A locality about 25 miles south-west of **Kuwait Town**, between the district of **Qrā'ah** on the east and that of **Shaqq** on the west. **Kabd** is a row of hills or belt of high ground extending east and west over a distance of 6 miles. Immediately to the south of **Kabd** is a parallel ridge called **Kabaidah** كبيدة or **Little Kabd**, having to the east of it some wells called **Jāhliyah** جاهليه, and to the south of it a well-known Bedouin landmark called **Rijm-al-Jahtān** رجم الجحطان. South of **Rijm-al-Jahtān**, again, is **Fawāris** قوارس, a small plain diversified by hillocks. A group of five small hills at the western end of **Kabaidah** is called **Mināqish** مناقيش; they are of a whitish hue and stand between the route from **Jahrah** to **Riqā'i** and that from **Kuwait Town** to **Hafar**.

KABĪR
(WĀDI-
AL-)

وادي الكبير

A valley in the **Dhāhirah** district of the 'Omān Sultanate which runs south-westwards and debouches on **Wādi Sanaisal**, a little above 'Ibri in **Dhāhirah**. The places situated in **Wādi-al-Kabīr** from its head downwards are the following:—

Place.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Miskin مسكن	Near the head of the Wādi.	Left.	...	See article Miskin .
Najaid نجيد	3 hours below Miskin .	Do.	40 houses of Bani Kalbān .	There is a fort held by the Bani Kalbān . Animals are 10 camels, 30 donkeys, 30 cattle and 300 sheep and goats: there are 800 date palms.

Place.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Haīyāl هيايل	7 hours below Najaid.	Right.	50 houses of Bani 'Umr.	There is a fort of the Bani 'Umr. Resources the same as at Najaid.
'Āridh عارض	3 hours below Hayāl.	Do.	...	See article 'Āridh.
Dariz درز	4 hours below 'Āridh in a side valley called Qarn-al-Kabsh قرن الكبش.	Left.	200 houses of Miyāyihah, and 30 of Bani Rashid mostly mud but a few huts.	In 1885 there was a tumble-down fort here with 2 guns. Livestock are 10 camels, 30 donkeys, 60 cattle and 300 sheep and goats, and there are 300 date palms.

Wādi Bilād Shahūm, in which stands Maqniyāt, is a tributary of this valley.

The innermost cove (Dōhat Kādhamah) of Kuwait Bay, to the west of Rās 'Ashairij; also a point (Rās Kādhamah) which projects into the same cove from its north side.

The cove shoals gradually from its entrance, where it is 4 miles broad and 6 fathoms deep in mid-channel, to its head, which is 9 miles west by south of Rās 'Ashairij and within about 2 miles of the village of Jahrah. There is an anchorage, well sheltered from the Shamāl, which would accommodate a large number of ships of 24 feet draught; but there is no deep water close to the shore, and cargo would have to be worked in lighters or a large pier built.

Rās Kādhamah is a low swampy point running out some 3 furlongs southwards into the cove at about 3 miles from its head: it is hardly above sea level, but it is partially protected by a natural bank of sand which follows the highwater line.

* A sketch survey of Dōhat Kādhamah will be found in the Government of India's Foreign Proceedings for July 1902. The suitability of the place as a terminus for the proposed Baghdad Railway is discussed by Captain E. W. S. Mahon, R.E., in a report dated 24th July 1905. See also Government of India's Foreign Proceedings for February 1905.

**KĀDHI-
MAIN**
كاذمين
QADHA

A division, by the Turks called Kāzimīyah كاذميه, of the Baghdād Sanjāq of the Baghdād Wilāyat in Turkish 'Irāq.

Position and boundaries.—The Qadha of Kādhimain embraces the greater part of that narrow section of Mesopotamia which is enclosed between the rivers **Tigris** and **Euphrates** where they approach one another in the neighbourhood of **Baghdād** City. On the north-east side the **Tigris** divides Kādhimain from the Qadha of **Baghdād**; on the north Kādhimain appears to be in contact with the Qadhas of **Sāmarrāh** and **Dilaim**; the adjacent districts on the west, south-west, south and south-east are **Dilaim**, **Karbala**, **Hillah** and **Jazirah** respectively.

Topography and tribes.—The only places of importance in this Qadha are **Abu Ghuraib**, **Kādhimain Town** and **Mahmūdīyah**, all of which are described under their proper names.

The parallel columns below contain a list of the Muqā'alahs or tracts in this Qadha and of the tribes and sections by whom they are cultivated, but it has not been found possible to arrange the tribes by territorial groups:—

Tracts.

1. Ghuraib (Abu) (See article **Abu Ghuraib**).
2. Hasniwah
حصيرة
3. Hor
هور
4. Mahmūdīyah (See article **Mahmūdīyah**).
5. Mazrafah
مزرفه
6. Radhwānīyah (See article **Euphrates**).
7. Saraiwīl (Abu)
ابو سريريل
8. Tāji
تاجي
9. Tārmīyah
طارميه

Tribes or sections.

1. 'Akaidāt.
2. 'Azzah.
3. Dilaim.
4. Fadāghah.
5. Kawām.
6. Ma'āmīrah.
7. Mashāhidah.
8. Rabī'ah (Bani) of the Karaish section, and Bani Tamīm subsection.
9. Sha'ār.
10. Shamāmtah Jabūr.
11. Shitī.
12. Zōba'.
13. Zubār.

Population.—The fixed population of the Kādhimain Qadha is estimated at 25,000 souls, all Muhammadans, of whom 17,000 may be Sunnis and 8,000—chiefly in the town of **Kādhimain**—are probably Shī'ahs.

Resources.—Apart from the town of **Kādhimain** the district is rural, and its assets consist in cultivation and livestock of the same kinds as are found in the other Qadhas of the Baghdād Sanjāq, such as **Jazīrah**. The principal canals which traverse the Qadha are described in the articles on the **Euphrates** river: they are those apparently from the Saqlāwiyah to the Latifiyah inclusive.

Administration.—The Qadha is of the 3rd class and is not, apparently, subdivided into Nāhiyahs: the town of **Kādhimain** is the *chef-lieu*. The Dāirat-as-Saniyah have established a firm hold on the district and are represented by Mudīrs at Abu **Ghuraib** and **Mahmūdiyyah**.

Called Kazimīyah كاظمية by the Turks, and known also as Imām Mūsā امام موسى. This town in Turkish 'Irāq, situated on the right bank of the **Tigris** about 3 miles north-west of **Baghdād** City, is important both as a Shī'ah place of pilgrimage and as the headquarters of a Qadha of the same name in the Sanjāq and Wilāyat of **Baghdād**. It is connected with **Baghdād** by a horse-tramway (which was constructed by Midhat Pasha, Wālī of **Baghdād** about 1870, and runs most of the way along the top of an embankment) and with **Mu'adhdham** on the opposite bank of the **Tigris** by a bridge of 21 boats.

**KĀDHI-
MAIN**
كاظمين
TOWN

The permanent population of the town is about 8,000 souls, all Muhammadans, of whom about 7,000 are Shī'ahs: about 1,000 are Persian subjects; 200 are British subjects, being Indians or of Indian descent; and 50 are Russian subjects of Persian race.

The town is a hot-bed of vice; venereal and ophthalmic maladies are common, and the passage through the place of nearly all the Shī'ah corpses sent from Persia to be buried at the holy places of **Najaf** and **Karbala** in no wise adds to its salubrity. In the cold weather the population is largely increased by Shī'ah pilgrims on their outward and return journeys.

The chief feature of the place is the tomb of the 7th and 9th Shi'ah Imāns, namely Mūsa-bin-Ja'far and his grandson Muhammad-bin-'Alī, from whom the town derives its name of Kādhimain or "the Two Self Restrained Ones," although in strictness the epithet of Kādhim belongs to the 7th Imām alone. Christians are not admitted within the precincts of the shrine, which is surrounded by a lofty wall; but a good general view of the buildings can be obtained from the roof of a Khān which faces the main entrance. The structure has the form of double cube, each of the two portions of which is surmounted by a cupola; and four tall galleried minarets spring from near the corners of the building. After his visit to the shrine in 1874 Nasr-ud-Dīn, Shāh of Persia, imitating the munificence of Nādir Shāh at **Karbala**, caused the twin domes to be plated and the minarets to be richly ornamented with gold, and the general effect produced by the large surfaces of the precious metal is brilliant in the extreme. The coloured encaustic tile work of the entrance gate and minarets, also the stalactite corbelling below and the carved wood-work above the galleries of the minarets, are equally remarkable. The shrine is richly endowed and the endowments are under the management of the Auqāf Department of the Turkish Government by whom the salaries of the custodians and attendants are paid. There are graveyards here for devout Shi'ahs, of which the principal is the Maqābir-i-Quraish مقابر قریش; but they do not possess equal sanctity with those of **Najaf** and **Karbala**.

Combs and small artistic objects of ivory, wood and tortoise-shell are manufactured for export, chiefly by Persians; Kāshī کاشی or encaustic tiles and bricks are also made by Persians; and there are some skilful Persian painters who decorate walls and roofs. The weaving of silk kerchiefs and handkerchiefs is a considerable industry and some of the handkerchiefs are sent abroad as far as to Tunis and Algeria; there are also tanneries. There is a trade in Persian carpets which the pilgrims, combining business with the performance of a religious duty, bring with them from their country; and the fact that the pilgrims mostly leave their riding animals to wait for them at Kādhimain while they proceed by stage-coach to **Karbala**, creates a large demand for forage. The pilgrims, many of whom are visitors from cold climates, are considerable purchasers of tea, sugar and woollen cloths. Kādhimain contains 30 Khāns or hostelries and over 300 shops.

The principal civil officials are the Qāim-Maqām of the Qadha and representatives of the Departments of Customs and Public Debt. The ordinary police force of Kādhimain consists of about 50 Dhābitiyahs:

but at the Muharram, and on other occasions of religious excitement, large reinforcements are drafted into the town from **Baghdād** City, with which there is telegraphic communication. There is also a post office. The town is constituted as a municipality. **Kādhimain** is the headquarters of the 1st battalion of the 83rd regiment of the **Radīf** and also of the 42nd brigade of the same.

An honorary **Nāib-Kārpardāz** or Consular Agent is charged with the interests of Persian subjects.

Generally pronounced **Chaháfah**. A well-known village in the **Jabal Shammar** principality, about midway between **Hāil** and **Buraidah** and some 75 or 80 miles from either; it is the ordinary third halting place on the **Hāil-Buraidah** route. The village is unwallled and contains about 50 houses of the **Mas'ūd** section of the **Aslam** division of the **Shammar**. Some of the wells, which are 8 to 9 fathoms deep, have good water, and the place is reputed healthy; there are only about 10 days' rain in the year, at the beginning of winter. Dates, cereals and vegetables are cultivated; the best kind of date is a large, yellow variety called **Fankhah**; palms of all sorts are said to number about 3,000. There are the usual animals. The Turks, after their defeat in **Qasīm** in the summer of 1904, fell back upon **Kaháfah**.

KAHÁFAH

كهفه

A river of Persian **Makrān** which comes down from **Gaih** and reaches the sea by two mouths, of which the eastern is on **Puzim Bay**, 28 miles west by north of **Chahbār**, and the other 18 miles farther to westward on the east side of **Tank point**. The village of **Tank** is situated on the right bank of the western branch at about 3 miles from the coast, and some 50 huts, frequently empty, forming a settlement known as **Kair** are scattered upon both banks of the eastern branch at about 7 miles from the sea; barley, wheat, cotton and jowari are grown in small quantities round this settlement, which is occupied chiefly by **Buzdārs** but partly also by **Hōts**. Much water comes down the **Kair** river when in flood; it sometimes rises over its banks and remains impassable for five or six consecutive days. The usual ford is at the telegraph crossing, but there is a better one $1\frac{3}{4}$ miles below it.

KAIR

کیر

KĀKI

کاکي

A small town in the **Dashti** district of the **Persian Coast**, 26 miles south-south-east of **Khurmūj** town and 20 miles from the sea; it is situated about 5 miles from the left bank of the **Mūnd** river. The population is very mixed, including some of the **Nasūri** tribe, who are **Sunnis**. **Kāki**, 40 years ago, was larger than **Khurmūj** town but not so well built; the **Khān** of the place had at that time commenced the erection of an elaborate fort and residence. Now there are about 300 houses, but no shops; some trade in sugar, tea and piece-goods is carried on in private houses. There are 8,000 date palms: livestock are 20 horses, 15 mules, 120 donkeys, 100 camels, 70 cattle and 3,000 sheep and goats. Native vessels of 40 tons can ascend the **Mūnd** river almost to **Kāki**. A cousin of the **Khān** of **Dashti** has his seat at **Kāki** and acts as the **Khān**'s deputy.

KALBA
(KHOR)

خور کلبا

Khor Kalba is not to be confounded with **Kalba**, otherwise called **Ghāllah**. It is the southernmost village of the **Shamailiyah** district in the **Shārjah** Principality of **Trucial 'Omān** and is situated on the coast of the **Gulf** of **'Omān** 20 miles north-north-west of **Shinās** in the **Bātinah** district of the **'Omān** Sultanate and 24 miles south of **Khor Fakkān**. **Khor Kalba** stands on a creek which boats can enter at high water and it is defended by a fort: it consists of 150 houses of the **Za'āb** tribe, who own 5 or 6 sea-going boats employed in the coasting trade.

KALBĀN
(BANI)

بني کلبان

Singular **Kalbāni** کلباني. A tribe of the **'Omān** Sultanate inhabiting both slopes of Western **Hajar**; they are found on the **Dhāhirah** side at **Maqniyāt** (740 houses), which is their principal place, at **Sammah** (60 houses), at **Khadal** (100 houses) in an affluent of **Wadi Dhank**, and at **Miskin** (200 houses), **Najaid** (40 houses) and **'Āridh** (300 houses) in **Wādī-al-Kabīr**. They occur also at **'Ibri** in **Dhāhirah**. On the **Bātinah** side their villages are **Zūla** (20 houses) in **Wadi Bani Ghāfir**; **Daīqarah** (25 houses), **Iliyāl** (70 houses), **Minzifah** (25 houses) and **Raqaiyid** (25 houses) in **Wadi Mabrah**; and **Battah** (90 houses) in **Wadi Sarrāmi**. There are also 30 houses of **Bani Kalbān** at **Bahlah** in **'Oman Proper**. In politics the **Bani Kalbān** are **Ghāfiri**, in religion **Ibādhi**. None of them are **Bedouins**.

The following are their subdivisions :—

Section.	Number of households.	Habitat.	REMARKS.
'Amairah (ʿAulād) أولاد عميرة	300	Maqniyāt and Miskin.	Nil.
Ghabābīn غبابين	200	Maqniyāt.	Do.
Jarāwinah جرارونه	720	Maqniyāt, 'Aridh and Khadal.	Do.
Sināu (Wilād) ولاد سنان	200	Maqniyāt.	Do.
Subaih (Wilād) ولاد صبيح	150	Maqniyāt and Miskin.	Do.
Tiyūm (Bani) بني تيوم	20	Zūla in Wādi Bani Ghāfir.	Do.

There is also a section or subsection called Quyūdh قيرض who are found at Raqiyid. Their total number is about 8,000 souls. In the troubles of 1888 the Bani Kalbān sided with the Sultān of 'Omān. They are sometimes at feud with the Miyāyihah.

A village on the coast of the 'Omān Sultanate 12 miles north-west of Sūr. It has no dates or cultivation of any sort, is unwallled and consists of 120 to 130 houses, all of mud, and a dozen shops. The Hajar hills rise behind the village at less than a mile's distance and Wādi Hilam reaches the sea at its east side. There are a few wells. The inhabitants are Bani Jābir of the Sha'ibiyīn section: they are fishermen and sailors and own about 12 Badans running to Masqat Town and Sūr and about 40 Hawāri. They have recently become Hināwis and have allied themselves with the Bani Bū Hasan against their own tribe (1907). Kalhāt is the port of Wādi Bani Jābir (I), of Kabda, and of Wādi Maṅqāl in which is Fita.

KALHĀT
كلهات
also
QALHĀT
قلهات

KANGŪN

کنگون

In English formerly spelt "Congoon." With the exception of its small dependency Banak, Kangūn is the northernmost of the **Shībkūh** ports on the **Persian Coast** and the only one of them lying north of the region in which the main maritime range falls directly into the sea; these high hills first approach the coast about 5 miles west of Kangūn. Kangūn is situated at the eastern end of a large bay, open to the south but fairly well sheltered from the **Shamāl**, at the opposite end of which, 9 miles to the westward, stands the rival port of **Daiyir**. Kangūn is about 20 miles north-west of the next considerable **Shībkūh** port, that of **Tāhiri** and is exactly opposite to **Bahrain** from which it is distant about 140 miles.

The place, at the present time partially abandoned, normally consists of some 300 houses of Arabs of mixed tribes; about two-thirds of the population are Sunnis and the remainder Shī'ahs. Some of the recent emigrants are now settled at **Fāo** in Turkish **'Irāq**. The inhabitants of **Kangūn** are fishermen, pearl divers and sailors owning 8 **Sambūks** which run to **Qatar**, **Bahrain**, **Qatif**, **Basrah** and various Persian ports, also 10 **Baqārahs** of the kind called **'Āmilah** which are used for fishing; they also cultivate dates and grain. Palms number about 2,000, and livestock are estimated at 5 horses, 200 camels, 100 donkeys, 200 cattle and 2,000 sheep and goats. Good water is contained in 3 wells of 4 to 5 fathoms depth; and there is a hot spring which is resorted to for its curative properties. Kangūn possesses a fair anchorage (but inferior to that of **Daiyir**) in a **Shamāl**. The number of shops is about 20. Imports are sugar, tea, piece-goods and rice; exports are wheat, barley, sheep, cattle, firewood, charcoal and onions. Kangūn is the port of **Jam** ج and **Rīz** رز in the interior, 10 to 20 miles distant northwards. A square fort stands in the middle of the town. Kangūn was till lately farmed by the **Khān** of **Dashti**, whose sub-lessee was one of his own relations. A post of the Persian Imperial Customs was established here in 1904.

KARBALA

کربلا

The headquarters division of the **Sanjāq** of **Karbala** in the **Baghdād Wilāyat** in Turkish **'Irāq**.

QADHA

Position and boundaries.—The **Qadha** of **Karbala** extends, at a short distance west of the **Euphrates**, from the parallel of **Musaiyib** (or a

little above it) down almost to that of **Najaf Town**: at **Musaiyib** however it actually touches the river and even reaches a few miles to the east of it. On the north the **Qadha** is in contact with that of **Dilaim**; on the north-east with that of **Kādhimain**; on the east with that of **Hindīyah** and possibly with that of **Shāmiyah**; on the south with that of **Najaf**; and on the west with the **Shāmiyah Desert**.

Topography and inhabitants.—By far the largest and most important place in the **Qadha** is the town of **Karbala**, described elsewhere under its own name; but the town of **Musaiyib**, the settlement of **Shifāthah**, and the village **Sikandariyah** are also deserving of mention and form subjects of separate articles. **Razāzah** in practice belongs to the **Karbala Qadha** and is mentioned below in the list of **Muqāta'ahs**, but nominally it is a separate **Qadha**. The chief feature of the **Karbala district**,—apart from the **Euphrates** river with which its connection is slight,—is the **Husainīyah Canal**, running from **Musaiyib** to **Karbala Town** and beyond.

The following is a list of the principal **Muqāta'ahs** or agricultural tracts in the **Qadha**:—

Tracts.	Tracts.	Tracts.
1. 'Aishah (Bad'at) بدعة عيشة	8. Bikairah بكيرة	15. Jardān (Abu) أبو جردان
2. 'Amaishīyah عميشية	9. Fuaibah فويحة	16. Jawaib جويب
3. 'Asāfiyah عسافيه	10. Haidariyah حيدرية	17. Jī'aitīnah جعيثينه

6. 'Awairat-as-Saghīrah عويرة الصغيرة	13. Ibrāhimīyah ابراهيمية	20. Khair-ud-Din خير الدين
7. Bahādari بهادري	14. Jangannah جنگنه	21. Lāyah لايه

Tracts.	Tracts.	Tracts.
22. Qādhi قاصي	27. Sālihīyah صالحية	32. Tahīn (Abn) ابو طحين
23. Qa'qa'aiyah قعقعية	28. Sharīf (Bad'at) بدعة شريف	33. Tuwāhij طويريج
24. Qartah قرطه	29. Shīlah شيطه	34. Wand وند
25. Razāzah رزازه	30. Sulaimān (Abu) ابو سليمان	and
26. Sālih (Karaid Muḥamm ad) كريد محمد صالح	31. Sumānah (Bū) بو صمانه	35. Zanit (Abn) ابو زنت

There is also a tract called Jarūf جررف, inhabited by the Janābiyīn tribe, on the east bank of the Euphrates above Musaiyib Town. Another tract known as Nasrīyah نصرية or Nāsirīyah ناصرية, occupied by the Jādī, Jahaish, Jarāwinah and Quidhah tribes, is situated further south on the same side between Musaiyib and the Nindiyah barrage; it is the country surrounding the Khān-an-Nasrīyah on the Baghdād-Fillah route.

The characteristic tribes of the part of country adjoining the Fusainīyah canal are the Āl Bū Masri, Mas'ūd and Yasār: those of the Musaiyib neighbourhood are the Janābiyīn, Āl Bū Mahaiyi and 'Uwaisāt. The desert round Shifāthah is occupied by nomads of the Khawādhir and Āl Bū Shibil tribes.

Population.—Karbala Town (50,000), Musaiyib (4,500), and Shifāthah (8,000) being included, the fixed population of the Karbala Qadha is believed to amount to 40,000 souls. The great majority of these are Shī'ah Muhammadans; but Sunni Muhammadans number about 10,000 and there are about 300 Jews.

Resources.—The rural population, including the inhabitants of Shifāthah, are altogether engaged in agricultural and pastoral occupations. Dates, wheat, barley, cotton, opium and tobacco are cultivated by them; and their livestock include horses, cattle, buffaloes and sheep.

The date palms of the Qadha are estimated at 750,000 trees, of which some 50,000 belong to the rich settlement of **Shifāthah**. There is in this Qadha a remarkable salt-field which is said to yield about 500 tons English of salt every year. It begins on the west side of **Razāzah** and passing to the north-east of **Shifāthah** is said to reach for many miles to the north-westwards: it is described as a great hollow with broken, rocky banks resembling the bed of a dried-up sea. The hollow is said to contain water which in summer partly evaporates leaving masses of crystalline salt along the margin. In consequence of its position and extent the Turkish Government are unable to make efficient arrangements for the prevention of smuggling.

Administration.—Containing as it does the town of **Karbala**, the headquarters of the whole Sanjaq, the Qadha has no separate Qāim-Maqām and is subject to the personal rule of the Mutasarrif, as is also its headquarters subdivision which consists chiefly of the town and is known as the Karbala Nāhiyah. The other two Nāhiyahs of the Qadha are Musaiyib and Shifāthah, each governed by a Mudir who is stationed at the place from which his charge derives its name: both of these are of the 1st class. The Dāirat-as-Saniyah, as mentioned in the article on **Musaiyib**, is strongly established in the part of the Qadha to the east of the **Euphrates**; it appears to be in possession of the whole Nasriyah tract referred to above in the present article.

One of the chief towns of Turkish 'Irāq, renowned as the scene of the martyrdom, or rather massacre, of Husain and his companions,—an event to which it owes its alternative name of Mashhad Husain **مشهد حسين** and in virtue of which it has become one of the principal places of Shi'ah pilgrimage; it is situated about 55 miles south-south-west of **Baghdād** City and about 25 miles west-north-west of **Hillah** Town. Karbala is known also by the name of Ghādhariyah **غاضرية** and by the old-fashioned appellation of Nainawa **نينوا**.

KARBALA
كربلا
TOWN

Site and buildings.—The town stands on the left bank of the **Husainiyah** canal, which circles round its northern and western sides. On the north, east and south it is surrounded by cultivated lands, date plantations and gardens of fruit trees; and its general shape and disposition

cannot be observed from any point of view accessible to Europeans. On the west the **Shāmiyah** or Syrian Desert approaches almost to the walls. About 2 miles to the south-east of Karbala begins the Hor-al-Husainiyah, a marsh formed by the **Husainiyah** canal and the Shatt-al-**Hindiyah**; an embankment running north and south for a distance of 6,000 metres is supposed to prevent the ingress of the waters of the **Hindiyah**, but this work is at present in a ruinous and inefficient state.

Karbala consists of an old town on the north, still walled on the east, north and west, but open on the south—the side on which the new town adjoins it: the old town is crowded and irregularly built, the new is well laid out, with a broad main street running north and south, and is by comparison clean. A mile or more to the south of the new town the large mansion of a Panjābi Indian family is conspicuous, standing in its own grounds and known as Afzal Khān's Fort.

The walls of the old town are of brick, between 20 and 30 feet high, with towers projecting at intervals as bastions; there are two tiers of loopholes, and on the inside is a banquette supported by arches which affords standing room for the defenders of the upper tier. The perimeter of the walls is about 2 miles; they are pierced by 5 gates, and about 25 towers still remain; but the whole work is now in bad repair, and the arches on the inner side serve chiefly as dormitories for vagabonds and as latrines.

The bridges connected with the town are described in the article on the **Husainiyah** canal.

The site of the town is level, but the ground is somewhat higher towards the north-western corner.

Inhabitants.—No close estimate of the population is possible; but it appears to amount to about 50,000 souls, not reckoning pilgrims and other visitors. At least three-fourths of the fixed population are Persians, and almost the whole of the remainder are Arabs. There are only about 100 Turks and 50 Jews, but Indians or persons of Indian extraction number about 1,200 souls, and there are a number of **Balūchis**. With the exception of a few hundred Sunnis, of the Jews already mentioned, and of about a dozen Christians, the people of Karbala are all Shi'ah Muhammadans. The Persians who compose the bulk of the population are almost altogether Persian subjects, so also are the **Balūchis**; but the rest are of Turkish nationality, except the Indians, who are nearly all British subjects, and about 30 Persian-speaking subjects of the Russian Empire. In all there are about 9,000 dwelling-

houses; but they are not sufficient and the extension of the town, although constant, does not keep pace with the growth of the population. Drinking water is from the **Husainīyah** canal, or, in the months when it is dry, from some 20 or 25 wells, mostly sunk in its bed.

Trade, manufactures, and resources.—Karbala is a place of considerable trade, the most valuable imports being piece-goods, sugar, petroleum, spices, coffee, tea, Persian carpets, and candles, almost entirely for local consumption; while the leading exports are dates, consecrated articles—such as rosaries, praying-tablets, and inscribed shrouds—skins and hides, wool and tobacco. The bazaars are extensive and well-stocked, and attached to the main bazaar in the old town is a **Qaisariyah** قيسريّة or arcade, in which are about 20 good shops dealing in European and other wares.

Filigree work and engraving upon mother-of-pearl are the only two arts; but all the ordinary trades are carried on with success, and even mechanical professions, such as watchmaking and photography, are exercised with a fair degree of skill.

The agricultural and garden produce of the environs is large, and the output of dates is on such a scale as to leave a large balance for exportation. Karbala is not, however, a good centre for the collection of ordinary supplies or transport: there are no mules, and camels can only be procured in autumn when Bedouins of the 'Anizah and Shammar tribes are in the vicinity.

Administration.—Karbala is the chief town and the headquarters of the administration, both civil and military, of the Karbala Sanjāq in the Wilāyat of Baghdād: internally it is administered as a municipality. The Mutasarrif of the Sanjāq has his residence here, and there is a Mudir of the Sanitary department, also a Mamūr of the Tobacco Régie. A whole Tābūr of Dhābitīyahs is supposed to be located at Karbala, but it is rare that more than 100 of the force are present. There is a post office, and telegraphic connection is maintained with Baghdād and Basrah via Hillah: a branch line of telegraph also connects Karbala with Najaf.

One battalion of regular infantry is, as a rule, stationed at Karbala; but it is partly scattered in detachments over the country, and the garrison of the town does not often exceed 240 men; these, in a manner characteristic of Turkish administration, are quartered in a hired caravansarai in the new town. There are also two muzzle-loading field guns but no cavalry. A reserve of 600 rifles is said to be maintained, probably for

arming the Radifs inscribed at this and subordinate centres on the event of their being called out; the place is the headquarters of the 3rd battalion of the 84th Radif regiment.

The interests of British subjects, both residents and pilgrims, are watched over by a native Vice-Consul, and the Persian Government also maintain at Karbala a paid Kārpardāz or consular official of somewhat similar rank.

Religious importance.—We may now mention the holy places which are the sole cause of the existence of a large Persian city on the verge of the **Shāmīyah** Desert at a distance of nearly 150 miles from the nearest part of the Persian frontier. The historical events with which they are connected are related elsewhere: but for those events Karbala, which does not appear to have been a seat of pre-Islamic civilisation, might never have existed, even as a petty town. The chief shrines within the town are the tombs of Husain and 'Abbās and the Khaimahgāh; in the country outside the walls are the tombs of 'Aun and Hurr.

The shrine of Husain, called Bārgāh Hazrat Husain بارگاه حضرت حسین, stands in the old town towards its western end. The interior is not accessible to Christians, but it is known to consist, in the first place, of a large enclosure called the Sahn سahn or Outer Court; this enclosure has 7 entrances, the main one surmounted by a clock-tower, and the enclosing wall is lined upon the inner side by no less than 53 arched recesses forming rooms, some of which are of considerable size. In the midst of the Sahn stands the Haram حرم or Sanctuary proper: it is a roofed building surmounted by a lofty dome of gilded tiles and its façade, from either end of which shoots up a gilded minaret of great height, faces the main entrance of the Sahn. A tile-work minaret, larger than those of the Haram but not so magnificent, rises in the corner of the Sahn which is at the back of the Haram and behind its proper left; and near this corner is a small external Sahn adjoining the main Sahn to which it serves as an entrance. In the centre of the building, underneath the dome, lies the Imām Husain with his son 'Ali Akbar on one side of him. The tombs of both have an outer cover of steel lattice-work overlaid with silver and an inner one of carved wood; both are of hexagonal shape. Behind a silver grating in one of the corners are the tombs of the 72 Shuhada شهدا, or so-called martyrs, who died with Husain.

The tomb of 'Abbās, half-brother of Husain, to the east of that of Husain and so nearer to the middle of the town, is similar but slightly

smaller and has a dome of glazed brick only; the minarets however are gilded.

Each of these principal shrines has a treasury supposed to contain untold wealth: but, as the treasury of Husain was looted by the Wahhābis in 1801 and is still admittedly the richer of the two, it does not seem that in either case the popular idea can be well founded. Such treasures as remain are, along with the other endowments, in charge of the Auqāf Department of the Turkish Government. Both buildings owe their gold plating to the piety of Nādir Shāh. At night a festoon of lanterns is slung from minaret to minaret in both shrines; but the most impressive sight of all is immediately after sunset when the golden outlines of the great edifices, catching the afterglow, burn in the gathering dusk with a fiery incandescence.

The Khaimahgāh or site of Husain's tent before the battle lies still further west than his tomb and is divided from it by rising ground, from the brow of which the women of his party are said to have witnessed the tragedy: the building of the Khaimahgāh is small and unpretentious.

The tomb of 'Aun عرب, a sister's son of Husain, is 7 miles north-east of Karbala on the road to Musaiyib, while that of Hurr حُرّ, who deserted to the side of Husain immediately before the battle, lies $3\frac{1}{2}$ miles to the north-west.

As might be expected, Karbala is a great centre, though in this respect subordinate to Najaf, of Shi'ah culture and learning. The Mujtahids or Shi'ah doctors are here a numerous and influential body; and there are 29 Shi'ah schools, of which 8 are Madrasahs or high schools, against a single Sunni school. In addition to the shrines there are 3 important mosques and over 150 others. Karbala possesses the second greatest of the holy cemeteries in which Shi'ahs are interred; it is inferior in sanctity to that of Najaf only, and is known by the name of Wādi-i-Aiman وادي ايس or Vale of Security.

The early history of the Shi'ah shrines of Karbala is obscure, but a shrine of Husain existed in 850 A.D., for the Khalifah Mutawakkil ordered it to be flooded with water and forbade pilgrimages to it. By 979 A.D. a magnificent shrine had been built, which was burnt down in 1016 A.D.; but by 1086 A.D. it had been restored.

The Karkheh river rises in the hills of the Western Lur country and enters the plains of 'Arabistān about 15 miles further to the west than

KARKHEH

کرخه

the **Diz** river. It forms the western limit of effective Persian jurisdiction as exercised from **Dizfūl** or **Shūstar**: beyond it, within the hills, is the autonomous district of **Pusht-i-Kūh**; and in the plains, upon that side, are the locations of the **Bani Turuf** and other virtually independent tribes. In the middle ages the **Karkheh** was known as the **Dujail** of **Basinna** بَصْنَا, from an important town which was then situated near it a short day's journey to the south of **Shūsh**.

Course.—Near its exit from the hills the **Karkheh** was formerly spanned by a bridge, of which the remains still exist and are known as **Pā-i-Pul** پاي پل. About 4 miles south of **Pā-i-Pul** the river passes the Sassanian ruins of **Aiwān-i-Karkheh** or **Kasra** ایران کرخه کسری, which lie half a mile from its right bank; and about 14 miles further on, the direction of the stream being now somewhat easterly as well as southerly, **Shūsh**, the site of the ancient **Susa**, is left 2 miles from the left bank. **Aiwān-i-Karkheh** was still in the 10th century A.D. a small but populous town with a weekly market.

The **Karkheh** after this pursues a general south-south-easterly course to a place, about 50 miles from **Shūsh** and perhaps 20 miles north-west of **Nāsiri** on the **Kārūn** river, at which it swings suddenly to the south-west and from which it runs in that direction for about 20 miles; after turning this corner it passes between the hills which form the north-eastern border of the **Hawizeh** District and the low range which is their prolongation and which crosses the **Kārūn** river at **Ahwāz** Village. This bend of the **Karkheh** to the south-westwards appears to be a recent feature: there is reason to think that the river formerly fell into the **Kārūn** a few miles below **Ahwāz**, and it is believed that at the present day this condition of affairs could be restored without difficulty by artificial means.

At the end of the reach which goes south-westwards the **Karkheh** arrives at **Kūt Nahr Hāshim** in the **Hawizeh** District,—the site, not long since, of a massive dam by which the whole irrigation of the **Hawizeh** District was regulated. When this dam was in existence the further course of the river lay first southwards and then through **Hawizeh** Town; but since the dam gave way, in 1837, the main stream of the river has taken a north-westerly course from **Nahr Hāshim**, and its waters, dissipated in streams and marshes, have submerged and ruined the country. At the western end of the **Hawizeh** District the river gradually reassembles its water, and finally, under the name of **Suwaib** or **Shwaiyib** شویب, augmented by the overflow of some of the **Tigris**

marshes, it enters the Shatt-al-'Arab about 4 miles below Qūrnah.

Character of stream.—At its entrance into 'Arabistān the Karkheh is a broad and rapid stream of whitish water. Near Aiwān-i-Karkheh it is split into several branches by low islands. Further down it continues to be broad, and islands and banks in midstream remain frequent; nor does its level fall much below that of the surrounding country until near the point at which it turns in the direction of Hawizeh. It is crossed by shifting and dangerous fords at Pā-i-Pul and Aiwān-i-Karkheh and near Shūsh. At Aiwān-i-Karkheh, 60 years ago, it was observed that the Karkheh appeared to be navigable for vessels of light draught; and in the autumn of 1841, when the stream was at its lowest, a small steamer ascended the Suwaib section for a distance of 10 miles. The waters of the upper Karkheh are celebrated for their purity; but lower down the stream is contaminated by the stagnant swamps through which it passes. The volume of the Karkheh exceeds that of the Jarrāhi River.

Character of the banks.—The banks of the Karkheh are wooded with tamarisk jungle and small trees, and in places they are lined with dense brakes of cane-reeds and willow. A remarkable belt of scrub, known as Jangal-i-Gharabi جنگل غربي, extends for a distance of about 50 miles between the Karkheh and Shāūr rivers and has an average breadth of 4 or 5 miles; it begins above a place called Buq'eh-i-Ghaib Ibn-'Ali بقة غيب ابن علي and reaches to a locality called Gharaibeh غريبه, which is in the country of the 'Anāfijeh. The lion and fallow deer, formerly found here, are now practically extinct; but wild boars, hyænas, and small game abound, and considerable herds of gazelles frequent the plains on both banks of the river.

Irrigation and villages.—The level of the Karkheh being, in the upper part of its course, but little below that of the surrounding country, its waters there are applied to irrigation on a considerable scale. Several of the more western villages of the Dizfūl District are watered by canals from the Karkheh, notably Jirqeh Saiyid Ahmad, 'Amleh Karīm Khān, Jirqeh Saiyid Muhammad, Jirqeh Saiyid Ta'ameh, Jirqeh Saiyid Tahir, and possibly Shūhān; two or three of these are served by a channel called the Harmūshi هرمرشي which takes off from the left bank of the Karkheh near Pā-i-Pul. Near Shūsh are the remains of great canals, down which were probably floated the stone columns for

the Sassanian palace of Susa, brought from the mountains of the Western **Lur** country. Above the point where it turns towards **Hawizeh** the Karkheh throws off a number of canals still actually in operation. In the **Hawizeh** District again it is said practically to dissolve into a network of canals. The whole way from Pā-i-Pul to its junction with the **Tigris** the river flows through alluvial plains which are for the most part capable of irrigation; and the entire Karkheh region, though now almost a desert, is studded with the remains of human habitations and of irrigation works.

The only village of importance now existing on or near the Karkheh above the point where it enters the **Hawizeh** District appears to be **Khairābād** خیرآباد, which is on the left bank below **Shūsh**, perhaps not so far from that place as has hitherto been supposed, for one report makes the intervening distance only 8 miles.* This place consists of about 80 houses and some tents; 20 families are of the Āl Bū Rawāyeh tribe, and the remainder are Bani Lām of the Āl Bāji section, 'Ikriṣh of the Daghāghleh section and Arabs of various other tribes. The inhabitants possess about 100 rifles, and of the fighting men 60 are mounted. Livestock are 200 camels, 100 cattle and 6,000 sheep and goats. A noted outlaw, Saiyid Na'amch, who was released from imprisonment by the Shaikh of **Muhammareh** about 1905, has been established by him here under surveillance of Shaikh Farhān Asad of the **Kathir**.

KĀRŪN کارون

The largest river of Persia and the only one navigable by steamers. It has its rise in the mountains of the **Bakhtiyāri** country about 100 miles due west of Isfahān and enters the plains of 'Arabistān some 15 or 20 miles north of **Shūshtar** Town. The name Kārūn appears to have been unknown to the Arab and Persian geographers of the middle ages, who called the river the Dujail, adding the epithet "of **Ahwāz**" or "of **Shūshtar**" to distinguish it from the Dujail canal near **Baghdād**.

Upper course.—Not far below its exit from the hills, which takes place by a defile 3 miles in length known as Tang-i-Qal' ch-i-Dukhtarān تنگ قلعه دختران; the Kārūn passes the village of Gotwand on its right bank: here there is, upon that side, a fertile alluvial plain sloping down slightly

* It is difficult to locate Khairābād. Another report puts it on the left bank of the **Shāūr**, قاور, in the Bait Sa'ad country.

from the west, and opposite to it the fertile plain of 'Aqīli round which the river flows in a remarkable curve. At 4 miles below Gotwand the Kārūn leaves the village of Jallakān on its right bank, the plain of 'Aqīli being still upon its left, and 8 miles further down it breaks through a range of pinkish sandstone hills, which rise on the right bank to a height of only 200 or 300 feet, but on the left bank attain an elevation of about 1,000 : the portion of the range nearest to the river upon its eastern bank is Kūh-i-Fidalak. The villages mentioned are described in the article on the Dizfūl District and the plain of 'Aqīli under its own name.

Two and a half miles beyond the Kūh-i-Fidalak barrier and at about half a mile from the town of Shūshtar the river, which has since emerging from the hills preserved a generally north and south direction, swings to the westwards. About 600 yards above the town it divides into two streams, the Gargar to the east and the Kārūn proper to the west. On the north side of the town the Kārūn proper forms a broad sheet of water, and then, turning to the south and passing an ancient dam and a bridge known as the Pul-i-Dizfūl, it changes its name to Shatait. The Gargar and Shatait form the subjects of separate articles, and the island enclosed by these branches and called Miyānāb is dealt with under its own name.

At a point 30 miles south in a direct line from the town of Shūshtar the Gargar rejoins the Shatait,—the village of Band-i-Qīr standing between them in the angle above their confluence,—and the Kārūn river once more resumes its course under its own name. At the point of junction of the Gargar and Shatait the Diz river, coming from the west, adds its waters to the Kārūn ; and from this place to Wais, 12 miles further down upon the left bank, the course of the river is straight and almost due southwards. From Wais to Ahwāz Village on the left bank, the direction of the river is on the average south-west ; but it winds considerably, and the distance, which is only about 14 miles as the crow flies, is fully doubled in travelling by water.

Rapids of Ahwāz.—Immediately above Ahwāz village the Kārūn divides into two streams, enclosing the small island of Umm-an-Nakhl ; it reunites to pass through a gap in the ridge of sandstone hills which here traverse the country at right angles to its course ; and in its descent over the sill of rock here forming its bed it gives rise to the famous rapids of Ahwāz,*

* A plan of the Ahwāz rapids by H. S. Wells, R.E., was lithographed by the Public Works Department of the Government of India in 1883.

by Arabs called Sidd ^{سد} and by Persians Band ^{بند}, which are situated opposite the village so named. The rapids, which are not quite $1\frac{1}{2}$ miles in length, terminate at the lower end of another small island, called Umm-as-Sabā'; just below them stands the village of Nāsiri on the left bank.

Lower course.—From Nāsiri to the tomb of 'Ali-ibn-al-Husain, a place on the left bank about 40 miles south-south-west of Nāsiri in a straight line, the Kārūn describes an extraordinary series of bends and convolutions; but at 'Ali-ibn-al-Husain it resumes a more straightforward and ordinary course, eventually reaching the Shatt-al-'Arab at a point situated 25 to 30 miles in a direct line to the south-west of 'Ali-ibn-al-Husain. About 15 miles below 'Ali-ibn-al-Husain it throws off the Salmāniyah ^{سلمانية} or Salmānah ^{سلمانه} canal, now almost dry, from its left bank; and 3 miles further down, opposite the island of Dāir, there is an outlet from the left bank of the Kārūn, called Mārid-al-A'mā ^{مارد الاعمى} or the Blind Mārid, which runs inland as a creek for about a mile and forms the mouth of the Fallāhiyeh-Mārid canal which is supplied with water by the Jarrāhi River: on the south-west bank of this creek at three-quarters of a mile from the entrance are some heaps marking the site of the old village of Mārid. A dry hollow, containing bushes at the end towards the Kārūn, connects the Blind Mārid with the Qanāqeh branch of Khor Mūsa; at one time, no doubt, the Kārūn discharged a part of its waters by this route to the sea. On the right bank, opposite to the Mārid creek, is the site of the old Ka'ab settlement of Sāblah. About 7 miles below the Mārid creek and 2 or 3 miles short of the Shatt-al-'Arab, the so-called Bahmanshīr quits the Kārūn on the left bank and follows an independent course to the Persian Gulf. The short remaining reach of the Kārūn below the head of the Bahmanshīr is called by Europeans the "Haffār" and by some natives the Bahmanshīr: the town of Muhammareh stands about the middle of its right bank.*

Animal life.—Duck, teal, snipe, pelicans, and gulls are seen upon the river; the banks hold francolin, hares, lynxes, and wild boars. In warm weather sharks travel up-stream to Nāsiri and even to Shūsh-tar Town.

Navigability and character of banks.—From Band-i-Qīr to Ahwāz village the width of the Kārūn is about 300 yards and there are ordinarily

* Tradition has it that this reach was artificially dug as an irrigation canal. Some authorities believe that the Shatt-al-'Arab once flowed into the Kārūn by this channel, instead of *vice versa* as at present, and that the mingled waters of both rivers were discharged by the channel which we have called the Bahmanshīr.

no serious obstacles to navigation; but sandbanks and heaps of stone occur, and the depth of water is sometimes insufficient. The banks here vary in height from 10 to 30 feet and have gravelly plains behind them: towards **Ahwāz** they are of marl: the brushwood which once clothed them has mostly disappeared.

The rapids of **Ahwāz**, though passable by towing, are a serious obstacle even to native boats, especially with a very high or a very low river,* and bulk is commonly broken at this point, goods for up-country being conveyed by a light railway, of which the trucks are at present drawn by horses, from **Nāsiri** on the lower river to a place a quarter of a mile above **Ahwāz** village upon the upper. The length of the rapids is about 2,000 yards; they are reckoned to be five in number and the real obstacle to navigation is the second rapid from the top. At this place a reef runs out from the left bank, leaving between its point and the right bank a channel, only 100 yards wide, through which the water rushes with a fall of 1 in 50: this channel is moreover broken up by rocky islets into two or three passages, of which the one adjoining the right bank is the easiest of ascent, but has a width of only 50 yards. Both reef and islets carry masonry remains, those of a great irrigation barrage which here raised the surface of the river to the level of the surrounding country.† Above the rapids the river is 400 yards broad, between them in places as much as 700, and below them only 200 to 300; from head to tail the total loss of level is 1 foot with a high river and 7 or 8 feet with a low one.

From **Ahwāz** to **Muhammareh**, a distance of over 100 miles by river, the **Kārūn** averages a quarter of a mile in width and flows through an open uncultivated country. The banks are generally low upon this part of its course, and in winter they are occupied by Arab encampments around which some slight and shifting cultivation takes place; but in summer, with the exception of the permanent villages mentioned below, they are totally deserted. The worst reach for steamers is the 20 miles immediately below **Nāsiri**; vessels of only $3\frac{1}{2}$ feet draft sometimes have difficulty in navigating it during the low season and are even obliged to unload part of their cargo.

Date groves commence on the right bank of the **Kārūn** at **Qisbeh**, 7 miles above **Muhammareh** Town; and in the final section between the

* The steamer "Assyria" ascended the rapids successfully in 1842, and the steamer "Shushan" in 1890.

† This barrage was called the **Shādhurwān**, and it existed in the 10th century A.D. (*vide* Le Strange).

Bahmanshīr and the **Shatt-al-'Arab** both banks carry fine plantations. Above **Qisbeh** as far as **Band-i-Qīr** the banks are bare and desolate and devoid of wooding.

There are ferries on the river at various places noted in the table below: no bridges however exist except the **Pul-i-Būlāiti** and the **Pul-i-Dizfūl**—the latter broken.—both at **Shūshtar**.

Volume, current, and variations of stream.—The minimum discharge of the **Kārūn** has been calculated at 10,000 cubic feet a second, and the flood discharge at 120,000 to 140,000.

The average surface slope of the river below the **Ahwāz** rapids is about 5 inches in the mile; and the current varies from 4 or 5 knots in the season of floods to 2 knots between August and November.

The **Kārūn**, along with its affluents, is liable to more violent and irregular changes of level than the great rivers of Turkish **'Irāq**. In most places the difference between low and high river is ordinarily from 12 to 14 feet; but there is a difference of 24 feet between the lowest recorded reading in October 1901 and the highest in February 1903. The river is generally at its minimum from the middle of October to the end of November; and the highest floods usually occur in March and April,* but sometimes earlier. The influence of the sea tides is perceptible as far up the river as **Ismā'īlyeh**, and lower down they cause a rise and fall of 4 to 5 feet; but no salt water ever enters the **Kārūn**.

Irrigation.—The **Kārūn** is not at present utilised for irrigation except on a petty scale, and that principally by means of water lifts upon the banks which are worked by animals. When the river is full it carries a brown silt and in its lower course runs flush with the banks; its water is at all times more or less discoloured. The silt does not, it is believed, ever exceed $\frac{1}{300}$ of volume and its fertilising value appears to be low.

Districts and villages.—Above **Band-i-Qīr** the course of the **Kārūn** in **'Arabistān** lies in the **Shūshtar** District; the river then enters the **Ahwāz** District, which it traverses. The next and last district upon the **Kārūn** is that of **Muhammareh** which begins on the right bank immediately above **Sab'eh**, and on the left bank just above the ruined tombs at **'Ali-ibn-al-Husain**.

The riverside villages from **Shūshtar Town** to **Band-i-Qīr** are dealt with in the articles on the **Gargar** and **Shatait**; those from **Band-i-Qīr**

* These data depend on records kept by the river steamers.

to Sab'eh are given in the table which follows below in the present article : the remainder will be found in the articles on the **Muhammareh** District and 'Abbādān island. The tribes inhabiting the banks of the Kārūn can be ascertained from the paragraphs on the populations of Northern and Southern 'Arabistān.

Name.	Miles by river below Band-i-Qir and on which bank situated.	Houses and inhabitants.	Resources and general remarks.
Naddāfiyeh Kabīr (Kūt-an-) کوت الندافیہ کبیر	3 Left.	50 houses, mostly grass huts, of Hamaid of the Nasailāt section. There are 150 fighting men, of whom 100 have rifles and 60 are mounted. Mulla Thāni, through whom the revenue of a number of tribes is paid, resides here.	Wheat and barley are cultivated. There is a ferry with one small boat.
Khalaf (Kūt Sai-yid) کوت سید خالف	4½ Left.	5 grass huts of mixed Arabs; they have no rifles.	Ordinary cultivation.
'Abbās (Kūt Sai-yid) کوت سید عباس	5½ Right.	Deserted since two years. Formerly there was a considerable village of 'Anāfiyeh.	Trade was with Wais.
Naddāfiyeh Saghir (Kūt-an-) کوت الندافیہ صغیر	6½ Left.	15 grass huts of mixed Arabs: there are 30 fighting men, of whom 10 are mounted and 10 carry rifles belonging to the Shaikh of Muhammareh.	The inhabitants are under an agreement with the Shaikh of Muhammareh to protect native vessels between Wais and Saiyid Hasan on the Gargar.
Hilleh-wa-Dilleh حله و دله	7½ Right.	Now deserted.	There is one small ferry boat here.
Wais وایس	11½ Left.	...	See article Wais.
Li'aimi لعیمی	11½ Right.	Until lately deserted, but reoccupied about November 1905, by the Al Bū Rawāyeh with a number of tents.	This place was formerly the chief centre of the 'Anāfiyeh.
Muwaitbeh مویله	11½ Left.	Two small adjacent hamlets containing together about 50 grass huts of Hawāshim. There are 100 rifles.	Practically a suburb of Wais. Wheat and barley are grown, and there are 50 mules which ply to Nāsiri, Rāmuz and Shūshitar.

Name.	Miles by river below Band-i-Qīr and on which bank situated.	Houses and inhabitants.	Resources and general remarks.
Isma'īl (Kūt Sai-yid) کوت سید اسماعیل	21½ Right.	At present deserted.	This place is also known as Kūt Zair Farhān and is situated in a tract called Luqbair لُقْبِير .
Suwaiti'ai صَوَيْتِي or Karādeh (Kūt) کوت کراده	23¾ Left.	Do.	...
'Anāyeh (Kūt Sai-yid) کوت سید عنایه	26½ Left	100 grass huts of mixed Arabs, subjects of the Bāwīyeh. Of the fighting men 80 are mounted and 150 have rifles.	Wheat and barley are grown. There is a ferry here with 1 small boat.
Ibrāhīm (Kūt Sai-yid) کوت سید ابراهیم	31¼ Right.	At present deserted.	Opposite the island of Khuwaiseh.
Qrāneh قَرَانِه	32¾ Left.	100 houses of Zarqān of the Al Bū Lahaiyeh and Sumāq sections; 40 are of mud, the rest are mat huts or tents. There are 50 mounted men and 100 rifles.	Wheat and barley are cultivated. One small ferry boat is kept here.
'Abbās (Saiyid) سید عَبَّاس	34½ Left.	14 grass huts of 'Ikrish of the Dagħaghleh section, Persians, etc. They have 7 rifles and 10 mounted men.	Wheat and barley are grown. This place is situated in a tract known as Zūwīyeh زُوِيِيَه. There is 1 small ferry boat here.
Ahwāz Village اَهْوَز	42 Left.	...	See article Ahwāz Village.
Nāsiri نَاصِرِي	43½ Left.	...	See article Nāsiri.
Aminīyeh اَمِينِيَه	48½ Right.	65 mud houses mostly of Hawāshim, among whom are 4 families of Sabians. There are 15 mounted men and 30 rifles.	The Sabians are silver-smiths; the other inhabitants cultivate wheat and barley and own 20 mules, 15 donkeys and some cattle and sheep. The place is below the Ahwāz rapid and nearly opposite to Nāsiri, with which is its trade.

Name.	Miles by river below Band-i-Qir and on which bank situated.	Houses and inhabitants.	Resources and general remarks.
Shikāreh شکاره	46 $\frac{3}{4}$ Left.	30 houses of mixed Arabs and Persians; some are of brick or mud, the rest are mat huts. Mounted men number 15 and rifles 20.	The village depends on agriculture. One small ferry boat is kept. The D'Arcy Oil Syndicate made their cart-road to Rāmūz for the despatch of plant from this place.
Harsheh حرشه	48 $\frac{1}{4}$ Left.	20 mud houses of mixed Arabs and Āl Bū Kurd. There are 10 mounted men and 10 rifles.	The village depends on agriculture.
Suwayiid (Kūt) کوت سوييد	48 $\frac{3}{4}$ Left.	At present deserted.	...
'Abdullah (Kūt) کوت عبد الله	49 Left.	60 mud houses of Āl Bū Kurd and Bāwiyeh. There are 40 rifles and 30 mounted men.	Adjoins Kūt Suwayiid, from which it is separated only by a small ridge. Detached on the south side at about $\frac{1}{4}$ of a mile is a part of the village, called Bait Haidar, which is owned by Mirza Hamzah, the principal Arab agent of the Shaikh of Muham-mareh. There is a ferry at Kūt 'Abdullah with one small boat.
Sālih (Kūt Saiyid) کوت سيد صالح	49 $\frac{1}{2}$ Left.	60 mud houses of Bāwiyeh and Āl Bū Kurd. They have 20 rifles and 15 mounted men.	This is an agricultural community. There is a small one-boat ferry.
Dibbis (Abu) ابو دبس	51 Left.	15 mud houses of poor Arabs and Āl Bū Kurd. No rifles or mounted men.	The people are cultivators. This village lies further north than the last, though it is further down the river.
Karaishān کريشان	52 $\frac{3}{4}$ Right.	20 mud houses of Āl Bū Kurd. Eight of the fighting men are mounted and 10 have rifles.	Wheat and barley are cultivated and 15 mules, a number of donkeys and some sheep and goats are owned. One small ferry boat is kept.

Name.	Miles by river below Band-i-Qīr and on which bank situated.	Houses and inhabitants.	Resources and general remarks.
'Amaireh (Kūt-al-) كوت العميرة	57 $\frac{3}{4}$ Left.	100 mud houses. Chiefly of Bāwiyeh of the Lijbarāt and Al Zahrao sections, and 50 tents of Al Bū Kurd. There are 150 mounted men and 150 rifles.	Part of the village is called Kūt Shaikh 'Alī from the late principal Shaikh of the Bāwiyeh who had his seat here. There is cultivation and about 200 camels are owned. On account of a great loop made by the river this place is about 2 miles due west of Kūt Saiyid Sulih. There is one small ferry boat.
Muzaffari (Bandar) بندر مظفری or Muzaffariyeh مظفریه	85 $\frac{1}{2}$ Left.	20 brick houses, 180 mud houses and 20 shops, also a large caravansarai and a Qahwehkhāneh built by Miz'al, the late Shaikh of Muhammareh. The people are Al Bū Kurd with a few Dizfulis. They have 10 mounted men and 100 rifles and are reputed warlike.	This place was formerly known as Ithleh اذله; it stands on a narrow tongue of land between two bends of the river. After Muhammareh and Nāsiri, Muzaffariyeh is now the most important place on the Kārūn below Band-i-Qīr. The Shaikh of Muhammareh has a brick house here and maintains an agent, one of the Al Bū Kurd; he frequently camps here himself in winter when he has business at Nāsiri or with the Bāwiyeh. There is some trade at Bandar Muzaffari with the surrounding tribes and merchants occasionally land with goods in retail quantities. One small ferry boat is kept here.
Tamair (Umm-at-) أم التمبر	61 Right.	60 mud houses occupied and 30 or 40 deserted. The inhabitants are Bāwiyeh and have 10 mounted men and 20 rifles.	The caravan route from Muhammareh to Hawizeh leaves the Kārūn at this place, which, after Muhammareh, Nāsiri, and Muzaffari, is the most important on the Kārūn below Band-i-Qīr; and Shaikh Anāyeh, who is in direct charge of the right bank

Name.	Miles by river below Band-i-Qir and on which bank situated.	Houses and inhabitants.	Resources and general remarks.
Maqtū' مقطوع	63 Right.	At present deserted, but Muhaisin and Bani Tamīm (II) of the 'Ayāishah section still encamp here occasionally and cultivate wheat and barley.	of the Karün as representing the Shaikh of Muhammareh, resides here. Wheat and barley are grown; and a few mules, a number of donkeys and cattle and some sheep and goats are owned. There is one small ferry boat. This place was once (it is said) the seat of the Maulas of Hawizeh. It is stated that a canal formerly ran from this place to Hawizeh and had a branch which went off in a southerly direction.
Khif خفي	65 Right.	10 mat huts of Muhaisin of the Manai'at section. They have 5 rifles.	Inhabited only in the seasons of seed-time and harvest.
Ghazzāwiyeh غزازيه	66 Left.	30 mud houses of Bāwīyeh of the Nawāsir and Lijbārāt sections: they have 10 mounted men and 20 rifles.	The people are cultivators. There is a ferry here with one small boat.
Milaihān مليحان	68½ Right.	20 houses of mud and reeds occupied by Muhaisin of the Manai'at section. 10 men are mounted and there are 20 rifles.	This is a colony located by the Shaikh of Muhammareh for the protection of the river traffic. They cultivate wheat and barley. There is one small ferry boat.
Morān موران	73 Left.	30 mat huts of Muhaisin who have 30 mounted men and 15 rifles. Bāwīyeh of the Nawāsir section are also found here.	By the Muhaisin only occupied in the seasons of agriculture.
Bayūdh بيروش	78½ Right.	A couple of huts, one of reeds and one of mud, occupied by Saiyid Nāsir, a member of a Saiyid family of Ahwāz. No arms.	Wheat and barley are grown.

Name.	Miles by river below Band-i-Qār and on which bank situated.	Houses and inhabitants.	Resources and general remarks.
Braikēh بریکه or Braicheh برچه	78½ Left.	150 mud houses of Ma'āwīyeh. They have 60 rifles and 30 mounted men.	Wheat and barley are grown and livestock include 30 horses, 15 mules and some donkeys, cattle and sheep. The Ma'āwīyeh formerly paid their revenue to the Shaikh of Muhammāreh through the Bāwīyeh , but their headman is now permitted to retain it as a personal allowance. One small ferry boat is kept.
Fārsiyāt فارسیات	83½ Left.	4 mud houses and about 25 huts of Muhaisin, among whom are a few Saiyids. Rifles number 10 and mounted men 20.	This place is only occupied at the times of ploughing and reaping. There is then a small ferry boat here.
Isma'ili * (اسماعیلی)	91½ Left.	40 mat huts of Muhaisin of the Mutūr section: they have 20 rifles and 25 mounted men.	Sometimes pronounced Simā'ini. Except a garden (with two masonry water lifts) which is cultivated all the year round, Isma'ili is deserted at the seasons of agricultural inactivity. A small ferry boat is sometimes to be found.
Chimaiyān چیمیان	93½ Left.	17 mat huts of Muhaisin and 3 of Saiyids, with 10 rifles and 15 mounted men.	...
Qājāriyeh قاجاریه	94½ Right.	60 reed huts of Muhaisin of the Zuwaiddāt section. There are 60 rifles and 50 mounted men. At seed-time and harvest the place is temporarily increased by about 35 houses of Bani Tamīm (II).	This place was formerly known as Saiyid Kādhim سید کاظم. Wheat and barley are grown. About 50 horsemen, viz., the mounted men of the village, are stationed here by the Shaikh of Muhammāreh for the protection of the river, and there is a small mud fort. A post and telegraph office constructed here by the Persian Government was never used as such and has now been converted into a rest house. There is a ferry with one small boat.

* A view of Isma'ili will be found in Chesney's *Narrative*.

Islands.—The following is a list of the principal islands in the Kārūn :—

Name.	Vernacular equivalent.	Position, etc.
Wais	ويس	A little below the Muwailleh hamlets.
Luqbair	لقبير	Opposite the tract called Luqbair.
Khuwaiseh	خويسه	Opposite Qrāneh.
Agha (Jazīrat-al-)	آغا	Opposite the tract known as Zūwīyeh.
Umm-an-Nakhl	أم النخل	Immediately above the Ahwāz rapids.
Umm-as-Sabā'	أم السباع	Between the second lowest and the lowest of the Ahwāz rapids.
Abu Dibbis	ابو دبس	2 miles below the village of Abu Dibbis.
Karaishān	كرايشان	2 miles below the village of Karaishān.
'Amaireh (Jazīrat-al-)	عميره	Opposite Kūt-al-'Amaireh village.
Ithleh	اثله	Opposite Muzaffari.
'Adhrāt	عذرات	A long island 4 miles below Kut-al-'Abid.
Salmāneh	سلمانه	Half a mile below the point where the Salmā-niyeh canal leaves the Kārūn: the island is about 300 yards long.
Dāir (Jazīrat-al-)	دائر	A very small island opposite to the Mārid creek on the left, and to Sāblah on the right bank of the river. A masonry dam here, of which the remains are still visible, is said to have been destroyed by Karīm Khān, Zand.

Political control.—The right of armed vessels or boats under foreign flags to enter even the lowest reach of the Kārūn is disputed by the Persian Government; and on each occasion that a British gunboat has anchored higher up than the British Consulate at **Muhammareh** a protest has been lodged by the local representative of the Persian Foreign Office. These protests have never been followed by any result.

KĀRWĀN

کاروان

A small district near the coast in Persian **Makrān**; it lies upon both sides of the **Rāpch** river, beginning on the south at about 10 miles from the coast and extending thence northwards for a distance of 10 or 15 miles; its breadth also, from near Balak on the east to the Kāshi stream on the west, is about 10 miles. Kārwān is, for Persian **Makrān**, a well cultivated and well wooded tract; it abounds with small game, such as black partridge and, in the season, duck. The inhabitants of Kārwān are known as Kārwānis; their tribal divisions are given in the article on Persian **Makrān**. The principal villages are :—

Name.	Position.	Number of huts.
Ganjak گنچک	11 miles north-west of the telegraph cross- ing on the Rāpch river.	35
Gāo گاو	10 miles north of do.	12
Haivān هیاں	2 miles west of Gāo.	20
Kārkindār کارکندار	12 miles north-west of the telegraph cross- ing on the Rāpch river.	40
Tambālān تمالان	8 miles north of do.	25

The chief village is Kārkindār, and besides the places mentioned above there are several small hamlets of which the names and particulars have not been ascertained. The village of Sāul, described in the article on Persian **Makrān**, should perhaps be reckoned to Kārwān. Five headmen of the Kārwān district receive annual subsidies aggregating Rs. 700 from the Indo-European Telegraph Department for the protection of the land line within their district. The district forms part of the chiefdom of Gaih.

KATHIR

کثیر

Generally pronounced Chathir; an important Arab tribe of Northern 'Arabistān. The Kathir occupy both banks of the Diz river, the Bait Sa'ad being in places interspersed with them, from the limits of the

'Anāfjeh up to a point 8 or 10 miles above Qal'eh 'Abdush Shāh; also the country in general between the Diz and the Karkheh rivers belongs to them. The majority are tent-dwelling nomads; but in the Dizfūl District they are found in the villages of Qal'eh 'Abdush Shāh, Jirqeh Saiyid Ahmad, Qal'eh Bānūt and Dih Nau. Some Kathīr also are settled at 'Arab Hasan on the Shatait. The Kathīr, unlike other Arab tribes of 'Arabistān such as the Bāwiyeh, not only take Persian wives themselves, but are accustomed to give their daughters in marriage to Persians.

The following is a statement of the divisions of the tribe :—

Section.	Subsection.	Location.	Fighting strength.	REMARKS.
Ka'ab-ad-Di-bais کعب‌الدیس	...	Right bank of the Shā-ūr to the west of Sh ū s h near Qar-yeh Saiyid Tāhir.	800, all with rifles, of whom 50 are mounted.	This section are said to own 3,000 buffaloes, 4,000 cattle and 10,000 sheep and goats.
Karīm (Bait) بیت کریم	Karīm or Mauleh (Bait) بیت کریم موله	Husainiyeh, a tract on the right bank of the Diz 7 miles above the 'Ajī-rub and extending from the Diz to the Shāūr.	500, all with rifles, of whom 300 are mounted.	This section takes one of its names from Mauleh who is a brother of Shaikh Haidar: the other name is generally pronounced Charīm or Jarīm. Their live-stock are estimated at 500 camels, 400 mules, a few buffaloes, 1,000 cattle and 20,000 sheep and goats.
Do.	Ma'alleh معاله	Do.	50, all with rifles, of whom 30 are mounted.	The ruling family of the Kathīr in old times were of this section. They are stated to possess 30 camels, 140 mules, 100 cattle and 1,500 sheep and goats.
Do.	Mahmūd محمود	Right bank of the Diz, 7 miles above Kūt 'A b d u s h Shāh.	100, all mounted and armed with rifles.	Called after a Shaikh whose father was paternal uncle of Shaikh Haidar.

Section.	Subsection.	Location.	Fighting strength.	REMARKS
Karīm (Bait) بيت كريم	Nāsir (Āl Bū) آل بر ناسر	Husainiyeh, as above.	100, all with rifles, of whom 30 are mount- ed.	The real Āl Bū Nāsir were almost exter- minated 20 years ago by Ghāfil, grandfather of Shaikh Haidar; the section is now com- posed largely of out- siders who have become incorporated with it. The Āl Bū Nāsir own 40 camels, 100 mules, 200 cattle and 2,000 sheep and goats.
"Khaltaq" خاطق (i.e. miscel- laneous de- pendents)	Bakhaitāt بخيئات	Left bank of the Diz between the Shūreh and the 'Ajirub.	100, all with rifles but none mount- ed.	Their animals are 150 buffaloes, 200 cattle and 2,000 sheep and goats. The Bakh- aitāt are attached to the Dailam sub- section below.
Do.	Dailam ديلم	Do.	300, all with rifles but none mount- ed.	Their livestock are estimated at 600 buffaloes, 2,000 cattle and 2,000 sheep and goats. They are sup- posed to be of the same stock as the similarly named sec- tion of the 'Anā- fijeh.
Do.	Dhabbeh ...	Left bank of the Diz above and close to Kūt 'Ab- dush Shāh.	150, all with rifles but none mount- ed.	They are said to own 200 buffaloes, 400 cattle and 3,000 sheep and goats. They are attached to the Dailam sub-sec- tion above.
Do.	Mahūr ماهور	Husainiyeh, as above.	100, all with rifles, of whom 60 are mount- ed.	These are really a divi- sion of the Sarkhah (Bani Lām), but at present they hold land under Shaikh Haidar of the Kathir, pay revenue through him, and are attached to the Bait Karīm. At times they have lived under the protection of Haidar's rival, Farhān Asad. They own 100 camels, 100 cattle and 4,000 sheep and goats.

Section.	Subsection.	Location.	Fighting strength.	REMARKS.
" Khaltaq " خلتاق (i.e. miscellaneous dependents)	Sa'ābireh سعابره	With the Dailam subsection above.	100, all with rifles but none mounted.	The Sa'ābireh are attached to the Dailam section above. They are stated to possess 100 buffaloes, 200 cattle and 3,000 sheep and goats.

Besides the above, or perhaps included in them, are said to be a section called Āl Bū Nassi who live at Hiddeh or Haddāmeh on the **Diz** and have 300 rifles.

The whole tribe may be estimated at 7,000 souls, of whom perhaps not more than 1,000 have a fixed residence.

The senior member of the Ma'alleh section formerly commanded the obedience of the whole tribe ; but at the present time two rival Shaikhs divide the Kathīr between them. Shaikh Farhān Asad is followed by the Bait Karīm subsection and part of the Dailam subsection and has his headquarters at Dih Nau ; the village of Qal'eh Banūt also belongs to his party ; and, outside of the Kathīr, the **Miyānāb** Arabs of 'Abdun Nabi on the **Gargar**, the Āl Bū Hamdān and Mahāmid sections of the Bait Sa'ad, the Bait Sa'ad of Saiyid Hasan on the **Gargar**, and indeed the Bait Sa'ad generally, are his adherents. The remainder and great majority of the Kathīr upon the upper **Diz**, obey Shaikh Haidar, to whom the village of Qal'eh 'Abdush Shāh belongs. Both chiefs are recognised by the Persian Government, and the control of the country and tribesmen and the collection of revenue is left entirely in their hands ; the total annual revenue demanded from the two is said to be 4,725 Tūmāns, for the greater part of which Shaikh Haidar is responsible. Shaikh Farhān Asad cultivates the friendship of the Shaikh of **Muhammareh** and his sister is married to Karīm Khān, Fāili Lur of 'Amleh Karīm Khān ; while Shaikh Haidar, whose daughter is married to a chief of the Sagwand **Lurs** and who has himself a Sagwand wife, is inclined to rely for support in difficulties on the Sagwands and indirectly on the Wālī of Pusht-i-Kūh. The relations of Shaikh Farhān Asad are with the Persian officials at **Shūshtar** and those of Shaikh Haidar with the authorities at **Dizfūl** ; consequently the tribe may be regarded as divided between the two districts of Northern 'Arabistān. It is a remarkable fact that of the Shaikhs—who are distantly related to one another—neither really belongs to the Kathīr tribe, but both are of Bait Sa'ad extraction.

KATHĪR
(ĀL)
آل كثير

Singular Kathīri كثيري. The principal tribe in **Dhufār** Proper where all the villages except Tāqa belong to them; they are represented in the **Samhān** hills also by several sections, who act as a partial counterpoise there to the uncivilised **Qaras**. A few emigrants of the tribe are settled at Dōhah in the **Masqat** District near **Masqat** Town. The following table explains the subdivisions and distribution of the Āl Kathīr:—

Section.	Number of families.	Habitat.	REMARKS.
'Ali-bin-Badr (Bait) بيت علي بن بدر	150	In the lower Samhān hills immediately behind Salālah .	Nil.
'Amr-bin-Muhammad (Bait) بيت عمر بن محمد	40	Salālah , etc.	Do.
Fādhl (Āl) آل فاضل	120	At 'Auqad-al-Fādhl and Dahāriz.	Do.
Ghawwās (Bū) بو غواس	150	At Salālah , and in the Samhān hills.	Do.
Marāhīn مراهين or Marhūn (Bait-al) بيت المرهون	50	All at Salālah , except a few at 'Auqad-al-Marhūn.	Do.
Muhammad-bin-Hamad (Āl) آل محمد بن حمد	150	In the Samhān hills.	Do.
Shanāfirah شنافرة	225	At Hāfah, etc.	This section are loyal to the Sultan of 'Omān. Their present Shaikhs are Bakhīt and 'Alī-bin-'Umr. The Shanāfirah are said to have been originally 'Awāmīr but they are now reckoned to the Āl Kathīr.

Other sections, entirely Bedouin, are the Bait Bakhīt-bin-Salīm بن خيثم بن سالم the Bait al-Hamar حمير the Bait Jadād جداد and the Bait Masan

مسى : of these the Bait Masan gave much trouble to the Sultān's Government between 1895 and 1897. Altogether the settled Āl Kathīr probably number about 2,500, and the nomadic about 2,000 souls.

The settled Āl Kathīr are agriculturists ; their resources are described in the article on **Dhufār Proper**. The nomad sections in the hills own camels and cattle and collect frankincense like the **Qaras**, whom in their arms, clothing and habits they very closely resemble, except that they arrange their hair in a top-knot instead of binding it with a fillet ; their language is possibly a dialect of Arabic, but it is reported to be quite different from that spoken by the Bedouins of 'Omān and it has not as yet been properly investigated. Some of the Āl Kathīr Bedouins are almost jet black.

The Āl Kathīr are a Hināwi tribe and claim to have immigrated from Hadhramaut some 3 centuries ago, conquering **Dhufār Proper** and establishing a capital at Dahārīz : they are Ibādhīs. There is constant friction between them and their **Qara** neighbours.

A considerable village in the **Dizfūl** District of Northern 'Arabistān, situated about 16 miles south-east of **Dizfūl** and 22 miles north-west of **Shūshtar** on the route connecting those towns ; it is the ordinary halting place for travellers between the two places. **Kāunak** stands on the left bank of a stream of the same name, which is a left-bank affluent of the **Diz** river. The bed of the **Kāunak** stream at the village is usually a dry or nearly dry stretch of shingle about a mile across ; after moderate rain, however, there is a good flow of water in several distinct channels, and heavy rain renders it impassable for short periods.

The village consists of about 100 mud houses ; it is not surrounded by a wall, as are most of the villages of the **Dizfūl** District. A caravansarai stands about 200 yards north of the place ; it is a mud-walled enclosure, but some of the interior buildings are of brick and there are a few small lodgings for better-class travellers in an upper storey. This building, along with the right to maintain 4 shops in **Kāunak** village, is held on lease by a private individual who pays 50 'Tūmans a year to the owner of the caravansarai and 20 to the Kadkhuda of the village. The only

KĀUNAK
كانك

defences of Kāunak are a couple of upper-storeyed buildings in the village, which show a few loopholes, and a small mud tower with a timber roof. There are two water mills.

The inhabitants of Kāunak are **Bakhtiyāris** and a few **Dizfūlis**: there is one shopkeeper from **Shūshtar** Town. The fighting strength fluctuates; at the best there are but 10 or 12 rifles, and in September 1904, when an attack by **Dirakwand Lurs** was expected, the place was almost deserted.

Rice, **Kunjid**, **Māsh**, wheat, barley, beans and cotton are cultivated on the village lands, which are irrigated from the Kāunak stream. A canal takes out of the stream a few hundred yards above the village, and beyond Kāunak it reaches a group of hamlets called **Gumār** which also it serves: there is a fair supply of water at all seasons of the year, but it is rather brackish. No transport is procurable at Kāunak except about 50 donkeys; cattle number about 150, and sheep and goats about 600.

There are four local shrines: the **Imāmzādeh** of **Bibi Qulkhān** قلخان, close to the caravansarai; a **Qadamgāh** of **Hazrat 'Abbās** and another of **Imām Riza**, both on the south side of the village and close to it; and a **Qadamgāh**, called **Amir Wazir**, half a mile from the village in the direction of **Shūshtar** Town. These shrines are visited by the surrounding Arabs as well as by **Dizfūlis** and **Shūshtaris**.

The revenue of Kāunak is paid into the **Dizfūl** treasury. With that of **Gumār** it amounts to 1,000 **Tūmāns** per annum for crops except rice being assessed, it is said, at the rate of 2 **Tūmāns** a plough; half produce in kind is paid on account of rice cultivation.* A flour mill belonging to the village, which charges customers 1 **Qrān** and 1 **Dizfūli Man** of flour on every 12 **Dizfūli Mans** ground, is assessed to revenue at 500 **Tūmāns** a year. Kāunak belongs to the **Bakhtiyāri Khāns** and to **Āgha 'Ali**, **Mustaufi**, of **Dizfūl**.

KHABBAH

(WĀDI)

وادي خببه

A valley in the Eastern **Hajar** district of the 'Omān Sultanate, a tributary of **Wādi Tāyīn** which it joins from the right bank at **Ghubrat-at-Tām**. **Wādi Khabbah** comes down from the watershed between the **Wādi Tāyīn** basin and **Sharqiyah**; its direction near its junction with **Wādi Tāyīn** is from south-south-east to north-north-west and in this

* The annual cash assessment of Kāunak, separately, is now reported to be 318 **Tūmāns** (1907).

part of its course it has no visible stream, but yields water in shallow wells and Falajs. The principal places in Wādi Khabbah are :—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Sama'iyyah سماعية	At the head of the Wādi on the watershed.	Left.	200 houses of Hanādhilah, Bani Jābir of the Al Saba' section, etc.	Nil.
Khabbah خبه	3 miles below Sama'iyyah.	Do.	100 mud houses of H i s h m , Siyābiyin, Bani Bū 'Ali and Suwā-wifāh, also Bani Jābir of the Al Saba' section and Hanādhilah: of the whole half are Siyābiyin.	Do.
Waljah ولجه	7 miles below Khabbah and 3 above Ghubrat-at-Tām.	Do.	80 houses of Hanādhilah.	Do.

The fixed population of the valley is thus about 1,900 souls.

A good route from Wādi Tāyīn into Sharqiyah lies up Wadi Khabbah: it is described as running westwards and south-westwards over a pass called Najd-al-'Awainah عرينه to Bataiyin بطين near Munjarid المنجريد.

A town of the Qasīm province in Najd, normally subject to **KHABRAH** خبرة Buraidah and distant about 35 miles south-westwards from that place. The site of Khabrah, which is near the left bank of Wādi-ar-Rummah, has no natural amenity, and the place consists of long, dreary streets of half-ruinous clay cottages. The town is surrounded by a mud wall and has a public square about an acre in extent, in the middle of which rises the watch-tower, commanding a view of the surrounding

country. The population of Khabrah is about 3,000 souls and, though tradition represents it as originally a settlement of the **Qahtān**, the present inhabitants are described as of '**Anizah** extraction : they are dull, ungracious and inhospitable. The majority live by agriculture, but many are camel-men. Dates, fruit and the ordinary cereals and vegetables of **Qasim** are grown on the town lands by irrigation from wells 8 fathoms deep ; the water of the town is sweet. The arable lands are in the bed of **Wādi-ar-Rumma** below those of **Rass**. A weekly market is held on Fridays. There are said to be 300 camels, a few donkeys and about 60 cattle, but no horses at this place.

KHĀBŪRAH خابورة

A town on the **Bātinah** coast in the Sultanate of '**Omān**, almost midway between its two extremities being situated 19 miles south-east of **Saham** Town and 22 miles north-west of **Suwaiq**. **Wādi-al-Hawāsinah** reaches the coast here, passing by the eastern side of the **Khābūrah** bazaar. The town consists entirely of huts ; but it is now larger than **Sohār** Town and the inhabitants may number 8,000 souls, of whom 6,000 are **Hawāsinah** belonging, in part at least, to the **Hawāmid** and **Sawālim** sections. There are also a few **Qatait**. About 25 families of **Khōjahs** are settled here. **Khābūrah** is the port of **Wādi-al-Hawāsinah** and its tributaries and partially of **Wādi 'Āhin**; and 5 sea-going boats are owned which run to **Masqat** with dates and to the ports of Trucial '**Omān**. There are also 30 **Shāshahs** and 15 small boats. Wheat is cultivated by irrigation from wells and there are 8,000 date trees : sheep and cattle are few and the only transport animals belong to visitors. The Sultān of '**Omān** has a **Wāli** at **Khābūrah** supported by a detachment of 10 '**Askaris**. The revenue is only about \$2,000 a year, collected as **Zakāt**, and of this the whole is expended on the local administration.

KHADHAR (JABAL) جبل خضر

A range forming part of the Eastern **Hajar** hills in the '**Omān** Sultanate but running, apparently, at right angles to them ; it constitutes the western side of **Wādi-Falaij**. **Jabal Khadhar** is barren, rugged and

precipitous, consisting of masses of limestone piled one upon another : its average height above the sea may be 5,000 to 6,000 feet. The highest summit of the range is situated about 9 miles west of Rafsah. Several villages and other frequented spots lie along the eastern foot of Jabal Khadhar ; the principal in order from north to south are :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Lamīm لميم	In a Wādī of the same name.	Camping ground and date-grove of the Mashārifah, but no permanent dwellings.	There are 100 untended date palms.
Taima تايما	In a valley called Wādī-al-Manjūl وادي المنجل about 8 miles west of Sūr.	200 houses of Mashārifah.	Date palms are about 500.
Wādaila واديلا	A very short distance south of Taima.	80 houses of mixed tribes.	There are 800 date palms.
Tahwa طهري	3 hours south-west of Taima.	60 houses of Hishm.	Palms are about 300.

Each of the above villages possesses a few donkeys, sheep and goats ; and the total population of the tract seems to be about 1,700 souls.

A comprehensive term used in Southern Najd to describe the body of inferior tribes by whom chiefly, in a number of the districts, cultivation is carried on on behalf of the Arab masters of the soil. The Bani Khadhīr seldom own land themselves ; but the Qāsim at Saih in Aflāj, who are Bani Khadhīr, constitute an exception to this rule.

KHADHĪ
(BANI)
بني خضير

Distribution.—Bani Khadhīr are found in the south-western part of Najd at Quwaīyah ; in Aflāj at 'Amār, Badi', Haddār, Harādhah, Kharfah, Lailah, Rajaiyyah, Raudhah, Saih, Shutbah, Stārah, Wāsīt and Wusailah ; and in 'Aridh at Haraimlah, Jarinah, Malham, Rghabah, Salbūkh, Sidūs and Thādiq in the Mahmal division

of the district, as well as at Jabailah, Malqa, 'Ammāriyah, 'Ilb, 'Audah, **Dara'iyah**, 'Arjah, Bātin-ash-Shuyūkh, **Riyādh**, Manfūhah, Masāni' and Hāir on Wādī **Hanifah**, and at Dhrumah proper, Mizāhmīyah and Rōdhah in **Dhrumah**. In **Harīq** they occur at Harīq town and Mufaijir; in **Hautah** at Hautah town, Hilwah, Quwai' and Wusaitah; in **Kharj** at 'Adhār, **Dilam**, Na'ajān and Sulaimīyah; and in **Sadair** at 'Ashairah, 'Attār, 'Audah, Dākhilah, Ghāt, Harmah, Hāsūn, Hautah, Jalājil, Janūbiyah, Khatāmah, Khis, **Majma'**, Raudhah, Ruwaidhab, Tamair, Tuwaim and Zilfi.

Divisions.—The following are a few of the sections, or rather tribes which go to form the general body of the Bani Khadhīr, together with the names of some of the places at which they are found:—

'Atij (Bani) بني عتيج at Zilfi.	Mizai'al مزيعل at Thādiq.
Had-hūd هدهود at Malham.	Muhārib محارب at Malham.
Hamadāt حمادات at Malham.	Natāqah نقاق at Zilfi.
Jamai'ah جميعه at Thādiq.	Qasim قاسم at Suib.
Jida'ah جداعه at Thādiq.	and
Marshūd مرشود at Malham.	Rabaiya' ربيع at Thādiq.

KHAIMAH The northernmost district in the principality of **Shārjah** in Trucial
(RĀS-AL-) 'Omān: it forms part of the 'Omān Promontory, and in shape it
 راس الخيمه is roughly triangular with its base to the west.
DISTRICT*

Boundaries and divisions.—The Rās-al-Khaimah district is divided from the **Ruūs-al-Jibāl** district of the 'Omān Sultanate on the north-east by a line which runs obliquely from Rās-ash-Sha'ūm on the west coast of the promontory to a point between the villages of **Dibah** proper and **Bai'ah** on the east coast. On the west, from Rās-ash-Sha'ūm on the north to the southern end of **Jazīrat-al-Hamra** on the south, it is bounded by the sea, and thence by a line, of which the course is indefinite, drawn across the desert to the southern extremity of the **Jiri** plain. The south-eastern limit is an imaginary line connecting the south end of **Jiri** with the east coast at a point immediately south of **Dibah**.

The principal divisions of the Rās-al-Khaimah district are the plain of **Sir**, the plain of **Jiri**, **Jazīrat-al-Hamra**, the island of **Tunb**, and the

* For authorities, maps, charts, etc., see first footnote to article Trucial 'Omān.

remainder of the tract of which the boundaries have been described above : the last mentioned division has no general name.

Physical characteristics.—**Sir, Jiri, Jazīrat-al-Hamra** and **Tunb** are described elsewhere under their own names. The rest of the district consists, on the west, of low, sandy desert adjoining the sea; and, on the east, of a section of the mountains that form the spine of the 'Omān Promontory. The hilly tract is divided into two nearly equal sections, a northern and a southern, by the Wādi-al-Qaliddi route between Rās-al-Khaimah Town and Dibah.

Topography.—For the topography of the **Sir** and **Jiri** tracts, Wādi-al-Qaliddi and **Hamra** island the articles under those names may be consulted. the following is a table of the principal places in the remaining portion of the district :—

Name.	Position.	Nature.	REMARKS.
Dibah دبه	On the east coast of the 'Omān Promontory, between the districts of Ruūs-al-Jibāl and Shamailiyan.	...	See article Dibah .
Ghalilah غليله	On the west coast of the 'Omān Promontory, about 1 mile south of Sha'am.	A village of 50 mud and stone houses of Shihūh of the Bani Shatair division and 'Ayl Sā'ad section.	The inhabitants have 5 fishing boats and about 4,000 date trees.
Hamra (Jazīrat-al) جزيرة الحمرا	12 miles west-south-west of Rās-al-Khaimah Town.	...	See article Jazīrat-al-Hamra .
Khaimah (Rās-al) راس الخيمه	On the west coast of the 'Omān Promontory, about 48 miles north-east of Shārjah Town.	...	See article Rās-al-Khaimah Town .
Khuwair (Khor) خور خوير	On the west coast of the 'Omān Promontory, between Ghalilah and Rams.	30 houses of Shihūh of the Bani Shatair section.	Date palms are estimated at 2,000 trees, and livestock at 10 camels, 10 donkeys and 300 sheep and goats. There is a creek here which can be used by boats at high water.

Name.	Position.	Nature.	REMARKS.
Muzāhmi مزالحمي	On the west coast of the 'Omān Promontory, towards Umm-al-Qaiwain.	An inlet with a sandy beach.	It is uninhabited but is a resort for fishermen using small boats.
Rams رمس	On the west coast of the 'Omān Promontory, 8 miles north-east of Rās-al-Khaimah Town.	...	See article Rams.
Sha'am الشعم	On the west coast of the 'Omān Promontory, 17 miles north-north east of Rās-al-Khaimah Town.	...	See article Sha'am.
Shariyah شرية	In the hills north-west of Dibah, in a valley called Hajil حجيل which is said to drain towards Rās-al-K h a i m a h Town.	10 houses of Sharqi-yīn.	The place is under Rās-al-Khaimah Town; its resources are estimated at 10 donkeys, 20 cattle, 600 sheep and goats and 2,000 date palms.
Wamm وَم م	In the hills somewhat to the north of the Dibah Rās-al-Khaimah route at a point a few miles to the west of Dibah.	30 houses of Shar-qi-yīn.	Wamm is under Dibah. Donkeys number about 50, cattle 50, sheep and goats 400 and date palms 1,500.

Population.—The settled inhabitants of the district number about 16,000 souls as below :—

Sir	2,50
Jiri	1,000
Jazīrat-al-Hamra	2,500
Remainder of the district (including Tunb island)	10,000

Among the fixed population the Za'āb with about 2,500 persons are numerically the most important tribe; after them come the Ahl Rās-al-Khaimah, Shihūh and Tanaij with about 2,000 souls each. The Mahārah (1,250) and the Bani Shamaili (1,000) are also considerable tribes; and cultivators of mixed tribes, included under the general and merely descriptive term of Bayādir, are numerous. The remainder of the settled popula-

Crowd at Rās-al-Khaimah.

(MAJ. P. Z. COX.)

tion are 'Awānāt, Āl 'Ali, Āl Bū Mahair, Mazāri, 'Naqbiyīn, Sharqi-yīn, and a very few Balūchis.

The nomads of the district, chiefly in Jiri, are either Na'im of the Khawātir section or Ghafalah.

Agriculture and trade.—The agricultural resources of the district may be learned from the village and topographical tables in the articles upon the divisions of which it is composed.

The trade of the district is concentrated at Rās-al-Khaimah Town, to the article on which reference may be made.

Communications.—The subject of routes is dealt with in the general article on Trucial 'Omān.

Administration.—The Rās-al-Khaimah district is at present governed by Khālid-bin-Saqar, the eldest and only surviving son of the Shaikh of Shārjah, as his father's deputy ; it brings in no surplus revenue, but the receipts, which are said to amount to Rs. 6,300 from the pearling interest alone, cover the expenses of the administration. The only military force is a body of armed retainers maintained by the Deputy-Governor at Rās-al-Khaimah Town, which is his headquarters. The town of Dibah and village of Wamm, it should be noted, are at present exempt from the Deputy-Governor's jurisdiction and are held in fief by Rashid-bin-Majid, a first cousin of the Shaikh of Shārjah ; the feudatory personally resides at the place and is styled Wālī of Dibah.

This town, the capital of the district similarly named in the principality of Shārjah, is situated on the coast of Trucial 'Omān about 48 miles north-east of Shārjah Town and 24 miles west-north-west of Dibah on the opposite side of the 'Omān Promontory.

KHAIMAH
(RĀS-AL-)
رأس الخيمة
TOWN

Site and harbour.—The town stands upon a narrow spit of land, 2½ miles in length, which runs parallel to the coast and is connected with the mainland at its south-western end. The country in the vicinity of the town is low, flat and sandy. A dense grove of dates, mostly belonging to the tract called Sir, begins opposite the town and extends a considerable distance inland, continuing northwards as far as Rams ; while a line of reddish sandhills, commencing a

little to the south-west of the town, reaches to Jazīrat-al-**Hamra** and beyond. The creek enclosed between the spit and the mainland contains an uninhabited island called **Qurmah** قمره; and on the eastern side of the creek there formerly stood a village named **Mahārah** محاره, of which the deserted site, or its vicinity, is generally occupied by some colony of temporary visitors to Rās-al-Khaimah. At present such a settlement, known as **Ma'airidh** معيرى and inhabited by Persians from **Rams**, etc., exists on this shore of the creek. Apart from the entrance at Rās-al-Khaimah town, the creek is connected with the sea by a backwater, 4 miles long, which has its opening on the coast $1\frac{1}{2}$ miles south of **Rams**. The creek forms an excellent and well sheltered anchorage for native boats; but, though 9 feet deep inside, it has only 2 feet of water at the entrance at low tide: the approach, however, could probably be somewhat improved by dredging. The anchorage for large vessels is at sea, $2\frac{1}{2}$ to 3 miles north-west of the town.

Defences.—A dilapidated wall crosses the isthmus to the south-west of the town, and there is a fort in the town itself. Neither is of any modern value.

Inhabitants.—There are altogether about 1,000 houses in Rās-al-Khaimah, of which half are built of stone and gypsum mortar, while the remainder are huts of date leaves. The largest section of the inhabitant are a mongrel race, known as **Ahl Rās-al-Khaimah** اهل راس الخيمة, formed by the fusion of various Arab tribes; these may number 400 houses. The other main elements of the population are **Mahārah** محاره (250 houses), **Āl 'Ali** (150 houses) and **Āl Bū Mahair** (120 houses). There are also a few **Na'im** of the Darāwishah section of the **Āl Bū Shāmis** division. In the town are found also 10 families of **Balūchis** from the **Bashākard** district of Persia who live by working in the date gardens of **Sīr**. There are here no resident Hindu traders; but 33 **Kōhjahs**, British subjects, are settled in the place.

Resources.—Drinking water is scanty and indifferent. The date plantations belonging to the town are estimated to contain about 15,600 trees, and the inhabitants possess in addition livestock to the number of 20 horses, 130 camels, 175 donkeys, 150 cattle and 300 goats. About 33 pearl boats and 15 other sea-going vessels, of which 7 are **Baghlahs** and the rest **Sambūks**, belong to this port; 10 of the pearl boats belong to **Ma'airidh** and are of small size. There are also about 120 fishing boats.

COPYRIGHT.

Rās-al-Khaimah, looking towards Ruūs-al-Jibāl.

(MrJ. P Z. Cox.)

Trade and manufactures.—The trade resembles that of other places on the coast of Trucial 'Omān. Of the local merchants 7 are **Khōjahs**. The only manufacture is of daggers, which find a sale in the other towns of the coast.

Administration.—Rās-al-Khaimah town is the seat of the Deputy Governor of the district of the same name. He is at present a son of the Shaikh of **Shārjah** and has under his orders a force of 70 'Askars or armed retainers to man the towers and otherwise defend the place if required. There are said to be several hundreds of rifles in the town also, the owners of which would participate in repelling an attack from outside.

Singular **Khalaifi** خليفي. An Arab tribe of **Qatar** and **Bahrain** who claim to be an offshoot of the Bani 'Abidah of Yaman. Those of **Qatar** have 170 houses at **Wakrah** and those of **Bahrain** 40 houses at **Hālat-al-Khalaifāt**, but the latter village is not continuously occupied. In religion the **Khalaifāt** are **Māliki** Sunnis, and they live by pearl diving and pearl dealing and partly also by pastoral pursuits. In the cold weather most of them camp in the interior of **Qatar** with their cattle: in the hot weather they work on the pearl banks, leaving their flocks and herds in charge of Bedouins.

**KHALAI-
FĀT**
خليفةات

The principal village of the **Jarrāhi** District and the seat, alternately with **Ma'shūr**, of the agent of the Shaikh of **Muhammareh** by whom the district is managed. **Khalfābād** stands on the left bank of the **Jarrāhi** River towards the upper end of the **Jarrāhi** District and 7 miles below **Cham-as-Sābi**. There are some fords near it which are practicable for laden animals during the greater part of the year, except after rain. The village consists of only about 40 mud houses, the inhabitants being mixed Arabs and Persians engaged in agriculture. To one of the tribes or families here, called the **Amāreh** أمارة, belonged until recently the local governors of **Ma'shūr**.

**KHALFĀ
BĀD**
خلف آباد

KHĀLID
(BANI)
 بني خالد
 or
KHUWĀ-
LID
 خوالد

The singular of the name is Khālidi خالدي. An Arab tribe of Eastern Arabia who had formerly a very wide range but are now little found outside the Sanjāq of Hasa; they are still predominantly Bedouin, but appear to be in the process of settling down.

Distribution.—The domains proper of the nomadic Bani Khālīd are the northern portion of **Habl** down to the **Habaiyah** wells and the northern half of **Biyādh**; when however, as at the present time, they are on good terms with the **Ajmān**, they make use of the southern parts also of these two tracts. They also roam in **Kuwait** territory, sometimes travelling as far north as **Kuwait Town** to obtain supplies, but the **Maqta'** stream is their ordinary limit in this direction. **Summān**, too, is visited by them. Permanent communities of Bani Khālīd have for long existed on the islands of **Musallamiyah**, **Jinnah** and **Tarūt**; and during the last few years two fixed villages of Bani Khālīd have sprung up on the mainland, namely, **Umm-as-Sāhak** in the **Qatif Oasis** and **Qasr Āl Subaih** in **Biyādh**. The Bani Khālīd are also represented at **Jishshah** and **Kalābiyah** in the **Hasa Oasis** and in the fixed villages of **Wādi-al-Miyāh**; and a few are permanently settled in **Bahrain** and some at **Kuwait Town**, while others pay regular annual visits to 'Anik in the **Qatif Oasis**, and may be regarded as partially settled there.

In **Najd** part of the inhabitants of **Malham** in 'Āridh, of **Zilf** in **Sadair**, of 'Anaizah, **Qusaibah** and possibly of **Khabb** and **Qisai'ah** in **Qasīm**, and of **Quwai'yah** in the south-western desert are believed to be of Bani Khālīd extraction; those at 'Anaizah bear a stronger resemblance to Bedouins than their fellow-citizens who are Bani **Tamīm**.

Religion, character and mode of life.—The Bani Khālīd, unlike most of their neighbours, are **Māliki** and not **Hanbali** **Sunnis**: the difference is probably accounted for by their hereditary antagonism to the **Wahhābis**, from whom the **Hanbalis** are sometimes almost indistinguishable.

The Bani Khālīd are described as more dignified and formal in their intercourse with strangers than the other Bedouin tribes of Eastern Arabia; and among themselves the share of the women in the social life of the tribe is said to be more restricted. Their tents are larger than the ordinary Bedouin tent. The Bani Khālīd are considered to be handsomer and of fairer complexion than the average Bedouin, and in general appearance they resemble the settled Arab rather than the nomad. As a rule they are well dressed and ordinarily wear 'Abas: they are said to have

a characteristic way of bringing down their kerchiefs so as partially to conceal their faces. They have some slight peculiarities of dialect.

In the 3 hot weather months the Bedouins of the Bani Khālīd descend to the coast and tend the date plantations which they own at various places in its vicinity ; during the rest of the year they roam in the interior. The principal occupations of the tribe as a whole are horse and cattle breeding and the cultivation of dates ; but those who are settled on the coast engage also in pearl diving and in the sea-fisheries.

Divisions and numbers.—The following is a table of the divisions and subdivisions of the Bani Khālīd together with such detailed information as it has been possible to procure regarding them :—

Section.	Subsection.	Fighting strength.	REMARKS.
Amāir عمائر	Dawāwdah دواردہ	100	A few Dawāwdah are settled at Yasrah in Bahrain and some others may be regarded as partially settled at Anik in the Qatif Oasis; otherwise the subsection is entirely nomadic. The Dawāwdah are of low origin and only the family of their Shaikh, at present Muhammad bin-'Isa, are considered to rank equally with the Bani Khālīd of other subsections and sections.
Do.	Hasan (Āl) آل حسن	600	A few Āl Hasan are settled on the islands of Musallamiyah and Jinnah, but all the rest are Bedouins. Their chief Shaikh is Fuwairis-bin-Muhammad (others say Sudi-bin-Husain).
Do.	Khālīd (Āl) آل خالد	400	This subsection are settled on Musallamiyah island where their Shaikh, at present Shabīb-bin-Aqal, is the principal personage and holds the appointment of Mudir under the Turks; he is said to be the leading Shaikh of the Bani Khālīd tribe.

Section.	Subsection.	Fighting strength.	REMARKS.
Amāir عمائر	Razīn (Āl) آل رزین	150	Also settled on Musallamiyah island: their present Shaikh, is Adwān-bin-Nāsir.
Do.	Shāhīn (Āl) آل شاهین	100	The Āl Shāhīn are settled on Jinnah island and have at present Muqdal-bin-Sulaimān for their Shaikh: he is Muḍir of the island under the Ottoman authorities.
Do.	Various.	530	Partly nomad, partly semi-settled at Anik in the Qatīf Oasis, and partly sedentary on the islands of Musallamiyah and Jinnah.
Humaid (Āl) آل حمید	...	20	The Āl Humaid were once the predominant section of the Bani Khālid: they had their headquarters at Thāj in Wādī-al-Miyāh, and the oasis of Hāsa is said to have been subject to them. The Āl Musallam are stated to have been originally one of their sections, and it is believed that a considerable number of Āl Humaid have become incorporated with the Muntafik of Turkish Irāq. The few who remain in the Hāsa Sanjāq are all nomads, and Bārak-bin-Talwas-as-Sardh is their present Shaikh.
Jabūr (Āl) آل جبور	...	150	Now partially settled at Jish-shah in the Hāsa Oasis. The subsectional Shaikh is Abdul Muḥsin-bin-Bidāh.
Mubāshīr. مباشیر	...	150	The majority of this subsection are nomads, but some are partially settled at Anik in the Qatīf Oasis, while others have become permanently residents of Musallamiyah and perhaps of Jinnah island and a few of their Kuwait Town: their Shaikh is Āli-bin-Āli Āl Kulāib (others say Banū-bin-Thamāiyān).

Sect-on.	Subsection.	Fighting strength.	REMARKS.
Miqdām (Āl) آل مقدم	...	300	The majority of this section are nomads; the Shaikh is Marzūq-bin-'Amir, Al Faiyādh. This section are represented at Kalābiyah in the Hasa Oasis.
Nahad (Bani) بنی نهد	...	300	Mostly nomads; the Shaikh is Raja-bin-Musbih.
Subaih (Al) آل صبيح	'Ainain (Āl Bū) آل بر عيين	...	This subsection, found only in Qatar and Bahrain, must now be regarded as a separate tribe, and they are described in a separate article.
Do.	Dhahairāt صحيرات	130	Settled at Qasr Āl Subaih. Their Shaikh is at present Zaltūn-bin-Shadaiyid.
Do.	Had-hūd هدهود	100	Also settled at Qasr Al Subaih, their present Shaikh being Abdullah, Al Āzzām.
Do.	Haiyah (Āl) آل حية	50	An entirely nomadic subsection, under Shaikh Jarbō'ah-bin-Marshad.
Do.	Hamaidāt حميدات	...	This subsection, located in Qatar and Bahrain, is now to all intents and purposes a distinct tribe and is described separately under its own name.
Do.	Katab (Al) آل كطب	180	It is stated that the Bani Qitab or Katab of 'Omān are of the same origin as this subsection. The present Shaikh of the Al Katab in the Hasa Sanjāq is Khālīd bin-Fahad, Al Thawāb.
Do.	Makhāsīm مخاصم	80	This subsection are altogether nomadic; but their Shaikh, at present Muhammad-bin-Ājrān, is Shaikh also of the whole Al Subaih section.

Section.	Subsection.	Fighting strength.	REMARKS.
Subaiḥ (Āl) آل صبيح	Zaban (Āl) آل زبن	160	Bedouins: their Shaikh at this time is Sultān-bin-Mansūr.
Do.	Various	500	Partly nomads and partly settled at Qasr Āl Subaiḥ.

The settled Bani Khālid of Malham are stated to belong to a section called Qammāz قماز, those of Zilfi to sections styled Dūshān دوشان and Hamrān حرمان and those of Quwai'yah to one known as 'Arāfah عرافه. There is also a small nomadic section, the Kathīr كثير, who are found to the north of Kuwait among the Dhafīr tribe.

The fighting strength of the Bani Khālid, exclusive of divisions which have separated from them and become independent tribes, is thus about 4,000 men; and the total number of souls in the tribe, subject to a similar deduction, may be roughly estimated at 14,000.

History and present political position.—Less than 150 years ago the Bani Khālid were the paramount tribe of Eastern Arabia, and the extent of their territory at that time is marked by the fact that caravans between Baghdād and Aleppo used to suffer from their depredations. Their power was first broken by the Wahhābis in or before 1795, and in 1830 they were obliged to surrender the sovereignty of the Hasa Oasis to the Wahhābi Amīr. In 1874 the Turks attempted to govern the Hasa Sanjāq through one of the Bani Khālid chiefs, but the experiment was a failure.

The Bani Khālid are on bad terms with the Mutair and the Āl Morrah, and the recent establishment of the village of Qasr Āl Subaiḥ was intended to facilitate the prosecution of hostilities against those tribes. With the Turks the Bani Khālid are in somewhat close relations, and the non-nomadic portion of the tribe for the most part pay them a regular Zakāt; but the allowances disbursed by the Porte to the tribe as a whole exceed the revenue which is recovered from the sedentary sections. The Shaikh of the Āl Khālid section is styled Mudīr of the island of Musallamiyah and receives a monthly allowance of \$30, which he shares (unofficially) with the Shaikh of the Āl Razīn; and the other headmen on the island are given annual presents of about \$50 each. The Shaikh of the Āl Shāhīn is similarly called Mudīr of Jinnah island, and he also receives an allowance from the Turks of \$30 per mensem. The settled Bani Khālid of Qasr Āl Subaiḥ, however, appear to consider themselves independent of the Turks; and so apparently do the nomadic branches of the tribe unless when they are in the neighbourhood of Turkish posts.

A valley in the Eastern Hajar district of the 'Omān Sultanate which, beginning at the watershed between the coast and the interior at a point inland from Tiwi runs from north-west to south-east down into Ja'alān. The villages of Wādi Bani Khālid in succession from above downwards are :—

**KHĀLID
(WĀDI
BANI)**

وادي بني خالد

Village.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Muqal مقل	Near the head of the Wādi.	Left.	150 houses of Sa'adiyin.	The people are carriers and shepherds owning 300 camels, 400 donkeys, 200 cattle and 2,000 sheep and goats.
Dawwah دوة	Adjoins Muqal.	Do.	200 houses of Masālibah, Muwālikh and Nidhairi-yin with some Bani Jābir.	This village consists of 7 quarters and there is a fort belonging to the Muwālik. Animals are 40 camels, 70 donkeys, 100 cattle and 200 sheep and goats.
Zilaff زلفت	1 hour below Dawwah.	Do.	50 houses of Hishm of the Thuwāni section.	There are 30 camels, 50 donkeys, 50 cattle and 200 sheep and goats.
'Adhfain عذفين	1 hour below Zilaff.	Do.	200 houses of Hishm.	Here is a fort and a perennial spring called 'Ain Sārīj عین صارج. Livestock are 70 camels, 100 donkeys, 300 cattle and 500 sheep and goats.
Halfah حلفح	$\frac{1}{2}$ an hour below 'Adhfain.	Do.	190 houses of Sha'ibiyin (Bani Jābir) and Hishm.	Animals are 60 donkeys, 40 cattle and 300 sheep and goats.
Badh'ah بصعه	$\frac{1}{2}$ an hour below Halfah.	Do.	150 houses of Hishm.	There are 30 camels, 200 donkeys, 40 cattle and 500 sheep and goats.
Siq سيق	1 hour below Badh'ah.	Do.	180 houses of Hishm.	Sa'id-bin-Rashid, Shaikh of the Hishm, has a tower here. Livestock are 20 camels, 30 donkeys, 100 cattle and 1,000 sheep and goats. Date palms number about 4,000.
Sibt سبت	$\frac{1}{2}$ an hour below Siq.	Do.	160 houses of Hishm.	The same Shaikh has a tower here. Animals are 70 camels, 100 donkeys, 20 cattle and 300 sheep and goats.

The settled population of the valley is thus about 6,400 souls.

On passing Sibṭ, which is said to be about 10 miles north of Kāmīl in Ja'alān, the Wādī emerges from the hills and enters the plain of Ja'alān. Wādī Bani Khalid contains running water; the principal crops are wheat, barley, lucerne and dates. The palms are said to number 100,000 distributed among the villages.

KHAMĪR

خمير

A large village situated on the coast of the **Bastak** district of Persia, about 12 miles west-north-west of Lāft on **Qishm** Island; mountains called Kūh-i-Khamīr کوه خمير run east and west immediately on the north of it. **Khamīr** is approached within half a mile by a creek, leading out of the Masakeh branch of **Clarence Strait**, which is navigable for native boats of 20 to 30 tons' burden. Sweet water is contained in 17 large reservoirs and brackish water in a dozen wells. Hills called Kūh-i-Dum-dumdeh دمدمده, one mile to the north-west of Khamīr, yield lime; and 3 miles to the north-westward, in a spur of the higher mountains which is called Kūh-i-Ma'adan معدن, are deposits of sulphur (in conjunction with gypsum) and a hot sulphurous spring. The spring is called Āb Bād آب باد and rises in a tank of masonry.

On the east side of the place are date plantations, and in this direction at 3 miles from the village, is a wall in excellent repair which was built by Saiyid Sultān of **Masqat** during an 'Omāni occupation. This rampart is known as Sidār سدار. The only other defence is a fort with a high square tower, also in perfect preservation and built in the same circumstances. There are 2 or 3 shrines of merely local importance, also a fine mosque in which free instruction is given to the young.

Khamīr contains about 350 houses, and the total population may be 1,800 souls. The people, except a very few, are Sunnis and belong to various Arab tribes: they are chiefly engaged in navigation, fishing, date-growing, wood-cutting and lime-burning, and they own about 50 camels, 20 donkeys and 200 cattle, sheep and goats. Their diet is of fish, dates and coarse barley bread, the commonest and most esteemed fish being a large sort of mullet.

The shipping of **Khamīr** consists of 4 Ghunchahs and 22 Baqārahs, some of which run as far as **Basrah** and even to Indian ports. Exports are fish, lime in large quantities, mill-stones and a little sulphur, but the trade in sulphur has ceased to be remunerative under

the expensive method of extraction employed*; firewood is also sent to the towns of Trucial 'Omān and to Bahrain.

Khamīr belongs properly to the **Bastak** district, but it is under the political supervision of the Governor of the **Gulf Ports**, and the local administration is carried on by a **Kalāntar** appointed by the Mu'in-ut-Tujjār of Tehrān who is revenue lessee of Khamīr and its dependencies: the present Kalāntar is one of the hereditary Shaikhs of the town. The Imperial Persian Customs have now a post here.

An Arab tribe found in the **Rāmuz** district, but said to be connected with the Ma'adān tribe on the **Tigris**. The principal divisions of the tribe are the following:—

KHAMĪS

آل خمیس

Section.	Subsection.	Location.	Fighting strength.	REMARKS.
Ābbad (Āl Bū) آل بو عباد	...	Near the Zarnīni, about 4 miles south-west of Rāmuz Town.	100, of whom 40 have rifles and 30 are mounted.	Their livestock amount to 50 camels, 100 cattle and 3,000 sheep and goats.
Ahmadiyah or H madiyah احمد	...	Mamūhiyeh village in the Rāmuz District.	100, of whom 30 are mounted and 30 have rifles.	This section own 40 camels, 150 cattle and 3,000 sheep and goats.
K. amīs (Āl) آل خمیس	Mansūr منصور	Near the Zarnīni, in the Rāmuz District.	50, of whom 30 are mounted and 30 have rifles.	The animals of the Mansūr are 40 camels, 100 cattle and 1,000 sheep and goats.
Do.	Rizaij-as-Sufur رزق الصفر	'Ain-ul-Bārid e h, close to the east bank of the Zarnīni, about 4 miles from Rāmuz Town.	50, of whom 20 are mounted and 20 have rifles.	They have 30 camels, 100 cattle and 1,500 sheep and goats.
Do.	Rizaij-as-Sultān رزق السلطان	Tughali, in the Rāmuz District.	60, of whom 30 are mounted and 30 have rifles.	Their animals are 60 camels, 150 cattle and 2,000 sheep and goats.
Rashaid (Bani) بني رشيد	...	At Sultā-nābād upon the right bank of the Mārūn River.	100, of whom 30 have rifles and 20 are mounted.	They possess 40 camels, 200 cattle and 3,000 sheep and goats.

* The method is described by Pelly at page 243 of the Bombay Geographical Society's Journal, Volume XVII, 1865.

Section.	Subsection.	Location.	Fighting strength.	REMARKS.
Zahairiyeh زهيريّه	...	Mamūhiyeh above ; also at Bunnat Shaikh Janām upon the Gargar.	100, of whom 40 have rifles and 30 are mounted.	This section have 50 camels, 200 cattle and 4,000 sheep and goats.
Zubaid زبيد	...	Apparently at Sar-i- Chishmeh in the Rāmuz District, and at Sidar Gūpāl not far from Mamūhiyeh in the same.	150, of whom 80 have rifles and 50 are mounted.	The lands of this sec- tion are irrigated from the Gūpāl stream. They own 150 camels, 400 cat- tle and 10,000 sheep and goats.

Most of these sections inhabit reed huts; and the tribe, of which the number may be estimated at 2,500 souls, should now perhaps be regarded as settled rather than as nomadic. About 1840 the Āl Khamīs emigrated to the country between Hawīzeh and the Kārūn, but they have since returned to their former seat, where they are at present subject and pay revenue to the Bakhtiyāri chiefs.

KHAMĪS (JABAL)*

جبل خميس

This is the name of the range which forms the termination eastwards of the Eastern Hajar hills in the Sultanate of 'Omān; it begins immediately south of Sūr and runs due south into Ja'alān, a distance of over 20 miles; its direction is thus at right angles to the main axis of Eastern Hajar.† Jabal Khamīs is parallel to Jabal Khadhar, the portion of Hajar which next adjoins it on the west; and Wādī Falaij, the main route from Sūr to Ja'alān and Sharqiyah, descends to the coast between the two. The height of Jabal Khamīs, which at 9 miles from the coast has an elevation of 2,845 feet, increases apparently from north to south and attains 4,195 feet at a point about 25 miles from Sūr; 4 or 5 miles however to the north of this point it falls to a col with an elevation of only 2,340 feet above the sea. This pass, called Najd-al-'Ayūn عيرت, is crossed by a route practicable for camels, which on the one side leads down *via* 'Ain-al-Mashārifah عين المشارف (16 miles) to Khor-al-Jarāmāh (30 miles) and on the other falls to Wādī Fisāo and passes by Wādī Falaij to Sūr; 'Ain-al-Mashārifah has shallow wells of indifferent water

* A distant view of Jabal Khamīs is given in Chart No. 2383—38.

† See *Sketch Map of the Country round Sūr*, 1908.

sufficient for 200 camels and an equal number of men, and the route on which it lies crosses a number of dry water-courses that run down from Jabal Khamīs to the South-Eastern Coast of 'Omān. In Wādi Muswa مسوى and Wādi Fisāo, the valleys which begin respectively from the east and west sides of the pass and in their tributaries, are outcrops of coal which were scientifically examined in 1901.* The mass of the Jabal Khamīs range is composed of limestone, sandstone and shale.

A village on the coast of Trucial 'Omān, in the Shārjah Principality. It stands about 2 miles south-west of Shārjah Town on the north side of a small inlet called Khor-al-Khān with two branches, one of which runs north-east and joins, or almost joins, at high tide the Shārjah backwater, while the other turns south behind Abu Hail. In passing between Shārjah and Khān the Shārjah creek must be crossed or a détour made so as to pass between it and the Khān creek. The land inshore of the village is for some distance low and swampy. Khān consists of about 200 houses, the majority of stone set in gypsum mortar or mud, the rest huts of date branches. The inhabitants, who belong to the Āl Bū Mahair, Mazāri' and Manāsir tribes, are pearl divers and fishermen, owning about 74 pearl boats, but no other sea-going vessels. Their fishing boats number 40, and they also possess some 115 camels, 85 donkeys, 35 cattle and 170 goats.

KHĀN
خان

By Arabs called Khārij خارج and in English formerly known as "Karrack." An island of some importance in the Persian Gulf; its south-eastern point is 34 miles west-north-west of Būshehr Town, and 2½ miles north of it begins the smaller island of Khārgu. Khārag is over 4 miles in length from north to south and its average breadth is about 2 miles. The greater part of the island consists of barren, table-topped hills, which are highest in the middle of the island and at the south end where they exceed 250 feet; northwards they decrease in elevation and terminate

KHĀRAG†
خارگ

* See the reports by Dr. A. von Krafft and Mr. R. D. Oldham, of the Indian Geological Survey, in the Proceedings of the Government of India in the Foreign Department for August 1901 and August 1902.

† A plan of Khārag Island is given as an inset to Admiralty Chart No. 2374—2837 B, *Persian Gulf*.

in cliffs only 20 to 30 feet high. The hills generally consist of a bed of soft sandstone or limestone overlain by a thin stratum of nearly horizontal calcareous breccia ; this upper stratum, where the supporting material has been eroded by weather, has collapsed in slabs and masses which convey a singular impression of ruin and desolation. The only low ground is a plain about one square mile in extent which forms a protuberance on the east side of the island and carries at its extremity the only village on the island and the remains of a Dutch fort. The island is surrounded by a reef about $\frac{1}{2}$ a mile broad ; the best anchorages and landings are off the village, but they are exposed, and the holding-ground is rocky and indifferent. Pearl banks occur between Khārag and Khārgu and also on the west side of Khārag to a considerable distance from shore. There are a few wild gazelle in the hills of the island. The climate resembles that of Bahrain but is rather cooler in summer.

The village consists of 120 houses and the inhabitants are partly recent settlers from Bahrain, Mināb, etc., and partly tribesmen who give conflicting accounts of their origin ; some of the latter speak a language which is said to resemble that of the Kumāzirah section of the Shihūh. About $\frac{1}{2}$ of the people are Shī'ahs and the remainder are Sunnis. In character the Khāragis are quiet and unwarlike, but they possess a few Martini rifles. They are mostly pearl-divers and pilots, but a little agriculture is carried on ; there are 1,500 date trees and some wheat and barley are grown. Irrigation is partly from springs, of which there are four large and three small, and some old Qanāts exist ; there are also wells of good water close to the beach, and on these the supply of water for drinking principally depends. The inhabitants possess 50 donkeys, 50 cattle and 150 sheep and goats. Provisions however are mostly imported from Būshehr.

The earnings of the Khārag pilots are considerable ; they are employed by steamers proceeding to Basrah and Rs. 140 is paid as pilotage for the voyage and return voyage. The people of Khārag also visit the Arabian coast for pearl-diving, and since 1901 pearling operations have been prosecuted with success on the reef of the island itself. The number of divers on the Khārag reef continued increasing until 1903, in which year Khārag pearls to the value of Rs. 12,500 were sold to Bahrain merchants : in 1904 however the value of the take declined to half of what it was in the previous year. The Khārag pearls are said to excel those from the banks about Bahrain in colour and lustre. The only sea-going vessel belonging to Khārag is one Kūtiyah, but there are about 90 fishing boats of the Baqārah, Shū'ai and jolly-boat patterns, and about 40 boats are used for pearling.

The island is subject to the Khān of the **Hayāt Dāvud** who is represented on the spot by a deputy, at present his own cousin **Mirza Husain Khān**. Taxation appears to be heavy. It is reported that a poll-tax of 2 Tūmāns a year is levied by the Khān on every male adult, besides which he takes the greater part of the pilotage fees and $\frac{1}{4}$ th of the pearls obtained locally by divers. The Persian Imperial Customs have recently posted an official of the department on Khārag. No import duties are at present collected, but exports are taxed in the same manner as elsewhere.

In the interior of the island are some caves * which are possibly prehistoric places of sepulture. They were originally divided into recesses by thin partitions of living rock which were grooved for the reception of 4 tiers of shelves, but they are now used as cattle-pens and the old workmanship is much defaced.

A Muhammadan shrine of **Mir Muhammad**, also in the middle of the island, appears to have been in existence for more than 600 years and is still a place of pilgrimage. Khārag in the 13th century A.D. was a place of call for ships between **Basrah** and **Qais** and was then already celebrated for its pearl fishery.†

A considerable village in the **Aflāj** district of Southern Najd with **KHARFAH** خرنه
one or two small hamlets and a number of detached Qasrs dependent on it; it is situated about the middle of the district, 3 miles north of **Raudhah** and 5 or 6 miles south-south-west of **Lailah**. Kharfah with its Qasrs comprises about 100 houses of **Dawāsir** of the Ghaiyithāt section and 50 of Bani **Khadhīr**; of the whole about two-thirds are contained in the main village which is known as **Hillah** or **Qil'ah**. The lands of Kharfah are said to be about $1\frac{1}{2}$ square miles in extent and to form a compact block; the date palms are estimated at 5,000 only and there are no other fruit trees. Wheat and barley and a little millet and maize are grown, also melons and lucerne; the wells are 7 to 8 fathoms deep. The settled inhabitants have no horses, but there is no scarcity of livestock of the other sorts common in **Najd**. The present

* Described by Captain Stiffe in the *Geographical Journal*, Vol. XII of 1898, page 179.

† See *Le Strang's Lands of the Eastern Caliphate*.

Amīr or headman of Kharfah is Shakhbūt-bin-Sultān. The nomenclature of Kharfah and its dependencies is given in the following table :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Hillah حله	See above.	See above.	The main quarter of Kharfah.
Hufūf هفوف	A few hundred yards beyond Samīnah in the direction of Rau-dhah.	50 houses of Bani Khadhīr.	The people are poor; they have but few animals and no fruit trees except 200 date palms. The water level is the same as at Kharfah proper. Lucerne and the ordinary cereals are grown.
Qil'ah قلعة	Another name for Hillah above.
Samīnah سمينة	On the southern margin of the Kharfah lands.	10 houses of negroes and half caste slaves.	The inhabitants cultivate for the owners who live elsewhere. There are cereals but no dates.

KHĀRGU* By Arabs called Khawairij خويرج and in English formerly known as "Korgu." A very low, white, sandy island situated with its southern point $2\frac{1}{2}$ miles north of the island of Khārag: it is $3\frac{1}{2}$ miles in length from north to south and only $\frac{1}{2}$ a mile wide. Khārgu is barren and uninhabited.

KHARJ خرج

A district of the Wahhābi dominions or Southern Najd; it is adjoined by 'Aridh on the north and by Hariq and Hautah on the west; on the other sides it is enclosed by deserts. It is understood to extend about 40 miles from north to south and the same from east to west.

* A plan of Khargu will be found in Chart No. 2374—2337-B, *Persian Gulf*, where it is given as an inset.

Physical characteristics. -- Kharj is a sandy plain without any remarkable physical features. The **Sahābah** tract on the north-east is closely connected with Kharj, but should probably be regarded as distinct. On the east side Kharj passes into a sandy and at times stony country called **Marāghah** مراغة; on the south it shades off into a bare sandy desert known as **Dahi** دهى; on the west it is divided from **Hautah** by **Saut** سوت, a stretch of low flat country containing tamarisk and acacia trees. The drainage of the **Hautah** and **Hariq** districts is brought to **Dilam** in Kharj by a hollow (**Wādi Braik**) which has its beginning at **Hautah** town, or even further away, to the west-south-west; and the **Sha'ib 'Alaiyah** reaches from the eastern face of **Jabal 'Alaiyah** to the village of **Yamamah** in Kharj: on the other hand **Wādi Hanifah**, though it approaches the district from the north, is dissipated in **Sahābah** and does not enter Kharj. There is one flowing stream in the district, that of **Farzān**, which rises on the west side of the Kharj villages and after making its way across some miles of sandy country is utilised for the irrigation of crops. The air of Kharj is described as healthy and refreshing.*

Topography, population and resources.—The following table contains some particulars of the principal places in Kharj:—

Name.	Position.	Nature.	REMARKS.
Adhār عذار	On the west or south-west side of Dilam , the date groves of the two places being almost continuous.	A village of about 40 houses, <i>viz.</i> , 20 of Bani Tamim , 10 of 'Aid and 10 of inferior tribes.	There is considerable cultivation of dates and wheat; live-stock are estimated at 60 camels, 20 donkeys and 40 cattle. The wells are 6 fathoms deep.
Balaisah بليسة	A short distance to the south-west of 'Adhār .	Formerly a village, now deserted.	There is not even cultivation now at this place.
Dhabai'ah (Umm) أم ضبيعة	Some miles south of Sulaimiyah .	A Khabrah
Dilam دلم	About 50 miles south by east of Riyādh , 30 miles east by south of Hariq town, and 35 miles east-north-east of Hautah town.	...	See article Dilam .

* So far as is known Kharj has not as yet been visited by any European traveller.

Name.	Position.	Nature.	REMARKS.
Faraijah فريجه	Not far from Dilam, direction south-west.	An abandoned Qasr.	There are wells by means of which some cultivation is carried on in favourable years by agriculturists from Dilam.
Farjān ('Ain) عين فرجان	To the west of Zamaijah.	A spring which formerly sent out a stream, but now nearly dry.	This spring belonged originally to the Farjān subdivision of the Dawāsir, but it was seized by the Wahhābi Amīr after the withdrawal of the Egyptians from Najd.
Farzān ('Ain) عين فرزان	Rises about 8 miles west of Dilam.	A flowing stream, said to be the property of the Wahhābi Amīr.	This rivulet loses much of its volume on its way through sandy ground to Dilam. Its water is used for all crops by the cultivators of Dilam, and the people of Sulaimiyah and Yamāmah are able to irrigate their corn fields from it, but it does not reach their date groves. The inhabitants of Na'ajān derive no benefit from it.
Muhammadi محمدي	About 3 miles north of the date groves of Dilam.	A stretch of cultivated ground.	There was a Qasr here, but it is now ruined and deserted.
Na'ajān نعجان	About 5 miles north of Dilam.	A village of 25 houses nearly all of inferior tribes but one or two of Bani Tamīm.	The usual crops of the district are grown and there are the ordinary livestock.
Saih سليم	A mile or two or perhaps more to the west of Yamāmah.	A place with a few houses occupied by servants of Ibn Sa'ūd. About 50 horses of the Wahhābi Amīr are kept here on account of the lucerne which is good.	There are no dates, but some ordinary cultivation is carried on. Water is said to be derived from the Farzān stream. According to one account the place is now dried up and forsaken.

Name.	Position.	Nature.	REMARKS.
Sulaimiyah سُلَيْمِيَّة or Salamiyah سَلَامِيَّة	About 8 miles east by north of Dilam.	A village of about 100 houses, viz., 30 of 'Aid, 20 of Bani Tamīm, 10 of Dawāsir, 10 of Sahūl, and 40 of inferior tribes.	There is the usual cultivation, fairly extensive here, of both dates and cereals. Livestock are estimated at 200 camels, 50 donkeys, and 300 cattle, besides sheep and goats, but no horses. This village benefits to some extent by the Farzān stream and its own wells are only 6 fathoms deep. The chief Shaikh is of the 'Aid tribe.
Yamāmah يَمَامَة	1 or 2 miles north (or, according to another account, south) of Sulaimiyah.	A village of about 130 houses, viz., 30 of 'Aid, 20 of Sabai', 15 of Dawāsir, 15 of Sahūl, and 50 of inferior tribes.	There are large date plantations, and the usual fruits, cereals, melons and lucerne are grown. Livestock are said to amount to 300 camels, 80 donkeys, and 200 cattle, exclusive of sheep and goats, but there are no horses. The village is partially irrigated from the Farzān stream and for the rest depends on its own wells, 6 fathoms in depth. As at Sulaimiyah, the headman of the village belongs to the 'Aid tribe.
Zamaijah زَمَيْجَة	Some miles to the south-west of Dilam.	A small settlement of about 10 houses.	The inhabitants are slaves belonging to Dawāsir residents of the Aflāj district.

Apparently the settled population of the Kharj district, among whom the 'Aid are the most characteristic tribe, amount to some 3,000 persons only, and half of them inhabit Dilam town; they are said to be of a milder disposition than the people of 'Aridh. Their houses are of sun-dried brick and mud with a coating of cement, which gives them a white appearance. The Bedouins of the district, who outnumber the townsmen and villagers and have been placed at 8,000 souls, are said

to be chiefly 'Ajmān of the 'Arjah and Āl Shāmīr sections, Sabai', 'Ataibah, and Dawāsīr of the Ju'aid section; they are well armed with breech-loading rifles.

In point of fertility Kharj ranks high among the districts of Southern Najd. The water level is only 6 to 8 fathoms below the surface, and dates and cereals are produced in large quantities; among fruits other than dates are grapes, lemons, pomegranates, and figs; lucerne and melons are also included among the products of Kharj. Domestic animals are camels, donkeys, horned cattle, and sheep and goats; but horses, unless belonging to Ibn Sa'ūd or the Bedouins, are hardly seen in the district. Such trade as exists is concentrated in Dilam town.

Communications.—The ordinary route from Kharj to Hasa leaves the district at Yamāmah and, skirting the Sahābah tract which is on the right hand, falls into the Riyādh-Hofūf route at Tarābī or Abu Jifān. The distance from Yamāmah to Abu Jifān is stated at 3 days by caravan.

Administration.—As explained in the article on Dilam, the Wahhābī Amīr at present governs Kharj through an official without local connections who is stationed at Dilam and occupies a fort within the walls. Taxes are collected from the nomadic as well as from the sedentary population of the district.

KHARMAH

خرمه

A tract in the Sanjāq of Hasa immediately to the south of the Oasis of the same name; it is bounded on the north by the Oasis, on the west by Ghuwār, and on the other two sides by Jāfūrah. The length of Kharmah from north to south is about 40 miles, and it tapers from about 30 miles in breadth at its northern end to about 15 at its southern extremity; the loss of breadth appears to be chiefly upon the east side. Jabal Arba' is situated on the border between this tract and the Hasa Oasis.

The principal feature of Kharmah is a hill named Jabal Kharmah, which is situated in the middle of the tract at about 30 miles from its northern end. The soil of Kharmah is a light red sand and the general level is higher than that of the Hasa Oasis. Water is found in a few places only; but depressions contain Hamdh, Rimth and Thamām

upon which 'Ajmān and Āl Morrah Bedouins pasture their flocks and herds.

The following are the chief wells of Kharmah :—

Name.	Vernacular equivalent	Position and remarks.
'Awaisah	عريسة	On the west side of Jabal Kharmah, about 4 miles from it. This is a halting place on the southern route from the Hasa Oasis Najd.
Khuwainah	الخوينه	14 miles north-east of Jabal Kharmah.
Mutawi	المطوي	9 miles south of Jabal Arba'.
Shajah	الشجه	8 miles south-south-west of Jabal Kharmah.
Zarnūqah	زرنوقه	8 miles south-east of Jabal Kharmah. Here the Turks, in September 1902, made successful reprisals on the refractory Āl Morrah tribe.

The neighbourhood of Zarnūqah is said to be almost permanently inhabited by 'Ajmān and Āl Morrah.

Singular Kharūsi خروسي. A Ghāfri tribe of the northern slopes of the Western Hajar district of the 'Omān Sultanate; in religion they are Ibādhis. They are found in Wādī Bani Kharūs at Misfāh (45 houses), 'Aliya (80 houses), Taqab (12 houses), Istāl (80 houses), Sanaiba' (80 houses), Shau (10 houses), Hijār (90 houses), Tau-ash-Shaikh (20 houses), 'Awābi (70 houses), and Falaj Bani Khazair خزير (20 houses), the last being named from one of their sections; at Nakhl in Wādī Ma'āwal they have 40 houses. Hijār is the tribal capital. There is also a Bedouin section called Yāl Khamaiyis يال خميس who number about 1,500 souls and possess 150 camels, 300 donkeys, 150 cattle and 2,000 sheep and goats. Altogether the Bani Kharūs may be estimated at 4,500 souls.

KHARŪS
(BANI)
بني خروص

A valley of the Western Hajar district in the Sultanate of 'Omān, alternatively called Wādī Hajar حجر; it begins at 'Aqabat-al-Hajar on the north face of Jabal Akhdhar and reaches the Bātmah coast a mile or two east of Bū 'Abāli. In its lower course in

KHARŪS
(WĀDĪ
BANI)
وادي بني
ص

Bātinah it is called Wādī-al-Qāsim رادي القاسم from the fact, it is said, that in the time of Saiyid Sa'īd II (1807-56) it was the frontier between the Sultān of 'Omān and the territory of the then independent Yāl Sa'ad tribe.

The villages of Wādī Bani Kharūs in succession from its head downwards are :—

Village.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Misfāh مسفاه	Near the head of the Wādī.	Right.	100 houses of Bani Riyām of the Shurai-qiyyin section and 45 houses of Bani Kharūs.	Wheat and lentils are grown: there are 4 camels, 15 donkeys, 30 cattle, and 40 sheep and goats.
'Aliya عليا	2 hours below Misfāh.	Left.	80 houses of Bani Kharūs and 70 of Bani Bahri.	The only livestock are 20 donkeys and 40 camels. Millet, mangoes and limes are grown.
Taqab تقاب	One mile below 'Aliya.	Right.	12 houses of Bani Kharūs.	The people have 30 donkeys, 20 cattle, 300 sheep and goats, and 1,500 palms.
Istāl استال	1 hour below 'Aliya.	Do.	80 houses of Bani Kharūs.	One of the principal routes across Jabal Akhdhar starts from this village. Wheat, millet, sugar-cane and sweet potatoes are grown: there are 40 camels, 100 donkeys, 20 cattle, and 1,000 sheep.
Sanaiba' صنيع	One hour below Istāl.	Left.	80 houses of Bani Kharūs.	Resources are 20 camels, 100 donkeys, 50 cattle, 500 sheep and goats, and 2,000 palms.
Shau شو	Immediately below Sanaiba'.	Right.	10 houses of Bani Kharūs.	Livestock are 40 donkeys, 30 cattle, 200 sheep and goats, and 1,000 palms.
Hijār هजार	Immediately below Shau.	Do.	90 houses of Bani Kharūs.	Here are 70 donkeys, 40 cattle, 300 sheep and goats, and 2,000 date trees.

Village.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Tau-ash-Shaikh طو الشيخ	2 hours below Istāl.	Right.	20 houses of Bani Kharūs and 30 of Dhahūl.	Crops are wheat, millet, lucerne and garlic; animals are 15 camels, 30 donkeys, 20 cattle and 70 sheep and goats.
'Awābi عوابي	Immediately below Tau-ash-Shaikh.	Left.	...	See article 'Awābi.
Falaj Bani Khazair فلج بني خزير	1 hour below 'Awābi.	Do.	20 houses of Bani Kharūs of the Bani Khazair section.	Wheat, garlic, mangoes and limes are cultivated and there are 1,000 sheep and goats.
Mahālil مهاليل	1 hour below Falaj Bani Khazair.	Do.	20 houses of Siyābiyīn.	Millet is grown: there are 10 camels, 100 donkeys, 15 cattle and 40 sheep and goats.
Sabaikha صبيخا	1 hour below Mahālil.	Do.	20 houses of Bani Ruwāhāh and Bani Harrās.	Only millet is grown; animals are 20 cattle and 50 sheep and goats.
Salaiyah صليه	2 hours below Sabaikha.	Right.	10 houses of Siyābiyīn.	The only crop is millet; there are 10 camels, a few cattle and 20 sheep and goats.
Abyadh ابيض	1 hour below Salaiyah.	Left.	200 stone houses of Bani Subh and Bani Harrās.	A little below this place the Wādī emerges from the hills. Wheat and millet are grown; there are 70 camels, 20 donkeys, 20 cattle and 150 sheep and goats.
Hifri حفري	5 hours below Abyadh and at no great distance from the sea.	Right.	40 houses of Jabūr.	Crops are wheat and millet; livestock are 10 camels, 10 donkeys, 30 cattle and 80 sheep and goats.

The only important affluent of Wādī Bani Kharūs is Wādī **Mistāl**, which joins it from the east at Mahālil. Wādī Bani Kharūs is an important valley, containing as it does the best route from the north to Jabal Akhdhar: the key of this route is 'Awābi. The trade of Wādī

KHASAB*

خساب

In English formerly known as "Kassaab." A small town on the coast of the ~~Oman Sultanate~~, the capital of the Bani Hadiyah section of the ~~Shihhi~~ tribe, situated on the southern side of a great bay which forms the approach to ~~Khorash-Sha~~ in the western coast of the ~~Ruūs-al-Jibāl~~ district. It stands upon a sandy beach nearly a mile long and is surrounded by date groves, which extend some distance up a wide valley, called ~~Sal'ala~~ ~~behind the town~~; these plantations belong partly to ~~Shihhi~~ of other places in the ~~Ruūs-al-Jibāl~~ district. At the back of the groves there is some cultivation of wheat and vegetables. Landing at Khasab is difficult at low water even from small boats. The only defences are a fort in the centre of the date plantations and two or three small towers near the sea. Good fresh water is obtained from wells 30 to 60 feet deep, and, being abundant, it is applied to irrigation: wood, cattle and vegetables are obtainable. The town consists of about 300 houses of ~~Shihhi~~, besides which there is a bazaar of 10 shops. The fixed inhabitants nearly all belong to the Bani Hadiyah section of the ~~Shihhi~~, but a few are of the Bani Shatair section: of the former about 300 persons are of the Bayādir or field labourer class. There is also a floating population, especially in the date season, when people flock in from the country round and from ~~Hanjām~~, ~~Shārjah~~ and ~~Dibai~~ and camp in malātes which they erect on the broad level in front of the town.

The inhabitants own six sea-going boats which run to ~~Dibai~~, ~~Lingeh~~ and the ~~Bātinah~~ coast; they have no pearl-boats of their own, but some of them go to the pearl-bank ships belonging to ~~Dibai~~. They depend chiefly on their own cultivation of dates and wheat and upon fishing.

The Sultan of ~~Omān~~ maintains a Wāli here, who has 15 'Askaris under his orders and is understood to collect \$600 a year as Zakāt. The present Sultan (~~Sayyid Faisal~~) has assigned to this official a date plantation and land at ~~Khasab~~ worth \$1,000 a year from his own private estate, and to this and the Zakāt the Wāli pays his own salary and defrays all other expenses: he makes no remittances to ~~Masqat~~ and receives none thence. His functions mostly relate to visitors and strangers; with the affairs of the permanent ~~Shihhi~~ inhabitants he seems to occupy himself little, but he acts as an arbitrator when requested to do so.

An important island belonging to the right bank of the Shatt-al-'Arab; it subtends the tracts of Baljāniyah, Faiyādhi, Zain and Mutāwa' upon that bank in whole or in part, and from its upper end near Sham-shamiyah island to the other which is a little below the mouth of the Kārūn it measures 5 miles; its average breadth is less than $\frac{1}{2}$ a mile.

KHASĀSĪF
(UMM-AL-)
أم الخصاصيف

The island contains 2 villages, of which the larger is called Umm-al-Khasāsif; this one is situated on the south shore of the island about 1 mile from the western end and is inhabited by about 2,000 souls of the so-called Shaikh Hasan and other tribes. Umm-al-Khasāsif village is well built and is laid out in 4 broad parallel streets: its resources are estimated at 20,000 date palms, 400 cattle, 300 sheep and goats, 10 horses and 20 donkeys. On the north side of the island near its eastern end is a smaller village known as Umm-ar-Rasās أم الرصاص; it is said to possess 250 inhabitants of the so-styled Shaikh Hasan tribe, who own 7,000 date trees, 80 cattle, 30 sheep and goats and 4 horses.

In the channel between Umm-al-Khasāsif island and the right bank of the river lie two smaller islands; the upper of these, Rumhailah رومحيلة, is between the western end of Umm-al-Khasāsif and the shore of Baljāniyah and about $\frac{1}{4}$ of a mile west-south-west of Umm-al-Khasāsif village; while the other, known as Umm-al-Yabābi أم اليبابي, is situated between the central part of the main island and the coast of the Faiyādhi tract. Rumhailah, which is of recent formation, is about $\frac{1}{4}$ of a mile long by 100 yards broad: it has about 20 inhabitants of the Shaikh Hasan, whose whole property is comprised in a score of date trees, a similar number of goats and sheep and half-a-dozen cattle. Umm-al-Yabābi, which is disposed so as to form a continuation of Rumhailah and is divided from it by a short interval only, is inhabited by about 100 souls of the Shaikh Hasan, who have 1,000 date palms, 10 cattle, and 25 sheep and goats.

The main island of Umm-al-Khasāsif is owned partly by the Shaikh of Muhammareh and partly by the family of the Naqīb of Basrah. It may be added here that the lower part of Umm-al-Khasāsif has been thrown up since 1836, in which year the main channel was apparently upon the Turkish (and not as now upon the Persian) side of the island. Umm-al-Khasāsif is Turkish territory.

Also called Abul Ghasīb أبو الغصيب. A considerable town in Turkish 'Irāq on the south side of the Shatt-al-'Arab, about midway between Basrah and Muhammareh but slightly nearer to the latter; it is situated 2

KHASĪB
(ABUL)
الخضيب

miles up a creek of which the mouth upon the river is 1 mile below Labāni and which communicates inland with the creek of Abu Mughairah. Abul Khasib is said to have been named after a freedman of the Khalifah Mansūr : in the middle of the 9th century of the Christian era it was a stronghold of the Zanj rebels.

The town is divided into two quarters standing on opposite sides of the creek; that on the east is known as Bāb Sultān باب سلطان, and that on the west as Bāb Sulaimān باب سليمان. The inhabitants number about 12,000 souls and belong to various tribes, including Bani **Malik** of the Bani Nahd section; one of the chief residents is Shaikh Ibrāhīm-bin-'Abdul Wahad, who occupies a well-built house above the town; he has lived at Bombay and can speak Hindustani. The agricultural resources of the place are estimated at 400,000 palms, and livestock at 1,000 cattle, 3,000 sheep and goats, 300 horses, 500 donkeys and 50 camels. Each quarter of the town contains a large bazaar, in which European goods are exposed for sale. Abul Khasib is a centre of great activity in the date season, and the annual meeting between date growers and exporters, held early in September to fix the prices for the season, sometimes takes place here.

The town is the seat of the Mudir of the Abul Khasib Nāhiyah in the Qadha of **Basrah**, and at the entrance of the Abul Khasib creek are a Turkish police post and customs house; nevertheless much smuggling of goods to and from Persia is carried on here. A harbour master is stationed at Abul Khasib.

KHATAM

ختم

Also called Khatam Āl Bū Shāmis. A tract dividing the region of **Dhafrah** on the west from that part of Trucial 'Omān which is sometimes called 'Omān-ash-Shamālī on the north-east. Khatam is apparently a compact district of somewhat circular shape with an average diameter of about 40 miles; its centre appears to lie 65 or 70 miles south-east by east of Abu Dhabi town and 45 miles south-west of the **Baraimi** Oasis. Khatam is covered with sand dunes, but it bears some Ghāf trees, besides shrubs of Abal, Arta, Markh and Ghadha. There are a number of wells, generally varying in depth from 1 to 2 fathoms, some of which contain good and the others indifferent water. Khatam appears to be a meeting ground of the Bedouins of the Bani Yās, **Manāsir**, and **Na'im** tribes; and it may perhaps be regarded, at the

present time, as included in the sphere of the Shaikh^h of Abu Dhabi, whose personal influence is predominant there. In the hot weather Khatam is deserted.

The following is a list of the principal wells in Khatam :—

'Ajām (Bada'-al-) بدع العجم	Hawīdh (Bul) بر الحويذ
'Ankah عكة	Hilyau الحليو
Artāh (Bū) بر ارتاه	Iqtīwah (Bū) بر اقطيره
'Arūs العروس	Jabāhinah ('Idd-al-) عد الجباهنه
Balqahais (Maghāil) مغائل بلقهيس	Jatīya جتيه
Banādiq (Umm-āl) ام البناديقي	Lahmah الحمة
Fāris Bū Hadīd (Ghait) غيط فارس بر حديد	Mirdāh (Abu) ابو مرداه
Hadbaib (Imwaih-al) امرية الحضيبي	Naghālah (Umm-an-) أم النغاله
Hadhrūm (Maghāil) مغائل حضروم	Sablah السبله
Hanīfah الخيفه	Suwaihān سويحان

A considerable Arab tribe in Turkish 'Irāq: their country stretches approximately from Kūfah to Samāwah through the intervening marshes and includes a portion of the adjoining Shāmiyah Desert: the settled members of the tribe are chiefly in the Qadha of Samāwah. The Khazā'il are all Shi'ahs and are divided into Mu'allim معلم, Āl Bū Hasan آل بر حسن and Lamlūm لاملوم; and one of their smaller sections is known as the Bani 'Aridh عارض. They are a strong and warlike body but not naturally pugnacious. Those who inhabit the desert are horsemen and are well-mounted: those on the rivers and marshes depend for locomotion, both in peace and war, upon their Mashhūfs or canoes. The agricultural part of the tribe cultivate rice, barley and wheat; sheep, horses and camels also are bred by the Khazā'il, and a considerable number of them are carriers and camel-dealers. A large proportion even of the agricultural sections follow the desert life between January and June. The Khazā'il levy Khuwwah from the 'Anizah and Northern Shammar, towards whom they are not well disposed, when camping in their territory.

KHAZĀ'IL
خزاعل

A small tract in the Kuwait Shaikhdom; it lies between the district of Yāh on the east and that of Shiqqaq on the west; it is about 8 miles in diameter and is situated perhaps 25 miles to the north-west of Jahrah.

KHILÂN
(UMM-AL-)

الخيلاء

KHŌJAH

خواجه

SECT*

The headquarters of the Khōjah sect in the Persian Gulf are in the Sultanate of 'Omān, chiefly at **Matrah**, where they number about 1,050 souls; but they are found also at **Khābūrah** (125 souls), **Sohār** Town, **Suwaiq** (80 souls), **Barkah** and **Masna'ah**, in **Bātinah**; at **Quryāt** (1 family); and at **Gwādar**, where they number about 300 souls. A considerable number live in the coast towns of Trucial 'Omān and Persia.

The entire Khōjah community of **Matrah** reside in a large fort or enclosed quarter upon the sea beach; security from attack by the Arabs and privacy for their women are the principal motives of this arrangement, and, except menials, the only non-Khōjahs admitted to the enclosure are the British officials at **Masqat**, whom they regard as their natural protectors. The Khōjahs of **Matrah** marry, for the most part, among themselves. Only about 10 families of those at **Matrah** are now adherents of the Āgha Khān of Bombay; the remainder have been converted to Thain 'Ashari Shi'ism, but preserve to some extent their old social usages and customs.

The majority of the **Matrah** Khōjahs are petty merchants and shopkeepers dealing in piece-goods, spices, etc. Only about 12 of them do business on a large scale, but there are seven or eight others who sometimes receive small consignments of goods on their own account. The business of the large Khōjah merchants at **Matrah** consists in the importation of rice from Calcutta and of piece-goods, oil and drugs from Bombay, and in the exportation to India of dates, both wet and dry, and of a small quantity of dried fish (**Matūt**). Some land in the **Masqat** District has been acquired by Khōjahs, particularly at **Birain**, at **Dārsait** near **Matrah**, and at **Ghallah** in **Wādi Bōshar**.

The **Matrah** Khōjahs are mostly of Sindi or Kachi extraction, but very few of them now have homes in India, and of 250 male adults only about 120 are British subjects, those, namely, whose ancestors immigrated after the British conquest of Sind. Of 41 families of Khōjahs in other parts of the 'Omān Sultanate except **Gwādar**, 29 are under British protection and 12 are Arab subjects; those of **Gwādar**, are comparatively recent immigrants and all claim British nationality. In the ports of Persia and Trucial 'Omān the Khōjahs are all regarded as British subjects.

In the Sultanate of 'Omān the Khōjahs are known to the Arabs

* Information about the Khōjahs is contained in the Government of India's Foreign Proceedings for May 1905. See also the Gazetteer Appendix on Religions.

as Lawātiyah * لواتيه, and in the Persian Gulf they are called Lūtiyān لوتيان; the singular in either case is Lūtiyah لوتيه. They are also commonly spoken of as Haidarābādīs حیدرآبادی .

The principal town of the **Dashti** district on the **Persian Coast**, **KHURMŪJ** خرموج situated at an elevation of 465 feet at the foot of the great maritime range, distant 40 miles south-east from **Būshehr Town**, 17 miles south-south-east of **Ahram**, the capital of the adjoining **Tangistān** district, and nearly 20 miles from the sea. The present town is adjoined by traces of an older one which was destroyed by the Persian Governor of **Shīrāz** at the beginning of the 19th century.

The place, which has doubled in size during the last 40 years, consists of about 350 houses, of which $\frac{1}{2}$ are mat huts and the remainder of mud and stone. The population, numbering about 1,800 souls, are chiefly **Khājaha**, **Dehdārha**, **ʿUmrūha** and **Dabāshiha**: nearly all are Persians and **Shīʾahs**; very few are Arabs. On the outskirts of the town is a substantial stone fort, the residence of the **Khān** of **Dashti**, which internally, in 1865, was comfortable and elegantly furnished. There are water-mills driven by a small stream from the high hills behind the town, and water for irrigation is brought from the same quarter in open channels. The water is good and grazing excellent. Barley and wheat are plentiful, and mutton and beef are procurable, though not in large quantities. Date palms in the immediate neighbourhood are estimated at 50,000 trees, and livestock at 200 horses, 20 mules, 500 donkeys, 1,000 camels, 500 cattle and 8,000 sheep and goats: in these figures a number of the surrounding villages may be included. Routes from **Būshehr Town**, **Kāki** and the sea-coast meet at **Khurmūj**.

Singular **Kibaisi** كبیسی. A small and rather unsettled tribe of **KIBÍSAH** كبسه Arabs, found chiefly in **Qatar**, but represented also in **Bahrain**. Their principal settlements at the present day are **Khuwair Hassān** and **Fuwairat** in **Qatar**, where they have about 80 and 50 houses respectively; besides these they have a few houses at **Hadiyah** and **Sumaismah**.

* A derivation of this name has been suggested from *lota*, the Indian water-vessel, which (it is said) they used to carry when they first arrived in the country. Another is from لوطي, a scamp, used in a good-natured sense. The **Khōjahs** never call themselves **Lawātiyah**, and they dislike the name.

in **Qatar**, and at **Jasairah** and **Rifā'-al-Gharbi** on **Bahrain** Island. Their chief occupation is pearl diving, but those of **Qatar** also own camels, sheep, donkeys and cattle, with which they retire into the interior of the peninsula in the cold weather; in summer they leave their animals to the care of local Bedouins and betake themselves to the pearl fisheries. In religion the Kibīсах are Māliki Sunnis. The tribe once lived mostly at **Dōhah**, but they were compelled by a difficulty with the 'Amāmarah to remove to Khuwair **Hassān**. Later they took part with the Na'im in the foundation of **Zubārah**, but after a time they returned to Khuwair **Hassān**, which is still their headquarters.

KIFL كفل

A considerable village in Turkish 'Irāq, situated on the left bank of the Shatt-al-**Hindiyaḥ**: it lies about 18 miles south-south-west of **Hillah** Town and 16 or 17 miles north by east of the town of **Najaf**.

Kifl is surrounded on 3 sides by creeks from the river, which are not often more than 4 or 5 feet deep; but they extend in some cases for a number of miles. When the **Hindiyaḥ** rises in winter the village is surrounded by floods; it is then connected with the mainland only by a winding embankment about 3 feet broad and $\frac{1}{4}$ of a mile long. There are a good many date trees in the immediate neighbourhood.

Kifl consists of about 70 houses of masonry and of a much larger number of poor constructions in mud and matting. The population of the place is estimated at nearly 2,000 souls, of whom about 200 are Jews and the remainder Arabs. The village is filthy and the people are poor. There are a couple of small and inferior **Khāns** at Kifl: the better of the two is double-storeyed and was built by a private individual for the gratuitous accommodation of pilgrims passing by water between the towns of **Karbala** and **Najaf**. The most striking architectural object at Kifl, however, is a solitary minaret, believed to have formed part of a mosque which has now disappeared; it affords an excellent landmark to all the country side, becoming visible on the way to Kifl a few miles after leaving **Najaf** Town, but it is now in an insecure state and its days of usefulness appear to be numbered.

The sole claim of Kifl to importance is founded on its possession of the reputed tomb of Hizqīl **هزقيل** or **Ezekiel**; this shrine stands in the middle of the village, in a courtyard surrounded by a wall, the cells and recesses on the inner side of which are

the dwelling place of most of the Jews of Kifl. The building is extremely simple and at present it is in a bad state of repair. The supposed coffin of the prophet, covered with common cloth, is about 12 feet in length by 6 feet wide and 5 feet deep; it is kept in a room which is 36 feet long and 20 feet wide and has a domed roof. The walls of the room are ornamented with pieces of inferior mirror glass and other bright coloured objects,—decorations attributed to the munificence of a Jewish merchant of Bombay, by whom the tomb is said to have been restored about 65 years ago. Jewish pilgrimages are made to this shrine, especially at the time of Pentecost; and many Jewish corpses are sent to Kifl from a distance for interment. A family of Muhammadan Arabs are the custodians of the tomb and receive whatever is paid by pilgrims.

There is some cultivation around Kifl,—chiefly on the further side of the Shatt-al-Hindīyah, which is here about 200 yards broad. Trade, chiefly with Hillah Town and Tawairij, is unimportant; but there is a bazaar about 150 yards long by 10 yards wide.

Kifl is the headquarters of a Nāhiyah in the Qadha of Hindīyah and the seat of a Mūdīr, who has a few Dhābitīyahs under his orders. The present Mūdīr is of Afghān descent and can speak a little Hindustani. There is a government primary school at Kifl, in which Arabic and Turkish are taught.

A low, white, sandy islet in the Persian Gulf, situated in latitude 29° 4' north and longitude 48° 30' east: it lies about 20 miles off the coast of Kuwait, 30 miles south-east of Rās-al-Ardh and 24 miles north-west of the island of Qāru. Its diameter is about a quarter of a mile, and its height above sea level is 8 feet. A few birds from the mainland frequent it, but there is ordinarily no fresh water except after rain. Kubbar is reckoned to the Kuwait Principality.

KUBBAR

كُبار

A town in Turkish 'Irāq; it stands on the right bank of the Shatt-al-Hindīyah at a distance of 6 miles eastwards, by road, from Najaf Town. The original Kūfah, founded about 638 A.D., was in early Islamic times among the most famous of cities, and under the 'Omayyids

KŪFAH

كُوفَا

shared with **Basrah** the honour of being one of the 'Irāqān, that is, one of the twin capitals of 'Irāq; but it subsequently declined and disappeared: the modern town is not more than 20 years old. The name is said to mean "the (city of) reed huts."

The ancient Persian city of **Hirah** حیره probably stood 2 or 3 miles to the south of Kūfah, and the battle of Qādisiyyah قادسیه, which in 635 A.D. gave the province of 'Irāq to the rising Muhammadan power, appears to have been fought at a place in the desert about 15 miles west of Kūfah; this Qādisiyyah is not to be confounded with the place of the same name on the Tigris above **Baghdād**. In 'Abbāsīd times the Hajj route from **Baghdād** passed through Kūfah.

Hindīyah stream and bridge.—At Kūfah the **Hindīyah** stream is 150 yards broad and flows deepest in the neighbourhood of the right bank, where, at the present time, about 6 feet of water may be found in midwinter. At this place the **Hindīyah** is spanned by a bridge of 16 boats, each of which is 30 feet long, 10 feet wide and 4 feet deep; the roadway is 8 feet wide, and there is a handrail about 3 feet high on each side from end to end. This bridge is now in bad repair. There is a small island 200 yards above and another 350 yards below the bridge; these are both wooded, and either would afford good cover or support to a bridging party. Quarter of a mile above the bridge the **Hindīyah** is nearly 300 yards wide.

Town and population.—Kūfah consists of about 600 houses, mostly of stone and mortar, and 100 occupied shops; its frontage on the river is 500 to 600 yards. The whole town is upon the western bank, but there is one private Khān on the opposite side about 50 yards above the bridge. The present population of Kūfah is about 3,000 souls, of whom one-fourth may be Persians (including a few Persianised **Balūchis**) while the remainder are Shī'ah Arabs; but this estimate does not include residents of **Najaf** Town, who have houses or offices at Kūfah and visit them often for pleasure or business.

Resources.—Kūfah, always the port of **Najaf**, is now a general entrepôt of trade and the distributing centre, for a wide tract of country, of goods brought by water from **Basrah** Town. On the river bank are numerous store houses and places of business, where the exports and imports of **Hillah**, **Najaf** and other places lie awaiting disposal. Kūfah is surrounded on all sides by excellent date plantations, and there is much

garden cultivation belonging to the place upon the left bank of the **Hindīyah**. Fruit, vegetables and forage can be had in abundance at Kūfah in the proper seasons. Half a dozen to a dozen ṣafinahs of medium size may be seen at anchor off the town, and such vessels can ordinarily be hired for a Majidi a day, but in the case of freight it is usual to charge by the journey and not by time.

Administration.—Kūfah is the headquarters of a Nāhiyah in the Qadha of **Najaf** and is the seat of a Mudir. There is a military detachment for the protection of the place, consisting of 40 rifles under 1 officer. A harbour master also is stationed here.

Antiquities.—There are two sacred buildings at Kūfah, which for many years were the sole remaining vestiges of the town.

By far the more important of these is the great Kūfah mosque, the scene of the assassination of 'Ali in 661 A.D. by 'Abdur Rahmān-bin-Muljam; it is situated about $1\frac{1}{2}$ miles from the present Kūfah, upon the way to **Najaf**. Externally this building resembles a fortified enclosure; for it has no dome and from the wall surrounding it, which is 30 feet high, small semi-circular bastions 10 feet in diameter project at intervals of 50 feet. Inside, the mosque is like a caravansarai; the courtyard, which is 128 paces long and 104 paces wide, is surrounded on three sides by the cubicles usual in Khāns; but behind these cubicles, instead of the usual stables, are little rooms with doors, 63 in number and equally divided among the 3 sides. There are also 9 Maqāms or Sardābs in the centre of the enclosure; they are named after Noah, Zain-al-'Ābidin, 'Ali and others, who used, it is said, to retire to them for meditation. On the fourth side of the courtyard, that towards Makkah, is the mosque proper; and here, enclosed by iron gratings, is a space about 4 yards square paved with blue tiles to show where 'Ali fell. It may be noted that from early times there have been some Muhammadan authorities who have maintained that 'Ali is buried at **Kūfah**, not at **Najaf**.

The mosque is adjoined by 2 other well-built brick enclosures; one of these, on the east side, has a wall about 20 feet high and contains, besides a few huts, the tombs of Muslim-bin-'Aqil and Hani-bin-Amwah, which are both objects of veneration. To the north of the mosque, outside it, are 2 or 3 small Khāns. Many pious Mullas of **Najaf** are in the habit of spending a night of each week in the old mosque at Kūfah for quiet devotion.

The other sacred place is the Maqām Yūnas near the bank of the **Hindīyah** at the upper end of the present town. It appears to be

doubtful whether this shrine is intended to commemorate the prophet Jonah or some other of the name.

The style of Arabic writing known as Kūfic had its origin here.

KUMAIT

کمیت

In Turkish 'Irāq, a small but growing village on the right bank of the Tigris 30 miles above 'Amārah Town, in the country of the Āl Bū Darāj. The place was founded only 5 years ago, but there are now 50 or 60 houses and about 20 shops: the whole is the property of the Dāirat-as-Saniyah. The population is mixed. The village is a market for the surrounding tribes and exports wheat, barley and maize: there are as yet no trees. It is protected by a military detachment of 100 men under an officer and there are no civil officials.

KUMZĀR

کمزار

A small town on the coast of the 'Omān Sultanate, the capital of the Bani Shatair section of the Shihūh tribe, situated at the bottom of a cove in the northern face of the Ruūs-al-Jibāl promontory; it stands at the mouth of a gloomy valley or gorge in the hills which is named Wādī Marwāni مرواني. There is no route by land from Kumzār to any other place. Kumzār consists of about 600 low stone houses of Shihūh of the Bani Shatair section: there are two large whitewashed mosques. The people are fishermen and have no cultivation of any sort; they own 40 or 50 fishing-boats and 5 sea-going boats that run to Qishm, Dibai and Masqat Town with cargoes of salt fish and shark-fins. Small quantities of dried and salted fish are exported also to Kuwait and Basrah. The Kumzāris have no pearl-boats of their own, but a few of them go to the banks on Shārjah and Dibai vessels. In the date season all but a very few persons migrate, mostly to Khasab and Dibah; the women go to the date harvest there or elsewhere, the men to the date harvest or the pearl fishery, and the 3 or 4 individuals who remain take charge of the flocks of the absentees.

KUNG

کنگ

A small town on the coast of the Lingeh District in Persia, about 4 miles north-east of Lingeh Town; it stands on a sandy shore along which

COPYRIGHT

Kumzār.
(HERR H. BURCHARDT)

it extends about half a mile. At the west end of the place is a large, white, ruined factory which once belonged to the Portuguese with a round fort opposite it that is surrounded by the sea at high water; there are also many ruined water-reservoirs and the remains of some old docks. Behind the village is a large date grove and much ordinary cultivation. The anchorage, sheltered from all winds except the Suhaili, is $1\frac{1}{2}$ miles off-shore in 5 fathoms of water. Kung consists of 500 stone houses inhabited by a medley of races representing most parts of the Persian coast; most of the people are Sunnis but a few are Shi'ahs. Kung, though evidently less important than it once was, and at the present time reduced by emigration to about half the size stated above, is still an active and busy place. The inhabitants are merchants, boat-owners Nākhudas, sailors, fishermen and potters. Here are owned 14 Baghlahs 1 Būm and 6 Sambūks which carry dates from Basrah and salt and small salt-fish from other places to Aden, Zanzibar and Indian ports; they also bring rafters from Zanzibar to Lingeh, Bahrain and Basrah. There are also 34 Baqārahs and 2 Shū'ais. The fishermen of the place are largely engaged in catching sharks and for this purpose visit grounds in the upper part of the Persian Gulf near Fāo, etc. The water-supply, from wells 5 or 6 fathoms deep and from covered cisterns, is usually ample. Live-stock are 40 camels, 50 donkeys, 200 cattle and 1,000 sheep and goats. A few arms are owned for self-defence, but the people are not addicted to fighting. There is an Imperial Customs post here.

Singular Kindi كندی. A scattered Ghāfiri tribe of 'Omān, Ibādhis in religion. They are found at Nizwa in 'Omān Proper, where they have 40 houses and which may be regarded as their capital; also in Wādī Ma'āwal at Nakhl (50 houses) and in Wādī-al-Jizi and its tributaries at Sahailah (100 houses), Milaiyinah (15 houses), Hail-ash-Shiya (10 houses), Hail-ar-Rafsah (60 houses) and Thiqbah (20 houses). They occur also at Hail, Ghāllah (20 houses) and Furfār in the Shamailiyan tract, and are found in Independent 'Omān at Baraimi Village and in Mahādah. None of the tribe are Bedouins. Their total number may be estimated at 1,500 souls.

KUNUD
کنود

KURD
کرد
TRIBE

Plural Akrād اکرد, a well-known tribe of the Turco-Persian frontier who do not properly fall within the scope of the present Gazetteer; to some extent, however, they are represented in Turkish 'Irāq and in Northern 'Arabistān.

In Turkish 'Irāq the Kurds are mostly Failīyah نيليه, that is they belong to the Faili section of the tribe. They are most numerous on the Tigris, where Shaikh Sa'ad is an entirely Kurdish village, and more than half the inhabitants of Bghailah and Kūt-al-Amārah are Kurds; Kurdish communities are found also at Suwairah and 'Ali Gharbi upon the same river; and there are many Kurds at Baghdād where they are chiefly known as porters and labourers. Part of the population at Hai and Qal'at Sīkr upon the Shatt-al-Gharāf are Kurds; and Badrah and Jassān, which lie nearer to the hills than do the places already mentioned, are predominantly Kurdish. The Kurds form one of the finest classes in the towns and villages of Turkish 'Irāq. They are a sturdy and capable race and are well represented in the army and military police; some of the regular battalions of the Baghdād Army Corps to a considerable extent consist of, and are officered by Kurds; and Kurds have also been known to rise to posts requiring some intellectual ability, such as the judgeships of Shara' courts. The Kurd is said to be quick in revenge, and poverty sometimes drives him to crime; otherwise he is, at least in the plains of Turkish 'Irāq, a peaceable and law-abiding subject of the Ottoman Government.

In 'Arabistān the Kurds, few in numbers and far removed from their tribal headquarters, are naturally not prominent as a political factor; but they are found in the Dizfūl District in the villages of Qal'eh 'Abdush Shāh, Asad Khān (I), Bālingān Balāi, Biyāwtiyūn, Hājiābād, Jībar, Kālehwand, 'Amleh Karīm Khān, Khusrauābād, Kūwigh, Shalgahi Buzurg and Jirqeh Saiyid Ta'ameh; and they occur also, in the Shūshtar District, at both Shalailis upon the Gargar.

KURD
(ĀL BŪ)
آل بو کرد

This is the Arabic form of the name: in Persian it is Āl Bū Kurdān آل بو کردان. These are a small tribe settled on the Kārūn River in the Ahwāz District, where they are found in the contiguous villages of Harsheh, Kūt Abdullah, Kut Saiyid Salih, Abu Dibbis, Kūt-al-Amāireh, and Muzaffari on the left bank, and at Karaishān on the opposite side. Their origin is not clearly ascertained, but it is stated that they were formerly subjects of the Bakhtiyāris and remained such until about 100 years ago, when they immigrated from the direction of

the **Rāmuz** and **Jarrāhi** Districts to their present seat; at that time they were a body only 400 or 500 strong, whereas they now number 1,500 or 2,000 souls. At first they resembled Persians in their habits, but they have now adopted the Arab dress and have become dependents of the **Bāwiyeh**. The **Āl Bū Kurd** marry among themselves and are credited with being good fighting men. Their present headman, Mulla Abus Saiyid, represents the interests of the Shaikh of **Muhammareh** at **Zaidān** in **Behbehān**: in his absence his brother Ahmad presides over the tribesmen in the **Kārūn** villages and is at the same time the Shaikh's Agent at Muzaffari.

This group of islands lies 25 miles off the South-Eastern Coast of 'Omān between Rās Sharbatāt and Rās Nūs and is consequently a little to the east of **Dhufār**. The origin of the English name "Kurīa Murīa" is unexplained; the Arabs call the islands Jazāir Bin-Ghālfān جزائر بن غلفان after a Mahra family who once seized them and in 1835 still claimed the group as their property. The Kurīa Murias are 5 in number and form a chain running for 50 miles due east and west. They are of granite and stand upon a granitic ledge, with very deep water immediately outside, which extends hence under the sea to Rās Nūs and from there by land to **Murbāt**, where it ends. During the north-east monsoon the islands are exposed to winds blowing from all points of the compass. The north wind sometimes lowers the temperature as much as 20° F. bringing it down to 50° and causing severe sickness. Hallāniyah, the largest and central island of the group, is the only one inhabited: the people are reported to speak a dialect closely allied to that current in the neighbourhood of **Murbāt** and resembling Mahri. The islands, in order from east to west, are:—

KURIA MURIA* ISLANDS

Name.	Position.	Dimensions and physical characteristics.	REMARKS.
Jibliyah جبلييه	16 miles east of Hallāniyah.	About 1 mile square. It consists of porphyritic syenite and dark granite; the highest point is 500 feet.	There is no fresh water. There are numerous gannets; the only other living creatures are rats, mice, snakes, scorpions and centipedes. Some fine sponges are obtainable in from 5 to 7 fathoms of water.

* Various authorities on this group are mentioned in the article on the 'Omān Sultanate (footnote). The Chart is No. 11.

KURIA MURIA ISLANDS

Name.	Position.	Dimensions and physical characteristics.	REMARKS.
Gharzaut or Rodondo	7 miles north-east of Hallāniyah.	Hardly more than a large rock, 200 feet high, of reddish granite.	Nil.
Hallāniyah حلانيه	48 miles east-north-east of Rās Nūs.	The largest of the islands, about $7\frac{1}{2}$ miles long from east to west by $3\frac{1}{2}$ broad from north to south. It consists of granite with dark veins, and the hills in the centre form a cluster of spires one of which reaches a height of 1,503 feet.	Water is abundant but all slightly brackish. There are a few tamarisk trees and at the east end a little grass. The natural fauna are wild goats, whip-snakes, scorpions and centipedes. The human inhabitants numbered 23 in 1835 and 36, including children, in 1883. Their race is uncertain; nominally they are Muhammadans. They keep goats and fish but have no boats and hardly ever visit the mainland. Their houses are mere semi-circular walls of loose stones and are roofed with sticks, fish-bones and seaweed. When Hallāniyah was last visited in 1901 it was found deserted.
Sūda سودا	6 miles west of Hallāniyah.	The second largest island of the group, 3 miles long by 2 broad. It is of red and grey granite with dark strata interposed and reaches a height of 1,310 feet.	There is some scanty grass and a quickly filling but brackish well. The island is now uninhabited but is known to have had occupants at the beginning of the 19th century.
Hāskiyah حاسكيه	18 miles west of Hallāniyah.	About a mile square and mostly composed of reddish granite; the highest point is 500 feet.	There is no vegetation or fresh water here but thousands of gannets frequent the rocks.

The Kuria Murias belonged at the beginning of the 19th century to the Mahra family named Bin-Ghalfān, already mentioned, and both the larger islands of the group were then inhabited. Pirates from the coast of Trucial 'Omān made a cruel raid on the settlements about 1818 and left them practically depopulated. In 1854 the Sultan of 'Omān, who had meanwhile established a title to the group, ceded the Kuria Murias

to Great Britain and they have since remained a British possession. Between 1857 and 1859 the islands were a scene of busy activity, as the rich guano deposits of Jibliyah and Haskiyah, since exhausted, were then being worked; Jibliyah was the more productive. In the season 1857-8, no less than 52 ships were engaged in removing the guano, and a European agent and analyst resided on Jibliyah. The guano was found on the lower and more level parts of the islands and extensive tracts were covered with it to an average depth of 2, and an extreme depth of 6 feet: it was mixed with fine stones, necessitating screening before shipment, and its chemical composition* differed widely from that of Peruvian guano, to which, however, it was hardly inferior in fertilising properties. A British telegraph station established on Hallāniyah in 1859 was removed in 1860 in consequence of failure of the cable.

A division of the Baghdād Sanjāq of the Baghdād Wilāyat in Turkish 'Irāq; it is now much reduced in size from its original dimensions, the Qadhas of 'Aziziyah and Jazīrah having been carved out of it in 1884 on the occasion of the separation of the Baghdād and Basrah Wilāyats, and the Qadha of Badrah in 1894 or 1895.

KŪT-AL-AMĀRAH
كوت الاماره
QADHA

Position and boundaries.—The Qadha of Kūt-al-Amārah lies on both sides of the Tigris river about midway between Baghdād City and 'Amārah Town. On the north-east it is conterminous with the Qadha of Badrah; on the south-east with that of 'Amārah in the Sanjāq of 'Amārah and that of Hai in the Sanjāq of Muntafik, both in the Wilāyat of Basrah; on the south-west with part of the Sanjāq of Diwāniyah; and on the north-west with the Qadhas, in its own Sanjāq, of Jazīrah and 'Aziziyah.

Topography and tribes.—The only places of any size in the Qadha are the town of Kūt-al-Amārah and the village of Shaikh Sa'ad, both of which are described elsewhere in special articles.

* Its composition was 70 per cent. phosphates, 29 per cent. silica and moisture, and 1 per cent. ammonia.

Steam Navigation Company a coal dépôt. An honorary Naib Kārpardāz represents the Persian Government at this place.

KUWAIT
كويت
BAY
and
TOWN

This name is the diminutive of Kūt كوت, and means a small fort: it sufficiently indicates the insignificant origin of the thriving town of Kuwait, the capital of the Arab Shaikhdōm or principality which now shares its name. In old English records and books Kuwait is generally called "Graine" or "Grane," doubtless from the island of **Qurain**, a short distance to the west of it. The town, which is about 80 miles south and slightly east of **Basrah**, almost 180 miles west by north of **Būshehr** and nearly 280 miles north-north-west of **Bahrain**, faces the north-west and is situated on the southern shore of Kuwait Bay about one-third of the way from its entrance at Rās-al-Ardh to its foot at **Jahrah**.

*Coast, harbour and anchorages.**—The bay itself is a large inlet of remarkable form, leading out of the north-west corner of the Persian Gulf, with an extreme length east and west of over 20 miles and a maximum breadth north and south of about 10 miles. In shape it approaches a crescent with the convex side to the north and one of the horns pointing to the south-west. The bay proper is an indentation in the true Arabian coast line, which is represented northwards by the western shore of **Khor-as-Sabīyah** and southwards by the coast below Rās-al-Ardh; but its shore line is prolonged on the side next the mouth of the Shatt-al-'Arab by a mud-flat, extending 20 miles south-east from the mouth of **Khor-as-Sabīyah**, on which stands the island of **Failakah**. The entrance of the bay, between this mud-flat and Rās-al-Ardh, is about 4 miles wide and open to the south-west and south-south-west. In the southern shore of the bay, within, there are three coves; the easternmost, between Rās-al-Ardh and Rās 'Ajūzah is shallow and vessels are recommended not to enter it; the middle cove, between Rās 'Ajūzah and Rās 'Ashairij راس عشيرج contains **Kuwait Town** on its eastern side, a dead coral reef covered with mud and sand and known as 'Akāz عكاز in the centre, the island of **Qurain** or **Shuwaikh** on the southern margin of 'Akāz, and the island of Umm-an-Namal ام النمل near Rās 'Ashairij; the westernmost cove, Dōhat

* For recent information about the Kuwait boat harbours the Foreign Proceedings of the Government of India for February 1905 and for September 1905 may be consulted. Some remarks on the bay by Admiral Atkinson-Willes, R.N., will be found in the Proceedings of the Government of India for June 1904.

Kādhamah between Rās' Ashairij and Rās **Kādhamah**, forms the innermost recess of the whole bay, and near the foot of it stands the village of **Jahrah**.

The land surrounding the bay is low except on the north side where the **Zor** hills, parallel to the shore, attain a height of 150 to 400 feet. A flat of soft mud extends for some distance off shore on the northern side of the bay making communication difficult at low water between sea and land.

In most parts of the bay the water is of suitable depth for anchorage and there is good holding-ground: the soundings are 14 fathoms off Rās-al-Ardh and 6 to 10 fathoms off Rās 'Ajūzah, shoaling to 6 fathoms at the entrance of Dohat **Kādhamah**. There is a rocky 2-fathom shoal, called Fasht-al-Hadibah فشت الهدب, $2\frac{1}{2}$ miles north of the town. The anchorage for large vessels is called Bandar Tuwainah طرينه; it lies a mile and a half to the north of the town inside Fasht-al-Hadibah. In a Shamāl a considerable sea rises in the south part of the bay, not enough however to distress a large vessel; but in a Qaus vessels anchoring outside the Hadibah shoal, or with the town south by west to south-south-west, might not be sufficiently sheltered.

Shoal water extends off the town of Kuwait for about 8 cables, and landing at low tide is inconvenient as the beach dries out to a considerable distance; but at high water the sea washes up almost to the houses. In front of the town are several tidal harbours, called Niqa'ahs of considerable size, formed by piers and breakwaters or Sūrs of loose coral blocks: these are often breached in a Shamāl, but are easily repaired.* On the beach proper lie in winter, drawn up above the high-water line, many of the pearling and other vessels on which the prosperity of the town depends: in places these extend, almost touching each other's sides, for hundreds of yards, and when launched they must form an imposing fleet. The boat harbour of Bandar-ash-Shuwaikh near the town is described in the article on **Qurain** island, and the bay and promontory of **Kādhamah** are dealt with in the article under their own name.

The town and its surroundings.—The town now measures about 2 miles along the shore, and is rapidly extending towards Rās 'Ajūzah; its depth inland is from one-fourth to three-fourths of a mile. Free sites granted

* An account of these boat harbours, accompanied by a map, will be found in the Government of India's Foreign Proceedings for September 1905.

by the Shaikh on all sides of the town are, on account of the increasing prosperity of the place, being rapidly taken up and built upon by enterprising individuals as a commercial speculation. The land surrounding Kuwait is pure desert as far as the eye can reach and belongs to the tract called *Qrā'ah*. One mile west of the town, on *Rās' Ajūzah*, is a fortified dwelling house, erected in 1904 by the eldest son of the Shaikh of Kuwait and named after him *Qasr-ash-Shaikh Jābir* قصر الشيخ جابر. To the south of the town the land rises for a mile or so and then falls; consequently the place is lost from sight soon after leaving it. On this side, in the cold weather, are pitched many Bedouin camps, and there is a constant coming and going of camels and of small caravans. Kuwait was formerly walled and 30 years ago had seven gates on the landward side, but since that time it has doubled in size and the sites of the old gates are now known to few; of one only, the *Darwāzat Janā'at* دروازة جناعات, which was the second in order from the east, do any traces remain. Kuwait is now an open, undefended town. From the centre of the town on the south side has grown out a long suburb called *Murqāb* مراقب, beyond which is a gypsiferous tract where Juss or gypsum mortar is manufactured by simply firing rubbish in broad shallow excavations. The site of the town is generally flat and sandy; but the south-western quarter stands on somewhat higher ground than the rest and has steep lanes leading down from it to the beach. The streets are irregular and winding, many of them are blind alleys, and the town is not laid out on any general plan; the only street of apparent importance, besides the main bazaar which runs at right angles to the sea about the middle of the town, is one which leads from the *Sūq* or market square, situated at the back of the town near the *Murqāb* quarter, to the north-east end of the town, but it has no general name. Most of the houses have only a ground floor, but appear higher owing to a parapet-wall enclosing the roof; they are generally built surrounding a courtyard. The better sort are of stone plastered with Juss and have high arched gateways, sometimes with a wicket-door in the middle of the gate; a few arches appear also in upper storeys. The system of conservancy is rudimentary; the sewage is deposited in large, open public cesspools in the various quarters. There are between 20 and 20 mosques, of which 4 are *Jāmi's* جامع or Friday congregational mosques; these are the chief mosque, which stands on the west side of the main bazaar, the Shaikh's mosque on the sea face near his residence, the mosque of *Haddād* حداد, and the mosque of the *Janā'at* جناعات; none of these have any architectural pretensions.

Climate.—The climate of Kuwait compares favourably with that of most ports in the Persian Gulf. In winter, especially when a Shamāl is blowing, it is sometimes bitterly cold ; in summer the heat of the sun is tempered by sea breezes, and the clean sand desert cools down rapidly at night. The air, however, except in a breeze, is laden with fetid odours, chiefly of the fish-oil with which the boats that line the whole beach are smeared and of human excreta.

Inhabitants.—The population of Kuwait is now about 35,000, of whom the great majority are Arabs of the 'Utūb, 'Awāzim, Rashāidah, Bani Khālid, 'Ajmān, Dawāsir, 'Anizah, and Dhafir tribes besides Hasāwiyah or Arabs from Hasa and Bahārinah from Bahrain. There are also a number of Persians, some Jews, some Janā'āt and many negroes ; also 2 Armenians. No Indians are settled here.

The 'Utūb are the tribe to which the Shaikhs of Kuwait belong, but they are reckoned to be only about 30 (another account says 250) families. The resident Bani Khālid belong, in part at least, to the Mahāshir, Āl Miqdām and Bani Nahad sections of that tribe. More than 100 Arab households in the town are immigrants from Zilfi in Najd. The Persian community consists of about 1,000 souls ; its members do not inhabit a separate quarter but are scattered through the town ; nearly all of them are permanently settled at Kuwait, nevertheless they go and come freely between Kuwait and the parts of Persia to which they originally belonged. Persian merchants are about a score ; over 100 Persians are shopkeepers ; 200 of the remainder are penniless labourers who live from hand to mouth. The Jews amount to between 100 and 200 souls ; they have a synagogue of their own, called a Kanisah ; at Kuwait they seem to be notorious chiefly for the distillation of spirituous liquors which some of the Muhammadan population consume secretly in dread of the Shaikh. Two of the Jews are well-to-do merchants ; the rest are mostly cloth-sellers and goldsmiths. The Janā'āt are a small colony of 150 souls ; some are merchants, the others sailors and boatmen. The negroes are a very conspicuous element in the population ; they number about 4,000 altogether, and have social clubs of their own which are distinguished by peculiar sky-signs ; about one-third are Ma'tūq or emancipated, while two-thirds are Mamlūk or enslaved.

The Muhammadans of Kuwait are nearly all Sunnis : the exceptions are the Persians, Bahārinah and some of the Hasāwiyah, who are Shī'ahs, and some immigrants from Najd, who are Wahhabis. The pilgrimage to Makkah from Kuwait is never made by land at present, and the annual number of pilgrims who go by sea is only from 20 to 40.

The Arab population of Kuwait are not on the whole of a robust type; they are generally long-faced, slender and inclined to lankiness; the complexion of many is sickly. The men wear the ordinary garments of the sedentary Arab, while the women dress in black veils and over-mantles, but sometimes display beneath a bright-coloured skirt which they allow to trail in the dust for some distance behind them. A remarkable scene follows sunset, when the town suddenly becomes alive with mendicants, mostly children, who beset the doors of the houses and beg in melancholy voices for a morsel from the evening meal; they are seldom repulsed from any gate. Merchants and other townsmen of Kuwait often resort for a change, before the pearling season, to the small villages in the adjacent **Qrā'ah** and **'Adān** districts.

Supplies and water.—Neither Kuwait town nor its environs can boast of any agricultural resources. There are no date plantations, no fields, hardly even a kitchen garden. Forage and vegetables are mostly brought from **Jahrah** or from abroad; and the Bedouins of the neighbourhood provide the town with dried curds or *Yuqat*, gli or *Saman* and truffles or *Faqa'* نقع, both fresh and dried, besides camel-dung or *Jillah* which is used as fuel to supplement the scanty supply of brushwood from the neighbourhood.

The drinking water of the town is mostly obtained from wells 4 miles to the south of the town and it is passably good, but water of better quality is supplied to the Shaikh's household from the wells of **Qasr-as-Sirrah** or those of **Mishrif** in **Qrā'ah**.

Sea fisheries.—The only truly local produce of Kuwait is that yielded by the harbour fisheries: these are a valuable asset. The principal fish is the *Zubaidi*, a deep thin fish about 1 foot long, which is in season from December to April and, though found all over the bay, is caught chiefly between the island of **Failakah** and its outlier **'Auhah** in water from 2 to 12 fathoms deep; the *Zubaidi* forms about one-third of the total catch of the Kuwait boats. The *Zubaidi* is captured with float-and-weight nets, 2 to 2½ fathoms deep, which are set across the tide-way: these nets are made in lengths of 36 fathoms, and each boat carries 8 to 16 lengths which are connected when set so as to form one long barrier of 300 to 700 fathoms in extent; sometimes as many as 70 boats go out. The nets are cast after sunset and are hauled three times in the night; fish that are not disposed of on the first day, in consequence of not reaching the town in time, are salted. The next most

common kinds of fish are the Naqrūr and the Nawaibi, which each constitute about one-quarter of the yield of the fisheries. The Naqrūr, varying in length from 1 to 2 feet, is found all over the harbour, is in season in March and April, and is caught with lines or Khuyūt by about 40 boats, prawns and small fish being used as bait. The Nawaibi is about the same size, is in season at the same time, and is caught in the same manner. The Maid is a fish rather less than a foot long, which is caught along the beach in summer with hand-nets. Ribyān or prawns, which are in season in March and April and again in October and November, are captured with fine triangular hand-nets. Many fish are taken also in stake-nets or rather tidal weirs called Hadhrahs, constructed of reed-hurdles; the fish enter them with the flowing tide and are left behind at the ebb. These Hadhrahs are a common sight along the coast near Kuwait and also at other places such as **Bahrain**. The fishermen of Kuwait are mostly town Arabs, but there are a few Persians: the boats used are Shū'ais, Baqārahs and Ballams. As a rule Kuwait fishermen do not go outside 'Auhah near **Failakah**, but occasionally they visit the Khor 'Abdullah and fish it, for Zubaidi only, between Rās-al-Qaid and **Warbah** island; at such times they take their drinking water with them and are absent from Kuwait for about a week, not landing on **Būbiyān** island except to collect fuel.

Pearl fisheries.—The lower and middle classes of Kuwait town almost all live by seafaring occupations, such as fishing, pearl diving and the coasting trade; at present (1904) the town possesses 461 pearl-boats carrying 9,200 men; but of the crews, in the pearling season, some 1,500 or 2,000 are Persian subjects. A large number of Kuwait pearl fishers—in 1905 no less than 3,000—now visit the Ceylon pearl banks in winter, instead of remaining at home to prosecute the cold weather sea fisheries which have been described above.

Carrying trade.—The carrying trade of Kuwait is chiefly confined to the upper and western part of the Persian Gulf and to the Shatt-al-'Arab; its ordinary limits are **Qatif** on the south and **Basrah** on the north, and the boats engaged in it are seldom absent from Kuwait for more than two months at a time. Seagoing cargo vessels number 36, viz., 11 Baghlahs, 20 Būms and 5 Shū'ais; the Baghlahs have an average carrying capacity of 2,000, and the Būms and Shū'ais one of 1,200 date packages each. Coasters are about 50 Būms with an average carrying capacity of 700 date packages each. Besides these cargo vessels, which

though owned at Kuwait are quite distinct from the pearl boats, about 50 strange boats—chiefly Ballams—visit the port with wood and vegetables from the Shatt-al-'Arab; and occasional calls are made by vessels from Khārag island and from Sūr in the Sultanate of 'Omān.

Boat-building.—Except boat-building, there are no local manufactures. About 20 or 25 vessels are turned out annually, the timber, coir-rope and fibre required being brought from Calicut, and the ribs from Karāchi: the nails used are also from India. About 300 carpenters gain a livelihood by boat-building; their earnings range from $\frac{1}{4}$ of a Riyāl to 4 Riyāls a day.

Miscellaneous occupations.—The other occupations and industries of the town are directed to the satisfaction of local requirements: an enumeration of them as they were in 1904 will help to elucidate the character of Kuwait. There were then 36 dealers in piece goods, 21 goldsmiths, 11 blacksmiths, 12 tinsmiths, 7 gunsmiths, 11 lamp makers, 132 dealers in Bedouin requisites (such as carpets, cheap 'Abas or cloaks, nails, horse shoes, lead and shot), 13 leather workers, 17 quilt makers, 23 haberdashers, 21 tailors, 37 cloak embroiderers, 7 gold and silk braid workers, 12 makers of 'Aqāls or Arab head fillets, 13 barbers, 11 confectioners, 8 bakers, 3 professional cooks, 11 fishmongers, 36 butchers, 14 tobacconists, 9 ghi sellers, 32 date merchants, 16 druggists, 28 fruiterers, 24 rice merchants, 15 wheat dealers, 2 oil pressers, 147 grocers and druggists, 9 grass sellers and, lastly, 35 male and 32 female brokers of private goods on commission who had fixed places of business. There were at the same time 12 tea shops, 7 cafés, 70 business offices, 250 warehouses for the storage of grain, and 6 stores for the materials used in pressing oil.

Weights, measures and currency.—The weights and measures by means of which the tradesmen of Kuwait conduct their business with one another and with the general public deserve a brief notice. Small weights are the Habbah حبه of 3 gr. English, the Mithqāl 'Attārī عطاري ميثقال of 54 grains, the Mithqāl Shīrāzī شیرازی ميثقال of 72 grains, and the Tōlah توله of 120 grains; but these are only in use for weighing such commodities as the precious metals, precious stones, gold and silver thread or lace, raw silk, silk thread and drugs. The ordinary unit of weight in retail transactions is a Waqīyah وقية equal to 4 lbs. 10 oz. 1 dr. English; there is also a retail Mann من, of 30 Waqīyahs or 133 lbs.

13½ oz. English. The unit of weight in the wholesale trade is also a Waqīyah, but one heavier (except in the case of the Mann of 30 Waqīyahs when it is the same) than the Waqīyah of retail trade and equal to about 4 lbs. 14 oz. 3 dr. English. The larger wholesale weights are a Qiyās قیاس (pronounced Jiyās) of 6 Waqīyahs or 29 lbs. 5 oz. ½ dr. English, used for wool; a Mann of 12 Waqīyahs or 58 lbs. 10 oz. 1 dr. English, used for twist and sail cloth from Persia and Bahrain; a Mann of 24 Waqīyahs or 117 lbs. 4 oz. 2 dr. English, used for ghi, tallow and mortar; and a Mann of 27 Waqīyahs or 137 lbs. 14 oz. 10 dr. English, used for all other commodities except cereals and dates which are sold by the Mann of 30 (retail) Waqīyahs or 138 lbs. 13 oz. 11 dr. English. Weighments in the wholesale trade are all made with steel-yards by professional weighmen who charge half an anna per Mann for their services. The license fees paid by these weighmen were in 1904 a perquisite of the Shaikh's mother, but she died in 1905, and they are now taken by the Shaikh himself.

The unit of length is a cubit or Dhirā' ذراع of 18¾ inches. Cotton and woollen goods and some kinds of planking are sold by the Dhirā' and it is used for measuring up masonry work which has been given out on contract by the piece. Beams and masts are sold by the Calicut kandy of 10 cubic feet and 29 cubic inches, chandals (round rafters or spars) by the Korjah كورجه or score, and boat ribs by the Gāri or cart load of 40 pieces or upwards according to size.

Indian rupees and other coins are current; but the basis of the local currency is the Maria Theresa dollar or Riyal ريال of which 100 are on the average equivalent in value to 135 Indian rupees, but in 1905-06 the rate of exchange fluctuated between 133 and 152.

Trade.—Kuwait owes its mercantile, as distinguished from its political importance, to its pearling and coasting fleet, to trade—especially a lucrative smuggling trade—with Persia and Turkish 'Irāq, and to the fact that it is the only port serving Najd which is not under Turkish control.

The richest merchants of Kuwait are Arabs who have made their fortunes in general trade; ten of them possess capitals ranging from Rs. 25,000 to Rs. 5,00,000. Of the Persian trading community two are wealthy, while about 20 others have sums between Rs. 5,000 and Rs. 10,000 invested in their business; two Jews also employ from Rs. 40,000 to Rs. 50,000 each in local trade.

As no statistics of imports and exports are kept at Kuwait or, if kept by the Shaikh's customs department, are not communicated, it is impossible

to give reliable particulars of foreign trade. According, however, to the most recent trade report the value of foreign goods imported by sea in 1905-06 was Rs. 48,18,929 of which Rs. 27,69,054 represented goods arriving by steamer and the balance goods brought in native sailing craft. In the year mentioned the chief classes of imports were as follows, in order of value :—

Article.	Value in lakhs of rupees.	REMARKS.
Arms and ammunition	10½	Entirely by steamer; four-fifths of the total were of British and one-fifth was of French origin. It is said that about three-quarters of the rifles and cartridges landed eventually find their way into Turkish 'Irāq; the remainder, with the exception of a few which are smuggled into Persia, are disposed of to Central Arabian customers. Very few arms go from Kuwait to Hasa, which is more conveniently supplied through Qatar.
Rice	7½	More than half from Turkish 'Iraq by sailing boat, the remainder by steamer from India. That from Turkish 'Irāq arrives in the husk.
Piece-goods	5	By steamer, four-fifths from India and one-fifth from America; the latter are Mexicans. At present half the superior piece goods in cases go to Basrah and more than one-fourth to Muhammareh;.
Tobacco	4½	By sailing boat from Turkish 'Irāq. Nearly half the quantity received appears to be re-exported to the same country.
Wet dates	3½	From Turkish 'Irāq by sailing boat. Nearly one-third of the quantity received was exported to Persia and the Arabian coast.
Wheat	2½	Smuggled from Persia by sailing boat. More than half the quantity was re-exported to Turkish 'Irāq and the Arabian coast, being divided in about equal proportions between the two.
Coffee	2½	By steamer from India and America, in the proportion of three quarters and one quarter respectively. The Brazilian coffee from America, which is of recent introduction, has not as yet found any sale in Najd, and the Indian is still preferred even at Kuwait. Some Arabian coffee for private consumption, not for sale, is brought from Aden, etc., by owners of native sailing vessels.
Barley	2	All by sailing vessels, three-fourths from Persia and one-fourth from Turkish 'Irāq.
Sugar	1½	By steamer, three-quarters from Germany and one-quarter from India.

It is said that the bulk of the rice, wheat, coffee and barley, and of the baled piece-goods such as cheap Mexicans, are not consumed at Kuwait but have Najd for their destination.

The total value of exports in 1905-06 was only Rs. 11,54,322 and the table of valuable exports and re-exports is consequently a short one ; it is as follows :—

Article.	Value in lakhs of rupees.	REMARKS.
Tobacco	2	A re-export ; see table of imports.
Wheat	1½	Ditto ditto.
Pearls	1	These all went to India.
Wet dates	1½	These were a re-export, as noted in the table of imports.
Ghi	1	This is a true export and all went to Bahrain.

Besides these commodities there is a small export of lambskins to Russia *via* Baghdād and of horses to India ; but the horse trade of North-Eastern Arabia with India seems now to have been diverted, or rather to have returned, to Basrah, its original port.

It would be imprudent to base any general conclusions on the statistics of a single year, the first for which complete figures have been available, but it is of interest to observe that the volume of imports is evidently much greater than that of exports. Of this fact a two-fold explanation is admissible ; first that, while Kuwait as a place of import serves Najd and to some extent Turkish 'Irāq and Persia, as a place of export it serves only the poor and sparsely populated tract which is politically dependent on it, -- in other words a large part of its trade is a transit trade taking place in one direction only ; second, that the balance of trade is partly adjusted in specie, while the earnings abroad of the mariners and pearl fishers of Kuwait must also be taken into account in this connection. The value of the specie exported from Kuwait in 1904-05 was Rs. 4,32,223 and in 1905-06 Rs. 2,87,535 ; in both years this specie went chiefly to India and was considerably in excess of the amount of specie imported.

In 1905-06 of the total sea-borne trade of Kuwait in both directions, about 30·75 per cent. was with India, 26·77 per cent. with Turkish Arabia, 14·66 with the United Kingdom and 9·21 per cent. with Persia ; the remainder was divided among various countries in less considerable amounts. With regard to trade by land, it is stated that before the war

in Central Arabia about 20 caravans from Southern Najd and two from Jabal **Shammar** used to come in annually at Kuwait; on the other hand, while the course of events was unfavourable to the Shaikh of Kuwait and his allies and **Hafar** was in the hands of Ibn Rashid, the Central Arabian trade was in a large measure diverted to **Basrah** and **Najaf**; and at the present time direct commercial relations between Kuwait and Jabal **Shammar** are still in abeyance. Batches of 300 to 500 camels are occasionally exported to Syria by land.

The slow steamer of the British India Steam Navigation Company has called regularly once a fortnight at Kuwait since the 8th of July 1903, and on the 9th of December 1904 the fast steamer began to call in the intermediate weeks. In 1905-06 no less than 50 steamers (all British) with a total tonnage of 51,893 entered the port of Kuwait.

Administration.—Kuwait is despotically and personally governed by the Shaikh. There is no delegation of authority. The town is divided into many quarters, but in none of them is there any recognised headman: all the inhabitants must deal direct with the Shaikh, who generally gives audience at the market place for an hour or two every morning. The nature of the Shaikh's general administration is explained in the article on the **Kuwait** Principality. Bedouins are not now forbidden to enter the town armed, but they generally leave their weapons in their tents outside. The town guard consists of about 20 watchmen indifferently armed and equipped.

KUWAIT
 كويت
PRINCIPALITY *

Strategical and commercial advantages, close political relations with the British Government, the proximity and (at times) hostility of the Turks and an intimate connection with Central Arabian affairs combine to render the position of the Kuwait Shaikhdom remarkable. The Turks affect to regard Kuwait as a Qadha of their Basrah Sanjāq and the Shaikh as a Turkish official; but, as will be apparent from the recent history of the principality, it might be more justly regarded as an independent state under virtual British protection.

*This leading article on the Kuwait principality and the other minor articles in the Gazetteer on places, etc., in the same are the outcome chiefly of special investigations held between 1904 and 1907. The information previously available in books and reports was collected by the writer in 1904 and was brought out in November of that year in the form of 19 printed foolscap pages of notes to serve as a basis for further proceedings. In December 1904 the writer visited Kuwait, and, after collecting information there for several days, travelled by land in company with Captain S. G. Knox, Political Agent at Kuwait, Lieutenant C. H. Gabriel and Mr. J. C. Gasrin to the

Extent.—The boundaries of the Kuwait principality are for the most part fluctuating and undefined ; they are, at any given time, the limits of the tribes which then, either voluntarily or under compulsion, own allegiance to the Shaikh of Kuwait. The northern and southern frontiers

Turkish frontier : between Jahrah and Safwān the party followed two different routes. A complete survey of the country traversed in this tour was made by Surveyor Sher Jang of the Survey of India and was after continued by him southwards from Kuwait Town for about 30 miles. The further collection of general information was carried on by Captain Knox during the early part of 1905 ; and in September the writer was able to produce a set of draft articles on the Kuwait Shaikhdom, extending to over 50 printed octavo pages. These drafts were carefully revised by Captain Knox, and much fresh information also became available in consequence of two journeys which he made, one in January 1906 to Hafar and the other in March 1906 to Warab, south of Kuwait Town. In 1906 Captain F. B. Prideaux, Political Agent in Bahrain, supplied much useful information regarding the southern districts of Kuwait. The drafts were reprinted at the beginning of 1907 with corrections and additions which increased them to over 60 pages ; and thereupon fresh references were made to the Political Agent at Kuwait. During 1907 the results of a survey by Commander Beauchamp, R. I. M., of Khor Zubair in the preceding October and of another journey by Captain Knox southwards along the coast (to Banīyat-az-Zor) became available and were incorporated, as were also new material relating to trade. An account, with maps, of a journey by Major Knox in the country north of Kuwait, made in December 1907 and January 1908, arrived too late for incorporation and has been transferred to the Foreign Department ; and similarly a report on an important journey from Kuwait to Ntā' in Wādī-al-Miyāh, made by the same officer in February 1908, can only be mentioned here.

General authorities on Kuwait up to 1904 were the following, which were concerned chiefly, but not in the case of Colonel Pelly exclusively, with the town and its environs : Stocqueler's *Fifteen Months' Pilgrimage*, 1832, *Bombay Records XXIV*, 1856 ; Colonel L. Pelly's *Remarks on the Tribes, etc.*, 1863 ; his *Recent Tour round the Northern Portion of the Persian Gulf* (with map), 1863 ; his *Report on a Journey to the Wahabee Capital* (with map), 1865 ; a report by Dr. Cassim Izzedine, dated 14th November 1897, contained in the Political Proceedings of the Government of India for June 1898 ; and Captain H. H. Dowding's *Report on Koweit* (with map), 1903. The *Persian Gulf Pilot*, 1898, deals sufficiently with the features of the coast except such as have only recently attracted attention, *viz.*, those belonging to the Khor 'Abdullah, Khor Umm Qasr and Khor Zubair waterways, which are on the border between Kuwait and Turkish 'Irāq. In relation to these last the principal authorities are :—a report on Khor 'Abdullah and Umm Qasr by Commander T. W. Kemp, R.N., dated 20th February 1902, and contained in the Government of India's Political Proceedings for July 1902 ; a report by Mr. F. E. Crow, Consul at Basrah, on a journey from Basrah to Umm Qasr and Khor 'Abdullah, dated the 4th May 1903 and contained in Proceedings for January 1904 ; a *Reconnaissance Report*, 1904, by Captain H. Smyth on Umm Qasr and Kādhamah in connection with the projected Baghdad Railway, contained in Proceedings for October 1905 ; a report by Captain E. W. S. Mahon, R.E., dated 24th July 1905, dealing with Umm Qasr, Warbah Island, and Kādhamah and Bandar-ash-Shuwaikh in Kuwait Bay as possible termini of the same proposed line ; and finally a report by Commander

in the neighbourhood of the sea may however be regarded as fixed; on those sides the question is not between the Shaikh and nomadic Arab tribes, but between the Shaikh and the Turkish Government.† On the north the most advanced Turkish outposts upon the mainland are at Umm Qasr and Safwān and the influence of the Shaikh of Kuwait is unquestioned up to the very walls of those places; we may accordingly consider the frontier on this side to be a line running from Khor-as-Sabiyah so as to pass immediately south of Umm Qasr and Safwān to Jabal Sanām and thence to the Bātin. On the south the Turks have no station nearer to Kuwait Town than Musallamiyah Island, nor does the Shaikh claim to exercise any real control over the Radāif

W. G. Beauchamp, R.I.M., on Khors 'Abdullah and Zubair, forwarded to the Government of India by Major P. Z. Cox, Resident in the Persian Gulf, with a demi-official letter, dated 20th November 1906.

The principal source of information in regard to trade is the commercial report now compiled annually by the Political Agent at Kuwait.

The map issued with this Gazetteer, superseding the *Map of Parts of Arabia and Persia*, 1883, will be found the most useful on a small scale for the principality of Kuwait as a whole; and the large scale survey made by K. S. Sher Jang of the more important districts has since been reproduced by the Survey of India as a *Map of the Country round Kuwait*, 1904-05. *Map of Route of the Political Agent, Kuwait, to Hafar*, 1906, gives the topography of the region between Kuwait Town and that place and is filed in the Foreign Department Library, Simla, as No. 1373; while Captain Prideaux's *Map of Eastern Arabia north of Qatar*, 1905, links the geography of Kuwait with that of the Hasa Sanjāq (Foreign Department Library, Simla, No. 1369).

The principal charts of Kuwait waters are No. 2374—2837-B, *Persian Gulf*; No. 2879—22 (plan), *Kuwait Harbour*; and No. 2380—1235, *Mouth of the Euphrates, etc.*: some additional soundings in Kuwait Harbour are given in a tracing which accompanied a report by the Officer Commanding the R. I. M. S. *Lawrence*, dated 8th February 1900, and is contained in the Government of India's Political Proceedings for October 1900. Recent marine surveys of general importance are the *Port of Kuwait*, Poona, 1905, and *Approaches to Kuwait Harbour* E. 31, Poona, 1906. Special marine surveys relating to the waterways north of Būbiyān Island are *Soundings in Khor Abdulla* by H. M. S. "Sphinx," July 1903 (Commander Kemp, R.N.) and a *Sketch Survey of Khor Zobeir*, 1906 (Commander Beauchamp, R. I. M.) The general features of the last mentioned survey are now conveniently incorporated in a reproduction of Chart No. 2381—3293, *Approaches to Kuwait Harbour and Shatt-al-Arab*.

† In our remarks on the northern and southern frontiers we have given weight not only to the statements of the Shaikh of Kuwait but also to facts observed in 1904 on a journey between Kuwait Town and Basrah and to reports (1905) from Bahrain regarding the northern limits of Hasa. The Shaikh of Kuwait stated (1904) that his authority was in some degree respected by the inhabitants of Wādī-al-Miṣāh, and it is questionable whether his limit in this direction should not be placed somewhat further south. If we carry the principality further south we must include Wādī-al-Miṣāh among its districts and the Aḥu Dhahair hills among its natural features.

tract; his boundary on this side may accordingly be considered to run westwards from Jabal Manifah on the coast to the Na'airiyah hill at the north-western corner of **Radāif**. It is a task of great difficulty to circumscribe the Shaikh's territories on the remaining sides with even approximate accuracy.* Shaikh Mubarak states (1904) that on the north-west his influence reaches to the **Bātin** and somewhat beyond it, and that on the west the inhabitants of **Summān**, but not those of **Dahānah**, acknowledge him; and his assertion is to some extent borne out by known facts in regard to the occupation of **Hafar** which Ibn Rashīd, though at one time he seized it, was unable for long to retain. We may therefore consider that the Shaikhdom is bounded between Jabal **Sanām** and **Hafar** by the **Bātin**, and that south of **Hafar** the border is the line dividing **Summān** from **Dahānah** as far south as the point where that line is intersected by the route from **Wabrah** to **Riyādh**. These being the limits of the Kuwait Principality its length from north-north-west to south-south-east is about 190, and its breadth from east-north-east to west-south-west about 160 miles. The islands belonging to Kuwait are mentioned in the next paragraph.

Districts and islands.—The Shaikhdom, considered from the physical point of view, falls naturally into two parts, one to the north and the other to the south of a line joining **Kuwait Town** and **Riqā'i**. In the northern block lie the districts or tracts of **Bātin**, **Shiqqaq**, **Bātih**, **Umm-al-Khilān**, **Yāh**, **Qirā'-al-Marru**, **Zaqlah** and **Zor**. The southern block comprises the three great divisions of **Summān**, **Dibdibah** and **Umm Janaib**: and the last, which lies along the coast to the south of **Kuwait Bay**, is further subdivided into districts named **Shaqq**, **Qrā'ah**, **'Adān**, **Salū** and **Hazaim**. There is also, in the extreme south, a district called **Sūdah**, which some authorities treat as independent of **Umm Janaib** and others regard as a portion of it.

Excluding the island of **Būbiyān**, which is claimed by the Shaikh of Kuwait but is at present (1905) occupied by the Turks, and the island of **Warbah**, the ownership of which would naturally follow that of **Būbiyān**, we may reckon the maritime possessions of Kuwait to consist of the island of **Failakah** which, with its northern and southern outliers of **Mashjān** and **'Auhah**, is situated at the mouth of **Kuwait Bay**, and of the islets of **Kubbar**, **Qāru** and **Umm-al-Marādīm**.

* For the border westwards we have been obliged to rely chiefly on the word of the Shaikh himself. Independent evidence worthy of the name was not forthcoming at **Kuwait Town** or in the neighbourhood.

Coastal features.—The coast line of Kuwait, except **Kuwait Bay**, is insignificant in its features and hardly merits a detailed description. The following only need be noted :—

Name.	Position.	Nature.	REMARKS.
'Ajūzah (Rās) رأس عجوزة	1½ miles north-east by east of Kuwait Town . It is in the Qrā'ah District .	Low cape.	The eldest son of the Shaikh of Kuwait has a fort, Qasr-ash-Shaikh Jābir قصر الشيخ جابر, here.
'Amūdah (Jabal) جبل عمودة	On the coast, about 3 miles south-west of Hadd-al-Misha'ab . It is in the Sūdah District .	A dark hill of volcanic aspect appearing from the sea as 4 or 5 hummocks.	Height is 105 feet; the hill is a well-known landmark. A view of it will be found in Chart No. 2374—2837-B.
Ardh (Rās-al-) رأس الأرض	8 miles east by south of Kuwait Town . It is in the Qrā'ah District .	Low, sandy cape.	The southern entrance point of Kuwait Bay : a beacon is maintained here by the Government of India for the guidance of ships. In spring townsmen from Kuwait camp about the base of this promontory.
Balbūl (Dōhat) دوحة بلبول	20 miles north-west of Musallamiyah Bay . It is in the Sūdah District .	Bay and anchorage.	A kind of fair is held here from April to June at which local Bedouins barter their ghi for rice, dates, etc., from Qatif . There are no houses. Bad water is obtained from temporary wells. In the vicinity is a pearl bank known as Mukalaf . Balbūl is adjoined on the south by another bay called Dōhat Balabīl دوحة بلبيال.
Banāyah بنايه	In Ardh-al-Khor , about 2 miles inland from the sea at a point about 7 miles south of Rās-az-Zor . Khor-al-Ami is to the north and Khor-al-Mufattah to the south of it. (See Ardh-al-Khor below.)	A dark coloured saddle hill, about 80 feet high, with salt deposits called Mamlakah in the neighbourhood.	Properly called Banīyut-al-Khor بنية الخور to distinguish it from Banīyat-az-Zor and Banīyat-ad-Dasht on the coast further to northward. Chart No. 2374—2837-B contains a view of it.

Name.	Position.	Nature.	REMARKS.
Bard-halq (Rās) راس برد حلق	22 miles north-north-west of Hadd-al-Misha'ab.	A low, white, sandy point.	Off the cape is a pearl bank bearing the same name.
Khafji (Rās-al-) راس الخفجي	15 miles north-north-west of Hadd-al-Misha'ab at the north end of the Sūdah District.	A sandy point.	Off the point is a pearl bank bearing the same name. The mouth of the Maqta' stream is immediately to the north of this point.
Kharais (Dōhat-al-) دوحة الخريس	From Rās-as-Safā-niyah to Rās-at-Tanājib. It is in the Sūdah District.	Bay.	...
Khor (Ardh-al-) ارض الخور	On the coast, beginning 2 or 3 miles south of Rās-az-Zor and reaching southwards for a few miles.	A tract.	In this tract, several miles south of Rās-az-Zor, are two creeks, one to the north is called Khor-al-'Ami ^{خير العبي} and vessels cannot enter it, but the other to the south, known as Khor-al-Mufattah ^{خير المفتاح} is open and is frequented by fishing boats. Banāyah (q. v.) stands between them in Ardhal-Khor. Inland of the Khors are some brackish wells named ^{هنييه} Habannamīyah. A pearl bank called Khirān lies off this stretch of coast.
Maqta' (Jazīrat-al-) جزيرة المقطع	1½ miles south of Hadd-al-Misha'ab, off the coast of the Sūdah District.	Island.	2 miles long north-east and south-west, with cliffs 20 to 30 feet high at the east end. No channel exists between Maqta' and the mainland. The island is said to be to a great extent submerged at high spring tides.
Manifah ('Adā-mat or Jabal) عدامة جبل منيفه	17 miles north-west of Musallamiyah Bay, on the southern boundary of the Sūdah District.	Cape.	A promontory of some height. It may be taken as marking the boundary on the coast between the principality of Kuwait and

Name.	Position.	Nature.	REMARKS.
Misha'ab (Hadd-al-) حد المتعاب	90 miles south-south-east of Kuwait-Town on the coast of the Sūdah District.	Cape.	This cape is low and sandy with patches of cliff. From its neighbourhood a chain of pearl banks is said to extend for some 60 miles eastwards or south-eastwards out to sea.
Misha'ab (Bandar) بندر مشعاب	3½ miles south-east of Hadd-al-Misha'ab.	Anchorage.	2½ miles wide at the entrance, depth 6 to 7 fathoms, situated between the spit at the east end of Maqta' Island and a detached reef to the south of it.
Qal'ai'ah (Rās-al-) or Qaliyah راس القليعه قلبيه	39 miles south-south-east of Kuwait Town in the 'Adān District.	A promontory consisting of white sand hills, through which crop out sandstone and a browner harder rock, apparently a conglomerate of fine gravel.	On the coast near the point is a pearl bank known as Qal'ai'ah. About 4 miles north-west of the point is a very short promontory of soft sandstone rising about 50 feet above the level of high tide and protecting from the Shamāl a small bay known as Adhibā'iyah مضباعيه; on this promontory, which is rapidly disappearing into the sea, are the ruins of a fort and mosque. The small promontory is called Qal'ai'at-al-'Abid عبيد to distinguish it from the main promontory or, Qal'ai'at-al-Harār حرار; the explanation given of the names is that the former is dark like a "slave" while the latter is light-coloured like a "free man." The village of Shi'aibah is visible from the neighbourhood of Qal'ai'at-al-'Abid.
Rāsain (Bū) بوراسين	On the coast of Sūdah District, a few miles south of Jabal 'Amūdah.	A small double-peaked hill.	A well-known landmark.

Name	Position.	Nature.	REMARKS.
Safāniyah (Rās-as-) راس السفانية	105 miles south-south-east of Kuwait Town, on the coast of the Sūdah District.	Cape.	There are a number of wells close to this promontory on the north side.
Tanājib (Rās-at-) راس القناجيب	122 miles south-south-east of Kuwait Town on the coast of the Sūdah district.	Do.	70 to 100 feet in height. A view of it will be found in Chart No. 2374-2837 B.
Zarq (Dōhat-az-) درحة الرزق	Between Rās-al-Qalai'ah and Rās-az-Zor.	A bay.	At the foot of the bay is a pearl bank upon the coast. The coast of this bay towards the north is called Ardh-ad-Dasbt, and towards the south Ardh-az-Zor.
Zor (Rās-az-) راس الرز	51 miles south-south-east of Kuwait Town and 40 miles north-north-west of Hadd-al-Mi-sha'ab.	A long, low, sandy point.	There is a pearl bank here, adjoining the coast, about 6 miles west-north-west of Rās-az-Zor, and $\frac{1}{2}$ a mile inland from the shore of Dōhat-az-Zarq is the Baniyat-az-Zor بنية الرز, a chain of broken sandstone mounds reaching south-east and north-west for about a mile; the highest rises 30 feet above the plain. These mounds are situated in a tract known as Ardh-az-Zor or Ardh Abu 'Amīrah ارض ابو عميرة; the tract contains an abundance of a shrub called Silaj سلاج, green in the hot weather, on which camels feed and which has an aperient effect on them. Between Rās-az-Zor and Baniyat-az-Zor are the brackish wells of Sūlah صولة.

An account of the pearl banks adjoining this coast will be found in the Appendix on the pearl fisheries of the Gulf.

Physical geography.—The surface of each of the districts mentioned above is described in the article under its name. As a whole the territory of the Shaikh of Kuwait is monotonous, devoid of striking features, and sterile. The only well-marked valleys of any size are those of **Bātin** and **Shaqq**, while the only eminences deserving of mention are **Jabal Sanām** on the northern boundary, the **Jāl-az-Zor** on the north side of **Kuwait Bay**, and the **Dhula'-al-Mi'ajil** towards the south of **Umm Janaib**; isolated hills of some importance as landmarks are **Sirrah** in **Qrā'ah**, **Burqān** and **Wārah** in **'Adān**, **Qrain** and **'Amūdah** in **Sūdah**, besides the small plateaux of **Ba'al** in **Sūdah** and **Warai'ah** near **Dhula'-al-Mi'ajil**. The soil is generally gravelly in the districts to the north of **Kuwait Bay**; in the more southerly it is partly sand and partly clay, except in **Summān** where there seems to be little sand. In many places there are low outcrops of sandstone, and in **Summān** these are a leading characteristic. Nowhere in Kuwait, it is said, is there any flowing water or spring rising to the surface of the ground except **Maqta'**: the entire water supply is from wells which are on the average about 20 feet deep and are frequently saline. The only minerals known to exist are Juss or gypsum, in fields near **Kuwait Town**, and elsewhere, and bitumen which exudes from the ground in a hollow near the **Burqān** hill.

Flora and fauna.—Vegetation is exceedingly scanty and in winter becomes almost invisible. The only trees are the date and the ber or **Sidar** and they, even, are not met with except in the environs of villages. Shrubs found, especially in the northern districts, and useful as grazing for camels are the **'Arfaj** and the **'Ausaj**, the latter is a thorny bush with small leaves and red berries. The colocynth, called **Handhal**, flourishes in the desert; and south of **Kuwait Bay** the grass called **Thamām** is obtainable, but is often of poor quality. **Nasi** grass is also obtainable in places.

Animal and bird life are scarce, but the wild animals include the hare and a gazelle resembling the Indian chinkara, also the wolf: among land birds are the lesser bustard and the sandgrouse, the last being plentiful in the **Bātin** in winter.

Communications.—From what has gone before it will be apparent that Kuwait, though free as to its surface from physical obstacles, is not a country of easy travelling. At a maximum distance of 20 to 25 miles from the town in any direction even the smallest quantity of provisions

ceases to be obtainable; it is thus necessary to carry all the food required for a journey. The case of forage is not so difficult, as in many localities camels are able to support themselves by grazing on the road. Water is scarce, especially to the north of **Jahrah**, and routes are determined everywhere chiefly by the position and state of the wells.

The principal routes are two leading to **Basrah** and four (of which two pass through **Hafar**) to **Najd**: the details of the more important follow below. All these of course are mere tracks; there are no made roads,—

*I.—Route from Kuwait Town to Basrah viâ Qasr-as-Sabīyah, Umm Qasr and Safwān.**

Halting place.	Distance from daily starting point by route followed, and average direction each day.	Character of halting place.	Remarks on the route between starting point and halting place.
Jahrah جھرة	20 miles west.	See article Jahrah .	For half of the way the road skirts the south shore of Kuwait Bay and for the first 5 miles it is somewhat soft and heavy going in consequence of sand. In the second half the route crosses slight almost imperceptible undulations at right angles; but the ground is fairly firm. Wells called 'Ashairij عشيرج, Mul-kashi ملكشي and Jir-thāmāh جرثامه lie on the right, and others called Jadadiyah جداديه, Sulaibiyah سلبيه, Umm Qarah أم قرة and Qalbanyāsain قلبان ياسين on the left of the route.
M dairah مديرة	19 miles north-east.	One well of fresh water, which is liable to become silted up in rainy weather.	The route runs through stony, barren ground known as Sif, in some places fairly high, between the Zor hills and the muddy northern shore of Kuwait Bay. The following object

* Chiefly from a report by Lieutenant C. H. Gabriel, I.A.

1. Route from Kuwait Town to Basrah via Qasr-as-Sabīyah, Umm Qasr and Safwān—continued.

Halting place.	Distance from daily starting point by route followed, and average direction each day.	Character of halting place.	Remarks on the route between starting point and halting place.
Qasr-as-Sabīyah قصر الصبية	21 miles north-east.	See Khor-as-Sabīyah.	<p>are passed on the way: at 5 miles Umm-al-Khuwais a h</p> <p>أم الخويصة, a well, now silted up, with a few wild date trees; at 6½ miles Mu'taradhah معترضه, a well; at 11 miles Kawaikib كويكب, about 20 wells with brackish water at 9 feet where the Mutair encamp in summer; at 15 miles Ghudhai غضي, a spot with brackish wells; at 17 miles Mahraqah مخرقة, a well of drinkable but brackish water.</p> <p>The track lies for 3 miles across loose sand, then for 8 miles across a mud flat, which is not however submerged at high water; it then ascends some sand hills and passes for the remainder of the way over undulating stony ground from which occasional glimpses of Sabīyah and Ilqaijah (see below) are obtained. Objects passed are: at 7 miles the wells of Bahrah بحره, with water only slightly brackish; at 8 miles the wells of Mishash-al-'Ajmān مشاش العجمان; at 12 miles the fresh wells of Mghairah مغيرة.</p>

I.—Route from Kuwait Town to Basrah viâ Qasr-as-Sabīyah, Umm Qasr and Safwān —continued.

Halting place.	Distance from daily starting point by route followed, and average direction each day.	Character of halting place.	Remarks on the route between starting point and halting place.
'Arfaīyah عرفجيه	10½ miles north-north-west.	A place with a ruined mud enclosure and numerous wells of fairly good water; no trees, but there are signs of former cultivation. The monotony of the plain is relieved by Qahdiyah, a low hill about 8 miles to the west-south-west.	The way runs over slightly undulating stony country. The following are passed: at 5 miles Shamimah شميمه, wells; at 6 miles Haqaijah حقيجه, 8 or 9 wells of slightly brackish water with a few tamarisk trees, a ruinous mud enclosure and traces of cultivation more than 7 years old; at 7½ miles Akhfārūn-bith اخفرونت, a well situated in a dry watercourse.
Sābailīyah صابريه	15 miles north-north-west.	A stage with wells more numerous than at any place yet passed; the water is good and plentiful.	The country is flat and stony. Places passed are: at 3 miles Mutawwa'iyah متوعيه, 5 wells, of which only 2 hold water; at 6 miles Turfāwi طرفوي, wells of drinkable but somewhat bitter water; at 7 miles Haswān خصران, wells; at 8 miles Karādi كرادي, well; at 9½ miles Zamāmi زمامي, wells; at 13 miles Subair صبير, wells.
Umm Qasr أم قصر	11 miles north by west.	See article Umm Qasr.	At 6½ miles the route crosses a low ridge from which Umm Qasr is visible. Wells passed are Bahrah بحر, water good and plentiful at 2½ miles; and Bahaith بحيث, water bitter, at 5 miles. A well called Umm Niqqah أم نقه, with good water, lies 4 miles

I.—Route from Kuwait Town to Basrah viâ Quar-as-Sabīyah, Umm Qasr and Safwān—concluded.

Halting place.	Distance from daily starting point by route followed, and average direction each day.	Character of halting place.	Remarks on the route between starting point and halting place.
Safwān صفوان	15 miles west-north west.	See article Safwān .	west of Bahaith and between this route and the direct route from Jahrah to Safwān (No. II below). The country is undulating and stony. Two hillocks are passed at 8½ miles.

The remainder of this route to **Basrah** is described in the article on Turkish 'Irāq. The distance from **Kuwait Town** to the Turkish frontier at **Safwān** is 111½ miles.

*II.—Route from Kuwait to Basrah viâ Jahrah and thence direct to Safwān.**

As far as **Jahrah** this route is the same as No. I; from **Jahrah** it runs in an almost straight line for 56 miles due north to **Safwān**, and this section is entirely without water, unless a slight détour be made to the east so as to strike the Qash'aniyah قشانيه wells, 10 miles south-east of **Safwān**. The Qash'aniyah wells are six in number and contain good water at 18 feet. The **Zaqlah**, **Qirā'-al-Marru**, **Yāh** and **Bātih** tracts are crossed on the way; and the going is level, but stony. The whole distance by this route is 76 miles.

III.—Route from Kuwait Town to Hafar viâ Rīqa'i.†

Halting place.	Distance from daily starting point by route followed, and average direction each day.	Character of halting place.	Remarks on the route between starting point and halting place.
Jahrah جر	See Route No. I above.	See article Jahrah .	See Route No. I above.

* The writer travelled this way in December 1904. Part of the district traversed by this route was carefully worked out by Major Knox in December 1907, but the results were received too late for incorporation in this book.

† From a report and map by Captain S. G. Knox, Political Agent at Kuwait, forwarded to the Government of India by the Resident in the Persian Gulf with his letter No. 460 of 28th February 1906, Captain Knox was the first European to visit **Rīqa'i** and **Hafar**. The halting places are mostly accidental and optional.

III.—Route from Kuwait Town to Hafar viâ Riqā'i.—continued.

Halting place.	Distance from daily starting point by route followed, and average direction each day.	Character of halting place.	Remarks on the route between starting point and halting place.
'Amārah (Umm-al-) أم العماره	25 miles, viz., south-west for 16 miles, then west by south for 9.	See article Dib-dibah. The actual camping place is, however, to the north-east of Umm-al-'Amārah. There is usually no water.	Before leaving the Jahrah District Khabrat-al-Ba'al is left on the right at five miles, and Rahaiyah hill on the left at 6 miles; at 9 miles a curving ridge, connected with the Faridah hill to the right, is crossed after traversing the plain of Umm Atwainij; and at 16 miles the ridge of Sāddah is surmounted. Up to this point there is a continuous ascent. Four miles beyond Sāddah the route descends into the Shaqq valley, here 5 miles broad; the halting place is reached immediately on emerging from Shaqq. Khabrat-al-Farāq is to the left 2 miles before camp is reached.
(No name)	25 miles south by west.	No regular halting place. There is ordinarily no water.	At 7 miles from the starting point the general route to Qasim is struck; it consists of half-a-dozen parallel tracks, but it is easily lost from sight in the camel grazing which grows thickly hereabouts.
Riqā'i رقي	37 miles south by west.	See article Riqā'i. Water is not always obtainable.	The country is poor and without landmarks. A few gazelle are to be seen. At 30 miles the Khabrah of Umm-al-Hamir is passed. From this point the road first ascends a series of terraces or ridges and then descends to Riqā'i.

III.—Route from Kuwait Town to Hafar viâ Riqā'i.—concluded.

Halting place.	Distance from daily starting point by route followed and average direction each day.	Character of halting place.	Remarks on the route between starting point and halting place.
Qasr Ballāl نصر بلال	36 miles south-west.	See article Bātin. There is frequently no water.	The route lies along the Bātin for the first 20 miles near its south-eastern bank, crossing the ravines called 'Adhariyāt. This stage may be broken at Dharābin, 20 miles from Riqā'i. Water is sometimes obtainable in the beds of the 'Adhariyāt.
Hafar حفر	25 miles south-west.	See article Hafar. There is water in deep wells, but fuel (except camel dung) is totally wanting.	The route lies along the Bātin. At intervals there are places where water is sometimes obtainable.

The nature of this route will be more fully understood after reference to the articles on Dibdibah, Riqā'i, Bātin and Hafar, also to that on Jahrah: the distance from Kuwait to Hafar is, it will be seen, about 168 miles. The continuation of the route beyond Hafar is given in the article on Najd.

*IV.—Route from Kuwait Town to Hafar direct.**

This route runs at first about south-west by south for 46 miles, the Kabd plateau being left to the north-west and the Wārah and Burqān hills in 'Adān to the south-east: at 9 miles the Jadādiyah جادديه wells are passed, at a short distance to the west of which at 2 miles distance is another group of wells called Sulaibiyah سلايبه. At neither of these places is the water good; but the supply at Jadādiyah is the more plentiful and nearer to the surface, standing at 4 fathoms. At 46 miles, at a place about 20 miles west of the Subaihiyah wells in 'Adān, a halt may be made; but, as

*This route is from the same source as the last. The stages described are those of Captain Knox's journey, the direction being reversed, but the halting places have no special advantages and are not obligatory. A more direct line might have been taken in the part between Kuwait Town and Abul Hīrān,

is usual in **Kuwait** territory, there is no recognised camping ground. Here the direction changes to almost due west. At 9 miles beyond the camping place, and at about 10 miles to the south of the Mināqīsh hills, the route descends into the **Shaqq** valley, across which it continues for 9 miles; about 4 miles beyond the western bank of **Shaqq** a featureless plain belonging to the **Dibdibah** district affords the usual facilities (which do not include water) for camping in the desert. The next stage is about 20 miles, west by south, to Abul Hirān in **Dibdibah**; at a little more than half way the ridge of Sala' is passed, distant a mile or two from the route on the right hand side. At Abul Hirān is a water hole which is said to contain water for a month after rain; and between Sala' and Abul Hirān a ridge which is one of the principal features of **Dibdibah** is surmounted. The next stage is one of 24 miles, west by south, to a nameless halting place without water or other conveniences. The route then runs for 28 miles nearly west-south-west to a camping ground of the usual type upon the summit of the scarcely perceptible Musannāh ridge, the most important natural feature of the **Dibdibah** district; during the second and greater part of this march the way lies along the Musannāh ridge, upon which it has gradually converged from the southern side. The next march is also 28 miles and the direction is still the same, but the route gradually diverges from the Musannāh ridge to its northern side. The ground is Hazam, that is to say is hard and lightly strewn with pebbles. The last stage of 11 miles, ending at **Hafar**, is of a similar character, but the direction is west by south. It appears that water cannot be relied on, except after rain, at any point upon this route. The total distance from **Kuwait Town** to **Hafar** by this route is apparently about 180 miles. The article on the **Dibdibah** district will cast further light on the character of this route.

V.—Route from Kuwait Town to Zilfi in Najd.

This route runs to Laqīt in the 'Adān district, 24 miles, and thence to Zilfi.

*V.—Route from Kuwait to Najd via Wabrah.**

Wabrah, 140 miles south by west of **Kuwait Town**, can be reached by various routes across the intervening districts. From **Wabrah** one route leads to **Majma'** in **Sadair** and there is another to **Sidūs** in 'Aridh; doubtless there are others also.

* Pelly travelled by this route, and there is a full description of it in his *Report on a Journey to the Wahabee Capital*.

Inhabitants.—The tribes of Kuwait are all Arabs or quasi-Arabs, belonging to the Sunni sect of Islām. Non-Arabs and Shi'ahs are found only in the town of **Kuwait**. The two tribes which compose the bulk of the population outside of **Kuwait Town** are the '**Awāzim** and **Rashāidah**; both are regarded as of socially inferior status, nevertheless they differ but little from the ordinary Bedouin Arabs. To these we may add wandering bands of the **Saluba**, between whom and the Arabs there is a more pronounced difference. Some of the friendly **Dhafir** and **Mutair** tribes of **Najd** enter Kuwait limits at certain seasons; indeed, the Kuwait portion of **Summān** is exclusively tenanted by the **Mutair**, and a large number of the **Mutair** encamp every season at **Jahrah**. The people of **Jahrah** are mostly of Najdi extraction. A few stray '**Ajmān**, **Bani Hājir** and **Bani Khālid** from the south are found in Kuwait limits; and **Kuwait Town** contains, in addition to representatives of most of the tribes already mentioned, '**Anizah**, **Dawāsir**, **Janā'āt**, and '**Utūb**. The only permanent villages in Kuwait are **Jahrah** at the head of **Kuwait Bay**, **Qasr-as-Sabiyah** on **Khor-as-Sabiyah**, **Zor** on **Failakah** island, **Dimnah** and **Qasr-as-Sirrah** in the **Qrā'ah** district and **Fahaihil**, **Fantās**, **Abu Halaifah** and **Shi'aibah** on the coast of '**Adān**, none of which are more than 25 miles in a direct line from **Kuwait Town**.

The fixed population of the principality, consisting of the inhabitants of the town and villages may be estimated at 37,000 souls, of whom no less than 35,000 are residents of the capital; and the Bedouin population, if we reckon only the '**Awāzim** and **Rashāidah** and a part of the **Mutair** (whose tribal headquarters are in the principality) and exclude others such as the **Dhafir** (who are merely visitors), must amount apparently to about 13,000 souls.

Agriculture and trade.—A general description of such agriculture as exists in Kuwait will be found in the article on **Jahrah**, and the article on **Dimnah** contains a description of village dwellings intermediate between the houses of **Kuwait Town** and the tents of the Bedouins. Domestic animals are the camel, sheep, goat and donkey and there are some horned cattle and a few horses. Commerce is fully treated of in the article on **Kuwait Town**.

General administration.—The present Shaikh's method of government is among the most remarkable peculiarities of the principality. **Mubārak's** rule is personal and absolute; and if in some respects it is

COPYRIGHT.

Camel riders of the Shaikh of Kuwait.

(RAJA DEEN DAYAL & SONS.)

mild and tolerant, in others it is exceedingly strict. On the whole, it may be said that in the town he exacts absolute submission and in the country is content with general loyalty and obedience; but this dictum implies a higher degree of control than might at first be supposed, inasmuch as in Kuwait the whole country depends for its wealth and prosperity upon the one town, and the political predominance of the capital is here greater than in almost any country. In all Mubārak's political arrangements precaution is a conspicuous feature. The heads of his departments are mostly slaves; his near relations are excluded from his counsels; even his sons wield no executive powers. The duty of interviewing foreigners is one which he never delegates to an agent, and without his previous consent no stranger can obtain information or facilities of any sort at Kuwait. An illustration of Mubārak's policy and firmness was afforded by his treatment about 1904 of some Central Arabians at **Kuwait** who had collected money and were preparing to found a Wahhābi mosque: they were quickly compelled to relinquish their schemes under pain of death.

Management of the town.—In the town the smallest disputes, whether civil or criminal, are settled by the Shaikh himself. Murderers, unless they pay blood-money, are handed over to the relations of the victim for Qisās or retaliation in kind; if the victim has left no relations, the criminal, unless he can satisfy the Shaikh by payment of a fine, is put in prison and practically starved to death. In cases of theft the offender is generally allowed to escape with a fine; but, if he is poor and cannot pay, his hand is cut off according to Muhammadan law. Rape is punished with fine, beating or imprisonment: a woman guilty of adultery may lawfully be put to death by her husband, but the conduct of the correspondent cannot be called in question. Shaikh Mubārak is zealous in the enforcement of the Muhammadan prohibition against strong liquor, and he has deported from Kuwait a relation of his own as well as other Muslims who were addicted to drinking; but foreigners are free from interference in respect both of their religion and of their social customs.

Management of the tribes, etc.—The Bedouins are held to their allegiance partly by gifts and kindness, partly by fear of the untoward results which would ensue, either directly or indirectly, from a rupture with the Shaikh. Mubārak has allied himself matrimonially to the **Mutair** tribe, who are of importance in **Najd** and are generally represented in Kuwait territory by encampments in **Summān** or, in the hot

weather, at the head of **Kuwait Bay**. During the recent hostilities in **Najd** the Shaikh is believed to have supplied Ibn Sa'ūd with 3,000 rifles, worth \$150,000; the terms of the transaction are unknown, but its effect was undoubtedly to ingratiate him with the rising power in **Najd** and even to place him, for the time being, in the position of a patron.

Military resources.—The Shaikh's fighting force in war consists of the best levy he can raise from the tribes subject to his influence; but he also possesses a sort of standing army, armed with rifles, who defend his person, perform his errands in the country and supply the town guard at **Kuwait**. These are about 100 in number and are mostly footmen.

Revenue.—There is no distinction in **Kuwait** between the State revenues and the privy purse of the ruler, nor, of course, are any accounts of revenue and expenditure made public. The following is a careful estimate by a Persian merchant settled at **Kuwait** of the Shaikh's annual receipts, of which a large proportion are in kind:—

	\$
Produce of date plantations at Fāo	108,000
Rent of shops in the Kuwait bazaar	9,000
Zakāt on Bedouin flocks	25,000
Tax on sheep brought into the town	2,000
Tax payable by butchers	2,500
Tax on camels brought to the town for sale	1,500
Sea customs	150,000
Duties on exports to the interior	20,000
Tax payable by pearl divers*	60,000
Fines	6,000
Share of fish brought into Kuwait	7,000
Interest on money lent to merchants	8,000
Total	<u>\$ 399,000</u>

The Shaikh denies receiving anything from pearl divers or by way of interest on money lent; but it was generally stated at **Kuwait** in 1904 that he took one diver's share from each pearl boat, and that he had lent a large sum at 20 per cent. interest to a local Arab merchant named Shāmlān. It is believed that the Shaikh is building up a large private fortune. Besides valuable plantations at **Fāo** he owns some 300 shops and ware-

* According to a different authority the proceeds of the pearl diving tax are only worth \$ 20,000 a year on the average.

houses in **Kuwait Town** and he is supposed to be accumulating large sums in specie: as far as can be ascertained he meets current expenses out of current revenue and converts the balance into Turkish gold. His savings have greatly increased since the acute stage of the war in **Najd** was passed, for he now spends much less than formerly on his Bedouin allies.

Singular is **Kuwāri** كوارى . A tribe found chiefly in **Qatar**, but **KUWĀRAH-** there are a few of them in **Bahrain** also. In **Qatar** they have 250 (ĀL-BŪ-) houses at **Sumaismah**, nearly 150 at **Dha'āin**, 100 at **Fuwairat** and 20 at **Dōhah**; in **Bahrain** there are now only about 10 houses at **Muharraḡ Town** and the same at **Hadd**. The **Āl Bū Kuwārah** are divided into four sections, *viz.*, the **Āl 'Abd-ash-Shaikh** آل عبد الشيخ, **Āl Kalaib** آل كليب, **Al Yahām** آل يهام, and **Matāwa'ah** مطارعه . In religion they are Sunnis of the **Māliki** school; by occupation they are pearl merchants, pearl divers, sailors, and camel and cattle breeders. The **Āl Bū Kuwārah** in **Qatar** are said to be closely connected by blood with the **Ma'ādhid**; both are **Bani Tamīm**. آل بو كواره

A plain with grazing, in the principality of **Kuwait** upon the sea coast. Its northern boundary being the **Maqta'** stream, it may be reckoned a part of the **Sūdah** district. It is bounded on the south by the **'Amūdah** عمرده hill. LABĪBAH لببیه

In English formerly spelt "Luft". A considerable village situated on the western side of the great salient from the north coast of **Qishm** Island, of which the extremity is **Lāft** point; **Lāft** village, situated in a recess of the coast, is about $3\frac{1}{2}$ miles south-south-east of the point. It is built at the foot of a hill which slopes up from the beach to a height of 200 feet and ends in cliffs on the landward side. The approach to **Lāft** is by a small narrow creek opening from the **Gūrān** branch of **Clarence Strait**; its mouth is marked by a low islet called **Hindrāni** هندرانی, and its course to the village, a distance of over 2 miles, is between the coast of **Qishm** Island and a mangrove-covered mud-flat which divides the creek from **Khūr Gūrān**. In this creek native vessels lie. The village is close to the shore and consists of about 250 houses of Arabs and

LĀFT
لافت

Persians, not belonging to well known tribes, who are chiefly engaged in fishing and boat-building and in cutting firewood for sale from the adjacent swamps. The water supply, which is from roofed tanks, is slightly brackish; there are also some wells, sunk 25 to 30 feet in the sandstone rock, which are used when the tanks run dry. Provisions in small quantities are available; livestock comprise about 20 camels, 15 donkeys, 40 cattle and 50 sheep and goats; and there are about 1,200 date trees. A rough estimate of the local shipping is given in the article on **Qishm** Island. There are three ordinary mosques, but the place has no local shrine. The hill behind Lāft is scarped and the scarps are strengthened at their crests with curtains and flanking works which, with a dilapidated fort having 5 circular towers pierced for guns, appear to be traces of some foreign occupation. The Imperial Persian Customs have a post here; it is manned by a Mudir and 2 Tufangchis.

LAILAH ليله

An important village of the **Aflāj** district in **Najd**; it is situated towards the north end of the district, about 4 miles north-west of **Saih** and 5 miles south of **Wusailah**. Lailah consists of quarters situated at some distance from one another, not all of which are at present inhabited; the total area of the settlement is estimated at less than 2 square miles, and the population at about 4,500 souls who may be classified as follows:—

Tribe.	Section.	Houses.
Ashraf	Saqar	70
Dawāsir	'Ajlan	80
Do.	Burās	70
Do.	Hamdan	60
Do.	Hijji	100
Do.	Jibarin	50
Do.	Wida'in	40
Fadhūl	40
Khadhīr (Bani)	300
Saba'	Rashūl	100

The usual fruit trees grow at Lailah, but there are only about 5,000 date palms ; the principal crops are wheat, barley, millet, maize, lucerne and melons ; the wheat, millet and maize predominate. On the east the wells are 6 to 7 fathoms deep ; on the west 9 to 10. There are a few horses and the ordinary proportion, for Najd, of livestock of other kinds. The Amīr or headman of Lailah is at present Mubārak-bin-Bāzah of the Burās Dawāsir.

A table follows of the principal quarters and other places having names in Lailah :—

Name.	Position.	Nature.	REMARKS.
Ghasībah غصيبه	Central.	The chief inhabited quarter of Lailah at the present day.	Ghasībah succeeded Mubarraz as the principal quarter.
Hazaimi حزائمي	Do.	Two date groves.	The owners are Widā' in Dawāsir.
Jafaidriyah جفيدريه	South of Ghasībah.	A considerable quarter.	The inhabitants are Hamdān Dawāsir.
Jiri جري	Close to Ghasībah on the east side.	A deserted quarter.	It formerly belonged to the Hijji, but was abandoned in consequence of a cholera epidemic.
Marair مرير	Perhaps a mile north-west of Ghasībah.	A quarter consisting of 30 houses.	The people are Bani Khadhīr.
Mishrafah مشرافه	Beyond the limits of Lailah proper on the side towards Wusailah.	Arable lands and an enclosure occupied in the season of agriculture by about 20 cultivators from Lailah.	The owners are Dawāsir of the Jadhālīn section who rent it to the actual cultivators.
Mubārraz مبارز	About $\frac{1}{2}$ a mile south-west of Ghasībah.	An inhabited quarter, but less important than formerly.	Mubarraz succeeded Naqaiyah as the principal quarter of Lailah and so remained until its destruction by 'A b d u l l a h -bin-Faisal, the Wahhābī Amīr. Some of the inhabitants then removed permanently to Ghasībah, but others returned to Mubarraz after a

Name.	Position.	Nature.	REMARKS.
Naqaiyah نقايه	To the east of Ghasibah.	A deserted quarter.	time. The name of Mubarraz appears to refer to the "exodus" from Naqaiyah to which its foundation was due. This was once the principal quarter but was abandoned in favour of Mubarraz on account of an epidemic.
Rumāhi رماحي	Central.	A quarter now all but deserted.	The few remaining inhabitants are Bani Khadhir.
Taraiyij طربج	In the middle of Ghasibah.	A fort.	The Ghasibah quarter sprang up round Taraiyij, which forms as it were its core.

Wusailah, which is described in the topographical table attached to the article on **Aḡāj**, is attached to Lailah for administrative purposes, but it is a distinct village and lies about 5 miles to northward.

LĀJĀL (WĀDI لجّال

A valley coming down from the Western Hajar in the 'Omān Sultanate and reaching the **Bātinah** coast near Rumais. In the upper part of its basin are two villages, Lājāl لجاجل to the west and Halbān حلبان to the east, about 4 miles apart, with a third village Fara' فرع between them: Lājāl contains about 100 mud houses of the Bani Na'ab tribe; it is built in two fortified quarters upon the hills, overlooking dategroves and other cultivation in the valley below. Halbān stands at the foot of the **Hajar** hills and consists of 30 mud houses and a tower belonging to the Bani Jābir; lucerne is grown here. The village of Fara' consists of only 1 or 2 houses. The livestock of this group of villages comprises 100 camels, 50 donkeys, 50 cattle and 700 sheep and goats; and wheat, barley and lucerne are cultivated. The trade of Wādī Lājāl is with **Barkah**.

A very numerous and important Arab tribe found chiefly in Turkish 'Irāq, but also, to some extent, in Persian 'Arabistān.

LĀM
(BANI)

بني لام

Territory.—The Bani Lām country proper is the plain between the Persian hills (or Pusht-i-Kūh) and the left bank of the Tigris river from a point opposite Shaikh Sa'ad down to 'Amārah Town. In 'Irāq, however, parties of the tribe are found as far to the west and north as Badrah, Zorbatīyah and even Mandali; while in 'Arabistān their ordinary limit is the Karkheh river between Pā-i-Pul on the north and the Hawizeh District on the south, but they sometimes range as far as the Shāūr river, especially below Khairābād. A detached colony of the Lawaimi section even exists beyond the Kārūn, on the Mālih at a few miles south-east of Nāsiri; and there is another, still more distant, at the village of Mīrbacheh in the Rāmuz District.

In 'Irāq both banks of the Tigris above the country of the Bani Lām are inhabited by the Bani Rabī'ah, and below it by the Āl Bū Muhammad; on the south-west the Bani Lām are in contact with the Muntafik, and on the north-east they are adjoined by the Faili Lurs, with some or other of whose sections they are generally at feud. The tribal centre is in the Qadha of Dawairij, where Ghadhbān-bin-Banaiyah, the chief Shaikh, has his residence in a tract known as Shamariyah شمریه; and the dealings of the tribe are mostly with 'Amārah Town and 'Ali-al-Gharbi upon the Tigris.

Divisions and numbers.—The Bani Lām consist of numerous sections which have not generally, it is said, separate habitats, but live interspersed. The principal divisions of the tribe, as understood on the 'Irāq side, are the following:—

- | | |
|---------------------------------|----------------------------------|
| 1. 'Abdul Khān.
عبد الخان | 7. Khumais.
خميس |
| 2. 'Abdush Shāh.
عبد الشاه | 8. Kinānah.
كنانه |
| 3. Akhwat Habshah.
اخوة حبشه | 9. Mu'allā.
معلی |
| 4. Balāsīm.
بالاسم | 10. Na'amah (Bait).
بيعت نعمة |
| 5. Dhāhir.
ظاهر | 11. Rahāmah.
رحمة |
| 6. Hamad.
حمد | 12. Ta'ān.
طعان |

Of these, the Balāsim are the division to which the chief Shaikh belongs; the 'Abdush Shāh live near the Hor Jassān هور جسان; the Hamīd are located on the Tirsakh ترسخ; and the Bani Lām of Mīrbacheh are Kinānah. Besides the above there is a family called Bait Jandīl بیت جندیل to which one or two of the secondary Shaikhs belong.

The Āl Bū Darāj آل بو دراج, a tribe who inhabit the right bank of the Tigris from Kumait down to a point opposite 'Amārah Town, are sometimes reckoned a section of the Bani Lām; so also are a portion of the Maqāsīs whom others treat as Bani Rabī'ah (q.v.); and part of the Sagwand division of the Western Lurs is at present regarded, notwithstanding the difference of race, as connected with the Bani Lām.

On the side towards 'Arabistān the Bani Lām appear to be classified as below:—

Division.	Subdivision.	Habitat of subdivision.	Fighting strength of subdivision.
'Abdul Khān عبد الخان	'Abdul Khān عبد الخان	Towards the Karkheh and even between that river and the Shāūr, both above and below Khairābād.	300
Do.	'Aifān عیفان	In 'Arabistān.	Not ascertained.
Do.	'Aqbah (Bani) بنی عقبه	Same as the 'Abdul Khān subdivision above.	400
Do.	Fanādīl فنادیل	Do.	100
Do.	Ka'ab Bait 'Āmir کعب بیت عامر	Do.	1,500
Do.	Maiyāh میاح	Do.	200
Do.	Shawaih شویه	Do.	200
Do.	Zighaib زغیب	Do.	100
Bāji (Āl) آل باجی		In the Dizfūl and Hawizeh Districts.	Perhaps 600
Khasraj خسرچ	'Abdullah عبد الله	On the right bank of the Karkheh river and westwards.	150
Do.	'Adhab عضاب	Do.	150

Division.	Subdivision.	Habitat of subdivision.	Fighting strength of subdivision.
Khasraj خسر ج	'Alāwinah علاونه	On the right bank of the Karkheh river and westwards.	200
Do.	'Ammār عمار	Do.	150
Do.	'Alājjid عناجد	Do.	100
Do.	'Athūq عثوق	Do.	150
Do.	'Awaidāt عويدات	Do.	200
Do.	'Id (Al Bū) آل بو عيد	Do.	150
Do.	Janādilah جنادله	Do.	200
Do.	Lataif لطيف	Do.	300
Do.	Saiyād (Āl Bū) آل بو سياد	Do.	100
Do.	Saqūr صقور	Do.	200
Do.	Wais (Al Bū) آل بو ويس	Do.	200
Lawaimi لريمي	...	Detached, in the Ahwāz District to the east of the Kārūn river, viz., on the Mālih and about the Thiniyah in the Ahwāz hills.	300
Sarkhah صرحه	Barais بريس	On the west side of the Karkheh, crossing also to the Shāūr between Aiwān-i-Karkheh and Shūsh.	300
Do.	Hajjāj حجاج	Do.	200
Do.	Kharsān خرسان	Do.	300
Do.	Labaibāt لبيبات	Do.	200
Do.	Māhūr ماهور	Among the Kathir, at Husainiyah between the Diz and the Shāūr.	100

Division.	Subdivision.	Habitat of subdivision.	Fighting strength of subdivision.
Sarkhah سرخه	Qasmān قصبان	Same habitat as the Barais above.	200
Do.	Rawaishid رويشد	Do.	500
Do.	Shabaikah شبابيك	Do.	300

In regard to the Lawaimi division above it may be noted that they have not now any apparent political connection with the main body of the tribe. The Sarkhah are not of very much importance: their Shaikh Mushattat has friendly relations with some of the Sagvand **Lurs**, and a few settled Sarkhah are found at Jirqeh Saiyid Ta'ameh in the **Dizfūl District** of 'Arabistān.

The number of fighting men of the tribe in 'Arabistān is thus approximately 8,000, and from a comparison of various discrepant accounts their military strength in 'Irāq would seem to be about 10,000. In view, however, of the indefiniteness of the Turco-Persian boundary and of the mobility of some of the sections of the Bani Lām, it is probable that the two estimates to a great extent overlap: consequently it is not necessary to estimate the fighting strength of the tribe at more than 15,000 men or their total number at more than 45,000 souls.

Mode of life and resources.—Except the Kinānah division, who (unless those settled at **Mirbacheh**) are entirely pastoral in their habits, the majority of all sections of the Bani Lām are agricultural and live by growing cereals. The tribe as a whole have not yet, however, abandoned the nomad life; for neither houses nor huts but only hair tents are found among them, and they migrate towards the hills in the cold weather and are on the move from February to June.

Wheat, barley, oats, maize, millet, Māsh and lentils are among their crops, but they have not much rice: their cultivation is shifting and desultory. The camels and horses of the Bani Lām are among the best in 'Irāq; of horses their best breeds are the Hargah, Nusbah and Wadhnah, the two former being, it is said, a monopoly of the tribe. They have also buffaloes, cattle, sheep and donkeys and supply most of the ghi for which 'Amārah Town is famous. The livestock of the

Zighaib subdivision are said to consist exclusively of buffaloes, and the Ka'ab Bait 'Āmir are also among the buffalo-owning sections. The horses possessed by that portion of the tribe which is connected with 'Arabistān rather than with 'Irāq has been estimated at 1,500 and their camels at 3,000.

Political position and military importance.—The Bani Lām are, with a few exceptions, Shi'ahs; by some of them Persian is spoken as well as Arabic, but they are not to any appreciable extent bilingual. Blood feuds are rigorously prosecuted both within the tribe and against outsiders. The tribe, as a whole, show great respect for their Shaikhs, to whom they are said to be blindly submissive both in peace and war; and though much divided among themselves by feuds and factions they do not fail to combine against outsiders. Their present head, Ghadhbān is described as “notoriously rich and brave, but a rude and violent savage without the experience or the moderation that age gives:” he appears to have a permanent good understanding with the Shaikh of **Muhammareh**.

On the Turkish side of the border the Bani Lām are generally quiet, but the Ottoman Government dare not put much pressure on them; and though the revenue collector is treated with outward respect he does not always succeed in recovering the demand in full. In Persia the Bani Lām give much trouble to the authorities and seldom pay any revenue. In 'Irāq, where they are probably the largest, the most powerful and the richest tribe next to the **Muntafik**, the land assessment of the Bani Lām is one-tenth to one-fifth in kind of agricultural produce, and they are also subject to a trifling annual tax in cash per head of livestock: these imposts are generally farmed out to the Shaikhs of the tribe who collect as much as they can.

In both countries the Bani Lām are noted for their predatory tendencies, but in reality the greater part of the tribe lead a peaceful and respectable life. The proceedings of the lawless minority are said, however, to be connived at by the Shaikhs, who even accept a one-fifth share in the proceeds of their raids and robberies. Their plunder from Turkish territory is disposed of in Persia, and *vice versā*. In 'Arabistān it is the **Khasraj** division who give most trouble; they attacked the “Shushan” steamer in April 1904, and in the summer of 1905 parties of them infested the neighbourhood of **Nāsiri** and were not driven away without difficulty. The **Kinānah** also are said to raid in the **Dizfūl** District. Gangs of Bani Lām and **Lur** robbers sometimes come in conflict with one another: in the instances known victory has generally remained with the **Lurs**.

The Bani Lām are now well supplied with modern rifles, chiefly Martinis, and are considered to be good shots, especially from the saddle. It is estimated that on the Persian side about one-third of the fighting men are mounted and two-thirds are armed with rifles; on the Turkish side the proportion of mounted and unmounted men is said to be about equal.

LĀRAK* لارك

Also pronounced Lārach and in English formerly spelt "Larrack." An island in the Persian Gulf, 20 miles south by east of Bandar 'Abbās and partially closing the marine approach to that place from the south between Qishm and Hormūz. The channel between Lārak and Qishm to the north-west of it is 6 miles, and that between Lārak and Hormūz to the north-north-east 11 miles broad. Lārak is oval in shape and measures 6 miles from east-north-east to west-south-west by about 4 miles across; the chief irregularity of outline is a small sandy cape which juts out from the north coast. The island is closely surrounded by deep water except on the west side, from which a shore reef extends for about $\frac{1}{2}$ a mile. The interior consists of a mass of rugged hills of sandstone, with an admixture of rock salt and red oxide of iron, and is almost entirely destitute of vegetation; the highest summit, a mile from the north shore, is 510 feet high, and another, a mile to the south-west of it, is hardly inferior in elevation. There is no vegetation, and sweet water, with the exception of that of the Salmi well, is not found except in reservoirs. Wild gazelle, however, are numerous; they are supposed to obtain what moisture they require from dew. The inhabitants of Lārak, about 200 in number, are Dhahūriyīn; but they are closely connected by intermarriage with the Bani Shatair Shihūh of Kumzār and they speak the Kumzāri language. There is no trade except in salt, of which some quantity is exported to the adjoining district of Ruūs-al-Jibāl in the Sultanate of 'Omān and to Qishm Town, the latter being the market in which the inhabitants of Lārak make most of their purchases. The people assert that they are independent of any ruler except of their own Kumzāri Shaikh at Labtiyāb village, and up to the end of 1905 no visible signs of Persian authority existed, but the island was said to be nominally included, along with the islands of

* A plan of the greater part of Lārak is given as an inset in Admiralty Chart No. 2878-2887 A., *Persian Gulf*, and a distant view of the island from the sea will be found in the same.

Qishm and Hormūz, among the places farmed to the Mu'-in-ut-Tujjār of Tehrān.*

Lārak seems to have been at one time occupied by a non-Muhammadan people, for a flat-topped hill on the east coast is covered with hundreds of graves, all of which lie east and west. A large valley between Labtiyāb village and this hill and all the flat ground upon the circumference of the island appear to have been highly cultivated at some former time; remains are visible of a water-channel and embankments.

The following table embodies the chief facts of the topography of Lārak :—

Name of place.	Position.	Houses and inhabitants	REMARKS.
Kuh کوه	In the interior of the island.	A dozen houses of Dhahūriyīn.	The inhabitants are salt diggers, graziers and fishermen. Water is from 2 reservoirs and livestock amount to 50 sheep and 200 goats. Date trees number about 50 and a patch or two of barley are cultivated. There are the ruins of an old fort, and the ground near by, called Kharābistān خرابستان bears traces of former occupation by a civilised people.
Labtiyāb لبطياب	On the north coast of the island.	30 houses, mostly stone, of Dhahūriyīn.	This village is also called Lārak and is the chief one on the island. It has a date-grove of about 150 trees and near by is an old fort in tolerable repair, said to be Portuguese. There is sweet water from one well and two reservoirs. The people are fishermen and the only industry is a little fish-curing; livestock are 5 donkeys and 200 sheep and goats. The people own a few small boats, but no large one.
Lārak	See Labtiyāb above.
Salmi سلمي	On the west coast of the island.	Nil.	A deserted site with a well of sweet water.

In May 1906, however, the Imperial Persian Customs authorities at Bandar 'Abbās began to construct a hut and erect a flagstaff on Lārak, probably as marks of Persian sovereignty.

 DISTRICT*

A district of the **Persian Coast**, the southernmost within the Persian Gulf, interposed between the **Shibkūh** district on the west and the **Khamir** portion of the **Bastak** district on the east. The coast of the Lingeh District appears to be identical with the **Sif 'Umārah** سمره of the mediæval Arab and Persian geographers, so called in the 10th century A.D. after an Arab tribe from the opposite side of the Gulf who had occupied it†.

Limits.—On the east and south the Lingeh district is bounded by the sea; on the west by a line which runs inland in a northerly direction from the coast between **Duvvān** and **Mughu**. The northern border is constituted by the great maritime range, described in the article on the **Shibkūh** district, which after passing behind Lingeh terminates in the sea at **Purghār**, a few miles north of the eastern end of **Qishm** Island. Lingeh district has thus a length from west to east of about 40 miles; and its maximum breadth between the mountains and the sea, a little to the west of **Lingeh Town**, is about 25 miles. The island of **Sirri** is attached for administrative purposes to the Lingeh district.

Physical features.—The bulk of the district is a plain slightly elevated about sea level, of which the centre is occupied by a great salt marsh called **Muhrakūn** مهوركون, 20 miles long from west to east and 10 miles in breadth. The plain has, as it were, a raised rim along the sea coast; this rim falls somewhat steeply to the marsh, but on the outer side it declines to the sea-shore as a barren sloping glacis. The ordinary height of this barrier between coast and interior is only 200 to 400 feet, but 10 miles north-east of **Lingeh Town** and at **Jabal Bustāneh** 10 miles west of the same place it rises in hills having the respectable elevation of 1,017 and 1,800 feet, respectively. With the exception of the highest part of the former, which is of light colour and jagged outline, these two hills present a generally dark and volcanic appearance. The rainfall in the Lingeh district is slight and the climate is cooler, healthier and pleasanter than that of **Bandar 'Abbās**.

Population.—The people of the district are principally Persians of various tribes and trace their origin to **Lār**, **Galehdār** and other places in the interior; Arab tribes, however, occur, such as the **Āl 'Alī** and **Marāziq**, who are noticed in the article on the **Shibkūh** district, and the **Qawāsīm** of **Duvvān**. Outside the town of **Lingeh** and **Kung** and

* The first is the Persian, the second the Arabic form of the name.

† Vide *Le Strange's Lands of the Eastern Caliphate*.

Duvvān, which are the principal places in the district and are separately described, the population is almost entirely Sunni of the Shāfi'i school. The total population of the Lingeḥ district, including Lingeḥ Town and Sirri island, is probably about 20,000 souls.

On the coast pearl-diving, sea-fishing and the carrying trade are the chief occupations, except in Lingeḥ Town, of which the inhabitants depend mainly on foreign trade. Away from the sea the population is agricultural and pastoral. The houses, where they are not mere huts, are mostly of stone.

Agriculture, trade and shipping.—Dates are the chief crop, and the palms in the Lingeḥ district are estimated at about 180,000.

Trade is concentrated in Lingeḥ Town, in the article upon which it is described.

As will be apparent from the topographical table at the end of this article, the district (Sirri island being included) possesses about 143 vessels of sea-going types and about 222 of smaller sizes. Of the former 57 are pearl boats which cross the Gulf in the season to work upon the Arabian side, the balance being employed in the carrying trade; and the latter, from Lingeḥ Town westwards, are used for local pearling operations as well as for fishing.

Supplies and transport.—Supplies, except at the larger places, are not abundant. Water is obtained from reservoirs and wells; the latter are ordinarily from 5 to 8 fathoms in depth. The transport animals of the district may be estimated at not less than 500 camels and 400 donkeys.

Routes.—Lingeḥ Town is connected with Mughu by a coast route passable for all arms, and with Bastak (and so with Lār) by a route which up to the border of the Lingeḥ district is also passable for all arms.* The Muhrakūn salt marsh which lies upon the latter route is traversable by animals in summer, but in winter it must either be avoided or crossed in boats. There is also a coast route to Khamir, but its character beyond Kung is uncertain, and at Purgḥār, between 25 and 30 miles from Lingeḥ Town, it becomes impassable at high tide in consequence of the sea rising against the side of the hill.

Administration.—The Lingeḥ district is subject to the Governor of the Gulf Ports who has his head-quarters at Būshehr Town; his local representative is a Deputy-Governor, very frequently changed, who is responsible

for the payment at Būshehr of about 150,000 Qrāns annually as revenue. This revenue is assessed throughout the district upon date-groves and other cultivation, on the coast upon boats also; and in Lingeh Town warehouses and other places of business are taxed, while men and animals entering the place are laid under contribution by means of tolls, which are farmed. At present date trees pay $\frac{1}{4}$ Qrān each a year besides $\frac{1}{10}$ of their produce; there is a poll tax on Nākhudas of Rs. 12 per annum and on ordinary sailors of Rs. 4; and shops are assessed at Rs. 4 to Rs. 8 a year. The general administration and collection of land-revenue are conducted by the Deputy-Governor through the Kalāntar or headman of Lingeh Town and the Kadkhudas of villages. Criminal justice there is none, and the only form of civil justice is that dispensed by the ecclesiastical authorities. The power of the Deputy-Governor is supported by a military detachment of 14 infantry and of 6 artillerymen only, with 2 old muzzle-loading smooth-bore guns; besides these about 200 armed citizens of Lingeh Town can be called together for the defence of the place in an emergency. The Imperial Persian Customs have an important station in charge of a European at Lingeh and others dependent on it at Bustāneh, Kung, Band Mu'allim and Birkeh Sifin and several places outside the Lingeh district. The annual gross receipts, which amount to about 500,000 Qrāns, are distinct from the general revenue for which the Deputy-Governor is liable.

Topography.—The following are the principal places of interest in the Lingeh district:—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Abbāsi (Birkeh) بركه عباسي	13 miles north of Lingeh Town.	5 houses of Shāfi'i Sunnis.	Here are 10 camels, 10 donkeys, 20 cattle, 150 sheep and goats, two water reservoirs, wells 7 fathoms deep and some date trees.
'Ali (Birkeh) بركه علي	9 miles west-north-west of Lingeh Town on the route to Lār.	10 huts of Shāfi'i Sunnis.	Water is good in wells 5 fathoms deep; there are also two reservoirs. Livestock are 15 camels, 10 donkeys, 30 cattle and 50 sheep and goats. Dates are grown.
Bārchāh بارچاه	7 miles north of Lingeh Town.	40 houses of Shāfi'i Sunnis.	There are wells and dates. Animals are 50 camels, 30 donkeys, 100 cattle and 200 sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
Bardghūn بردغون	4 miles north-east of Lingeh Town near the coast.	15 houses of Shāfi'ī Sunnis.	There are wells and dates. Livestock are 30 camels, 20 donkeys, 50 cattle and 200 sheep and goats.
Bāvar بارر	12 miles north of Lingeh Town.	60 houses of Shāfi'ī Sunnis.	There are wells and dates. Animals are 4 camels, 30 donkeys, 60 cattle and 300 sheep and goats.
Birāismūn (Birkeh) بريسمون	13 miles west by north of Lingeh Town on the south border of the Muhrakūn salt marsh.	4 houses of Shāfi'ī Sunnis.	There are reservoirs and wells. Dates are grown, and 10 camels, 10 donkeys, 30 cattle and 100 sheep and goats are owned here.
Bustāneh بستانه	On the coast 15 miles west by south of Lingeh Town, on the east side of the eastern point of Mughu bay.	100 houses, more than half Marāziq and the remainder Qawāsim. They are Sunnis except a few of the Marāziq, who are Wahhābis.	There is a round tower in the village and a domed reservoir on rising ground behind; date-groves adjoin the place. Water is from wells and tanks. The people are fishermen, pearl-divers, sailors, cultivators and date-growers; they have 4 Sambūks trading to Lingeh Town and the coast of Arabia and about 24 small Baqārabs, 3 Shū'ais and 4 Varjis used for fishing and for pearling near Bustāneh and at Farūr island. A small pearl bank lies opposite the village close in shore. Bustāneh belongs to the Lingeh district and the Qawāsim pay their revenue to the Deputy-Governor, but the Marāziq are under the Shaikh of Mughu. The people are poor and the two tribes are at variance. The Marāziq have 20 or 30 rifles but the Qawāsim are unarmed. There is an Imperial Customs post here.

Name.	Position.	Houses and inhabitants.	REMARKS.
Durūshi (I) دروشي	9 miles north of Lingeh Town.	Nil.	A garden merely.
Durūshi (II) دروشي	On the coast 1 mile west of Milu.	Nil.	Do.
Duvvān دوران	On the coast 7 miles north-west of Bustāneh and 4 miles east of Mu- ghu.	...	See article Duvvān.
Gardaneh (Birkeh) بركه گردنه	3 miles west of Lingeh Town.	Nil.	A water reservoir only.
Gazīr گازير	12 miles north by east of Lingeh Town.	150 houses of Shāfi'i Sunnis.	Dates are grown and the water-supply depends on 8 reser- voirs and on some wells 12 to 18 fathoms deep. Live-stock are 150 camels, 100 donkeys, 100 cattle and 700 sheep and goats.
Hamairān حميران	On the coast 15 miles north-east of Lingeh Town.	40 houses of Sunnis.	Native vessels are laid up here in 4 fathoms of water protected by a shoal $1\frac{1}{2}$ miles off shore. The people are poor; they are mostly fishermen and sailors or look after date-plantations here which are owned by inhabitants of Lingeh Town; a few of them have dates and cultivation of their own. There are 2 fish- ing Shū'ais.
Hizvaad (Birkeh) بركه هيروند	5 miles east by north of Duv- vān near the southern edge of the Muhrakūn salt marsh.	Nil.	A water reservoir and garden belonging to Kundarūn.

Name.	Position.	Houses and inhabitants.	REMARKS.
Husainābād حسین آباد	Near the coast 2 miles north-east of Lingeḥ Town.	No permanent houses.	This is a summer resort of the people of Lingeḥ Town.
Jangal (Birkeh) برکه جنگل	8 miles north-west of Lingeḥ Town near the southern border of the Muhrakūn salt marsh.	Nil.	A reservoir only.
Jisheh جشه	On the coast 2 miles south-west of Lingeḥ Town.	Over 100 houses of mixed Arab tribes, Sunnis; but the place is, at present, more than half deserted.	The people are poor and unarmed. They are fishermen and sailors and dive for pearls near Mila, besides owning some date-palms, almond trees and cultivation. Their boats are 4 'Amilahs, 3 Shū'ais, and 6 Varjis, all of which are employed in pearling near home as well as in fishing.
Khārān (Birkeh) برکه خاران	8 miles north-west of Lingeḥ Town and 1 mile east of Birkeh Jangal, near the southern border of the Muhrakūn salt marsh.	Nil.	A reservoir and date garden.
Kher Sūr خور سور	Near the coast 5 miles north-east of Lingeḥ Town.	Nil.	Do.
Kung کنگ	On the coast 4 miles north-east of Lingeḥ Town.	...	See article Kung .
Lashtān (Qal'eh) قلعه لشتان	5 miles north by west of Lingeḥ Town.	Nil.	There is no village here notwithstanding the name.
Lāvar لاور	5 miles west-north-west of Lingeḥ Town.	Nil.	A tract of cultivated ground.

Name.	Position.	Houses and inhabitants.	REMARKS.
Lingeh Town لنگه	About 96 miles west-south-west of Bandar 'Abbās, 88 miles north-north-west of Shārijah and a little over 300 miles south-east of Būshehr Town.	...	See article Lingeh Town.
Magarāt مگرات	Near the coast between Shanās and Milu.	Nil.	A garden only.
Mulla (Birkeh) بركه ملا	7 miles north-west of Lingeh Town and 1 mile east of Birkeh Khārān.	Nil.	Do.
Milu ملو	On the coast 9 miles west by south of Lingeh Town, between Shanās and Bustāneh.	Half a dozen huts, mostly of Sūdān Arabs, Sunnis.	The people are poor, owning only 2 Shū'ais, 2 Varjis, and some date trees: they fish and dive for pearls in the vicinity of their village. A pearl bank, known as the Milu bank, adjoins the coast here and reaches towards Bustāneh and Shanās. The date-groves mostly belong to inhabitants of Bustāneh and Shanās who come to live here in summer; in the same season there are also some immigrants from Lingeh Town.
Mirakūn ميركون	22 miles north-west of Lingeh Town between the northern edge of the Muhrakūn salt marsh and the foot of the great maritime range.	70 houses of so-called Kurds.	There is a good and abundant water-supply from wells 60 feet deep.
Mu'allim (Band) بند معلم	On the coast 13 miles north-east of Lingeh Town.	At present about 20 houses of Arabs of mixed tribes, Sunnis.	The village is surrounded by date-groves. It was formerly much larger, and over 200 houses are still in existence, but the

Name.	Position.	Houses and inhabitants.	REMARKS.
Mūsālim (Cbāh) چاه موسالیم	27 miles west-north-west of Lingeh Town on the north-western edge of the Muhrakūn salt marsh and upon the route from Lingeh to Lār.	Nil.	majority of the inhabitants have migrated to the Arabian side of the Gulf during the last ten years to escape Persian oppression. Those who remain are sailors, fishermen, cultivators and date-growers; but most of the groves belong to inhabitants of Lingeh Town. There are a few boats for trade and fishing, viz., 1 Sambūk and 8 Baqārahs; and a small export of sheep and firewood to Arabian ports is carried on. There is an Imperial Customs post here. A halting place merely.
Purghār پرغار	On the coast at the eastern extremity of the Lingeh district, nearly opposite Bāsīdu and 25 to 30 miles from Lingeh Town.	A place with a small fort in which 10 riflemen can be placed when necessary.	This is the point where the great maritime range of the Shīb-kūh and Lingeh districts ends in the sea. The route between K h a m i r and Lingeh Town runs round the end of the range and is blocked by the rise of the tide at high-water: there is no alternative route anywhere near the coast. By the tower mentioned, which was built by the Qāsīmī Shaikhs during their occupancy of Lingeh, the road can be absolutely closed. The Persian Governor of Lingeh has not lost sight of the fact and in case of disturbances usually sends men to occupy the place.

Name.	Position.	Houses and inhabitants.	REMARKS.
Shanās شنامس	A mile from the coast and 5 miles west by south of Lingeh Town.	160 houses of mixed tribes, mostly Sunnis.	The village is screened on the seaward side by a thick grove of date-palms. The people are poor and mostly live by fishing for the Lingeh Town market; they own 5 'Amilahs and 4 Varjis. Some sheep, onions and water-melons are exported to the Arabian coast. There are no arms.
Sifān or Sifēh (Birkeh) بركه سفليين سفله	On the coast 25 miles north-east of Lingeh Town and 8 miles north by west of Basidu.	60 houses of Sunnis, but the place is at present partly unoccupied.	Slightly north of the village the main maritime range abuts on the sea; and at the foot of it, 2 miles north-east of the village, there is a creek with a sulphurous spring on the further bank. The people cultivate grain and grow dates on their own account and also tend plantations belonging to inhabitants of Lingeh Town. Good lime and mortar are prepared and exported to Lingeh Town and to Trucial 'Omān. Vessels are 3 Shū'ais. There is a post of the Persian Imperial Customs.

Of the above, the Birkehs at which there are no permanent habitations frequently become the centres of temporary encampments during the hot season.

TOWN*

A considerable and important, but at the present moment declining, town on the Persian Coast, the capital of the district of the same name: it is situated about 96 miles west-south-west of Bandar 'Abbās, 88 miles north-north-west of Shārjah and a little over 300 miles south-east

* The first is the Persian, the second the Arabic form of the name. A view of Lingeh will be found at page 181 of Goldsmid's *Telegraph and Travel*.

COPYRIGHT

Lingeh.

Site, buildings and anchorage.—Lingeh is a well-built town and extends about a mile along the shore; behind it are some date-plantations, and on the north-east there is a detached grove about half-way on the road to Kung. The surroundings are extraordinarily arid, and the background consists of an absolute desert rising gradually behind the town to a watershed of which somewhat prominent hills form the eastern and western extremities.

The anchorage is in 5 fathoms of water, with good holding ground, at $\frac{3}{4}$ of a mile from the beach; it is exposed to southerly and southeasterly winds which sometimes make communication with the shore impossible, the waves then lashing full on the piers and the spray driving inland over the town. At a short distance to the west of the anchorage there is a small pearl bank, 200 yards off shore, in 12 to 20 feet of water.

Inhabitants.—The population at present amounts to 12,000 souls and is of a very composite character. The basis is Arab and is supposed to consist chiefly of immigrants from Trucial 'Omān, but Bahrain has contributed a quota of Āl Bu Samait, 'Utūb and Dawāsir and there are also settlers from Kangūn. Of these the Āl Bū Samait have 340 houses in the Ghāriyeh suburb and 2 in the Līngiyeh quarter. The remainder of the people of Lingeh are mostly Persians from the neighbourhoods of Bastak and Lār, and the medley is completed by a considerable negro admixture. The majority of the inhabitants are Sunnis or Wāhhābis: less than $\frac{1}{4}$ are Shī'āhs. The following table will give an idea of the composition of the town :—

Arabs	5,000 souls.
Persians	5,000 "
Africans	1,500 "
Khōjahs	56 "
Hindus	26 "
Europeans (<i>viz.</i> , 1 British, 1 Belgian and 1 German)	3 "

The Hindus at this place have not their families with them.

Though the town is large its defensive strength is small. Arms are few and most of them, it is to be feared, are in undesirable hands. As a rule arms are not produced except on the incitement of Mullas, and then not without the existence of personal interests to be served or the issue of injunctions by the Deputy-Governor.

Trade.—Lingeh was until recently a trade emporium serving a large and important area. As a general centre for the collection and export of pearls it rivalled even Bahrain. As a point for the distribution of foreign goods, not only the adjacent districts of Persia but also the ports of Trucial 'Omān and Qatar and even, to some extent, those of the Bātinah coast of 'Omān and of Bahrain were numbered among its clients. But the rigorous régime of the reformed Persian Customs and the partial application of the customs tariff to the transit trade on which the place depended appear to have set a term, at least for the present, to its prosperity; and the towns of Trucial 'Omān formerly among its leading constituents, are now turning to Dibai, which the establishment of direct steam communication with India and the absence of official harassments have at length enabled to compete with Lingeh upon favourable terms. It is estimated that goods imported direct at Dibai can be sold there 10 per cent. cheaper than similar goods imported through Lingeh. To save themselves from utter ruin most of the leading merchants of Lingeh have established agencies in Trucial 'Omān, by means of which they hope to retain a part of their former business; and it seems probable that, unless the Persian Government take steps to remove the causes of the decline, Lingeh will shortly be reduced to the position of a merely local port. The tract of which the trade is naturally dependent on Lingeh lies to the north-west of it, including Bastak and Lār and not extending beyond Jahrum, a distance of little over 150 miles. The actual number of shops in Lingeh is 455 and of other business premises 28; of the shops the greater number are for the sale of cloth and provisions.

Exports from Lingeh by sea consist of carpets, rose-buds, flax-seed tobacco, gum-tragacanth, gum-arabic, assafœtida and a little dried fruit from Jahrum, Ishkani, Tarākameh and Galehdār: they are shipped chiefly to Indian and Turkish ports, but some of the assafœtida, gum-tragacanth and gum-arabic goes direct to the United Kingdom. Mother-of-pearl shells are despatched also to London and Hamburg as well as to India. The value of the exports between 1901 and 1903 was about £101,000 per annum, exclusive of transit trade.

Imports, except pearls and a certain quantity of piece-goods which are received direct from England and Germany, are all from India: the principal of these are rice, wheat, barley, ghi, sugar, loaf-sugar, sugar-candy, spices, linen, silk, and cloth of all sorts. Imports, not including goods imported for re-exportation, were worth between 1901 and 1903 about £146,000 a year.

The following figures, showing (in lacs of rupees) the average annual imports and exports of Lingeh from 1899 to 1906 in the principal branches of trade, place the character of Lingeh as merely a port of transit in a clear light:—

Commodity.	Imported.	Exported.
Pearls	33	33½
Grain and pulse	11½	6½
Provisions	2½	1½
Cotton piece-goods	5½	1½

The standard of weight is a local Man equal to 9 lbs. English, and that of length a Zara' of 35 English inches. The currency is that of Persia, but the Indian rupee, Maria Theresa dollar, Turkish Lirah and English sovereign also circulate.

Shipping.—The carrying trade of Lingeh, in the past considerable, appears not unlikely to fall off in the future in sympathy with the general export and import business. At the present time 2 sailing barques, 19 Baghlahs, 4 Ghunchahs, 15 Sambüks, 20 Batils, etc., 10 Baqārahs, 15 Shū'ais and 20 Ballams and Varjis belong to the port, besides 22 lighters; the last are Sambüks, Baqārahs and jolly-boats.

In 1905-06 steam vessels to the number of 67 with a tonnage of 73,700 visited the port of Lingeh: of these all but 4 were British.

Occupations other than trade.—The principal resource of Lingeh apart from commerce and navigation is the pearl fishery: included in the statement of shipping above are about 30 pearl boats of size (Sambüks, Batils and Baqārahs) which cross the Gulf to work on the Arabian side. The sea fisheries are of some value and employ 45 vessels of a smaller build, which are also used for pearling along the Persian coast. Date culture is of considerable importance, but other cultivation is insignificant in consequence of the paucity of the means of irrigation. There are some mechanics and artisans, and Lingeh is said to be the best place in the Gulf to have iron-work made or necessary repairs to ships executed, but the workmanship is rude.

Communications, transport and supplies.—Land communications and land transport are dealt with in the article on **Lingeh District**, and the nature of the sea-communications may be gauged by the remarks on shipping above. The water of Lingeh is generally abundant; that from wells however is brackish, and for drinking purposes the water of the Birkehs is almost exclusively used. The Birkehs appear to have a capacity of about 60,000 gallons each, but at times they are nearly empty. Cattle, poultry, vegetables, rice, flour and firewood are available in some quantity.

Administration.—Lingeh, as one of the **Gulf Ports**, is subject to the Governor of that division, but it is administered by a local Deputy-Governor. The nature of his administration is described in the article on **Lingeh District**. The Imperial Persian Customs have a post here; and there is a small Persian garrison, as already mentioned in the article on **Lingeh District**, besides whom about 200 armed citizens can be mustered by order of the Deputy-Governor for the defence of the town.

British interests.—British subjects at Lingeh are 1 European; 26 Hindus; 56 Muhammadan Indians, **Khōjahs**; and 35 other Muhammadans. Traders under British protection are 21 Hindus, 8 **Khōjahs** and 4 other Muhammadans.

LIRĀVĪ لیراری

This is the only district of the **Behbehān** province upon the **Persian Coast**; it separates the Southern 'Arabistān district of **Hindiyān** from the **Gulf Ports** district of **Hayāt Dāvud**.

Limits.—Lirāvi extends along the Persian Gulf from a point about 7 miles north of **Dilam** to Sabzpūshān 31 miles south-south-east of that place, and it is bounded inland by a low maritime range, which at the north end of the district is about 6, and at the south end about 18 miles from the sea; this range rises to about 1,000 feet behind **Dilam**.

Physical characteristics.—The principal points on the coast are Rās-at-Tanb or Tanūb تنب تروب, 8 miles south of **Dilam**, a low sandy point; Khor Lailatain, a small creek 1 mile south-east of Rās-at-Tanb; Khor Sini سيني, another small creek with deep water inside, 8 miles

south-south-east of Khor Lailatain* ; finally Sabzpushān, a slightly projecting rocky point which has a small water-course on the south of it and is itself 18 miles south-south-east of Khor Sini. The most striking object in the interior of the district is Jabal Bang بنگ or Bāg باگ, an isolated group of hills rising to a point 1,000 feet high at a distance of 24 miles south-south-east from Dilam and 3 miles from the coast ; these hills stretch for 12 miles parallel to the coast, are precipitous on the seaward side, and contain salt and gypsum.† Apart from Jabal Bang and the hills which form the inland boundary the whole district is low and flat and consists of plains, sometimes grassy, with an occasional outcrop of light-grey sandstone. The heat of summer is, it is said, not excessive ; and the winter resembles that of Būshehr. Water everywhere is from wells. The Lirāvi coast south of Rās-at-Tanb can ordinarily be approached to within 1 mile by vessels of moderate size.

Population.—A table of villages which is subjoined shows that the fixed inhabitants of Lirāvi are chiefly of Lur and Arab blood. Their number is probably about 6,000 souls, inclusive of the inhabitants of Dilam and its dependent villages. The people are all Shi'ahs unless, as is reported, there are a few Bābis at Shehr-i-Virān. They are quiet, free from fanaticism, and engaged for the most part in agriculture or sea-faring occupations. Martini rifles are numerous, there being, it is said, one rifle on the average to each house in the interior, and on the coast about 3 rifles to every 2 houses. Dwellings outside of Dilam are nearly all huts. During the six winter months the district is visited by the Darashūli درشولي and Kashkūli كشكولي Iliyāt ايلييات, nomadic hill tribes whose summer quarters are in the valley of Bibi Hakimeh ببیي حكيمة, 30 or 40 miles inland from the coast.

Agriculture and trade.—Wheat, barley, dates and tobacco are the chief products, and of the first two a certain surplus is ordinarily available for export. Cattle, sheep and goats are fairly numerous. The exports and imports are those described in the article on Dilam. There is no internal trade. Currency, weights and measures are the same as those

* It would seem natural to identify Khor Sini with the ancient Siniz had not Mr. Le Strange, who is the best authority, already fixed upon Dilam as marking its site. Siniz was sacked by the Carmathians in 933 A. D., but recovered its prosperity for a time : it was celebrated in the middle ages for the manufacture of a special kind of gauze, also of linen stuffs. See footnote to article Dilam.

† A distant view of Jabal Bang from the sea is given in Chart No. 2874—2887 B., Persian Gulf

of **Dīlam**, except the Gaz or yard which is $38\frac{1}{2}$ inches or 2 inches less than that of **Būshehr**.

Transport and communications.—Līrāvi is believed to possess about 200 horses, 100 camels and 2,000 donkeys. The best known route is one which traverses the district longitudinally from Shehr-i-Virān to Kīnār-i-Kūh at some distance from the coast; the marching by this is easy and there are numerous convenient halting-places.*

Administration.—The district is ruled by a Khān (at present Hasan Shāh Quli) who has his residence at the village of Chāh Tahl and is subordinate to the Governor of **Behbehān**. There are no Persian officials in his territory and he manages the villages through their Kadkhudas or headmen. One of the Khān's sons is posted at Hisār as his father's deputy. Land-revenue appears to be collected, on actual cultivation only, at the rate of 20 to 60 Qrāns per Gāu.

Topography.—The following table contains particulars of most of the places belonging geographically to the Līrāvi district:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Ahmad (Buneh) بنه احمد	5 miles east of Chāh Tahl.	35 houses.	Wheat and barley are grown. Live-stock are a few horses, 200 donkeys, 100 cattle, 500 sheep and goats. Also called Buneh Ahmad احمد بنه
Ahmadasīn احمد سين	3 miles south of Chāh Tahl.	50 houses.	There are 10 horses, 200 donkeys, and 130 cattle.
Bagh باغ	On the coast 3 miles north-west of Sabz-pūshān.	30 houses of Lurs and Arabs.	A ravine from the Bang hill passes close to the village.
Bāzīti بازيتي	3 miles east of Chāh Tahl.	70 houses.	Wheat and barley are grown: animals are 10 horses, 200 donkeys, 150 cattle and 1,000 sheep and goats.

* *Vide Routes in Persia*, I, No. 19 A.

Name.	Position.	Houses and inhabitants.	REMARKS.
Bīdu بیدر	12 miles east by south of Dīlam.	20 houses of Lurs and Arabs.	Crops are wheat and barley; livestock are 5 horses, 35 donkeys, 25 cattle, and 300 sheep and goats.
Bul Fath بر الفتح	15 miles south-east of Dīlam.	40 houses of Lurs and mixed tribes.	The water-supply is from wells.
Buvairāt بویرات	6 miles east of Dīlam.	40 houses of Lurs.	The people grow wheat and barley and have 100 donkeys, 70 cattle and 1,000 sheep and goats.
Buvairāti بویراتی	7 miles south-east of Dīlam.	60 houses of Lurs.	Resources are cultivation of wheat and barley, and livestock, viz., 7 horses, 60 donkeys, 40 cattle and 600 sheep and goats.
Chāh-i-Shīrīn چاه شیرین	6 miles from Dīlam.	20 houses of Lurs.	Wheat and barley are grown. There are 30 donkeys, 20 cattle and 300 sheep and goats.
Dih 'Arabi ده عربی	6 miles north-east of Dīlam.	30 houses of 'Aushārs.	Crops are wheat and barley; livestock are 30 donkeys, 20 cattle and 300 sheep and goats.
Gāhḍār گاهدار	9 miles east of Dīlam.	50 houses of Lurs.	Crops are wheat and barley; livestock are 20 horses, 10 mules, 110 donkeys, a very few cattle, and 1,100 sheep and goats. The village has a tower and is also known by the names of Gāhḍard گاهژرد and Gareh گره.

Name.	Position.	Houses and inhabitants.	REMARKS.
Gaz-i-Lūri گز لوري	6 miles north-west of Gābzard.	40 houses of Lurs.	Animals are 50 donkeys and 30 cattle; there is cultivation of wheat and barley.
Gurbēhi گربۀه	10 miles south-east of Gābzard.	30 houses.	There is a tower. Wheat and barley are cultivated and animals are 7 horses, 50 donkeys, 25 cattle and 500 sheep and goats.
Hasani (Baha) بها حسني	5 miles north of Hisār.	25 houses of Lurs.	This village has a tower. The crops are wheat and barley and animals are 50 donkeys, 30 cattle, 700 sheep and goats and 10 horses.
Hisār حصار	10 miles south-south-east of Dīlam.	60 houses of Lurs and Ka'ab Arabs.	Hisār is the seat of one of the sons of the Khān who governs it for his father. There are wells of good water, and a tower. Wheat and barley are grown. Live-stock are 30 horses, 200 donkeys, 120 cattle and 1,000 sheep and goats. The arms-trade is said to flourish here still.
Imām Hasan (امام حسن)	On the coast 14 miles south by east of Dīlam, on the south side of Khor Sini.	50 houses of Lurs and a few Ka'ab Arabs.	There are a few trees and an old building forming a sea-mark. Many modern rifles are said still to be landed here in spite of the establishment of a post of the Imperial Persian Customs. Animals are 50 donkeys, 30 cattle and 500 sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
Isfandi-yāri اسفندیاری	27 miles south-east of Dīlam.	40 houses of Lurs and Ka'ab Arabs.	There are 10 horses, 45 donkeys, 20 cattle and 500 sheep and goats. Wheat and barley are grown.
Khājah Hīr خواجه هیر	5 miles east of Imām Hasan.	40 houses of Lurs.	There are 5 horses, 35 donkeys, 30 cattle and 170 sheep and goats. Cultivation is chiefly wheat.
Khātir (Buneh) بنه خاتر	3 or 4 miles east of Dīlam.	100 houses of Lurs.	Wheat and barley are grown and 10 horses, 60 donkeys, 40 cattle, and 600 sheep and goats are kept.
Kinār-i-Kūh کنار کوه	8 miles east by north of Dīlam.	60 houses of Lurs.	Grain is grown and there are 15 horses, 150 donkeys, 100 cattle and 600 sheep and goats.
Lailatain لیلتین	On the coast 8 miles south of Dīlam.	30 houses of Lurs.	The village has a tower. Crops are wheat and barley; animals are 5 horses, 40 donkeys, 25 cattle and 200 sheep and goats.
Muzaffari مظفری	Perhaps 2 miles north-west of Gāhzard.	20 houses of Lurs.	Crops are wheat and barley; there are a few horses, 30 donkeys, 25 cattle and 300 sheep and goats. The name is sometimes pronounced Mudaffari.
Sabzpūshān سبز پوشان	On the coast 31 miles south-south-east of Dīlam.	30 houses of Lurs with a few Ka'ab Arabs.	There is an unimportant shrine, also a tower. There are 10 horses, 25 cattle, 35 donkeys and 700 sheep and goats. Wheat and barley are grown.

Name.	Position.	Houses and inhabitants.	REMARKS.
Sabakūn سهکون	6 miles north-west of Māl Shahāb.	30 houses of Lurs.	This village has a tower; crops are wheat and barley, and animals are 8 horses, 40 donkeys, 5 cattle and 800 sheep and goats.
Shahāb (Māl) مال شهاب	10 miles south-east of Gāhzard.	30 houses of Lurs.	There are two small towers. Cultivation is of wheat and barley. Livestock are 40 donkeys, 30 cattle and 200 sheep and goats.
Shehr-i-Virān شهر ویران	10 miles south-east of Gāhzard.	40 houses of Lurs.	There is a tower. Wheat and barley are grown and 10 horses, 40 donkeys, 25 cattle and 250 sheep and goats are owned.
Sumiyāl (Band) بند سمیل	8 miles east of Dīlam.	30 houses of Lurs.	One tower here, and the usual cultivation of wheat and barley. Animals are 7 horses, 40 donkeys, 30 cattle and 1,200 sheep and goats.
Sunān (Māl-i-) مال سنان	2 miles south of Band Sumiyāl.	30 houses of Lurs.	There are two small towers. Animals are 35 donkeys, 25 cattle and 850 sheep and goats. Wheat and barley are cultivated.
Tahl (Chāh) چاه تهل	9 miles east of Hisār.	70 houses of Lurs.	The residence of the Khān of Lirāvi. Wheat and barley are grown and the inhabitants own 20 horses, 100 donkeys, 70 cattle and 1,000 sheep and goats.

LIWA

 لوى
 SUB-WILĀ-
 YAT

A subdivision of the Wilāyat of **Sohār** in the **Bātinah** district of the 'Omān Sultanate, ruled by an official who is subordinate to the Sultān's Wālī at **Sohār Town**. The capital is **Liwa Town**, a short distance inland; and the places on the 17 miles of coast belonging to the sub-Wilāyat are, in order from south-east to north-west, the following:—

Name.	Houses and inhabitants.	REMARKS.
Harmūl حرمول	50 houses of Bani 'Umr	The people are fishermen owning 7 Shāshahs. This is the landing-place for Liwa Town which lies 3 miles inland, westwards. There are 10 cattle and 30 sheep and goats. Harmūl is on the coast, $4\frac{1}{2}$ miles north-west of Majis in the Sohār sub-Wilāyat. At Harmūl Wādī Bani 'Umr-al-Gharbi reaches the sea.
Nabar نبر	100 houses of Bani 'Umr.	Two Baqārahs are owned here which run to the ports of Trucial 'Omān: there are also 4 Badans and 8 Shāshahs. Animals are 20 camels, 20 donkeys, 20 cattle and 100 sheep and goats. Nabar is on the coast, $3\frac{1}{2}$ miles north-west of Harmūl.
Diwānij دوانج	60 houses of Bani Sa'ad.	The people are cultivators and fishermen: they own 3 Badans, 5 Shāshahs, 10 camels, 10 donkeys, 10 cattle and 80 sheep and goats.
Asrār Bani Sa'ad اسرار بني سعد	200 houses of Bani Sa'ad.	Tobacco is cultivated and exported to Bahrain and Lingeh. Some of the people are sailors. Here are 3 Baqārahs, 12 Shāshahs, 10 camels, 30 donkeys, 30 cattle and 400 sheep and goats.
Asrār Bani 'Umr اسرار بني عمر	250 houses of Bani 'Umr.	At this place there are 1 Badan, 12 Shāshahs, 12 camels, 40 donkeys, 40 cattle and 400 sheep and goats.
Umm-al-'Inah أم العنه	100 houses of Bani 'Umr.	The people are fishermen and cultivate dates: they have 3 Shāshahs, 5 camels, 7 donkeys, 10 cattle, and 30 sheep and goats.

Name.	Houses and inhabitants.	REMARKS.
Hasaifin حسيقين	200 houses of Balūchis.	This village includes a quarter called Sūr-al-Balūsh, but distinct from the village of the same name below. There are 10 Shāshahs, 10 camels, 30 donkeys, 30 cattle and 100 sheep and goats at this place.
Hasaifin-al-Mazārī حسيقين المزاريق	100 houses of Mazārī'.	The people fish and cultivate: they own 8 Shāshahs, 12 camels, 20 donkeys, 20 cattle and 120 sheep and goats.
Hasaifin Sūr-al-Balūsh حسيقين سور البلوش	100 houses of Balūchis.	Not to be confounded with the quarter similarly named in the village Hasaifin above. There are 100 sheep and goats here.
Hasaifin Sūr-al-'Abri حسيقين سور العبري	150 houses of Bani Ka'ab. There are also a few of the 'Abriyīn who were formerly more numerous.	The inhabitants fish and cultivate: they have 5 Shāshahs but no domestic animals.
Hasaifin Sūr-al-Khazaimāt حسيقين سور الخزيمات	100 houses of Khazaimāt.	The people are cultivators and fishermen owning 5 Shāshahs.
Hasaifin Sūr-ar-Riyāyisāh حسيقين سور الرياسه	50 houses of Riyāyisāh.	The inhabitants fish and cultivate.
Taraif طريف	100 houses of Bani Ka'ab.	This village stands a little back from the sea. There are no boats here, but 8 camels, 10 donkeys, 20 cattle and 80 sheep and goats are owned.
Hamairah حميرة	100 houses of Bani 'Umr.	There are 10 Shāshahs here. Animals are 8 camels, 12 donkeys, 20 cattle and 100 sheep and goats.
Furfarah فرقارة	90 houses of Futaisāt.	Livestock are 10 camels, 12 donkeys, 30 cattle and 100 sheep and goats. There are no boats.
Furfar-as-Salātinah فرفار السلطنة	20 houses of Salātinah.	No boats here. Animals are 8 camels, 8 donkeys, 5 cattle and 20 sheep and goats.

The total fixed population of the sub-Wilāyat may be estimated at 12,500 souls, the inhabitants of Liwa Town being included.

The chief trade centre in the sub-Wilāyat of the same name in the **LIWA** 'Omān Sultanate and the seat of a deputy governor subordinate to the Wāli of **Sohār**. Liwa town is about 3 miles inland from a point on the **LIWA TOWN** **Bātinah** coast which is $14\frac{1}{2}$ miles north-west of **Sohār Town** and midway between Harmūl and Nabar in the sub-Wilāyat of **Liwa**. The town consists of the following quarters:—

Name.	Houses.	Inhabitants.
Ja'ashami جعاشي	100	Balūchis.
Hillat-al-Makhailif حَلَّةُ الْمَخَيْلِف	100	Persians and Balūchis.
Hillat-ash-Shaikh حَلَّةُ الشَّيْخ	100	Ghafalah.
Hillat-al-Hisn حَلَّةُ الْحَصْن or Liwa Proper	300	Persians and Bani Hina, the latter being 160 houses.
Dabbāgh(I) دَبَاغ	60	Dhahūl.
Dabbāgh (II) دَبَاغ	50	Bani Sa'ad.

In the Hillat-al-Hisn quarter are 7 or 8 shops, of which 4 are kept by Hindus; there are no **Khōjahs**. The Sultān's garrison consists of only 10 men. The total population of the town is about 3,500 souls.

Plural, **Lūrha** لُرْه (Persian) or **Alwār** الْوَار (Arabic). A numerous and important tribe, or rather race, of South-Western Persia; they occupy the mountains that bound 'Arabistān on the north, and they are found also in some of the districts of 'Arabistān, Fārs and the Gulf Ports.

LUR
لُر
TRIBE

The **Bakhtiyāris** are a division of the Lurs, but they are generally mentioned by their own name, and throughout this Gazetteer—except where the contrary may be indicated by the context—the term Lur is used to denote only those Lurs who are not **Bakhtiyāris**. The Lurs, in this restricted sense, may be divided into Western Lurs and Eastern Lurs, the **Kārūn** river being taken as the line of demarcation, and the **Bakhtiyāris** or Central Lurs being between,

*Western Lurs.**—The home of the Western Lurs is the mountainous tract between the **Dizfūl** District and **Khurramābād**; but in winter they descend in considerable numbers to the plains of **Dizfūl** where, as the table of the villages in that district indicates, many of them have now become permanently resident. The principal sections of the Western Lurs with whom we are concerned are the **Dīnārwand** دیناروند, **Dirakwand** دیرکرد, **Faili** فیلی and **Sagwand** سگزند.

Settled **Dīnārwards** are found at 'Abbāsābād and 'Amleh **Karim Khān** in the **Dizfūl** District; but the headquarters of this section, said to be of Kurdish descent, appear to be at **Dih Lurān** ده لوران, where they are subject to the **Wālī** of **Pusht-i-Kuh**.

The **Dirakwands** are a turbulent, marauding and entirely nomadic section, who are generally on bad terms with their neighbours, including the **Bakhtiyāris**, and do not emerge from the hills except for purposes of robbery; in the **Dizfūl** District the village of **Bunwār Nāzir** has been plundered by them once, and that of **Sar Bīsheh** (a **Bakhtiyāri** possession) several times. About 1902 the **Dirakwands** looted the **Bakhtiyāri** village of **Gotwand** in the **Shūshtār** District, the **Bakhtiyāris** in 1903 retaliating by a raid on **Qīlāb** in which a number of **Dirakwands** of a subdivision called **Qalāwand** قلاروند were either killed or captured. In 1904 the British Military Attaché from **Tehrān** and the British Vice-Consul from **Nāsiri** were attacked and robbed in the hills between **Khurramābād** and **Dizfūl** by a **Dirakwand** escort and narrowly escaped with their lives. The fighting strength of the **Dirakwands** is about 8,000 men of whom only $\frac{1}{4}$ are true **Dirakwands**, the rest being refugees from other tribes.

A few **Faili Lurs** are found at **Qal'eh 'Abbās** in the **Dizfūl** District, and **Karim Khān** of 'Amleh **Karim Khān** belongs to this section.

* Full information about the Western Lurs will be found in the Proceedings of the Government of India in the Foreign Department for October 1904, in reports by Lieutenant D. L. R. Lorimer, dated 29th June and 4th July 1904.

It is understood that the Failis claim to be Saiyids descended from Hazrat 'Abbās, and that the Wālī of Pusht-i-Kūh is himself of their number.

The Sagwands are among the most powerful of the sections of the Western Lurs and numbers of them are settled in villages of the Dizfūl District, especially at Qal'eh 'Abbās, 'Abbāsābād, Qal'eh Hāji 'Alī, 'Alī-ibn-al-Husain, Anjīreh, Āqa Abu Talab, Asad Khān (II), Bīsheh Nau, Chūgheh Sabz, Qal'eh Farrāsh, Jibar, Kālehwand, 'Amleh Karīm Khān, Khizar Baigi, Kūtiyān, Murādi, Qal'eh Qāzi, Qal'eh Saiyid, Sālārābād, Bunwār Shāmi, Sharafābād and Jirqeh Saiyid Ta'ameh ; the village of Qal'eh Hāji 'Alī is partially owned by the Sagwand chief Khānjan Khān. In winter nomadic Sagwands, up to the number of perhaps 15,000 souls, encamp in the plains to the west of Dizfūl Town ; and the country between the Diz and Karkheh rivers, where they are found as far south as Shūsh, is then fairly safe ; this section, however, do not cross to the east of the Diz river. Besides innumerable sheep and goats the Sagwands own cattle of a very small breed, which they use chiefly as beasts of burden. They took a considerable part in the French excavations at Shūsh about 1903-04.

The absence of men of any influence or enlightenment among the Western Lurs makes it difficult to maintain satisfactory political relations with them as a body ; a large section of the Sagwands, however, headed as they are at present by Khānjan Khān, are an exception to the ordinary rule. The inhabitants of Dizfūl Town, in view of cultivation which they possess at Mazra'eh Sālīhābād, ordinarily find it worth while to purchase the friendship of the neighbouring Lurs.

Eastern Lurs.—The Eastern Lurs occur in the Rāmuz, Ma'shūr and Hindiyān Districts of 'Arabistān, and in the Līrāvi, Hayāt Dāvud, Rūd-hilleh, Angālī and even Dashti districts of the Persian Coast ; in most of the latter they are popularly regarded as immigrants from Behbehān. The Lurs of the Rāmuz District, so far as they are not Bakhtiyāris, chiefly belong to a division called Kūhgalu کوهگلو, of which sections known as Bagdali بگدلي, Bahmāi بهاي, Bair Ahmadi بيراحمدی, Āgha Jarī آغا جری and Taibi طایبی are found there. The Lurs of the Hindiyān District appear to be all, or nearly all, Āgha Jaris. Some of the Lurs in the Angālī District belong to a section called Nūi نوی ; among those who do are the ruling family. The principal divisions, in the hills, of the Eastern Lurs are the Kūhgalus, who adjoin the Bakhtiyāris on the south-east, and the Mamasanis ممسنی, who are in contact with the Kāshkai کاشکاي, a tribe of reputed Turkish origin

occupying the country to the south of Shīrāz. As far south at least as the district of **Hayāt Dāvud** extends, the Lurs are distinguishable by the peculiar dialect of Persian which they speak.

LŪSAIL

لوسايل

A village on the east coast of **Qatar** about 15 miles north of **Dōhah**; the principal residence at the present time of Shaikh Jāsim, the head of the Āl Thāni family of **Qatar**. About 500 yards inland of the place is **Jabal Lūsail**, a rocky hillock of some height, which forms a landmark well known to mariners. On the summit of **Jabal Lūsail** is a double-storeyed tower which can be seen from several miles inland; and at the foot of the hill are three wells, one on the north and two on the west side; the water of these is extremely brackish. The village of **Lūsail** consists of about 50 substantial stone and mud houses of **Hamaidāt** and 2 or 3 of **Ma'adhīd**, the latter being personal retainers of the Shaikh. To the village belong 9 pearl boats, 2 other sea-going vessels, and 3 fishing boats. Animals of transport are 20 horses and 70 camels. The house of the Shaikh stands about 200 yards to the south of the village; it was built about 1901 and is a four-sided, high-walled building of stone and plaster, adjoined by a few yards and out-houses and by a small mosque. By courtesy it is called a fort, but it contains no guns.

MA'ADHĪD

معاذيد

Singular **Ma'adhādi** معاذدي. It is difficult to decide whether the **Ma'adhīd** (or rather a part of them) should be treated as a distinct tribe or should be regarded as a section of the Āl Bin-'**Ali** tribe of **Bahrain** and **Qatar**. In **Qatar** the **Ma'adhīd** are said to be nearly related by blood to the Āl Bū **Kuwārah**, who like themselves claim descent from the **Bani Tamīm**. From the article on the Āl Bin-'**Ali** it will be apparent that the **Ma'adhīd** comprise at least 7 families, of which 1 has recently become extinct. Of the 6 remaining, the Āl '**Ali**, Āl **Talah** and Āl **Thāni** deny relationship with the Āl Bin-'**Ali**; the '**Asīriyīn** and Āl **Fādhāl** on the contrary seem to admit it; and the Āl Bin-**Muqbil** are divided, a few who live in **Muharraq** Island (but not apparently the remainder) professing themselves Āl Bin-'**Ali**. The **Ma'adhīd** who claim

independence of the Āl Bin-**Ali** do not fly the so-called Salaimi flag which is common to the rest of that tribe. The principal settlements of the Ma'ādhid in **Qatar** are at **Dōhah**, 100 houses; **Wakrah**, 70 houses; and **Lūsail**—where their chief now lives—about 5 houses. In **Bahrain** they are found at **Muharraq Town** and **Hadd**. The different families of the Ma'ādhid live intermingled in their various settlements. In religion most of the Ma'ādhid are Māliki Sunnis, but their Shaikh has become a Hanbali—that is in reality a Wahhābi—and some of the tribe have gone with him in his change of belief. By occupation the Ma'ādhid are either pearl merchants, pearl divers, sailors, or breeders of camels and cattle. Jāsīm of the Āl Thāni family is Shaikh of the tribe, and at the same time the most important and influential personage in the whole peninsula of **Qatar**.

Singular Ma'awali معاولي. A tribe of the 'Omān Sultanate, Hināwi **MA'ĀWAL** in politics and Ibādhi by religion, found in Wādi **MA'āwal** in Western **Hajar** where they own the villages of Āfi (1,000 houses); 'Araiq (40 houses), Musilmāt (300 houses), and part of Hibra (80 houses), also at Khabbah (150 houses) and **Barkah** (20 houses), in **Bātinah**. There is moreover a Bedouin section, called the Yāl Bin Rashīd يال بن رشيد, who own about 60 camels, 20 donkeys, 30 cattle and 600 sheep and goats. The Ma'āwal number altogether about 8,000 souls: Āfi is the tribal capital and the present Tamīmah is Nāsir-bin-Muhammad. The Jalandite rulers of 'Omān, who flourished at the time of the conversion of the country to Muhammadanism or somewhat earlier, are supposed to have belonged to this tribe. معارل

A complexus of small valleys in the Western **Hajar** district of the 'Omān Sultanate, of the disposition of which it is impossible, in the absence of a survey, to gain a clear idea; the drainage of the system appears to combine and find a common outlet to the sea immediately on the west side of **Barkah**. Of the component valleys Wādi-al-Hammām وادي الحمام and its continuation towards the coast may be regarded as central, while Wādis Miyaisin مييسين, 'Ajāj عجاج and **MA'ĀWAL (WĀDI)** وادي معارل

Jahfān جحفان are western members, and Wādi Gharīz غريز is an eastern member of the system. The places in Wādi Ma'āwal, taken generally in order from south to north, are given below. The inhabitants, numbering some 12,000 souls, are mostly of the Ma'āwal tribe.

Name.	Towards which side of Wādi Ma'āwal.	Houses and inhabitants.	REMARKS.
Nakhl نخل Musilmāt مسلّمات	At the head. West.	... 300 houses of Ma'āwal.	See article Nakhl. Porous water vessels are made from a bluish clay found here. Wādi Miyaisin has its mouth hereabouts. There are no wells. Livestock are 50 camels, 40 donkeys, 200 cattle and 800 sheep and goats.
Āfi أفي	Do.	1,000 houses of the Ma'āwal tribe, whose capital this place is.	There is a bazaar and extensive cultivation of dates. Wādi 'Ajāj has its mouth near this. Animals are 100 camels, 200 donkeys, 20 cattle and 200 sheep and goats. There are 2 quarters named Matla' مطلع and Shaikh شيخ.
'Araiq عريق	Do.	40 houses of Ma'āwal.	Wādī Jahfān debouches between this place and Āfi. There are 30 camels, 50 donkeys, 40 cattle and 200 sheep and goats.
Hibra حبرا	East.	300 houses of Āl Bū Sa'id, Ma'āwal, Bani Bahri and Bani Harrās.	The place is walled and has a tower and a small bazaar. The inhabitants, who are regarded as Bedonins, own 200 camels, 280 donkeys, 150 cattle and 600 sheep and goats.
Wāsīt واسية	Do.	70 houses of Bani Filait.	Wādi Gharīz joins the main valley here. Wāsīt forms a small but rich oasis of date cultivation and is about 10 miles from Barkah. There are 20 camels, 70 donkeys, 30 cattle and 200 sheep and goats.

The valley also contains a plain called Na'amān نعام between Hibra, Āfi, Muslimāt and Tuwaiyah, and receives from the south the drainage of Tuwaiyah. The trade of Wādī Ma'awal is with **Barkah**. Wheat, barley, lucerne and beans are grown, and the date palms are estimated at 100,000.

Also called Wādī Hailain حيلين and Wādī Jahāwar جهار. This **MABRAH (WADI)** راي مبرح is a valley rising on the north side of Najd-al-Khubaib خبيب in the Western Hajar district of the 'Omān Sultanate, between Wādī Bani Ghāfir on the east and Wādī-al-Hawāsinah on the west, and reaching the sea about 15 miles to the west of Suwaiq. The places in the Wādī, in order from its head downwards, are the following :—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Daiqarah ديقره	A short distance below the head of the valley and several hours north-east of Miskin .	Right.	25 houses of Bani Kal-bān.	Livestock are 7 camels, 15 donkeys, 3 cattle and 40 sheep and goats.
Hiyal حيال	$\frac{1}{2}$ an hour below Daiqarah.	Left.	70 houses of Bani Kal-bān.	There are 15 camels, 20 donkeys, 20 cattle and 200 sheep and goats.
Minzifah منزفه	$1\frac{1}{2}$ hours below Hiyal.	Do.	25 houses of Bani Kal-bān.	Animals are 3 donkeys and 30 sheep and goats.
Raqaiyid راقيد	$\frac{1}{4}$ of an hour below Minzifah.	Do.	25 houses of Bani Kal-bān of the Quyūdh section.	The inhabitants own 8 camels, 12 donkeys, 4 cattle and 40 sheep and goats.
Bidit بدت	4 hours below Raqaiyid.	Do.	25 houses of Bidah.	Animals are 15 donkeys, 3 cattle and 30 sheep and goats.
Hailain حيلين	$\frac{1}{2}$ an hour below Bidit.	Both.	100 houses of Jahāwar.	There are 15 camels, 20 donkeys, 25 cattle and 100 sheep and goats.
Mabrah مبرح	1 hour below Hailain and 6 hours from the coast.	Left.	70 houses of Jahāwar.	Livestock are 12 camels, 20 donkeys, 20 cattle and 200 sheep and goats.

The entire fixed population of the valley thus amounts to about 1,700 souls.

MADĀĪN

مدائن

A collective name for some ruined sites in Turkish 'Irāq upon both banks of the **Tigris**, 30 to 34 miles below **Baghdād** City by river and 20 miles from it south-south-eastwards by land. The remains on the right bank represent the Macedonian town of Seleucia, those on the left the Parthian town of Ctesiphon. According to the Arab geographers there were formerly 7 towns at this place; but in the 9th century of the Christian era only 5 of them were still extant. About 903 A.D. large quantities of stone were carried off from the ruins of Madāin for use at **Baghdād**, yet in the 10th century Madāin was still inhabited and fairly populous. The only building of which a considerable portion now remains standing is the winter palace of the Parthian kings, known as **Tāq Kisra** طاق كسرى: the vaulted central hall and the half of the facade on the proper right are still standing, but the left facade has fallen since the British survey of 1860-65. Near the left bank of the river a little above Ctesiphon is the tomb of **Salmān Pāk** سلمان پاک, one of the companions of the prophet Muhammad and said to have been his barber.

MADHĀ-HAKAH

مضاحكه

An Arab tribe in **Bahrain**, said to have come from **Qatar** where some still remain. They claim descent from **Dhahhāk-bin-Qais** ذحاک بن قیس, who was (they say) a king in Arabia before the days of Muhammad. They have 150 houses at **Busaitin** on **Muharraḡ** Island and a few at **Dha'ain** on the coast of **Qatar**. Two or three of their principal men are pearl merchants; the rest are divers. The **Madhāhakah** are **Māliki** Sunnis.

MADĪNAH

مدينة

A small town in Turkish 'Irāq on the right bank of the **Euphrates** about 12 miles above **Qūrnah** Village: it is the headquarters of a **Nāhiyah** of the same name in the **Qadha** of **Qūrnah** and the seat of a harbour master. - Some maize is exported and the reeds and mats used at

Basrah Town mostly come from **Madinah**. There is a military detachment. **Madinah** has perhaps 2,500 inhabitants.

A plain in the heart of the 'Omān Promontory, the headquarters of the Bani **Ka'ab** tribe; together with **Jau** it forms the greater part of Independent 'Omān. **MAHÁDHAH** مأهده

Position, extent, and physical features.—**Mahádah** is probably situated 15 to 20 miles north-east of the **Baraimi** Oasis, but its exact position is uncertain. Its level is said to be somewhat higher than that of **Baraimi**, and its extent is described as about 6 miles in any direction. According to native accounts it is surrounded by hills, which are high upon the east and south sides and low upon the west and north; its soil is of clay mixed with stones, the western portion of the plain being less stony than the eastern; and its drainage escapes westwards, through openings in the hills, to the sandy desert that lies inland from the west coast of Trucial 'Omān.

Topography of Mahádah and surrounding country.—The plain of **Mahádah** contains only one village, also named **Mahádah**, which is described in the table below; but a number of settlements of the Bani **Ka'ab** and other points of interest exist in the neighbourhood and can be most conveniently dealt with in the same table.*

Name.	Position.	Nature.	REMARKS.
Hayūl (Wādī- al-) وادي الحيو	Probably to the east of Mahádah at a considerable distance. Wādī Khadhra starts from the same Najd but goes westwards.	A valley containing, with Wādī Qahfī , 100 houses of settled Bani Ka'ab of the Miyādilah section.	The drainage of this valley goes north-east by Wādī Qahfī to Bātinah .
Jawaif الجريف	In Wādī Khadhra .	A village of some settled Bani Ka'ab of the Miyāisah section.	...

* One or two of the features mentioned appear in the map *Route taken by Major P. Z. Cox, etc.*, 1905.

Name.	Position.	Nature.	REMARKS.
Jila'ah (Wādi Bū) وادي بو جلع	Said to be a few miles east of Mahádhah.	A locality containing 70 houses of settled Bani Ka'ab of the Mis a'id section	The drainage of this place goes westwards to Mahádhah.
Kahal كحل	Uncertain, but apparently further west than Mahádhah and nearer to the Baraimi Oasis, perhaps 10 miles or less north-east of the last.	A village of Bani Ka'ab consisting of 2 quarters; one to the north, of 40 houses, of the Ahl Yidhwah section; and one, to the south, of 30 houses of the Makātīm section.	Wheat and jowari are grown by irrigation from wells which are said to be 14 fathoms deep. Dates are about 500 only: livestock are estimated at 100 camels, 70 donkeys, 200 cattle and 700 sheep and goats.
Kahal (Ramlat) رملة كحل	North of the Baraimi Oasis, extending eastwards and westwards; its extent on the Baraimi-Rās-al-Khaimah route is from the end of the 4th to the end of the 9th mile from Baraimi Village.	A belt of desert which consists of a maze of hills and valleys of loose drifting sand.	Camel tracks are rapidly obliterated by the wind. On the east this desert is said to extend almost up to the village of Kahal.
Khabbain خبين	In Wādi Khatwah to the east of Mahádhah.	A village of 80 houses of Bani Ka'ab of the Nawaijiyīn section.	Some dates and wheat are grown and there are camels and goats.
Khadhra (Jabal) جبل خضرا	25 to 30 miles north-north-east of Baraimi Oasis.	A peak in the hills of the 'Omān Promontory, at or near the western side of that range.	The route between Baraimi Oasis and Rās-al-Khaimah Town passes a few miles west of it.
Khadhra (Wādi) وادي خضرا	Apparently begins in the hills in the neighbourhood of Jabal Khadhra and thence goes west or south-west to the plain.	A valley containing the Bani Ka'ab settlements of Jawaif, Sharam and Nawaiji and some dwellings of Kunūd.	This valley is said to start from the opposite side of the same Najd as Wādi-al-Hayul which goes east to Batinah.
Khatwah خطوة	In the Wādi called Bū Sa'ad; it is said to be 8 miles south of Mahádhah.	A village of 280 houses of settled Bani Ka'ab of the Nawaijiyīn section.	The drainage of this place is stated to go to Mahádhah.
Madal (Hūr-al-) حور السدل	About 3 miles south-west of Jabal Mahádhah.	A detached hill.	Visible from the Baraimi-Rās-al-Khaimah route, which lies about 12 miles to westwards.

Name.	Position.	Nature.	REMARKS.
Mahádhah (Jabal) جبل محضة	20 miles north-east of Baraimi Village.	A conspicuous hill, visible both from the Baraimi-Rās-al-Khaimah and from the Baraimi-Sohār route.	The position of Mahádhah village or of the Mahádhah plain with reference to this excellent landmark is unfortunately not known.
Mahadhah محضة Village	In the Mahádhah plain; the only village so situated.	A village of 220 houses of Bani Ka'ab, viz., 90 of Makātim, 60 of Salahāt, 50 of Zahairāt and a few of Mizāhamiyin and Ahl Yidhwah.	The village consists of scattered and unwalled groups of sundried brick or stone houses. The date plantations cover a space 2 or 3 miles in diameter and are estimated to contain 20,000 trees. Water is brought to the village lands by a Falaj, and wheat, jowari and millet are grown as well as dates. Livestock are said to be 300 camels, 400 donkeys, 400 cattle and 100,000 sheep and goats. The relations of this place are chiefly with Baraimi Oasis and Shārajah and Dibai Towns.
Misākin (Wādi) وادي مساكين	Crosses the Baraimi-Rās-al-Khaimah route about 16 miles north-north-east of Baraimi Village.	A valley which runs west-south-westwards to the desert from a point between the Shihhāt-al-Khādim and the red sandhills near its tip.	A well, known as Misākin, is situated in the valley.
Nawar-i نويئي	Said to be several miles north of Mahádhah and to lie just at the western foot of the 'Omān Promontory hills.	A village of 70 houses of Bani Ka'ab, of the Sawālim and Zahairāt sections.	The Bat-hah Nawar-i, a dry water-course coming down westwards from this village, cuts the Baraimi-Rās-al-Khaimah route between Shihhāt-al-Khādim and Safwān, or about 20 miles north-north-east of Baraimi Village.

Name.	Position.	Nature.	REMARKS.
Ūyān (Batīn-al-) بطين العريان	10 miles north of Baraimi Village, on the route to Ras-al-Khaimah Town.	A gently undulating tract of sand hills, containing a well at the point specified.	The ridges run east and west and carry a certain amount of desert vegetation. The tract is 4 miles across from north to south.
Qahfi (Wādi) وادي قحفي	On the eastern side of the watershed of the 'Omān Promontory. It joins Wādi Hatta.	A valley which receives the drainage of Wādi-al-Hayūl and itself contains a Bani Ka'ab settlement called Shibakah.	The village of Shibakah consists of perhaps 50 houses of Bani Ka'ab of the Hībāt subsection of the Shwaihiyīn section and some of the Miyādilah section.
Safwān مفران	6 or 7 miles south-west by west of Jabal Khadhra.	A well, curiously situated in the middle of a circular knoll which resembles an inverted bowl.	In spite of its position the depth of this well does not appear to exceed the average of the others in the same region.
Sharam شم	In Wādi Khadhra, higher up and further east than Nawai-i.	A village of 70 houses of the Ahl Yidhwah section of the Bani Ka'ab.	...
Shibhāt-al-Khādim شبهات الخادم	Runs west and east between Bat-hah Nawai-i on the north and Wādi Misākin on the south.	A belt of sand dunes, 2 miles across from north to south; it joins the desert on the west and terminates, at the other end, a short distance to the east of the route between the Misākin and Safwān wells.	A little way to the east of the extremity of these dunes is a group of red sand hills 200 feet high.
Shiya (Wādi) وادي شيا	Somewhere in the neighbourhood of Jabal Khadhra.	A valley which has no outlet: it is occupied by 30 households of nomadic Bani Ka'ab of the Drisah and Shwaihiyīn sections.	This valley is said to receive the drainage of Wādi Shwaihah and to be closed at its end by Jabal Samaini.
Shwaihah (Wādi) وادي شويهه	Apparently on the east or south-east side of Wādi Shiya, of which it is said to be a tributary.	A valley inhabited by about 200 families of Bani Ka'ab, mostly nomadic, of the Shwaihiyīn section.	...

The country between Wadi **Hatta** and the **Jau** district, some features of which have been considered above, seems to be a perfect labyrinth of small Wadis, and it has proved impossible to fix the relative positions of all the different places satisfactorily. The names of a number of less important valleys are known, the situations of which cannot be even approximately indicated. The following however appears to be the order, from north to south, of the Wadis upon the west side of the watershed:—

These 5 seem to enter or cross Mahádah in their westward course.	{	Wādi Sarfah ضرفه.
		Wādi Shwaihah (see above).
		Wādi Ramthah رمثه.
		Wādi 'Abid عبيد.
		Wādi Nawai-i (probably part of Wādi Khadhra above).
		Wādi Khabaib خبيب.
		Wādi Haiwān حيوان.
		Wādi Bū Sa'ad بو سعد.
		Wādi Misāh مساح.

Besides these there are 3 Wadis, named Fāi فاي, Mūsha مشا and Subakh صبخ, of which the positions are altogether uncertain. All the Wadis enumerated are north of the **Baraimi-Sohār** route.

Communications.—From Mahádah village to the **Baraimi** Oasis: is described as a journey of about 20 miles in a south-westerly direction; it is said that the country between is a plain, but that there is a slight descent by the way and that one low pass must be crossed. The route from Mahádah to **Sohār** Town is *viā* Wādi 'Abailah and Wādi-al-Jizi; and it is stated that the head of Wādi 'Abailah is reached in about 10 miles from Mahádah upon an ascending gradient.

Singular Mahairi محيري. A considerable tribe in Trucial 'Omān, found in all the coast towns; they have 120 houses at Rās-al-Khaimah, 30 at Umm-al-Qaiwain, 80 at 'Ajmān, 200 at Shārjah, 60 at Khān, 400 at Dibai, 100 at Abu Dhabi and 100 at Bātin. By some the Dahailāt of Abu Dhabi Town are regarded as a section of the Āl Bū Mahair. All of the foregoing Āl Bū Mahair are non-nomadic, but a few others, perhaps 20 households, in the Abu Dhabi Principality are Bedouin in their habits. At Abu Dhabi the Āl Bū Mahair are reckoned a section of the Bani Yās; but they are said to be of **Mahra**

MAHAIR
(ĀL BŪ)
آل بو محير

origin and to have come originally from Hadhramaut. They conform to the religion and politics of the Shaikh of the principality in which they happen to live.

MAHĀN- DAH

مهاده

Singular Mahannadi مهندي . A semi-pastoral tribe of **Qatar**, by some said to have come from Persia: those who accept this statement regard them as **Hūwalah**. The following are their sections, with the strength and habitat of each:—

Section.	Houses.	Location.
Hasan (Āl) آل حسن	200	Khor Shaqīq.
Ibrāhīm (Āl) آل ابراهيم	100	Dhakhīrah.
Misāndah مسانده	200	Khor Shaqīq.

The Mahāndah are pearl divers, pearl merchants, and breeders of cattle and camels. They belong to the Māliki sect of Sunnis.

MAHMADI

مهدي
or
MUHAM-
MADI

حمدي

The principal though not the largest village in the **Persian Coast** district of **Rūd-hilleh**; it is situated on the right bank of the **Rūd-hilleh** River at 10 miles from the sea and consists of about 60 houses which are huts and structures of sun-dried brick in about equal proportions. The inhabitants are partly Arabs, who call themselves **Bani Tamīm** and **Bani Hājir**, and partly **Lurs**; about half of them are Sunnis and half Shī'ahs. Wheat and barley are cultivated and a small quantity of wool is exported to **Būshehr Town**; there are no shops, but a little trade is carried on in private houses. The people own about 30 horses, 20 mules, 100 donkeys, 50 cattle and 280 sheep and goats. **Mahmadi** is the seat of a **Khān**, who is Deputy-Governor of the **Rūd-hilleh** District on behalf of his brother, the **Khān** of **Hayāt Dāvud**. The land-route from **Būshehr** to **Behbehān** crosses the **Rūd-hilleh** River at this place and a ferry-boat is maintained by the **Khān**: the charge is 2 Pāls for each load and 4 Pāls for each passenger; caravan animals are swum. There is a small fort of stone and mud at **Mahmadi**.

The principal village in the **Angāli** district of the **Persian Coast**, situated on the left bank of the **Rūd-hilleh** River about 10 miles east of **Mahmadi**, the chief place in the **Rūd-hilleh** District. **Mahmadshāhi** is protected by a small fort and is the residence of the Khān of **Angāli**. The inhabitants number about 300 souls and are said to be Nūis نري, descendants of immigrants from the **Behbehān** province. Wheat and barley are cultivated and a few dates ; there are about 30 horses and 60 donkeys. There are no shops, but a small trade in piece-goods, rice, coffee, tea, sugar and spices is carried on in private houses.

MAHMAD-
SHĀHI
محمد شاهي
or
MUHAM-
MAD-
SHĀHI
محمد شاهي

In the **Kādhimain Qadha** in Turkish 'Irāq, the first stage on the **Baghdād-Karbala** road, at 20 miles from **Baghdād** City. **Mahmūdiyyah** is situated on the south bank of the **Mahmūdiyyah** canal, which is the property of the **Dāirat-as-Saniyah**, and is surrounded by cultivation : some of the **Dilaim** tribe camp in the neighbourhood in the cold weather.

MAHMU-
DIYAH
محموديه

Mahmūdiyyah was founded about 40 years ago by one Saiyid Ja'far of **Baghdād**, who built the first Khān ; and it soon superseded the stages of Khān Azād and Khān-al-Bir which were respectively nearer to and further from **Baghdād** on the way to **Karbala**. The original inhabitants were a few **Bani Rabī'ah** Arabs who migrated from Khān-al-Bir ; but **Mahmūdiyyah** is now a considerable and increasing place with 11 Khāns, a dozen shops, about 150 houses, and a population of perhaps 1,000 souls. The Khāns are mostly defensible, one of them being partly loop-holed and provided with circular towers at the four corners ; in the aggregate they would provide accommodation for about 1,000 men and the same number of animals.

A manager of the **Dāirat-as-Saniyah** resides here and has under him some mounted **Dhābitiyahs** and a few regular soldiers for the work of the Department. There are also a **Saniyah Ambār** or store-house and a **Saniyah** primary school. The canal, which is noticed in the article on the **Euphrates**, at present flows for eight or nine months in the year, irrigating fields of wheat, barley and millet.

An island village in **Ghubbat Hashish** on the South-Eastern Coast of 'Omān, in the dominions of the Sultan of 'Omān ; it is situated in the northern part of the bay 2 or 3 miles from the shore of the mainland, to

MAHŌT
محوت

which a man can cross on foot at low tide. The island is a mere sand-bank 2 miles long by 1 broad, devoid of vegetation, except mangroves, and of potable water; the mangroves grow on a mud-flat, screening the island from view seawards and extending round $\frac{2}{3}$ of its circumference. The village consists of about 50 huts of mangrove boughs and there is one mosque roughly built of stone. The inhabitants are **Hikmān** and a few **Januabāh**; they maintain a perpetual feud with the **Āl Wahibāh** of the adjoining mainland; their semi-insular position protects them from sudden attacks. Water is fetched daily by slaves in earthen vessels from wells under a low hill on the mainland 4 miles to the northward. Mahōt is the principal trade centre of this part of the 'Omān coast and in particular the market in which the inhabitants of the coast from **Masirah** to the **Kuria Muria** islands purchase their dates; its unimportance is in proportion to that of the district which it serves. There are no regular shops and few large boats; but caravans constantly visit the place from **Adam**, the nearest point in 'Omān Proper, distant from Mahōt 7 days' journey by way of Wādī **Halfain** which reaches the sea, it is believed, a little to the north-east of Mahōt. These caravans bring dates and cotton twist and take away fish. Animals at Mahōt are 10 camels, 10 donkeys, 20 cattle and 30 sheep and goats; there are 4 Baghlahs and 20 small fishing boats. In former days Mahōt was a great place for the disembarkation of slaves, who were then smuggled into 'Omān by way of Wādī **Halfain**. Native sailing vessels passing between Aden or Zanzibar and the Persian Gulf used sometimes to call and ship cargoes of salt, made at Rās Sauqirah or Khor-al-Milh, or of salt fish, shark-fins and tortoise-shell, but this has become unusual. The only supplies obtainable at Mahōt are a few sheep, firewood and water.

MAHRA لما TRIBE

This tribe of Southern Arabia lie almost entirely beyond the limits of the present Gazetteer,* but some of the 'Amarjīd عمرجيد and Thō'ār ثور sections are found at Hāsik, in the hills behind Tāqa and in the Qatan tract inland of Wādī Dirbāt in the Dhufār District. A few are settled at **Murbāt**. One of the sections adjoining Dhufār on the west are the Bū Mālih بحر مالخ of Jādhib جاضب and Hōf حرف.

* Some remarks by Carter on the Mahra tribe, with a vocabulary of their language will be found in the Bombay Asiatic Society's Journal for July 1847, pages 339-348 and 347-370.

A valley rising in the southern slopes of the Eastern Hajar of the 'Omān Sultanate, in a part of the hills called Jabal Hala MAHRAM (WĀDĪ) which is several miles south of the 'Alāyah of Wādī Samāil: it goes southwards to the district of Sharqīyah or 'Omān Proper and falls into وادي مسحرم Wādī 'Andām from the western side at Ghiryain.

In descending order the villages of Wādī Mahram are as follow :—

Name.	Position.	On which bank situated.	Houses and inhabitants	Resources.
Būri بورى	At the head of the valley.	Right.	40 houses of Bani Ruwā-hah.	30 donkeys, 30 cattle, 200 sheep and goats and 500 date palms.
Falaj-al-Marāghah فلاج البراغه	2 miles below Būri.	Do.	50 houses of do.	15 camels, 30 donkeys, 50 cattle, 250 sheep and goats and 1,000 palms.
'Uyainah عينه	2 miles below Falaj-al-Marāghah.	Do.	200 houses of do.	40 camels, 80 donkeys, 340 cattle, 250 sheep and goats and 300 palms. One mile above this place this valley has its exit from the hills.
Matīyah مطيه	3 miles below 'Uyainah.	Left.	30 houses of do.	20 camels, 20 donkeys, 15 cattle, 100 sheep and goats and 1,000 palms.
Jūrahk جورخ	6 miles below Matīyah.	Right.	70 houses of do.	40 camels, 60 donkeys, 60 cattle, 150 sheep and goats and 1,500 palms.
Mahram مسحرم	3 miles below Jūrahk.	Do.	300 houses of do.	70 camels, 100 donkeys, 100 cattle, 800 sheep and goats and 7,000 palms.
Saih سيح	3 miles below Mahram.	Do.	150 houses of do.	40 camels, 40 donkeys, 50 cattle, 400 sheep and goats and 3,000 palms.
Bai'ah بيعه	2 miles below Saih.	Do.	40 houses of do.	20 camels, 30 donkeys, 20 cattle, 200 sheep and goats and 1,000 palms.
Khala خلا	3 miles below Bai'ah.	Left.	10 houses of do.	20 camels, 20 donkeys, 15 cattle, 100 sheep and goats and 400 palms.

The junction of this valley with Wādi 'Andām at Ghiryain takes place about 3 mile- below Khala.

The Bani **Ruwāhah** of Wādi Mahram belong to the Wilād 'Ali, Wilād 'Āyish, Wilād Barkat, Wilād Hamad, Bani Hamim and Wilād Salim sections of the tribe ; and the total number of the inhabitants is about 4,500 souls.

MĀPUR**(HALAT****ABU)**

حالة ابو ماه

A village which at high water is surrounded by the sea, but at low tide is connected with **Muharraq** Island in **Bahrain**. It is distant about 200 yards from the south side of **Muharraq** Town and consists of some 500 houses and huts inhabited by Sunnis of various tribes, *viz.*, Āl Bin-**Maqla** (100 houses), 'Utūb of the Jalāhimah section (5 houses), Āl **Musallam** (5 houses), low caste Arabs (50 houses), free negroes (140 houses) and negro slaves living apart from their masters (200 houses). At the south end of the island stands the 4-bastioned fort of Abu Māhur, sometimes called **Muharraq** fort, which was bombarded and dismantled in 1867 on the occasion of the deposition of Shaikh Muhammad-bin-Khalifah : it is now used by the Shaikh of **Bahrain** as a stable for his excellent stud of Arab mares. Six hundred yards east of the fort, and a fathom below the surface of the sea, is the remarkably fresh but slightly warm spring of Abu Māhur, in fetching water from which a number of boats are constantly engaged ; it is the principal source of supply for the town of **Muharraq**.

MAIH**WADĪ)**

ميدح (واي)

One of the principal valleys of the **Masqat** District in the Sultanate of 'Omān, having its rise in the northern slopes of Eastern **Hajar** about 21 miles south by east of **Masqat** Town. It runs first for 14 miles to the north-west and then, turning to the north-east, reaches the sea 12 miles further on at Yiti. The following are the principal places in Wādi Maih :—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Dhahar Sidrah نهر سدرة	3 miles below the place where the Wādi begins.	Left.	30 houses of Bani Wahaib.	There are 15 camels, 25 donkeys, 20 cattle and 500 sheep and goats.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Tūyān Jahlūt طويان جحروت	4 miles below Dhahar Sidrah.	Left.	40 houses of Bani Wahaib.	There are 3 wells. Animals are 20 camels, 25 donkeys, 15 cattle and 300 sheep and goats. The principal Shaikh of the Bani Wahaib resides here.
Sa'adi سعادي	1 mile below Tūyān Jahlūt.	Right.	60 houses of Bani Wahaib.	Livestock are 40 camels, 30 donkeys, 30 cattle and 400 sheep and goats.
Mahaidith محيدث	$\frac{1}{2}$ a mile below Sa'adi.	Do.	20 houses of Bani Wahaib.	There are 20 camels, 25 donkeys, 15 cattle and 200 sheep and goats.
Rakil Milh راكل ملح	1 mile below Mahaidith.	Left.	30 houses of Bani Wahaib.	Animals are 10 camels, 17 donkeys, 15 cattle and 150 sheep and goats.
Mandhariyah مندريه	$\frac{1}{2}$ a mile below Rakil Milh.	Do.	20 houses of Bani Wahaib.	There are 20 camels, 13 donkeys, 12 cattle and 300 sheep and goats.
Mahail مهال	$1\frac{1}{2}$ miles below Mandhariyah.	Right.	25 houses of Bani Wahaib.	Livestock are 7 camels, 12 donkeys, 10 cattle and 150 sheep and goats.
Hamlah حملة	A little below Mahail and a little back from the Wādī.	Left.	...	These settlements are said to be deserted at present.
Kaid كايد	A little below Hamlah and a little back from the Wādī.	Do.	...	
Khafaiji خفجي	4 miles below Mandhariyah.	Right.	20 mud and date-branch houses of Hādiyyin.	Dates and tobacco are grown. There are 8 camels, 25 donkeys, 10 cattle and 200 sheep and goats.
Tawilah طويله	Immediately below Khafaiji.	Left.	30 houses of Bani Wahaib.	Animals are 12 camels, 25 donkeys, 30 cattle and 250 sheep and goats.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Mizra'- al-'Alawi مزرع العلوي	3 miles below Tawilah.	Left.	200 houses of Bani Battāsh of the Ma'āshirah section, of Qawāsīm, Bani Hasan and Balūchis.	This village has orchards which stand on terraces rivetted to protect them from the stream. There are about 20,000 date palms, and melons, figs, limes, mangoes, sweet potatoes, tobacco, lucerne and a little wheat are grown. Livestock are 30 camels, 45 donkeys, 50 cattle and 1,000 sheep and goats.
Mizra'-al-Hadri مزرع الحدري	1 mile below Mizra'-al-'Alawi.	Right.	60 houses of Bani Battāsh of the Ma'āshirah section.	Animals are 35 camels, 20 donkeys, 30 cattle and 200 sheep and goats.
Rija' رجح	1½ miles below Mizra'-al-Hadri.	Left.	70 houses of Bani Battāsh of the Ma'āshirah section.	Livestock are 20 camels, 40 donkeys, 40 cattle and 300 sheep and goats.
Yiti يتي	6 miles below Rija' and 1 mile from the sea.	Right.	...	See article Masqat District.

The villages of Fifah فيفاه, Haim حيم and Samkat سمكت lie in the basin of Wādī Maih near the watershed between it and Wādī Sarain. They are about 6 miles from the left bank of Wādī Maih and their drainage enters it between Mahaidith and Khafaiji. Fifah is the most western and Samkat the most eastern of the three. These settlements are stated to be at present unoccupied.

The settled population of Wādī Maih, exclusive of the village of Yiti which is on the coast, appears to be about 3,000 souls.

Wādī Maih has only one important affluent, Wādī Jannah جنة or Hatāt, which joins it on its left bank from the south-west immediately below Tawilah. This valley contains the village of Hājir حاجر on its bank a few hundred yards above Tawilah: Hājir was founded about 1875 by Saiyid Hilāl-bin-Ahmad who purchased the water supply from the Bani Wahaib: it consists of 30 stone houses and huts of the Bani Wahaib. to whom part of it still belongs: it produces dates in

considerable quantities, also melons, limes, figs and mangoes: livestock are 30 camels, 40 donkeys, 20 cattle and 200 sheep and goats. For 8 miles above the junction Wādi Jannah lies in Saih **Hatāt**, whence its alternative name; it is formed by the junction at the head of Saih **Hatāt** of two short valleys, Wādi Qahza قحزا from 'Aqabat-al-Qahza on the west and Wādi 'Amdah عمد from 'Aqabat 'Amdah more to the east. Each of these valleys contains a route from **Matrah** to Wādi **Tāyīn**; the passes of both are difficult, that of 'Amdah especially so. Wādi-al-**Hilu** joins Wādi Maih on its east bank immediately below Yiti; but the junction being so near the coast, it can hardly be reckoned a tributary. Wādi Maih below Tawilah contains a fast-flowing stream which irrigates the two villages of Mizra', but its aspect in its lower course is generally barren. The uppermost 7 villages are said to possess 30,000 date palms; and frankincense is stated to be obtained in their vicinity, but this is doubtful.

A very large reed-hut village of the Al Bū **Muhammad** tribe in Turkish 'Irāq, on the right bank of the **Tigris** about 12 miles by water below 'Amārah Town. It is the headquarters of a Nāhiyah similarly named in the Qadha of 'Amārah and has a bazaar. Maize, rice and Māsh are cultivated; the land is marshy; and the only animals kept are buffaloes and cattle. There are about 40 shops.

A few miles above this place on the same bank is Majar-as-Saghīr مجار الصغير, a similar village of about half the size, situated in the domains of the Dāirat-as-Saniyah and also the seat of a Mudir.

There is a large canal called Majar in the neighbourhood of these villages.

MAJAR-
AL-KABĪR
مجار الكبير

The principal town and natural headquarters of the **Sadair** district in **Najd**; it is situated on the eastern route from **Buraidah** to **Riyādh** between Ghāt and Tuwaim, about 25 miles east-south-east of the former and 34 north-north-west of the latter place. **Majma'** stands on the left bank of a shallow valley coming down from Mishqar in **Jabal Tuwaiq**; it is a walled town with a large square fort in the centre, and in the environs there are extensive date gardens and orchards. In all there are

MAJMA'
مجمع

about 650 houses distributed as follows: Bani **Tamim** of the Nawāsir section 40, of the Thamārah section 50 and of the Wahabah section 180; 'Anizah of the 'Askar section 70 and of the Hawaidi section 30; **Fadhūl** of the Fadhl section 40 and of the Kathīr section 30; **Sabai'** 40; **Qahtān** 20; and Bani **Khadhīr** 150. In all the inhabitants may number about 3,500 souls. There are said to have been formerly as many as 60,000 date palms, but many of these have perished of drought in recent years and others have been cut down by the Wahhābi Amīr. The water supply is described as scanty and precarious, and it is stated that there is only one well in the date plantations west of the town which can be absolutely relied on; in dry seasons the use of it is authoritatively restricted. The only fruit trees other than dates which have successfully resisted the late drought are vines. Cereals, lucerne and melons are cultivated as in other villages of the **Sadair** district. The wells are from 6 to 12 fathoms deep according to rainfall. Live-stock belonging to the town are estimated at some 20 horses, 600 camels, 200 donkeys and 400 cattle, besides sheep and goats. There is a bazaar of about 50 shops dealing in coffee, piece-goods, arms and ammunition, etc.: trade relations are chiefly with **Kuwait**, but the local merchants have also dealings with those of 'Anaizah and **Buraidah** in **Qasim**. A direct route *viâ* Wabrah leads from **Majma'** to **Kuwait** Town.

During the recent troubles in **Najd** the Shaikh of **Majma'**, 'Abdulah-bin-'Askar, was a consistent enemy of Ibn Sa'ūd and partisan of Ibn Rashīd; since the latter's downfall he has been labouring without success to bring about a peace between the rival dynasties. **Majma'** is at present the seat of a non-local Wahhābi governor, who administers the district of **Sadair**.

MAKRĀN *
 مکران
 (COAST
 of
 PERSIAN)

This article relates to so much only of the great tract styled **Makrān** as is situated in Persia and maintains relations with the Gulfs of Persia and 'Omān. British **Makrān**, as we may call the portion which is attached to Balūchistān, is excluded from consideration altogether, and in Persian

* This article on the Coast of Persian **Makrān** and the smaller articles relating to the same tract were begun in November 1904 with the issue by the writer of a memorandum of two printed foolscap pages embodying shortly the information which had up to that time been obtained. On a tour in the Persian Gulf in the winter of 1904-05 the writer visited **Jāshk**, and general geographical enquiries along the coast were instituted by and under the orders of Mr. H. Whitby Smith, Director of the Persian Gulf Section of the Indo-European Telegraph, the investigations

Makrān close consideration will be directed only to the narrow maritime plain which borders the sea. Our subject then, as the title of the article indicates, is primarily the coast of Persian Makrān, but the circumstances of the interior are of importance to us in so far as they serve to elucidate the physical, commercial and administrative position of the coastal tract, and in that degree they will receive attention.

Limits.—Persian Makrān is bounded on the south by the Gulf of 'Omān and the Arabian Sea. On the west it extends to and includes Kūh Mubarak, and in the opposite direction it reaches to a point 8 miles east of Gwatar—the termination upon the coast of the frontier between

at Jāshk and its immediate neighbourhood being entrusted to Dr. W. C. McMillan, Assistant Surgeon at that place. From the information thus collected in 1904-05 draft articles aggregating 32 octavo pages of print were compiled and were sent in March 1906 to local officers for amplification and correction. The work of revision, which was heavy, was carefully carried out by Mr. R. H. New of the Indo-European Telegraph Department, Officiating Assistant Superintendent; and some fresh information was supplied by Mr. Whitby Smith personally, and by Captain Tindall of the telegraph ship "Patrick Stewart". Amended drafts extending to 50 octavo pages were ready at the beginning of 1907 and underwent further revision during that year at the hands of Mr. Whitby Smith and Mr. New. Valuable assistance was rendered in 1905 and 1907 by Mr. R. Hughes-Buller and Major C. F. Minchin, successive Superintendents of the Imperial and District Gazetteers of Baluchistan, and by Munshi Gul Muhammad.

General and topographical authorities on the coast of Persian Makrān are not numerous, the principal being: Kinneir's *Geographical Memoir of the Persian Empire*, 1813; Grant's *Journal of a Route through the western parts of Makran*, 1839 (but refers to a period 30 years earlier); Colonel F. Goldsmid's *Notes on Eastern Persia and Western Baluchistan*, 1867; and Major P. M. Sykes' *Ten Thousand Miles in Persia*, 1902. In addition to these the *Persian Gulf Pilot*, 1898, and several military works quoted in the footnote to the article on the Persian Coast supply information of a special character. Useful side-lights on the country are afforded by the *Imperial Gazetteer of Baluchistan* and the *District Gazetteer of Makran*.

The antiquities and ancient geography of Persian Makrān are dealt with in the following: Major E. Mockler's *Ruins in Makran*, 1876, and his *Identification of places in Makran mentioned by Arrian, Ptolemy and Marcian*, 1879, Colonel T. H. Holdich's *Notes on Ancient and Mediæval Makran*, 1896; General A. Houtum Schindler's *Marco Polo's Camadi*, 1898; and Mr. G. Le Strange's *Lands of the Eastern Caliphate*, 1905.

For general purposes the map of Persian Makrān issued with this Gazetteer will be found convenient; but the country is shown on a larger scale in sheets Nos 8 N.-W. and N.-E. and 16 N.-W. of the Survey of India's *North-Western Frontier* series. A plan of Jask, in the form of a tracing from a survey of New Jāshk, made in 1887, is numbered 1386 in the Library of the Foreign Department, Simla.

The Naval Charts referring to this coast are No. 2375-753, *Entrance of the Persian Gulf*, and No. 2383-38, *Maskat to Karachi*; the latter contains insets of the bays of Chahbār and Gwatar. Admiralty Plan No. 145 refers to Khor Rāp̄ch.

Persia and Kalāt which was accepted by the Persian Government in 1871 :^{*} its length along the coast is thus roughly 275 miles. On the west Persian Makrān meets the coast district of **Biyābān** † and the inland district of Bashākard in Persia ; on the east, as already indicated, it is conterminous with the territories of the Khān of Kalāt. For present purposes it is unnecessary to define its northern boundary precisely, and it will suffice to state that eastwards of the district of Bashākard that boundary lies between the 27th and 28th parallels of north latitude.

Physical characteristics. ‡—The bulk of Persian Makrān is a labyrinth of mountains, which in some places attain an elevation of over 6,000 feet, and through which various streams—in this country styled Kaurs كورس—and valleys travel southwards by devious courses to the sea. The rocks are generally sandstone or a conglomerate of sand and shells ; they contain no minerals. The larger streams are the Jagin, Gābrīg, Sadaich, **Rāpch**, **Kair** and Dashtyāri Chīl, which contain water more or less throughout the year ; the remainder are mere torrent beds which after rain are impassable for a day or two, from March to August contain water in pools, and thereafter become dry on the surface but still yield water at about 10 feet below ground. Water is most scarce in the part between **Chahbār** and the Chīl river.

The maritime plain, of which mention has already been made and with which we are more particularly concerned, is bounded on the inland side by a range of hills of which the average height appears to vary from 1,000 to 2,500 feet : this outer range, which has no general name, is not straight or continuous ; but nowhere does its distance from the sea much exceed 20 miles, and towards both extremities, as well as in the centre between the **Rāpch** and **Kair** rivers, it approaches, with an elevation of over 1,500 feet, to within a few miles of the coast. It is composed ordinarily of a light-coloured clay with streaks of gypsum, and it is capped with sandstone which frequently contains fossil remains.

The greater part of the maritime plain is a sandy waste diversified by long duues of sand in certain localities ; but here and there occur

^{*} See Aitchison's Treaties, Vol. X, p. 17.

† The ordinary natives of the country regard **Biyābān** as being included in Persian Makrān, and that district may accordingly be considered to belong to Makrān in the *geographical* sense of the term.

‡ Remarks on particular physical features, such as the principal hills and rivers, will be found in the separate article on **Jāshk** District and in the topographical table at the end of the present article.

COPYRIGHT.

The Tis Valley in Persian Makrân.

(MR. R. H. NEW.)

patches of alluvial soil, and the courses of the rivers, for the last 7 to 12 miles before reaching the sea, are usually characterised by considerable alluvial deposits. One large and two small mud volcanoes * are met with between the Bīr and Kair rivers, and on the sea-beach, 15 miles east of New Jāshk, there are some hot springs. The rise and fall of the tide upon the coast is 5 to 10 feet.

Flora.—Trees are not found on the plain except by the banks of rivers, where tamarisks and acacias grow in profusion and even large banyans are sometimes found ; but grass and other small vegetation is fairly plentiful after rain. In the hills of the interior the Pish palm flourishes, and the banyan and even the mango occur in some inland valleys.

Fauna.—Wild animals include, in the neighbourhood of the coast, the leopard, wolf, jackal, fox, hyæna, gazelle, ibex and oorial, while black bears also are found in the more northern areas. The bustard, black and grey partridge, chikor, sisi, pigeon, dove, vulture, kite, falcon and raven are always found, and the wild duck, sandgrouse and quail at the seasons of their migration southward. The adder, scorpion, lizard, centipede and tarantula are all seen ; also the viper, which is very common, and the black rock-snake, which is seldom met with. In some places mosquitoes are troublesome.

Climate and seasons.—The cold weather lasts from October to April, the hot weather from May to October. From the observations at New Jāshk and Chahbār in 1903 and 1904 it would seem that the maximum winter temperature on the coast varies from 87° to 94° Fahrenheit, and the maximum summer temperature from 94° to 110°. At New Jāshk the thermometer has been known to fall in the cold weather to 44·3°. Rainfall is uncertain, but usually occurs in November, December, January, and February, occasionally continuing into March : the annual rainfall has not been observed, but is probably on the average between 6 and 7 inches ; it differs considerably from place to place. In summer it would be impossible for Europeans to sleep under canvas by day on account of the heat ; while by night, wherever water exists, mosquitoes and other insect pests frequently make rest impossible.

* These are hillocks from 20 to 200 feet in height which emit at the top a mixture of blackish and bluish clay along with hot water and gases. They are most active when the sea is rough upon the neighbouring coast,

Inhabitants.—The country is peopled by a medley of tribes, mostly claiming to be descended from Arabs who either originally settled in Makrān or removed thither from earlier settlements in Sind and Kach. The following is an alphabetical table of the predominant tribes and classes :—

Name.	Supposed origin, etc.	Distribution.	REMARKS.
Birdi بردي	...	Mostly east of Chah-bār.	The Birdis are camel-owners.
Bizanzju بيزانجو	Brāhūis.	Do.	Bizanzjus are not numerous in Persian Makrān.
Buzdār بردار	Balūchis.	In and around Chah-bār.	In Persian Makrān the Buzdārs are mat-makers and own sheep and goats.
Durzādah دزاده	Considered to be aborigines.	Chiefly to the east of Gaih.	A low class, mostly emancipated slaves.
Gichki گچکي	Said to be descended from a Sikh who left the Panjāb in the seventeenth century and settled in the valley of Gichak; another account makes them Rājput̄s.	Mostly in the Qasrkand district.	The chief of Qasrkand belongs to this tribe.
Gūrgaij گورگيج	Said to be of Persian origin; but according to another account they are Balūchis.	At Bāhu Qalāt and to the westward of it.	The Gūrgaij are few in number in Persian Makrān.
Hōt هوت	Balūchis and claim connection with the Rinds.	The Hōts are few in Persian Makrān and are scattered in different parts of the country.	The chiefs of Jāshk belong to this tribe.
Jadgāl جدگال	Said to have immigrated from Sind and to be Indian Jats by race, but in Makrān they are reckoned Balūchis.	Principally in the Dashtyāri and Bāhu districts.	The chiefs of Dashtyāri and Bāhu are Jadgāls. See article Jadgāl.
Jangizai جنگي زي	Origin unknown.	Chiefly in the neighbourhood of Jagin.	A respectable tribe of cultivators and camel-owners.

Name.	Supposed origin, etc.	Distribution.	REMARKS.
Jat جٹ	Origin uncertain.	They are scattered through various districts.	The Jats of Persian Makrān are graziers owning some camels, cattle and sheep. They are a low class tribe.
Kalmati کلمتی	Claim connection with the Rinds and have a tradition that their ancestors immigrated from Syria.	Found in small numbers scattered over the country.	Some of the Kalmatis are fishermen, but they are considered a high class tribe.
Kārwanī کاروانی	Not properly a single tribe, but a group of tribes inhabiting the Kārwan district.	The Kārwan district.	The Kārwanīs are given to fighting and plunder. The tribes of the group are the Lashāri لاشاری, the Shāhūzāis شاهوزای and the Gōjawi گوجاری.
Lattī لٹی	Supposed to have immigrated from Sind but are counted Balūchis.	Occur mostly in Dasht-yāri and Bāhu.	The Lattis are camel-owners and intermarry largely with the Kalmatis.
Lori لوری	They are believed to be Gypsies.	Found in small numbers scattered over the country.	The Loris are blacksmiths and musicians.
Maid مید	Origin doubtful.	Inhabit the coast, especially Chahbār and Gwatar.	The Maids are fishermen.
Mullāi ملائی	Origin unknown, but are reckoned Balūchis.	Scattered over the country in small numbers.	The Mullāis are priests of the Zikri sect.
Qalandarzai قلندرزی	Do.	Chiefly in the neighbourhood of Jagin.	The Qalandarzais are mostly camel-owners, but they cultivate to some extent.
Rais رئیس	Balūchis.	In all districts.	The Rais are all cultivators.
Rinds رند	See article Rinds.
Sangur سنگوری	Connected with the Jadgāls and reckoned Balūchis.	Found in all districts in small numbers.	The Sangurs are chiefly agriculturists.

Name.	Supposed origin, etc.	Distribution.	REMARKS.
Shaih شيخ	Said to have come from Northern Persia: according to one account they are Saiyids.	The majority are in the Bāhu district.	Many are native physicians and some are priests. The name was originally Shaikh شيخ.
Shaizādah شيزاده	Believed to be of Indian origin; they claim to be Marwats from the North-West Frontier Province of India but are accounted Balūchis.	Scattered.	A very small tribe who have for years furnished escorts for European officers on tour. They are a high class tribe, trustworthy and generally respected. They are said to be connected with the Naushīrwānis of Baluchistān.
Shaikh شيخ	Probably from Arabia.	There are a few in the Jashk District.	Agriculturists.
Sidi سیدی	East Africa.	In all districts.	These are Swahili negro slaves and not properly a tribe.
Singalau سینگلو	...	At Bīr and in the Gaih district generally.	A high class tribe, but few in numbers.

The total population of Persian Makrān is estimated at 114,000 souls; * the ordinary fighting strength at 6,300 men armed with Martini and in some cases with magazine rifles; and the additional fighting muster provided with inferior firearms at 19,500 men. Almost every adult carries a sword, pistol or revolver: only the lowest classes, that is, the fishermen and herdsman, go unarmed.

The people are all Muhammadans, and the vast majority belong to the Sunni persuasion, but there are some Shī'ahs chiefly from the Mināb District. The Makrānis are addicted to pilgrimages to local shrines, whereat they perform vows. Their customs are mostly in accordance with Muhammadan law; but in matters of inheritance children by mothers of inferior status do not ordinarily receive their full legal rights. Girls may not be married until the age of puberty, but they may be betrothed at an earlier age. In character the people are peaceable and not naturally inclined to violence. Slavery still prevails in most parts of the country and freeborn families that do not own one or more slaves are

* The district totals will be found in the separate article on the Jashk District and in the notices of the other districts towards the end of this article.

the exception. Most of the slaves are negroes—some with Balūchi blood—and are born in the servile condition ; of late years, however, the enslavement of Bashākardis and low class Balūchis, mostly orphans, has become common. Their condition is ordinarily a mild form of domestic and agricultural serfdom ; but the slave has no voice in any matter whatever, and in case of his committing a murder his master may put him to death without reference to any authority.

The spoken language of the country is a dialect of Balūchi called Makrāni ; it contains a considerable admixture of Persian and Arabic words and differs widely from the standard Balūchi spoken in Northern Balūchistān. It is sometimes reduced to Persian characters, but the ordinary medium of communication by writing is Persian, which all chiefs of districts can speak fairly well. Except the Mullas, the entire population is illiterate. Popular ballads in which the deeds of tribes, chiefs of districts and other heroes are extolled, together with songs, having similar themes and chanted by roving minstrels of the Lori tribe to the accompaniment of a kind of fiddle, supply the place of literature and the arts.

Agriculture and livestock.—Cultivation, in the maritime plain, is mostly confined to the beds and banks of rivers, where an alluvial soil exists accompanied by the means of irrigation, and to places under the hills where rain water is caught and utilised by means of embankments called Bands بند ; there are no canals or regular wells, only water holes, and the crops depend almost entirely on rainfall, which is deficient on the average in three years out of every four. Near the coast the staple of cultivation is the date, but small quantities of wheat, barley, millet, and jowari are grown ; also some cotton. In the valleys of the interior the percentage of arable soil is larger and considerable quantities of dates, wheat, barley, jowari, millet, lentils, rice, and cotton are produced. The winter crop of cereals is sown in November and reaped in March or April : there is no summer crop except dates. Manure is not used, and the crops frequently suffer from the depredations of locusts and caterpillars. A wooden plough, resembling that of India but much smaller in size, is the principal implement of agriculture ; field labour is mostly performed by domestic slaves, and seed grain is usually obtained from British Indian traders. The proportion of the population directly interested in agriculture is small and probably does not exceed 20 per cent. of the whole. One-fifth of the gross produce is the share ordinarily taken by the chiefs of districts or by local headmen as the revenue of cultivated land.

Livestock and domestic animals are camels, donkeys, horses, buffaloes, cattle, sheep, goats, and dogs, all belonging to indigenous breeds and of small size; horses and buffaloes are both scarce. The Jats are the main pastoral tribe; they live a primitive life, subsisting almost entirely on dates and milk and changing their grazing grounds frequently according to rainfall. The chiefs of districts collect a small tax in money from the owners of herds grazing within their territories.

Fisheries.—The sea fisheries are an important asset on the coast of Persian Makrān. The fish are of numerous kinds and may be roughly divided into two classes, those which are taken for local consumption and those which are caught for export. Fishing is carried on with both net and line, the bulk of it by local boats, of which two or three are owned in almost every coast village between New Jāshk and Gwatar. In April and May, however, and again from October to December, Chahbār is the resort of a score of large-sized boats owned by Arabs from the coast of 'Omān and of a dozen others from Gwādar which come to take part in the fishing. The fish caught for export, whether by natives or strangers, are cured on the spot by being gutted, rubbed with salt, kept a few days, then washed in the sea and finally dried in the sun. The fish, when thoroughly cured, are sold to Balūchi and Indian retail traders who visit all the places upon the coast periodically in order to purchase them for re-sale to merchants at Chahbār and Gwādar; the profits of the fish trade are said to be large, amounting to as much as 40 per cent. on outlay. There are no pearl fisheries upon the Persian Makrān coast.

Foreign trade.—The only at all considerable ports are New Jāshk, Chahbār and Gwatar, and a leading part is played in the foreign commerce of the district by Hindus and Khōjahs, British subjects, who reside permanently at Chahbār and Gwatar.

The chief exports are dates, Pish palm mats, dried fish, Pōto or fish-maw isinglass, shark fins, raw cotton, ghi, goats'-hair, wool, and hides in small quantities. The annual value of the exports appears to be about Rs. 1,50,000 at Chahbār and Rs. 50,000 at Gwatar: the trade of Gwatar is at present depressed by the prevalence of disorder in the neighbouring country. No estimate is possible for the smaller ports: that for New Jāshk will be found in the article under the name. The bulk of the exports goes to India, but a portion to 'Omān, Qishm Island and Bāndār 'Abbās. The profits of the export trade are said

to run from 15 to 20 per cent. or, in the case of dried fish, from 5 to 40 per cent.

Imported goods are principally rice, flour, piece-goods, lead, iron, tobacco, beads, mineral and vegetable oil, matches, tea, cotton thread, silk, spices and sugar ; and the profits of the trade are placed at 20 per cent. on the average. The annual value of the **Chahbār** imports is estimated at Rs. 1,00,000 and of the **Gwatar** imports at Rs. 30,000; for New **Jāshk** the article under that name may be consulted, and for the other ports there are no data. It should also be mentioned that there is a considerable importation, chiefly from **Masqat**, of modern rifles manufactured in England, France, Germany, and Belgium.

Internal trade and manufactures.—The internal trade of the country is carried on chiefly by barter, agricultural and pastoral products being exchanged for dried fish and foreign imported goods. The ports of New **Jāshk**, **Chahbār** and **Gwatar** are the main trade centres; **Tank** and **Gālag** also are markets, but petty ones. Business is chiefly in the hands of **Balūchi** and British Indian traders. The merchandise is transported about the country on camels and donkeys. Manufactures there are none, except of Pish palm mats, partly for export, and of swords and pistols for local sale.

Currency, weights and measures.—The silver currency consists of Maria Theresa dollars, by **Balūchis** called **Qursh** قورس and by **Arabs** **Riyāl** ريال worth at present R1-4 each; of Persian **Qrāns**, here worth one-third of a rupee a piece; and of the Indian rupee, in Persian **Makrān** styled **Kaladār** كلدار : the small change of the country is copper pice, partly of Indian and partly of **Masqat** mintage. A Persian gold coin, by **Balūchis** called **Sor** سور, is said to exist and to be worth Rs. 7, but it is now hardly if ever seen.

The principal weights are the **Qiyās** قياس, ordinarily equal to about 8 oz. avoirdupois English, but varying from place to place, and the **Man** which is subject to wide fluctuations between 7 and 15 English pounds.

The common measures of length are the **Balūchi Gaz** گز or cubit, equal to the distance from a man's elbow to the tip of his middle finger or about $1\frac{1}{2}$ feet, and the Persian **Gaz** of about 3 feet. Distances are estimated on the coast by time, and inland by a **Farsakh** of about 4 miles which is defined as the space that a walking horse will cover in an hour on ordinary ground.

Communications, supplies, and transport.—The land line of the Indo-European Telegraph Department from **Gwādar** to **Jāshk** traverses the whole district, keeping near the coast: the only offices in Persian Makrān are at **Chahbār** and **Jāshk**.

There is a continuous route along the coast which passes through **Kūh Mubārak**, **Gangān**, **Jāshk**, **Chahbār** and **Gwatar**, eventually reaching **Gwādar**; and the ports of **Jāshk**, **Chahbār** and **Gwādar**, as well as some of the smaller places on the coast, are connected with the district capitals of the interior and through them with **Bampūr**, the nearest seat of a high Persian official, by various routes of which the major portions lie beyond the scope of our inquiry. These routes have been fully worked out, along with a number of cross routes in the interior, by the military authorities in India.* Here it is sufficient to remark that the roads of the country are all camel tracks, and that—though on some there are difficult places—as lines of communication they are fairly good of their kind. The maritime plain between **New Jāshk** and **Gwādar** is free from physical obstacles in dry weather and would then, it is reported, be passable for field artillery with few delays; but the route along it is everywhere liable to be interrupted after rain for one or two days by floods in the torrent beds which cross it from the hills, or for 5, 6, 10 or even 15 days by the larger rivers; and in the **Dashtyāri** and **Bāhu** districts the country generally is sometimes impassable for a fortnight together.

In a dry season the use of the coast route would be strictly limited by scarcity of water, fodder and other supplies, and it would probably be impossible to move with more than 500 men: it is estimated that in a favourable season, that is, after good rainfall, the local supplies of sheep, goats, ghi and fodder might suffice to maintain a force of 1,500 men except in the **Dashtyāri** and **Bāhu** districts, where the water is bitter and a detachment of even 100 men would be supplied with difficulty. In the hills supplies are at all times less inadequate: some particulars are given in the notes on districts towards the end of this article. Water, slightly brackish, can generally be obtained even in the hot weather from holes in river and torrent beds at a depth of 4 to 15 feet. There are also some artificial tanks, called **Ōtags** آبگنج, which are filled by rainfall and are frequently not exhausted in less than 6 to 8

* See in particular *Routes in Persia* I, Nos. 4, 6, 6B, 15, 25, 26, 27, 27A, 27B, 28, 34, 34D, 42, 43 and 62. There is also in the records of the Intelligence Branch, Simla, a recent report by Lieutenant A. J. H. Grey, I.A., on the route from **Chahbār** to **Bampūr**.

Country between the Bir and Kair Rivers in Persian Makrān.

(Mr. R. H. New.)

months: these are not common upon the coast, but there are 3 between **Chahbār** and **Gwatar**.

Pack-carriage is obtainable to a limited extent throughout the country, and abundance of camel transport can be obtained at **Chahbār** and **Jāshk** on short notice. The Makrāni camel carries a load of 5 maunds and marches 15 miles a day at the rate of $2\frac{1}{2}$ miles an hour. For transport purposes male camels are almost exclusively employed, females not being used unless barren, or in cases of emergency. Marches are usually done in the morning and evening, a halt being made in the middle of the day for grazing; in the hot weather movement only takes place before sunrise or after sunset. The price of camels varies from 20 to 40 Tūmāns according to size, age and sex, and the ordinary daily hire, to Europeans, is one rupee a head.

Maritime transport consists of a number of boats owned at places upon the coast. **Gwatar** has 4 Safri Bōjis of 75 tons; and **Chahbār** boasts 12 vessels of 20 to 100 tons burden, manned by crews of 8 to 20 men, which run to Karāchi and Bombay as well as to Arabian ports. New **Jāshk** possesses 4 and Tank 6 boats of about 12 tons, with crews of 5 to 7 men, trading to the coast of Arabia only; and at **Gālag** there are 5 boats of 20 tons each. The total shipping of the coast is thus only about 40 boats of 12 tons and over: there are, perhaps, a few other good-sized boats, at smaller places which are not included in the above estimate.

Administration.—Persian Makrān, except the district of **Jāshk**, is administered by a Persian Governor or Hākīm حاکم, who has his seat at Bampur بامپر and is subject to the authority of the Persian Governor-General of Kirmān. Persian Makrān is divided into the 5 districts of **Jāshk**, **Gāih**, **Qasrkand**, **Dashtyāri**, and **Bāhu**; of these the first is described under its own name and the remainder receive short notices below. Each of the districts, except **Jāshk**, is ruled by a chief, who pays annual tribute to the Persian Governor at Bampur, but in regard to the internal administration of his district is exempt from the interference of the Persian executive. In fact, with the exception of Customs employés on the coast and a **Balūchi** Wāli representing the Governor of Bampur at **Chahbār**, no Persian officials are to be found in Persian Makrān, and similarly there are no Persian garrisons; when, however, the annual tribute is refused or falls into arrear the Persian Government is accustomed to make an incursion into the country with regular troops and wheeled artillery from Bampur and to devastate

the refractory districts by way of punishment. Persian Customs officials are stationed only at New **Jāshk**, **Chahbār**, and **Gwatar** and foreign trade at other places on the coast is forbidden, but the prohibition has not as yet been successfully enforced.

The chiefs are assisted in the administration of justice by the religious authorities or Mallas of the country, and they delegate their executive authority to headmen of sub-districts, who in some cases are hereditary but more commonly are appointed by the chiefs. These headmen have almost plenary powers within the limits of their jurisdictions, power to inflict death however being withheld, and are responsible for the collection of the taxes. The ordinary taxes are $\frac{1}{5}$ th of actual gross produce on cultivated land, a grazing due of $\frac{1}{2}$ to 2 Qrāns per animal for the year on livestock except sheep and goats, 1 to 2 per cent. in kind of sheep and goats kept, and 10 per cent. in kind of fish brought to market.

There are no recognised laws, and order, so far as it exists, is enforced by primitive, summary methods; formal protection of life and property however is almost altogether wanting, and its place is only partially supplied by the blood-feud system, which renders aggression upon natives of the country dangerous to the committer. Arms are frequently used in tribal disputes, but serious disturbances are rare.

The British Government pays subsidies to various local chiefs for the protection of the land line of telegraph between **Gwādar** and **Jāshk**, and the inhabitants are in general well-disposed towards the telegraph staff and other British officials. The Persian Government also receive an annual subsidy of 3,000 Tūmāns on account of the facilities afforded to the British telegraph in the district.*

Particulars of the districts except Jāshk.—The Gaih گای district has a population of about 48,000 souls. The capital is Gaih, population about 2,500 souls, which is situated 72 miles north-north-west of **Chahbār**; the second place of importance is Bint بنت with 2,000 inhabitants, 42 miles west by north of Gaih. The tribes of the district will be found in the table of tribes already given. The fighting men armed with modern rifles are estimated at 4,000, and the second levy with inferior fire-arms at 10,000. The chief of Gaih, at present Saiyid Khān, Shairkhānzāi, maintains a bodyguard of 50 mounted men, armed with swords and Martini carbines. The Gaih district is reported to contain large patches of cultivation, and the water is said to be generally good: it is estimated that supplies and forage to maintain a force of 1,500 men would be forth-

* See the Appendix on the Persian Gulf Telegraphs.

coming all the year round. The passage of wheeled artillery in this district, if possible, would be difficult. The chief receives a telegraph subsidy of Rs. 1,000 a year from the Indo-European Telegraph Department.

The chief village of the Qasrkand قصرکند district is similarly named, Qasrkand; its population is about 1,500 souls, and it is situated on the Kaju affluent of the Chil river, 68 miles north by east of Chahbār and 1,775 feet above sea level. The population of the district is about 12,000 souls and the tribes are as stated in the tribal table given above. The first fighting levy of this district comprises about 300 men, and the second 1,500. The rightful chief of Qasrkand is Jān Muhammad, Gichki, but he has been ousted by Saiyid Khān of Gaih. It is calculated that the resources of the Qasrkand district might support a force of 1,000 men. The country is unsuited for field artillery.

The Dashtyāri دشتیاری district has a population of about 18,000 souls; the tribes will be found in the tribal table above. The principal village is Mīr Bāzār میر بازار, with 1,500 inhabitants, situated 35 miles north-north-west of Gwatar. The well armed fighting men of Dashtyāri are said to number 1,000, and the less well armed 2,500. In the coastal part of the district it would be difficult at any time to maintain a force of 100 men, and after heavy rain the country generally is flooded and may remain impassable for animals during a fortnight. The present joint chiefs of Dashtyāri, the brothers 'Abdī and Mahmūd, are Jādgāls and are related to the chief of Bāhu; they each receive a telegraph subsidy of Rs. 500 a year from the Indo-European Telegraph Department.

The Bāhu باهر district has a population of about 14,000 souls: its capital is Bāhu Qalāt باهر قلات, with 1,000 inhabitants, situated 38 miles north of Gwatar. The tribal table already given shows the tribes to which the people of the district belong. About 500 of the fighting men are said to be armed with modern rifles and 2,500 with indifferent weapons. Near the coast there are the same obstacles to the maintenance and movement of troops as in Dashtyāri. The chief of Bāhu, Mīr Ashraf, is a Jādgāl and belongs to the same family as the chiefs of Dashtyāri. He receives Rs. 600 per annum as a telegraph subsidy, and one of Rs. 400 is also paid to his cousin Mīr Ahmad.

Topography.—The following is a table of the features and inhabited places of the coast of Persian Makrān, except those within the Jāshk District, in alphabetical order; the houses, except where otherwise stated, are all date-stick huts covered with mats.

A number of the villages are often partly empty through the absence of some of the people, with the flocks and herds, in search of pasture.

Name.	Position, geographical and political.	Character.	REMARKS.
Amdrāmtak امدرا متک	6 miles north-north-west of Sirgān. Under Gaih.	A village of 20 huts of Hōts.	A little barley, jowari and cotton are grown. There are 400 date trees; and 70 camels, 80 cattle and 460 sheep and goats are owned.
Balak بالک	12 miles north of Galag and 2 miles east of the Rapch river. Under Gaih.	40 huts of Hōts and Balūchis.	Cotton, wheat, barley, jowari are grown and there are 200 camels, 100 cattle and 400 goats and sheep. Date palms number 40. The headman of Balak, at present 'Abdu-bin-Haidar, receives a British telegraph subsidy of Rs. 100 a year.
Bandani Stream and Village بندنی	Its source is about 30 miles inland and it reaches the sea immediately west of Hūmdān. The village is under Gaih.	A hill torrent with a bed width, at 7 miles from the sea, of 200 yards: the banks are steep in places. A considerable amount of water comes down after rain.	Near this river at 10 miles from the sea is a village, also called Bandani, of 50 huts of Singalaus and Balūchis. There is good water from wells and some camels are kept. Wheat, barley, and cotton are grown. The headman of Bandani, at present Shai Muhammad, receives a British telegraph subsidy of Rs. 100 a year.
Bandgāb بندگاہ	9 miles north of Tiz. Under Gaih.	A temporary village of 12 huts of Balūchis, existing only during the rains.	There is a little cultivation of barley and jowari.
Bir Stream and Village بیر	Its source is 25 miles inland and it reaches the sea 8 miles east of Hūmdān. The village is under Gaih.	A stream with a bed width, at 4 miles from the sea, of 270 yards: the banks are low and ill-defined. There is no water except after rain.	On the left bank at 3 miles from the coast is a village, also called Bir: it consists of 70 huts of Singalaus and Qalandarzaïs. There is abundant cultivation of dates, wheat,

Name.	Position, geographical and political.	Character.	REMARKS.
			barley, jowari and cotton, date palms numbering 1,000. Livestock are 160 camels, 100 cattle and 400 goats and sheep; and there is good water from wells. The headman of Bir, at present Saidullah, receives a telegraph subsidy of Rs. 200 a year.
Biyāsk بیاسک	On the coast about midway between the Sadaich river and Rās Maidāni. Under Gaih.	A fishing village of 12 huts of Maids*	The inhabitants own one boat and a few camels and goats.
Brāg براگ	8 miles north-west of Gālag. Under Gaih.	A village of 30 huts of Hōts.	Barley is grown and there are 300 camels, 5 cattle, and 50 goats.
Brīs بریس	In a bay, facing westwards, at 20 miles west of Gwatar. Under Bāhu.	A village of 35 huts of Maids, fishermen; it is practically deserted after the rains.	An occasional place of call for vessels from 'Omān. Fish, palm mats and fish are exported; and dates, rice, jowari and cloth are imported. The inhabitants have 8 small boats, 8 camels, 7 cattle and 30 goats. The place is connected with Nigor.
Chahbār Bay چهار	On the west side of Chahbār Town.	See article Chahbār Bay.
Chahbār Town چهار	On the east side of Chahbār Bay, about 106 miles west by north of Gwādar and 180 miles east by south of New Jāshk. Under Gaih.	See article Chahbār Town.

Name.	Position, geographical and political.	Character.	REMARKS.
Chīl (or Dashtyārī Chīl) River دشتیاری چیل	Passes several miles east of the Dasht-yārī capital of Mīr Bāzār at 30 miles from the coast and reaches the sea in Gwatar Bay about 3 miles north of Gwatar village. In Dasht-yārī.	A river with an extensive drainage area which reaches to 120 miles from the coast. At 20 miles from the coast the river enters a saline, marshy tract; but above this its course is through rich alluvial soil, with a bed 140 yards in width and well-defined banks 10 feet high. It never runs altogether dry, and its flow is generally swift though narrow.	The district capitals of Bāhu and Qasrkand are situated on the two principal streams by whose junction the Chīl river is formed, the latter, on the Kaju, being the more westerly of the two.
Darak درک	On the coast about 6 miles east of Gālag. Under Gaih.	A temporary village of 10 huts of Maids. fishermen; it exists only during the rains.	The village is situated in a valley and has 400 palm trees; the inhabitants own 10 camels, 20 cattle and 40 sheep and goats. Good water is procurable from wells. There is an open anchorage not far from the shore which can be used by steamers, but it is not sheltered except from northerly winds.
Drāngo درانگو	1 mile from the sea and 2 miles east of Hūmdān. Under Gaih.	A village of 10 huts of Balūchis.	There is a little cultivation of grain and cotton. Livestock are 10 camels, 15 cattle and 70 goats and sheep.
Gālag گالی	On the east side of the eastern estuary of the Rāpch river, about 1 mile from the coast. Under Gaih.	A village of 15 huts of Maids, fishermen.	This is the port of the Kārwan district, but only 5 small fishing boats belong to it. The resources of the place consist of 50 date palms, a few livestock and wells of very good water. Vessels from Masqat and Qishm occasionally call, and rifles smuggled from Masqat are landed.

Name.	Position, geographical and political.	Character.	REMARKS.
Gōhart گوهرت	5 miles east of the Sadaich river and 4 miles from the coast. Under Gaih.	A village of 50 huts of the Raīs tribe.	The name means "sulphur" and is taken from a hill close to the village which yields that mineral. There are 100 date palms and some cultivation of barley, wheat and jowari. Livestock are 30 camels, 100 cattle and 200 goats and sheep. The people have 3 small boats.
Gūrdīm گوردیم	On the coast, in the delta of the Kair river, 6 miles west of its eastern mouth. Under Gaih.	A village of 50 huts of fishermen.	A few camels, cattle, goats and sheep are owned.
Gwatar Bay and Village	The village is about midway between Gwādar and Chahbār Towns, being 52 miles west of the former and 54 miles east by south of the latter. Under Bahu.	...	See article Gwatar Bay and Village.
Hamīdi Gau همیدی گو	12 miles north-east of the mouth of the Sirgān river. Under Qasrkand.	A village of 40 huts of Balūchis.	There is a little cultivation of dates, wheat, barley, jowari and cotton. Livestock are 30 camels, 30 cattle and 100 goats and sheep.
Hūmdān هرمدان	On the coast 18 miles east of the mouth of the Rāpch river.	A village of 20 huts of Maids, fishermen.	There is some cultivation of dates (300 trees) and a little of barley; and about a dozen banyan trees are to be seen. Livestock are 10 camels, 30 cattle and 200 goats and sheep. There is good water in wells. The village stands on a creek and there is a small direct trade with 'Omān.

Name.	Position, geographical and political.	Character.	REMARKS.
Kair River and Village کیر	The principal or eastern mouth of the river is 28 miles west by north of Chahbār Town . Under Gaih	See article Kair river .
Kaki Kūh کاکي کوه	10 miles inland between Bris and the Kinj stream. In Dashtyāri .	A part of the maritime range, which here runs parallel to the coast for several miles. It is of white clay, has a deeply serrated outline, and appears to be nearly vertical on its southern side.	The highest peak, 1,991 feet, is 12 miles north-east of the mouth of the Kinj river.
Kārwan District کاروان	Upon both sides of the Rāpch river at 10 miles from its mouth and northwards. Under Gaih	See article Kārwan .
Kāshi Stream کاشي	Its head is in the hills west of Kārwan and it reaches the sea about 5 miles west of the western mouth of the Rāpch river. In Gaih .	A hill stream with a bed width of 150 yards and banks about 5 feet high. It brings down a considerable amount of water after rain.	The course of this stream in the maritime plain is through saline ground. At 20 miles from the coast and 4 miles west of the river is a village also called Kāshi ; the permanent village consists of 50 huts of Balūchis who cultivate dates (600 trees), wheat, barley and jowari, and own 350 camels, 100 cattle and 200 goats and sheep; in the rains the village is increased by about 100 huts.
Kinj Stream and Village کينج	Rises a few miles inland and reaches the coast at a point 13 miles east of Chahbār Town . In Dashtyāri .	This is a short stream. It emerges from a gap in the coast hills which is called Kinj Dap کنج دپ and at its mouth is a grove of acacia trees.	On the left bank, 2½ miles from the sea, is a village named Kinj which consists of about 5 huts of Balūchis and fishermen. The people own 10 camels. 25 cattle and 100 goats and sheep.

Name.	Position, geographical and political.	Character.	REMARKS.
Kunarak کدری	On the western shore of Chahbār Bay. Under Gaih.	A village of 20 huts of Maids, who are fishermen, of Hōts and of Jats.	Resources are 1,000 date palms, 50 camels, 50 cattle and 200 goats and sheep. The anchorage off this village is convenient in certain winds.
Kūpān Sur کوپان سر	At the foot of Siyāh Kūh, between that hill and the sea. Under Dashtyāri.	A village of 12 huts of Balūchis.	There is a little cultivation of grain and cotton.
Lāsh لاش	8 miles north of Gālag and 3 miles east of the Rāpch river. Under Gaih.	40 huts of Hōts and Singalaus.	Dates (100 trees) and barley are grown; and there are 50 camels, 40 cattle and 100 sheep and goats.
Lir لیر	5 miles from the coast and 10 miles east of the Sadaich river. Under Gaih.	20 huts of Balūchis, Jats and Raīs.	There are about 400 palms and a little cultivation of wheat, barley and jowari; also 40 camels, 40 cattle, and 20 goats and sheep.
Maidāni (Rīs) راس میدانی	On the coast about 9 miles west of the western mouth of the Rāpch river. In Gaih.	A broad cape with a sea face of 5 miles running east and west; at the eastern end there are cliffs 150 feet high.	Inland is a group of hills, 3 or 4 miles in extent and 200 feet high, which is connected with the eastern part of the cape.
Malaki ملکی	6 miles north of Tiz. In Gaih.	A pasture ground for cattle.	There are no habitations here.
Milīn ملین	Between the Kair river and the Sirgān stream at 6 miles from the coast. Under Gaih.	20 mat huts of Balūchis. The village is larger in the rains.	Low hills running down towards the coast terminate here in Milīn Kūh, 200 feet high. There is a large banyan tree near the village and good water is obtainable from wells. Livestock are 20 camels, 20 cattle and 20 goats and sheep.
Mōmān مومن	8 miles north-west of Pārag. Under Gaih.	20 huts of Hōts.	A little wheat, barley, jowari and cotton are cultivated, and there are 20 camels, 10 cattle and 100 goats and sheep.

Name.	Position, geographical and political.	Character.	REMARKS.
Nigor نگور	8 miles north-east of Rōdi. Under Dashtyāri.	20 mud houses and 80 huts of Shai-zādahs, Balūchis and Jūlahags or weavers.	This is a prosperous place. Dates (100 palms), wheat, barley, jowari, cotton, fruit and vegetables are grown; and livestock are 60 camels, 30 donkeys, 80 cattle and 300 goats and sheep. Water is plentiful and good. Mīr Hajī Muhammad and Saiyid Muḥammad, Jadgāls, to whom Brīś also is subject, reside here.
Nīlag نیلگ	3 miles east of Sand. Under Dashtyāri.	10 mat huts of Balūchis.	There are many acacia trees and a little cultivation; also a few livestock.
Pārag Stream and Village پارگ	The stream rises 15 miles inland and reaches the sea in Chahbār Bay, 10 miles north-west of Chahbār Town. In Gāh.	The bed of the Pārag is shallow and sandy, but near its mouth it is 200 yards wide. It contains no water except after rain. Near the sea is a large salt pan in which excellent salt is manufactured for exportation.	The mouth of the Pārag is tidal for a distance of half a mile and affords an anchorage for native boats. At 4 miles from the sea is the village of Pārag consisting of 10 to 30 huts of fishermen according to the season. Livestock are 10 camels, 10 cattle and 50 goats and sheep. Water, which is brackish and scanty, is obtained from shallow holes dug in the sandy torrent bed. The headman of Pārag receives a telegraph subsidy of Rs. 150 a year.
Pasa Bandar پسا بندر	On the coast 8 miles south-west of Gwatar. Under Bāhu.	12 huts of Maids.	The people are fishermen; they have a few cattle and 20 goats and sheep.
Patār پتار	2 miles west of Samāch, midway between Rōdi and Nigor.	20 huts of Shaizādahs and Raīs.	Cotton, barley, wheat and jowari are grown, and there are a few livestock.
Pushat پش	6 miles south-west of Gwatar, on the coast.	5 huts of Maids, fishermen.	A few Shāshahs (date stick boats) are owned here.

Name.	Position, geographical and political.	Character.	REMARKS.
Puzim Bay پوزم	The eastern point, called Rās Puzim, is 22 miles west of Chahbār Town; the western, Rās Rashidi, is 6 miles further to the west.	A bay 6 miles wide at the entrance and 3 miles deep.	The depth is 5 fathoms at the entrance, but diminishes rapidly to the low shore at the foot of the bay. The eastern branch of the Kair river enters the bay at its north-western corner and the Sirgān stream at its north-eastern corner. A dangerous isolated rock called Bāklang پاكلكى lies opposite the entrance of the bay.
Puzim Village پوزم	On the eastern shore of Puzim Bay about the middle. Under Gaih.	A village of 40 huts of fishermen.	The chief of Gaih has an agent here, who realises about \$200 per annum in dues upon the dried fish trade. Livestock are a few cattle and about 40 goats and sheep.
Qalāt (Kūh) کوه قلالت	Between the Rāpch river and the Bir stream. In Gaih.	An outlier of the maritime range, approaching the coast and displaying cliffs of white clay.	The principal summit of this range, 1,680 feet high, is called Biri Sai Pādag سي پارك بري and is situated several miles inland to the north-east of the village of Hūmdān : it has a remarkable triple peak.
Ramin رامين	7 miles east of Chahbār Town and 1 mile from the sea. In Gaih.	12 huts of Maids, fishermen.	There are 3 banyan trees and an old stone-lined well, believed to be Portuguese, yields good water. The inhabitants own a few livestock.
Rāpch River راپچ	A little over 90 miles east of New Jāshk and a little under the same west by north of Chahbār Town. In Gaih.	...	See article Rāpch.

Name.	Position, geographical and political.	Character.	REMARKS.
Rāpch Village راپچ	On the east side of the western estuary of the Rāpch river at half a mile from the coast. Under Gaih.	A village of 15 huts of Jats.	There is a small trade with 'Omān. The people have 20 goats.
Rāshidi راشیدی	On the west shore of Puzim bay, 2 miles south of the eastern mouth of the Kair river. Under Gaih.	A village of 20 mat huts of fishermen.	Livestock are a few cattle, goats and sheep.
Rōdi رودی	About 10 miles north-north-west of Bris and 6 miles from the coast. Under Dashtyāri.	A much scattered village of 100 huts of Balūchis; there is also one unoccupied mud house.	The village is surrounded by low hills. There is extensive cultivation of barley, wheat, jowari and cotton.
Sutār سوتار	4 miles north of Nilag. In Dashtyāri.	30 huts of Gūrgaij and Jadgāls.	Water is from Ōtagr. There is much cultivation of dates, wheat, barley, jowari and cotton, and some livestock are owned.
Samāch سماح	5 miles north of Rōdi. Under Bahu.	20 huts of Jadgāls and low class Balūchis.	There is good grazing and good water. A few camels, 20 cattle and 40 goats and sheep are kept.
Sand سند	20 miles north-west of Gwatar, not far from the right bank of the Chīl river. Under Gaih.	30 huts of Gūrgaij, who remain only while water lasts.	Water is from Ōtagr. There are a few livestock and a little cultivation.
Sapt سپت	4 miles inland from the foot of Puzim bay. Under Gaih.	20 huts of low class Balūchis.	There is a little cultivation of barley, jowari and cotton. The people own a few camels, 20 cattle and 40 sheep and goats.
Sarkūh سركوه	2½ miles north of Rōdi and 3 miles west of Patār, near Kāki Kūh. Under Dashtyāri.	5 mud houses and 30 mat huts of Hūts and Balūchis; there are also two Hindu traders.	There is a fair amount of cultivation, the crops being barley, wheat, jowari and cotton. Some live-

Name.	Position, geographical and political.	Character.	REMARKS.
Sul سؤل	2 miles west of the Rāpch river immediately north of the telegraph line, and should perhaps be reckoned to the Kārwan District. Under Gaih.	25 huts of Hōts.	stock including 30 camels, 40 cattle and 100 goats and sheep are owned. There is good water from Otags and wells. There is considerable cultivation of dates (200 palms), barley, jowari and cotton. Livestock are 20 camels, 20 cattle and 200 goats and sheep.
Shairwiyān شیرویان	3 miles east of Chahbār Town and half a mile from the sea. Under Gaih.	30 huts of Buzdārs.	There is good grazing and good water. Some camels, cattle, goats and sheep are kept and Pish matting is made.
Sigāri سگاری	10 miles north of Gwatar. In Bāhu.	A village which existed here has now been abandoned. In the rains there are still about 15 huts, inhabited by people from Rōdi and adjoining villages.	The soil is poor and saline and the lands are flooded after rain. Mosquitoes abound.
Sirgān Stream and Village سرگان	Its source is 35 miles from the coast and it reaches the sea in Puzim bay at its north-east corner. In Qasrkand.	In dimensions and character the bed of the Sirgān resembles that of the Bīr stream. It is dry except after rain.	On the right bank of the Sirgān stream at 8 miles from the sea is a village, also called Sirgān; it consists of 100 mat huts of Balūchis, among whom are a few Hōts. Cotton, barley, wheat and jowari are cultivated, also a few dates, and there are 50 camels, 50 cattle and 200 sheep and goats. The headman of Sirgān receives a telegraph subsidy of Rs. 200 a year.
Siyāh Kuh سیاه کوه	On the east side of the Kinj stream near its mouth. In Gaih.	A dark hill of round form.	The hill stands close to the sea, is perhaps 500 feet high, and has cliffs on its seaward face.

Name.	Position, geographical and political.	Character.	REMARKS.
Sorchât سورچات	3 miles east of the Sadaich river and 7 miles from the coast. Under Gaih.	20 huts temporarily occupied during the date season by Hôts and their retainers (Jats and slaves) who come from Gôhart and Sûrag.	There are 600 date-palms and a little cultivation of barley, wheat and jowari.
Sorkamb سورکامب	7 miles west-north-west of Pârag. Under Gaih.	20 huts of Hôts.	A little cotton, wheat, barley and jowari are grown, and there are a few livestock.
Sûrag سورگ	13 miles east of the Sadaich river and the same distance from the coast. Under Gaih.	A scattered village of 150 huts of low class tribes and a few Hôts.	Dates (100 palms), barley and jowari are grown and livestock are 200 camels, 50 cattle and 200 sheep and goats.
Taizkôpân تیزکوپان	9 miles east-north-east of Chahbâr Town and 4 miles from the coast, 1,000 yards east of the route from Chahbâr Town to Bampûr. Under Dashtyâri.	15 huts of Birdis, Bizanjus and a few Buzdârs, the last being mat-makers. The Bizanjus are subjects of the Khan of Kulât and only come to graze their cattle.	A large white Ziyârat is the chief feature of the place. There is a large banyan tree, and good water is supplied by wells. Cultivation is very restricted, but there are 350 camels, 50 cattle and 200 goats and sheep.
Tali Kûh تلی کوه	8 miles west-north-west of Gwatar. In Bâhu.	Hills reaching a height of 276 feet.	The country round these hills is saline, liable to inundation, and unfit for cultivation.
Tank تنگ	46 miles west by north of Chahbâr Town and 3 miles from the coast, on the right bank of the western branch of the Kair river. In Gaih.	A village of 60 huts of Maids.	Fish mats, fish and sheep are exported, and dates, rice, jowari and cloth are imported. There are 6 boats of about 20 tons each trading chiefly to Masqat and partly owned by residents of that place. A point, named similarly to the village, lies immediately to the westward and is joined to the mainland by a narrow strip of sand only. Resources are 50 date palms, 30 camels, 20 cattle and 100 goats and sheep.

COPYRIGHT.

Mouth of the Tis valley looking seawards.
(MR. R. H. NEW.)

Name.	Position, geographical and political.	Character.	REMARKS.
Tiz* تيز or Tis طيس	On the eastern side of Chahbār Bay, in a valley which comes down to the bay at 4 miles within the entrance of the latter; the village is a mile from the sea. Under Gaih.	A village of 4 huts of Hōts, fishermen and mat-makers; in the rains the number increases to 20. The inhabitants own 10 mango trees, 58 date palms, 4 camels, 4 cattle and 50 goats.	A Persian fort stands on a small hill in the entrance of the valley, and there was once another fort belonging to the village; the former is not kept up nor occupied, and of the latter hardly any trace now remains. The beach of Tiz on Chahbār Bay is $\frac{1}{2}$ of a mile long and 200 yards wide; it can be approached within 20 yards by boats drawing 5 feet. There are some trees and cultivation, and a stream runs in the Tiz valley after rain; at other times water, fairly good and abundant, is obtained from wells sunk in the dry bed. The place is picturesque, and it is also interesting on account of the extensive ruins of the ancient Tiz, which was a flourishing port with a cosmopolitan population between the 10th and 13th centuries A. D.†
Wank وانك	Near the coast, 3 miles east of Tank. In Gaih.	10 huts of Maids.	The people are fishermen and have 4 small skiffs.

From the above table it will be apparent that the Gaih District is the westernmost and has the greatest extent upon the coast except Jāshk, reaching from the border of the Jāshk District to a point a little east of Chahbār; at the north-eastern corner of Puzim bay, however, it is almost if not quite interrupted by the Qasrkand District which here reaches down the Sirgān stream towards the sea. The coast from the Kinj stream almost to Brīs belongs to Dashtyāri, and from Brīs to Gwatar it is in Bāhu.

* The most recent authority on Tiz is Lieutenant A. J. H. Grey, I. A., in a report to the Intelligence Branch, Simla.

† See Le Strange's *Lands of the Eastern Caliphate*.

MĀLIK**(BANI) (I)**

بنی مالک

A tribe of foreign origin, long settled in **Qatar**, who furnish soldiers and servants to the Shaikhs of **Qatar**. The **Sulutah**, elsewhere described in a separate article, are probably Bani Mālik. Except the **Sulutah**, in regard to whom there is doubt, the Bani Mālik are believed to have reached **Qatar** from Persia; and, being Māliki Sunnis, they are accordingly classed as **Hūwalah**. They are however, if the **Sulutah** be excluded, few in number; and they have no tribal organisation.

MĀLIK**(BANI) (II)**

بنی مالک

Generally pronounced Bani Mālich : an Arab tribe of Turkish 'Irāq, not very numerous but somewhat widely disseminated.

On the **Tigris** the Bani Mālik are found between 'Azair and Qūrnah Village; but here, on either side of the river, the marshes behind them are tenanted by the Ma'adān and they are confined to the neighbourhood of the actual banks. On the **Euphrates** they occur at various places from Sūq-ash-Shuyūkh down to Qūrnah Village. On the **Shatt-al-'Arab** the Bani Mālik are met with in the villages on both banks from Qūrnah Village to **Muhammareh** Town, but chiefly at Abu Mughairah and in the neighbourhood of Abul **Khasīb** upon the right bank. Finally there are a number of sections of the tribe who in winter cultivate the soil in the **Hawīzeh** District of Persia and whose Shaikhs in summer make their appearance at Hārthah, Abul **Khasīb** and Da'aiji upon the **Shatt-al-'Arab**.

Among the sections of the Bani Mālik are the following :—

1. 'Abūdah-as-Sabti

عبد الوهاب

2. Aghzawi

اغزوي

3. 'Ayāishah

عياشه

4. Barāja'ah

براجعه

5. Hilāl

هلال

6. Hamūdi

حمودي

7. Huwāishim

هوشيم

8. Majāda'nah

مجادعه

9. Nahd (Bani)

بنی نهد

10. Sakain (Bani)

بنی سكين

and

11. Sulaimān

سليمان

Of these subdivisions the Bani Nand are mostly settled at Abu Mughairah, Abul **Khasīb**, Nahr Khōs and thereabouts, while the remainder

belong to that portion of the tribe which has been described as oscillating between the **Hawizeh** District and the banks of the Shatt-al-'Arab.

In religion the Bani Mālik are Shi'ahs. Their habitations are huts; their crops are wheat, barley and maize; they are cattle-owners, but they have no horses, camels or sheep. The tribe are now well armed with Martini rifles. The Bani Mālik above Qūrnah appear to be subject to the chiefs of the **Muntafik**.

An important town of the 'Omān Sultanate, in the district of 'Omān Proper; it is situated about 12 miles south-south-east of Nizwa and 16 miles south-west of Izki. It forms the centre of a highly cultivated oasis about 3 miles in diameter, surrounded by plains; there are no hills in the neighbourhood. The town is rather scattered; the following are the principal quarters:—

MANAH
منع

Name.	Position.	Houses and inhabitants	REMARKS.
Bilād بلاد	In the middle of the others.	300 houses of mixed tribes.	This is the largest of the quarters and contains the chief fort of Manah.
Fiqāin فيقين	North-east of Bilād.	200 houses of Āl Bū Sa'id.	This quarter also contains a fort and here the Wali of the Sultān of 'Omān has his residence.
Ma'mad معمد	South of Bilād.	250 houses of mixed tribes including Bani Na'ab and Habūs of the 'Ayāl 'Abdū section, also Hawāshim.	..
Ma'ra معرا	East of Bilād.	140 houses of Bani Riyām.	The Shaikh of this community is Rāshid-bin-Salim.

The total population is about 4,500 souls. The town is surrounded by date groves except on the south and is characterized by a tall tower, called Minārah, in the Bilād quarter. The houses are of mud and stone, some of them with upper storeys. Wheat, gram and sugar are grown in the

oasis, which also produces grapes, limes and quinces, but neither almonds nor oranges. The date palms are estimated at 20,000, camels at 30, donkeys at 100, goats at 1,000 and sheep at 2,000; cattle are very few. The cultivation is irrigated by hot springs. Manah suffered from a severe drought in 1845, and the population in that year was reduced by emigration to 400 or 500 persons. The Sultān of 'Omān has a Wālī at Manah with only 15 armed 'Askaris as a following. This official collects as Zakāt about \$400 a year, the whole of which is again expended by him locally: he also holds as an assignment some grazing land in the vicinity which is the private property of the present Sultān Saiyid Faisal.

MANĀMAH

المنامة

The principal town and commercial metropolis of **Bahrain**: it can hardly, however, be described as the political capital, for the seat of government is where the Shaikh is, and he resides during the greater part of the year at **Muharraq Town**, not at Manāmah.

Situation and harbour.—Manāmah is situated on the coast of **Bahrain** Island at its north-eastern corner, on the northernmost point of the island: it lies less than 2 miles south-west by west of the town of **Muharraq**, from which it is separated by the tidal channel connecting the Manāmah anchorage with **Khor-al-Qalai'ah**. The harbour of Manāmah,* the only one in **Bahrain** used by steam vessels, is sheltered by the **Bahrain** and **Muharraq** islands on the south and east respectively, by the **Fasht-al-Jārim** on the north, and by the **Fasht Khor Fasht** on the north-west. The outer anchorage, the nearest point to which steamers of 19 feet draught can approach the town, lies 4 miles north-west of Manāmah: smaller vessels can run up to an inner anchorage less than 2 miles off shore in the same direction. The water of the harbour is clear, and the bottom over the greater part of it appears to consist of white sand in patches interspersed with flat coral rock. The bottom shelves very gradually and regularly up to the town, and even boats, at low water, cannot get within $\frac{1}{4}$ of a mile of the beach, but are obliged to discharge their passengers and cargo by means of donkeys that come alongside; these donkeys, 30 or 40 in number and belonging to the large

* For the harbour and its approaches see Admiralty Plan No. 2377—20.

COPYRIGHT

The British Agency, Manāmah, Bahrain
(MAJ P. Z. Cox.)

Bahrain breed, have been specially trained to work in the sea. A feature of the harbour is the number of fish-weirs and nets which are always set.*

General aspect and buildings.—Including the suburbs of Rās-ar-Rummān on the north-east and Na'im-al-Kabīrah on the south-west, Manāmah now extends $1\frac{1}{2}$ miles along the sea-front, and it has a depth inland of about $\frac{1}{2}$ a mile. The general aspect of the town is damp, squalid and depressing. The better houses are built of small stones cemented together with mud or inferior mortar, which, falling out, gives them a rickety as well as an unwholesome appearance: some of the tenements are roomy, but often a good deal of the internal space is devoted to business offices and godowns. The bazaar, in the centre of which is the market place, is a filthy labyrinth of narrow lanes lined by shops and generally covered over with mats to keep out the sun. The habitations in the outskirts are for the most part mat huts with sloping roofs, standing in courtyards surrounded by hurdles of upright date fronds. There are but few really good buildings. The best are the new British Political Agency towards the north-east end, between the town proper and Rās-ar-Rummān; Qal'at-ad-Diwan قلعة الديوان or Manāmah fort, the Shaikh's summer residence, a large construction in good repair with several bastions, standing in the open plain behind the town between it and the date gardens; a neat and well built mansion belonging to his son Shaikh Hamad, partly upper-storeyed, which is situated near the fort but somewhat further inland; and a large house with strong and high walls, situated near the south-west end of the town and occupied until his flight in 1905 by Shaikh 'Ali-bin-Ahmad, a junior member of the ruling family. The existing mosques are singularly plain and unpretentious, with dwarf minarets only about 12 feet high; a new Jāmi' mosque, however, is now in course of erection which will be a much finer building than any of them. There are now no trees in the town; but on the side towards the American hospital traces exist of a date grove which appears to have been watered by a Falaj from a spring in the Qal'at-ad-Diwan. Large refuse heaps abound, especially in the suburbs. About 1 mile south of Manāmah is an old shrine which is visited by Shi'ah women during the night: it consists of a stone with a hollow top in which the devotees deposit rice and eggs.

* Some remarks on the harbour by Admiral Atkinson-Willes, R.N., will be found in the Government of India's Political Proceedings for June 1904.

Defences.—Except for Manāmah fort, already mentioned, which is badly placed and of no modern value, the town is open and undefended both from land and sea.

Inhabitants, quarters and suburbs.—The population of Manāmah (inclusive of the two suburbs mentioned further on) is now estimated at 25,000 souls, of whom about $\frac{2}{3}$ are Shi'ahs and most of the remaining $\frac{1}{3}$ are Sunnis. The Shi'ahs may be classified as follows :—

Arabs from Basrah	250
Bahārinah of Bahrain	12,000
Bahārinah from the Hasa Oasis	750
Bahārinah from the Qatif Oasis	500
Persians	1,500
TOTAL	15,000

The Shi'ahs of Manāmah are all Ithnah-'Asharis except about 15 Borah merchants from India, not mentioned above, who are Ismā'ilis.

The remaining Muhammadans of Manāmah are distributed as below :—

Arabs from the Hasa Oasis	250
Arabs from Kuwait	150
Arabs from Najd	500
Arabs of various or uncertain origin including a few Janā'āt	1,000
Hūwala h	5,000
Negroes (free)	1,500
Negroes (slaves, but not living with their masters)	800
Persians from 'Awaz, etc.	50
'Utūb	550
TOTAL	9,800

All of these are Sunnis of the various principal sects, with the exception of the Najdi Arabs who are mostly Wahhābis.

The small non-Muhammadan balance of about 200 souls consists of 69 to 175 Hindus, 50 Jews, 40 Oriental Christians, 6 Americans and 4 Europeans. The Hindus, whose numbers fluctuate, are not permanently settled and are mostly Bhātiyahs and Lohānahs. The Jews are mostly immigrants of 10 years' standing and less from Turkish 'Irāq. Of the Oriental Christians about 30 are engaged in trade and the remainder are attached to the American Mission, to which also the 6 Americans all belong. The Europeans are the British Political Agent and 1 British and 2 German merchants.

Among the native population, other than the **Bahārinah** and Persians, there is a noticeable infusion of negro blood ; and the people, without being sullen or disagreeable, look dull and dejected. Diseases of the eye are extraordinarily prevalent among them.

The **Fariqs** or quarters of the town are —

Bada'	البدع	Haiyāk	حياك
Barr	البر	Hūwalah	الهوله
Dawārabah	الدرايه	Janā'āt	جناعات
Dawāwdah	الدراوده	Makhārqaḥ	المخارقه
Fādhāl (Āl)	آل فاضل	Mishbar	المشبر
Hammām	الحمام	Shuyūkh	الشيوخ
Hatab (Sūq-al-)	سوق الخطب	Surrah (Abu)	ابو صرة

A suburb, which was once a distinct village and is called **Rās-ar-Rummān** رأس الرمان or **Fariq-al-Hamidah**, covers a point of the same name beyond the British Political Agency: the inhabitants are 120 families of **Hamidah** engaged as pearl divers and fishermen and also as ferrymen between **Manāmah** and **Muharraḡ Town**. Another suburb known as **Na'im-al-Kabīrah** نعيم الكبيرة, once a separate village but now connected with the west end of the town, consists of about 600 reed huts with a few masonry houses and is inhabited by about 3,000 low-class **Bahārinah** dependent on boat-building and the pearl fishery.

Resources and water supply.—About 500 date palms belong to the town proper and another 800 to the **Na'im-al-Kabīrah** suburb. Livestock include 21 horses, 175 donkeys and 135 cattle in the town itself ; 6 donkeys and 8 cattle in the **Rās-ar-Rummān** suburb ; and 18 donkeys in the suburb of **Na'im-al-Kabīrah**.

The better classes at **Manāmah** buy their drinking water from camelmen of **Rifā'-ash-Sharqi** and **Rifā'-al-Gharbi** who bring it for sale from the **Hanaini** and **Umm Ghuwaifah** wells of their respective villages. The water used by the poorer inhabitants is procured from one of two sources, **Qufūl** قفول and **'Ain Muqbīl** عين مقبل ; the former of these is a cistern, about 1 mile west of the fort, which is filled by the surplus water of several springs ; the latter is a well sunk in the coral rock between the British Political Agency and the American Mission, in open ground belonging to **Hāji-Muqbīl-adh-Dhakari**, the leading **Najdi** merchant. The water of **Qufūl** is always contaminated by the ingress

and washing of men and animals, while that of 'Ain Muqbil is naturally very brackish ; but the servants of the Political Agency get their drinking water from the first, and the animals of the Agency are watered at the second. Water from both is hawked about the town by carriers ; that from Qaful fetches one pice per goatskin. For washing purposes nearly every house or courtyard in Manāmah possesses a shallow well in which the water stands at about 6 feet below the surface.

Trade and shipping.—Manāmah exists chiefly by its trade, which forms the bulk of that described in the article on the **Bahrain** Principality. The bazaar contains about 450 shops. To Manāmah Town belong 2 Baghlahs, 6 Būms, 1 Shū'ni and 100 Māshuwahs and jollyboats ; while 1 Baghlah, 2 Būms, 1 Baqārah and 15 Māshuwahs and jollyboats, all used for pearling, are owned by the inhabitants of the Rās-ar-Rummān suburb.

Foreign interests and institutions.—Manāmah is the seat of the British Political Agent in **Bahrain**, and a charitable dispensary and post office are attached to the Agency. A mission of the Reformed (Dutch) Church of America in **Bahrain** have their headquarters at Manāmah, where they maintain a book dépôt for the sale of the Bible and of other books printed in the languages of the Gulf. There is also a "Mason Memorial Hospital" belonging to the Mission which was built in 1902 ; it has 20 beds, and in 1904 medical attendance was there afforded on no less than 17,000 occasions. An Arabic-English day school with 68 enrolled pupils also forms part of the Mission.

**MANĀ-
NA'AH**
مناعة

Singular Mannā'i مناعي. A tribe of non-Bedouin Arabs, pearl divers and pearl merchants in **Bahrain** and **Qatar**. In **Bahrain** they have 100 houses at Qalāli, 10 at Muharraḡ Town and 10 at Hadd : in **Qatar**, 10 at Dōhah and 70 at Abu Dhalūf. They are Maliki Sunnis in religion and claim to be Bani Tamīm by descent.

MANĀSĪR
مناصير

Singular Mansūri منصوري. A Bedouin tribe of Trucial 'Omān whose headquarters are in Dhafrah ; their general range is from **Qatar** on the north-west to the Baraimi Oasis on the east, and they are found all over Dhafrah, but especially in Dhafrah Proper and Liwāh, and also in **Khatam**. A few frequent the neighbourhood of Abu Dhabi Town and

COPYRIGHT.

An Arab of the Manāsīr tribe
(HERR H. BURCHARDT.)

visit the **Baraimi** Oasis, and some are settled in the coast villages of **Khān** and **Jumairah**. On the north the tribe are in contact with the **Bani Hājir** in the neighbourhood of **Qatar** and further inland, on the west, with the **Āl Morrah**: their raiding parties sometimes reach **Wādī Farūq**. On the east their territory marches with that of the **Bani Yās**, with whom moreover they are intermingled in **Dhafrah**; and to the south of them the country is uninhabited, being part of the **Ruba'-al-Khālī**.

The **Manāsīr**, except those at **Khān** and **Jumairah**, are altogether nomadic; most of them winter in **Qatar** or its neighbourhood and spend the summer in **Līwah** where they have temporary villages of huts and some date groves, possessed as tribal joint property. Their manner of life in **Līwah** is described in the article on **Dhafrah**.

A tabular account of the Bedouin portion of the tribe and its sub-divisions follows below :—

Section.	Subsection.	Fighting strength (of subsection).	REMARKS (on section).
Mindhīr (Āl Bū) آل بو منذر	Ka'ābarah كعابرة	50	The Āl Bū Min- dhīr winter in the direction of Qatar . In summer they occupy Lāhīn, 'Idd, Sarait and Thar- wāniyah in Līwah . Their leading Shaikh is Rashid- bin-Māni' whose summer quarters are at Sarait.
Do.	Māni' (Āl) آل مانع	15	
Do.	Marāshid مراشيد	30	
Do.	Matawa'ah مطارعة	100	
Do.	Midāhimah مداحمة	20	
Rahamah (Āl Bū) آل بورحمه	Khail (Āl Bū) آل بو خيل	200	The Āl Bū Rahamah frequent Khatam in the cold weather and also visit Qatar , except the Abu Khail sub- section who winter about Samaih and in the neighbour- hood of Abu Dhabi Town. In summer the Abu Khail move to the
Do.	Taraif (Āl) آل طريف (also called Ahl- al-Janūb) اهل الجنوب	50	

Section.	Subsection.	Fighting strength (of subsection).	REMARKS (on section).
Rahamah (Āl Bū)	Tarārifah طارفة	7	} Baraimi Oasis and the remainder to Hamaim and Qa'aisah in Liwah. The sectional chief is Suwid-bin-Gha-daiyar.
Do.	Wabrān (Āl) آل وبران	30	
Sha'ar (Āl Bū)	Ghuwainam (Āl) آل غوينم	30	} The Āl Bū Sha'ar winter in or towards Qatar and their summer quarters are in Liwah where they occupy Jarairah, Jarrah and Mōsal. Their chief man is M u h a m m a d - b i n - Jaraiw.
Do.	Rashaiyid (Āl) آل رشيد	20	
Do.	Thuwaibit (Āl Bū) آل بوثريب	10	

From the above facts it may be inferred that the total number of the tribe is about 1,400 souls.

The Manāsīr are Hināwiyah in politics and Muwālik in religion. They were formerly subject to the Wahhābi government and in 1865 were understood to pay a contribution worth \$2,000 a year, chiefly in kind, into the Wahhābi treasury ; now they are independent of all control but maintain some degree of intercourse with the town of Abu Dhabi and its Shaikh.

MANSAH (WĀDI) وادي منصم

A valley in the Sultanate of 'Omān constituting an important right bank tributary of Wādi Samāil, which it enters immediately below Qurtā' : its source is at Najd Wāsīt, where there is a village, Wāsīt واسط, in a bleak situation with a scanty water supply ; this village consists of 35 houses of the Rahbiyīn and is the seat of the principal Rahbi Shaikh. In the same vicinity are two other Rahbiyīn villages, Manaithirah منيثيره and Rahbah ربه, of 35 and 20 houses respectively : the former is said to have 40 camels, 200 donkeys and 2,000 sheep and goats, the latter to have 60 camels, 200 donkeys and 6,000 sheep and goats, but these figures appear exaggerated. A frequented route leads up Wādi Mansah and over Najd Wāsīt into Wādi Tāyīn. The upper

part of Wādi Mansah forms a broad highway, the acclivity being slight and the bed smooth and sandy ; the lower course of the Wādi is fringed with date groves. Not far from the head of the Wādi is the village of Sharabat شربت , 12 miles below which it receives, on its left bank, a tributary called Wādi Rāk راک . Sharabat consists of 30 houses of Rahbiyīn who possess 10 camels, 30 donkeys and 500 sheep and goats.

Up Wādi Rāk lie the following villages :—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Mizra' Halīlah مززع حليله	1 mile above junction with Wādi Mansah.	Right.	10 houses of Rahbiyīn.	There are 5 camels, 10 donkeys and 300 sheep and goats.
Mizra' Sidr مززع سدر	$\frac{1}{4}$ of a mile above Mizra' Halīlah.	Left.	30 do.	Animals are 5 camels, 25 donkeys and 500 sheep and goats.
Jardamān جردمان	$\frac{3}{4}$ of a mile above Mizra' Sidr.	Do.	15 do.	Livestock are 5 camels, 10 donkeys and 100 sheep and goats.
Mizra'-al- (ghāf مززع الغاف	1 mile above Jardamān and 1 mile from the Wādi.	Right.	40 do.	There are 10 camels, 25 donkeys and 600 sheep and goats.

Below its junction with Wādi Rāk, Wādi Mansah contains the following villages :—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Musibt مسبت	1 mile below the mouth of Wādi Rāk.	Right.	50 houses of Rahbiyīn.	There are 10 camels, 30 donkeys, 15 cattle and 1,500 sheep and goats.
Lāhan لاهن	$1\frac{1}{2}$ miles below Musibt.	Do.	15 do.	Animals are 15 camels, 30 donkeys, 10 cattle and 200 sheep and goats.
Murr مور	$\frac{1}{2}$ a mile east of Lāhan.	Do.	15 do.	Livestock are 4 camels, 15 donkeys, 4 cattle and 140 sheep and goats.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Mala ملا	$\frac{1}{2}$ a mile below Lāhan and 1 mile from the Wādī.	Right.	30 houses of Rahbiyīn.	20 camels, 15 donkeys, 15 cattle and 170 sheep and goats are owned here.
Ghurābah غرابه	1 mile below Lāhan and 1 mile from the Wādī.	Do.	50 do.	There are 2 camels, 50 donkeys, 20 cattle and 300 sheep and goats.
Damdām دمدم	4 miles below Ghurābah.	Left.	30 do.	Animals are 24 donkeys, 8 cattle and 200 sheep and goats.
Naf'ah نفعه	3 miles below Damdam.	Do.	300 houses of Siyābiyīn and 50 of Qawāsim.	Wheat is scantily cultivated. Live-stock are 40 camels, 100 donkeys, 80 cattle and 600 sheep and goats.
Khatwah خطره	1 mile below Naf'ah and 1 mile above the junction with Wādī Samāil.	Right.	30 houses of Rahbiyīn.	There are 15 camels, 25 donkeys, 20 cattle and 150 sheep and goats here. Just behind Khatwah lies a village Najūm in a small separate tributary of Wādī Samāil called Wādī Najūm نجوم.

The total fixed population of Wādī Mansah and its tributaries is thus about 3,900 souls.

In Wādī Mansah wheat, barley and lucerne are grown in villages in the bed of the Wādī, but the amount of cultivation is insignificant. The same holds of its tributary Wādī Rāk.

MAQĀBĪL

مقابيل

Singular Maqbālī مقبالي. A Ghāfri tribe of the 'Omān Sultanate, located for the most part in Western Hajar. They are found at Khān (40 houses), Hail 'Adha (20 houses) and Hansi (20 houses) in Wādī-al-Jizi and its tributaries; at Muta'arishah (60 houses), Hail (40 houses),

Lithaibāt (25 houses) and 'Aqair (20 houses) in Wādi-al-Hilti; and at Murri (60 houses), Mahbab (60 houses), Nizūk (20 houses), Madīnah (25 houses) and Salam (30 houses) in Wādi Bani Ghāfir. Outlying settlements of the Maqābil occur at Bāt (180 houses) in Wādi Sharsah in Dhāhirah, and at 'Awaināt (50 houses), Himbār (90 houses) and Taraif (200 houses) in the Sohār sub-Wilāyat in Bātinah. The Maqābil at Muta'arishah belong to a section styled Bani Khail بني خيل and a number of those in Bātinah are Samāh سملح. The number of the tribe may be estimated at nearly 5,000 souls, and Hail in Wādi-al-Hilti appears to be their headquarters. In 1905 the Maqābil gave much trouble to the Sultān of 'Omān and were expelled by his troops from a fort in Wādi-al-Hilti.

Or Mijdam مجدم : a place in Turkish 'Irāq on the left bank of the Euphrates river about 30 miles by water below Fallūjah and 38 miles above Musaiyib. There is no permanent habitation of any sort here, not even a hut ; but a collection of tents may sometimes be seen of the Zōba' tribe. At this place the left bank of the Euphrates is shelving and very sandy, the right bank steep ; the distance between the two is nearly 200 yards. There is a small wood on the left bank about half a mile long by 150 yards deep, consisting of medium sized trees of Euphrates poplar and surrounded by a belt of tamarisks : it is said to be the property of a resident of Baghdād City. Goods from Hit, chiefly lime and Juss, are sometimes deposited by boats at Khān Maqdam for removal to Baghdād by camel caravan.

MAQDAM
(KHĀN)
خان مقدم

A small tribe of Bahrain and Qatar claiming to be a branch of the Āl Bū Kuwārah,—by whom however the correctness of the claim is denied. The Āl Bin-Maqla are Māliki Sunnis ; they are pearl divers and pearl merchants by occupation ; and they own 100 houses at Hālat Abu Māhur in Bahrain and 10 houses at Wakrah in Qatar. A small subdivision of the Āl Bin-Maqla in Bahrain are called Āl Bū Khamīs آل بر خميس.

MAQLA
(ĀL BIN-)
آل بن مقله

MAQLAB

مقلب

A bay in Khor-ash-Sham, on the west side of the isthmus which divides the Malcolm and Elphinstone inlets of the **Ruūs-al-Jibāl** District of the 'Omān Sultanate. The bay lies between Qānah and Sham Island and is about a mile broad by a mile deep. The whole neck joining the main body of **Ruūs-al-Jibāl** to its head which ends in Rās Musandam is now generally spoken of by Europeans as the isthmus of Maqlab: it consists of a rocky ridge, about 200 feet high at the lowest part and 4 miles in length from west-south-west to east-north-east; at one place near its eastern end it measures only about 600 yards across from sea to sea.

MAQNĪ

YĀT

مقنيات

A town among the inland slopes of the Western Hajar of the 'Omān Sultanate, but reckoned to the district of **Dhāhirah**; it is situated in a valley called Wādi Bilād Shahūm بلاد شهر, which is a tributary of Wādi-al-Kabīr and rises near the head of Wādi Banī Ghāfir. Maqniyāt consists of some 740 mud houses of the Bani Kalbān tribe, the sections being represented as follows: 'Amairah, 200 houses; Ghabābīn, 160 houses; Jarāwinah, 200 houses; Sinān, 80 houses; and Subaih, 100 houses. The people are cultivators, camel-men and donkey-men; they own about 200 camels and 600 donkeys which ply from Khābūrah and Sohār in Bātinah to 'Ibri and Dhank in Dhāhirah. The agricultural resources of the place comprise 12,000 date-palms, 50 cattle and 2,000 sheep and goats. A mile or two west of Maqniyāt is a village of 60 houses called Sammah سمه, also inhabited by Bani Kalbān; here wheat, millet and lucerne are grown, and there are 1,000 date-palms, 12 cattle, 15 donkeys and 200 sheep and goats.

MAQTA'

مقطع

A stream of brackish, undrinkable water in the Kuwait Principality, forming the boundary between the district of **Hazaim** on the north and the plain of **Labibah** or district of **Sūdah** on the south. It rises in a salt spring called 'Ain-al-'Abd عين العبد, which is said to be about 15 miles from the coast, and it reaches the sea immediately to the north of Rās-al-Khafji. Maqta' is described as having a flow of

COPYRIGHT.

The Cemetery, Maqlab.

(FROM A PHOTOGRAPH IN THE POSSESSION OF H GABLER, Esq , L E T D)

water 10 or 12 feet broad and 1 foot deep, and it is stated that at full tide native vessels can proceed a short way up it. Its entrance is known as Khor-al-Maqta'. A plural form of the name (Maqāta' مقاطع) is also used.

A low, sandy islet, 28 miles south by east of Kubbar island and 16 MARĀDİM miles off the coast of Kuwait. It is under half a mile in diameter and (UMM-AL) bears some brushwood, but is destitute of water. Umm-al-Marādim is أم المرادم reckoned to the Kuwait Principality.

Singular Marri مري. A tribe found chiefly in the coast towns of Trucial 'Omān, but also in the interior: they have 200 houses at Shārjah in the Laiyah quarter, 40 at Abu Dhabi and 30 at Dibai: besides these there are about 70 families of Bedouin Marar who inhabit Liwah in Dhafrah. The Marar claim to be a section of the Āl Morrah, but their pretensions in this respect do not appear to be well founded. Most of the Marar are pearl divers by occupation; in politics they are Hināwiyah and in religion Māliki Sunnis.

MARAR

مرار

A tract in Kuwait territory, situated to the north of Jahrah between Zaqlah and Yāh: it begins at 9 miles, and extends to 15 miles, from Jahrah. Its elevation is from 250 to 300 feet; it has camel grazing but no water. The name, which means a barren pebbly waste, is perfectly descriptive.

MARRU (QIRĀ'-AL-)

قراع المرو

A river, also called the Kurdistan or Behbehān river, which emerges from a rift in the Kūhgalu hills some distance to the north of Behbehān Town and, flowing north-westwards, unites with the Rāmūz river 10 or 12 miles below Rāmūz Town to form the Jarrāhi. Sultānābād and

MARŪN

مارون

Jaizān in the Rāmuz District lie respectively 13 and 28 miles up it from its junction with the Rāmuz River. The valley of the Mārūn in the Rāmuz District is 1 to 2 miles wide, flat, and enclosed by cliffs 50 to 100 feet high. The stream is 50 to 100 yards broad, 3 to 6 feet deep and has a strong current. The banks are bordered with thick willow jungle. About 5 miles above Sultānābād the Mārūn receives on its right bank a tributary of fresh water, 10 yards wide and 3 feet deep, fringed with willows and oleanders. On the north side of the Mārūn, in places, are grassy plains with thorn trees.

MASĀ- KIRAH مساكيره

Singular Maskari مسكيري. A Ghāfiri tribe of the 'Oman Sultanate, Ibādhis by religion, numbering in all about 6,000 souls; they inhabit the 'Alāyah or northern quarter of Ibra, sharing that town with the Hirth, and also occupy Yahmadi and the other villages of the Baldān-al-Masākīrah division of Sharqīyah. Some live at Bilād-as-Sūr. The Masākīrah have also the following Bedouin sections: the Falaiḥāt فليحات, 300 souls, owning 30 camels, 25 donkeys, 40 cattle and 200 sheep and goats; the Nahad نهذ, 500 souls, owning 50 camels, 40 donkeys, 30 cattle and 600 sheep and goats; and the Masā'id مساعيد or Masā'idah مساعده, 800 souls, owning 300 camels, 200 donkeys, 100 cattle and 800 sheep and goats. In 1877 the Masākīrah were reported to have given pecuniary aid to the Hārithi rebel Sālih, but they have at times been at feud with his tribe. The Masākīrah have now 5 principal Shaikhs at Ibra, and others of their influential men are at Yahmadi in Baldān-al-Masākīrah.

MA'SHŪR* مشر

A village constituting, with some square miles of the country surrounding it, a small administrative district in Southern 'Arabistān; it is the port of the Jarrāhi District and formerly served the district of Rāmūz also.

Position and boundaries.—The village of Ma'shūr, generally called Bandar بندر, is situated about a mile north of the inland termination of the Khor Ma'shūr branch of Khor Mūsa; and its position, as very

* The principal authority for this article is a report, dated 14th March 1906, by Captain D. L. R. Lorimer, Vice-Consul for 'Arabistān.

recently astronomically determined, is $30^{\circ} 34' 28''$ north by $49^{\circ} 11' 28''$ east. According to local tradition the original village of Ma'shūr was situated at a place Tall Kāfirān کالجی, which seems to lie on the south-east bank of Khor Ma'shūr at about 3 miles from its head.

The limits of the tract dependent on the village are not clearly defined; but they may be taken to include the south-eastern bank of Khor Ma'shūr, so far as it consists of *terra firma*, and the north-western bank down probably to the mouth of Khor Dōraq, the locality Zangi which is mentioned in the article on Khor Mūsa thus falling within the boundaries of Ma'shūr. On the side towards Buziyeh the limit of Ma'shūr territory is said to be at a spot called 'Aquleh آقوله, about 8 miles from the village.

Surroundings and communications.—The ground to the south of the town, which is mostly impracticable even for men on foot, is included in the description given elsewhere of Khor Mūsa; so also is the only route connecting the village with that inlet at the point called Sif. A direct route connects Ma'shūr with Buziyeh by way of 'Aquleh and of either Imāmzādeh 'Abdul Hasan or Ramlah; up to the border of the Fallāhiyeh District at 'Aquleh the country is mostly a saline plain with patches of grass which support considerable flocks of sheep. A route to Fallāhiyeh Town, more northerly and less westerly in its initial stages than the last, strikes the Jarrāhi River at Tuwaiqiyyeh; at two miles from Ma'shūr village this route runs through ground which is intersected by ravines—the beginnings of the hollow which reaches Khor Ma'shūr between Ma'shūr village and Sif—and would be heavy going after rain; beyond this point patches of wheat become frequent, and grass and scrub increase as the Jarrāhi is approached. Communication with Rāmuz is by various lines joining the Fallāhiyeh-Rāmuz route, which runs along the bank of the Jarrāhi River, at various points.

Character of village.—a'shūr village stands upon a mound which has the appearance of being artificial but in all probability consists merely of the accumulated débris of a long inhabited site. A ruined Burj dominates the place, and there are 3 mosques, of which the best was built in the present generation by one Hāji Nasir, a merchant of the place. The houses are of the type usual in this part of Persia; they are of mud with mud roofs and each of them encloses its own courtyard. Around the village, outside, are scattered the roofless mud walls of diminutive huts which are occupied in the wheat harvest, when the

grain is heaped up outside the village. Sanitation is disregarded and drinking water is largely drawn from a stagnant pool, the same as that in which clothes are washed. The atmosphere in summer is said to be very damp, and the heat oppressive.

Inhabitants.—The population of Ma'shūr village is about 1,500 souls; as a whole the people are healthy and well favoured in appearance. Half of them are Bandarīs بندری or Bandarīyeh بندریّه and are said to be connected with the Bani Turuf, but this point is very doubtful and the Bandarīs themselves profess ignorance of their origin; the remainder of the people are described as Qanawātīs from Behbehān. The Bandarīs are said to have been the founders of the place and the Qanawātīs to be later immigrants. A few Bandarīs, perhaps 300, are found at Hadāmeh in the neighbouring Jarrāhi District; the Qanawātīs are better known through their connection with the Hindiyān District, in the article on which they are described.

The entire community is bilingual, speaking both Persian and Arabic; but among themselves the people chiefly use a low form of Persian of the Lur type. Their dress is in the main Arab in pattern; but it is not free, especially in the case of the women, from Persian modifications. Men wear the Arab Kafiyah or kerchief, the Arab 'Aql or head-fillet and the Arab 'Aba or cloak; underneath the last is a Zabūn or long cotton coat reaching to the heels. The women all wear the 'Aba, their coiffure is Arab, and the Persian Burqa' is not seen among them; on the other hand trousers frequently form a part of their costume, shoes are worn, — which are not found among Arab women of the lower classes—and as children they frequently adopt the bandage round the forehead which is not assumed by the Arab woman until after marriage.

Until two generations ago the permanent inhabitants of Ma'shūr were all Sunnis, at least so the people themselves aver; but now all have become Shī'ahs. Ma'shūr is at present the seat of a Mulla, named Shaikh Husain, who has considerable local influence and receives Zakāt even from villages on the Jarrāhi. His sentiments are believed to be anti-European. The people of Ma'shūr are fairly well armed and possess in all about 100 rifles.

Agriculture and livestock.—There are traces of extensive irrigated cultivation to the north and west of Ma'shūr village, but the fields have long ceased to exist; the necessary supply of water is said to have been drawn from the Jarrāhi River by means of a dam at Hadāmeh. There

is now no irrigation on the north side of Ma'shūr, nor is any met with in going westwards until the Khātār canal of the **Shatūt** tract is reached near Imāmzādeh 'Abdul Hasan in the **Fallāhiyeh** district. Cultivation is now limited to 50 or 60 Khīsh or ploughs of land in the neighbourhood of the village, on which precarious crops of wheat and barley are grown by rainfall alone. There are only about 30 date palms.

Livestock are estimated at 20 or 30 horses and mares, 50 mules, 150 donkeys, 50 horned cattle and 5,000 sheep and goats.

Water supply and other resources.—Rain water is collected on the east side of the town by an embankment faced with brick which was built about 10 years ago by the merchant, Hāji Nasīr, already mentioned; on the open tank thus formed the people of Ma'shūr depend for all purposes during about 8 months in the year, and during the other 4 months they drink from wells, of which there are many small ones in the town. There is also, to the west of the town, a Birkeh or underground cistern which holds excellent water and is due, like the other principal works of the place, to the liberality of Hāji Nasīr; the entrance is kept locked during the winter. The fact that the livestock of Ma'shūr are not sent elsewhere in the hot weather seems to indicate that the water supply is in no way deficient, but the well water at least is brackish, and unhealthy.

Fodder is brought from the **Jarrāhi** and **Hindiyan** Districts, and fuel, consisting of small bushes only, is mostly cut within a radius of 10 miles from the village upon its east and west sides.

The prices of ordinary supplies frequently range high at Ma'shūr. In March 1906 the rate for wheat was 23 to 27 Qrāns, and for barley 14 Qrāns per local Hāshim Man of about 248 lbs. English. Fish and excellent prawns are taken at Zangi; the rate for the latter, at the time just mentioned, was 1 Qrān per Būshehr Man of $7\frac{3}{4}$ lbs. if dried, and 8 Qrāns if cleaned.

Trade.—The rise of Nāsiri on the Kārūn river has adversely affected Ma'shūr and has taken from it the greater part even of the **Rāmuz** export trade, of which it had formerly a monopoly. The staple export is wheat, but the quantity available varies greatly, as elsewhere in 'Arabistān, from season to season. There is also some exportation of barley. In a good year the amount of wheat passing through the port may reach 600, and that of barley 50 local Kārehs. From 20,000 to 30,000 fleeces of wool, valued at from 15 to 26 Tūmāns the hundred,

are exported in each year. Some beans, sesame and oak-bark also are shipped from Ma'shūr, but it is stated that gum arabic and linseed no longer follow this route as formerly.

Imports, which are mostly of Indian origin, are received through **Kuwait**, **Būshehr** and **Muhammareh**. The chief articles imported are Qand or sugar in the loaf, about 200 cases a year; Shakar or granulated sugar, about 300 bags per annum; also piece-goods, tea, and spices or Adwiyāt. The piece-goods are mostly from **Muhammareh**. The prices of imported goods depend on the prices at **Būshehr** and are greater by the amount of the freight and other transit charges and by the commission of the local merchant which is at a rate of 5 to 10 per cent. The price of Qand is thus 8 to 11 Tūmāns for a case containing 32 or 36 cones.

There are only 2 merchants of consideration at Ma'shūr; both are Behbehānis by origin, and both now have their headquarters at **Kuwait**. There is no bazaar at Ma'shūr and all business is transacted in private houses.

The weights in use at Ma'shūr are the following :—

1 Waqiyeh واقييه	. =	1 Būshehr Man	or	7½ lbs.	English.
16 Waqiyeh	. . =	1 Man-i-Khalfābād	or	124 do.	do.
32 Waqiyeh	. . =	1 Man-i-Hashim	or	248 do.	do.
100 Man-i-Hashim	. =	1 Kāreh كره	or	24,800 do.	do.

The Waqiyeh is divided into Ruba' ربع or quarters, Nīm نيم or halves, etc.

The unit of linear measure is the usual Zara'-i-Shāh of the **Persian Coast**.

Port and shipping. -- The facilities which Ma'shūr enjoys, or more correctly the disabilities from which it suffers, as a port are described in the article on **Khor Mūsa**; there it will be seen that the landing place for goods is more than 2 miles from the village and that the path connecting the two becomes difficult in bad weather. Only about 10 trading vessels are owned at Ma'shūr and 4 fishing boats of size: of the former class 5, belonging to one owner, are Būms capable of making voyages to **Kuwait** and even to **Masqat**. Numerous vessels from other ports call at Ma'shūr, and in a year of large wheat export as many as 600 visits may be paid by strange craft; these are mostly Māshuwahs, Ghunchahs and Baqārahs, but sometimes they are Ballams and occasionally Bāghlahs. All vessels must sail or drift up **Khor Mūsa** to Ma'shūr as, from the nature of the banks, there is no possibility of towing them.

The journey from Ma'shūr to **Kuwait**, by sailing vessel ordinarily occupies about 24 hours, but in favourable circumstances it may be performed in half that time. About 24 hours is the time usually required to reach **Fallāhiyeh** Town from Ma'shūr by water *via* **Khor Ma'shūr** and **Khor Dōraq**.

Government.—Ma'shūr is understood to be the joint property of the **Nizām-as-Saltaneh** and the **Mushīr-ud-Dauleh**, having been obtained by the former from the Persian Government as a **Tiyūl** in 1895. It is farmed from the owners by the Shaikh of **Muhammareh**, but the terms of the lease are not at present ascertainable. The local authority until about 8 years ago was a certain **Mir 'Abdullah**, belonging to a tribe or family called **Amāreh** of **Khalfābād**; and to him belonged the ruined fort which is still visible at Ma'shūr. In the time of **Mir 'Abdullah** the Shaikh of **Muhammareh** had not perhaps obtained the farm of the revenues of Ma'shūr, for they were then paid into the treasury at **Shūshtar**. Four or five years ago **Mir 'Abdullah** died, having been held in imprisonment for the last 3 or 4 years of his life by the Shaikh of **Muhammareh**, whose displeasure he had incurred. Since this event the influence of the Shaikh at Ma'shūr has become supreme and undisputed and he has been represented locally by a confidential agent named **Shaikh Salaiyeh**, who was at one time among his personal attendants and whose position and powers in regard to Ma'shūr, as well as to the **Hindiyān** District also controlled by him, appear to be indefinite. The Shaikh of **Muhammareh** is exceedingly feared at Ma'shūr; but there, as elsewhere in Southern **'Arabistān**, he appears to be regarded as a just man.

The only agricultural tax is one on land actually cultivated, at the rate of 110 **Qrāns** per **Khish**; but the Shaikh also recovers one **Chahārak** per **Man** (or the monetary equivalent) on the flesh of every animal slaughtered for food; and there is reason to believe, though efforts are made to conceal the fact, that he also collects an excise of 2 **Tūmāns** on every hundred fleeces exported from Ma'shūr.

The customs of Ma'shūr before their transfer to the Imperial Persian Customs Department were valued at 6,000 **Tūmāns** per annum; no proper estimate of their yield under the new régime can be framed, but it is said to amount to 20,000 **Tūmāns**. There is no telegraph office. A post office managed by the Customs exists however, and a weekly service to **Muhammareh**, **Hindiyān** and **Būshehr** is maintained.

MASĪRAH*

مصيرة

The only large and important island now included in the Sultanate of 'Omān; it is situated off the South-Eastern Coast of 'Omān and begins about 140 miles below Rās-al-Hadd. Masīrah is of irregular oblong form, about 40 miles in length from north-north-east to south-south-west and lies parallel to the coast, from which it is distant about 10 miles. Constricted in the middle to about 4 miles in breadth, the island widens out above and below this point to 10 miles and again tapers towards each extremity. The eastern or "outward" side of the island is called Dhāhīriyah ظاهريه and the western or "channel" side Khorīyah خوريه. The sound which divides Masīrah from the mainland is so shallow that the greater part of it is dry at low water; it is navigable only on the side towards Masīrah. The channel is used by native vessels of about 40 tons.

A chain of hills traverses Masīrah longitudinally from end to end sending ridges down to all the principal capes, while shorter spurs protrude in different directions over the island. The highest summit, Jabal Madhrūb مذروب near the north-east corner, attains an altitude of 620 feet; hardly any of the peaks in the southern half exceed 300 feet, and in the narrow waist of the island the hills are low and undulating. Flat land is almost confined to the west side of the island, where it occurs in the shape of sandy plains that extend from the base of the hills to the sea and are raised only a few feet above sea level. The rocks of Masīrah are chiefly igneous, of enphotide and diorite, with here and there small tracts of limestone raised upon them. Copper is found in many places, mostly among green earthy diorites and in low trap hills; it occurs also as malachite, both disseminated and in veins. Traces exist in some localities of ancient workings and smelting furnaces. In the northern half of the island is a tabular bed of limestone, 2 miles long by $\frac{1}{2}$ a mile broad, which rests upon greenstone and is elevated about 400 feet above the level of the sea: both in horizontality and in colour it forms a marked contrast with the dark, rugged igneous rocks around and beneath it. On the inner side of the island, about the middle, good water is obtainable throughout the year at a few feet below the surface.†

Masīrah is almost destitute of vegetation. On the mountains only a few small herbs grow, and on the plains stunted Sidar and Samar trees, some herbaceous shrubs, and grass in matted tufts. Dates are few and poor

* For Masīrah Island see Chart No. 2369—10c.

† The geology of Masīrah is discussed by Carter in the *Bombay Asiatic Society's Journal* for 1844-7, pages 400-403.

and are not found at many places. Wild animals are gazelles and grey rabbits resembling the English rabbit but only half the size. Wild asses are found in the hills; and edible turtle, called Hamas abound in the sea, which also yields seer-fish, grey mullet, sharks and porpoises. The sperm-whale is common, and cuttle-fish and other cephalopods are in myriads. There are no hyenas or jackals. The climate is not unhealthy, and the thermometer in the north-east monsoon ranges from 68° to 78° F.

The people are **Jannabah** with a few **Hikmān** interspersed: the total number of males on the island is said not to exceed 200, and the permanent population is probably about 600 souls. The following are the principal settlements on both sides in order from north to south: there are no fixed villages in the interior.

Name.	Position, houses and inhabitants.	REMARKS.
<i>Dhāhirīyah or eastern side.</i>		
Jidūfah جدوفه	A dozen huts, in summer, of Jannabah from Sakalah and Jibsh on the mainland; in winter deserted.	Here the crew of the "Baron Inverdale" were massacred in 1904. Near the village is a cape called Rās Half.
Sha'inzi شعزني	1½ hours from Jidūfah; consists of 5 to 10 huts in the date season.	A few dates are grown here.
Wadi-al-Mahi وادي المهي	3 hours from Jidūfah; it exists only in summer when there are 6 or 7 houses of fishermen and cattle-owners.	This is a valley with dates which runs down to the sea.
'Amq عمق	4 hours from Jidūfah; 6 or 7 temporary huts of herdsmen.	There are 15 date trees here.
Haqal حقل	6 or 7 temporary huts of herdsmen. It is 4½ hours from Jidūfah.	The largest date plantation in the island is here.
<i>Khorīyah or western side.</i>		
Dawwah دوه	8 miles from Jidūfah. A mud fort and 40 huts of Jannabah , who are fishermen and sailors.	A few dates grow and there is water in wells close to the surface. About 15 Badans are owned here, some of which run to Bātinah ports for dates, and to Aden.

Name.	Position, houses and inhabitants.	REMARKS.
Umm Rasās أم رصاص	One mud house and 30 huts of Jannabah.	Opposite Umm Rasās is a long sandy island covered with mangroves and frequented by myriads of wading birds. Umm Rasās is the capital of Masirah.
Safāij سفاج	4 miles from Umm Rasās. 15 huts of Jannabah.	The people are fishermen.
Sūr Masirah سور مسيره	6 miles from Safāij. 20 do.	Do.
Jāiran جايران	4 miles from Sūr Masirah. 20 huts of Jannabah.	There are sheep here and a few cattle.
Kalbān كلبان	3 miles from Jāiran. Only occasionally visited by fishermen.	Nil.

The inhabitants of Masirah subsist on fish and turtle which they catch themselves, on dates from 'Omān Proper and Bātinah, and on rice from India which is brought by boats from Sūr. When provisions run short they obtain dates from Mahōt. The women and children eat shell-fish. Domestic animals are sheep and goats, which are not numerous on account of the scarcity of pasture; also dogs, cats and fowls.

In the monsoon the northern end of Masirah island is (or was till lately) frequented by tribesmen from the mainland who came, under pretext of fishing, to indulge in wrecking and other nefarious practices; among these were the Āl Bū 'Isa Bedouins of the Ja'alān district. The massacre of the crew of the "Baron Inverdale" at Jidūfah in 1904 was committed by these summer immigrants.

The exports of Masirah are tortoise-shell, shark-fins and dried fish, all of which go to Bombay in Sūr boats; and the principal import is cotton cloth brought by the same vessels. The people extract porpoise oil. The statement that they deal in ambergris is now incorrect: none has been found for over 40 years.

Suwaïq ; it is situated at the point where **Wādi Fara'** or **Rustāq** reaches the sea. **Masna'ah** is a small town of about 300 houses with date groves extending 4 or 5 miles along the sea and 2 or 3 miles inland ; the inhabitants are **Yāl Braik** (30 houses), **Yāl Shabīb** (20 houses), **Yāl Sa'ad** (50 houses), **Yāl Jarād** (80 houses), **Nuwāfil** (10 houses), **Balūchis** (90 houses), and **Persians** (20 houses). There is an Arab bazaar of about 50 shops, and the fort contains about 10 shops kept by **Hindus** ; there are also a few **Khōjah** traders. **Masna'ah** is the port of **Wādi Bani Kharūs** and of the **Rustāq** District : it possesses 4 **Baqārahs** running to the ports of **Trucial 'Omān** and 12 **Badans** plying to **Masqat** Town, also 20 **Shāshahs**. Livestock are 90 camels, 100 donkeys, 200 cattle and 320 sheep and goats : there are 9,000 date palms. There is a fort belonging to the **Sultān** of **'Omān** ; it is occupied by his **Wālī** of **Masna'ah** and is held by a garrison of 70 men. The customs duties produce about \$3,000 and **Zakāt** \$2,000 a year, of which \$1,000 is remitted to **Masqat**. Since 1901-02, before which they were farmed, the customs of this port have been under the direct management of the **Sultān's** officials.

This is the established spelling of the name, but educated inhabitants of the place state that it is frequently pronounced and sometimes written **مسقط** ; the latter is the form given by **Niebuhr**.

MASQAT
 مَسْقَط
BAY
 and
TOWN*

Situation.—**Masqat** is the capital of the **'Omān** Sultanate and the usual residence of the **Sultān** : it is situated in the **Masqat** District on the southern shore of the Gulf of **'Omān** rather less than $\frac{1}{2}$ of the way from **Ras-al-Hadd**, the eastern point of Arabia, to **Rās Musāndam** which marks the entrance to the Persian Gulf. It stands in the centre of an outcrop of volcanic rock which extends 10 miles along the coast from **Dārsait** to **Bandar Jissah** and has a depth inland of about 3 miles : the town is at the bottom of a cove, the easternmost of 5 large contiguous indentations, where **Wādi-al-Kabīr** وادي الكبير, a valley carrying the drainage of the greater part of the igneous basin, disembogues into the sea. The northern portion of the volcanic bed is diorite and the remainder euphotide of a dark-brown colour resembling serpentine : between the diorite and the euphotide is a deposit of green steatitic clay.

* The map for **Masqat** town is *Masqat and Matrah* (Survey of India, 1904-05) ; the chart, which contains views, is No. 2372-2869.

Rugged and almost inaccessible hills rise inland of the town on both sides of Wādi-al-Kabīr to heights of 500 and 400 feet, and are dominated by Jabal Bardah جرد or Saddle Hill in the background, which is 1,350 feet high and about 3 miles south of Masqat. Through the hills on the west a track barely practicable for animals leads over a pass to Riyām and so to *Matrah*; while on the south-east a somewhat similar pass conducts to Sidāb; both these passes are situated beyond the outermost suburbs and each is barred by a wall with a gateway in it. There is no route, except for foot-passengers, by Wādi-al-Kabīr to the interior.

Harbour.—The bay of Masqat * is about $\frac{3}{4}$ of a mile deep and $\frac{1}{2}$ a mile wide; it is open to the north-north-west. The western side of the bay is formed by a rocky promontory, 435 feet high, terminating at the seaward end in a point named Rās Kalbūh. The eastern side consists of Masqat Island, 1,300 yards long and 350 feet high, indented and precipitous all round and ending seawards in Rās Masqat. Between the southern end of Masqat Island and the mainland is a rocky islet, 100 feet high, which has a narrow and shallow channel upon each side of it; the channel between it and Masqat Island is known as Duwairah دويره. The foot of Masqat Bay is a sandy beach terminated at each extremity by a rocky eminence on which stands a fort; and it should be mentioned that a spur from the western side of the bay projects about 200 yards into the harbour, forming on its south side a small sheltered cove called Makallah مكالة.† The side of Masqat Island next the harbour is covered with the names of European ships of different nationalities painted in white upon the rocks; the custom of recording a first visit in this manner is a time-honoured one with which few vessels neglect to comply. Among the names are those of one or two Russian vessels which have lately been lost in the war with Japan.

Defences.—The principal defences of Masqat are the forts called Mirāni ميرانى and Jalālī جلالي perched on rocks at the opposite ends of the sandy beach already mentioned; each stands on a cliff about 150 feet above sea-level and is approached by a staircase cut in the rock. Mirāni on the west is very slightly the higher of the two; it is also the more complicated in its design and has a battery beneath it at water-

* See Admiralty Plan No. 2872-2869. Remarks by Admiral Atkinson-Willes, B.N., on Masqat harbour and defences will be found in the Government of India's Political Proceedings for June 1904.

† A photograph of the Makallah cove will be found among the Proceedings of the Government of India in the Political Department, October 1900; also a plan showing the nature of the ground occupied by the British and French naval coal yards, which are here.

(MAJ. P. Z. COX.)

level. Jalālī, to the east, is a rather smaller and simpler construction, but exhibits two tiers of casemated embrasures. These two forts, in conjunction, were well calculated at the time they were built by the Portuguese to command the town and to protect it both from the landward and seaward sides ; but neither of them has the slightest modern value or is in a state of even tolerable repair. Subsidiary maritime defences, also legacies of the Portuguese, are Sīrat-ash-Sharqīyah صيرة الشرقيه on the eastern side of the harbour about 250 yards within Rās Masqat, and Sīrat-al-Gharbīyah صيرة الغربيه on the other side, surmounting the promontory which shelters Makallah : both these are now in ruinous state. On the landward side the water-supply of the town, situated $\frac{1}{2}$ a mile up Wādī-al-Kabīr, is protected by a high, square fort of Portuguese construction with machicoulis, called Rāwīyah رويه ; and numerous points of vantage on the hills environing the suburbs are occupied by small blockhouses, the principal of which are Burj Sa'ālī برج سعالي above the south-east corner of the town, Bōsto بوستو behind the middle of the town, Burj-al-Murabba' برج المربع some distance up Wādī-al-Kabīr, Burj Damōdar دمودار above the west end of the town, Burj Madaimin مديين on the side towards Riyām, and Burj Makallah on the top of the ridge that forms the west side of the harbour. At present only the Mirānī and Jalālī forts are occupied ; their armament consists of a number of old muzzle-loading guns in bad order, fit only for firing salutes. The garrisons, amounting to 200 men of whom one-fourth are private retainers of the Sultān, are composed of Balūchis and miscellaneous Arabs armed with rifles but destitute of military training.

Town and suburbs.—Masqat consists of a town proper, surrounded by walls, and of a large agglomeration of unwalled suburbs twice or thrice as extensive as the town proper. It is necessary to deal with these separately.

The town proper is about $\frac{1}{2}$ a mile long from east to west and $\frac{1}{4}$ of a mile deep from the sea inland. On the north side it fronts the harbour and comes right down to the beach ; on the east it is enclosed by precipitous hills, which a gap called Mughab مغاب divides from the Jalālī hill ; on the south and west sides the town is walled. The wall is in fairly good order and has towers at intervals : it is broken in the middle of the south side by the Bāb-as-Saghīr باب الصغير or Little Gate on the road to Sidāb, immediately outside which is a good bazaar of about 40 shops and stalls, chiefly for the sale of provisions ; at

the south-western angle it is pierced by the Bāb-al-Kabīr باب الكبير or Main Gate, through which runs the route to the majority of the suburbs and to Matrah: both of these Bābs are fortified gateways at which guards are stationed day and night. There is another gate of less importance at the north-western corner under Fort Mirāni which is called Bāb-al-Mathā'ib باب المثائب; it consists of a row of four small iron-grated posterns through which Wādi-al-Kabir passes on its way to the beach. Many of the houses in the town are somewhat handsome erections of two or more storeys, built of stone, concrete or mud, and plastered with gypsum-stucco. The old mosques are low and mean, without either domes or minarets, but one of greater elegance and pretension is now (1905) in course of construction towards the east end of the town. The bazaars inside the town, containing about 300 shops, are roofed and rather dark: of the shops about 20 belong to arms dealers, 80 to money-lenders and bankers, 100 to sellers of piece-goods and 100 to provision merchants. The quarters of the town in order from east to west along the sea-face are:—

Name of quarter.	Limits and number of houses.	REMARKS.
Mughab مغيب	From Fort Jalali and the Mughab gap to the Customs-House. 8 houses.	It contains the British Consulate, furthest to the east, with the Agency Civil Surgeon's house next to it; also the quarters of the Agency clerks and the Agency Hospital.
Muhallat Banyān محلة بنيان	Immediately surrounds the Customs House and reaches some distance inland. 30 houses.	Here are the Indian bazaar and most of the residences of Indians.
Muhallat Āl Bā Sa'id محلة آل بو سعيد	From the Customs House to Fort Mirāni and inland to the Bāb-al-Kabir. 10 houses.	Consists of the Sultān's palace and the residences of his relations.

The inland quarters taken in the same order are:—

Name of quarter.	Limits and number of houses.	REMARKS.
Wuljat ولجات	From the east end of the town to the American Vice-Consulate. 70 houses.	Inhabited by Arabs of various tribes.

COPYRIGHT.

West end of Masqat Town with Sultan's Palace. & Fort Mirani

(MAJ. P. Z. Cox.)

Name of quarter.	Limits and number of houses.	REMARKS.
Muhallat-as-Sūq محلة السوق	From the American to the French Vice-Consulate. 100 houses and 300 shops.	Contains the main bazaar. The inhabitants belong to various races and tribes.
Muhallat-al-Bahā-rinah محلة البحارنة	From the French Vice-Consulate to the Bāb-al-Kabīr. 70 houses.	13 houses here are occupied by Shī'ahs as Mātams ماتم or places of lamentation.
Wadi-al-'Aur وادي العور	From Mirāni to the Bāb-al-Mathṣ'ib. 40 houses.	This quarter is to the west of that of the Al Bū Sa'id, which cuts it off from the sea. The inhabitants are chiefly Balūchis.

The suburbs consist mostly of mat-huts, but some of them contain a few fairly good houses. The following is a list;—

Name of suburb.	Position.	Inhabitants.	Number of houses and remarks.
Safafīr صفافير	Adjoins the town on the side towards Sidāb.	Chiefly Bahrainis.	50 houses.
'Ajam عجم	Between Takiyah and Safafīr.	Chiefly Persians.	40 houses.
Takiyah تكية	On both sides of the road to Sidāb, the furthest suburb from the town in this direction.	Chiefly Balūchis.	One of the largest of the suburbs. It is distinguished by a mound on which is a blockhouse. 100 huts.
Hinna حناء	On the west side of the Sidāb road, nearer to the town than to Takiyah.	Negroes, Persians and Arabs.	80 huts.
Bahārinah بحارنه	Adjoins Hinna and lies in the middle between the town and the Bōsto hill.	Mostly Persians.	50 houses.
Nisāsil نيساسيل	Between Bahārinah and Khutmah.	Persians from Qishm, etc.	The people are weavers. 50 houses.

Name of suburb.	Position.	Inhabitants.	Number of houses and remarks.
Khutmah خطمه	Outside the Bāb-al-Kabīr.	Arabs and Balūchis.	50 huts.
Bāb-al-Mathā'ib باب المتاعيب	Outside the gate of the same name.	Balūchis with some negroes and Arabs.	40 huts.
Dabghah دبغه	West of the Wādī-al-Kabīr towards Kalbūh.	Chiefly Balūchis.	Here is a fine house belonging to Nasibbin-Muhammad, Balūchi, the British Naval contractor. 100 huts.
Jafainah جفينه	Reaches up towards the pass leading to Riyām.	Balūchis.	50 houses.
Dallālin دلالين	West of the Wādī-al-Kabīr.	Bayāsirah and freed slaves.	Contains the buildings of the American Presbyterian Mission. 60 houses.
Halālu حلالو	Lies around the Rāwiyah fort on the west side of Wādī-al-Kabīr.	Negroes and Arabs of the Bani Wahaib and 'Awāmīr tribes.	A fruit and flower garden belonging to the Sultān adjoins the Rāwiyah fort on its north side. 50 houses.
Tūyān طريان	Extends up the Wādī-al-Kabīr above Rāwiyah.	Balūchis.	It is divided into 3 parts which are, in succession proceeding up the Wādī, Lōghān لوغان (40 houses of Balūchis); Hammāliyah حمه (15 houses of negroes); and Shāikh شيوخ (50 houses of Balūchis). Some distance above Tūyān there are pools of water in the Wādī-al-Kabīr where the town washermen do their work.
Zubādīyah زباديه	On the east side of the Wādī-al-Kabīr opposite Rāwiyah.	Arabs.	There are several acres of cultivation. The people are gardeners and grow lucerne, turnips and jowari. 45 houses.

Centre & Western end of Masqat Town with part of the Harbour.

(MAY P Z Cox)

Name of suburb.	Position	Inhabitants.	Number of houses and remarks.
Zidjāl زیدجال	Immediately below the Bōsto hill on its south side.	Jadgāls.	The inhabitants are shopkeepers. 45 houses.
Miyābīn ميايبن	Runs into recess in the hills south-east of Bōsto and is divided by a small rocky pass from Zidjāl.	Arabs, chiefly Bani Wahaib, and negroes.	40 houses.

Inhabitants.—The population of Masqat is exceedingly heterogeneous. Arabs of the full blood are extremely few and **Balūchis** appear to be numerically the strongest element; next to **Balūchis** are probably negroes and half-caste Arabs, called Mawālīd مواليد. The **Balūchis** are soldiers, sailors, porters, servants and petty traders. There is a considerable Persian community who are shopkeepers, fish-mongers and makers of quilts and bedding. Hindus number about 200 male adults and 50 women besides some children, the presence with some of them of their families being a recent innovation; they are bankers, importers from India of rice, piece-goods, sugar and coffee, date-exporters, silversmiths and owners of some of the best gardens in the suburbs. There are some Hadbārim حضارم or Hadhramautis in the Sultān's service, with their families; and a few families of fishermen from Soqotrah سقطرة come annually to the Makallah cove in the beginning of the hot weather and remain for a month or two. There are a few Abyssinians, called Habūsh حبوش, and Nubians, called Nūbān نوبان. About 20 Portuguese are settled at Masqat as general storekeepers, vendors of spirits and tobacco, clerks and servants. There are 10 **Khōjahs** and 6 Jews at Masqat. The population of Masqat is fluctuating and is at its lowest in the hot weather when more than half the inhabitants of the suburbs leave for **Sib**, **Barkah** and other places in **Bātinah** in quest of a less trying climate. In winter, when the town is full, the population of Masqat may be 10,000 souls, viz., 3,000 residing within the walls, 5,000 in the suburbs and 2,000 visitors: in size Masqat is inferior to **Matrah**. The principal food of the people, apart from fish, is rice; but the poorer classes subsist largely on bread made of jowari.

Resources and climate.—Masqat has no natural resources or amenities. Food and firewood are all imported, with the exception of the trifling yield

of a few date trees and of some small market gardens in Wādi-al-Kabīr and of the excellent and abundant fish which a fleet of boats belonging to the town catch outside the entrance of the harbour every morning when the weather permits. About 30 cattle and 200 sheep and goats are kept, which are fed largely on fish. The climate is equable but extreme, the heat in the sun rising to as much as 189° F. and the temperature on the house roof at night in June occasionally remaining at 106° F. There are only two seasons, a cool and a hot; the cool season lasts from November to March and is attended by occasional rain and heavy stormy weather with comparatively chilly winds from the north and north-west which produce outbreaks of malarial fever. The early part of the hot weather is the healthiest season of the year. The rainfall is about $4\frac{1}{2}$ inches per annum, and most of it is received during February and March in the course of a fortnight or 3 weeks.

Commerce, shipping, etc.—The choice of Masqat as capital of the country appears to have been determined by the comparative excellence of its harbour, which favoured trade and in former times enabled the Sultān to maintain a naval force and exercise some influence at sea, and by its inaccessibility, and consequent security, from the inland side. Even as a port, however, Masqat suffers from various disadvantages. The harbour lies open to the prevalent Shamāl, and landing is difficult when that wind blows. Again Masqat has no landward communications and all goods for the interior after being imported at Masqat must be re-shipped to some other distributing centre, generally to **Matrah**. Despite these drawbacks Masqat continues to be the only steam-port of 'Omān, the **Matrah** anchorage being regarded as unsafe, and through it passes practically the whole export and import trade of the country.

The only local manufactures are lungis, white skull-caps embroidered with silk, matting of Makrān reeds, and ornamental daggers called Khanājir.

Dates are the only export of any account. The values of the principal articles of export in 1906-07 were, in lakhs of rupees:—dates, $19\frac{1}{2}$; specie, $10\frac{1}{2}$; dried fish, mother-of-pearl and pearls, 1 each; dried limes, nearly 1; and fresh fruit, $\frac{1}{2}$. The total value of the exports for the year was Rs. 36,93,820, of which Rs. 26,92,600 went to India, Rs. 3.69,000 to Turkey in Asia and smaller amounts elsewhere.

The Fard dates of Masqat all go to America, where they are much esteemed; other sorts are exported to Kach, Calcutta and Rangoon, mostly in native vessels. Native sailing boats from

the Red Sea, mostly from Hodaidah, visit Masqat in September of each year and some of them ship full cargoes of dates at Masqat ; others, which have previously visited Basrah, merely complete their cargoes ; both dispose of their purchases along the east coast of Africa and in Madagascar. The date-trade with India is mostly by Kūtiyahs from Kach which come over at the beginning of August. The dates are collected at **Matrah** by Hindu dealers, who sometimes advance money on an instrument executed before the Qādhi to Arab brokers ; in these cases the dates are brought in at harvest time by the broker, who subsequently receives commission at the rate of $2\frac{1}{2}$ to 5 per cent. on the price which the Hindu merchant is able to obtain. For the Indian trade dried dates are preferred ; these are dates boiled in the Ratab or semi-ripe state and then dried ; they are in request at native weddings in different parts of India.

The chief imports in 1906-07 were, according to the same notation :—rice, 24 ; arms and ammunition, $16\frac{1}{2}$; cotton piece-goods, nearly $8\frac{1}{2}$; specie, $4\frac{1}{2}$; twist and yarn, $2\frac{1}{2}$; silk and silk goods, 2 ; sugar and coffee, 2 each ; and cereals other than rice, nearly 2. The total value of the import trade for the year was Rs. 69,21,375, of which Rs. 43,25,000 belonged to India, Rs. 7,94,900 to the United Kingdom and smaller amounts to other countries.

The large import of rice is chiefly from Calcutta ; the import of wheat, which is less important, is from Karāchi, Persia or Turkish 'Irāq according to the season and the prices ruling in those countries.

In 1906-07, 302 steam vessels with a tonnage of 578,505 entered and left the port of Masqat : of these 279, with a tonnage of 542,525, were British. The shipping of Masqat port consists of 1 Baghlah owned by a Hindu British subject, of 12 large Horis for loading and unloading cargo, and of 50 small Horis for conveying passengers between Masqat and **Matrah**. Cargo and fishing boats are built, and larger boats are repaired, at Masqat. The boat building yard is at the mouth of Wādi-al-Kabir, below Fort Mirāni.

There is only one European firm at Masqat and it is British ; its business consists in exporting dates and in importing piece goods. Four British firms engaged in the trade in arms and ammunition are represented by agencies. Ten Hindu firms employ about Rs. 10,00,000 in the Masqat trade and own house and other property, worth about Rs. 5,00,000, at Masqat ; altogether there are about 35 Hindu traders, all of whom are under British protection. The Hindu merchants export dates and import piece-goods, rice, sugar and coffee ; they also deal to some

extent in pearls and shells. The Hindu commercial community is smaller than it once was, but its prosperity is at present on the increase in consequence of expanding trade. Five miscellaneous firms (Armenians, Goanese, etc.) do business in arms and ammunition or in spirits and enjoy British protection.

Currency, weights and measures.—The currency of Masqat is described in the article on the 'Omān Sultānate. We may add here that the usual means of payment in the foreign trade is by Hundis, here called Kundis كُنْدِي, or bills of exchange at 21 days' sight, drawn against requirements; these instruments are practically accommodation bills as possession is not given of the bills of lading for the cargo against which they are drawn and there is no relation between the value of the Hundi and the value of the consignment,—a trade usage sufficient in itself to deter European firms from engaging in banking business at Masqat.

The weights and measures of Masqat are the same as those of **Matrah**, but differ somewhat from those of the **Bātinah** coast and other parts of 'Omān. The ordinary table of Masqat weights runs as follows:—

	1 Mithqāl مثقال	= 57·6 grains	English.
1 Riyāl ريال	= ½ Mithqāl	= 15·8 drams	„
1 Kiyās كياس	= 6 Riyāl	= 5 oz. 14·8 drams	„
1 Mann من	= 24 Kiyās	= 8 lb. 14 oz. 3 drams	„
1 Farāsilah فراسله	= 10 Manns	= 88 lb. 13 oz. 14·4 drams	„
1 Bahār بهار	= 20 Frāsilahs	= 15 cwts. 97 lb. 4 oz. 15 drams,,	

Dates are sold by these weights; so also are liquids. Saffron, musk and ottar of roses, however, are sold by a Mithqāl of 62·6 grains English.

Gold is sold by Rattis رَتِّي and Ibrāmīs اِبْرَامِيس, one Ibrāmīs being equal to 28 Rattis: the Ibrāmīs is equal to 54·46 grains English and the Ratti consequently to a little less than 2 grains. Civet is sold by a Waqiyah وَاقِيَه of 14·5 grains English. For transactions in grain measures of capacity are employed, namely, the Sidis سِدِس and Farah فَرِه; a Farah consists of 40 Sidis, and 2½ Farahs of ordinary wheat are equal in weight to 2 Karāchi maunds. The measure of length is the actual cubit, *viz.*, the distance from a man's elbow to the point of his middle finger. Other measures of length are the long span or Shibar شِبَر and the short span or Fatar فَتَر, from the tip of the thumb to the tip of the little and the first finger, respectively, when distended as widely as possible.

Administration.—The town of Masqat is personally governed by the Sultān without the intermediacy of a Wāli. Of the gross produce of the few gardens which belong to the town $\frac{1}{10}$ is taken as a tax. There is also a municipal police tax called Hirāsah حراسه which is collected monthly from the occupiers of shops and places of business. The main source of revenue is of course the sea-customs, which are noticed in the article on the Sultānate of 'Omān.

This name is not current locally ; but it is the most suitable that can be given to that tract in the 'Omān* Sultanate which surrounds **Masqat Town** and is enclosed between Wādi Samāil on the west, Wādi Tāyīn on the south and the sea upon the east and north.† With these limits the district has a length of about 50 miles from west-north-west to east-south-east and a maximum breadth of about 25 miles.

MASQAT
مسقط
DISTRICT

Configuration.—Masqat District consists of a complexus of small valleys which diverge in different directions from the slopes of Eastern Hajar to the sea. The principal of these valleys in order from west to east are Wādi Risail, Wādi 'Adai, Wādi Bait-al-Falaj, Wādi Maih and its tributaries, Wādi-al-Hilu and Wādi Mijlās with its affluents, including Wādi Sarain, all of which are described under their own names. The surface of the district, rugged and barren in its general aspect, is chiefly occupied by this network of valleys with their intervening ridges, but in places the country opens out into small expanses of more or less level plain which possess specific names, such are Wādi Bōshar and Saih Hatāt, to which special articles are devoted, and Saih-al-Harmal سبخ الحرمال or the " Plain of Ru'e," a widening of Wādi Bait-al-Falaj, between Bait-al-Falaj and Ruwi. The coast of the Masqat District is bold, the hills everywhere east of Wādi 'Adai coming right down to the sea : in the neighbourhood of **Masqat Town** they are volcanic and elsewhere of limestone rock.

* For authorities maps and charts see footnote to article 'Omān Sultanate. A view of part of the coast of this district will be found in Chart No. 2313--2837 A.

† Thus defined the district slightly overlaps that of Eastern Hajar, the seaward slopes of Hajar being common to both. The places common to both have been included for statistical purposes in the Masqat district.

Communications.—Apart from the valleys of the interior and their villages and from the inhabited places on the coast, among which are the towns of **Masqat** and **Matrah**, the district possesses few points of interest. It is necessary however to mention various routes by which **Matrah** and, through **Matrah**, **Masqat Town** are placed in communication with central 'Omān. The most important of these is the westernmost which, leaving **Matrah** by way of **Ruwi** and traversing Wādi Bōshar, reaches Wādi Samāil near Fanjah and so taps the main highway between the coast and the interior of 'Omān. Probably the second in importance is one which, starting likewise by **Ruwi**, follows Wādi 'Adai to a point 7 miles above Birain and thence crosses into the upper basin of Wādi Maih, whence two steep passes, 'Aqabat Qahza and 'Aqabat 'Amdah conduct into Wādi Tāyīn; Wādi Tāyīn in its turn gives access to the **Sharqiyah** district. A third route, running from **Matrah** by **Ruwi** to Birain, leaves Wādi 'Adai at that point and crosses direct to Wādi Maih which it ascends to its head and then, surmounting an intervening pass, descends Wādi Mijlās to **Quryāt** on the coast. The only land route which starts from **Masqat Town** is one which skirts the coast south-eastwards as far as Qantab, passing through all the intermediate coast villages; at Qantab its distance from the shore increases, but **Jissah** and **Yiti** on the sea can be reached by following it. This last route is connected with **Ruwi** by a track that enters it between **Jissah** and **Yiti**. **Yiti** is connected with two different points on the **Matrah-Quryāt** road by tracks, one of which leads up Wādi Maih, the other up Wādi-al-Hilu.

Topography.—It remains to describe the features and places on the coast of the Masqat District: in the following table they are given in the order in which they occur from west to east and, except when the contrary is stated, they stand upon the sea.

Name.	Position.	Nature.	REMARKS.
Adaibah عدايبه	1½ miles north-west of Ghubrah and a mile inland.	Village composed of 50 or 60 huts of Aulad Kulaib, Al Wahibah, Bawāri and Hinādīs; water is from wells.	A short distance to the west of 'Adaibah is Khalil, a date-plantation to which a village also called Khalil خليل was once attached; but, the houses having been

Name.	Position.	Nature.	REMARKS.
Ghubrah غبرة	11 miles west-south-west of Matrah and a short distance inland.	Village of 60 huts, divided into 2 quarters by a Wādi. The people are Bani Hasan and Al Wahibah who keep camels, sheep and goats, are fishermen and export firewood to Matrah .	carried away by a flood, the inhabitants removed to 'Adaibah. The only cultivation is of dates; there are 5,000 trees. Animals are 4 camels, 8 donkeys, 4 cattle and 70 sheep and goats. There are 3 Badans and 3 smaller boats. There are date-plantations: water is from wells. A garden here belongs to a Hindu of Masqat Town . There are 3 camels, 10 donkeys, 6 cattle and 100 sheep and goats. Date palms number 2,000.
Khuwair خوير	On a small creek about 8 miles west of Matrah .	Village of 30 to 40 date-branch huts of Bani Hasan , who are fishermen and owners of sheep, cattle and camels, on which last they bring firewood for sale to Matrah .	By some Khuwair is reckoned to Wādi Bōshar. The family of the Sultān of 'Omān sometimes come to stay at Khuwair for sport and change of air. There are 3 camels, 10 donkeys, 6 cattle and 60 sheep and goats, also 1,000 date trees.
Sāru سارو	6 miles west of Matrah .	30 houses of Bani Hasan .	Animals are 4 donkeys, 4 cattle and 60 sheep and goats. There are 500 date palms.
Rās-al-Hamar راس الحمير	4½ miles west-north-west of Matrah .	Point of red cliffs 150 feet high.	The hills recede from the coast west of this point. East of it, between it and Dārsait, is a sandy beach more than a mile long. In this vicinity there are 1,500 date palms and 60 camels belonging to the Sultān of 'Omān graze, besides other animals.

Name.	Position.	Nature.	REMARKS.
Faha. فاحا	Off Rās-al-Hamar, 2 miles out to sea.	...	See article Fahal island.
Dārsait دارسيت	1 mile north-west of Matrah .	Village of 40 huts of Bani Hasan consist- ing of two quarters, one on each side of Wādī Bait-al- Falaj at its mouth. The people send fish to Matrah and Masqat Town; they own 4 or more Badans and 40 dug-outs.	The date-groves of the village extend 1 mile up the Wādī. here flat and open, to 'Alwa علي, also a part of Dārsait, where Khōjahs and Bani Wahaib own some houses and gardens. Land is valuable at 'Alwa and fodder and sweet pota- toes are grown among the date-trees. There are 600 date palms and 3 Badans and some fishing boats. Animals are 10 donkeys, 4 cattle and 60 sheep and goats.
Aiyint عينت	$\frac{3}{4}$ of a mile north- west of Matrah .	A summer resort of Khōjahs .	The village has a few date trees and stands a little way back from the sea. There are 4 donkeys, 10 cattle and 400 date palms.
Shataifi * شطيفي	$\frac{1}{2}$ a mile north of Matrah .	Village of 30 or 40 huts of mixed tribes, especially Bani Zarrāf, standing on a sandy beach at the foot of a bay: the inhabitants are fishermen.	The bay is open to the north-east and is never used by shipping. There are 3 cattle, 50 sheep and goats and 6 fishing boats.
Arbaq * اربع	Between Shataifi and Matrah , ad- joining the latter.	Small village of Bani Zarrāf at the foot of a bay; the people are sailors plying to India and merchants.	The village is less pros- perous than it was owing to the loss at sea of vessels belonging to it. These are 25 date palms, 5 donkeys, 4 cattle and 60 sheep and goats. About 50 Askaris are quartered at night in a block- house belonging to Arbaq for the pro- tection of Matrah .

* See Admiralty Plan No. 2372—2869.

Name.	Position.	Nature.	REMARKS.
Matrah* مطرح	2 miles west of Masqat Town.	...	See article Matrah .
Dikkah* دكه	Adjoins the east end of Matrah , of which it is practically a suburb; but it is to be distinguished from the quarter of the town so called.	100 houses of Balūchis .	There are 250 date palms, but no boats. Animals are 60 camels, the property of the Sultān of 'Omān, also 70 donkeys, 100 cattle and 500 sheep and goats.
Matairah* مطيرح	On the sea, a little to the east of Matrah : it is separated from Dikkah by a rocky mound.	90 houses of Balūchis and mixed tribes.	The village is in 2 parts divided from one another by rocks. The inhabitants are fishermen and pearl divers and own a few small boats. Animals are 5 donkeys, 3 cattle and 40 sheep and goats. About 50 'Askaris are quartered at night in a blockhouse belonging to Matairah for the protection of Matrah .
Riyām* رياح	Midway between Masqat Town and Matrah , at the foot of the easternmost cove in Matrah bay.	40 houses of Arabs of mixed tribes and slaves.	The ordinary land-route between Masqat Town and Matrah passes through Riyām . There are 3 donkeys, 3 cattle, 30 sheep and goats and 15 fishing boats.
Dōhab* دوحه	On the west side of the promontory that divides the bays of Riyām and Kalbūh .	Village consisting of a few huts of Al Kathīr from Dhufār .	Above it is a tower. There are 2 cattle and 20 sheep and goats.
Kalbūh* كلبوه	$\frac{1}{4}$ of a mile north-west of the nearest part of Masqat Town .	Village consisting of about 15 stone houses and 20 or 30 huts of slaves, Balūchis and Arabs of Bātinah tribes.	Stands on the sandy beach of a small bay between the bays of Masqat and Matrah . The Dōhab tower is on the western point of this bay; and the eastern point, which divides it from Masqat Bay .

Name.	Position.	Nature.	REMARKS.
Masqat Town مسقط	also carries a tower, called the Kalbūh tower. Here there are 5 donkeys, 3 cattle and 40 sheep and goats also 7 fishing boats. See article Masqat Town.
Sidāb سداب	At the foot of a bay which is 1 mile south of Masqat Town.	Village consisting of about 250 houses, mostly of Arabs and Mawālīd, but a good many of them Balūchis. The majority work in Masqat Town; the rest are fishermen. They own one or two Badans and about 30 dug-outs.	The bay is circular and about 300 yards in diameter: the sides of the entrance are of rock, within all is pure sand. Precipitous hills surround the village on the landward side. The houses are mostly reed and mat cabins; some have upper storeys of reed and mat. Some dates are interspersed with the houses and lucerne is grown at the south end, where are the wells supplying all the drinking-water. At this end are two good country houses, one of which belongs to a Masqat Hindu. There are 10 donkeys, 20 cattle, 40 sheep and goats and about 700 date trees. Some of the dates are the private property of Saiyid Faisal, the present Sultan of 'Omān.
Harāmūl حرامول	In a small bay $1\frac{1}{2}$ miles south of Masqat Town.	Village of about 15 houses of mixed tribes; the people are fishermen.	The quarantine station of the Masqat port is here. There are 7 fishing boats and a few sheep and goats, also 20 date trees.
Raudhah روضه	$1\frac{1}{2}$ miles south of Masqat Town.	A date-plantation with a few houses of cultivators and wells.	This is an estate belonging to Muhammad, the brother of the present Sultan of 'Omān. A rocky islet called Jazīrat Sirah صيرة lies a little off Raudhah to the north-east. There are 1 donkey, 4 cattle, and 30 sheep and goats

Name.	Position.	Nature.	REMARKS.
Bistān بستان	3 miles south of Masqat Town.	Village of 20 huts of Bani Wahaib who are cultivators and date growers.	here, but no boats. The palms number 800. There are some wells here. Animals are 20 donkeys, 20 cattle and 200 sheep and goats. Date palms number 1,400.
Qantab قناب	4 miles south-south-east of Masqat Town.	Village of 20 dwellings, mostly huts, of Bani Hasan. The people fish and grow dates by irrigation from wells.	The Sultan of 'Omān occasionally goes to stay at this place. There are 5 donkeys, 4 cattle, 30 sheep and goats and 400 date trees.
Jissah (Bandar) بندر جصة	5 miles south-east of Masqat Town.	...	See article Bandar Jissah.
Yiti يتي	About 1 mile inland on the right bank of Wāli Maih, just above its junction with Wadi-al-Hilu.	Village of 60 houses of Bani Wahaib, Hādiyin, Bani Battāsh of the Ma'ashirah section, and some Balūchis. The people are fishermen, boatmen and carriers.	There are 10 camels, 35 donkeys, 10 cattle, 400 sheep and goats and 1,200 date palms.
Khairān* (Bandar) بندر خيران	10 miles south-east of Masqat Town immediately west of Rās-al-Khairān.	Anchorage and village. The anchorage consists of a bay protected by 2 islands; it is frequented by fishing boats only, but could be used by larger vessels; the bay extends with shoal water for a mile southwards and ends in a swamp. The village consists of 30 huts of the Ma'ashirah section of the Bani Battāsh.	The people are fishermen and dive for pearls in their own locality. They own 2 or 3 small fishing Badans and some Horis. There are no animals.
Khaisat-ash-Shaikh خيصة الشيخ	13 miles south-east of Masqat Town.	Village of 1 or 2 houses only. The people, who are Bani Battāsh of the Ma'ashirah section, cultivate some dates.	Resembles Bandar Khairān

* For a plan of this anchorage see Chart No. 2369—10 C.

Name.	Position.	Nature.	REMARKS.
Sifah سيفه	16 miles south-east of Masqat Town.	Village of 40 houses of the Bani Battāsh.	There is a date-grove here with about 300 trees, also a square tower on a mound 60 feet high. Animals are 8 donkeys, 8 cattle and 150 sheep and goats.

Population.—The following is an estimate of the settled population of the Masqat district :—

Wādī 'Adai	500
Wādī Bōshar	4,800
Wādī-al-Hilu	200
Wādī Maih (excluding Yiti near the coast)	3,000
Wādī Mijlās	2,600
Wādī Risail	300
Places on the coast (see topographical table above)	29,250

Total . 40,650 souls.

The composition of the population by tribes can be ascertained on reference to the separate articles on the Wādīs of the district and to the topographical table above.

A few of the Bani Wahaib appear to be the only nomads in the Masqat district.

MAS'ŪD

مسعود

An Arab tribe of Turkish 'Irāq belonging to the neighbourhood of Karbala and inhabiting both banks of the Husainiyah canal from the Euphrates down to the Pul-i-Sufaid, as well as some land on the Mshorab canal to the west of the Shatt-al-Hindiyah: they seem to occur also on the left bank of the Euphrates a little above Musaiyib. The bulk of the tribe dwell in hamlets of grass, thorn and mat huts sprinkled along the banks of the Husainiyah canal, but the leading men have brick-built castles. The Mas'ūd are about 7,000 souls. As a tribe they are reputed brave, generous and hospitable, and they have about 1,000 horses; but only the Shaikhs possess modern firearms. In religion they are Shi'ahs; by occupation they are agriculturists and graziers owning cattle, buffaloes and sheep. They are generally at feud with the Yasār and live in amity and alliance with the Janābiyin. The small Khadhīrāt and Zumailāt tribes are politically dependent on the

Mas'ūd, and some would even classify the latter as a section of the Mas'ūd. The Mas'ūd joined the townspeople of **Karbala** in their rebellion in 1843 against the Turkish Government. They are exempt from conscription for Turkish military service. The official Shaikh of the tribe, recognised by the Turks, is Ibrāhīm-ibn-Ḥāji Hatmi; but the real Shaikh is Ḥāji Sa'ūd, eldest son of Ḥāji Hatmi: there is not however any dissension between these two. The Mas'ūd comprise the following sections: Āl Bū Ghānim آل بو غانم, Harir حريز, Inaqābāt, Qarid قريد and Shūkān شركان: in all there are about 15 different subdivisions. The Mas'ūd are said to be of **Shammar** origin.

The largest town in the Sultanate of 'Omān, and the most important commercially. **Matrah** is situated on the south-west side of **Matrah** Bay and is about 2 miles west of **Masqat** Town. Like **Masqat** it is enclosed on the landward sides by rugged volcanic hills; but its isolation from the interior is less complete, for an easy route leads through a pass called Kharāshif الخراشيف to **Bait-al-Falaj** and **Ruwi**, whence routes described in the article on **Masqat** District diverge to various parts of 'Omān. The ordinary way to **Masqat** Town lies by **Matairah** and **Riyām** along the coast; there is also a more inland route across the hills. Communication with the capital, however, is maintained chiefly by boat, the passage occupying in a rowing-boat about $\frac{3}{4}$ of an hour.

The bay of **Matrah**† is 1,400 yards wide, 1,200 yards deep and shoals regularly from 8 fathoms at the entrance to the beach on which the town stands. In appearance it is less remarkable than the bay of **Masqat**; but, though open to the north-east, it is sheltered from the north-west, is more easily entered, and is preferred as a harbour by ordinary native craft.

The town extends along the water's edge for $\frac{3}{4}$ of a mile and has a mean depth inland of about 250 yards. The fort, a Portuguese construction of the same type as the forts at **Masqat**, stands on a rocky eminence at the east end of the town which, like **Masqat**, is defended, where nature has left it unprotected, by a wall with fortified gateways; the most important gate is the Bāb-al-Kabir باب الكبير at the south-west corner of the town, by which the **Ruwi** road leaves **Matrah**. Several blockhouses, as at **Masqat**, command the approaches through the hills. The Customs House is on the beach slightly to the west of the fort. In the centre of the town upon the sea-front stands the fortified quarter inhabited by the

MATRAH*

مطرح

* The map and chart for **Matrah** are the same as for **Masqat** Town, *q. v.*

† See Admiralty Plan No. 2372—2869.

Khōjah community and generally known as the Khōjah Fort: behind it, some distance to the north-west of the Bāb-al-Kabīr, is the Bāb-as-Saghīr باب الصغير. About midway between the Customs House and the Khōjah Fort a hollow, coming from the Bāb-al-Kabīr and known as Khor Bambah ببه , reaches the sea. The houses of **Matrah** Town are meaner than those of **Masqat**, but there is less suburban squalor.

The following are the quarters of **Matrah** within the walls:—

Name.	Position.	Number of houses and remarks.
Sūr-al-Lawāṭiyah سور اللواتيه	About the centre of the town, on the sea face and extending some distance inland.	300 houses of Khōjahs . This is the Khōjah Fort already mentioned.
Takiyah تكيه	On the south side of Sūr-al-Lawāṭiyah.	150 houses of slaves and servants of the Khōjahs ; also Balūchis and Jadgāls .
Hārat-as-Siyāgh حارة الصياغ	On the sea, immediately north-west of Sūr-al-Lawāṭiyah.	50 houses of Hindu silver-smiths, Balūchis and Bayāsirah .
Sarmalla سرمله	On the sea immediately north-west of Hārat-as-Siyāgh.	25 houses of Balūchis and Bayāsirah . At the junction of the Hārat-as-Siyāgh and Sarmalla quarters, on the side furthest from the sea, stood the old Jabru جبر gate.
Hārat-ash-Shamāl حارة الشمال	Forms the extreme north-west end of the town upon the sea, being situated between the Sarmalla quarter and the separate village of Arbaq.	125 houses of Manādharah , Balūchis , negroes and Hindus. At the junction of the Sarmalla and Hārat-ash-Shamāl quarters, on the inland side, is the present gate called Jabru جبر in the town wall. There is also a gate called Bāb-al-Mathā'ib مئاعيب.
Hārat-as-Sūq حارة السوق	On the sea front from Sūr-al-Lawāṭiyah to the Customs House	500 houses of Balūchis , Jadgāls , Arabs of mixed tribes, Hindus and Khōjahs . Here is the bulk of the bazaar.
Wādi الوادي	On both sides of Khor Bambah from the Bāb-al-Kabīr to the sea.	80 houses including 16 Khōjah Sablahs, 20 houses of Balūchis and negroes and 4 shops.
Nāzimaujah* نازيموچه	Between Takiyah and Wādi and has Hārat-as-Sūq on its north side.	30 houses of slaves and servants of the Khōjahs ; also Balūchis and Jadgāls and a few Hindus.

* This name is probably of Swahili origin; it recalls the Mnazi Moja ("One Coconut Tree") of Zanzibar.

Name.	Position.	Number of houses and remarks.
'Iryānah عريانه	On the inland side of the town, bounded on the north by Hārat-as-Sūq and on the west by Wāli.	300 houses of Balūchis, Arab brokers of mixed tribes and Bayāsirah. In this quarter also there is a gate in the town wall called Bāb-al-Mathā'ib متاعيب.
Dalālīl دلاليل	On the south side of the Portuguese Fort and comes down to the sea between it and the Customs House.	60 houses of Arabs of mixed tribes and Bayāsirah.
Dikkah دكة	South of Dalālīl and east of 'Iryānah.	120 houses of Balūchis and Bayāsirah.

The following are the suburbs outside the walls :—

Jābru حبر	Inland (that is west) of the Hārat-ash-Shamāl quarter of the town.	60 houses of Persians and Balūchis. In this quarter Saiyid 'Azzān-bin-Qais was killed in 1871. There is a Shī'ah Mātām here.
Khazzāfin (Hārat-al-) حارة الخزافين	Inland (that is west) of the Hārat-as-Siyāgh and Sar-malla quarters of the town.	100 houses of mixed tribes.
'Ajām عجم	Inland (that is west) of Hārat-al-Khazzāfin.	250 houses of Balūchis and Persians. A new and growing quarter.
Hārat-al-Balūsh حارة البلوش	Adjoins the town quarters of Takiyah and Nāzimaujah on their inland (that is their south-western) side. Also called Gharaifah, غريفه from a hill to the west of it.	300 houses including 30 of Bani Jābir; the remainder are Balūchis, Jadgāls, Bani Hadhram and Bayāsirah.
Tūyān طريان	Outside the Bāb-al-Kabīr, on both sides of the road leading to the Kharāshif pass.	180 houses of the same tribes as in Hārat-al-Balūsh.
Zabādiyah زباديه	South of Tūyān, on the east side of the road to the Kharāshif pass, extending towards a hill called Lūluwāh. لولوا	50 houses of the servants and slaves of Khōjahs and others.

The villages of Arbaq and Matairah, described in the article on **Masqat** District, are closely connected with **Matrah**. Each has a block-house in which a guard of about 50 'Askaris is stationed at night for the protection of the town.

The population of **Matrah** is a medley of races resembling that of **Masqat Town**. But whereas at **Masqat** there are many Hindus and almost no **Khōjahs**, here **Khōjahs** are numerous and Hindus comparatively few, the **Khōjahs** numbering about 1,050 souls, while the Hindus are only about 30 men, of whom 7 or 8 have their families with them. The population of **Matrah** is greater than that of **Masqat**, and the permanent inhabitants are about 9,000 within and 5,000 outside the walls, or in all about 14,000 souls, of whom at least half are **Balūchis**. The predominant Arab tribes are **Bani Hasan**, **Siyābiyīn**, **Rahbiyīn** and **Bani Jābir**.

The bulk of the trade of up-country 'Omān, apart from the mere shipping and unshipping of goods which takes place mostly at **Masqat**, is concentrated at **Matrah**; and its volume and character appear from the article on **Masqat Town**. **Matrah** is the loading and unloading place of all caravans for and from the interior. The import and export trade is mostly in the hands of the **Khōjahs** and Hindus, who are as a rule general merchants and shopkeepers not confining themselves to particular lines of business. Both classes import rice from Calcutta and piece goods, sugar, oil, iron and spices from Bombay and export wet and dried dates; the **Khōjahs** also export some quantity of dried fish of the small sardine variety called **Matūt**. Some of the Hindu merchants settled at **Matrah** visit the **Samāil** valley and 'Omān Proper in person to purchase dates. Of the Hindu merchants 10 and of the **Khōjah** merchants 38 at present enjoy British protection. To the port of **Matrah** belong 7 **Baghlahs** and 20 **Badans**, all owned by **Khōjahs**.

The town is governed by a **Wāli** on behalf of the Sultān of 'Omān and has a garrison of 100 'Askaris.

MATTI
(**SABĀ-**
(**KHAT**))*
سبخة مطي

This is the name used among the inhabitants of 'Omān; but by dwellers in **Qatar** and the **Hasa Sanjāq** it is generally called **Sabākhat** 'Omān, and sometimes it is even spoken of as **Wādi Sabākhat**. It is a coastal district in the **Abu Dhabi** Principality near its western end, and by some it is regarded as forming the western boundary of 'Omān in the strictly geographical sense.

The extent of the district upon the coast is from **Jabal Wutaid** in

* This article is partly from information by Captain F. B. Prideaux, Political Agent in **Bahrain**, in whose *Map of Jāfūrah, etc.*, the tract in question is included.

Dhafrah to **Dôhat-as-Sila'** in **Mijan**, a distance of about 30 miles; and its centre is situated very nearly upon the 52nd meridian of east longitude. Inland it extends probably 60 miles, and its length is possibly greater at a distance from the coast than it is upon the sea. **Sabákhat Matti** is enclosed, landwards, by **Mijan** on the west, by **Jāfūrah** and possibly the **Ruba'-al-Khāli** on the south, and by **Dhafrah** on the east. The well of **Sufuk** in **Jāfūrah** marks approximately the boundary of **Sabákhat Matti** on the south.

The whole of the district appears to be a saline or nitrous marsh, the extreme of desolation, without wells or grass, or even mangroves at the coast. It is said that the sea runs up the middle of the **Sabákhat** at high tide for as much as 12 or 15 miles and that camels in that part of it are liable to be lost. Ordinary travellers prefer to pass it by sea, and the crossing is so difficult, and even dangerous, that the **Manāsīr** Bedouins in their periodical migrations between **Dhafrah** and **Qatar** avoid it by deviating into the **Jāfūrah** desert to the south.

A large and picturesque village in **Wādi Tāyīn** in the Sultanate of 'Omān, about 10 miles above **Hail-al-Ghāf**: it is the capital of the **Bani Battāsh** tribe and has a population of about 1,700 persons, all **Bani Battāsh** and their dependants, among the last being **Bani Na'ab**. It stands on both sides of the **Wādi**, but chiefly on the right bank. The following are the quarters of the village :—

MAZĀRA'

مزراع

Name and quarter.	Position.	Number of houses.	REMARKS.
Sāh ساح	On the north-west side.	Over 100.	Has a separate fort. Animals are 5 camels, 20 donkeys, 40 cattle and 200 sheep and goats.
Ghnbairah عبيرة	Do.	70 to 80.	The inhabitants are of the Bani Juma'ah section. There are 10 camels, 25 donkeys, 15 cattle and 200 sheep and goats.
Jazīr جزير	The central quarter.	40.	Has a separate fort. Livestock are 10 camels, 28 donkeys, 20 cattle and 200 sheep and goats.

Name and quarter.	Position.	Number of houses.	REMARKS.
Hisn حصن	East of Jazir.	40.	Has a separate fort. There are 20 donkeys, 20 cattle and 150 sheep and goats.
Qaryah قرية	South-east of Jazir.	30.	Animals are 20 camels, 12 donkeys, 15 cattle and 100 sheep and goats.
Minsift منسفت	South-east of Hisn.	40.	Has a fort of its own. Livestock are 14 camels, 28 donkeys, 25 cattle and 200 sheep and goats.
Mizra'an-Na'ab مزرع العنب	South of Hisn.	10.	The people are shepherds and own about 400 sheep and goats and 30 donkeys.

The village is surrounded on all sides by steep hills; and an old tower and part of the village, built on a crag, command the approach up the valley. There are extensive date groves containing 12,000 trees or more, and there is cultivation on both sides of the Wādi and in two tributaries which join it here. Much jowari is grown, and the general appearance of the place is prosperous. The main wealth of the village is its dates; there are no local manufactures nor any general trade. Mazāra' is the seat of the Tamīmah of the Banī Battāsh.

MAZĀRA'I مزارعی DISTRICT

A small district belonging naturally to the Government of Fārs, but at present held as Tiyl by Mehdi Khān, a cousin and ward of the Sālārī-Mu'azzam, direct from the Shāh of Persia: it lies on the upper course of the Rūd-hilleh river immediately below the point where that stream emerges from the high hills into the maritime plain. The hills enclose it on west, north and east; on the south it lies open towards the flat districts of Dashtistān and Zira and it is believed to have formed originally a part, administratively, of Dashtistān. Mazāra' is itself a plain and suffers extremes of heat in summer. The inhabitants are Persian-speaking Shī'ahs, immigrants from Kāzarūn, Khish and Davis, and number about 8,000 souls; they cultivate wheat, barley and dates and export some wool and dates and a considerable quantity of gum, collected in the hills, to Būshehr Town. The eastern part of the district

is irrigated in summer from the **Dāliki** stream by a channel which first passes through **Zīra**. The imports and the details of trade generally do not differ from those of the other small districts near **Būshehr**. The local **Hāshim Man** is equal to 20 Mans of **Būshehr** or 155 lbs. English. **Mazāra'i** possesses about 700 donkeys, besides a few mules and horses: the people are well armed with rifles and revolvers. The **Sālār-i-Mua'zzam** realises about 2,500 **Tūmāns** per annum from the district, which he has farmed to the **Khān** of **Shabānkāreh**; the latter is represented locally by an agent and takes half the produce of the dates, either in cash or kind, and 60 **Qrāns** in cash per **Gāu** of other cultivation. The villages of **Mazāra'i** are —

Name.	Position.	Houses.	REMARKS.
Dasht-i-Būr (I) دشت بور	West of the Rūd Shirin and 6 miles north-west of Mazāra'i Village.	40	There is a tower. Wheat and barley are grown and date-palms number 500. Animals are 100 donkeys, 50 cattle and 500 sheep and goats.
Dasht-i-Būr (II) دشت بور	Also north-west of Mazāra'i Village.	40	Similar to Dasht-i-Būr (I) except that there are no dates.
Jarreh جره	1½ miles south of Dasht-i-Būr.	40	One tower. Wheat and barley are grown and livestock are 70 donkeys, 40 cattle and 500 sheep and goats.
Lilak ليلك	9 miles north-west of Dāliki .	30	One tower, 50 donkeys, 30 cattle, 600 sheep and goats, cultivation of wheat and barley.
Mazāra'i مزارعي Village	5 miles north-west of Dāliki in Dashtis-tān	See article Mazāra'i Village.
Shūlpasagūn شول پسگون	6 miles west of Mazāra'i Village.	40	Wheat and barley are grown. There are 100 donkeys, 50 cattle and 600 sheep and goats.

The principal place in the district of the same name; it is situated **MAZĀRAI** about 5 miles north-west of **Dāliki** and consists of some 400 houses. **مزارعي**
The inhabitants are of mixed tribes, said to be immigrants chiefly from **VILLAGE**

Kāzarūn and **Burāzjān**: they cultivate wheat, barley and dates. There are no shops. Animals are 30 horses, 25 mules, 300 donkeys, 200 cattle and 1,500 sheep and goats. There is a fort of stone and mud with 4 towers; the village has also 4 detached towers. This place is the seat of the Khān of **Shabānkareh**'s manager in the **Mazāra'i** District.

MAZĀRI'

مزاريع

Singular Mazrū'i مزروعى. An Arab tribe or Trucial 'Omān and the Sultanate of 'Omān. The majority are found in Abu Dhabi territory, where they are regarded as a section of the Bani Yās tribe, and the number of these is computed in the article on the Abu Dhabi Principality: besides these some are found in Dibai Town. Similarly, the Mazāri' of the 'Omān Sultanate are dealt with in the general article on that state, and an estimate of their strength is given there. The remainder are subjects of the Shaikh of **Shārjah** inhabiting Wādis **Hām** and Sfuni in the Rās-al-**Khaimah** District and Wādi Sfai in the district of **Shamailiyah**: in Wādi **Hām**, where they hold the villages of Adhan, 'Asimah and Fara', their number is about 500 souls; in Wādis Sfuni and Sfai it has not been ascertained but is probably considerable. Besides these there are perhaps 300 Mazāri' at the village of **Khān** near **Shārjah** Town. The extent to which the Mazāri' are regarded, outside Abu Dhabi territory, as a section of the Bani Yās is uncertain; as a rule they are Ghāfiri in politics and Hanbali in religion.

MI'AJIDIN
(WĀDI)

وادي معيدن

The principal valley in the southern slopes of Jabal **Akhḍhar** in the Sultanate of 'Omān; it drains to 'Omān Proper. At its head is the village of **Sharaijah**: 3,000 feet lower is the village of **Musairah** مصيرة, chiefly remarkable for the possession of a date-grove at an unusual elevation; it consists of 200 houses of the **Habūs** tribe. Below **Musairah** is **Mi'ajidin**, a pretty village under a cliff, well-watered and possessed of date, lime and other trees; it is composed of 30 houses of **Habūs**. A small hamlet called **Misfāh** مسفا is 3 miles below **Mi'ajidin**: near it the banks of the Wādi begin to recede and decrease in height and vegetation grows more abundant as the exit from the hills is approached: **Misfāh** contains

COPYRIGHT.

View of Wādi Mi'aidin from Sharaijah.

(MAJ. P. Z. COX.)

40 horses of **Habūs**. The crops in the villages are wheat, sugarcane and lucerne; and grapes, figs, quinces, limes and pomegranates are grown. The only animals are a score of cattle. In the plain of 'Omān Proper Wādi Mi'aidin passes Birkat-al-Mōz, and further on it probably joins Wādi Halfain. The descent into the upper part of the valley from **Sharaijah** is accomplished by means of an artificial causeway or staircase which is practicable for horses. The valley contains 3 small but perennial streams. The banks of the Wādi exhibit a dark-bluish veined limestone and a very brittle ferruginous shale.

A range of low hills in the **Kuwait** Principality running east and west between the Hamudh wells in the **Sūdah** District and the Safah wells in **Summān**. The range is reported to have a length of some 30 miles, and the districts of **Dibdibah**, **Summān** and **Shaqq** appear to meet at its western extremity. On the north side of Dhula'-al-Mi'aijil, at about 12 miles from it, is the **Warai'ah** tract or plateau. On the south side of Dhula'-al-Mi'aijil, between it and the Abu Dhahair hills in the **Hasa** Sanjāq, are the following places:—

MI'AIJIL
(**DHULA'**-
AL -)
ضلع المعيجل

Name.	Position.	Character.	REMARKS.
Jariyah جرية	15 miles or less south of Dhula'-al-Mi'aijil.	Wells.	Sweet water at 12 feet.
Jariyat-as-Sifa جربة السفلى	6 miles south-east of Jariyah.	Do.	20 feet deep; water sweet.
Qaswān قسان	About 15 miles east by south of Jariyat-as-Sifa and the same north of Na'airiyah at the head of Wādi-al-Miyah.	Do.	Depth 18 feet; water sweet.

A desert but not inhospitable tract situated on the coast of the **Abu Dhabi** Principality between the Sabākhāt **Matti** on the east and

MIJAN *
المجن

* The information contained in this article was supplied by Captain F. B. Prideaux, Political Agent in **Bahrain**, in whose *Map of Jāfūrah, etc.*, the tract in question appears.

the district of 'Aqal on the north-west. Inland it is bounded by the Jāfūrah desert on the west and south and by the Sabākhat Matti tract on the east. On the coast its limits are Dōhat-an-Nakhalah on the west and Dōhat-as-Sila' on the east and its average breadth may be about 20 miles, while southwards its boundary with Jāfūrah is perhaps 70 miles from the sea. The Mijan district is full of stony mounds, apparently as much as 50 or 60 feet high; at the foot of these lie firm pebbly tracts, but sand dunes also occur between. The mounds and firmer soil, it is said, are covered in winter with green grass, while Abal and dwarf tamarisk are found throughout the year.

The following are the chief points of interest in Mijan :—

Name.	Position.	Nature.	REMARKS.
'Aqdah العقدة	At the southern extremity of the tract, 20 or 25 miles south-south-east of 'Aqalat Mijrin.	A well.	The water is bad.
Ba'ajah بعجة	3 miles inland, westwards, from Dōhat-as-Sila' on the coast.	A spring or overflowing well.	It is 3 feet deep and is surrounded by a bed of green grass.
Bat-hah بطح	About 15 miles south-west by south of Sila'.	A well.	The water is of indifferent quality.
Ghadaiyar-al-Lāl غدير الال	20 or 25 miles south of Sila'. (One authority would make it nearly 30 miles west of Sila'.)	Do.	The best well in Mijan: the water is sweet and sometimes overflows after rain, but at times it falls to 1 or 2 fathoms below the surface. It is situated in an earthy plain with some scanty scrub. Travellers between 'Omān and Qatar often halt here.
Ghuwaiḥat غويطات	Near the coast, 10 miles north of Sila'.	Do.	The water is indifferent in quality.
Manāif المنائف	About 15 miles south-east of 'Aqalat Mijrin.	Do.	The water is bad.
Mijrin ('Aqalat) مقلة مجرين	35 or 40 miles south-west of Dōhat-as-Sila'.	Do.	The water is good and almost at the ground level.

Name.	Position.	Nature.	REMARKS.
Minba'i المنبعي	About 8 miles west of Sila'.	A spring or over-flowing well.	It resembles Ba'ajah, but is surrounded by shallow pits which also yield water.
Sila' سليح	About 5 miles inland, south-westwards, from Dôhat-as-Sila'.	A well.	The water is brackish, but is drunk in emergency. The well is under the east face of a stony ridge.
Sila' (Dôhat-as-) دوحة السليح	The chief indentation in the coast of Mijan, which it divides from Sabâkhat Matti to the eastward; it is about 46 miles south-east by south of the entrance of Khor-al-'Odaid.	A bay.	The country in the neighbourhood is desert descending in terraces to the sea.

A deep, narrow and tortuous valley of the **Masqat District** of **MIJLĀS** the 'Omān Sultanate: it is formed by the junction 9 miles west of **Quryāt** of Wādī Sarāin and Wādī Haithadh and it reaches the coast at **سليح مجلس** (WĀDĪ) the north end of **Quryāt**. Its principal village is Sawāqim **سوافم**, a pretty hamlet of 20 houses of **Āl Bū Sa'id** on the right bank about 8 miles above **Quryāt**, where there is a date-plantation and country-house belonging to Sa'id-bin-Khalfān, **Āl Bū Sa'idi**. Not far from it, in the hills to the southward, are two other small places, Mizra' Sumair **مزرع سمير**, 20 houses of Bani **Wahaib**, and Mizra' Balail **بليل**, 15 houses of Bani **Wahaib**: the inhabitants are cultivators.

The two valleys which by their junction form Wādī Mijlās may conveniently be disposed of here. Wādī Haithadh **حيث** is short and comes from the north: it contains the villages of Haithadh (30 houses), Fayādh **فيان** (20 houses), and Haifal **هيفل** (15 houses), all of Bani **Wahaib**, who cultivate grain. The other valley, Wādī Sarāin **سارين**, starts more than 20 miles west of its junction with Wādī Haithadh: at

The hills* forming the eastern boundary of the district and called Kūh-i-Zindān, or in the north where they adjoin the Rūdbār رۇدبار district Kūh-i-Rūdbār, are rugged of outline and barren of vegetation except for a few ber trees.

Climate.—By natives Mināb is considered to be much healthier than Bandar 'Abbās, and shade and flowing water combine to render it at least cooler. In summer many Bandar 'Abbāsīs migrate to **Mināb** to escape the terrible heat of their own town. But mosquitoes abound and even early in March are sometimes so numerous as to make life a burden. Rain is said to fall more copiously in **Mināb** than on any other part of the Persian coast within 150 miles on either side of it.

Population.—A majority of the inhabitants of the Mināb district are Persians of mixed descent, in whom a Balūchi strain predominates over other foreign elements; the rest are for the most part genuine **Balūchīs**, or Arabs who are believed to have immigrated from **Bahrain**, etc. The total population, inclusive of the permanent inhabitants of **Mināb Town**, may be placed at 26,000 souls. The most part are Shī'ahs, Sunnis being found only among the **Balūchīs** and the Arab immigrants. The topographical table at the end of this article will make plain in detail the distribution of the population and their means of livelihood. In the interior all are date-growers, stock-raisers or ordinary agriculturists; on the coast there are some fishermen and sailors. The people on the whole are fairly well-to-do and most of them inhabit mud-brick houses, only the poorest labourers occupying the date-leaf huts which in some adjoining districts are the most common kind of dwelling. The character of the people is less degraded than in the neighbourhood of Bandar 'Abbās, a circumstance which is attributed to the less direct and oppressive form which Persian Government here assumes; as agriculturists they are reputed thrifty and careful. The language of the district is a local patois compounded of Persian, Arabic and Balūchi, Persian words predominating. Few arms are carried or owned in **Mināb**, notwithstanding that the district was until lately upon a high-road of the Persian Gulf rifle trade with Afghanistan and Balūchistan.

Agriculture and trade.—The staple industry is the cultivation of dates, but wheat and barley, besides henna, vegetables, and fruits such as

*A delineation of some of these hills, as seen from the sea, will be found in Chart No. 2373—2374A., *Persian Gulf*.

citrons, limes, lemons, oranges, mangoes and plantains, are grown in considerable quantities.*

The chief facts about trade are given in the article on **Mīnāb Town**, which is the only trade centre in the district; here it may be added that an illicit trade with Afghānistān and Balūchistān in imported rifles which formerly flourished here has now been all but suppressed by the reformed Persian Customs.

Communications, transport and water supply.—The principal routes in the district are four, as follow :—

1. A portion of the coast-route between **Mīnāb** and Bandar 'Abbās : this is the continuation of Route No. 1 of the paragraph on communications in the article on the **Shamīl** district and no further remarks are necessary here, except that the section within the **Mīnāb** district is divided at Dūdau, which is 14 miles from **Mīnāb** Town and 16 from Qulūghān in the **Shamīl** district.
2. A small portion of the route between **Mīnāb** Town and **Shamīl** Village lies in the **Mīnāb** district; *vide* Route No. 4 in the paragraph and article already cited. It will be seen, on reference to Route No. 5 in the same place, that travellers proceeding from **Mīnāb** Town to Bam or Kirmān may go by **Shamīl** Village, joining the Bandar 'Abbās-Kirmān route at Tang-i-Zindān.
3. There is a route over the hills from **Mīnāb** Town by the Gardaneh Āsyāi گردنه آسیای and Murād Kushteh مراد کشته passes to Manūjān منوجان whence, as explained under Route No. 4 in the passage cited above, ways lie to Sīstān and Khurāsān.
4. The route to **Jāshk** runs from **Mīnāb** Town to Kalāvi (25 miles) by Kōkōgaz, Hazārmani, Kahatak, Majbūn and Dāhi Qand; there is also a route a few miles shorter by Hazārmani, Jū Mahalleh and Dāhi Qand. The continuation beyond Kalāvi is given in the paragraph on communications in the article on the **Biṭābān** District.

The above routes are no better than those of South-Eastern Persia generally; but in dry weather they are free from difficulty for mounted men and pack animals, at least until they enter the hilly country.

A rough estimate of the land transport owned in the **Mīnāb** District shows that there are about 1,000 camels and an equal number of donkeys.

* In the 10th century A. D. the crops of the district included maize, indigo, sugar and cummin; palm groves also were numerous at that time. See Le Strange's *Lands of the Eastern Caliphate*.

As will appear from the village list at the end of this article the number of boats belonging to the coast villages is inconsiderable. It should be noted that the water supply in many villages of the Mināb district, though described as good in accordance with native information, is probably only drinkable.

Administration.—The district is ruled by an official who has his seat at **Mināb** Town. He is at present a nominee of the Mu'in-ut-Tujjār of Tehrān who holds the district in farm from the Persian Government. Mināb, however, is subject in some respects to the Governor of the **Gulf Ports**; and his subordinate, the Deputy-Governor of Bandar 'Abbās, is supposed to exercise a certain degree of authority over the official in charge of Mināb; no signs of control however are apparent. The Mu'in-ut-Tujjār's agent dispenses a rude form of criminal and civil justice and is responsible for the collection annually of 14,000 Tūmāns as land revenue. Except this Mālyāt or land revenue no taxes are collected in the district, which in this respect is more fortunate than **Shamīl** or Bandar 'Abbās. The agent's behests are enforced by a small corps of about 30 Tufangchis; and about 20 rifles of regular Persian infantry have recently been stationed in the district to support the authority of the Imperial Persian Customs.

The operations of the Imperial Customs establishment in the district are supervised by a Persian Mudir stationed at **Mināb** Town: his pay is 40 Tūmāns a month and he has under his orders a small post at Tiyaḥ and another at Kūhistak.

The leading men of the district are Muhammad Bāqir of **Mināb** Town, who is a native of the place, and Shaikh Hasan of Yazd, a large landed proprietor who was Deputy-Governor of **Mināb** about 1901 but now spends most of his time at Bandar 'Abbās.

Topography.—A synoptical account of the principal places in the district, arranged in alphabetical order, follows :—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Abbās (Bāgh Hāji) باغ حاجي عباس	6 miles north by west of Mināb Town on the route from Shamīl Village.	20 houses of Persians, Shī'abs.	Dates, wheat, barley, henna, mangoes and lemons are grown and there are some goats and sheep. Water is brought by a canal from a branch of the Mināb river.

Name.	Position.	Houses and inhabitants.	REMARKS.
'Abdullah (Band) بند عبدالله	About 20 miles west of Mināb Town, the only village in a large stretch of sandy and swampy waste.	Half-a-dozen houses of Shī'ahs.	The people are fishermen and herdsmen possessing about 50 sheep and goats and a few cattle. Water is from wells.
Ahmadābād احمد آباد	4 miles north by west of Mināb Town on the route from Shamīl Village.	20 houses of Shī'ahs.	Dates, mangoes, henna and lemons are grown. Water is from a branch of the Mināb river by a canal.
'Ali Matriyūm علي مطريوم	8 miles north by east of Kalāvi, not far from the right bank of the Mazāvi stream.	2 houses of Balūchis.	There are 3 camels, 2 donkeys, 10 cattle and a few date trees. Wheat and barley are grown by rainfall. There are 2 wells, 2 fathoms deep, of good water.
Bānzar بانزر	7 miles south-west of Mināb Town, on the left bank of the Mināb river.	40 houses of Balūchis.	There are 150 date palms, but no cereals are cultivated. Animals are 4 camels, 4 donkeys and 30 cattle. Water is from the Mināb river.
Basreh بصرة	2 miles north of Mināb Town near the right bank of the Mināb river.	50 houses of Shī'ahs.	Dates and other fruit are grown, but the resources of the place are scanty. Water is from a large branch of the Mināb river which is spanned by an excellent stone bridge, arched and 8 feet wide.
Bulbuli بلبلي	5 miles south-south-west of Mināb Town on the left bank of the Mināb river.	25 houses of Minābis, Shī'ahs.	There are 4 camels, 12 donkeys and 100 cattle. Wheat, barley and fruit are grown in small quantities. Water is from the Mināb river.
Būmāni برماني	2½ miles north-east of Kūhistak.	10 houses of Balūchis.	There are a few date palms dependent on rainfall, but no cereals.

Name.	Position.	Houses and inhabitants.	REMARKS.
Chilau چلو	7 miles west by south of MĪnāb Town, in the midst of a marshy and trackless waste.	15 houses of Arabs, Sunnis, said to be of the Ka'ab tribe.	Livestock are 2 camels, 3 donkeys, 15 cattle, and 30 sheep and goats. Water is good, from 3 wells, 1½ fathoms deep. The people are date-growers and own a very few buffaloes. Water, which is brackish, is from wells.
Dāhi Qand داهي قند	8 miles north-north-east of Kūhistak, near the left bank of the Mazāvi stream.	15 houses of Balū-chis.	There are 50 date palms, unirrigated, but no other crops. Livestock are 3 camels, 5 donkeys, 45 cattle and 45 sheep and goats. There are 3 wells, 1½ fathoms deep, of good water.
Dahu دهر	10 miles west by south of MĪnāb Town on the road to its port Tiyaḅ.	150 houses.	The village, a prosperous one, consists of two separate quarters. The people are fishermen, camel-owners and growers of dates. Supplies are available in some quantity, and livestock amounts to 40 cattle and 500 sheep and goats, and transport animals to 60 camels and 100 donkeys. Water is from a branch of the MĪnāb river.
Dahusta دهستا	3 miles west-north-west of MĪnāb Town.	120 houses of Shī'ahs.	The village is surrounded and concealed by date-groves and possesses an old mud fort now in ruins. The people are all date-growers and a few are fishermen. Supplies are obtainable, but no transport. Water is from the MĪnāb river: the canals are crossed by serviceable stone bridges, 6 feet wide.

Name.	Position.	Houses and inhabitants.	REMARKS.
Dallālan دالان	8 miles west by north of Mināb Town.	10 houses of Bandar 'Abbāsīs, Shī'ahs.	Wheat and barley are grown and there are 2,000 date trees. Animals are 4 camels and 5 donkeys. Water from the Mināb river is good and plentiful.
Dilgusha دلگشا	4 miles west-north-west of Mināb Town.	150 houses of Minābis Shī'ahs.	Wheat and barley are grown and there are 1,500 date palms, also 3 gardens each containing about 150 trees, limes and mangoes. Livestock are 10 camels, a few donkeys and 150 sheep and goats. Water is by canals from the Mināb river.
Dūdar دودر	10 miles south-east of Kuhistak in the low hills.	10 houses.	A little wheat and barley are grown and there are 500 date-palms. Livestock are 3 camels, 10 donkeys, 10 cattle and 200 sheep and goats. There are 4 wells, of good water, 2 fathoms deep.
Dūdau (I) دودو	1 to 3 miles south-west and south by west of Mināb Town on the left bank of the Mināb river.	100 houses of Arabs of Bahraini descent.	The village consists of 4 hamlets, namely, Dūdau proper, Ruk-nābād رکن آباد, Tib Shāhi طیب شاهی and Dūri دوری. Dates and wheat are grown and livestock and transport are 20 cattle, 200 sheep and goats, 30 camels and 50 donkeys. Supplies are obtainable in fair quantities. Water is from a stream which is a branch of the Mināb river and known as the Bagurāz بگراز.
Dūdau (II) دودو	12 miles west by north of Mināb Town.	50 houses of Balū-chis.	There are no dates here; the people are agriculturists and graziers owning 70

MINAB DISTRICT

Name.	Position.	Houses and inhabitants.	REMARKS.
Fehrābād فهرآباد	2 miles east of Mināb Town.	60 houses of Shi'ahs.	camels, 100 donkeys, and 300 sheep and goats. The village has a shrine of Khājeh Khizar. Water is from a stream and from wells. The inhabitants are date and fruit-growers; a few are fishermen. Live-stock are 20 donkeys and 50 sheep and goats. Resources are scanty except dates. Water is from the Mināb river. There is a Qadamgāh of Murtaza 'Ali.
Gandumi گندمي	13 miles north of Kūhistak and 6 miles east of the mouth of the Mazāvi stream.	20 houses of Balū-chis, Sunnis.	Crops are wheat and barley irrigated from the Mināb river. Livestock are 5 camels, 5 donkeys, 45 cattle and 200 sheep and goats. There is one well of brackish water.
Gardu گردر	4 miles north of Kūhistak and 2½ miles from the coast.	20 houses of Balū-chis, Sunnis.	There are no cereals and very few dates. Animals are 2 camels, 2 donkeys and 40 cattle. Some of the people are fishermen. There are 3 shallow wells of good water.
Gat (Qal'eh-i-)	In the hills 11 miles east-south-east of Kūhistak.	A ruinous fort occupied by a few Tufang-chis and perhaps 30 houses.	The approach from Dūdar village is through bad ground among sandstone hills, and up the bed of a torrent. The fort, which includes about 6 acres of ground with remains of water tanks, occupies the top of a detached hill with almost perpendicular sides and is reached by a steep path which is commanded by a

Name.	Position.	Houses and inhabitants.	REMARKS.
Gaurāni گوراني	10 miles south-south-east of Mīnāb Town.	35 houses of Balū-chis.	fortified gateway. The building does not appear ever to have possessed more than local importance. The people cultivate a little and own a few animals. Wheat and barley are grown by rainfall and there are 200 date palms. Livestock are 25 camels, 15 donkeys and 60 cattle. There are 6 wells, 1 to $1\frac{1}{2}$ fathoms deep, of good water.
Gurāzu گورازو	7 miles south-south-west of Mīnāb Town.	55 houses of Balū-chis.	No irrigation, no cereals, 100 date trees. Animals are 2 camels, 2 donkeys and 20 cattle. Water is fairly good; it is obtained not from wells but from pits, 3 or 4 feet deep, dug in the ground.
Gvāizangeh گوارزنگه	4 miles south-west of Mīnāb Town, on the right bank of the Mīnāb river.	45 houses of Balū-chis and Mīnābis, the latter Shī'ahs.	There are 6 donkeys, 35 cattle and 550 date trees, but no other crops. Water is from the Mīnāb river.
Gvehamini گوهميني	4 miles north-north-west of Mīnāb Town.	100 houses of Shī'ahs.	The people are mostly date and fruit-growers, but some are weavers. Supplies are obtainable and there are about 10 camels and 50 cattle, besides sheep and goats. Water is from a branch of the Mīnāb river called Safā سفلی.
Hājīābād حاجي آباد	10 miles west by north of Mīnāb Town.	150 houses of Balū-chis.	A fort formerly existed here, but has now almost disappeared. The people are date and barley cultivators; they have two gardens of lemons, oranges and mangoes, and their livestock amounts to 10

Name.	Position.	Houses and inhabitants.	REMARKS.
			camels, 50 donkeys and 200 sheep and goats. Water is from the Safa branch of the Mināb river. Some supplies are obtainable. With Gvehamini this place has 15,000 date palms and the two villages together are assessed at an annual revenue of 800 Tūmāns.
Hakami حکمي	4 miles north-west of Mīnāb Town.	120 houses of Shī'ahs.	The inhabitants are date and fruit-growers and own 30 camels, 50 donkeys and 100 sheep and goats. Water is from the Safa branch of the Mināb river. Some supplies are obtainable. There are 11,000 date palms and the annual revenue of the village is 700 Tūmāns.
Halvāi حلوي	2 miles south-west of Mīnāb Town near the left bank of the Mināb river.	No houses.	A little wheat and barley are grown by inhabitants of Mīnāb Town. There is one well, of good water, 3 fathoms deep.
Hazārmani هرارمني	9 miles south-south-east of Mīnāb Town.	No houses.	This is merely a place to which the inhabitants of certain villages resort to cut grass.
Hussinābād حسين آباد	9 miles west by north of Mīnāb Town	50 houses of Shī'ahs.	Wheat and barley are the only crops: a few of the people are graziers owning 200 sheep and goats. Water is from wells.
Jānfari جانفري	11 miles south-south-west of Mīnāb Town.	6 houses of Balūchis.	No cereals are grown and there are only a few date trees dependent on rainfall. Live-stock are 6 camels, 2 donkeys, 20 cattle and 20 sheep and goats. There are 2 wells of good water, 1½ fathoms deep.

Name.	Position.	Houses and inhabitants.	REMARKS.
Kahatak کهتک	Near the right bank of the Mazāvi stream, 8 miles east-north-east of Dāhi Qand.	4 houses of Balū-chis.	There are 100 date palms dependent on rainfall, but no other cultivation. Animals are 2 camels, 2 donkeys and 10 cattle. Water is good from 2 wells, one fathom deep.
Kalāvi کلای	5 miles north-north-east of Kūhistak and 2 miles from the left bank of Mazāvi stream at 9 miles from its mouth.	40 houses.	The people own 30 camels, 30 cattle, 150 sheep and 1,000 date palms. The two main routes from Mīnāb to Jāshk separate here.
Kardar کردر	4 miles south-south-west of Mīnāb Town, on the left bank of the Mīnāb river.	20 houses of Balū-chis.	Water is from the Mīnāb river; there are 250 date palms but no other cultivation. Livestock are 2 camels, 5 donkeys and 100 cattle.
Kargūn کرجون	10 miles north of Kūhistak, on the right bank of the Mazāvi stream at 4 miles from its mouth.	100 houses of Balū-chis.	There is no cultivation here; livestock are 6 donkeys and 35 cattle. A certain number of the inhabitants live by fishing. Good water is obtainable from shallow wells.
Kariyūn کریون	On the left bank of the Mazāvi stream, about 5 miles above Kahatak.	100 houses of Balū-chis.	There are 100 donkeys and 100 cattle, also 1,000 date palms, and wheat and barley are grown. Water is from a stream called the Sīrnai سرنی.
Karpān کریان	Three miles south-south-east of Kūhistak and 1 mile from the coast.	2 or 3 houses inhabited in the hot weather only by people from Kūhistak.	There is one well, a fathom deep, and 100 date trees.
Khāgun خاگون	2 miles from the coast and 6 miles north of Kūhistak.	Not ascertained.	On both sides of the village the shore is low and sandy.
Kōkōgaz کوکوز	7 miles south-south-east of Mīnāb Town.	2 houses of Balū-chis.	Wheat and barley are cultivated and there are a few vines. There is one well of good water, but no artificial irrigation. Livestock are 6 cattle.

Name.	Position.	Houses and inhabitants.	REMARKS.
Kūh Siyāh کوه سیاه	$\frac{1}{2}$ a mile south of Kūhistak between it and the right bank of the Chāh-lak stream.	25 houses.	There are 30 cattle and 1,000 date trees.
Kūhistak کوهستانک	On the coast 25 miles south-south-west of Mīnāb Town and 1 mile from the right bank of the Chāh-lak stream at its mouth.	60 houses.	The village is distinguished by a fort upon a little isolated hill to eastward, about 80 feet above sea-level. There are 1,700 date palms and 5 camels, 35 cattle, 10 donkeys and 100 sheep and goats; many of the inhabitants are fishermen and they own 10 small sailing boats. Wheat and barley are grown and there are 2 wells, 3 fathoms deep, of good water.
Kūmbil کومبیل	7 miles south-south-west of Mīnāb Town.	3 houses of Balū-chis.	There are 50 date trees, but no other cultivation. Animals are 1 camel, 3 donkeys and 5 cattle. There is a well, 1 fathom deep, of good water.
Kunār Ismā'il کنار اسماعیل	10 miles south-south-west of Mīnāb Town.	45 houses of Balū-chis.	Animals are 5 camels, 6 donkeys and 50 sheep and goats. Wheat and barley are grown without irrigation and there are 100 date trees. There are 3 wells, 1 fathom deep, of good water.
Kunāreh کناره	5 miles north of Mīnāb Town.	30 houses of Shī'ahs.	Dates and fruit are grown and there are some cattle. Water is from the Shehvār شہوار branch of the Mīnāb river. Supplies are scanty and there is no transport.

Name.	Position.	Houses and inhabitants.	REMARKS.
Mahalleh (Jū) جر محله	13 miles north-north east of Kūhistak on the right bank of the Mazāvi stream.	Half-a-dozen houses.	On the top of a hill, near a ford here, is a small round tower in ruins.
Mājībūn ماجبون	1 mile from the left bank of the Mazāvi stream at 4 miles above Dāhi Qand.	No houses	Wheat and barley are grown here in the cold weather by inhabitants of Kūhistak.
Māshihirān ماشهران	6½ miles west by north of Mināb Town.	30 houses of Minābis Shī'ahs.	Resources are 2,000 date palms, cultivation of wheat, barley and oats, 7 camels, 5 donkeys and 250 sheep and goats. Water is from the Mināb river and is good and plentiful.
Māzigh مازغ	11 miles west-south-west of Mināb Town and about 6 miles from the coast.	100 houses of Shī'ahs.	The people are date growers and herdsmen: they possess 100 camels, 200 cattle and 300 sheep and goats. Supplies are obtainable and water is from the Mināb river.
Mināb Town میناب	Almost 50 miles due east of Bandar 'Abbās and 28 miles south-south-east of Shamīl Village.	See article Mināb Town.
Mir 'Alī Dād میر علی داد	On the left bank of the Mināb river about 8 miles above Mināb Town, within the hills.	3 houses of Balū-chis.	There are 100 date palms, but no other resources. Another 100 palms grow at Bagh, 2 miles further up the left bank, which is considered to be a part of Mir 'Alī Dād.
Miyān Shehṛ میان شهر	8 miles north-north-west of Mināb Town, the last village of this district on the side towards Shamīl.	70 houses of Shī'ahs.	There is a ruined mud fort. Date and barley are cultivated and livestock amount to 50 donkeys and 200 sheep and goats. Supplies are in fair

NAME.	POSITION.	HOUSES AND INHABITANTS.	REMARKS.
Mugh Ibrāhīm مغ ابراهيم	11 miles west by south of MĪNĀB Town, near the head of the creek on which is Tiyyāb, the port of MĪNĀB.	100 houses of Shī'ahs.	quantities and water is brought by a cut from the MĪNĀB river. Dates and barley are grown and there are 10 camels, 20 donkeys, 50 cattle and 200 sheep and goats.
Murdeh Singān مردہ سنگان	6 miles north by west of MĪNĀB Town.	25 houses of Shī'ahs.	Dates and fruit are cultivated and the people own 20 donkeys and 100 sheep and goats. Water is from the Shehvār branch of the MĪNĀB river. Supplies are scanty.
Patal پاتل	3 miles north-north-east of Kūhistak.	30 houses of Balū-chis.	Livestock are 5 camels, 10 donkeys, 35 cattle and 35 sheep and goats. There are 200 date palms, but no other cultivation. Water is good, from 3 wells $1\frac{1}{2}$ fathoms in depth.
Qambar (Chāh) چاہ قمبر	2 miles north of Jū Mahalleh.	15 houses of Shī'ahs.	There are 10 camels, 60 cattle and 150 sheep.
Rābin رابی	6 miles east of Hazārmanī at the foot of the hills.	55 houses of Balū-chis.	Wheat and barley are grown without irrigation and there are 200 date trees. Livestock are 3 camels, 15 donkeys, 55 cattle and 100 goats. Good water is obtainable from 2 wells 5 fathoms deep.
Rāmchān رامچان	8 miles south-east of Kūhistak.	30 houses.	Wheat and barley are grown and there are a few date trees. Animals are 5 camels, 10 donkeys, 50 cattle and 200 sheep and goats. Water is good, from 10 wells 4 fathoms in depth.

Name.	Position.	Houses and inhabitants.	REMARKS.
Sarbarān سربران	7½ miles west-north-west of Mīnāb Town.	75 houses of Mīnābis, Shī'ahs.	Date palms number 4,500 and wheat and barley are cultivated. Animals are a few camels, 20 donkeys, 15 cattle and 80 sheep and goats. Water is by canals from the Mīnāb river and the supply is good and abundaut.
Sargū'alam سرگورالم	2 miles east of Kūhistak.	10 houses of Balūchis.	There are only a few date trees and no irrigation. The people have 2 camels, 3 donkeys, 10 cattle and 30 sheep and goats. Water is good from 2 wells of a fathom deep.
Sehbansūl سهبانسول	19 miles west of Mīnāb Town on the coast route to Bandar 'Abbās.	15 houses of Shī'ahs.	The people are barley growers and graziers owning 15 camels, 10 cattle and 300 sheep and goats, but resources are limited. Water is from a stream and wells.
Shaikhābād شیخ آباد	2 miles south-south-east of Mīnāb Town.	100 houses of Persian Shī'ahs, and of Balūchis.	The village is surrounded by date plantations. The inhabitants are date growers and cattle breeders owning 30 cattle and 200 sheep and goats, but no transport animals. Water is from the Mīnāb river and ordinary supplies are obtainable. Two hundred new date trees were planted here in 1904.
Shavar (Qal'eh-i-) قلعه شوار	6 miles north-west of Mīnāb Town.	A dozen houses of Shī'ahs.	Date cultivation is the only resource. Water is from a branch called Qāsir قاسر of the Mīnāb river.
Shehvār شهرار	5 miles north-north-west of Mīnāb Town.	300 houses of Persians, Shī'ahs.	This is a large and prosperous village standing in the centre of a large date

Name	Position.	Houses and inhabitants.	REMARKS.
			grove. The soil, a sandy loam, is irrigated from the Mināb river and highly cultivated: the chief products are dates, barley, wheat, mangoes, lemons and limes. The annual Malyāt is 100 Tūmāns. Water is both sweet and abundant and supplies plentiful; livestock are 20 camels, 100 donkeys and 300 sheep and goats. There is a shrine of Imām Husain.
Sih Chāhān سه چاهان	1 mile south of Gandumī.	5 houses of Balūchis.	There are 50 date palms, but no irrigation and no other agricultural resources. Animals are 3 camels, 2 donkeys, 20 cattle and 20 sheep and goats. Water is good from 2 wells of a fathom deep.
Sīsī (Bagh) باغ سیسی	On the right bank of the Mināb river within the hills about 5 miles above Mināb Town.	3 houses (occupied in the hot weather only) of 'Omānis and Persians from Mināb Town.	A little wheat and barley is grown and there are 120 date palms. Water is from the Mināb river. No livestock.
Taling تلنگ	2 miles north-west of Garūk in Biyābān and 1 mile from the right bank of the Mazāvi stream.	30 houses of Bashā-kardī Persians.	A little wheat and barley are cultivated. Water is from the Mazāvi river.
Tiyāb طیاب	Upon a creek, 12 miles west by south of Mināb Town and about 6 miles in a direct line from the coast.	There are only a few mat sheds, occupied by Customs employés, their servants and labourers, and a couple of water reservoirs.	This is the port or landing stage of Mīnāb Town. The ground about it is occasionally flooded and this prevents the growth of a village.
Tumbak تیمک	6 miles south-west of Mināb Town on the right bank of the Mināb river.	250 houses of Persians and Balūchis; the latter are Sunnis.	The people are date growers and graziers; they own 300 camels, 100 donkeys and 400 cattle, sheep and

Name.	Position.	Houses and inhabitants.	REMARKS.
Vādasht وادشت	2½ miles north of Kūhistak, near the coast.	12 houses of Balūchis, Sunnis.	goats. Water from the Mināb river is plentiful and is applied to irrigation. No cereals are grown, there is no artificial irrigation, and date palms only number about 30. Animals are 2 camels, 3 donkeys, 15 cattle and 20 sheep and goats. There are 4 wells of good water a fathom deep. The people are fishermen.
Zāngu زانگو	Near the right bank of the Mazāvi stream, 1½ miles east of 'Alī Matriyūm.	No houses.	A little wheat and barley are cultivated here in the cold weather by people from Mināb Town.
Ziyārat زیارت	11 miles south by east of Kūhistak and 1 mile from the coast.	7 houses.	The village stands amidst sandhills and the coast route from Mināb Town to Jāshk passes between it and the sea. There are 200 date palms and a little wheat and barley is grown. Animals are 4 donkeys, 10 cattle and 100 sheep and goats. There are 2 wells of good water a fathom deep.

A salt water creek in the Mināb District, providing an incomplete approach from the sea towards the district capital of Mināb: its mouth is situated about 33 miles east by south of Bandar 'Abbās and 19 miles west by south of Mināb Town. The bar of the creek is nearly dry at low water. The creek runs inland at first in a north-easterly direction for 1½ miles through sand and mud flats, then for 2 miles south-

MINĀB
or
MĪNĀU
(KHŪR)
خورمیناب مینا

eastwards between banks grown with mangroves, and finally for 4 miles to the east-north-east to its head, where is situated Tiyaḅ, described elsewhere among the villages of Mīnāb District, the landing place for Mīnāb Town and the site of an Imperial Persian Customs station.

A mud flat continues 2 miles beyond Tiyaḅ in the direction of Mīnāb Town, between which and the landing stage goods are transported on camels and donkeys. During and after the date harvest, in August, September and October, a considerable trade is carried on here, as many as 20 boats arriving and leaving on the same day; these are mostly from Qishm and Bandar 'Abbās, but a few are from the coast of Arabia and even from India.

The Mīnāb creek makes an indifferent harbour; the bar, as already mentioned, is shallow, while the inner channel, which at its head degenerates into a mere ditch, cannot be used by native boats exceeding 20 tons burden and at low water is impracticable even for these. During a Shamāl vessels can neither enter nor leave Khūr Mīnāb and accidents in attempting to do so are not uncommon.

From the accounts of the mediæval geographers, Arab and Persian, it would seem that the original town of Hormūz, on the mainland, must have lain on Khūr Mīnāb, probably in the vicinity of the present Tiyaḅ.*

MINĀB
or
MĪNĀU
ميناب مينار
TOWN

In English formerly "Minnow". The capital of the Mīnāb District and the only populous or important place of the Persian Coast anywhere east of Bandar 'Abbās; it is situated about 28 miles south-south-east of Shamīl Village and nearly 50 miles due east of Bandar 'Abbās, at a distance of about 15 miles in a direct line from the nearest point on the sea.

Mīnāb stands on the left bank of the Mīnāb river and is immediately commanded on the east side by some hills, which rise to 640 feet and carry a large (but very dilapidated) fort overlooking the town; the whole hill side is covered with remains of towers, bastions and walls. The greater part of the town consists of mat huts, but at the foot of the hill on which the fort stands is a quarter, about 5 acres in extent, with many good and substantial houses; this quarter was originally enclosed, but the wall which surrounded it has now almost entirely

* The town on the mainland was abandoned, on account of the attacks of robber tribes, about 1315 A. D., the ruler transferring his seat to the island now called Hormūz. See Le Strange's *Lands of the Eastern Caliphate*.

disappeared, only the towers and bastions which belonged to it remaining *in situ*. On the south side are extensive plantations and gardens, and here begins an enormous date-belt, about 6 miles in breadth, which follows the course of the Mināb river half the way to the sea ; it belongs to various villages mentioned in the article on the **Mīnāb** District.

There are in all not less than 2,000 houses in Mināb Town, and the population may be estimated at 10,000 souls in summer, when the place is partly occupied by immigrants from Bandar 'Abbās, Hormūz and the adjoining rural districts ; the minimum winter population possibly does not exceed 7,000. The inhabitants are described as civil and obliging : the majority of them are Persians of no particular tribe, a considerable proportion of them being natives of the Rūdbār district upon the upper course of the Mināb river. Large numbers of Arabs and negroes also are among the inhabitants ; and there are at present 14 Hindus and 17 Khōjahs who are British subjects. The Khōjahs, who are from Sind, are accompanied by their families, but the Hindus are not ; the former have 2, and the latter 5 places of business. The Persians of Mināb Town are all Shī'ahs. Nearly the entire population is dependent on date and fruit culture, but a few are engaged in the manufacture of Lūngis or coloured check cloths, and others live by trade.

Dates, tobacco, henna, oranges, citrons, lemons, plantains and mangoes are grown, and the town can furnish about 200 donkeys, 300 camels and 400 cattle. The bazaar is large and better supplied than that of Bandar 'Abbās, and carpenters and blacksmiths are here obtainable. Exports consist chiefly of dates, corn, vegetables, fruit, henna, wool, ghi and hides, while imports include piece-goods, rice, sugar, tea, kerosine oil and dried fish ; a portion of the trade really belongs to the Rūdbār district in the interior which produces the greater part of the wool, ghi and hides exported. The town is the only trade centre of the **Mīnāb** District ; its currency, weights and measures are identical with those of Bandar 'Abbās. Every kind of supply is obtainable at Mināb, and water, which is from the Mināb river and canals dependent on it, is good and abundant. There are a few wells.

The Deputy-Governor of the **Mīnāb** District has his residence here, and there is also a Mudīr of the Imperial Persian Customs ; the authority of both is supported by the presence of a small detachment of 20 Persian infantry. There are shrines of Hazrat 'Abbās, Zain-ul-'Ābidin, and Shāh Wali. The elements of a Muhammadan education are imparted in two or three mosques : these are the only tuitional establishments.

MĪRBA-
CHEH*

میربچه

or

MADAP-
CHĪYEH

مدآپیہ

A village with an elevation of 310 feet above the level of the sea, situated in the Rāmuz District about 11 miles west by south of Rāmuz Town on the main track from that place to Nāsiri. Mirbacheh stands on a mound about 80 feet high, ascended by steep narrow paths and crowned at the summit by a fort-like enclosure; on the north-east, east and south-east sides the village spreads downwards to the plain, and on the north, west and south it is surrounded by plantations of young date trees, while to the south-west there is a detached date grove and on that side a garden extends to a distance of about half a mile from the mound. In winter the surrounding plains are grassy.

The salt Muwailheh stream, described in the article on Rāmuz District, passes about 2 miles to the west of the village; and at a mile on the east side of Mirbacheh a stream of fresh water 2 yards wide and 2 or 3 feet deep is encountered, besides other smaller channels, flowing to the north-westward. The ground on this side is boggy and treacherous, but the channels are now bridged with logs. These streams of fresh water on the east of Mirbacheh are said to have their origin in a perennial spring some 10 or 12 miles south or south-east of the village, of which the discharge is sometimes conducted by a channel, known as the Āb-i-Jū 'Abdullah, to the lands between Mirbacheh and the Muwailheh stream; it is possible also that they are connected with the Zarnīni stream of the Rāmuz District.

The place consists of rather over 100 houses, of which 2 or 3 belong to Lurs and the remainder to Bani Lām Arabs of the Kinānah section: the inhabitants possess about 70 rifles.

The irrigated lands are estimated at 90 Khīsh or ploughs, the unirrigated at 80 Khīsh; the annual yield of the same in grain, which here includes rice, is placed at 5,000 Rāmuz Mans. Date palms number about 6,000, on the average 15 years old, and are the property of the villagers. Transport animals and other livestock are 40 horses, a large number of donkeys, 400 cattle and 3,000 sheep and goats.

The village is the property of the I'tizād-us-Sultān, one of the Bakhtiyāri ruling family. Irrigated land is assessed at $\frac{1}{4}$ of the gross produce and unirrigated at 25 Qrāns per Khīsh per annum.

* Or perhaps more commonly Marbacheh. The popular derivation is: "Mar (=magar) bacha-é?" i.e., "Perhaps you are a child then?" *sc.* to speak or act so.

A village of the Bani **Kalbān** tribe situated in the district of **Dhāhirah** in the 'Omān Sultanate near the head of Wādi-al-**Kabīr** and about 2,750 feet above sea-level. It consists of about 200 houses, of which 100 belong to the Jarāwinah, 80 to the 'Amairah and 20 to the Subaih section of the tribe. Wheat, jowari, and lucerne are grown; the date, mango, plantain, Nabaq, fig and vine flourish; the fields are fenced with thorny Nabaq branches and irrigated with water brought in channels from springs. Animals are 30 camels, 20 donkeys, 120 cattle and 1,000 sheep and goats; date-palms are estimated at 4,000. Miskin stands on the usual route between **Dhank** and **Rustāq**, and from it two routes lead to **Bātinah**, one over the Najd of the Wādi-al-**Hawāsīnah**, and the other over the Najd of its tributary the Wādi Dhula' further to the west: the latter is the more direct.

MISKIN

مسكن

A valley in the Western **Hajar** district of the 'Omān Sultanate, a right bank tributary of Wādi Bani **Kharūs**, which it joins near Mahālīl. The villages of Wādi Mistāl in ascending order are :—

MISTĀL (WĀDI)

وادي مستال

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Ghubrat Bani Ruwāhah غبرة بني رواح	1 hour from Mahālīl.	Left.	40 houses of Bani Ruwāhah.	The inhabitants keep cattle and are charcoal-burners.
Hail حيل	1 hour above the preceding.	Do.	40 houses of Bani Ruwāhah.	Do.
Hijār حجار	Do. *	Right.	50 houses of Bani Riyām.	Do.
Hadash חדש	Do.	Left.	30 houses of Bani Hadram.	Do.
Qorah قوره	Do.	Do.	40 houses of Bani Riyām.	Do.

* Another account makes it 12 miles from Ghubrat Bani Ruwāhah to Hijār.

Above these are several other small villages. There is also a village called *Fiq* فيق of the Bani *Harrās*. Running water is found in this valley. There are some cattle but not many other animals in the villages. The settled population of the valley and villages connected with it may be estimated at 1,500 souls.

MIYĀH
(WĀDI-
AL-)
وادي المياه

A long valley or depressed tract in the extreme north of the Sanjāq of *Hasa*; it is distinguished by its comparative fertility from the regions which surround it upon every side and it owes its name, "The Valley of Waters", to its numerous wells and springs.

Boundaries and extent.—Wādi-al-Miyāh is considered to begin in the north at the Na'airiyah hill. From that point its border, curving out to the westwards, runs by the isolated hill of 'Udūwāt to the ridge of Abu Dhahair, which it follows southwards to its termination; the remainder of the boundary on the west side is defined by the northern part of the Taff range. A line which leaves Jabal-at-Taff immediately north of the Jau-al-Ghānam portion of *Habl* and goes almost straight eastwards to Jabal Qadām marks the limit of Wādi-al-Miyāh on the south; and on the east side its perimeter is completed by an almost straight boundary which runs northwards and very slightly westwards by Jabal Qadām, Jabal Labtalāh and Jabal-al-Hass back to Jabal Na'airiyah. With these limits the extent of Wādi-al-Miyāh from north to south is about 90 miles and its greatest breadth, which is in the southern half, is about 30 miles. It should be observed, however, that some Bedouins would greatly increase the dimensions of Wādi-al-Miyāh by including in it so much of *Habl* as lies further west than Jabal Qadām, and even the low-lying parts of *Taff* as far as the wells Jūdāh; and Bedouins are also found who consider *Sanfān-al-Hanna* to be a subdivision of Wādi-al-Miyāh.

Position.—The districts surrounding Wādi-al-Miyāh are thus *Warai'ah* in the *Kuwait* Principality upon the north-west, *Summān* on the west, *Habl* on the south; and, on the east, *Habl* as far north as Jabal Labtalāh, then *Sanfān-al-Hanna* from Jabal Labtalāh to Jabal-al-Hass and finally *Radāif* between Jabal-al-Hass and Jabal Na'airiyah.

Physical characteristics.—The soil of Wādi-al-Miyāh is dark brown and perfectly cultivable; the fall of the land is generally from west to east. After heavy rain the ground in the northern part of the district is said to be flooded to such an extent that the Bedouins move all their camps to the southward of Qubaibah, where the land is slightly higher. In spring the valley is covered with grass, which is in places 3 feet high, and the water overflows from many of the wells; in summer the water level is generally about 12 feet below the surface. At Bakha, Mughati, Halaisiyah and other places there are flowing springs.

Population and villages.—Besides the Bedouins who visit the district there is a small settled population, inhabiting the three permanent villages of Ntā', Mulajjah and Sarrār and the temporary village of Kahafah; of these Ntā' is described elsewhere under its own name, and the others are dealt with in the paragraph on topography below. The settled population is very mixed and includes representatives of the 'Ajmān, 'Awāzim, Bani Khālid, Mutair, Rashāidah and Southern Shammar tribes. The crops generally grown are dates, wheat, barley, maize and lucerne; livestock are horses, camels, donkeys, cattle, sheep and goats. Notwithstanding the distance from the sea some of the people go to the pearl fisheries.

Political position.—The inhabitants of Wādi-al-Miyāh are said at the present time to pay Zakāt to the Shaikh of Kuwait, but the Shaikh does not regard the district as forming part of his territories. The local authority is the Shaikh of Ntā', at present Ibrāhim-bin-'Abdur Rahmān. The sites of deserted towns and villages are numerous, from which it may be inferred that Wādi-al-Miyāh was once more populous and politically more important than it is now: among the places at which these occur are, 'Aqair, 'Ataiyiq, 'Awainah, Bakha, Mishāfin, Muraighah and Thāj. At some of these places very ancient ruins with non-Arabic inscriptions are alleged to exist; the most considerable remains are at Thāj, where they are said to cover a large area.

Topography.—The following is a table of the chief places having names in the district:—

Name.	Position.	Nature.	REMARKS.
'Aqair العقير	4 miles west of Thāj.	Wells.	There are traces here of former habitation.
As-hāf اصحاف	6 miles south-east of Sarrār.	Do.	...

Name.	Position.	Nature.	REMARKS.
'Ataiyiq عتيق	12 miles east of Sarrār and 1 mile west of Jabal-al-Hass.	Wells.	There are ancient remains here.
'Awainah عوينه or 'Ayainah عينه	20 miles west of Thāj, nearly opposite the gap between the Abu Dhahair and Taff hills.	Do.	Do.
Bakha بخا	5 miles south-west of Thāj.	Springs.	Do.
Baqarah بقرة	15 miles west-south-west of Thāj.	Wells.	...
Dhabatīyah صبطية	15 miles south by west of Qubaibah.	Do.	The wells are 3 or 4 in number and from 2 to 3 fathoms in depth: they contain good water.
Dilaima داليا	4 miles south-east of Qubaibah.	Do.	...
Ghanwa غزوا	6 miles east by south of Sarrār.	Do.	...
Haishiri هيشري	9 miles south-south-west of Dhabatīyah, in the extreme south of Wadi-al-Miyāh.	Do.	...
Halaisīyah الهليسية	10 miles west-north-west of Jabal Qadām.	Springs.	...
Hanīdh حنيد	7 miles south-south-west of Thāj and 7 miles west of Jabal Labtalāh.	Wells.	...
Hasai الحسي	4 miles south-east of Sarrār.	Do.	...
Jahaidhah جعيدة	9 miles west-north-west of Thāj.	Do.	...
Jarairah جريرة	8 miles east by south of Sarrār.	Do.	...

Name.	Position.	Nature.	REMARKS.
Kahafah كهفه	8 miles south-south-west of Na'airiyah hill and 6 miles north-north-east of Mulaijah.	A walled hamlet of 10 houses, inhabited only during the cold weather; the cultivators remove in summer to Ntā'.	There are no date palms here, and the houses and the wall surrounding the hamlet are in a semi-ruinous state. The wells are brackish and usually about 15 feet deep.
Khazāmi الخرامي	17 miles west by north of Jabal Qadām.	Wells.	...
Labaiḥ لبيب	8 miles north by west of Thāj and 3 miles south-south-west of Jabal-al-Hass.	Do.	...
Mishāfin مشافين	4 miles south-west of Sarār and 2 miles east of the Abu Dhahair hills.	Do.	There are traces of ruins at this place.
Mughati مغطي	8 miles west by south of Thāj.	Springs.	...
Mulaijah مليجة	7 miles north-north-east of Ntā'.	A walled village of 30 houses of settled Arabs belonging to various tribes. Some of the people are pearl divers.	There is a small date grove of about 200 trees on the east side of the village; and among the fields outside are some 15 wells for irrigation in which the water stands at 6 feet. Livestock, exclusive of sheep and goats, are 100 donkeys and 250 cattle; there are no horses or camels. In the cold weather a good many cattle are sent to Kuwait for sale.
Muraighah مريغة	1½ miles west of Sarār.	Wells.	There is a deserted site here.
Ntā' نطاع	50 miles inland west of the foot of Musallamiyah bay.	...	See article Ntā'.

Name.	Position.	Nature.	REMARKS.
Qubaibah قبيبه	18 miles south of Thāj.	Wells.	About here is the border between the lower part of the district in the north and the higher part in the south.
Quta (Umm-al-) أم القطا	5 miles south of Sarrār.	Do.	...
Ridainiyah الريدينه	7 miles south-west of Sarrār and 3 miles east of the Abu Dhahair hills.	Do.	There are said to be ancient remains here.
Ridha رضا	18 miles north-west of Jabal Qadām.	Do.	...
Sadairah سدیره	4 miles north of Mulaijah.	Do.	The water is sweet, at 12 feet.
Safaiyah صفیه	8 miles north-west by north of Thāj.	Do.	...
Sarrār صرار	8 miles south of Ntā'.	A walled village of 50 houses inhabited by miscellaneous settled Arabs.	There are here about 150 date palms, and livestock include some 5 horses, 30 camels, 150 donkeys and 120 cattle.
Sharai'ah الشريعه	Near the southern border, 9 miles west of Jabal Qadām.	Wells.	...
Thāj تاج or Tāj تاج	24 miles south-east by south of Ntā' and 5 miles north-west of Jabal Labtalāh.	The site and remains of a once considerable town; it is said that the ruins of the houses, which were built of large light coloured stones, cover a space about 1 mile in length by ½ a mile in breadth. The inhabitants were Bani Khālid of the Al Humaid section which is now nearly extinct.	There are some wells with good water at 1 fathom. An encounter took place near Thāj in 1799 between the Turks, then invading Hasa from the north, and the Wahhābis. The destruction of the settlement is attributed to attacks by the Wahhābis and by the 'Ajman tribe. There are said to be underground dwellings and inscribed stones here.

An island in the **Shūshtar** District of Northern 'Arabistān, enclosed between the **Shatait** and **Gargar** branches of the **Kārūn** River and having the town of **Shūshtar** at its northern, and the village of **Bard-i-Qīr** at its southern apex.

MIYĀNĀB

مياناب

or
MIYĀN-
DĀB

ميانداپ

Vegetation, cultivation and animals.—Within a radius of 3 miles of **Shūshtar** Town there are many **Kunārs** and date palms; further to the south the only trees are the dates of village plantations. In spring **Miyānāb** is covered with vegetation, the grass sometimes reaching to a horse's belly; but in winter there is no greenery except in the neighbourhood of villages, where the people cultivate the ground with the ordinary wooden-shared plough of 'Arabistān drawn, here as elsewhere, by horses, mules, buffaloes and even donkeys. The northern end of the island was once highly cultivated. It was also irrigated by the **Mīnau** canal from **Shūshtar** Town and about one-fourth of it is still so served, among the villages which benefit being **Kunārpīr**, **Mehdiābād**, **Tabatti** and **Yissāreh**; but the total area of **Miyānāb** is only about 270 square miles and the whole could be watered from the **Mīnau** canal, if improved and properly worked. The supplies of **Shūshtar** Town, except fuel, are, so far as not brought from 'Aqili, mostly derived from **Miyānāb**. The game of the tract comprises mallard, teal, snipe, plover, francolin, sandgrouse and pigeon; there are also jackals and pig, and there were formerly lions.

Inhabitants.—In the south the people of **Miyānāb** are mostly 'Anāfijeh Arabs, elsewhere they are chiefly **Bakhtiyāris** of the **Shīr** 'Ali section. The remainder of the population are for the most part detribalised Arabs, called **Miyānāb** Arabs, or **Shūshtaris**.

Communications.—The land route connecting **Shūshtar** Town with **Band-i-Qīr** is about 30 miles in length; it runs direct from **Shūshtar** Town to the village of 'Arab Hasan on the **Shatait**, which is a much used and convenient halting place though rather nearer to **Band-i Qīr** than to **Shūshtar**, and thence it goes to **Band-i-Qīr**; the track is liable to become difficult after rain. There are two variants of this route, one more easterly for the whole way, and the other more westerly between **Shūshtar** and 'Arab Hasan, but they are hardly ever used.

Topography.—The riverain villages of **Miyānāb** will be found in the articles on the **Shatait** and **Gargar** rivers; those of the interior are

described in the following table, whence further particulars of population, cultivation and irrigation in Miyānāb can be extracted from the column of remarks :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Band-i-Qīr بد قیر	See article Band-i-Qīr.
Binaiyeh (Kūt-al-) کوت البنيه	See Qal'eh Nau below.
Jadāyar جدایر	3½ miles east of Lungur and 2½ miles south of Qurūnizi on the Gargar.	50 mud houses and mathuts of Persians called Mināwis and also of Shūshtaris. They have 20 rifles.	The village consists of three hamlets grouped together on a mound and named after their present headmen Safa, Yarra and Mash'al. There are wells, but the animals of the village, comprising 15 mules, 20 donkeys, 100 cattle and 500 sheep and goats, are watered at the Gargar River. Jadāyar belongs to Saiyid 'Abdus Samad, Mujtahid, of Shūshtar Town.
Kunārpīr کنار پیر	4 miles nearly due south of Shūshtar Town and 1 mile from the right bank of the Gargar.	100 mud houses of Shīr 'Alī Bakh-tiyāris who have among them 60 rifles.	There is an Imāmzādeh here and a Kunār tree. Water is from the Gargar river, from which it is taken at Mahibāzān; and there is some irrigation from the Minau canal. Livestock are 20 mules, 80 donkeys, 40 buffaloes, 100 cattle and 3,000 sheep and goats. The Imām Jum'eh of Shūshtar Town is proprietor of this village.
Lungur لنگر	1½ miles south of Mehdiābād.	15 mud houses of Shīr 'Alī Bakh-tiyāris and Shūshtaris. They have 10 rifles.	By Arabs called Languri-yeh. Water for men and animals is from wells and there are 6 Kunār trees. Livestock are 15 mules, 15 donkeys, 15 buffaloes, 50 cattle and 300

Name.	Position.	Houses and inhabitants.	REMARKS.
Medhdiābād مهدي آباد or Mohdiyāweh مهدياره	3 miles south-west of Shalaili Buzurg.	25 mud houses of Shīr 'Alī Bakhtiyāris and Shūsh-taris. There are 10 rifles.	sheep and goats. This village is owned by the Imām Jum'eh of Shūshtar Town. The water-supply for men is from wells: the cattle are sent to drink either at the Gargar or the Shatait. There is an Imānizādeh surrounded by 80 date palms; and wheat, barley and beans are cultivated by irrigation from the Mīnau canal. Livestock amount to 10 mules, 20 donkeys, 15 buffaloes, 60 cattle and 500 sheep and goats. This village is the property of the Imām Jum'eh of Shūshtar Town.
Mun'im (Hāji) حاجي منعم	$\frac{1}{2}$ of a mile west of Kūt Hāji Muḥammad Husain on the Gargar.	A Kūt or enclosure containing a house owned by Shūsh-taris.	The place is not occupied except in the seasons of agricultural activity.
Qal'eh Nau قلعه نو	$1\frac{1}{2}$ miles south-west of Kunārpīr and about midway between the Gargar and Shatait.	15 mud houses of Shīr 'Alī Bakhtiyāris, Bani Sa'ad of the Tarāif section and Shūsh-taris. They have 5 rifles.	By Arabs styled Kūt-al-Binaiyeh. Beans, wheat and barley are cultivated. Animals are 15 donkeys, 25 buffaloes and 50 cattle.
Saiyid (Kūt or Qal'eh) کوت - قلعه سيد	$1\frac{1}{2}$ miles south-west of Qal'eh Nau.	15 mud houses of Shīr 'Alī Bakhtiyāris, Tarāif and Shūsh-taris, owning 10 rifles.	Wheat, barley, beans and lentils are grown. There are 20 donkeys, 15 buffaloes and 40 cattle.
Shūshtar Town شوشتر	See article Shūshtar Town.
Tabatti ...	1 mile south of Shalaili Buzurg.	20 mud and mat huts, of which only 12 are at present inhabited. The people are Shīr 'Alī Bakhtiyāris and Shūsh-taris and possess 10 rifles.	Water is from the Gargar and there is some irrigation from the Mīnau canal. Livestock are 10 mules, 15 donkeys, 30 cattle and 200 sheep and goats. Tabatti belongs to Mirza Tāhir Khān, Mustauḥ, of Shūshtar.

The principal wealth of the Āl Morrah is in camels; but they have also some horses and many sheep and goats. Their tents are small and black: some of them have no tents. Of the sections enumerated below only the Āl 'Adhbah, Āl Bahaih, Āl Fahaidah and Āl Shabīb have either kerchiefs or 'Abas. The tribe as a whole avoid towns and villages. Those of the Āl Morrah who enter **Jāfūrah** do so in winter, and while there they have often no drink other than the milk of their camels and are reduced to boiling their rice in the same. It is said that the sections which frequent **Jāfūrah** wear a specially thick footgear made of camel hair to protect their feet from the burning sand, that their complexion is of a swarthiness unusual among Arabs, and that their camels are generally dark-coloured.

The dialect of Arabic spoken by the Āl Morrah is peculiar, and to other Arabs they appear to talk "in a stammering way."

Divisions and numbers.—The following table contains all that is known about the internal structure of the tribe:—

Section.	Subsection.	Fighting strength.	REMARKS.
'Ali-bin-Morrah (Āl) آل علي بن مرة	Ghiyāthīn غياتين	20	...
Do.	Jarāba'ah جرابعه	25	...
Do.	Nābit (Āl) آل نابيت	60	Their Shaikh is 'Ali-bin-Nābit.
Bishr (Āl)	See Āl Shabīb below.
Jābir (Āl) آل جابر	Ghaddīn (Āl) آل غضبان	45	...
Do.	Na'ām (Āl Bin-) آل بن نعام	30	...
Snabīb (Āl) آل شبيب or Āl Bishr آل بشير	'Adhbah (Āl) آل عذبه	250	The proper Shaikh of this subsection is 'Abdur Rahmān-bin-Niqāḍān, but a number of his people live under the Shaikh of the Āl Fahaidah.

Section.	Subsection.	Fighting strength.	REMARKS.
Shabib (Āl) or Al Bishr	Bahaiḥ (Āl) آل بحیح	500	This section, who have acquired an unenviable reputation by acts of violence committed near the coast, are distributed between two Shaikhs, <i>viz.</i> , Taithab-bin-Hādī and Muhammad-as-Sa'āk.
Do.	Buraid (Āl) آل برید	30	The subsectional Shaikh is Salih-al-Mutawwa'.
Do.	Dāwi (Āl) آل داری	20	...
Do.	Fahaidah (Āl) آل فہیدہ	350	Muhammad-bin-Sharaim, who is Shaikh of this subsection, is paramount Shaikh also of the whole Al Morrah tribe.
Do.	Ghafrān (Āl) آل غفران	500	The present Shaikh is one Bin-Jallāb.
Do.	Hādī (Āl) آل ہادی	25	...
Do.	Hasan (Āl) آل حسن	20	...
Do.	Jahaish جحیش	35	...
Do.	Shabib (Āl) آل شبيب	35	...
Do.	Zaqaimah (Āl) آل زقیمہ	25	...
Do.	Zibdān (Āl) آل زبدان	30	...

This gives a total fighting strength of 2,000 men, and the whole number of the tribe may be roughly estimated at 7,000 souls.

Political position.—The Āl Morrah are at present at feud with the 'Ajman and the Bani Khālid; and difficulties between them and the Turkish administration in the Hasa Sanjāq are chronic. The Āl Bahaiḥ

subsection are particularly turbulent and obnoxious to their neighbours : in 1900 they massacred a Shaikh of the **Bahrain** ruling family with a number of followers at the Bin-'Aqdān well in Barr-adh-**Dhahrān**, where he had come for sport ; in 1902 they cut up a Turkish force near 'Oqair Port ; in 1905 they committed an unprovoked attack on **Bahrain** boats at Huwaiqil bay in Barr-al-**Qārah** ; and in 1906 they repeated their exploit against the Turks at nearly the same place as in 1902 and in much the same circumstances.

The Āl Morrah when pressed by enemies more powerful than themselves ordinarily take refuge in the impenetrable **Jāfurah** desert ; but in 1902 the Turks, after the 'Oqair outrage, succeeded in surprising a large body of them at the wells of Zarnūqah in **Kharmah** and inflicted on them a sanguinary defeat. The Amirs of the Wāhhābis sent frequent expeditions against the Āl Morrah ; but one only, led by the Amir Faisal, was partially successful ; his forces, however, reached the scene of action in such a feeble State, owing to want of water, that he was obliged to be satisfied with a nominal arrangement and returned to **Najd** vanquished rather than victorious.

In connection with their postal service in the **Hasa** Sanjāq the Turks pay small subsidies to the chief Shaikh of the Āl Morrah, to the Shaikhs of the Āl 'Adhbah and Ghafrān subsections, and to Muhammad-as-Sa'āk of the Āl Bahaiḥ subsection : but these do not avail to secure the good behaviour of the tribe, nor can any revenue be realised from them by the Ottoman Government. About 1865 the Āl Morrah were paying the value of \$3,000 as revenue to the Wāhhābi Amir, and during the recent conflict in Central Arabia they supported the Wāhhābi cause, but they are not at present tributaries of Ibn Sa'ūd.

MŌZ
(BIRKAT-
A)
بركة الموز

A large village in the 'Omān Sultanate on the northern limits of the plain of 'Omān Proper, situated at the point about 6 miles west of **Izki** where Wadi Mi'aidin emerges from Jabal Akhdhar. It consists of three Hujrah or quarters, appropriated respectively to the Āl 'Umair, to the Bani **Riyām** and to tenants of Āl Bū Sa'īdi landlords ; the population is about 1,400, about 1,250 belonging to the Bani **Riyām** and 150 to other tribes. There are large date-groves containing about 15,000 trees, and the plantains to which the place owes its name are numerous. Irrigation is by Falaj. Bait Rudaidah ربيعة, a fort

and residence, consisting of a rectangular enclosure with an upper storey and towers at the corners, lies to the west of the village and is separated from Birkat-al-Mōz by a conical hill with a watch-tower commanding the water-supply. This fort belonged in 1876 to a relation of the Sultān of 'Omān, one Hamad, son of Hilal-bin-Muhammad who was murdered by Qais in 1864; it is at present (1906) in the hands of the Bani Riyām, who are holding it against the Sultān.

Also called A'dhamīyah اعظمیه : a small town in Turkish 'Irāq on the left bank of the Tigris opposite to Kādhimain and distant 2 miles north-westwards from the nearest part of Baghdād City. Mu'adhdham is connected with Kādhimain by a bridge of 21 boats, and with Baghdād by an unmetalled road—very little better than a ploughed field—on which ply public conveyances drawn by four mules and many hackney carriages.

MU'ADH
DHAM
معظم

The population of Mu'adhdham is about 2,000, and almost all are Sunni Muhammadans. Some good houses on the bank of the river serve as villas to wealthy merchants of Baghdād; but the principal object of interest is the tomb of the great Sunni theologian Abu Hanīfah, which is distinguished by a fine dome of blue tile-work; entrance is denied to Christians. The Mutawalliship of this shrine is hereditary in a local family: the present incumbent (Mustafa) has been absent at Constantinople for some years and is represented by his younger brother ('Abdul 'Aziz).

The chief industry is the tanning of skins and hides with gall-nuts from Mūsāl: there are about 40 tanneries, employing a large number of hands and turning out about 5,000 pieces a week. The brokers and merchants of Baghdād visit the yards once a week to make their purchases; and the leather, though technically known as rough-tanned, is of good quality and commands a ready sale in Europe. The red and yellow shoes called Yamanis يمانى are made at Mu'adhdham and sold wholesale at Baghdād; and some of the market-gardens which supply the city are at Mu'adhdham. There is a small bazar.

Mu'adhdham is the *chef-lieu* of a Nāhiyah in the Baghdād Qadha and the seat of a Mudīr: it is also the headquarters of the 4th battalion of the 81st regiment of the Radif.

**MU'AW-
DAH**
معادنة

A small tribe of Māliki Sunnis in **Bahrain**, pearl merchants, owners of date gardens, and navigators in every part of the Persian Gulf and even in seas outside it. They claim descent from the 'Anizah of Najd and are supposed to have come to **Bahrain** with the 'Utūb from **Kuwait** and **Qatar**. They have now only 20 houses at **Muharraḡ Town**.

**MUBAR-
RAZ**
مبرز

The next town in importance in the **Hasa Oasis** after **Hofūf**, from which it is distant 2 miles due northwards.

Surroundings.—On the west of Mubarraz is the desert; on the other 3 sides it is enclosed by cultivation. A raised causeway which connects it with **Hofūf** traverses a heavily irrigated country, full of ponds and springs of tepid water. Immediately outside the town on the north side is the **Hārah** spring, while the springs of **Marjān** and **Nādharah** adjoin respectively its south-western and its south-eastern corner: these are all described in the article on the **Hasa Oasis**. At half a mile westwards from the town is the Bedouin camping ground called **Hazam**. A cemetery extends along the south side of the town.

Defences.—Mubarraz is enclosed only by a ruinous wall without a ditch. The only military work is a fort called **Qasr Sāhūd** قصر صاهود which is just outside the town wall on the west side, between it and **Hazam**. The garrison is a quarter of a battalion of regular infantry in **Qasr Sāhūd** and 25 mounted and 10 unmounted **Dhābitīyahs** in the town.

Quarters, gates and buildings.—The town consists of 5 **Fariqs** or quarters, which are as follows:—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Ayūni (Fariq-al-) فريق العيوني	Embraces the central and south-western portions of the town.	700 houses, mostly of non-Bedouin Sunni Arabs. The chief family in this quarter are the Bin 'Afaḡiq بن عفالق.	The residence of the Turkish Muḡir is in this quarter, so also are the market place or Sūḡ and the Qaisariyah; the latter is a small collection of permanently occupied shops in the market place.

Name.	Position.	Houses and inhabitants.	REMARKS.
'Itbān (Farīq-al) فريق العتبان	Occupies the middle of the northern face of the town.	400 houses, mostly of Shī'ahs; but there are still a few also of the settled 'Atai-bah from whom the quarter is said to take its name.	...
Muqābil (Farīq-al) فريق المقابل	Situated in the north-east corner, having 'Itbān to the west and Sha'abah to the south of it.	70 houses, mostly of Sunnis.	...
Sha'abah (Farīq-ash-) فريق الشعب	Forms the south-eastern end of the town and has Muqābil and 'Itbān to the north-west and 'Ayūni to the west of it.	200 houses, chiefly of Shī'ahs.	The leading man in this quarter is at present Hasan-bin-Bishr.
Siyāsib (Farīq-as-) فريق السياب	Is on the north-west side and is met by 'Itbān on the east and by 'Ayūni on the south.	300 houses, the majority of Sunnis.	Shaikh 'Abdullah-bin-Sa'dūn, a resident of this quarter, is headman of the whole town and descended from its ancient rulers. He traces his origin to the Bani Khālid.

There are only two gates in the town wall, one on the north and one on the south side; the former called Darwāzat-al-'Itbān is in the 'Itbān quarter; while the latter, known as Darwāzat-al-'Anainah درارة العنينة is in the eastern end of the wall belonging to 'Ayūni. The houses of Mubarraaz are mostly of stone and lime, but some are of unburnt brick.

Inhabitants.—From the table in the preceding paragraph it will be seen that the population of Mubarraaz is about 8,500 souls; of these about four-fifths are Sunnis. The people are all settled Arabs and there are not many foreigners among them; a few immigrants from Najd are found, but none from Persia or even from Bahrain.

Resources, trade and industries.—The best drinking water is obtained from the Marjān spring. The interests of the town are largely agricultural, but it has a market which is resorted to by Bedouins on account of the springs and grazing which enable them to encamp near by; the Bedouin trade however is smaller than at Hofūf. A Friday fair is held in

the Sūq around the Qaisariyah ; the number of booths at this weekly fair is said to reach 250.

Administration.—Mubarraz is the head-quarters of a Nāhiyah.

MUDHAIBI

مضیبي

A town of about 700 houses in the Baldān-al-Habūs division of the Sharqīyah district of the Sultanate of 'Omān ; it is probably about 4 miles west of Sanāu, but its position with reference to Samad is uncertain. Mudhaibi is the largest place in Sharqīyah, except Ibra, and has a population of 3,500 or more. The inhabitants are Habūs, Hajriyīn, Āl Wahibah and Hirth. Date palms number about 10,000, and there are 100 camels, 60 donkeys, 70 cattle and 600 sheep and goats. Mudhaibi is said to possess the finest spring in Sharqīyah.

MUGĀM

مگام

or

MUQĀM

مقام

A port on the coast of the Shībkūh district of Persia, situated 22 miles east-south-east of Shīvuh at the mouth of a considerable valley which is described in the article on the Shībkūh District. Mugām consists of 250 houses inhabited by a population of mixed Arab and Persian origin who in religion are mostly Sunnis of the Shāfi'i school. A few of the people are merchants ; but the majority are seamen, divers, cultivators and date-growers. Mugām is the port of the Tarākameh and Ishkani districts in the interior, with which it has relatively good communications ; and there is considerable intercourse between it and Bahrain, Trucial 'Omān and Masqat Town. The principal article of export is tobacco, grown about Tarākameh and Ishkani, which is sent to Lingeh and Bahrain. Livestock at Mugām are 6 horses, 20 camels, 40 donkeys, 120 cattle and 100 sheep and goats. Date palms number about 1,000. Water is from 5 reservoirs and from 6 sweet wells of 2 to 3 fathoms depth. Vessels are 12 Sambūks, 30 Baqārahs, 5 Shū'ais and 2 Varjis, of which 8 go to the Arabian pearl banks and others are employed in pearling near home and in the neighbourhood of Shaikh Shū'aib island. Mugām is the seat of the Hamadi Shaikh to whom Nakhilu, Jazeh and Makāhil and the upper villages of the Mugām valley also are subject ; he is under the authority of the Governor of Bastak and pays 800 Tūmāns a year as revenue on account of his possessions.

The Imperial Persian Customs have a post at Mugām, which is a centre of smuggling.

The following are the villages in the Mugām valley in order from Mugām upwards :—

Name.	Position.	Houses, resources, etc.
Shakaru شكر	About 2½ miles above Mugām.	50 houses; 15 camels, 20 donkeys, 80 cattle, 1,000 sheep and goats, and 4,000 date palms.
Jibrāil (Bū) جبرائيل	About 1½ miles above Shakaru.	80 houses; 10 camels, 30 donkeys, 130 cattle, 250 sheep and goats, and 5,000 date palms.
Banūd بنود	About 2 miles above Bū Jibrāil.	50 houses; 20 donkeys, 70 cattle and 150 sheep and goats; 2 water reservoirs.
Jāmāl (Nakhl-i-) نخل جمال	About 1 mile above Banūd.	80 houses; 10 camels, 50 donkeys, 190 cattle, 300 sheep and goats, and 3,000 date trees; 3 water reservoirs, a spring and a mill.
Bāghu باغو	About 4½ miles above Nakhl-i-Jāmāl.	40 houses; 20 donkeys, 60 cattle, 100 sheep and goats and 1,000 date palms; 3 water reservoirs.
Karaisheh كرايشه	About 6 miles above Bāghu.	70 houses; 20 camels, 50 donkeys, 180 cattle, 400 sheep and goats and 300 date palms; 4 water reservoirs.
Sacheh سچه	About 1 mile above Karaisheh.	20 houses; 10 camels, 20 donkeys, 65 cattle, 150 sheep and goats, and 300 date trees; 3 water reservoirs.
Marbakh مربخ	About 1 mile above Sacheh.	200 houses; 20 camels, 200 donkeys, 400 cattle, 150 sheep and goats, and 2,000 date palms; 11 water reservoirs, Qanā's and water mills. Shaikh 'Abdullah-bin-Muhammad, Hamadi, the father of the present Shaikh of Mugām, had his principal residence at Marbakh. A strong fort was built by him here as a defence against his neighbour and enemy the Nasūrī Shaikh.
Gul Surkh گل سرخ	About 1 mile above Marbakh.	30 houses; 5 camels, 50 donkeys, 70 cattle, 350 sheep and goats and 300 date trees; 3 water reservoirs.
Rustāq رستاق	About 2 miles above Gul Surkh.	200 houses; 20 camels, 150 donkeys, 300 cattle, 1,500 sheep and goats, and 1,000 date palms; 2 water reservoirs and a flowing water channel.

Name.	Position.	Houses, resources, etc.
Buchīr بجیر	About 15 miles north-east of Muxām, at the head of the right bank affluent (called Hamīru) of the Mugām Valley.	150 houses; 40 camels, 200 donkeys, 250 cattle, 3,000 sheep and goats, and 6,000 date palms; 7 water reservoirs.

From this table it would appear that the population of the valley, inclusive of the port of Mugām proper, is about 6,000 souls.

MUGHU

مغر

In English formerly spelt "Mogoo." The last, on the south-east, of the **Shibkūh** Ports of the **Persian Coast**; it lies about 17 miles south-east of **Chāarak** and 23 miles west by north of **Lingeh Town**. Inland of Mughu are date-plantations; on the coast to the east of it low sand-hills extend for about 2 miles; and the nearest slopes of **Kūh Namaki** are about 1 mile to westward. Water is from a dozen wells, sunk about 15 feet in a clay soil, and is sweet. There are several towers for defence, and in 1899 a fort was built to ward off the attacks of the people of **Chāarak**. The houses, which are of stone and mud, number about 150; but at the present time a number of them are unoccupied. The inhabitants, amounting to about 500 souls, are mostly **Marāziq** or **Marzūqi** Arabs who claim to be a branch of the '**Ajman** tribe; but some are **Sūdān** or belong to other tribes, among them the **Āl Bū Samait** of whom there are 4 families. The **Marzūqi** majority, or about three-fourths, are **Wahhābis**; the rest are all **Sunnis** of the **Shāfi'i** school. The people have numerous date-groves and some cultivation of crops; the grazing near the village is good. There are 5 business warehouses, but no shops. Wheat, barley and dates are exported. A few of the inhabitants are traders, the remainder are sailors, pearl divers and cultivators. To Mughu belong 8 **Sambūks** trading to the coast of Arabia, 8 **Sambūks** which cross the Gulf to the Arabian pearl banks, and 4 '**Amilāhs** and 12 **Shū'ais** which are used both for fishing and for pearl-diving on the Persian side at **Bustāneh** and **Farūr** island. Mughu, with the connected villages of **Hasīneh** and **Kundarūn**, **Farūr** island and a part of the village of **Bustāneh** in the **Lingeh** District, is ruled by a **Marzūqi** Shaikh, at present **Ahmad-bin-Rāshid**. His subjects live in unity under his authority and are well provided with rifles; many of them habitually carry arms. The revenue for which the Shaikh of Mughu is responsible is 1,000 **Tūmāns** annually and is payable to the Governor of **Bastak**; but the amount which actually

reaches that official ordinarily falls below half the prescribed sum. The Imperial Persian Customs have a post here.

A powerful Arab tribe of which the ruling Shaikh of **Muhammareh MUHAISIN** is the head in Southern 'Arabistān. محيسن

Distribution.—The headquarters of the tribe are in Persian territory, and a majority of the Muhaisin are probably Persian subjects; but they also occur in large, and perhaps not much inferior numbers in Turkish 'Irāq.

In Persia the Muhaisin occupy all that part of the **Muhammareh** District which lies north and west of the **Kārūn** and they are found in some of the northern and eastern villages of 'Abbādān island to the south of it; they also extend up the banks of the **Kārūn** into the **Ahwāz** District, where their principal settlements are Maqtū, Khifī, Milaihān, Morān, Fārsiyāt, Ismā'ili, Chimaiyān, Qājāriyeh, Drisiyeh, Nathāreh and Salaihāwiyyeh, but of these only Milaihān, Ismā'ili and Qājāriyeh are occupied at other seasons than those of cereal cultivation.

In Turkish 'Irāq the Muhaisin are settled upon the Shatt-al-'Arab, chiefly below **Basrah**, their principal places on the left bank being Mōhiyah, Kūt Ghadhbān, Kūt-ash-Shaikh, Kūt Suwādi, Dahaimat-al-Kabir, Dahaimat-as-Saghīr, Kūt-as-Sinni, Dagħaimāt, Nahr Jāsim, Da'aiji and Kharnūbiyah, and, on the right bank, Mahaulat-az-Zahair, **Hamdān**, Hamdān-as-Saghīr and Abul Hamad: above **Basrah** there are Muhaisin at Kataibān, and possibly at other places.

Divisions and numbers.—The following are the principal sections of the Muhaisin, in Persian territory, with some particulars concerning them:—

Name of section.	Places at which found.	Estimated fighting strength.	REMARKS.
'Aryadh (Ahl-al- أهل العريض)	At 'Aryadh on the Abu Jidi' canal above Fāiliyeh; also at Rumais on the north, and 'Arādhīyeh on the west side of 'Abbādān island.	700	The section are named after their settlement at 'Aryadh. Their principal Shaikh resides at Ruwais.

Name of section.	Places at which found.	Estimated fighting strength.	REMARKS.
Baghlāniyeh بغلانيه	On the east coast of 'Abbādān island at Suwainikh-as-Sādeh, Suwainikh and Al Bū Hamaid; on the west coast of the same at Al Bū Nāji and 'Arūsiyeh, also at Durband on the left bank of the Shatt-al-'Arab above its junction with the Kārūn.	500	...
Bakhākh بخاخ	On the east side of 'Abbādān island at Bakhākh-at-Tura and Bakhākh; on the west side at Manyūhi; also on the left bank of the Bahmanshīr at Kharkhareh.	700	Not really a section of the tribe but a collection of people, some of them Persians, who have associated themselves together under the leadership of one Bakhākh, a native of Khārag. The so-called "Tāifat Bakhākh" is treated by its neighbours as a standing jest.
Farhān (Āl Bū) آل بو فرحان	Chiefly on the left bank of the Shatt-al-'Arab above its junction with the Kārūn, viz., at Khuwaiseh, Nahr Yūsuf, Sa'idān, Jadīd, Shakhūreh, Makri and Nazleh; but also at Nahr Siyāb on the right bank of the Kārūn in the Muhammareh District and at Zāir Hamaid on the west side of 'Abbādān Island.	700	...
Ghānim (Bait) بيت غانم	On the Abu Jidi' canal between Failiyeh and Aryadh; on the island of Umm-al-Khasāsīf and on the Turkish bank of the Shatt-al-'Arab.	800	...
Hilālāt هلالات	At Muhammareh Town; at Hizān on the right bank of the Kārūn in the Muhammareh District, at Hūz-al-Malākeh on the left bank of the Shatt-al-'Arab above its confluence with the Kārūn; at Sarhāniyeh سرخانيه on the	600	There is a local tradition that the Hilālāt came from Masqat, where they were formerly known as Mirāziq میرزق, but no such tribe is traceable in 'Omān.* Subsections of the Hilālāt are the Dawālim دواليم

* The reference may be to the Marāziq, who are found in the 'Omān Sultanate.

Name of section.	Places at which found.	Estimated fighting strength.	REMARKS.
Kana'an (Bait) بيت كنعان	Durband creek at one mile from the Shatt-al-'Arab; at Fārsiyeh on the north side of 'Abbādān island; also at Upper Silaik on the eastern bank of the Bahmanshir. At Muhammareh Town; on the left bank of the Shatt-al-'Arab above its junction with the Kārūn, viz., at the villages of Hadd, Sāna' and Ma'mūri; also on 'Abbādān island at Shanbeh, Shinaineh and Bait Bin-'Ataiwi on the east side, at Shākhāt-as-Sādeh on the north side, and at Āl Bū Burqa' on the west side.	300	Āl Bū 'Īsa آل بو عيسى Āl Bū Jinām آل بو جنام Āl Bū Khatir آل بو خاطر Mi'āziqeh مرازقة and Āl Bū Sawādi آل بو سوادى The Daw- ālīm subsection are found at Fārsiyeh.
Kāsib (Āl Bū) آل بو كاسب	At Failiyeh and on the Ma'mūri creek near its junction with the Shatt-al-'Arab; also on the Turkish bank of that river.	20	These are the family of the Shaikh of Muham- mareh and his imme- diate relations; but, owing to whole tribes such as the Bani Tamīm (II), and 'Idān of Southern 'Arabistān having been enrolled at their own request among the Āl Bū Kāsib, the fighting strength of the section may, in a different aspect, be estimated at as much as 3,000. The name is pronounced Chāsib.
Ma'arraf (Āl Bū) آل بو معرف	On the west side of 'Abbādān island at Bawairdeh, Shākhāt Zāir Husain and Manyūhi.	600	...
Manai'at منيعات	At Khif and Milaibān on the Kārūn River and at Qisbeh in the Muham- mareh District.	20	Manai'at are found also among the Kā'ab. They may have been originally a separate tribe.
Mutūr مطور	At Muhammareh Town, and on 'Abbādān island, where they occur on the north side at Shākhāt 'Abarteh,	700	An important and promi- nent section of the tribe.

Name of section.	Places at which found.	Estimated fighting strength.	REMARKS.
	Shākhbat, Hāji 'Arrāq, Shākhbat Hāji Digbaifiḡ and Hūz Ridhyo, on the east side at Shākhbat Bait Sālim, Shākhbat Abul Khadhair, Hūz 'Umr and Faiyādhī, and on the west side at Shatait: Mutūr also are found at Munīkb, Dāḡeh and Tingeh on the left bank of the Bahmanshir, and in the season they cultivate at Ismā'ili on the Kārūn. Some of the section are in Turkish territory.		
Zuwaidāt زويدات	At Failiyeh.	400	Small bodies of Zuwaidāt are found planted as police guards on the Kārūn, e.g., at Rahwāli and Qajariyeh, where there are permanent posts, and sometimes at the Mārid creek and in the Umm-al-Wāwiyeh tract.

The Muhaisin in Turkish 'Irāq appear to belong almost entirely to the Bait Kana'an section.

The Abu Hamreh ابو حمرة in Northern 'Arabistān, who are said to have 200 fighting men and to frequent the country south of the Haddām towards its source, are considered by some to be a section of the Muhaisin; but others class them as Hamaid. The Āl Bū 'Atuwi section of the Bāwiyeh were originally Muhaisin and in some respects still belong to the tribe.

The fighting strength of the Muhaisin proper in Persian territory would appear from the table above to be about 6,000, and the present Shaikh of Muhammareh estimates it at double that number; but a computation by settlements gives the total number of Muhaisin in Persia as about 12,000 souls only. It is estimated that about two-thirds of the fighting men of the tribe are armed with rifles and that about one-sixth of the total muster are provided with horses.

Mode of life and character.—The Muhaisin in Persia are a settled, but not altogether sedentary tribe, having their permanent headquarters in the Muhammareh District: at their homes they are cultivators of dates, but they also grow wheat and barley upon both banks of the Kārūn

as far up as Morān and even in the vicinity of **Wais**. Their custom is to leave the **Muhammareh** neighbourhood in November for their grain lands on the **Kārūn**; in February, after sowing these, they return to **Muhammareh** to fertilise their dates; in May they revisit the **Kārūn** to reap their crops of wheat and barley; in June or July they reappear at **Muhammareh** in expectation of the date harvest, which begins at the middle of July. The Muhaisin own many sheep and goats, some cattle and a few buffaloes; when they return from the **Ahwāz** to the **Muhammareh** District they leave part of their flocks in charge of sections of the **Bāwīyeh** tribe. In religion, except some of the **Bait Ghānim**, who are Sunnis, the Muhaisin are all Shī'ah Muhammadans. They are described as a cheerful and lazy race, thoroughly amenable to tribal custom and authority.

Origin, history and political position.—The Muhaisin are said to be descended from a certain man whose name was Muhaisin and from his son-in-law **Kāsib** کاسب (pronounced Chāsib). Tradition represents these individuals as belonging to a tribe of the **Muhammareh** District whom the encroachments of their neighbours the **Ka'ab** compelled to emigrate and to settle on the **Tigris** under the name of Āl Husain Pasha آل حسین پاشا. Muhaisin and Kāsib however, having purchased land near the site of the present town of **Muhammareh** from the **Ka'ab**, returned with some followers to their native country and founded the Muhaisin tribe, of which the headship has remained vested in the house of Kāsib.

The later authentic history of the Muhaisin is included in that of 'Arabistān. Here it is enough to observe that on the conclusion of the Anglo-Persian war in 1857 Hāji Jābir, then head of the tribe, was recognised by the Persian Government as Shaikh of **Muhammareh** in his own right and with plenary powers; the Shaikhship up to that time had been held by him merely as nominee of the **Ka'ab** Shaikh. Shortly afterwards, the Shaikh of the **Ka'ab** having been deported to Tehrān, the **Fallāhiyeh** District was placed in charge of his Muhaisin rival; and, except during one short interval from 1860 to 1862, the heads of the **Ka'ab** tribe have ever since been in subordination to the Shaikh of the Muhaisin, or as he is now generally called, the Shaikh of **Muhammareh**.* At the present time the Muhaisin, in consequence of the authority wielded by their head over all the districts of Southern 'Arabistān, may be regarded, though still outnumbered by the **Ka'ab**, as the paramount tribe in all that region.

* The Shaikh, it is said, now sometimes describes himself as Shaikh of the **Ka'ab**.

Physical character.—The whole of this country is flat, alluvial and low-lying, and so much of it as is within reach of irrigation by canals and creeks from the Shatt-al-'Arab, Kārūn and Bahmanshīr is fertile and productive; the remainder, situated chiefly in the centre of 'Abbādān island or to the north of Muhammareh Town, is barren, but only for want of water. The banks of the rivers are generally lined with dense plantations of dates.

Population.—The principal tribes of the district are the Muhaisin and the Ka'ab, and the great bulk of the Muhaisin who reside in Persian territory are located within its bounds. The following table explains how the population is distributed, and shows the total number of souls to be about 24,000 :—

Division of the district.	Muhaisin.	Ka'ab.	Various.	Total number of souls.
Left bank of the Shatt-al-'Arab above its junction with the Kārūn.	3,000	...	750	3,750
Both banks of the Kārūn including Muhammareh Town and excluding the north shore of 'Abbādān island.	4,500	100	2,150	6,750
East bank of the Bahmanshīr stream.	300	550	...	850
East shore of 'Abbādān island.	1,000	1,400	...	2,400
North shore of 'Abbādān island.	1,100	250	1,150	2,500
West shore of 'Abbādān island.	1,600	4,250	1,650	7,500
TOTALS.	11,500	6,550	5,700	23,750

Among the miscellaneous tribes are included Arabs of Bahrain origin at Muhammareh Town and at Kūt-ash-Shaikh and Qasbeh on 'Abbādān island; Persians at the same places; about 40 houses of Sabians and a few Jews and Oriental Christians in Muhammareh Town; Hasāwīyah at various places, especially on the left bank of the Shatt-al-'Arab; Saiyids and some communities of doubtful origin—among them a few 'Atub said to have come from Turkish 'Irāq—in the Kārūn villages; and Balūchis and negroes, especially at Failīyeh, the negroes being found in some number also at Qasbeh on 'Abbādān island. Some of the Muhaisin visit the Ahwāz District in winter to cultivate cereals; but except for these and occasional bands of gypsies called Kōlis, the population of Muhammareh District may be regarded as altogether sedentary.

River Scene Muhammareh.

(MAJ. P. Z. Cox.)

Topography.—The only town is that of **Muhammareh**. Lists of the villages on the east side of the **Bahmanshīr** and on 'Abbādān island will be found in the articles under these names, and the tables below accordingly deal with the two remaining divisions of the district only. The names given primarily designate small tracts, estates or plantations ; but they have also a secondary application to the villages or hamlets that are situated within their limits.

The following is a list of the places on the left bank of the Shatt-al-'Arab from the Turkish frontier down to the mouth of the **Kārūn** :—

Name.	Inhabitants.	Remarks.	Distance in miles below last village.
Hadd حد	Bait Kana'an (Muhaisin).	60 mud houses and reed huts.	1 (In this case below the cairn which marks the Turko - Persian frontier.)
Khumaiseh خميسه	Āl Bū Farhān (Muhaisin).	45 reed huts.	5
Nahr Yūsuf نهر يوسف	Do.	55 mud houses and reed huts.	1
Sa'idān سعيدان	Do.	35 reed and mat houses.	1
Jadid جدید	Do.	30 reed and mat huts.	$\frac{1}{2}$
Shākhūreh شاخوره	Do.	35 mud houses and reed huts.	Adjoining.
Makri مکري	Do.	70 mud houses and huts.	Do.
Nazleh نزله	Do.	25 mud houses and huts.	Do.
Kūt Khaiyain کوت خيئين	Various sections of the Muhaisin.	40 mud and reed houses surrounded by a dilapidated wall.	$\frac{1}{2}$
Faiīyeh فيليه	...	See article Faiīyeh.	...
Durband در بند	Baghlāniyeh (Muhaisin) and Hasāwiyyeh ; gardeners. (The	15 mud houses. Here is a large creek from the Shatt-al-'Arab which formerly (it	1

Name.	Inhabitants.	Remarks.	Distance in miles below last village.
	Hasāwīyeh are immigrants from Hasa and their descendants, not Muhaisin.)	is said) connected with the Kārūn.	
'Arbidiyeh عربيديه	Hasāwīyeh; gardeners. (See last village.)	6 mud houses.	1
Sāna' صانع	Bait Kana'an (Muhaisin).	5 mud houses on a canal of the same name.	Adjoining.
Ma'mūri معمروري	Do.	One hamlet of 20 mud houses and 2 others comprising 12 huts; the former is inhabited by relatives of the Shaikh of Muhammareh. Ocean steamers anchor opposite this place for Muhammareh business.	.
Hūz-al-Malākeh حوز الملاكه	Hilālāt (Muhaisin).	6 mud houses on the Barhāneh canal.	...
Jābiriyyeh جابرية	.	The angle between the Shatt-al-'Arab (left bank) and Kārūn (right bank), in which are situated the Persian Customs House, the British Consulate and the premises of Messrs. Lynch Brothers.	...

The following is a table of the villages on the Kārūn from Sab'eh downwards; all of them are included in the Muhammareh district except the first 4 upon the left bank, namely, Drisiyeh, Nathāreh, Salaihawīyeh, Mansiyeh, which are in the Ahwāz District:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Sab'eh سبعه	On the right bank 58 miles by river below Nāsiri and 101 below Band-i-Qir.	1 house of Saiyids.	At this place, which is nearly due west of Drisiyeh in the Ahwāz District, there was formerly

Name.	Position.	Houses and inhabitants.	REMARKS.
'Abūd (Saiyid) سید عبود	In the waterless desert, seven miles from the right bank of the Kārūn and about ten miles southwest of Sab'eh.	The tomb of a Muhammadan saint, much visited by Arabs. Robbers and thieves respect property left near it; consequently cultivators often store their grain in matting at the place and leave it otherwise unprotected.	a shrine which had a grove of 50 palm trees on the south side and contained the tombs of seven saints. It was destroyed about ten years ago by the combined action of rain and river. The Saiyid in charge lives at Sab'eh. There are said to be traces of an old canal or natural stream which took out of the Kārūn two miles below Sab'eh, passed Saiyid 'Abūd and terminated on the Shatt-al-'Arab in the middle of Faili-yeh.
Drīsiyeh دریسیه	On the left bank, three miles below Sab'eh.	20 mat huts of Muhaisin having 15 rifles and 25 mounted men.	Occupied in the ploughing season and at harvest only. Included in the Ahwāz District, not in that of Muhammareh.
Nathāreh* نثاره	On the left bank, three miles below Drīsiyeh.	20 mat huts of Muhaisin. There are 15 rifles and 20 mounted men.	Do.
Salaihawīyeh صليحاریه	On the left bank, eight miles below Nathāreh.	20 mat huts of Muhaisin. Mounted men are 15 and rifles 10.	Do.
Mansi'yeh منسیه	On the left bank near Salaihawīyeh.	10 huts occupied by 30 Ghulāms of the Shaikh of Muhammareh, all of whom have rifles and horses.	This place also is in the Ahwāz District.

* Rahaimāniyeh رحمانیه and Umm-al-Wāwīyeh أم الواویه, shown in some maps near to Nathāreh, are not villages but tracts of land; and Mamlah صلاح near Mansiyeh, is another such tract. All 3 are on the right bank of the river. Mamlah takes its name ("place of salt") from a long depression, parallel to the river and about 1 mile inland from it, which contains deposits of salt and supplies the Kārūn region with that commodity.

Name.	Position.	Houses and inhabitants.	REMARKS.
'Ali-ibn-al-Husain علي ابن الحسين	On the left bank about six miles by river below Salai-hāwīyeh.	Two ruined tombs only, with two or three date trees.	About one mile above this place and one mile inland from the left bank of the Kārūn is a marsh called Kharmeh خرمه fed by the river at high rises, to which Muhammareh buffalo owners bring their animals in spring.
'Abid (Kūt-al-) كوت العبيد	On the left bank about two miles by river below 'Ali-ibn-al-Husain.	At present deserted.	The signs of former habitation are now scarcely visible.
Rahwālī رهوالي	On the right bank 8 miles by river below Kūt-al-'Abid.	10 huts containing a garrison of 30 Ghulāms of the Shaikh of Muhammareh, all armed with rifles and mounted and belonging to the Zuwaidāt section of the Muhaisin. There is a ferry with a single small boat.	Here stood the tomb of Rūbīn-bin-Ya'qūb (ربيع بن يعقوب) of pyramidal form and built in 13 tiers or stages: it fell down in February 1906. On the same side of the river, 3 miles further down, are three or four mounds known as Husainiyāt حسينيّات.
Qisbeh قصبه	On the right bank, 9 miles below Rahwālī and 7 miles above Muhammareh Town.	20 huts of Saiyids and Manai'āt Muhaisin, cultivators of dates.	The Muhammareh date belt begins here. There is a canal. One small ferry boat is kept.
Ramsān رمسان	$\frac{3}{4}$ a mile below Qisbeh.	15 huts of Ka'ab of the Dris division.	...
Askaleh اسكالة	On the right bank, included in the tract properly called Haffār, which extends from Qisbeh to within about a mile of the north-eastern corner of 'Ab-bādān island. Askaleh is $\frac{1}{4}$ of a mile below Ramsān.	Two mud huts on the bank and a few among the trees. The people are Muhaisin of the Zuwaidāt section. Above Askaleh is a small but conspicuous shrine, called Amīr-al-Muminin, which has recently been repaired by Mirza Hamzah, adviser to the Shaikh of Muhammareh.	The name is attributed to the existence, formerly, of a customs house at this place. The Shaikh of Muhammareh has an officer here to inspect boats proceeding up the Kārūn.

Name.	Position.	Houses and inhabitants.	REMARKS.
Mahsin (Bū) بر محسن	Begins $\frac{1}{2}$ a mile below Askaleh and extends $1\frac{1}{2}$ miles.	Scattered huts of various tribes.	...
Charīm (Bū) بر چريم	2 miles below Askaleh.	20 huts of various tribes.	...
Muqāmīseh مقامسة	About 1 mile below Bū Charīm.	20 huts of 'Atub.	...
Talūl (Umm-at) أم القلول	The last place in the Haffār tract.	20 huts of Saiyids.	According to one account this place was the earliest settlement of the Muhaisin tribe.
Khunbeh خنبه	On the right bank, about 1 mile below Umm-Talūl and the end of the Haffār tract.	A thick date grove.	The owners reside in Nahr Siyab.
Siyāb (Nahr) نهر سياب	On the right bank, immediately below Khunbeh and opposite to the north-east corner of 'Abbādān island.	50 huts, scattered among the date trees, of Muhaisin of the Al Bū Farhān section.	A name Bū Mashallish used about here seems to include Umm-at-Talūl, Khunbeh and Nahr Siyāb.
Falaifil (Shākhat) ساختة فلأفل	On the right bank. Adjoins Muhammareh Town.	6 huts of gardeners.	Practically a suburb of Muhammareh.
Muhammareh Town محمره	On the right bank on the Kārūn, $1\frac{1}{2}$ miles from its junction with the Shatt-al-'Arab.	...	See article Muhammareh Town.
Hizān حيزان	The tract of land on the right bank of the Kārūn river from Muhammareh Town to the confluence of the Kārūn and Shatt-al-'Arab.	About 80 houses of Hilālāt Muhaisin, scattered amidst date groves.	Hizān comprises, besides Hōz-al-Malākeh and Jābiriyeh already described, a village called Muhammarat-al-'Atiqeh which consists of 15 mud houses of Hasāwi market gardeners and is situated between the end of the Ma'mūri canal from the Shatt-al-'Arab and the end of another, called Nahr Sadeh, which runs out of the Kārūn between Muhammareh Town and the British Consulate.

Agriculture and livestock.—The principal crop is that of dates, but some cereals also are grown, and there is an ordinary proportion of livestock. Irrigation from the **Kārūn** river appears to have been once more extensive than it is at the present day; and 2 miles below Sab'eh, on the right bank of the river, there are said to be traces of a canal which formerly ran from that point *viâ* Saiyid 'Abūd to Failīyeh on the Shatt-al-'Arab.

In the villages nearly every family own one or two cows, and a small proportion own mares. The Shaikh of **Muhammareh** keeps at least 60 brood mares and a few stallions in his own possession, but he has other stock also which he distributes among the tribesmen to be looked after for him. Buffaloes are brought into the district by nomadic Ma'adān. Fowls, ducks and geese are owned by the inhabitants.

Trade and communications.—The trade and communications of the district are noticed in the general article on 'Arabistān.

Administration.—The Muhammareh district appears to be sometimes called the district of Shatt-al-'Arab, doubtless on account of the importance attached by the Persian Government to the jurisdiction of the Shaikh of **Muhammareh** over the eastern or Persian bank of that river; but locally this name is not used, perhaps because it might lead to confusion with the Shatt-al-'Arab Nāhiyah in the Turkish Wilāyat of Basrah. For administrative purposes the Muhammareh district is at present divided into two principal blocks, the **Kārūn** river being the border between the two; and 'Abbādān island is further sub-divided into 4 executive charges, 3 of which have their headquarters at Ruwais, Manyūhi and Qasbeh respectively. In the Muhammareh district the Shaikh takes as revenue half the produce of all date trees, and only those which are Waqf property or which belong to certain of the Shaikh's own relations are exempt.

The first form of the name is used in Persian, the second in Arabic. Muhammareh is the capital and the only important town of Southern 'Arabistān; it may also be described as the sole seaport and entrepôt of foreign trade in all 'Arabistān.

Site.—Muhammareh stands upon the right bank of the **Kārūn**, the river being here from 200 to 300 yards wide; the houses begin $1\frac{1}{4}$ miles

COPYRIGHT.

Two Views of Muhammareh Town.
(MR. J. C. GASKIN.)

above the junction of the **Kārūn** and the Shatt-al-'Arab, and the river frontage of the town extends for about one mile upwards from this point. The soil is alluvial, and the river bank, which would otherwise be subject to erosion, is protected within the limits of the town by revetments of date logs laid horizontally to form quays and wharfs. Muhammareh is shut in upon its upper side by the date plantations of Nahr Siyāb, on its lower by those of Hīzān; but these groves are only a quarter of a mile deep, and immediately behind the town begins an open treeless desert which stretches away to the interior.

Buildings.—The town, which is constantly increasing in size, now consists of about 800 houses, some of which are of brick and some of mud, while some are merely huts. Upon the river there are now some fine modern buildings; among them the most conspicuous is the palatial mansion of Hāji Muhammad 'Alī, Rāis-ut-Tujjār, who is the chief secretary of the Shaikh of Muhammareh. There are six mosques, three public baths and a good brick bazaar: the last has a domed roof throughout and was built by the present Shaikh, who is less afraid than were his immediate predecessors of exciting the cupidity of the Persian Government. The state of the town, in spite of these and other improvements, continues to be highly insanitary: the only kind of drain seen is a channel cut down the middle of each street, which is generally choked up except after rain. Accommodation for travellers is afforded by 7 Husainiyahs حسینیه: these are buildings primarily set apart for the readings and lamentations which are obligatory on Shi'ahs at the Muharram and also as refuges for destitute strangers and for pilgrims, but they also serve as inns and in one of them superior rooms can be had on payment. There are also some Khāns خان in Muhammareh; but these, instead of being hostelries as in Turkish 'Irāq, are merely places of business or warehouses where merchants store their goods.

In the town, towards its eastern end, are the residence of the Persian Kārguzār, the telegraph office and a battery, overlooking the river, of 5 brass field pieces of various sorts. The village of Kūt-ash-Shaikh, on 'Abbādān island opposite to the town, is practically a suburb. Outlying appurtenances of Muhammareh are the Customs House—originally built as a Governor's palace—at the mouth of the **Kārūn** upon its right bank, and the quarantine station and doctor's quarters, which are upon the left bank a little further from the river mouth and were constructed in the first instance for artillery and infantry barracks respectively.

Defences.—The only sort of defence which the town possesses—except

the miserable battery already mentioned—is a ruinous mud wall upon the landward side: it was built by the Persians in 1858 and suffered severely in the floods of 1896. This wall runs at an unnecessary distance from the town, and its perimeter is so great in proportion to any force which the Persian Government could place at Muhammareh as to render it valueless even should it be repaired. The only representatives of the Persian army at Muhammareh are two artillery officers, with a dozen privates under them, who are in charge of the guns and of an arsenal that exists, at least in name.

Population.—The inhabitants of Muhammareh are chiefly local Arabs belonging to the Hilālāt, Bait Kana'an and Mutūr divisions of the **Muhaisin** tribe; but there are also numerous Arabs who are descendants of refugees from **Bahrain**, besides some natives of **Dizfūl** and **Shūshtar** Towns, a few merchants from other parts of Persia, about 40 families of **Sabians**, and a handful of Jews and Oriental Christians. The Bahrainis are mostly small shopkeepers and mechanics; the **Sabians** are silver-smiths; the Jews deal in Manchester goods; and the Christians are clerks or lightermen. The total population is probably about 5,000 souls. The people drink the water of the **Kārūn** river, which is good.

Trade and shipping.—Muhammareh can now boast of five large bazaars, containing over 300 shops, and of a grain market. Large stocks of rice and dates are generally available. There are two or three gun-smiths who repair rifles and revolvers.

More important, however, than the local trade or industries of Muhammareh are its foreign commerce and its functions as a port. The town is accessible to ocean-going steamers; but, owing to the narrowness of the **Kārūn** and to the consequent difficulty in swinging, they generally discharge their cargoes without leaving the **Shatt-al-'Arab** opposite to the village of Ma'mūri. Of the foreign trade carried on at Muhammareh, the greater part depends on places upon the **Kārūn** river and further up-country. For particulars the paragraph on trade in the article on **'Arabistān** may be consulted.

The large boats owned at Muhammareh are chiefly employed in trading up the **Kārūn** river; they are 19 Mahailahs and about a dozen Ballams of a kind for cargo called Nassāri. Besides these about 80 'Ashāri or passenger Ballams are owned at Muhammareh or in its immediate neighbourhood.

Administrative and political matters.—The administrative arrange-

ments and political interests of Muhammareh town are a part of those of 'Arabistān generally, to the article on which reference may be made. Muhammareh is in communication by telegraph with Nāsiri, and by telephone with the Shaikh's headquarters at Failiyeh and with the Customs House; one or two of the public offices in the town belonging to the Shaikh or to the Persian Government are also connected by telephone. There are also a Persian post office and a Persian treasury which are both in charge of the Imperial Persian Customs. The town is nominally governed by a deputy of the Shaikh called the Naib-al-Hukūmeh, but the Rais-at-Tujjār in reality wields greater powers: all commercial cases are settled by him.

Among private citizens three Bahraini and two Shūshtari 'Ālims, or doctors of religion not enjoying the title of Mujtahid, are prominent.

The British Consulate stands on the right bank of the Kārūn between the town and the Customs House, and the Christian cemetery is at some distance inland from the Consulate at the point where the date-groves of Hizān give place to open country. There are only two or three registered British subjects resident at Muhammareh; in the date season, however, Indian boats containing British subjects visit Muhammareh; and numerous Indian pilgrims, Bohrahs and others, pass through the place on their way to and from the Shi'ah shrines. Two European British firms are represented by agencies at Muhammareh, and there are 3 local Muhammadan firms enjoying British protection. A British post office exists in connection with the Consulate.

After Bahrain Island this is the most important island of the Bahrain group. It lies north-east of Bahrain Island and is separated from it only by a strait, $1\frac{1}{2}$ miles broad, of which the greater part is extremely shallow. Its maximum diameter, from north-north-west to south-south-east, is about 4 miles; but the area of the island proper is relatively very small,—in fact only $5\frac{1}{4}$ square miles,—on account of its irregular and much indented form, somewhat resembling a horse shoe with the open side to the south. Muharraq consists of a low strip of sand, but it is surrounded by broad, flat reefs of coral which almost triple its superficies at low tide; and a rocky spit, called Rās-al-Khasaifah راس الخصيفه, which runs out nearly four miles to seaward from the north-western corner of the island, constitutes the chief danger to

MUHAR-
RAQ

ISLAND*

* For authorities, maps, charts, etc., see footnote to the title of the article Bahrain Principality.

vessels entering **Manāmah** harbour. The marine springs or **Kaukabs** specified in the first table below are one of the most remarkable features of the island. There are date plantations at 'Arād, **Busaitīn**, **Dair**, **Qalāli**, **Samāhij** and **Zimmah** only, and gardens at **Raiya** and **Zimmah**. There is practically no grazing, and only a few stall-fed animals are kept on the island.

Features of the coast.—The outstanding features of the coast of **Muharraq** Island are given below in alphabetical order :—

Namo.	Position.	Nature.	REMARKS.
Arād (Dōhat) دوحة عراد	On the south side of Muharraq Island between 'Arād village and Muharraq Town.	A large bay.	...
Fakākah (Dōhat) دوحة فكاكه	On the south side of Muharraq Island between 'Arād village and Hadd .	Do.	...
Hallah (Dōhat-al-) دوحة الحلة	On the north side of Muharraq Island between Dair and Raiya .	A small bay.	...
Jurdi (Jazīrat) جزيرة حردى	One mile north-east of Qalāli .	An islet situated on the shore reef.	It carries the remains of a building and near it are two fresh water springs in the sea. The islet is 2 feet above sea level.
Khasaifah (Jazīrat) جزيرة خصيفه	Half a mile north of Dair .	A small rocky islet on the shore reef.	Between it and the shore are three fresh water springs, uncovered at low tide, from which Dair is supplied with water. The islet itself is 8 feet above sea level.
Raiya (Rās) راس ريا	The northernmost point of Muharraq Island.	Cape.	Described below in the table of villages.
Sajah (Jazīrat-as-) جزيرة الساجه	One mile west of Busaitīn .	A small islet on the shore reef.	It has a basin on the top filled by a fresh spring, but the water is liable to be tainted by the sea getting in. The islet is only 20 yards in diameter and 2 feet above sea level.
Shāhīn (Jazīrat Abu) جزيرة ابو شاهين	One mile south-east of Hadd .	An islet on the shore reef.	Only 1 foot above sea level. It has a fresh water spring.

Towns, villages, etc.—The following is an alphabetical list of the towns, villages and other principal places on Muharraḡ Island :—

Name.	Position.	Nature.	REMARKS.
'Arād عراد	In the middle of a promontory from the south side of the island between the bays of Fakākah and 'Arād.	100 huts of Bahārīnah who are date growers, fishermen and pearl divers.	There are three date plantations, estimated to contain over 12,000 trees, and a ruined rectangular fort with sides about 90 feet long; the latter is at the eastern point of 'Arād bay. 'Arād was formerly the name of the whole of Muharraḡ Island.
Busaitīn البسيتين	See article Busaitīn.
Dair الدير	See article Dair.
Hadd الحد	See article Hadd (II).
Khalaifāt (Hālat-al-) حالة الخليفات	Off the south side of the island, on ground which at high tide is surrounded by water, and rather more than 1 mile west of Hadd.	40 reed huts of Khalaifāt, pearl divers and fishermen.	This village is of recent foundation and is not always inhabited.
Māhur (Hālat Abu) حالة ابو ماهر	See article Hālat Abu Māhur.
Muhammad-bin-Salīm ('Ain) عين محمد بن سالم	Half a mile west of Qalālī at a short distance inland.	A fine spring of fresh water.	...
Muharraḡ Town محرق	See article Muharraḡ Town.

Name.	Position.	Nature.	REMARKS.
Na'im (Halat-an-) حالة النعيم	On the promontory which forms the western point of Dohat Fakālah.	50 reed huts of fishermen and pearl divers of the Na'im tribe and one or two families of Sādah.	There are 6 donkeys and 5 cattle here. Some of the Na'im of this place remove to Qatar in the cold weather; and Rāshid-bin-Mahanna, Shaikh of the Na'im, sometimes occupies an 'Arish here. With Halat-as-Sulutah, this village possesses a number of pearl and other boats.
Qalāli قلالي	See article Qalāli.
Raiya ريّا	On the northernmost point of the island, $\frac{1}{2}$ a mile east of Dair.	A garden about 300 yards square with dwellings of gardeners. Only a little lucerne and onions and a few fruits, such as pomegranates, are grown.	The garden has fountains and water tanks and belongs to the Shaikh of Bahrain who, when residing at Muharrāq Town, drives out here three or four times a week to spend some hours in relaxation.
Sanāhij (pronounced Samāhij) سامح	Near the north coast of the island, a little south of Raiya.	150 reed huts of Bahārinah, of whom the male adults are all pearl divers.	The village is hidden in date groves which contain about 1,150 palms. The drinking water from wells in the vicinity, 2 fathoms deep, is slightly brackish. There are 14 donkeys and 4 cattle; boats are 6 Shū'ais and Sambūks and 6 Māshuwahs and jollyboats, 11 of which are used for pearling.
Shajairah (Jazīrat Ummash-) جزيرة أم الشجير	On a quasi-island $1\frac{1}{2}$ miles south of Hadd.	30 reed huts. The people are the same as on Umm-ash-Shajar below.	Vessels here are 1 Baqarah and 14 Shū'ais and Sambūks.
Shajar (Jazīrat Umm-ash-) جزيرة أم الشجر	On a quasi-island $\frac{1}{2}$ a mile south by east of Hadd.	60 reed huts of the Na'im tribe who are pearl divers and fishermen. Two or three families are Bani Yās of the Al Bū Falāsah section.	Can be reached on foot at low water only. There are here 2 Batils and 15 Shū'ais and Sambūks: of these 12 are used for pearling.

Name.	Position.	Nature.	REMARKS.
Sulutah (Hālat-as.) حالة السلطة	On a sandbank in Dōhat Fakākah rather less than a mile west of Hadd.	The permanent village consists of 10 houses of Sulutah, 10 of Na'im and 5 of Āl Bū Falāsah (Bani Yās). Besides these about 85 additional families of Na'im take up quarters here in the hot weather while the men are engaged on the pearl banks: the hut- which they then occupy are their own property.	Connected at low water with Muharraq Island. Along with Hālat-an-Na'im above, this place possesses 5 Bātils, 12 Baqārahs, 50 Shū'ais and Sambūks and 4 Māshuwahs and jollyboats; of these 51 are used for pearling.
Zimmah الزيمه	Quarter of a mile north of Hadd.	A date plantation belonging to Hadd.	The water supply of Hadd is situated here.

In the table above negroes are included, being shown as members of the tribe among whom they live (if free) or to whom they belong (if slaves).

The principal town of **Muharraq** Island and the second in the principality of **Bahrain**: as it is the headquarters of the Shaikh during eight months in the year it may even claim to be the political and administrative capital of the Shaikhdom.

Situation and general character.—Muharraq is surrounded by the sea at high water on the eastern, southern and western sides, and its situation is low; nevertheless, as seen from **Manāmah** harbour, it stands up handsomely in the afternoon or evening light. Its distance from **Manāmah**, which it exceeds in area though it is not equal to it in population, is about 2 miles, measured across the shallow strait which divides the **Muharraq** and **Bahrain** Islands. Muharraq fort, more correctly described as the fort of **Abu Māhur**, stands on an island and is 800 yards south of the town, but it is no longer of military importance; near it is the celebrated submarine spring of **Abu Māhur** which supplies the town of **Muharraq** with most of its drinking water. The sea, closely approaching the town on three sides at high water, is the scavenger of **Muharraq** and removes at intervals of a few hours the town refuse which is deposited at its edge.

MUHARRAQ
محرّق
TOWN

Inhabitants and quarters.—The population of Muharraḡ Town is now about 20,000 souls, who may be classified as below :—

'Ainain (Āl Bū)	100
'Ali (Āl Bin-)	2,000
'Amāmarah	200
Arabs (miscellaneous non-Bedouin)	150
Bahārinah	900
Dhā'in (Āl)	50
Hūwalah	10,000
Kuwārah (Āl Bū)	50
Manāna'ah	50
Mu'āwdah	100
Musallam (Āl)	75
Negroes (free)	1,000
Negroes (slaves, but not living with their masters)	1,500
Persians	100
Qumārah	50
Rumaih (Āl Bū)	75
'Utūb	2,800
Yās (Bani) of the Āl Bū Falāsah section	50
Ziyāinah	750
TOTAL	20,000

Of the 'Utūb mentioned in this table 30 houses are Āl Fādhal and 30 are Jalāhimah. The Bahārinah and the Persians are all craftsmen: they being the only Shi'ahs it is obvious that the Sunni form of Islām here enjoys a great ascendancy. During the hot months the bulk of the inhabitants forsake the town and encamp in the north-eastern part of Bahrain Island.

The Fariqs or quarters of the town are these:—

'Ali (Āl Bin-)	آل بن علي	Kuwārah (Āl Bū)	آل بو كواره
'Amāmarah	العمامرة	Manāna'ah	المنانة
'Arār	عرار	Mu'āwdah	المعادرة
'Asfūr (Āl)	آل عصفور	Qumārah	القاهرة
Dhā'in (Āl)	آل ضائر	Yūsuf-bin-	
Haiyāk	حياك	Ibrāhīm(Āl)	آل يوسف بن ابراهيم
Khamīs (Āl Bū)	آل بو خميس	and	
Khāru	خارو	Ziyāinah	الزيانة

Most of them, as will be apparent, are called after the tribes inhabiting them.

Occupations, trade, shipping and resources.—Muharraḡ Town contains a bazaar, the only one on the island, of about 300 shops. The people of Muharraḡ Town are general merchants, shopkeepers, pearl merchants, pearl divers, sailors, fishermen, boatmen, bakers, barbers, butchers, tailors, shoemakers, masons, carpenters, tin-workers, water-sellers and washermen. Trade is considerably less than at **Manāmah**; but the pearl diving proportion of the community is many times greater. More than 700 vessels, some of considerable size, belong to Muharraḡ Town: they are 40 Batils, 141 Būms, 68 Baḡārahs, 189 Shū'ais and Sambūks and 396 Māshuwahs and jollyboats; of these 282 are used as pearl boats. There are no date palms. Animals belonging to the town are 80 horses, 220 donkeys and 150 cattle.

The second place in importance in the **Hindiyaṅ** District, situated on the right bank of the **Hindiyaṅ** River about 17 miles north of **Hindiyaṅ** Village. The inhabitants, who number about 700 souls, are half of them **Ka'ab** Arabs and half **Qanawātis** from **Behbehān**. **Dih Mulla** is the centre of a wool-raising tract which is said to yield 100,000 shearings per annum, worth a **Qrān** each; a royalty is collected by an agent whom the Shaikh of **Muhammareh** maintains here. There are some old guns at **Dih Mulla** and some ruins on the opposite bank $\frac{1}{2}$ a mile further up the **Hindiyaṅ** River; the latter are perhaps vestiges of a Portuguese occupation.

MULLA
(**DIH**)
مولا

The upper course of this river in **Fārs** lies beyond the scope of our inquiries, moreover it is imperfectly known; but the stream, or one of its main tributaries, is believed to rise close to **Shīrāz** and to pass **Fīrūzābād** on its way southwards. The **Münd** finally emerges from the hills in the **Persian Coast** district of **Dashti**, about 7 miles north of the town of **Kāki**, turning as it does to the north-western corner of **Kūh-i-Namak**. From this place it runs due west for 7 miles to the village of

MÜND*
موند

* A monograph on this river by Dr. Andreas is contained in the Persian Gulf Administration Report for 1877-1878, pages 18-16. The **Münd** is the **Nahr Sakkan** of the mediæval Arab and Persian geographers and probably identical with the **Sitakus** of **Nearchus**. See *Le Strange's Lands of the Eastern Caliphate*.

Chaghāpūr where it receives on its right bank the whole drainage of the Khurmūj valley. From Chaghāpūr it runs south for 17 miles skirting the inland flank of the Kuh-i-Münd, then swings round the southern extremity of this range and runs west for another 15 miles to its estuary, the Khor Ziyārat, which is 65 miles south-south-east of the town of Būshehr. At the point where the track between Khurmūj and Kāki crosses it, the stream is 120 yards wide and in winter is not as a rule traversable except on a raft; at times, however, even in that season, it is not more than $3\frac{1}{2}$ feet deep. Forty years ago (1865) it could be ascended by native craft of 40 or 50 tons burden almost as far as Kāki, and after rain it discharges a large volume of water into the sea. Craft of some size still navigate it to a point about 3 miles above Kāki. The water is slightly brackish even in the cold weather, and in summer it is unfit for human use unless in an emergency.

Khor Ziyārat, which forms the river's mouth, is a small creek with low banks which can be entered by boats at high water, but the entrance is exposed. For a short distance to the north of this estuary and for some 20 miles to southward the coast of the mainland is swampy.

MUNTAFIK

مُنْتَافِك

An Arab tribe, the largest and most powerful in Turkish 'Irāq.

Territory.—To the Muntafik belong both banks of the Euphrates together with the adjacent western desert from Durraji, between the towns of Samāwah and Nāsiriya, to the junction of the Euphrates and Tigris; also the banks of the Shatt-al-Gharāf except in its upper course, the right bank of the Tigris from 'Azair to Qūrnah Village and the whole western portion of the country, called Jazīrah or Mesopotamia, included between these three. Part of the right bank of the Shatt-al-'Arab below Basrah was formerly occupied by the Muntafik, but they were at some period displaced by the Muhaisin; some of them however are still found at Ma'amir above Fāo and at Kūt-al-Khalifah in the Dawāsir District. The Muntafik are adjoined by the Dhafir on the west, and by the Khazā'il on the north-west; while the Bani Rabi'ah, Āl Bū Darāj and Āl Bū Muhammad intervene between them and the Tigris bank from Kūt-al-Amārah to 'Azair. It follows that the bulk of the tribe are under the government of Basrah and comparatively few under that of Baghdād. The chief towns in the Muntafik country are Sū-qash-Shuyūkh, Shatrat-al-Muntafik and Nāsiriya, and the tribe also frequent the town of Samāwah.

Divisions.—No estimate of the number of the Muntafik is possible and their subdivisions are innumerable; but they are sometimes classified under the three heads of Ajwad أجود, Bani Sa'id سعيد, or Sa'ad سعد and Bani Mālik; of these the first are predominant in the Euphrates valley above Hammār, the second (sometimes treated as a distinct tribe) are chiefly found upon the Tigris and Shatt-al-'Arab and have their centre about Qūrnah, while the third are now generally regarded as a separate tribe and have been so dealt with in this Gazetteer.

The term Muntafik is properly applicable to the central core only of the great tribal congeries of which the territorial limits have been described above; but in use it has become extended to the whole. Some of the components of the tribe in the wider sense occasionally separate themselves from the general body and this is considered to be the position at present of the Bani Mālik, and in a lesser degree of the Ajwad. Various client tribes also, though not included under the name, are closely associated with the Muntafik; such were formerly the Bani Mansūr and Ahl Jazāir. Part of the once famous Bani Khālīd tribe is believed to have been absorbed in the Muntafik.

Mode of life.—A large part of the Muntafik tribe is still Bedouin; but the remainder inhabit tents, reed-huts, villages and even towns, cultivate the land, grow dates, and breed sheep, cattle, buffaloes and camels: many, however, even of those who belong to the settled pastoral sections rove the desert in spring with their flocks and herds for the sake of the grazing. The Muntafik women do not veil their faces.

Religion and political position.—The tribesmen generally are Shī'ahs, but the ruling Shaikhs and their subdivision, called the Sa'idūn سعيدون, are Sunnis.

The Sa'idūn are said to have come from Makkah not quite 500 years ago, and their authority over the tribe was unlimited till about 20 years since, when the Turks removed the Shaikh of the day from the official headship. Some of the desert sections still ignore the Turkish Government and obey no orders but those of the Sa'idūn. The Muntafik are at enmity with the Bani Rabī'ah and with the Northern Shammar. In war they carry swords and lances, and they are well armed with rifles, chiefly Martinis; a large proportion of their mounted men are camel-riders. Quite recently about 1,500 of the tribe under Sa'adūn Pāsha were in rebellion against the Turks.

MURAI-
KHĀT

مريخات

Singular Muraikhi مريخي . A tribe closely related to the Āl Bū Shāmis section of the Na'im or, possibly, one of its subsections. They are found in Bahrain at Umm-al-Baidh on Sitrah Island, where they have about 15 huts and are pearl fishers. The Muraikhāt are said to have come from Qatar: they claim to have been originally Mutair, but the Mutair repudiate them. In religion they are Māliki Sunnis.

MURBĀT

مرباط

One of the principal places in the district of Dhufār, and a complementary port to Rīsūt from which it lies 48 miles almost due east, the plain of Dhufār Proper occupying the interval between. At Rās Murbāt the coast changes its direction from east and west to south-south-east and north-north-west; and off the village, which stands on the shore about a mile within the cape, there is consequently a perfectly sheltered anchorage in the north-east monsoon*; the depth of water is 6 to 7 fathoms at less than half a mile off shore. Near the sea, less than a mile north of the village, is a red granite hill called Jabal-al-'Āli جبل العلي, and a plain of dark granitic rocks extends eastward from Murbāt to Rās Nūs and inland for about 10 miles to the foot of the huge scarp here formed by the Samhān hills: one of the highest points in the Samhān range is situated about six miles north of Murbāt. The village of Murbāt consists of about 150 huts and houses; of the houses, 38 in number, some are of stone. The only buildings in good repair are the house of the Shaikh and the residence of the 'Aqid commanding the garrison; the latter is on the beach about $\frac{1}{4}$ of a mile north-west of the village. The population of the place is mixed and includes 40 houses of Sādāt, 20 of Ja'afar, 10 of Qaras of the Āhl 'Umr section (Bait Makhaiyr subsection), and a few of Mahrās, Hikmān and Mashāikh. The poorest classes live by fishing and none are well-to-do. Malarial fever is said to prevail throughout the year and the people are rather thin and anæmic. Little is to be had in the way of supplies except cattle and goats; the water-supply is from wells in the bed of Wādi Murbāt, which comes down to the sea about one mile north-west of the village, and is of fair quality. Livestock are a few camels, donkeys and cattle and about 400 sheep and goats; in winter the cattle present a thin and miserable appearance, due to the scarcity of pasture at that season. Millet and sugarcane are grown, also cocoanuts. Frankincense from the Samhān hills is exported to Bombay, whence rice

* A plan of the Murbāt anchorage will be found in Chart No. 10 B.

and cloth are obtained in return. With the exception of 10 to 30 boat crews of **Jannabah**, who come every year to fish, few Arabs from abroad visit Murbāt. Murbāt is subject to the Wālī of **Dhufār** and is held by a garrison of some 20 'Askaris in the name of the Sultān of 'Omān; but few of these levies are men from 'Omān. The virtual ruler of Murbāt is the Shaikh of the place, whose authority is supposed to extend from Rās Nūs to Tāqa; but he has little real power beyond the limits of his village. The plain of **Dhufār** Proper can be reached from Murbāt by a track which runs along the coast westwards for about 20 miles. Murbāt was once occupied by Muhammad-bin-'Aqīl, a pirate who made himself master of **Dhufār** at the beginning of the 19th century: the traces of his fort built in 1806 still remain, and his tomb also is here.

In English formerly called "Bomosa." An island in the Persian Gulf, a few miles nearer to the town of **Shārjah** in Trucial 'Omān than to that of **Lingeh** in Persia and situated slightly to the west of a line joining those places. In shape it is nearly rectangular and lies with its corners approximately to the cardinal points; its extent is about 3 miles diagonally between opposite corners. The island is low and consists of great sweeps of sandy plain covered with tussocks of dry grass but without trees; it carries however some isolated hills of dark, volcanic appearance, and a sugar-loaf peak, somewhat to the north of the centre, attains a height of 360 feet. Bū Mūsa is surrounded by fairly deep water and is a common place of refuge for native boats in bad weather. There is good drinking water in about 20 wells, also a plantation of about 150 date trees which is said to belong to the Shaikh of **Shārjah**. The permanent population consists of above 20 households of **Sūdān** from the village of **Khān** in **Shārjah**, all of whom are fishermen and live in huts and mud houses. They are reported to own 4 camels, 60 donkeys, 40 cattle, 200 sheep and goats, 7 pearling boats and 5 fishing boats; and their provisions are obtained from **Lingeh**. There is also a shifting population of persons from the **Shārjah** coast who come to fish, or bring animals for grazing on the island; but of late years their numbers have been fewer than formerly in consequence of failure of pasturage due to want of rain. Some 10 or 15 donkeys are kept on the island by the employés of a Persian contractor of **Lingeh** who has obtained from Salīm-bin-Sultān, the uncle of the Shaikh of **Shārjah**, a concession to work deposits of

MŪSA *
(BŪ)
بومرسی

* A distant view of this island will be found in Chart No. 2373—2337A.

red oxide of iron that exist on the island. The concessionaire pays \$250 a year to the Shaikh's uncle by way of royalty; his Persian work-people (men, women and children) sometimes number 100 souls; and the amount of oxide removed annually is said to average 40,000 bags. The island of Bū Mūsa belongs to the Shaikh of Shārjah who frequently visits it in the hot weather. There are several herds of wild gazelle on the island.

MUSA *
(KHOR)
خور موسی

A remarkable inlet of the sea which leaves the Persian Gulf at its northern extremity, to the east of the Shatt-al-'Arab, and affords access to Buziyeh and Ma'shūr, the ports respectively of the Fāllahīyeh and Jarrāhi Districts of Southern 'Arabistān.

Course and main features.—The channel of Khor Mūsa begins in the open sea at a distance from *terra firma*, and the position of the entrance may be taken as approximately 29° 55' north and 49° 3' east, or about 30 miles east of the bar of the Shatt-al-'Arab. For the first 31 miles within the entrance Khor Mūsa is nearly straight and runs approximately north-north-westwards; in the course of the next 5 miles the channel gradually bends round to eastwards; and for the remaining 7 miles, to a point where it divides into branches running to Buziyeh and Ma'shūr, its direction is slightly to the north of east. The total length of the main Khor is thus over 40 miles.

* The principal recent authorities on Khor Mūsa are a report by Commanders T. W. Kemp and H. B. T. Somerville, R.N., dated 20th July 1903 and accompanied by a sketch (in the Government of India's Proceedings in the Foreign Department for June 1904); a note by Sir L. Dane, Foreign Secretary, dated 1st December 1903 (in the same Proceedings); a report by Major E. B. Burton, Vice-Consul at Muhammareh, dated 14th February 1904 (Government of India's Political Proceedings for July 1904); a letter of Captain D. L. R. Lorimer, Vice-Consul for Arabistān, dated 22nd March 1906, and forwarded to the Government of India by the Resident in the Persian Gulf with his letter No. 900 of the 22nd April 1906; and notes by Commander G. Sinclair, R.I.M., taken between the 16th and the 20th November 1906 and accompanied by a sketch survey. To these may be added a letter No. 1265 of the 16th June 1907 from Major P. Z. Cox, Resident in the Gulf, to the writer and a sketch survey of the Khor Qanāqeh branch which accompanied the same; but the latest and most correct and complete survey of the Khor Qanāqeh branch is a *Topographical Sketch showing Dry Bed of Blind Karun River, 1908*, by Commander C. W. Shearme, R.I.M., numbered 1397 in the Foreign Department Library, Simla. There is now also a survey of the Khor Dōraq branch; it is *Khor Buziyeh*, 1907, by Commander C. W. Shearme, R.I.M., numbered 1398 in the Foreign Department Library, Simla. Khor Mūsa may perhaps be identified with the creek of Dōraqistān, where (in the 13th century A.D.) "ships coming from India cast anchor." *Vide* Le Strange.

Near the entrance the banks of the channel are not visible on either side, being covered even at low water; but on the east side, from 5 miles within the entrance up to 23 miles, there are patches of sand and mud which dry at low water; and on the opposite side, from 14 miles and upwards, banks of mud with rocky patches are exposed at half tide. At 11 miles within the entrance a low swampy island to the right, called *Dairah* ديرة, is passed at about 6 miles distance; 3 miles to the north-east of this island is *Bunneh* بنة, another island, $3\frac{1}{2}$ miles long, narrow, and distinguished by a ruin. A channel passing between *Dairah* and *Bunneh* is said to be called *Khor Wāstah* واسطه. Beyond *Dairah*, *Khor Mūsa* is temporarily divided into two channels by *Qassār-bin-Siswān*, a rocky shoal a mile in length; and at 23 miles from the entrance *Qabr-an-Nākhuda* قبر النخدا, another low islet, lies upon the starboard beam at 3 or 4 miles distance. Immediately after passing *Qabr-an-Nākhuda*, a ridge of dry sand a mile or more in length appears above the mud on the western bank of the *Khor*; and at 29 miles from the entrance there is a small sandy islet on the eastern bank, opposite which *Khor Mūsa* throws off to westwards a branch named *Khor Qanāqeh*.

The banks of *Khor Mūsa* above *Khor Qanāqeh* are still low; on the western or northern side they are of mud with small patches of rock and are covered at high tide; on the other side they are of mud and are submerged at high water springs.

Khor Qanāqeh branch.—*Khor Qanāqeh* قنّاقه runs inland, westwards and slightly northwards, for a distance of about 25 miles to the ruins of **Qubbān** where it forks; this is the distance as measured in a direct line, but by the windings of the creek it is somewhat over 50 miles. From **Qubbān** one branch, named *Khor Abu Khadhair* ابر خضير, runs north and is lost in the marshes adjoining the *Fallāhiyeh-Mārid* canal; the other, known as *Khuwairīn* خويرين, goes south-eastwards and meets, or almost meets, a creek called *Silaik* سليك or *Silaich* which is said to leave the coast at a point between the mouth of the **Bahmanshīr** and the entrance of *Khor Mūsa*. The level of *Khor Qanāqeh* as far as **Qubbān** and of its branches beyond **Qubbān** is affected by the sea tides.

It is interesting to observe that the head of *Khor Qanāqeh* at **Qubbān** is connected by a hollow, now dry, with the **Kārūn** river at *Mārid*; and it is easy to imagine that, as the inhabitants of the tract assert, the **Kārūn** or a part of it at one time flowed to **Qubbān** and thence to the sea either by the *Khuwairīn* and the *Silaik* creek or by *Khor Qanāqeh* and *Khor Mūsa*. The water in the upper part of *Khor Qanāqeh* is

nearly fresh; at flood it is drinkable in the upper third, and at ebb in the upper half of the creek. The banks of Khor Qanāqeh at 7 miles from its mouth and upwards are 4 to 6 feet high, firm, and covered with coarse grass; but nearer to the main Khor they are liable to be overflowed at spring tides. The west bank of the Khuwairin near Qubbān is of hard mud. In the season of most water, *e. g.*, in May, the whole country to the north of Qubbān is a swamp.

Khor Dōraq branch.—The branch which runs from the head of Khor Mūsa to one mile beyond Buziyeh is called Khor Dōraq درق or Khor Buziyeh; its direction is north-westerly and its length, owing to windings, is about 35 miles. As this Khor is ascended its water becomes less and less salt; and on its banks, at the same time, saline swamps gradually give way to pasture and cultivated land. At the point where it approaches Imāmzādeh Abdul Hasan most nearly, Khor Dōraq is several, perhaps 10, miles distant from that place and has a breadth of 60 or 70 yards. At about 12 miles below Buziyeh, where the water of the Khor begins to be drinkable when the tide is out, villages commence on both banks; those on the western side belong to the Āl Bū Abbādi and Āl Bū Dahaleh sections of the Ka'ab, and those on the eastern side to these two sections and to the Āl Bū Hamādi section. Khor Dōraq in the immediate neighbourhood of Buziyeh is described in the article under that name.

Khor Ma'shūr branch.—The other branch, and true continuation beyond its head of Khor Mūsa, is Khor Ma'shūr مشور which runs north-eastwards, has a length of about 14 miles, and may be considered to end at a point about a mile south of Ma'shūr village; but with high tides and a south-east wind the sea water is said to reach almost to the town on two sides—the south and the west. On both sides of this Khor are broad mud flats which are mostly covered at high water springs.

Navigation of Khor Mūsa.—The entrance of Khor Mūsa is crossed by a bar which carries only 3 fathoms at low water springs, but is practicable for large vessels at high water, the spring rise being about 10 feet. The bottom, however, is of mud and could easily be dredged if necessary; and, though no more favourable sounding than 3 fathoms has as yet been obtained on the bar, it is possible that a complete survey might reveal a deeper channel than any at present known. Inside the bar the depth steadily increases, and shortly after passing Dairah island there is no bottom at 9 fathoms, a condition which is maintained the whole way from this place to the head of the main Khor. The soundings

in Khor Mūsa do not appear to be liable to much variation, for recent surveys agree closely with others made a number of years ago.

In Khor Mūsa, Dairah island and the mainland upon the opposite side are very low and only just visible in clear weather; but as the inlet is ascended the mud banks and flats which uncover at low water afford guidance to the navigator. The Qassār-bin-Siswān shoal lies in the middle of the fairway and probably never uncovers; as a rule, however, it can be seen, but it may be missed, especially if the western edge of the channel is followed. Above the entrance to Khor Qanāqeh the Khor Mūsa channel is difficult to find, except at low tide, on account of the distance to which the sea spreads over the mud flats on either side.

Navigation of the branches.—In the Khor Qanāqeh branch at 7 miles from its entrance the width of the channel is about 400 yards, and the depth within 20 yards of the banks is 4 fathoms increasing rapidly to 6 or more in the middle. In Khor Qanāqeh a minimum depth of 6 fathoms can apparently be obtained for 30 miles above the entrance; and a ship's boat can proceed about 20 miles further still to a point about $1\frac{1}{2}$ miles east-south-east of Qubbān where the creek is only 10 yards wide and has a depth of a foot at low water. In the upper part of the Khor the tide flows for 3 hours and ebbs for 9; its rise and fall is about 10 feet, and the ebb is very strong. At 7 and 12 miles from the entrance unexplored branches run southwards, and one at least of them must apparently communicate with Khor Mūsa or with the sea as a native vessel has been known to emerge from Khor Qanāqeh which had not entered it by the ordinary channel.

The navigability of Khor Dōraq has recently been tested; in the uppermost few miles it is narrow and at low water nearly dry, but the rise of the tide is about 10 feet and sea-going native vessels of as much as 150 tons are able to reach the town of Buziyeh.

For $2\frac{1}{2}$ miles above the mouth of Khor Dōraq the soundings in Khor Ma'shūr continue to be more than nine fathoms, but thereafter they shoal, not altogether regularly, to the head of this branch. In ordinary tides small boats reach a point $1\frac{1}{2}$ miles from Ma'shūr village, and native sea-going craft ordinarily discharge their cargo at a place called Sif سيف, $2\frac{1}{2}$ miles from the town, where at ordinary low tides the depth of water is 3 feet and the width of the channel 15 feet. The banks here are of shelving mud and the breadth of the water increases at high tide to 50 feet. Larger vessels discharge opposite a tract called Zangi further down.

General navigability.—The whole of Khor Mūsa Proper is navigable for large vessels, and the Khor Qanāqeh branch is also navigable for a distance of 7 miles at least. The only difficulty is that already remarked on, which arises from the invisibility of the edges of the channel except at low water; and it should be added that Khor Qanāqeh becomes, after a few miles, too narrow for a long ship to be turned in. At the places most suitable for anchorage in Khors Mūsa and Qanāqeh the tidal stream runs not less than 2 knots an hour at springs.

Land approaches.—So far as examination has yet been carried, the navigable portions of Khor Mūsa and its branches appear to be difficult of access from *terra firma*, being as a rule separated from the same by wide stretches of soft mud or treacherous saline soil which are sometimes miles in extent.

The ground in the neighbourhood of Ma'shūr village has been carefully explored; and the result has been to show that the channel, where it is deep enough for European vessels, is unapproachable on that side by animals or even by foot-passengers. The tract called Zangi زنجي which adjoins the northern bank of Khor Ma'shūr above the mouth of Khor Dōraq appears to consist to a large extent of labyrinthine creeks containing liquid mud: some of these are ramifications of an inlet, called Jū-i-Zangi, from Khor Ma'shūr. Even the route from Ma'shūr village to Sif, the place already mentioned where native sailing vessels discharge their cargoes, is sometimes impassable by caravans. For one mile it lies across a bare plain of saline soil which is swampy in winter and almost untraversable after rain. It then crosses a drainage hollow leading from the desert west of Ma'shūr village to Khor Ma'shūr; this hollow is liable to floods after rain, and even in ordinary weather the tide runs up it to within a mile of Ma'shūr village. The remaining $1\frac{1}{4}$ miles of the way are sandy going and somewhat firmer than the first mile; but this section also is said to become deep and difficult in wet weather. At Sif itself is a patch of really firm sand.

The only other point at which it is certain that access to Khor Mūsa exists by land is on the north-eastern bank of its Khor Dōraq branch, at the point nearest to Imāmzādeh 'Abdul Hasan which is on the direct route between Ma'shūr and Buziyeh. The distance of the bank from the Imāmzādeh is several, perhaps 10, miles; and the ground, especially in the neighbourhood of the Khor, is fairly high and firm; but for part of the way it is somewhat cut up by the canals of the Shatūt tract. The depth of the Khor at this place has not been reported, but it has been

ascertained that the water in the Khor does not ordinarily rise to within less than 3 feet of the top of the bank. Both above and below this particular spot, however, the north-eastern bank of Khor Dōraq is stated to be low and marshy.

It is possible that the Qanāqeh branch of Khor Mūsa may be easily approachable by land from certain directions, but this point has not as yet been specifically investigated.

Naval advantages and disadvantages of Khor Mūsa.—The principal anchorages of Khor Mūsa are completely protected from all winds and could be easily defended against attack from the open sea whether by bombardment or by torpedoes. Fresh water could perhaps be brought from the Jarrahi River, which is not far distant; and the climate is probably less trying than in some other parts of the Persian Gulf. The nearness of the place to the mouth of the Shatt-al-'Arab and to the valley of the Kārūn is also an important consideration.

On the other hand, it is not certain that the navigable portions of Khor Mūsa could be made approachable, at least without inordinate expense, from the landward side; the chief natural anchorages might require adaptation in order to form good harbours; and the bar at the seaward entrance must be dredged to enable the Khor to be entered by ships in all states of the tide.

A country town of pleasant aspect in Turkish 'Irāq; it is situated upon both banks of the Euphrates river where crossed by the Baghdād-Karbala road.

MUSAIYIB

مسیب

Musaiyib is well sheltered by palm-groves, which surround it and extend along the banks of the river, and most of the houses are masonry-built. The main body of the town lies upon the left bank, but some of the best buildings, including the government offices and several good Khāns, are in the small quarter on the other side. On the left bank, immediately above the town, a strong embankment carefully revetted extends for about 600 yards, and along the top of it runs the high road to Baghdād. The stream of the Euphrates is spanned at the town, where it is about 200 yards broad, by a bridge of 24 boats: some of the boats are connected only by insecure gangways without hand-rails.

The whole population of Musaiyib may be about 3,500. The great

majority of the people are Shi'ah Arabs, but there are about 80 Jews who are Turkish subjects, 100 Persians who are Persian subjects, 20 Panjabi Indians who are British subjects, and a few Afghāns. There are no resident Christians. The Jews are silversmiths and traders.

Musaiyib contains 12 Khāns, 25 granaries and over 100 shops. There are no local manufactures; and trade, though the town possesses about 40,000 date-trees and is the centre of a good agricultural district, is inconsiderable; most of the going and coming is of goods and travellers passing between **Baghdād** and **Karbala**. Transport is not readily obtainable in any quantity, and the surplus of forage and provisions is not great. In the busy season 12 boats of the Sāfinah type are retained to bring up rice from the **Hindiyah** barrage, 5 miles distant, and to take down cotton piece-goods and other **Baghdād** merchandise to boats which wait below the barrage to receive them; in the off-season 7 of these are released for up-stream traffic on the **Euphrates**. There are 20 Sājahs or small boats at Musaiyib. Musaiyib is the headquarters of a Nāhiyah—which also contains **Sikandariyah**—in the Qadha of **Karbala**; but only the smallest local affairs are settled by the Mudir. The town is a municipality, and Pāsawāniyah and Chirāghīyah, or taxes on account of night watchmen and the lighting of the streets, are collected. Besides the civil Mudir there are here a harbour master, a Mudir of the Public Debt and a Mamūr of the Sanitary Department; and the Persian Government maintain a Nāib Kārpardāz or Consular Agent. From Musaiyib a double line of telegraph runs to **Baghdād** on the one side and to **Hillah** on the other. The Dāirat as-Saniyah has taken firm hold of the country around Musaiyib on the left bank and has planted down a number of masonry enclosures in the neighbourhood; these are used as storehouses but in appearance resemble military forts. The same department maintains a school on one of its estates near Musaiyib.

MUSALLAM (ĀL)
آل مسلم

Singular Musallami مسلمي. A small clan of **Qatar** and **Bahrain** who claim descent from the Bani Khālid and are probably a branch of the Āl Humaid section of that tribe. The Āl Musallam were once numerous and influential in **Qatar**, where about 1850 a number of them were settled by the Shaikh of **Bahrain** at **Dōhah** as a counterpoise to the **Sūdān**; they were brought apparently from **Buwailat** and **Huwailah**. The present fort of **Dōhah**, formerly

known as Qal'at Āl Musallam, was built by them; they founded the quarter of Duwaihah; and they maintained close relations with the **Ma'ādhid**. They have now been reduced by natural causes to about 25 houses in **Bahrain** (at **Muharraḡ Town**, **Hadd** and **Hālat Abu Māhur**) and 8 houses in **Qatar** (at **Dōhah**, **Fuwairat** and **Wakrah**). In religion the Āl Musallam are **Māliki** Sunnis: by occupation they are all pearl merchants except a few who serve the Shaikh of **Bahrain** as soldiers.

Musallamiyah bay is a considerable indentation in the coast of the **MUSALLAMIYAH** ^{مسلمية} **Hasa** Sanjaq; it is situated about 77 miles north-west of **Rās Tanūrah** and divides the tract of **Zor-al-Audhān** on the north from that of **Huzūm** on the south: at its foot it meets, or nearly meets, the inland district of **Sabākhāt-al-Mutāya**. The northern point of the bay is **Rās-al-Bidya'** راس البديع, a low sandy promontory with tufts of grass; the southern, which is of some height and runs into the sea between Musallamiyah bay and the island of **Jinnah**, is named **Rās-al-Abkharah** راس الابخر. The width of the entrance between these points is 4 miles, and the depth of the bay inland from the entrance is 6. The inner area is for the most part shallow; but a deep channel, known as **Khor Musallamiyah**, leads past **Rās-al-Bidya'** up to Musallamiyah island.

This island, which like **Jinnah** has **Jazīrat-al-'Amāir** جزيرة العماير for an alternative name, is situated in the bay about 5 miles west of **Rās-al-Bidya'**. On the east side of it is a village of 400 houses, protected by two adjacent forts, which possesses several wells and a few ber trees but no cultivation. The inhabitants are **Bani Khālīd** of the 'Amāir section and belong chiefly, if not altogether, to the Āl Khālīd and Āl Razīn subsections; they subsist by fishing and pearl diving and own, with the people of **Jinnah** island, about a dozen pearl boats. A detachment of 3 **Turkish Dhābitiyahs** is quartered on the island, which is under the **Qaim-Maḡām** of the **Qatif** Oasis: they are accommodated in a mud house, and their sole duty is to fly and look after the Turkish flag. The Shaikh of the Āl Khālīd is styled **Mudīr** of the island, and he receives from the **Turks** an allowance which he shares, by private arrangement, with the Shaikh of the Āl Razīn; the less important headmen also, as mentioned in the article on the **Bani Khālīd** tribe, are stipendiaries of the **Porte**. The **Zakāt** or revenue payable by the whole community on **Musallamiyah** island is 60 **Riyāls** per annum.

MUSANDAM

مَسْنَدِم

In English formerly called "Musseldom". An island adjoining the north-eastern tip of the **Ruūs-al-Jibāl** promontory, from which it is separated only by a narrow strait: it may be considered to mark the entrance of the Persian Gulf and to divide that sea from the Gulf of 'Omān. Musandam measures 2 miles in length from north to south and very little less in breadth across its southern end: its extreme height is 875 feet, and it is precipitous almost all round, the only landing places being 3 or 4 small coves on the east side. Some ruins exist at the north end, built of large blocks of stone without mortar; but a few herdsmen in charge of goats are generally the only denizens of the island. At its north end Musandam terminates in a cliff 100 feet high, the celebrated cape **Rās Musandam**. Not far from Musandam island, on the north and east sides, soundings are obtained of 100 fathoms, a depth considerably exceeding anything found within the Persian Gulf. The strait which separates the island from the main is called **Fakk-al-Asad** نَاقِ الْاَسَد or **Bāb** باب; it is 600 yards wide, 24 fathoms deep, clear of obstacles and can easily be passed by steamers if a good speed is maintained, but in consequence of strong tides and baffling winds it is avoided by Arab vessels except rowing-boats; the cliffs on either side are perpendicular, resembling door-posts. A pillar of rock called **Kachalu** كَچَلُو, 100 feet high, stands $\frac{1}{2}$ a mile north-north-east of **Rās Musandam** with a clear passage between it and the cape.

MUTAIRمَطِير
or**UMTAIR**

مَطِير

A great and typical * Bedouin Arab tribe of Central Arabia.

Limits.—The range of the Mutair is more extensive than that of any tribe except the 'Anizah. They are the principal nomad visitors to **Qasīm** and the almost exclusive possessors of **Dahānah** and **Summān**. On the north-east they extend far into **Kuwait** territory, where they have a favourite summer camping-ground at **Jahrah**; on the south-west they are found on the outskirts of **Qasīm** about **Miskah** and **Dhariyah**, in **Washam** and **Wādī-as-Sirr**, and at a great distance off in the volcanic country between **Makkah** and **Madinah**; a few of them visit 'Aridh. Hijaz is said to have been the cradle of their race. On the Persian Gulf side their northernmost limit is at a place called

* The Mutair have been described at some length, as, on account of their present close relations with **Kuwait**, it has been possible to procure detailed and authentic information concerning them. Very full particulars of the Jibāl subdivision and of some of the sections of the Umwahah subdivision, with pedigrees of chiefs, etc., are given by Captain Knox, Political Agent at Kuwait, in an Appendix to his *Diary No. 19* for the week ending 8th May 1907.

Bishūq بشرق, the position of which is not accurately known; southwards they reach to the end of Summān, and to Hasa in which they sometimes wander. The Mutair are in contact on the north with the 'Anizah, on the north-west with the Shammar, on the west with the Harb, 'Ataibah, Qahtān, Dawāsir and Sabai', on the south-west with the 'Ajman, and on the south with the Āl Morrah, Bani Hājir and Manāsir. At the wells of Dukhnah their Bedouins have been supplanted in recent times by the 'Ataibah.

Settled Mutair are found chiefly in Qasim, where some of the inhabitants of Bukairiyah, Butainiyāt, Ghāf I, Hatān, Khabb, Khabbal-Qabar, Khudhairah, Muraid Saiyid, Rafī'ah, Raudhat-al-Mahanna, Ta'amīyah, Qasr Zaid and Ummahāt-az-Ziyābah are supposed to be of Mutair blood; and non-nomadic Mutair occur also at Dhrumah in 'Aridh, at 'Ashairah in Sadair and at Jaraifah in Washam in Southern Najd, and in the villages of Wādi-al-Miyāh in the Hasa Sanjāq.

Divisions and numerical strength.—The original divisions of the Mutair are two only, the 'Ilwah عله and the Braih بره; but to these have been added in recent times, probably by fission of the Braih, a third main division, the Bani 'Abdillāh بني عبدالله. During the late struggle for supremacy in Central Arabia the Bani 'Abdillāh sided with Ibn Rashīd while the majority of the tribe were partisans of Ibn Sa'ūd, and the estrangement continued until the final defeat of Ibn Rashīd when the Bani 'Abdillāh rejoined the general body of the Mutair.

The 'Ilwah consist of two large subdivisions, the Jiblān جبال and the Umwahah اموهه composed of the sections given below:—

Jiblān subdivision.

'Arāif	عرائف
'Arāqibah	عراقبه
Bursān	برسان
'Inah	عنه
Kharābtah	خرابطه
Lāmi (Bani)	بنی الامي
Masāibah	مسائبه
Mijālidah	مجالده
Mura'āsah	مرعاسه
Qa'aimāt	تعييمات
Qahtān	قحطان
Qisha'ān	قشعان
Shawā'irah	شواعره
Shiyābīn	شيابين

Umwahah subdivision.

'Arfān	عرفان
Barā'asah	براعصه
Jibrah	جبړه
Khawātirah	خوارطه
Malā'ibah	ملاعبه
Rukhmān	رخمان
Sa'ānīn	صعائين
and	
Sahabah	صهبه

The Sahabah section of the Umwahah consists of several subsections, among which are the 'Arafān عرفان , Damānān دمانين , Fuqamah , Hījji حجي , Jama'ain جماعين , Jārid جار , Jawāfiyah جوافيه and Umtairāt امتيرات ; of these the Fuqamah supply the Shaikhs of the section, as a subsection called Dhil Ghanaimān ذي الغنيمان do in the Malā'ibāh section. Some authorities have included among the Umwahah the whole **Rashāidah** tribe and a clan called Hirshān هرشان , both of whom join the Mutair in their raids and forays and pay tribute to the chief Mutairi Shaikh ; they are however altogether repudiated by the Mutair, who consider them to be of servile or otherwise inferior origin and decline to intermarry with them.

The Braih are composed of three main subdivisions, the Aulād 'Ali اولاد علي , the Birzān بزران and the Aulād Wāsil اولاد واصل ; of these the Birzān and the Aulād Wāsil are in some manner more closely connected than the Birzān and the Aulād 'Ali. The Birzān, with a fighting strength of 300, appear to be a nearly homogeneous body ; the sections of the other two subdivisions are as follow :—

<i>Aulād 'Ali subdivision.</i>		<i>Aulād Wāsil subdivision.</i>	
'Abādin	عبادين	'Abaiyāt	عبيات
Hamādīn	حمادين	'Afisah	عفسه
Jalāilah	جلالاه	Akalah	اكاله
Sa'adūn (Dhī)	ذي سعدون	Aqūt	اقوت
Sa'arān	صعران	'Awāridh	عوارض
Shi'ālīn	شعالين	Bidānah	بدانه
Shitailāt	شيتيلات	Diyāhin	دياحين
and		Farāwiyah	فراريه
Tha'alāh	ثعاله	Hawāmil	هوامل
of whom the		Haftah	هفته
Tha'alāh are		Jida'ān (Ibn)	ابن حدعان
closely asso-		Qaraifah	قريفه
ciated with		Mahālithah	محالته
the Hamādīn.		Maraikhāt	مريخات
		Masbāhibah	مساهبه
		and	
		Wisāmah	وسامه

The Hawāmil section of the Aulād Wāsil comprises four subsections, namely, Hamrān حمران , Hizwah حزه , Shadhiyah شظيه and Sharmān شمران . The Mutair settled at **Dhrumah** are of a section called Nafisah نفيسه which is said to belong to the Braih.

The Bani 'Abdillah appear to be the most western portion of the tribe, and their composition has not been clearly ascertained; they include however the following groups, some of which are probably quoted here merely by the names of their chiefs:—

Askaiyān (Ibn)	ابن اسكيان	Jabrīl (Ibn)	ابن جبريل
Darwish (Bin)	بن درويس	Jarnās (Bin)	بن جرناس
Dhimnah (Ibn)	ابن ذمنه	Maimūn	ميمون
Harīsh (Ibn)	ابن حريش	Sharār (Bin)	بن شرار

It seems certain that, of these, the Maimūn are an important sub-division.

Sections of the Mutair known as Dhawī'ūn ذويعون, Shahaba شهاب and Shākīr شاكِر are said to be known in **Hasa**, but it is uncertain to which division of the tribe they belong.

From estimates given it may be inferred that the total strength of the Mutair amounts to not less than 4,000 fighting men,* that is males who are neither infants nor decrepit with age; and the total number of souls may thus be 10,000 or more.

Character and customs.—The Mutair are typical Bedouins, which is to say that they are poor, hardy, restless, impatient of control, much engaged in tribal warfare and ready to fight,—in the desultory nomad fashion,—where there is either hope of plunder or an injury to be revenged. In religion they are not fanatical, but, as compared with other Bedouins, they are perhaps somewhat deficient in hospitality.

The principal customs of the Mutair mostly refer to marriage, to compensation and retaliation, and to crime and punishment.

A sum, called Muhar مهر, is paid to the father or guardian of a bride; among Shaikhs and headmen it is \$200, but among ordinary tribesmen it averages \$40 to 50; Muhar is generally given at the time of the marriage, but occasionally the payment of half the amount is postponed. The customary bride-price among the Mutair is said to be the same as it has always been. If the Mutair happen to be near a town the 'Aqd عقد or ceremony of marriage is performed by a Qādhi, but in the desert his presence is dispensed with. The Fuqamah subsection (see above) will marry the daughters of other sub-sections of the Sahabah, but they will not give their own daughters in marriage except to men of

* Tribal estimates of fighting strength are in Arabia as a rule too greatly exaggerated to be of any value. In the present case the estimate may perhaps be accepted, subject to some deduction, the tribe being well known at **Kuwait** and their fighting strength having been a question directly in issue during the past several years.

Shaikhly class such as the Dhil Ghanaimān. The Dhil Ghanaimān on the other hand will give their daughters to certain selected classes only in their own section (the Malāibah), but they do not refuse them to any sub-section of the Sahabah.

Compensation for a man slain is called Idiyah (إديه) and among the Mutair it consists of \$800 in cash, a slave, a riding camel and a rifle. The blood-price of a woman is half that of a man, and if a slave or animal be killed the actual value must be made good. Injury causing the loss of both eyes must be compounded for at the same rate as homicide, while the loss of one eye or of the nose, the fracture of a bone and the severance or permanent disablement of a limb are each treated as entitling the sufferer to half the Idiyah. In cases of flesh-wounds, loss of fingers and deafness suitable compensation is assessed by the Shaikhs. Teeth knocked out must be paid for at the rate of one she-camel per tooth. A peculiar provision of the tribal code is one which authorises a man whose beard has been pulled in anger or by way of insult to cut off the hand or nose of the offender without recourse to the tribal authorities and without incurring any liability to pay compensation. A murderer can go in safety for the settlement of his case only in company of a member of the opposite party who consents to act as his escort. Disputed points are settled to a great extent by oath. The formula in swearing to a homicide is *إنا أشهد من حيث أنشد أنك أنت الذابح* "I bear witness, being adjured, that thou art the slayer ; " the established phrase of denial is *والله لا خبرت ولا اختبرت* " By God neither do I know nor have I become aware. " A solemn form of oath is one by which a man declares his wife to be divorced in the sight of Heaven in case what he is asserting be not true— *علي الحرام والطلاق أنني صادق*.

Thieves are punished with the loss of the nose and one hand, but the delinquent may ransom his hand by payment of half Idiyah ; only the paramount Shaikh of the Mutair and the chief Shaikhs of the Jiblān and Braih have power to order this penalty. In case of seduction of an unmarried girl she is put to death, and the paramour also is killed if caught in the act. In case of adultery the husband kills the adulterer if he can, and the woman is handed over to her blood-relations to be put to death or otherwise punished ; the disgrace is considered to fall on her own family rather than on her husband's. Adultery cannot be compounded. The adulterer is not regularly outlawed, but his goods are kept under attachment as long as he lives. In a case of rape the woman is not killed, and if the assailant make good his escape it is not

incumbent on the injured husband to make any effort to discover him.

The subject of the war-cry, called 'Izwah عزرة or Nakhwah نخوة is replete with complications. The war-cry of the 'Ilwah as a body is *علية هل الرداة*, meaning apparently "O noble ones, will ye not return to the fight?" ; it is said to have originated from the words used by a leader to rally the 'Ilwah in a fight in which they at first gave way, and the name 'Ilwah is supposed to be derived from it. If however the Jiblān should be engaged alone they cry *خيال الصبح جبلي* and the shout of the Umwahah in similar circumstances is *اولاد المروهي*, both phrases referring to ancestral origin. The Aulād Wāsil battle-cry is *اولاد راصل*, their name, and it is perhaps used by others of the Braih, for it is stated that if the Mutair generally were engaged the words 'Ilwah and Wāsil would be those chiefly heard. The separate cry of the Bani 'Abdillah is *اولاد عباد*.

Mode of life and property.—Like other Bedouins the Mutair follow a wandering life, being assembled together in large bodies at good watering stations for 3 months in summer and dispersed during the rest of the year over their whole territory in search of pasture. They are said to prefer the northern part of their Dīrah. Nowhere do they cultivate, and camels, mostly of a dark colour, are their chief wealth, but they also possess sheep and goats in large numbers and in about equal proportions. Both sheep and goats are of one kind only, the sheep belonging to the species called Nijad نجد because proper to Najd. The best male riding-camels, called Dhalūls ذلول, do not sell for more than \$100 each among the Mutair, and a female (or Nāqah ناقة) Dhalūl being weaker only fetches \$60. The price of the best male baggage camels, called Ba'irs, بعير, is \$60, and their Nāqahs average about \$10 less; but a Halfah حلفه or she-camel in milk may become more valuable than a male. The goats (Ma'az معز) and sheep (Dhān ضان) are sold at \$4 to \$6 a head, and the price of females is higher than of males.

The Wasams رسم or property marks of the Mutair are endless and, as a rule, are branded only on camels. The Wasam of the Dūshān is a  placed low down on the off-quarter, and that of the Basaiyis a crescent impressed in two places, *viz.*, below the right eye and low down on the off-quarter. The brand is applied to a camel when it is 2 years old, and the operation is accompanied with the remark *وسمك والبركة قسمك*, "This is your mark and may good luck be your portion."

Tribal constitution.—The paramount Shaikh of the Mutair is at

present Sultān-bin-Hamaidi-ad-Dawīsh سلطان بن حميدي الدويش, a man 60 years of age, whose authority over all lesser Shaikhs is admitted by such of the Mutair as are not at the moment in rebellion against him. The Bani 'Abdillāh, as already mentioned, refused for a considerable time to submit to his paramount authority, and the Sahabah section are reported to have maintained a quarrel with him for the last 15 years in connection with the division of some booty obtained in a raid on the 'Ataibah. His authority, therefore, is far from being absolute, and it is said to be weaker now than it was formerly. The surname, ad-Dawīsh, shows that this Shaikh belongs to the Dūshān درشان, a family of the Umwahah and not, as some authorities have supposed, a large division of the tribe. There are 5 other Shaikhs who are recognised as "Shaikhs of the Dūshān," but the recognition appears in the case of each to be honorific and not founded upon the headship of any considerable group. Sultān appears to be chief Shaikh not only of the whole Mutair tribe but also of the 'Ilwah division; there are however subdivisinal Shaikhs of the Jiblān and Umwahah; and there is a divisional Shaikhship of the Braih, vested in a family called Bin Basaiyis بن بصيص of the Sa'arān section and held at the present time by Nāif-bin-Hazāl نائف بن هزال aged 45. The nomenclature of the Mutair in regard to tribal groups seems to differ from that of most of their Bedouin congeners in Central Arabia, by whom small groups are ordinarily styled Findahs فنداء (plural فناد). The Mutair divide the whole tribe or 'Ashīrah عشيرة into Qabilahs قبيلة (plural قبائل) and the Qabilahs into Badīdahs بديدة (plural بدائد) or Hamūlahs حمولة. Thus, strictly speaking, Qabilah means a main division and Badīdah a subdivision or smaller group; but the current use of both terms is loose and inconsistent, and Qabilah is frequently employed to describe a subdivision.

Political position.—The Mutair have ordinarily been tributaries of Ibn Sa'ūd, and their annual contribution to the Riyādh treasury was valued 40 years ago at \$16,000; nevertheless by religion they are Maliki Sunnis, and in this respect they differ from most of the Bedouins of Central Arabia, who are tinctured with Wahhābiism and describe themselves as Hanābilah. About 1878 the relations of the Mutair with Ibn Rashīd were friendly, and deputations of the tribe used to visit Hāil with gifts; but they were not then subject to him and never became so. In Qasim their disposition at the same period was hostile towards the Qahtān tribe and the town of Buraidah, and amicable towards the town

of 'Anaizah. In the long struggle between the Wahhabi and Shammar Amīrs a large majority of the tribe, as already noted above, adopted the side of the southern state and shared in its final victory. The alliance which subsisted between Ibn Sa'ūd and the Shaikh of **Kuwait** during the war brought the Mutair into closer relations than before with that north-eastern seaport. By arrangement with Ibn Sa'ūd the Shaikh of **Kuwait** now collects on his own behalf from all of the tribe in his territories, and possibly from some of those beyond it, a tribute or *Zakāt* at the rate of \$1 annually on every 100 sheep and the same on every 5 camels. The **Kuwait** tax-gatherer or Muzakki مَزَكِّي, at present a native of **Buraidah**, visits the watering-places of the tribe with 30 or 40 followers, numbers the animals and collects the amount due from all owners except headmen; he then pays a share of the proceeds to the principal Shaikhs of the tribe and conveys the remainder to his master at **Kuwait**. There is also a matrimonial alliance between the Mutair and **Kuwait**. The Shaikh of **Kuwait** has espoused a daughter of Fahād-al-Askah فَهَادُ الْعَسْكَاهِ, one of the Dawish Shaikhs, and has appointed his fort at **Jahrah** as her residence.

The Mutair, as befits allies of **Kuwait**, are well armed with breech-loaders, and it is estimated that every fifth fighting man now possesses a Martini rifle or Sama'ah سَمْعَة, as that pattern is called. The best rifles cost \$100. Among the Mutair are smiths who are accustomed to repair modern weapons. Matchlocks are now entirely out of date.

A large and apparently featureless marsh of the ordinary type which its name implies; it is situated in the north of the **Hasa** Sanjāq and not being included in any of the other tracts which compose that province, it may be treated as one in itself. Its eastern border connects the foot of **Musallamiyah** bay with **Jabal Manifah** on the coast and so isolates the coastal tract of **Zor-al-Audhān**; on the north it is conterminous with the **Sūdah** district of the **Kuwait** Principality; on the west it is bounded by the **Radāif** tract and on the south by that of **Huzūm**, both of which are included like the Sabākhāt itself in the Sanjāq of **Hasa**: at its south-western corner, between **Radāif** and **Huzūm**, it meets **Jau Shamīn**. These being its boundaries the Sabākhāt-al-Mutāya would appear to measure about 25 miles from north to south and 20 from east to west.

MUTĀYA
(SABĀKH-
AT-AL-)

سبخة المطايا

NA'AB
(BANI)
بنى نعب
or
NU'ABAH
نعبه

Singular Na'abi نعبى. A small but distinct Hināwi tribe of the 'Omān Sultanate, dispersed for the most part among other tribes. The village of Lājāl (100 houses) belongs to them, and they are found also at **Manah** (30 houses) in 'Omān Proper, at Siya (70 houses) and elsewhere in Wādi Sarain, in Wādi Mi'aidin, and at **Mazāra'** in Wādi Tāyīn among the Bani **Battāsh**. In the hills on the right bank of Wādi Tāyīn in its Wādi Dhaiqah section they are shepherds and form a warlike subdivision of the Bani **Battāsh**. They are possibly of non-Arab descent, but are now considered to be Arabs. They number perhaps 1,500 souls.

NA'AIR*
(SIR BŪ)
صير بو نعيمير

An island in the Persian Gulf, 50 miles north by west of Abu Dhabi Town and 65 miles west of **Dibai**, on the north edge of the pearl banks. It is $2\frac{1}{2}$ miles long from north to south by 2 miles broad, is covered with hills of volcanic rock which attain a maximum height of 240 feet, and has a low sandy point at its south-eastern corner. The only supplies it affords are brushwood and some brackish water in wells upon the east side. Sulphur is said to be found, and there is salt in the hills which until some two years ago used to be removed by Persians, chiefly from **Lingeh** and **Kung**, on payment of dues to the Shaikh of **Shārjah**. In winter fishermen from **Shārjah**, **Khān** and **Dibai** resort to the island, and in the pearl season the fleets visit it to open their oysters; at other seasons it is uninhabited. There are several pearl banks in the vicinity, in particular Hair Bin 'Adhbi, 6 miles to the north; Rijlah, 8 miles to the south-west; and Lijjah, 6 miles to the north-west. Sir Bū Na'air belongs to the principality of **Shārjah**.

NA'ALAH
الذعلاء

A long, narrow, stony and rather elevated district in the Sanjāq of **Hasa**. It has the same direction as **Ghuwār** and Wādi **Farūq**, which enclose it on the east and west respectively; and its extent northwards and southwards is the same as that of Wādi **Farūq**, viz., between the Jau-as-Sa'adān tract on the north and the hill of Jau-ad-Dukhān on the south. With these for its boundaries the length of Na'alah from north-north-west to south-south-east is about 100 miles, while its average breadth is only about 8 miles.

* A view of this island is given in Chart No. 2373-2374A.

A low desert island of the **Bahrain** group, lying about 2 miles off the west coast of **Bahrain** Island and measuring less than 4 miles in length from north to south by about $2\frac{1}{2}$ miles in breadth. It has two rather remarkable peaks of inconsiderable height and furnishes the best cement used for building in **Bahrain**. There is a fresh-water spring near the west coast of the island. The **Dawāsir** of **Budaiya'** and **Zallāq** on **Bahrain** Island send their cattle to **Umm Na'asān** in the hot weather to benefit by a little grazing which exists at that season.

NĀ'ASĀN
(UMM)
أم نَعَسَان

Singular **Nabhāni** نَبْهَانِي. A tribe of merely historical importance, who furnished the rulers of 'Omān at the end of the 16th and beginning of the 17th century. They are now few in numbers, and are found at **Sharqatāin** in **Wādī Samāil**, at **Hammām-al-Ā'li** and **Sunub** in **Wādī Bōshar** and at **Nakhl**, having been expelled from their original seats which were in **Western Hajar** about **Yanqul** and **Maqniyāt**. The surviving remnant are **Ibādhis** in religion and belong to the **Ghāfiri** political faction : they number about 600 souls.

NABĀHI-
NAH
نَبَاهِي
cr
NABHĀN
(BANI)
بَنِي نَبْهَان

One of the **Shibkūh** ports of the **Persian Coast** ; it is situated on the south shore of **Nāband** bay nearly 3 miles within the entrance and is distant about 4 miles south-west of 'Asālū and 39 miles west-north-west of **Shivuh**.

NĀBAND
نَابَنْد

Nāband bay is more than 3 miles wide and runs inland eastwards for about 5 miles, becoming shallow towards the foot. The south side of the bay is low and rocky, is fringed with date-plantations, and has hills behind it rising to a height of some hundreds of feet. The east end is low and sandy, with patches of swamp, and forms the mouth of the great valley of **Gābandi**. On the north side are an anchorage and fishing-ground, off **Baidheh Khān** village, which are protected by a sandy point with a reef extending off it. Among the pearl banks of value on the coast of the **Persian mainland** are those which adjoin Rās **Nāband**, the southern entrance point of the bay, and extend thence south-westward as far as **Barku** ; diving is carried on here, but is not extremely remunerative.

Nāband village has a reef in front of it, inside which native boats anchor close to the beach. The place consists of about 200 stone houses and huts of the Āl Haram Arab tribe; but the population, in consequence of the place being partly deserted, probably does not exceed 600 souls at the present time. The inhabitants are nearly all Sunnis; they are fishermen and pearl-divers, owning about 28 small Baqārahs and 20 Varjis.

Nāband, under that name, seems to have existed already as a port in the 10th century of the Christian era.*

NAFŪD نفود

The word Nafūd is used in the northern and eastern parts of Central Arabia both as a generic term and as a proper name. In the wider and primary meaning the word denotes any expanse of sandy desert soil,—such for example as the wastes of sand which pervade southern Qasīm and approach the towns of 'Anaizah and Buraidah. In the restricted sense in which it is employed in the present article, the name Nafūd refers to the huge wilderness of sand which forms a counterpart in northern Central Arabia to the Ruba'-al-Khāli of the south.

Extent.—The boundaries of the Nafūd or Great Northern Desert have not yet been ascertained with any completeness, and its extent is consequently uncertain. On the west it commences between Taimah and Jauf-al-'Āmir, probably not far to the west of a line joining those two places. The northern boundary of the Nafūd runs thence in a curve almost to the edge of the Jauf-al-'Āmir depression and from there to a point 50 miles north of Shāmah, while the southern boundary, after passing a little to the north-east of Taimah, continues by the northern extremity of Jabal Aja to a place about 10 miles south of Shāmah. It follows that the breadth of the Nafūd, which to the south of Jauf-al-'Āmir is 200 miles, has near Shāmah diminished to about 60; but the precise limits of this portion are difficult to fix as it is broken up and interspersed with stony ground. Eastwards beyond Shāmah the diminished Nafūd appears to change its direction and run south-eastwards to a locality on Wādī-ar-Rumma immediately to the north-east of Qasīm, where it terminates or at least ceases to be known by the name of the Nafūd. If the Wādī-ar-Rumma be taken as the south-eastern limit of the Nafūd

* *Vide* Le Strange's *Lands of the Eastern Caliphate*.

the whole length of the desert from west-north-west to east-south-east is over 400 miles. The districts which border the Nafūd on its northern side are, from west to east, **Jauf-al-'Āmir** and its connected villages, the **Hamād** or Syrian desert, especially the tract known as **Wadyān**, and the region of Hajarah. On the south are the districts of **Jabal Shammar** and **Qasīm**.

Physical characteristics.—The surface of the Nafūd is generally devoid of prominent features. Its level above the sea varies, however, within considerable limits; and on the line between **Jauf-al-'Āmir** and **Hāil** differences of several hundred feet in elevation apparently occur; the central portion of the tract upon this section stands somewhat higher than either of the margins. It is generally agreed that the north-western part of the Nafūd towards **Jauf-al-'Āmir** is that which has the most broken and irregular surface; and here the ridges and valleys of which it consists, if they have any general direction at all, run from west to east. Nearer to **Hāil** the Nafūd consists of open concave plains, interrupted here and there by banks of sandstone; there are also sandhills of less height but greater circuit than those in the north. Further to the east the Nafūd falls away into low sand ridges branching out from the higher western grounds: enclosed between these ridges are long but shallow valleys which descend eastwards. The average altitude of the Nafūd between **Jauf** and **Hāil** seems to be rather more than 3,000 feet; in a line between **Hāil** and **Najaf** it is, apparently, some 700 feet less.

The Nafūd throughout is composed of a bright red sand, somewhat coarse but absolutely pure; this sand is almost crimson when damp and does not seem to vary in colour or consistency from one place to another. In occasional deep depressions a firm bottom of clay, or a calcareous, flinty or quartzzy stratum is exposed at the lowest point. The Arabs state that the sand of the Nafūd is in most parts too deep and too loose to admit of the sinking of wells.

The most remarkable phenomenon of the Nafūd is a species of large depression called a **Falj** (فلق or فلق). In shape it is semi-oval and resembles the print of a gigantic horse-hoof; the toe is the deepest part and points invariably to the north-west, while the floor of the hollow rises south-eastwards and reaches the ground level at the heel; the internal walls are inclined at an angle of 50 or 60 degrees to the horizon. The **Falj** is of all sizes, varying in area from 1 to 200 acres, but the average diameter is 300 to 400 yards and the ordinary depth from 150 to 250 feet. The formation of these hollows is generally ascribed to the agency

of the prevalent western winds, but this theory cannot yet be regarded as fully established. Peculiar facts relating to these depressions are that, in spite of the instability of their sandy sides, they apparently remain constant in shape and size from year to year and even from generation to generation; that none of them retain water after rain; and that they lie in irregular courses or strings from west to east. To the north of Jubbah for the greater part of the way to **Jauf-al-'Āmir** there is a constant succession of Faljs on both sides of the road. In Nafūd nomenclature sandhills, particularly if (as is not uncommon) they are of crescent shape with the concave side to the south, are styled Tu'ūs* طعوس (singular Ta'as طعس); and passages or spaces between them are called Khalūl خلول (singular Khall خلل).

Climate, vegetation and animals.—The prevailing breezes in the Nafūd are from the west: the Bedouins state that high winds are of rare occurrence. In winter a white frost is visible on the ground in the early morning, and a considerable depth of snow has been known to fall in a single night. After rain, which is not frequent but is sometimes heavy, pools are formed and continue for a time in parts of the Nafūd.

There is abundant desert vegetation, and but for the absence of watering places the Nafūd would be permanently inhabited. The grazing is excellent, and when the winter rains have made a sojourn possible the surrounding Bedouins repair to the Nafūd with all their flocks and herds. North of 'Alam-an-Nafūd the principal plant is the Ghadha, which yields good firewood and charcoal; south of that point it is the Artah, which when leafless resembles a thickly matted vine. The commonest plant however is 'Ādar with stiff green leaves and brownish-yellow flowers: there are also Nasi, a good kind of camel grass, and Hamrah, a blue prickly plant which is excellent forage for horses.†

Animals include the wolf, the Beatrix antelope (called Baqrat-al-Wahshi or Wadhihi), the hare, lizard and snake; among the snakes are believed to be the cobra and the horned viper. Birds are the buzzard, kestrel, grey shrike, linnet, wren, desert lark and wheatear with an occasional crow; and a few ostriches are still, it is said, found in the eastern and northern parts of the Nafūd. There are also flies, dragonflies and small butterflies. ‡

* Such is the definition obtained at Kuwait of a Ta'as: it differs somewhat from Huber's (*Journal de Voyage*, page 51).

† For further details see Huber's *Journal de Voyage*, pages 571-2 and 581-3.

‡ For other particulars see Huber's *Journal de Voyage*, pages 568-71, 579-80 and 581-3.

Inhabitants.—Several fixed villages mentioned below lie within the border of the Nafūd ; but, these few isolated spots excepted, the whole tract is without permanent inhabitants. In winter and spring the north of the Nafūd is frequented by **Sharārāt** and by 'Anizah of the Ruwalah branch, the south by 'Anizah of the Bishr branch and by Southern **Shammar**, and the east by Northern **Shammar**, **Dhafir** and **Muntarik** ; in summer all the Arab Bedouins withdraw, the three last mentioned to Turkish 'Irāq, and **Saluba** and **Hawāzim** remain in exclusive possession.

Communications.—Political interest in the Nafūd attaches mainly to the routes by which it is crossed, the most important being that between **Hāil** and **Jauf-al-'Āmir** known as **Khall Bani Hilāl** خَلَّ بني هلال or **Khall Abu Zaid** خَلَّ ابو زيد . They are described in the article on **Najd**.

Topography.—Below are described, in tabular form and alphabetical order, the principal inhabited places, recognised subdivisions and other points of interest in the Nafūd :—

Name.	Position.	REMARKS.
'Akairishah عكيرشه	One hour north of Jibbah on the route from Kuwait to Makkah .	A watering-place with 50 wells of sweet water at a depth of 1 fathom.
'Alam-an-Nafūd علم النفود or 'Alaim-an-Nafūd عليم النفود	About 80 miles south-east of Jauf-al-'Āmir .	Two pyramidal hills of sandstone weathered black, the principal landmark on the route across the Nafūd from Jauf-al-'Āmir to Hāil . They stand about 600 yards apart; the northern hill rises about 250 feet above the plain and the southern about 120 feet, the base of the former being 3,550 feet above sea level. They are also known by the names 'Alam-as-Sa'ad علم السعد and 'Alam-al-'Atsh علم العطش.
Asha'ali اشعلي	Begins a few miles south-east of the Sha'aibah wells and extends south-eastwards for 20 or 30 miles.	A long narrow tract forming part of the Nafūd between Shāmah and Qasim .
Ba'ithah بعثه	Three hours north of 'Akairishah.	A watering-place with 30 wells of sweet water at 8 fathoms; it is situated in the tract of the Nafūd known as Madhhūr .
Baniyah بنيه	The part of the Nafūd nearest to Jauf-al-'Āmir .	A high and extensive plain of fine sand with protruding rocks; it is the first obstacle to be surmounted on the way from Jauf-al-'Āmir to Hāil .

Name.	Position.	REMARKS.
Falṣḡ* فلق or Falūh	Commences 30 or 35 miles north-west of 'Alam-an-Nafūd and extends north-westwards for 15 to 20 miles.	The most difficult known part of the Nafūd; it consists of valleys and scarped hills which make it difficult for the traveller to preserve his direction and render progress tiring. There are numerous deep Faljs and a quantity of bushes. The route between Jauf-al-'Amir and Hail traverses this tract.
Haiyāniyah† حيانية	Between Hail and Hazil, about 125 miles north-north-east of the former.	A group of 5 wells containing sweet water at 25 fathoms. Shammar Bedouins and Saluba encamp here at times and a small permanent post is maintained by the Amīr of Jabal Shammar for the protection of the wells.
Hinatain حداتين	30 or 40 miles south-east of Jubbah.	A couple of high sand dunes.
Jubbah جبه	About 80 miles west-north-west of Hail and 160 miles south-south-east of Jauf-al-'Amir. Elevation above the sea is 3,060 feet.	A village situated in the midst of the Nafūd, towards the north end of a plain several miles in extent of which the soil is hard and stony. One mile to the west-north-west of the village is the hill of Umm Sinnān. Jubbah once consisted of 4 quarters and was a thriving place of nearly 1,000 inhabitants of the Armāl section of the Shammar; during the last seven years, however, it has rapidly declined and is now estimated to contain only 25 houses inhabited by about 100 Arabs of various tribes. The place was once walled, but is now open and undefended. The grazing in the neighbourhood is among the best in the Nafūd and attracts nomad 'Anizah, Shammar and Hataim in the season to the number of 300 or 400 families. A few dates and some cereals are grown and here the Ithl tree is first seen in entering Central Arabia from the north. The wells are about 40 feet deep and yield water which though insipid is better than that of Jauf-al-'Amir. Forty years ago a toll, under the guise of payment for water-rights in the Nafūd, was collected at Jubbah on behalf of the Amīr of Jabal Shammar: it was at the rate of \$2 from travellers about to cross the Nafūd and \$1 from those who had passed it.

* See Huber's *Journal de Voyage*.

† Von Nolde apparently reached Hail from Jauf-al-'Amir *via* Haiyāniyah. In that case Haiyāniyah must apparently be placed further west (which is difficult, see Wallin and Huber) or the existence of two somewhat similar Haiyāniyahs must be supposed.

Name.	Position.	REMARKS.
Lazzām لزام	East of Asha'ali.	A portion of the Nafūd about the same size and shape as Asha'ali with which it is conterminous and parallel.
Madhhūr مضهور	Extends from Jabal Shamlān to a point a little east of 'Ain Ibn-Fahaid in Qasim.	A tract in the Nafūd, 100 miles in length but narrow. Trubah is on the west border of Madhhūr near its northern end. Madhhūr contains the wells of Zibairah زبيره, Radifah رديفه, Ba'ithah, Talaih طليح, 'Akairishah and Jibbah, the last on the Kuwait-Makkah route through Qasim. Southern Shammar Arabs encamp at these.
Mujiyān (Spelling uncertain.)	At the northern boundary of Falūq.	A high barrier of very fine sand with brushwood which is leafless except in winter. The ridge is light-coloured and gives its name to the Nafūd for some distance north of it on the way to Wādi Shaiq.
Nuwādhir نواذر	On the west of Madhhūr extending southwards to Dhidah on the outskirts of Qasim.	A tract of the Nafūd 60 miles in length but narrow. It consists of three parallel strips running north-west and south-east; they are Umm-adh-Dhumaid أم الضيد on the east, Ma'sthir معاثير in the centre, and Batrah بثره on the west.
Qana or Iqnah قنه قنا	50 miles east-south-east of Jubbah and 30 north-west of Hail. Elevation above the sea is 3,280 feet.	A village in the Nafūd close to its southern border; it stands on a white chalky plain surrounded by low sandstone hills. The place consists of about 20 houses of Shammar with half-a-dozen wells and about the same number of date-gardens. The soil is sandy and the water sweet. A little fruit and some corn, especially barley, are cultivated; the grain fields are unfenced.
Qulbān (Umm-al-) أم القلبان	About 35 miles north-north-west of Hail.	A locality situated in an enormous Falj of red sand towards its northern end. There is good water at 10 fathoms from the surface in about a dozen wells. Shammar Arabs camp and graze their camels and horses here all the year round, but there are now neither date-palms nor any permanent village.
Shaiq (Wādi) وادي شقيق	About 25 miles south-east of Jauf-al-'Amir.	A valley running north-east and south-west with a breadth of about 1 mile and a depth below the surrounding Nafūd of 120 to 150 feet. It is rugged,

Name.	Position.	REMARKS.
		with rock coming to the surface in places and elsewhere flints or sand, and appears to drain a large area of Nafūd and to supply the wells of Shaqīq and Azhari ازهری. The wells of Shaqīq are two at the usual watering-place; they are sunk through 20 feet of hard soil, this upper portion being masonry-lined, and then through 100 feet or more of rock. The diameter at the mouth is 3 feet, but it increases further down. The water never entirely fails and is generally sweet but sometimes becomes fetid. 'Anizah, Shammar and Sharārāt nomads collect here, especially at the end of summer. The wells of Azhari lie about 6 miles farther east.
Shāmāh شامة	40 miles east-north-east of Baqa'a.	A halting-place on the Hāil-Najaf route.
Shamlān (Jabal) جبل شملان	15 miles north-north-east of Trubah.	A solitary hill of some height forming a landmark in the Nafūd.
Sinmān (Umm) أم سنمان	1 mile west of Jubbah.	A remarkable hill rising about 1,200 feet above the level of the surrounding plain; it is almost perpendicular on the west and very steep on the east side. The summit is very narrow; from it the higher point of 'Alam-an-Nafūd is visible. Many of the rocks at the base of Umm Sinmān bear Himyaritic inscriptions. The name suggests a resemblance to the hump of a camel.
Subhān (Khabb) خب سبهان	At the south-south-east end of Windiyāt.	A portion of the Nafūd of small extent.
Tarbiyah (Spelling uncertain).	15 miles east of Hāi-rāniyah.	An enclosure with 2 wells and a dozen inhabitants.
Trubah طربه	50 miles north-east of Baqa'a, in the Madhhūr tract of the Nafūd.	There are 2 wells of moderately good water; they are 30 feet deep. The surroundings are extraordinarily arid, consisting of stony desert with patches of sand; the sub-soil is a conglomerate of quartz, flints and calcareous stones. Trubah is a stage on the Hāil-Najaf road and is protected by a fortlet with walls 20 feet high and corner-towers. It was built by the Amir Mata'ab and is held by a garrison of several men. Southern Shammar camp in the desert around.

Name.	Position.	REMARKS.
Tuwaiyah طويه	About 40 miles west by north of Hāil.	A village in the Nafūd with a population of 100 souls.
Windijāt رنديات	Extends from Shāmāh on the north-west to Khabb Subhān on the south-east.	Three long low, parallel sand-ridges reaching for 30 miles but only a few miles broad. They are separated from Lazzām to the south-west of them by a narrow belt.

Or Na'aim: the name is sometimes pronounced with the accent on the first syllable, and the singular is Na'aïmi نعيمي. The Na'im are an important Arab tribe found chiefly in 'Omān, but partly also in **Bahrain** and **Qatar**; these two main territorial divisions of the Na'im are now in all respects independent of one another and must be dealt with separately.

NA'IM

نعيم

Settled Na'im of 'Omān.—Settled Na'im are found in Trucial 'Omān, in the 'Omān Sultanate, and also in the neutral autonomous district of **Jau** which is situated between the two former. The table below explains the distribution of the tribe in this quarter :—

Country.		Principality or district.	Town or village.	Number of houses.
Trucial	'Omān	'Ajman	'Ajman	25
Do.	do.	Shārjah	Dhaïd	30
Do.	do.	do.	Hairah	250
Do.	do.	do.	Hamriyah	250
Do.	do.	do.	Haqālah	10
Do.	do.	do.	Shārjah Town	100
'Omān	Sultanate	Bātinah	Sanqar	45
Do.	do.	do.	Dhank Town	660
Do.	do.	do.	Sanainah	200
Independent	'Omān	Jau	Baraimi Village	100
Do.	do.	do.	Hafit	150
Do.	do.	do.	Qābil	180
Do.	do.	do.	Su'arab	100

From the figures given it may be inferred that the total number of non-nomadic Na'im in 'Omān is about 10,500 souls, of whom roughly 3,500 belong to Trucial 'Omān, 4,500 to the 'Omān Sultanate, and 2,500 to Independent 'Omān.

Bedouin Na'im of 'Omān.—The Bedouin Na'im in 'Omān range over the entire central portion of the 'Omān Promontory towards its base. The district of **Jau**, in which the **Baraimi** Oasis is situated, may be regarded as their headquarters; but they are predominant also in the **Dhāhirah** District of the 'Omān Sultanate to the eastwards, and on the west they extend to the district of **Khatam** which they occupy in common with the Bani **Yās** and **Dhawāhir**. In winter some of the Na'im pasture their animals on the watershed between the **Baraimi** Oasis and **Sohār**, and the Na'im are an important factor in tribal politics at the head of **Wādi Hatta**; but on the north their principal location is in the plain of **Jiri** which is shared by their **Khawātir** section with the **Ghafalah** tribe. In the direction of **Shārjah**, the tract known as **Gharīf** was once in their possession; but they were displaced by the Bani **Ka'ab**, who in their turn had to make way for the Bani **Qitab**. The number of Na'im Bedouins in 'Omān may be roughly estimated at 2,500 souls, of whom 1,200 may be ordinarily in Trucial 'Omān, 900 in the 'Omān Sultanate and 400 in Independent 'Omān.

Subdivisions of the Na'im of 'Omān.—The Na'im of 'Omān, whether settled or nomadic, all belong to one of two main tribal divisions—the **Āl Bū Kharaiḇān** آل بو خريبان and the **Āl Bū Shāmis** آل بو شامسى—and each of these again is resolvable into a number of tribal sections. The **Āl Bū Kharaiḇān** are said to be descended from a common ancestor named **Khazraj** خزرج and the **Āl Bū Shāmis** from one 'Aus.

The following table contains some of the better known sectional names :—

Section.	Main division.	Location.	REMARKS.
'Aryān عريان	Āl Bū Kharaiḇān.	Hafit village in Jau .	About 140 souls. In summer they cultivate dates; in winter they roam the desert in tents with their flocks and herds.

Section.	Main division.	Location.	REMARKS.
'Azīz ('Ayāl) عيال عزيز	Āl Bū Shāmis.	Dhank Town in Dhāhirah.	About 700 souls: all are townsmen. They are believed not to be really Na'im, but their true origin is forgotten.
Darāwishah دراوشة	Do.	Hairah, Hamrīyah and Shārjah Town in Shārjah, also Rās-al-Khāimah Town.	At these places the settled members of this section aggregate more than 1500 souls. The Shaikhs of Hamrīyah and Hairah belong to this section.
Dhanain (Āl Bū) آل بو ضنين	Āl Bū Kharaibān.	'Ajman and elsewhere.	About 700 souls. The name is also given as Āl Bū Adhnain.
Hamīrat حميرة	Do.	Do. do.	This section consists of about 90 townspeople and 90 Bedouins.
Hiyah ('Ayāl) عيال حية	Āl Bū Shāmis.	Dhank Town in Dhāhirah.	The name is also given as Ahīya احيا. They are all townspeople and number about 150 souls. In religion they are Shāfi'i Sunnis.
Khawātir خواطير	Āl Bū Kharaibān.	Hafit village in Jau and the Jiri plain in Shārjah.	The Khawātir of the Jiri plain are Bedouins inhabiting black blanket tents; they number about 500 souls and are said to own some 800 camels, 70 donkeys, 100 cattle and 1,500 sheep and goats.
Kilābinah كلابنة	Āl Bū Shāmis.	Hafit village in Jau and Sanqar in Bātinah.	...
Qarātisah قراطسة	Āl Bū Kharaibān.	Baraimi Village and Su'arah in the Baraimi Oasis.	The Shaikh of 'Ajman belongs to this section.

Section.	Main division.	Location.	REMARKS.
Shawāmis شوامس	Āl Bū Shāmis.	Bizailli and Sanainah in Dhāhirah, also Dhank Town.	About 1,400 souls, partly Bedouin. A few of the Bedouins affect to be Māliki Sunnis; the remain- der of the section are Hanbalis. (<i>N. B.</i> —There is also a Shawāmis section of the Bani Kalaib tribe.)
Wahāishah وحائشه	Do.	Dhank Town in Dhāhirah.	About 250 souls. In religion the majority are Ibādhis, some are Shāfi'is, and a few Hanifis.

The Āl Bū Kalbi of 'Ajmān Town are perhaps another section of the Āl Bū Kharaibān division of this tribe.

Political position of the Na'im in 'Omān.—The Baraimi Oasis, where they are still politically though no longer numerically predominant, is regarded by the Na'im of 'Omān as their tribal headquarters; but at 'Ajmān and Hamriyah, both of which places are ruled over by Na'aïmi Shaikhs, their position appears to be more secure than it is in Baraimi at the present day. They are also the most powerful Ghāfiri tribe in the Dhāhirah District of the 'Omān Sultanate; but their relations with the ruler of the Sultanate are slight. Except at 'Ajmān and Hamriyah the Na'im appear to be weakened by internal dissensions, but their Bedouins are described as warlike and predatory. In 'Omān the Na'im are generally Sunnis of the Hanbali school; one or two exceptions to this rule are noted in the table in the preceding paragraph.

Settled Na'im of Bahrain.—We now turn to the second territorial division of the tribe—a branch severed from the parent trunk some generations ago—who are found in Bahrain and Qatar. In the region in question non-Bedouin members of the tribe are now found only in the Bahrain islands where they have 60 houses at Umm-ash-Shajar, 50 at Hālat-an-Na'im, 80 at Shajairah, 10 at Hālat-as-Sulutah and a few at Rifā'al-Gharbi; they thus number about 800 souls altogether. There are now no settled Na'im in Qatar.

Bedouin Na'im of Bahrain and Qatar.—The nomadic Na'im outside 'Omān are believed to number about 2,000 souls. In winter they live in **Qatar**, chiefly in the neighbourhood of Zubārah; in the hot weather most of them remove to **Bahrain** and form camps in the northern part of the main island, but some take up their summer quarters near **Dōhah** in the **Qatar** peninsula. These Bedouins are reputed to possess altogether about 100 horses, 600 camels, 1,000 sheep and 1,000 goats.

Subdivisions of the Na'im of Bahrain and Qatar.—The main tribal divisions of the Na'im are the same here as in the south, namely, the Āl Bū Kharaiḃān and the Āl Bū Shāmis; but the prominent sections appear to be entirely different. They are—

Āl Bū Kharaiḃān.

Jifāfalah	جفافله	Mizā'idah	مزائدة
Khalūwi	خاوي	and	
Matawa'ah	مطارعة	Qabāṭin	قحاطين

Āl Bū Shāmis.

Fahad (Āl)	آل فهد	Jima'an (Āl)	آل جمعان
Haiyi (Āl)	آل حايي	Ramadhān (Āl)	آل رمضان
Hutūm	حترم	and	
Jabar (Āl)	آل جبر	Suwāwarah	سوارورة

These sections, and even the two main divisions, are here much intermingled; but all the tribesmen in **Bahrain** and **Qatar** are followers of one of two Shaikhs who belong to the Āl Haiyi and Āl Ramadhān sections respectively. The **Muraikhāt** of **Bahrain** are sometimes regarded as a section of the Āl Bū Shāmis division of the Na'im, with whom they are at least intimately connected; but it appears preferable to treat them as a separate tribe. The Na'im of **Bahrain** speak of the Shaikh of **Ajmān** as a Jaffāli, and it is therefore possible that the Jifāfalah section among the Na'im of the north corresponds to the Qarāṭisah section among those of the south.

Political position of the Na'im in Bahrain and Qatar.—The Na'im of **Bahrain** and **Qatar** are now completely detached from the main body of the tribe in 'Omān and maintain no relations with the latter. They

believe that their ancestors immigrated from 'Omān several generations ago at the invitation of the 'Utūb, then in **Qatar**, for the purpose of expelling the Āl **Musallam**. Some of these northern Na'im have become pearl divers, but the majority are still pastoral and depend for subsistence upon their livestock. The Bedouins of the northern Na'im are retained as mercenaries both by the Shaikh of **Bahrain** and by the Āl Thāni Shaikhs of **Dōhah**, and the protection of those Shaikhdoms is considered to devolve principally upon them during the absence from home of the pearl fleets. Their efficiency and trustworthiness are not however beyond doubt, and their presence in **Bahrain** in summer is a source of annoyance to the peaceable agriculturists of other tribes. In **Bahrain** and **Qatar** the Na'im are Māliki Sunnis.

NAJAF
نجف
QADHA

A division of the Karbala Sanjāq of the Baghdad Wilāyat in Turkish 'Irāq.

Position and boundaries.—The Qadha of Najaf is situated on the Shatt-al-**Hindiyah** in its lower reaches, chiefly on the western side ; it is bounded by the Qadhas of **Karbala** and **Hindiyah** on the north, by that of **Shāmiyah** on the east, and by the **Shāmiyah** desert on the south and west.

Topography and inhabitants.—The only town which the Qadha contains is that of **Najaf**, elsewhere described ; the only fixed village of any size is Rahabah رحبه , the seat of a Mudir, which is situated nearly 20 miles south of **Najaf Town** on the western verge of cultivation and at the beginning of the **Shāmiyah** desert. Rahabah is a small place inhabited by sedentary Arabs whose houses are miserable cabins of mud.

The chief physical features of the district are the Bahr-an-Najaf, which is noticed in the articles on the Shatt-al-**Hindiyah** and **Najaf Town**, and part of the **Shatt-al-Hindiyah** which flows into it.

Tables follow below of the agricultural tracts and of the tribes of the **Najaf Qadha**, by Nāhiyāhs.

Nāhiyah of Hor-ad-Dukhn.

The names of the tracts in this Nāhiyah, which is situated between

Kifl and the **Shāmiyah Qadha**, have not been ascertained. The principal tribe are Bani Hasan of the following sections :—

'Abbās	Hadāri (Āl Bū)
'Adhaib (Āl Bū)	Hawātīm
'Āradhi (Āl Bū)	Majātim

There are also some of the Mawāsh tribe who are intimately connected with the Bani Hasan.

The Hor-ad-Dukhn tract is intersected by a canal which leaves the **Hindiyah** (left bank), under the name of Abu Shūrah ابو شره, a little below **Kifl** and goes first to the eastward ; it then assumes the name of Abu Kufūf and circling round to southward eventually rejoins the waters of the **Hindiyah** in the neighbourhood of **Shināfiyah** ; it is known in the last part of its course as the Khurm. The chief village in the Nāhiyah and the seat of the Mudir is Abu Shūrah, several miles to the north-east of **Kūfah** ; it consists of about 70 huts.

Nāhiyah of Kūfah.

The tracts in this Nāhiyah also cannot be specified by name, but the chief tribes are these :—

1. 'Adhārāt عذارات	7. Mashhūd (Āl Bū Shaikh) آل بو شيخ مشهود
2. Balūsh or Balūchis بلوش	8. Mawāsh مواش
3. Dhabah (Āl Bū) آل بو ذبح	9. Na'amān (Āl Bū) آل بو نعمان
4. Hasan (Bani) بنی حسن	10. Qaraishāt قریشات
5. 'Īsa عیسی	11. Rabī'ah (Bani) ربیعہ
6. Ja'āfarah جعافره	12. Shūshtari شوستری

Nāhiyah of Rahabah.

The tracts in this Nāhiyah are the following :—

1. 'Adhbah عذبه	3. Ghānim غانم
2. Ārbij عاربج	4. Haiyadhiyāh حیاضیه

نصاب | 14. Shaqīq
شقيق |

The settled Arab tribes of the Rahabah subdivision are the 'Akārāt, 'Atij, Dhuiwahir, and Āl Bū Sultān of the Āl Bū 'Abdullah section.

In the Qadha generally there are a number of nomadic Arabs, chiefly of the 'Anizah (including Dahāmishah), Ghazālāt, Bani Hasan of the 'Ayāsh and Bani Salāmah sections, Zubaid of the 'Ajāib عجائب subsection (Jabūr-al-Wāwi section), Northern Shammar and Āl Shibil.

Population.—The total fixed population of the Qadha, inclusive of the town of Najaf, is probably not less than 50,000 souls. In the Hor-ad-Dukhn Nāhiyah there are said to be 2,000 huts of tribesmen. Except about 750 Sunni employés of the Turkish Government, who are collected in the town of Najaf, the people are all Shi'ah Muhammadans.

Resources.—Agriculture is the principal pursuit; the crops and live-stock are of the usual sorts; but, as parts of the district are marshy, rice cultivation and buffaloes are also found. A number of saline hollows have been drained by the Sanīyah administration and converted into rice lands. The date palms in the Qadha are estimated at 250,000 trees, of which 170,000 are in the Nāhiyah of Kūfah.

Near Rahabah are large salt fields, formed by the evaporation in the hot weather of previous floods; the more important are three in number and are known as Wādi-al-Hamārah حمارة, Sirājīyah سراجيه and Rahmīyah رهميه; of these the first two are close together and the third about 3 miles from the others. These three fields together yield about 1,000 tons a year of salt, but the produce is of poor quality and has not been utilised by the Public Debt Department during the last 10 years in their dépôt at Najaf Town.

Administration.—Najaf is a Qadha of the 1st class; it contains—besides the Markaz Nāhiyah—the Nāhiyahs, already mentioned, of Hor-ad-Dukhn هور الدخن, Kūfah كوفه and Rahabah رحبه. Each Nāhiyah, except the one at headquarters, is governed by a resident Mudir: that of Kūfah belongs to the 1st and that of Hor-ad-Dukhn to the 2nd class.

NAJAF
نجف
TOWN

Sometimes characterised as Najaf-al-Ashraf نجف الاشرف and also well-known as Mashhad 'Ali مشهد علي ; a famous town of Turkish 'Irāq, the most sacred of the places regarded as holy by Muhammadans of the Shi'ah sect. The origin of Najaf, unreliable traditions apart, is obscure, and there is no mention of its existence earlier than the 10th century of the Christian era. From ancient times it has been maintained by some Muhammadan authorities that 'Ali was really buried at **Kūfah**, and not here. In 1051 A.D. a Shi'ah shrine which existed here was burned by Sunnis from **Baghdād**.

The battle of Qādisiyah قادسيه, by which the Muslims in 635 A.D. gained the province of 'Irāq from the Persians, is believed to have been fought at a place about 10 miles west of the present town of Najaf; Qādisiyah was then a village, and its existence as such continued until the 14th century of the Christian era, if not longer.

Position and site.—Najaf stands in the desert 6 miles west-south-west of **Kūfah** on the **Hindiyah**; it is situated on a ridge of reddish sandstone and gravel and overhangs and overlooks from the north-east the Bahr or Sea of Najaf, described in the article on the **Hindiyah**, to which its site falls away in cliffs about 40 feet high. The Bahr is now dry near the town and contains several date plantations. In the plain surrounding the town on every side except the south-west irregular earthen mounds rise in different directions; some of those to the north and east are about 30 feet high, but their summits are narrow. A mound of rubbish, also narrow-topped but commanding the town, is situated on the south-west side between the town and the Bahr. On the south, between the town and the Bahr, is open ground, where the Turkish expeditionary force destined for **Najd** was encamped in 1904-1905. The Hamidiyah canal from the **Hindiyah**, mentioned again further on, runs in the bed of the Bahr skirting the foot of the cliffs; its bed, opposite the town, is 12 feet wide and 6 feet deep, and the water in it runs in midwinter about 6 feet wide and 6 inches deep; it is occasionally filled up by drifting sand. The Hamidiyah canal is sometimes, from the name of the Saniyah agent who constructed it, called the Bakriyah بكريه. Cemeteries adjoin the northern and eastern sides of the town. The environs generally contain market gardens and plantations of young date trees which have not yet begun to bear fruit.

Town and buildings.—The town of Najaf, which is roughly quadrangular, is surrounded by a wall built a century ago to defend it from the attacks of the Wahhābis; the wall is about 30 feet high and has circular bastions, some 50 in number and each 50 feet in diameter, at intervals of 100 yards. This work is now in a state of decay; in places it is cracked and in others it is actually falling down. There are two main gateways with gates, one 12 and the other 9 feet wide, on the eastern face of the town; of these the larger is the Bāb-al-Husain باب الحسين; and the other, opened only three years ago, is the Bāb-al-Kūfah باب الكوفة. On the south-west side towards the Bahr is a third gate, called Bāb Murād باب مراد on account of a tradition that the turban of the Sultān Murād IV fell off when he was passing through it in 1638 or 1639 A.D. In the western wall is an aperture known as Thilmah ثلثمه which has no gate but is large enough to afford a passage for field artillery or other vehicles. At the north-east corner of the town, adjoining the military barracks, is a fifth gate spoken of simply as Bāb باب.

The principal building in Najaf is the shrine which contains the tomb of 'Ali; it rises in the centre of the town and is even richer and more splendid than the shrine of Husain at **Karbala**. In general design it resembles the sacred edifices of **Karbala**; but it is double-storeyed, and the gold plating of the minarets reaches almost to the ground. Its dome has been described as “a mound of gold rising from the level deserts.”*

The main bazaar of Najaf runs from the shrine to the larger eastern gate, and in it are situated the Turkish Government buildings or Sarāi. The dilapidated barracks of the Ottoman troops are in the north-eastern part of the town. About a score of caravansarais for travellers are located in different quarters; these include 5 or 6 well-built brick Khāns of modern construction which stand outside the town on the north-east side at about 25 yards from the town wall.

The houses of Najaf are mostly of brick and mortar and new ones of modern design are steadily replacing those in the old style. The site of Najaf is greatly overcrowded. Up to the present time the efforts of the executive authorities to arrange for an extension have been frustrated by the Auqāf or Department of Religious Endowments.

Inhabitants.—The population of Najaf, which has greatly increased during the last generation, is now estimated at more than 30,000 souls. Of these more than one-third are Persians and nearly all the remainder are

* See Loftus's *Travels and Researches*, page 52.—Loftus and his party are perhaps the only Christians who have ever entered the precincts of the shrine.

Arabs; but there are also about 250 Negroes, 100 Barbaris of Afghan origin, 100 Indians and 50 Turks. No Jews or Christians are found. With the exception of about 100 Sunnis, chiefly government employés, the entire population (including the Barbaris) is Shi'ah. The town is divided between two turbulent political or municipal factions, the Shumurd شمر and Zugurd زگرد, of which the origin and *raison d'être* have not been explained, and in the past the public peace was often disturbed by their frays; even at the present time serious fighting sometimes takes place between them in the streets.

The atmosphere of Najaf is one of Shi'ah culture and bigotry, both carried to greater lengths than at **Karbala**; and most of the permanent residents depend for their livelihood on functions connected with the shrine, the pilgrims, or religion. There are many Mujtahids, some of whom carry great weight in the Shi'ah world; also real and nominal students of Shi'ah theology to the number, probably, of several thousands. The town boasts 15 Madrasahs or religious high schools and 90 mosques.

Resources.—In a place so artificial as Najaf, a large town situated in a desert, supplies and transport are necessarily deficient. The water of the Bahr, when it contains any, is not drunk except by animals; but it serves for washing and other domestic purposes. A better water supply is now furnished by the Hamidiyah حميدية, an open canal, the property of the Dairat-as-Saniyah, which brings the water of the **Hindiyah** to the town; and the ancient jingling proverb زبارة الامير — ماء البئر — خبز الشعير — *“He who takes up his residence in Najaf must be content with brackish well-water and barley-bread compensated for by the virtue of the shrine of 'Ali”*—has now lost its appropriateness.

Trade and manufactures.—The trade of Najaf, of which the river port is **Kūfah**, depends on local consumption, on the influx of pilgrims, and in a minor degree on intercourse with Jabal **Shammar**. Two-thirds of the imports are said to be consumed by pilgrims. The trade with Najaf is carried on by Hadrachs حدرة or commercial missions from the interior, sometimes private enterprises and sometimes officially despatched by the Amīr of Jabal **Shammar**, which visit Najaf periodically to make purchases. In seasons of scarcity inland there is a steady flow of grain from Najaf to **Hāil**. The principal exports of Najaf are lambskins, sheepskins and wool brought in from the adjacent country, 'Abas manufactured in the town, and grain. The chief imports are Manchester piece-goods from **Baghdād**, sugar, Indian spices, tea, largely from Calcutta, hardware and timber.

The most important local manufacture is of silken and woollen 'Abas, dyed in fast colours and embroidered with gold thread; it maintains about 200 looms and 30 shops in the town. There is a business also, as at **Karbala**, in praying tablets and inscribed shrouds.

Administration.—Najaf is the headquarters of the Qadha of the same name and the seat of a Qāim-Maqām, but Turkish officialdom is not conspicuous; it seems to be maintained, perhaps in order to avoid wounding Shi'ah susceptibilities, at the lowest strength compatible with effective control. The Sanitary and Public Debt Departments and the Tobacco Régie are each represented by a Mamūr.

A single telegraph wire connects Najaf with the **Euphrates** valley line at **Hillah** *viâ* **Karbala** and **Tawairij**, but the working of this branch is inefficient and in 1905 it remained interrupted for several months continuously. There is also a post-office at Najaf, and a government primary school exists in the town, but it is a small one and indifferent. The military garrison of Najaf is one company of infantry and the force of Dhābitīyahs is even smaller, but there are about 300 military reservists at call for whom rifles are kept in store, and the town is the headquarters of the 4th battalion of the 84th Radif regiment. The town itself is administered as a municipality. The municipal building consists of 6 or 7 rooms, partly furnished, over the Bāb-al-Husain: it was placed at the disposal of the British Consul-General on the occasion of his last visit to Najaf (1905).

The interests of Persian subjects at **Najaf** are protected by a paid Nāib-Kārpardāz or Persian Consular Agent.

Religious importance.—Najaf owes its celebrity and even its existence to the estimation in which it is held by Shi'ah Muhammadans as a place of pilgrimage and interment; the subject of the Shi'ah pilgrimages is fully dealt with in another place.* The consecrated cemetery of Najaf, known as the Wādi-as-Salām وادي السلام, or Valley of Salvation, is even more highly esteemed than the corresponding necropolis of **Karbala**; it covers the sandy plain to the north and east of the town, and it contains, besides myriads of obscure tombs, a few pretentious mausoleums and a number of enclosed family graveyards: some of the last are pictured as delightful places of retirement and seclusion. The deposit of bodies, at the rate of several thousands annually, has now been going on at **Najaf** for centuries, grave being superimposed on grave; mouldering bones are often visible, and the soil must now consist largely of decomposed human remains. This enormous difficulty in the way of sanitation may account for the epidemics which sometimes ravage the place in spite of a climate said to be healthy in comparison with that of the neighbourhood.

* See the Gazetteer Appendix on Religions.

Najd or Central Arabia consists of the three provinces of Jabal Shammar or Northern Najd, of Qasim or Middle Najd and of Southern

NAJD *

نجد

* The compilation of all accessible information relating to Najd or Central Arabia was commenced by the writer in 1904 and in November of that year the result appeared in the form of 57 printed foolscap pages. Copies of these preliminary notes were taken by the writer to Kuwait and Bahrain, where he personally initiated further investigations, and after his return to India the work of inquiry was continued by the local officers. During 1905 much new information, especially in regard to tribes, was obtained by Captam S. G. Knox, Political Agent at Kuwait; and the principal routes across Arabia were successfully worked out by Mr. J. C. Gaskin, Political Assistant. The materials obtained during 1905, after being added to those already existing, took shape in February 1906 as printed draft articles extending to 162 octavo pages. The work, however, was still incomplete; and during 1906, by the labours of Captain Knox at Kuwait and of Captain F. B. Prideaux, Political Agent, assisted by Mr. In'am-at-Haqq, in Bahrain, so great a quantity of fresh data was amassed that the next set of drafts, printed in January 1907, filled no less than 260 octavo pages. These again became the subject of fresh references to the Political Agents which were disposed of in the course of the year. Captain Knox dealt chiefly with the eastern end of Qasim and the more northern of the Wahhabi districts, while Captain Prideaux extended his investigations over the whole of Southern Najd and also over Qasim. Mr. C. M. Doughty, the Central Arabian traveller, and Mr. D. G. Hogarth, author of *The Penetration of Arabia*, were good enough to examine some of the more important of the earlier draft articles.

The following are the principal published works which contain general and topographical information regarding Najd:—Sadlier's *Diary of a Journey across Arabia* (in 1819); Wallin's *Notes taken on a Journey through Part of Northern Arabia* in the Journal of the Royal Geographical Society for 1851; Wallin's *Narrative of a Journey from Cairo to Medina and Mecca, by Suez, Araba, Tawila, Al Jauf Jubbe, Hail and Nejd in 1845* in the Journal of the Royal Geographical Society for 1854; Palgrave's *Narrative of a Year's Journey through Central and Eastern Arabia*, 1865; Guarmani's *Itinéraire de Jérusalem au Neged Septentrional* in the B.S.G. for 1865; Pelly's *Report on a Journey to the Wahabee Capital of Riyadh*, 1866; Colonel E. C. Ross's *Memoir on Nejd* in the Persian Gulf Administration Report for 1879-80; Lady Anne Blunt's *Pilgrimage to Najd*, 1881; M. Ch. Huber's *Voyage dans l'Arabie Centrale, 1878-82* in the B. S. G. for 1884 and 1885; Mr. C. M. Doughty's *Travels in Arabia Deserta*, 1888; Baron E. Nolde's *Reise nach Inner-Arabien*, 1895; Professor J. Euting's *Tagbuch einer Reise in Inner-Arabien*, 1896; M. Ch. Huber's posthumous *Journal d'un Voyage en Arabie, 1883-84*; published in 1891; and Mr. D. G. Hogarth's *Penetration of Arabia*, 1904. All of these, except the two German authorities, are accompanied by valuable maps; those contained in M. Huber's *Journal* and in Mr. Doughty's book are the most important.

The best general map of Najd at the present time is the one issued with this Gazetteer. It has been compiled by Captain F. Fraser Hunter, I. A., from all available sources, including those described above and also the following:—maps contained in Brydges' *Brief History of the Wahabys*, 1834, and in Mongin's *Histoire Sommaire de l'Égypte*, 1839; Captain Knox's *Map of the 'Aridh District*, 1906, and *Map of the Sadair District*, 1906, both from native information, Nos. 1374 and 1385 in the Library of the Foreign Department, Simla; Captain

Najd, and the articles under those names comprise, if read in conjunction, most of what it is necessary to know concerning Central Arabia. We have reserved for the present article the discussion of routes, for which, as lying partly in one province and partly in another, an appropriate place could not elsewhere be found; also the description of a few villages, wells and natural features belonging to districts which do not possess recognised names; and, lastly, a short notice of the political organisation and external relations of the country at the present time.

Routes.—The three principal routes of Central Arabia are those which traverse it from **Hofūf**, **Kuwait** and **Najaf** to Makkah, where they meet; and they are the first described in the tables that follow. Next are tabulated the sections of a great longitudinal route which, beginning on the confines of Syria, runs crosswise to the first three and intersects the Najaf-Makkah route at **Hāil**, the Kuwait-Makkah route at **Buraidah** and the Hofūf-Makkah route near the head of Wādi **Hanifah**. The subject is concluded with an account of the routes connecting 'Anaizah with Madinah and Makkah and with an enumeration of several subsidiary routes linking together places of minor importance.

*Route No. I.—From Hofūf to Makkah by Riyādh. **

Hofūf هفوف	See article Hofūf
Farūq فرق	Marked by a solitary acacia tree in Wādi Farūq . (This is only one	10	West. Over a gradually rising desert with camel grazing of Nasi, 'Arfaj and

Prideaux's *Map of Qasim*, 1906, *Map of Sadair, Washam and 'Aridh*, 1906, and *Map of Central Arabia (Southern and South-Western Portions)*, 1906, all from native information, Library Nos. 1376, 1375 and 1377; and a copy of a *Turkish Survey for Hijaz Railway*, date uncertain but recent, Library No. 1378.

* This route is described mainly from native information obtained by Mr. J. C. Gaskin, Political Assistant; but the works of Doughty and Huber have been utilised to amplify and correct the account of the latter portion. The distance in hours has everywhere been left as stated by the native informant; but the number of miles, when it has been approximately fixed by more reliable authority and is inconsistent with the native account, is given separately in brackets. The portion between **Hofūf** and 'Aynah was travelled (in the reverse direction) by Palgrave in 1862 and by Pelly in 1865; but neither apparently followed the line of the itinerary we have given above, unless between **Riyādh** and 'Aynah. The course of Sadlier from **Hofūf** to Dara'iyah in 1819 may be regarded as an unimportant variant of the first part of this route. The paragraph on communications in the article on the **Hasa Sanjāq** should be consulted for information regarding these points.

Route No. I.—From Hofūf to Makkah by Riyādh—contd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Jabal-an-Nir جبل النير	See this article, paragraph <i>Topographical Details (South-Western District)</i> below.	12	South of west over a level desert plain.
Sijah سجه	3 large wells of 8 fathoms with water which is drinkable but leaves a disagreeable after-taste. The wells are difficult and dangerous to draw from in consequence of their funnel-shaped openings, rudely cut in the basalt rock. Route No. VIII appears to unite with the present route at or near this place.	12 (55 miles)	South-west. Through a valley in Jabal-an-Nir for 2 hours to the Hanābij حنابج wells, sweet and only a fathom deep; then over a gradually ascending plain strewn with small pebbles. (The desert changes from granite to marble and basalt.) This is a double stage or nearly so.
Qulbān Bin-Had- dāf قلبان بن هذاف	4 wells with sweet water at 15 fathoms in a boulder-strewn plain called Ruqbah رقبه.	12	South-west. Over the plain of Hazam-ar-Rāji at a constant elevation of about 3,500 feet.
Muwaiḥ Hakrān مويه حكران	Many wells of drinkable water 2 fathoms deep situated in a saline bay in the eastern face of the Harat حرة قشab. The altitude is probably about 3,750 feet above the sea. Two days' supply of water must be taken from this place. Here, and for 3 or 4 stages beyond, annoyance is caused by nocturnal thieves.	12 (50 miles.)	South-west. Over a level plain, stony in places. This is a double stage.

Route No. I.—From Hofūf to Makkah by Riyādh—contd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Radhwān رضوان	A small ridge on the east side of the route.	12	South of west. For 2 hours over a saline plain; then over level desert.
Ibraqain ابرقين	Two mounds, one on each side of the route. Shi'ahs assume the Ihām or garment of pilgrimage at this place.	10	South of west. Over level desert.
'Ashairah عشيرة	A dozen wells with sweet water at 3 fathoms; they have narrow openings and are lined with dry masonry of lava blocks. The altitude above the sea is probably about 4,400 feet.	8	South of west. Over a flat, gravelly plain.
Sail سيل	A halting place in a valley, with a flowing stream and a considerable amount of vegetation, on the Red Sea side of the watershed that divides Western from Central Arabia. The stream comes from the south-east and, turning here, goes on to the south-west. Grass, rushes and peppermint grow. This is the place where Sunnis don the Ihām. Sail is also a mid-day halting place on the summer route from Makkah to Tāif.	11 (28 miles)	South-west. The plains of Najd are left behind and a rugged country of traps and basalts, the commencement of Hijāz, is entered. The pass through the hills, called Rī'-as-Sail ريع السيل is infested with robbers. The altitude at the top is 4,950 feet, the highest elevation on the way between Qasim and Makkah.* The descent from the Rī' to Sail is difficult.

* As calculated by Lieutenant F. Fraser Hunter from Huber's observation (see footnote to article Jabal Shammar).

Route No. I.—From Hofūf to Makkah by Riyādh—concl'd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
'Ain-az-Zaima عين الزيماء	A village of 10 mud and stone houses of the Hadhail tribe. There is corn cultivation, but trees are few. Altitude above the sea is probably about 2,250 feet. A coffee house and the remains of a Wahhābi fort are found here.	8 (25 miles)	South-west. For 4 hours down a stony valley, half a mile wide with a few accaias, which is called Wādī-as-Sail; then over a level plain.
Alamain علمين or Amyāl اميال	Two posts marking the boundary of the Haram or sacred district; they are 12 feet high and 25 yards apart. Pilgrims may not destroy animal or vegetable life after passing these bounds.	8	The road is easy and well marked; it is treeless, but hills on either side are full of wooding. It runs for 2 hours on the level, and then ascends and descends a small hill, 'Uqabah عقبه, from the top of which a glimpse is obtained of Makkah. The remainder is a gentle declivity.
Makkah مكة	...	3	South-west. For 1½ hours over a broad plain between hills to Jabal-an-Nūr جبل النور; then along a stony ravine-bed past gardens, houses, and coffee shops.

Pilgrims by this route start from **Hofūf** about the 8th, and from **Riyādh** about the 16th of Dhul Qa'dah. The journey to Makkah can be performed in 23 days* from **Hofūf** and in 17 from **Riyādh**.

* Doubtless some of the shorter stages are combined and occasional halts made elsewhere.

*Route No. II.—From Kuwait to Makkah by Buraidah. **

The first five stages of this route, ending with **Hafar**, will be found in the paragraph on communications in the article on the **Kuwait** Principality. The rest are as follow :—

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Matrubah مطربه	A depression which contains rain water at times; it is a valley entering Bātin from the south.	11½ (from Hafar)	South-west. Along the bed of the Bātin hollow. At intervals wells and tanks are passed, but there is no water except during winter and spring, when pools are formed.
Umm-al-Fahūd أم الفهود	Do.	11	Do.
Thamāni ثمامي	Several wells, of which 5 have sweet water at 4 fathoms. In winter the supply is plentiful, but in summer it is only enough for 20 camels.	4	South-west. Along the bed of the Bātin depression. At 1 hour there is an old tank, with dry wells and a large acacia tree, and at 1½ hours 2 old tanks and more wells. Water collects in the hollows in winter and spring.
Taiyib Ism طيب اسم	25 wells of sweet water at 3 fathoms in a plain covered with ber and acacia trees.	12	South-west. Along the bed of Bātin for 1 hour; then across the Dahānah desert for 5 hours; then over a long plain called Taisiyah, covered with ber and acacia trees, for 6 hours.
Jibbah † جبه	Numerous wells of drinkable and abundant water at 2 to 3 fathoms. This place is on	7	South-west. Sometimes across, and sometimes along, dry watercourses fringed with trees.

*This route is almost entirely from native information obtained by Mr. J. C. Gaskin, Political Assistant, and the distances in hours are stated as they were described without modification. Distances more definitely ascertained are indicated, in brackets, by miles.

†In a generally northerly direction from Jibbah are various other wells by which, possibly, travellers on this route may pass. They are, in order of nearness to Jibbah, 'Akairishah عكيرشه, Ba'ithah بعثه, Talaih طليه, Radifah رديفه, Zibairah زبيرة, and Tha'alabiyah ثعالبيه: all lie within that tract of the eastern Nafūd which is called Madhhūr.

Route No. II.—From Kuwait to Makkah by Buraidah—contd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
	the eastern border of the strip of Nafūd called Madhhūr and is connected with Ab-ad-Dūd in Qasīm by a track known as Kharimat Jibbah خریمة جبه		
'Ain Ibn-Fahaid عين ابن فهد	See article Qasīm.	14½	South-west. The route enters the Nafūd at ½ an hour and then runs over hard sand and between dunes in the following Nafūd tracts:—Madhhūr (for 3 hours), Buwaitir بویتیر (for 1 hour), 'Amār عمار (for 1½ hours), Baidha بیضا (for 1½ hours), Baisiyah بیصیه (for 1 hour), Batrah بطره (for ¾ of hour) and 'Arq-al-Bilād عرق البلاد (for 1½ hours): these tracts are separated from one another by strips of stony plain 1 or 2 miles in breadth.
Tarfiyah طرفیه	See article Qasīm.	8 (20 miles)	South-south-west. For 5 hours over undulating stony plain, for 1½ hours over loose sand, and the rest over firm desert.
Buraidah بریده	See article Buraidah.	5 (15 miles)	South-south-west, for 3 hours over undulating stony plain, the rest over loose sand.
Shabībīyah شبیبيه	See article Qasīm.	10 (18 miles)	South by west. For 6 hours over loose sand and for 4 hours along Wādī-ar-Rummah.

Route No. II.—From Kuwait to Makkah by Buraidah—contd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Rass رَس	See article Rass	5 (26 miles)	South-west. For 3 hours in Wādī-ar-Rummah: then over a pebbly desert apparently on the south side of the Wādī.
Shabaikīyah شَبَايْكِيَه	30 wells with sweet water at 3 to 4 fathoms.	12	South-south-west. Over a level desert plain.
Dhariyah ذَرِيَه	See this article, paragraph <i>Topographical Details (South-Western District)</i> below.	13	South by west. Over level desert plain for 10 hours; the rest over scattered hills.
Sufwīyah صُفْوِيَه	Numerous wells with brackish water at 2 fathoms.	8	South-south-west. For 3 hours between high ridges; for 3 hours over loose sand and dunes; and for 2 hours over level desert plain.
Sha'ab-al-'Asībī-yāt شَعْبُ الْعَصِيْبِيَّات	Many wells at the head of a valley which runs hence northwards: it is in the 'Ataibah country. Water is plentiful and sweet at 1 to 3 fathoms.	10	South-south-west. Over a gently rising desert plain in the 'Ataibah country.
Ghathmah غَثْمَه	10 large wells of brackish water, in the 'Ataibah country.	6	South-south-west. Over a slightly descending plain for an hour: then over level desert.
Majrūr مَجْرُور	A long depression in Hazam-ar-Rāji, running north and south.	9	South-south-west. Over Hazam-ar-Rāji. At 6 hours there are several small detached peaks 2 miles to the left of the road, which are called Dhinaīb ذُنَاب.

Route No. II.—From Kuwait to Makkah by Buraidah—concl'd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Dafinah دفيه	8 or 9 large wells with sweet water at 11 fathoms, in the 'Ataibah country.	4	South-west. For 1½ hours across a depression ; then over a rising desert plain for 2½ hours ; then down again to a tract with rocky ridges and acacia trees.
'Iqbah عقبه	About 60 wells of sweet water at 1 to 1½ fathoms, in the 'Ataibah country.	10	South-west. Over the tract just mentioned ; then by the north face of Jabal Khāl ; then over a level saline plain. About here the Harrat Qishab is entered.
Dahalah دحله	Halting-place, without water, in the 'Ataibah country.	8	South-west. Over a stony plain and between rocky ridges with acacia trees.
Marrān مران	Watering-place, with numerous shallow wells, in the 'Ataibah country.	4	South-west. Over a stony and rocky plain with many acacia trees.
'Arf عرف	A ridge in the 'Ataibah country running north and south. Shī'ah pilgrims to Makkah by this route don the Ibrām here.	12	South-south-west. Over a stony plain. At one hour are passed 20 wells of sweet water at 1½ fathoms, called Dighaibiyah دغيبية , and at 6 hours Hilyān حليان where there are hills on both sides of the road. The route then emerges from the lavas of the Harrat Qishab.
'Ashairah عشيره	See Route No. I above, which the present route joins at this point.	8	South-west. The route at first dips slightly and then rises again.

Pilgrims to Makkah by this route leave **Kuwait** on the 1st or 2nd of Dhul Qa'dah and accomplish the journey in about 30 days. The return journey is made by the same route. The section of this route between **Buraidah** and 'Ashairah is well known by the name of Darb-as-Sultāni درب السلطاني .

*Route No. III.—From Najaf to Makkah by Hāil.**

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Najaf نجف	See article Najaf.
'Ain-as-Saiyid عين السيد	A small walled hamlet of 20 houses of cultivators. A spring supplies drinkable water.	6 (26 miles)	South. Over a level plain.
Hammām حمام	A large ruined bath with a dry tank and well.	9 (38 miles)	West of south. Over a flat gravelly plain.
Shabaikah شبيكة	Numerous wells of sweet water in a small depression. Elevation is 1,010 feet. A practicable route is reported to run from this point to Jauf-al-'Amir <i>via</i> the wells of Lōqah and Hazil.	7 (32 miles)	West of south. Over a level clay plain.
Wāqsah واقسه	A large well of sweet water, very deep, immediately below the south side of Jāl-al-Wāqsah, the descent of which is about 70 feet in 2 stages.	4½ (19 miles)	East of south. For 1 hour over a clay plain to 'Aqabat Sharāf عقبة شراف a ridge 60 feet high; then over a clay plateau strewn with stones for 1½ hour to the Sikir سكير wells with sweet water at 2 fathoms; then for 1½ hours to the Sharāf شراف wells and a tank containing water only after rain; finally for 1 hour across sandstone ridges to Jāl-al-Wāqsah.

* As in the case of Route No. 1, the bulk of the information about this route was obtained by Mr. J. C. Gaskin, Political Assistant, from a native source, and in regard to details of direction and distance must be accepted with reserve. Amplifications and corrections are chiefly from Lady Anne Blunt and Huber.

Route No. III.—From Najaf to Makkah by Hail—contd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Umm 'Asāfir أم عسافير	A tank on the south border of Batn containing water after rains. There are 3 tanks of the name, a northern, a middle and a southern, at considerable distances apart.	10 (31 miles)	West of south. For 7 hours over a desert plain with small pebbles to Jāl-al-Batn; then down the 'Aqabah عقبة (140 feet in height and very steep) into the Batn depression which is crossed in 3 hours.
Zibālah زبالة	A tank and wells with sweet water at 30 fathoms. Water collects in a large natural rocky basin and there are ruins of houses. The character of the ground is markedly volcanic.	9 (35 miles)	South. Over a rising clay plain for 23 miles to Birkat Jamaimah حبيمه a large tank (altitude 1,730 feet); then over a stony plain for 5 hours; then over broken ground for 2 hours.
Shaihiyāt سيحيات	A large tank. Elevation above the sea 1,940 feet.	10 (distance apparently exaggerated.)	South. Over a level plain.
'Ashshār عشار	A large tank on the eastern border of the Nafūd.	8	South. Over a level clay plain.
Khadhra خضرا	14 wells with drinkable water at 30 fathoms.	8	West of south. Over rocky and sandy ground.
Sha'ārah شعارة	Two wells of brackish, undrinkable water.	10	West-south-west. Over stony and sandy tracts in the Nafūd.
Qitaiyān قطيان	A number of wells in a depression surrounded by low ridges, 1 mile south of Baqa'a. Water is at 5 fathoms and rather saline.	11	West-south-west. For 3 hours through the Nafūd and 8 hours over a stony tract.

Route No. III.—From Najaf to Makkah by Hāil—contd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Khāsirah خاصرة	A number of wells, with sweet water at 3 to 4 fathoms, sunk in clayey soil.	5 (18 miles)	South-west. For 3 hours over low ridges and for 2 hours over desert plain.
Rummānatain رمانتين	A depression holding water after rains beneath a hill of the same name, 80 feet high with inscribed rocks.	9 (7 miles)	South-west. Over an undulating plain of hard sand strewn with stones.
Hāil حائل	See article Hāil.	4 (22 miles)	South-west. At first, over desert plain, then up Wādī Da'ājan. The sandstone tract is left behind and basalts and granites are entered.
Arkān اركان	Camping ground with water at the foot of a hill of the same name.	4 (16 miles)	South-south-west. Along dry water-courses and among hills.
Sirrah سرة	See article Jabal Shammar. There are wells with sweet water at 2 fathoms.	8 (22 miles)	South. Over a stony tract cut up by dry water courses.
Mustajiddah مستجدة	See article Jabal Shammar.	6 (24 miles)	South. Along a sandy torrent bed and down Wādī Rumm رمان.
Silaimi سليمي	A camping ground without water 3 hours south of Silaimi village: see article Jabal Shammar.	9½	South-south-west. Over a clay plain.
Ajājah عجاجة	10 wells with sweet water at 4 fathoms.	7	South-south-west. Over level desert plain. Some dry water-courses, with a few wells called Qanah are passed on the left of the road.

Route No. III.—From Najaf to Makkah by Hail—contd.

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Abu Mughair أبو مغير	10 wells with sweet water at 4 fathoms.	10	South-south-west. For 2 hours over desert, 4 hours among boulders and 4 hours over stony plain.
Wadi Hamdh وادي حمص	A camping ground, with water after rain, in a valley of the same name.	6	South-south-west. Through a broad valley between low hills; then over a plain, partly cut up by dry watercourses and strips of sand, bearing acacias.
'Amaq عمق	A well with sweet water at 7 fathoms.	9	South-south-west. Over a level plain, partly of dry clay and partly saline with pebbles and stones.
Jiraisiyah جريسياه	Numerous wells in a narrow valley. The water of some is sweet, at 2 fathoms.	6	South-south-west. Along a narrow stony and rocky valley between hills.
Rās-as-Sabkhah راس السبخه	Camping ground without water, near hills and at the exit of a valley.	3½	South-south-west. Along the bed of a narrow stony and rocky valley.
Sabkhatain سبختين	Camping ground without water on a level saline plain between hills. There is here an arch through which a loaded camel can pass; it is formed by a rock resting upon two others.	9	South-south-west. Over a saline plain with acacias. There are hills on each flank at some distance.
Hāthah حاته	Some wells in a valley with sweet water at 8 fathoms. There are cornfields, a few ruined Qasrs and some date palms.	8	South-south-west. Through a broad valley; for 5 hours over a saline plain and for 3 hours over boulder-strewn ground.

Route No. III.—From Najaf to Makkah by Hāil—concl'd.

Name of the stage.	Description of stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Wādī 'Aqīq وادي عقيق	A camping ground with a tank in a valley of the same name; the tank is adjoined by a jungle of ber and other trees. Shi'ah pilgrims by this route put on the Ihram here.	10	South-south-west. For 3 hours over a rising saline plain; for 4 hours over undulating stony ground to Birkat-ash-Shāmi بركة الشامي, whence water is taken to purify the Ihrams; and for 3 hours over a gravelly plain with acacia and other trees.
Dharibah صريه	A camping ground in a narrow valley between high hills with thick jungle. Water is obtained by digging 2 feet in the water-course. Sunnis assume the Ihram here.	5	South-south-west. For 3 hours over a level plain with acacias, and for 2 hours over a difficult rocky track, in places narrow, between hills.
'Ain-al-Laimūn عين الليمون	A village with a spring, of which the channel is spanned by a small stone bridge, and some gardens, at the foot of mountains. There are some shops, but supplies are limited.	10	South-west. For 2 hours over level ground with stones; for 2 hours through a difficult tract; and for 6 hours along a sandy ravine bed.
Barūd برود	A camping-place in a broad valley with a large well, called Bir-an-Nabi ببر النبي having sweet water at 5 fathoms. There are fig trees affording shade.	6	South-west. For 3 hours over a sandy tract; for 1 hour through a narrow valley; and for 2 hours through a sandy valley with acacias.
'Alamain علين	Here this route joins Route No. 1.	2½	South-west. Along a valley.

The return journey of pilgrims who use this route is ordinarily made *viâ* Madīnah. The way from Makkah to Madīnah is reported to lie backward by the stages mentioned above as far as Wādī 'Aqīq where it diverges and runs by Sufainah صفينه, Tihaiyim تهييم, Hijriyah حجريه, Rās-al-Baghāz راس البغاز, Khanaq خنق and Dhaharah ظهرة to Madīnah. From Madīnah it goes to Mustajiddah, where it rejoins the outward route. This homeward route has the following stages :—

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Madīnah مدينه
Sābiyah سابيه	A camping ground at the exit of a valley, in a sandy and stony plain. There is a small well with sweet water at 5 fathoms.	9½	East for 1½ hours over an undulating stony plain to Abu Rashaid ابو رشيد, a place with irrigation tunnels and a large mosque where the pilgrims assemble at their exodus; then for 1 hour over level desert to the entrance of a narrow valley; then north-north-east for 8 hours through a valley with a sandy bed and acacias.
Shagrah شقرة	A number of small wells with acacias and other trees; they are sunk through clay and yield fresh water at 2 fathoms.	6½	North-north-east. For 1½ hours over an undulating stony plain; then down for ½ an hour to a lower clay plain which continues for 3 hours; then 1 hour of a narrow descent; then ½ an hour over a dusty plain.
Nakhail نخيل	A small village with some date palms and a number of wells of sweet water 3 fathoms deep.	5½	North-north-east. For 1 hour over a stony plain; then up a scarp; then for 1½ hours over a stony plain; then for 3 hours across a desert with occasional saline and stony patches.
Halq-ar-Ri' حلق الربيع	A camping ground at the end of a valley.	6	North-east. Through a narrow sandy and stony valley between

Name of the stage.	Description of the stage.	Distance in hours from the last stage.	Direction and nature of the route from the last stage.
Sufait صفايت	5 wells of sweet water at 4 fathoms.	10	hills. In this stage the route passes Hanakiyah which lies at 2 or 3 hours distance to the right. North-east. For 3 hours over an undulating sandy and stony plain to the Karaiziya wells, some of which have sweet water at 3 fathoms; they are situated in a tract of hard sand and stones within hills. Then for 7 hours over a pebbly plain crossed by small hollows.
Halaifah حليفه	A small Arab village with some date gardens and cornfields. Wells sunk through clay mixed with pebbles contain fresh water at 4 fathoms.	6	North-east. Over a plain partly saline and partly strewn with black stones; there are clayey and pebbly patches and occasional low ridges are crossed.
Chöl Silaimi چول سليمي	A camping ground at the northern corner of some hills, some distance to the west of Silaimi village.	8	North-east. Over level hard sand with pebbles, crossing hollows and skirting the northern face of a range of reddish hills.
Mustajiddah مستجد	The homeward route re-joins the outward route at this point.	11	East-north-east. For 5 hours across an undulating plain of pebbles, stones, and hard sand to the entrance of a narrow valley 6 hours long, crossed by watercourses.

The pilgrim caravan which travels by this route leaves **Najaf** on the 4th Dhul Qa'dah and arrives at Makkah on the 5th Dhul Hijjah, taking 30 days on the way. It leaves Makkah on the 7th Muharram, starts again from Madinah on the 16th Muharram and arrives in **Najaf** on the 18th Safar, thus taking about 42 days on the return-journey, inclusive of the ten days' halt at Madinah.

The portion of this route between **Najaf** and **Hāil** is called the Darb Zubaidah **درب زبیدہ** or Darb-as-Sultāni **درب السلطاني**. It was travelled (in the reverse direction) by the Blunts in 1879 and by Huber in 1881. The line followed in both cases was, some trifling deviations apart, that described in the table above, but many of the halting-places were different.* Huber mentions two subsidiary routes from the Euphrates valley to **Hāil**; the first, called Darb Ghazāl, is to the west of the Darb Zubaidah; while the second, styled the Darb **Samāwah** because it starts from that place, is to the east of it and runs by the wells of Lainah.†

The Darb Ghazāl is probably identical with the route by which Wallin travelled from **Hāil** to **Najaf** in 1848. The following are the principal points on Wallin's route, which was in his time considered safer, but more difficult, than the ordinary route :—

Name.	Nature.	Hours from the last point.	Direction and nature of the route from the last point.
Jadhāmiyah جذاميه	See article Jabal Shammar.	5	...
Bir Taiyim بیر تیم	A very deep well in the plains of Khattah خطه between two sandy deserts. Sulaba camp here in summer.	8½	Passes the north-west end of Jabal Aja at some distance off.
'Atwa عطرى	Wells said to be 50 fathoms deep and lined with hevn stone; they are of good and evidently of ancient workmanship.	13	For 3½ hours over the Khattah plain; the remainder through sandy desert less undulating than is usual.
Hamātiyah حماطيه	A locality where water is sometimes found in the cavities of the limestone rock.	11	Low ridges of sandstone, called Sailab صيله are passed at 4 hours; and 3 hours later the sand becomes firmer.

* See Lady Anne Blunt's *Pilgrimage*, II, page 33—100, and Huber in B. S. G., 1885, pages 104—125.

† See Huber, idem, pages 124—125. The first stages on the **Samāwah** route are described,

Name.	Nature.	Hours from the last point.	Direction and nature of the route from the last point.
Hazil حزل	See this article, paragraph <i>Topographical Details (North-Western District)</i> , below.	23½	At 6½ hours a sand-ridge called Dahānah is reached which is considered to be the north-eastern boundary of the Nafūd: it is crossed in ½ an hour and the stony desert of Hajarah is entered. At 7 hours the direction of the route becomes more northerly.
Majāmir مجامير	A low plain stud-ded with hum-mocks of aggluti-nated sand.	17½	Low ridges of lime-stone and conglome-rate sandstone are passed.
Samit صميت	Cisterns which sometimes con-tain water.	18	At 5½ hours the dis-trict of Mushaiqiq مشيقيق is pas-sed. It has cisterns which dry up in summer.
Qasr-ar-Ruhaimi قصر الرهيبي	A small village from which the gilt cu-pola of Najaf is visible. About this point we seem to join the ordinary route.	12¼	At 8¼ hours the end of Hajarah is reached and an open valley con-taining acacias is entered.
Najaf نجف	See article Najaf.	12	The road runs over a crisp sandy soil and then passes through a defile in the isolated hill of Jabal Sanām سنام.

The total length of this route is about 340 miles and Wallin's hours may therefore be reckoned (with allowance for deviations) at about 3 miles each. The average direction is to the north-north-east, but the northing apparently increases in the last 4 or 5 stages.*

Route No. IV.—From Kāf to Hāil.

This is a highly important route, being the direct avenue of approach to Central Arabia from the Mediterranean basin. The portion beyond Kāf and towards Syria lies outside our scope: the remainder may be

* See Wallin in J. G. S., 1851, pages 336—339.

divided into two sections, that from Kāf to **Jauf-al'-Āmir** and that from the **Jauf** to **Hāil**.

The former of these lies, except the last march, along Wādi Sirhān, of which the general characteristics are described in a special article. There appear to be 3 or 4 parallel or intersecting routes in the Wādi, and a comparison of the narratives of different travellers shows that there must be a considerable choice of halting places with water. The water is generally brackish and in places extremely so; fuel however appears to be sufficient. The distance from Kāf to **Jauf** is about 160 miles and the journey does not seem to be a very difficult one.

The remainder of the route from **Jauf** to **Hāil**, a distance by road of some 280 miles, lies, except the first few miles from **Jauf** and the last 25 miles before **Hāil**, entirely in the sands of the **Nafūd**. The ordinary line, that which with slight deviations has been followed by all European travellers except Nolde, * runs straight from **Jauf** to 'Alam-an-Nafūd; thence direct to Jubbah; and from Jubbah by Qana, where the **Nafūd** is finally quitted, round the north-west end of Jabal Aja to **Hāil**. Except in Wādi Shaiq, not far from **Jauf**, no water is obtainable between **Jauf** and Jubbah, a distance of 170 miles; consequently there are no fixed halting places between these two stations. Fuel appears to be ample for the requirements of caravans. A general idea of the nature of the route can be obtained from the article on the **Nafūd**. Here we may add that the track, called Khall Bani Hilāl خَلّ بني هلال, Khall Abu Zaid خَلّ ابر زيد or simply Khall خَلّ, is merely a camel path about one foot broad, and that in the more exposed parts it is often obliterated by wind, camel droppings alone remaining to mark the way; it is seldom clearly defined except between 'Alam-an-Nafūd and Jubbah. It is said that the journey between **Jauf** and Jubbah can be accomplished in 3 days on a good dromedary, but apparently no European traveller has performed it in less than 49½ hours, and the average time taken by Europeans appears to be about 75 hours, of actual travelling.†

* Who travelled by Qārah and Haiyāniyah; see his *Reise*, pages 16—28.

† For detailed accounts of this route the reader is referred to Wallin, J. G. S., 1854, pages 136-9, 158—66, and 174—5; Guarmani, B.S.G., 1865, pages 510-3 and 504-7; Lady Anne Blunt's *Pilgrimage*, I, pages 84—112 and 155—212; Huber, B. S. G., 1884, pages 312—7 and 326—53, and his *Journal de Voyage*, pages 35—42 and 49—61. The former citation in each case refers to the first, the latter to the second part of the route. Palgrave's *Narrative*, though not reliable, may also be consulted (I, pages 20—45 and 85—103).

*Route No. IV.—Hāil to Buraidah and 'Anaizah.**

This is one of the chief lines of internal communication in Central Arabia, connecting as it does the capital of Jabal Shammar with the chief towns of Qasim. The distance from Hāil to 'Anaizah is about 175 miles by road, and the general direction is from west-north-west to east-south-east. The following are convenient stages :—

Name of the stage.	Character of the stage.	Distance in miles from the last stage.	Remarks on the route from the last stage.
Hāil حائل	See article Hāil
'Adwah عدوة	At the western foot of Jabal Salmah, in a nullah coming from a pass which is crossed the next day. See article Jabal Shammar.	27	At 18 miles Jabal Fitig is crossed.
Faid فيد	See article Faid .	24	At 3 miles a pass over Jabal Salmah is entered. The road, which in places is narrow, difficult and even dangerous for loaded camels, runs through this pass and then over rough granitic and basaltic country with softer intervals until near Faid.
Kaháfah كفاه	See article Kaháfah.	32	The track crosses a remarkable desert of volcanic rock and sandstone almost without vegetation.
Quwārah قواره	See article Qasim.	28	At first over sand; then two ridges are crossed and part of

* The principal authority on this route is Huber: see B.S.G., 1884, pages 473—484 and 492—493, and his *Journal de Voyage*, pages 677—710. There is also a route between Kaháfah and Buraidah which passes by Qusaibah, Wathāl and Shiqqah and is described by Huber, but it is little frequented: see B. S. G., 1884, pages 497—501. Palgrave's route to Buraidah however lay by Qusaibah and will be found in his *Narrative* (I, pages 218—270); his halting-places were Jabal Salmah, Faid, Kaháfah, Qusaibah, Quwārah and 'Ayūn. See also Doughty, II, pages 311—314 and 329—337.

Name of the stage.	Character of the stage.	Distance in miles from the last stage.	Remarks on the route from the last stage.
			the Tarmus desert; then two other ridges shortly before Quwārah. The greater part of the way is stony desert with rock protruding.
'Ayūn. عين	See article 'Ayūn.	24	Stony desert with protruding rocks, at first of yellow, then of red, sandstone is crossed.
Buraidah بريدة	See article Buraidah.	26	The villages of Qara'ah and Shiqqah are passed at 12 and 16 miles; 2 miles beyond Qara'ah is a salt lake, sometimes dry. Some sandy desert is traversed as Buraidah is approached.
'Anaizah عنيزة	See article 'Anaizah.	12	At 4 miles the village of Khadhar is passed; sandy desert continues for 4 miles further to the edge of Wadi-ar-Rummah across which the route lies for 2 miles amidst palm plantations with brackish water near to the surface; 2 miles beyond the Wādi 'Anaizah is reached. The direction in this stage is south.

The way between Hāil and 'Anaizah is frequently unsafe on account of prowling Bedouins, especially between Kahāfah and Quwārah near the Shammar frontier, and at times between Buraidah and 'Anaizah.

Route No. V.—From 'Anaizah to Riyādh.

As Route No. IV connects **Hāil** with **Qasīm**, so this route links **Qasīm** with **Riyādh**, completing the line of communication between the rival capitals of Central Arabia. It has not been traversed by any European since Sadlier, in 1819, from whose account the following stages may be deduced* :—

Name of the stage.	Character of the stage.	Distance in miles from the last stage. †	Direction and character of the route from the last stage.
Mudhnib مذنب	See article Qasīm .	25 (from 'Anaizah).	South-east. Barren hills covered with loose stones are passed.
Murabba' مرعب	After rain there is grass, and water can be obtained by digging in the sand.	15	South by east. A depression is passed where a lake forms after rain; it is adjoined by some cultivation.
'Ūniyāt كونيات	After rain a lake is formed here with grass on its banks; there are a few houses of cultivators.	25	South-south-east. Over an extensive plain, parts of which are sometimes cultivated. Probably connected with 'Ayūn-as-Suwayna' in Wādī-as-Sirr.
'Ayūn-as-Sirr عيون السر	A plain where an extensive sheet of rainwater is sometimes formed.	30	South-east. Some cultivation is passed here and there upon the way. Probably adjacent to Barrūd-as-Sirr in Wādī-as-Sirr.
Shaqrah شقرة	See article Shaqrah .	30	East. Half of the way through heavy red sand-hills; then over an extensive gravelly plain and along a valley which leads to the Shaqrah plain.
Tharmidah ثرمدة	See article Washam .	20	East for a few miles up a valley; then south-south-east over a very flat barren, and gravelly desert. Qarāin is passed at 15 miles.

* See his *Diary*, pages 65—71. Native information has been used to complete his account.

† Sadlier, accompanying the retirement of Egyptian troops, seems to have made on the average about 3½ miles an hour in this part of his journey.

Name of the stage.	Character of the stage.	Distance in miles from the last stage.	Direction and character of the route from the last stage.
'Awainidh عونية	See article 'Āridh.	20	East-south-east over gravelly desert.
Haisiyah حيسية	See articles Wadi Hanifah and Jabal Tuwaiq.	20	South-east. Over a flat gravelly plain; then along a valley north of western Haisiyah and up an ascent, very steep and rugged but practicable for field artillery, to a gravelly plateau.
'Ayainah عينه	See article Wadi Hanifah.	20	East. The track continues to rise by a rugged road, passable for field guns, to the summit of a ridge. On the further side it descends by a ravine (probably the eastern Haisiyah); it then crosses a plain to Wādi Hanifah.

A variant of this route is given by Doughty,* from native information with the following stages † of one caravan day each, except the last which is less; Mudhnib, 'Ain-as-Suwaina', Faidha, Barrūd, Shaqrah, Thar-midah, Rghabah, Thādiq, Haraimlah, Sidūs and 'Ayainah. By riding camel, according to the same authority, the intermediate stages are three, namely, Wādi-as-Sirr, Shaqrah and Sidūs.

The portion of this route beyond 'Ayainah and the march between Sidūs and 'Ayainah will be found described in the present article under Routes I and VI, respectively.

Route No. VI.—From Buraidah to Riyādh.

This route is supplementary to the one preceding it, but it is longer and more circuitous.‡ It lies for the greater part of the way through the district of Sadair; and as far as Sidūs, the point where it enters Wādi

* *Arabia Deserta* II, page 396.

† We have ventured to alter the spelling of the names, but there appears to be no doubt as to the identity of the places.

‡ See Palgrave I, page 324.

Hanifah, it has not been traversed by any European except Palgrave.* That traveller's account of his journey is by no means lucid, no compass directions being given; but, with the aid of native reports, his stages may perhaps be roughly tabulated as below :—

Name of the stage.	Character of the stage.	Apparent direction and nature of the route from the last stage.	Number of hours apparently taken by Palgrave.	Probable distance in miles on various considerations.
Buraidah بريد	See article Buraidah.
Rôdhat-ar-Rubai'i روضة الربيعي	See article Qasim (Identification with Rôdhat-ar-Rubai'i is not certain).	East. Over sandy ground with bushes.	8 (by night)	15
Wasit واسط	A small village with dates, figs and melons at the bottom of a large depression in the Nafûd. The people have some camels.	East. Over undulating firm ground for 4 hours, then through a desert of loose sand.	17 (of which 9 by night)	25
Zilfi زلفي	See article Zilfi.	East. Over ridges of loose sand, and, as Zilfi is approached, along a depression half a mile wide which is not a water course but has a flooring of firm soil and is known as Khall Izlaidi خَلّ اِزْلَيْدِي	4	10
Ghât غاما	See article Sadair.	South-south-east. For 6 hours along a hollow; then for 2 hours up a valley in Jabal Tuwaiq.	8	20
Majma' مجمع	See article Majma'.	East-south-east. One or two miles from Ghât the valley ends. The track ascends by zig-zags to the Tuwaiq plateau and a plain with some brushwood is entered.	10	25

Name of the stage.	Character of the stage.	Apparent direction and nature of the route from the last stage.	Number of hours apparently taken by Palgrave.	Probable distance in miles on various considerations.
Tuwaim تويم	See article Sadair.	South-south-east. The route at first ascends. Jalājil is passed and the route then runs over an upland plain which has the higher summits of Tuwaiq on either side of it. (According to native information the stream near Jalājil mentioned by Palgrave does not flow except after rain.)	10	33
Thādiq ثادق	See article 'Aridh.	South by east. Tamair is passed at 3 hours and the track then ascends to one of the highest parts of the Tuwaiq plateau, keeping apparently on the western side of the watershed and over stony ground for 3 or 4 hours. Towards the end of the day there is a steep descent to a lower level.	12	35
Haraimlah حرزيلة	Do.	South. The track runs through jungle containing hares and partridges. The ground thereafter is an undulating plateau.	12	20
Sidūs سدوس	Do.	South-south-east. Through a gorge or valley and over a plain of light coloured soil.	4	12

From Pelly's *Journey* * it appears that the route, after ascending by a narrow but not difficult path to a plateau about 300 feet higher than Sidūs, leads down by a gentle slope to 'Ayainah in Wādi Hanifah; the intermediate distance is probably some 15 miles. At 'Ayainah this route drops into Route No. I.

Route No. VII.—From 'Anaizah to Madīnah.

The only account of this route is by Sadlier who traversed it in 1819. The stages of his journey may, with the help of native reports, be worked out as follows:—

Name of the stage.	Character of the stage.	Probable distance in miles from the last stage.*	Direction and character of the route from the last stage.
Rass رَس	See article Rass.	35	South-west by west. For nearly the first half of the way through red sand-hills.
Matta (not recognised)	Wells with a wall- ed enclosure con- taining a few families of cul- tivators.	12	Probably west by south. Over a gravelly barren plain skirted on the west by rocky hills, probably Abanāt.
Uddas (not recognised)	Wells.	15	Probably west by south. Over another barren gravelly plain sprinkled with hills in process of disintegration.
Jirzawiyah (not recognised)	Some wells in a hollow.	25	Probably west by south. Towards the end of the march a line of hills running north and south is crossed: it appears to be "a principal range, although of no considerable elevation."
Wadi-al-Miyah وادي المياه	A plain liable to inundation. The regular halting-place is at the wells of Bajir بَجِير to the west-south-west of this place.	20	Probably west by south. At first over a very extensive plain of fine gravel bounded on the south by detached rocky hills: the latter part of the march lies through red sandhills.

* In this, the second part of his journey, Sadlier appears to have travelled at the rate of $2\frac{1}{2}$ miles an hour.

Name of the stage.	Character of the stage.	Distance in miles from the last stage.	Direction and character of the route from the last stage.
Mishāsh Bātin-al-'Urmah (not recognised)	A place where, after rain, fresh water can be obtained by digging.	25	Probably west by south. At first over a gravelly plain, then along a sandy torrent bed.
Jabal Māwiyah جبل مارية	A camping ground to the west of a hill of the same name.	20	West. The route crosses a sandy but tolerably firm and level plain and turns the north end of Jabal Māwiyah. Here took place the first encounter in the Egyptian advance on Dara'iyah, and in 1819 the ground was still strewn with the bleached skeletons of fallen Wahhābis.
Hanakīyah حنكية	Hanakīyah is a small negro village of 40 houses in Wādi-al-Hamdh which runs down from it to Madīnah. The wells are 10 to 15 fathoms deep. There is a small Turkish military post.	About 60	West-south-west. The route at first runs through broken ground, and at 15 or 20 miles a valley running from north-west to south-east is crossed in which there are wells. Thereafter the way lies amidst detached rocky hills, and at 40 or 45 miles something resembling a range is crossed, of which the direction is from north-west to south-east.

It is probable that this route joins Route No. III (return section) near the stage called Shaqrah, about 30 miles west-south-west of Hanakīyah, and so reaches Madīnah.

Route No. VIII.—From 'Anaizah to Makkah.

This route is parallel to the Kuwait-Makkah route through Buraidah and is distant from it only a few miles south-eastwards. It was traversed by Doughty in 1878 and by Huber in 1884; an analysis of Doughty's stages to the point where they become identical with those of Route No. I is given below.* Disputes with Bedouins as to the use of the wells

* The two routes appear to unite some 3 marches before the point to which we have carried this one, but the stages do not at once become identical.

give less trouble on this route, but the watering places are further apart and are not so good as on the **Buraidah-Makkah** line. The journey is not to be undertaken, in summer at least, without considerable hardship from scarcity of water. The large ghi caravans which go from '**Anaizah** to Makkah every summer travel this way ; otherwise, apparently, this track is not much used, for wood is still abundant near some of the halting-places. The **Qasim** caravans are protected on the way by '**Ataibah** Rafiqs, most of the journey being through '**Ataibah** territory. The following is chiefly abstracted from Doughty* :—

Name of the stage.	Character of the stage.	Approximate distance in miles and direction from the last stage.	Character of the route from the last stage.
Wahlān وهلان	See article Qasim . This is the rendezvous where the caravan is formed for the journey.	About 3. (South-west of ' Anaizah .)	A hollow roadway in sandy desert leads hither from ' Anaizah .
Hajnāwi حجناوي	See article Qasim .	About 25. South-west.	The way lies mainly up Wadi-ar-Rummah. A mid-day halt is made at Shabībīyah. at 5 miles.
Kir كير	A hillock and halting-place without water.	About 25. South by west.	The mid-day halt is at Umm Taiyah, أم طيه where there is cultivation belonging to Rass . The sandy desert of Qasim is quitted soon after the start, and a granitic and basaltic region entered which extends to Makkah.
Farqain فرقين	A camping ground under a hillock. Elevation perhaps 3,500 feet.	About 15. South by west.	At about $\frac{1}{3}$ of the way the brackish wells of Rukkah are passed, where there is an enclosure sometimes occupied by people from Rass who come to extract saltpetre from the soil. The country is of basaltic trap and granite.

* The orthography of some of the names is according to Huber, and information has been added from Huber and from native sources.

Name of the stage.	Character of the stage.	Approximate distance in miles and direction from the last stage.	Character of the route from the last stage.
Shi'ab (spelling certain) un-	A camping ground near a basaltic hill.	About 25. South by west.	Over high steppe, elevation perhaps 4,200 feet, with hillocks and sharp rocks of trap and granite. About half way are passed the wells of Ghöl غول with the only good water between 'Anaizah and Makkah; they are 2 fathoms deep and masonry-lined. There is good pasture (Nasi grass, etc.). This high desert receives annual rains, connected possibly with the monsoon.
Umm-al-Mashā'ib أم المشاعيب	A camping ground at an elevation of perhaps 4,200 feet.	About 25. South by west.	Over the same high country, but basalt begins to predominate over granite.
'Afif عفيف	An ancient well with brownish but not disagreeable water at 10 fathoms; it is lined with dry masonry of basalt blocks. The site is a hollow surrounded by low basalt hills. The well is used by both Mutair and 'Ataibah and is reckoned sufficient for 500 tents.	About 30. South-west.	Jabal-an-Nir is left to the east. The country is open with acacia trees.
(No name given)	...	About 30. South-west.	The mid-day halt is at Wādī Shabram شبرم a hollow containing acacias and a plant from which it takes its name. Route No. I apparently joins this route in the stage.
(No name given)	...	About 36. South-west.	The plain of Dha'aikah is traversed. Towards the end of the march ground encrusted with salt is crossed.

Name of the stage.	Character of the stage.	Distance in miles and direction from the last stage.	Character of the route from the last stage.
(No name given)	...	About 18. South-west.	At 2 hours are reached the wells of Sharmah شرمه, 3 in number and shallow, lined with dry masonry; the water is almost undrinkable. A short distance to the west is Jabal Khāl خال, a solitary hill of black basalt, conical but flat-topped, which is considered to mark half the distance between 'Anaizah and Makkah and which divides this route from No. II. Stretches as of dried mud encrusted with salt are passed; in places there is black plutonic gravel. There are numerous Samar acacia trees by the way, but many are dead and none are of any size.
Hazaim-as-Said حزيم الصيد	A grove of acacia trees with wells containing drinkable but unwholesome water at $1\frac{1}{2}$ fathoms. Altitude perhaps 3,700 feet.	About 18. South-west.	The way lies over hard black crusted mud without stones or plants and over white Sabakhah. It skirts the east side of the Harrat Qishab.
Muwaih Hakran مويه حكران	See Route No. I.	About 15. South-west.	Over saline ground.

Huber's route, which is the usual one, diverged from Doughty's at Shabibiyah rejoining it at Umm-al-Mashā'ib; between these points it lies further to the east, by the wells of Dukhnah and Shibirmah. The caravans which Doughty and Huber accompanied each halted for two nights at 'Afif.

There is another route between 'Anaizah and Makkah further to the eastward: it is called Darb Wādī Sabai', has few and small watering places, and is used only by well mounted men travelling rapidly.

Minor routes in Central Arabia.—A few subsidiary routes of lesser

importance, of which accounts are extant, may be noticed before leaving the subject. The route between **Taimah** and **Hāil** has been described by Wallin, Doughty and Huber,* to whom we may add Guarmani for a part of the way.† A route from **Taimah** to **Jauf-al-'Āmir** is given by Doughty from native information; ‡ and his personal experiences between **Khaibar** and **Hāil** are on record, as well as those of Huber. §

Passing to the other side of the peninsula we note the route followed by Pelly from **Kuwait** to **Sidūs** together with the branch routes of which he makes incidental mention.|| A practicable but little frequented and probably difficult route is said to lead from the coast of **Qatar** to the **Hautah** district of Southern **Najd**.¶

Supplementary information about minor routes in various parts of the country will be found in the articles **Dhrumah**, **Hariq**, **Jauf-al-'Āmir** and **Kharj**.

We conclude with an itinerary, from native information, of the journey from **Salaiyil** in **Widyān Dawāsir** to **Hasa**; it traverses one of the least known parts of Central Arabia. The stages are **Hamām**, 1 day; **Badī'** in **Aflāj**, 4 days; * **Kharfah** in **Aflāj**, 6 hours, followed in 2 or 3 hours by **Lailah**, also in **Aflāj**; **Hautah** 2½ days; **Dilam** in **Kharj**, 1½ days; **Yamāmah** in **Kharj**, 4 hours; **Abu Jifān**, 3 days; **Hofūf** in **Hasa**, 6 days. The general direction of this route is from south-west to north-east, and a comparison of its last 6 stages with the first 3 of Route No. I suggests that the "days" are short, each representing only 20 to 25 miles.

Topographical details of Najd not included in provincial or district articles.—We pass now to the topography of the north-easternmost and south-westernmost districts of **Najd**.

* See J. G. S., 1851, pages 334—5; Doughty, I, pages 566—584; B.S.G., 1864, pages 504—511; and *Journal de Voyage*, pages 234—316 and 493—550.

† See B. S. G., 1865, pages 490—496.

‡ See Doughty, I, page 297.

§ Doughty, II, pages 60—76 and 215—248; and B. S. G., 1885, pages 92—104.

|| *Report on a Journey to the Wahabee Capital*, pages 16—43.

¶ See also article Southern **Najd** (Communications).

* * According to another authority (followed in the map which accompanies this Gazetteer) the distance from **Salaiyil** to **Hamām** is only ½ a day, and from **Hamām** to **Badī'**, only 1 or 1½ days; but possibly the "days" in this case are dromedary and not caravan days.

North-Eastern District.

Batn

بطن

A depression included in the desert of Hajarah and crossed on the route from Najaf to Hāil at about one-third of the distance from Najaf. Batn has a length from north-west to south-east of about 100 miles, one-third of which is to the west of the usual Najaf-Hāil route and the remainder to the east of it: the breadth of Batn is about 3 hours and its slope is downwards to the south-east. On the south Batn is bounded by a clay plain, which gradually rises from it; and on the north by a remarkable rocky scarp, called Jāl-al-Batn جال البطن, about 140 feet high and co-extensive in length, or nearly so, with the Batn itself. Above the Jāl, is a stony tableland stretching away to the north without visible change of level. The track scales the Jāl, of which the vertical face is to the Batn plain, by a difficult pass, called merely 'Aqabat عقبة; here camels frequently lose their footing, and elsewhere the Jāl is said to be generally impossible of ascent even by men climbing. The surface of Batn at the bottom of the Jāl shows signs of strong water action and contains some pasture. There are various wells in Batn and its elevation above the sea is about 1,640 feet. Batn is debatable land between the Shammar and 'Anizah tribes.

Hajarah

حجرة

A hard stony tract or calcareous desert of great extent, lying to the north-east of the Nafūd between Hazil on the north-west and a point considerably beyond the ordinary Najaf-Hāil route on the south-east. On the south Hajarah is bounded by the Nafūd and on the north it includes Batn and a considerable area beyond, approaching to within about 50 miles of Najaf*. The greater part of Hajarah consists of an unvarying succession of broad ridges, like waves, alternating with gravelly plains; not a single hill meets the eye to relieve the monotony or serve as a landmark, unless we except the Jāl-al-Batn and a couple of small hills called 'Athāmin عثامين, which are 10 miles north of Batn on the west side of the Darb Zubaidah. Hajarah is traversed both by the Darb Zubaidah and by the Hazil route between Najaf and Hāil. Shammar and 'Anizah Bedouins camp in it while pasturage lasts and while there is water in the tanks upon the Darb.

Hazil

حزل

A camping ground on the more westerly route between Najaf and Hāil, apparently about midway between those places. There are said to be over 100 wells at Hazil, sunk through sandstone rock, in which the water stands at 12 to 20 fathoms. A route from Jauf-al-'Amir to Shabaikah on the Darb Zubaidah passes through a place Hazil which can hardly be the same as this one.†

Khadhra (Jabal)

جبل خضر

A solitary hill 2 hours south-west of the Khadhra wells on the ordinary Najaf-Hāil route. It stands in a depressed tract of dark soil which covers a large area.

Lainah

or

Linah

لينه

A famous camping ground, but its position is difficult to fix: it is variously stated to lie 30 miles east of the Darb Zubaidah, 1½ days north-east of the Khadhra wells on the same, 3 days north-west and 4 days north, respectively, of the Bātin and Mustawi sections of Wādi-ar-Rummah, and close to Jāl-al-Batn at 6 stages from Samāwah. The celebrated wells of Lainah are said to be about 300 in number and are sunk through hard white rock; the water,

* See Wallin's route in Route III, *ante*.

† Huber's Hazil (from native information) is much further west than Wallin's; and a recent report on native authority places one Hazil at only 3 caravan days from Jauf-al-'Amir.

- which is at 10 fathoms, is good but not what Arabs call "sweet." Dhafir say that the water supply at Lainah would suffice for the whole of their tribe. Some miles to the east of Lainah is another group of wells, called Bida' بديع , which contain good water at 4 fathoms; Shammar Bedouins encamp round them in summer.
- Lūḡah**
لوقه
- A halting-place on the direct route from Jauf-al-'Āmir to Shabaiḡah on the Darb Zubaidah; it is said to lie 6 hours east of Hazil (probably the second Hazil referred to above) and to possess about 25 wells with water, equal in goodness to river water, at 12 fathoms from the surface.
- Rūṭha**
(Wādī-ar-)
وادي الرثا
- A valley which begins between the wells of Lainah and Birkat 'Ashshār on the ordinary Najaf-Hāil route; it runs north as far as Birkat Zibālah on that route, its drainage then dispersing partly northwards to Batn and partly eastwards to Hajarah. The Wādī is two or three miles in breadth, and its fall in a course of some 25 miles appears to be about 500 feet. The name Rūṭha is derived from a plant which grows in the valley and is much prized as pasture for both camels and horses; the grazing rights belong to the Shammar.
- Sha'aibah**
شعيبه
- A camping ground about 25 miles east of Baqa'a sometimes used by the Persian Hajj as an intermediate stage between Khadhra and Qitaiyān near Baqa'a. At one time the pilgrim route instead of continuing through Hāil turned southwards at this point and ran to Buraidah in Qasim. Sha'aibah has 30 or 40 wells, 15 to 20 feet deep, of very salt and bitter water; they stand in a large bare space with hills of white sand to the north of them.
- Taisiyah**
تيسيه
- A great plain which extends from the Dahānah on the east into Qasim on the west. Its eastern end, which is diversified by ravines and ridges with ber and acacia trees, is crossed on the route from Kuwait to Makkah between Thamāmi and Taiyib Ism; at its western extremity it lies within the Qasim border and apparently divides into two prongs, Taisiyat-ash-Shamāliyah شماليه and Taisiyat-al-Janūbiyah جنوبيه , which adjoin the Fuwailik plain on its north and south sides respectively.
- Wāḡsah**
(Jāl-al-)
جال الراقسه
- A scarp somewhat similar to Jāl-al-Batn and parallel to it, but in every way less striking; it crosses the Darb Zubaidah 20 or 30 miles on the Najaf side of Batn. This Jāl is said to have a length of about 40 miles and consists of two tiers with an aggregate height of 70 feet and with a level space between them 100 yards in extent. The steep face of the scarp is to the south-west.
- Zubaidah**
(Darb)
درب زبيده
- This term is now practically a synonym for the Persian pilgrim-route* to Makkah from Najaf as far as the beginning of the Naḡd, but it originally referred to a well-cared-for highway of which the construction is attributed by tradition to Zubaidah, wife of Harūn-ar-Rashid. Many vestiges of this great public work still exist, chiefly in the form of tanks or Birak of masonry and cement, some of them of great dimensions and excellent workmanship; the remains of over a dozen are seen by the way, but the only one which escaped the destructive energy of the Wahābis and is now in serviceable order is the Birkat Jamaimah, a march to the south of Batn. In a couple of places there are remnants of the walls enclosing the road on both sides by which,

* See Route No. III.

it is said, Zubaidah intended that even the blind should be enabled to feel their way to the Holy Cities; and at various halting places there are ruins of what must at one time have been considerable stations.*

South-Western District.

Dhārīyah ذريه	A village situated 2 days' south-south-west of Rass in Qasim on the Kuwait-Makkah route. It consists of about 40 mud houses. Grain and vegetables are grown, but there are no date palms; irrigation is from a score of wells with good water at 7 fathoms. The inhabitants are partly negroes and partly Arabs of Qasimi extraction. 'Ataibah, Harb and Mutair Bedouins all camp in the neighbourhood of Dhariyah.
Dukhnah دخنه	A camping ground 50 miles south-south-west of 'Anaizah and 4 or 5 miles eastwards from Jabal Khazāz. There are about 40 wells scattered over a space of 1 or 2 miles; they contain good water at about 3 fathoms. At one time Dukhnah was exclusively occupied by the Mutair, but it subsequently passed to the 'Ataibah, whose tribute to the Amir of Jabal Shammar was collected here in 1884. The Qahtān have been known to visit the place, and were surprised and severely punished there in 1878 by the Mutair and the people of 'Anaizah with whom they were then at feud.
Duwādimi دوادمي	A considerable walled village of Sabai' on the route from Riyādh to Makkah; it is situated in the desert about two-thirds of the way from 'Ayainah in Wādī Hanifah to Jabal-an-Nir and probably lies about 110 miles south and slightly east of 'Anaizah. There are date groves and numerous wells with sweet water at 8 fathoms.
Hazam or حزم	A great tract of stony desert of which the eastern border is near the 'Afif wells; its extent south-westwards from 'Afif is 2½ days' march and its length from north to south is said to exceed its breadth. It forms a part of the Dirah of the 'Ataibah tribe. According to some authorities, it is identical with Shiffa.
Hazam-ar-Raji حزم الراجي	
Rilīl (Jabal) جبل حليت	Some hills about 80 miles south-south-west of 'Anaizah on the route to Makkah. The rocks are said to bear numerous inscriptions, which have not yet been examined, and to contain gold †
Khanūqah خنفه	A hamlet of the Sabai' tribe in the desert, 12 hours' march eastwards of Jabal-an-Nir; it is a halting place on the Riyādh-Makkah route. There are corn-fields and a score of wells holding sweet water at 7 fathoms.
Khazāz (Jabal) جبل خراز	A small range of hills running parallel to the 'Anaizah-Makkah route near Dukhnah at a distance of 4 or 5 miles to the north-west. Here is said to have been fought in pre-Islamic times a decisive battle between the Tubba' of Yaman and Kulaib, Shaikh of the Rabi'ah.

* See Lady Anne Blunt's *Pilgrimage*, pages 64—84, and Huber in the B. S. G., 1885, pages 110—122. There is a picture of the Birkat Jamaimah in the first-named authority, page 80.

† Huber was informed that the clue to the mines was lost. The story now told by native informants is that the gold, in the form of dust, is found in a cavern on the north side of the hills, which the Arabs dare not enter for fear of meeting with dangerous animals and reptiles.

Miskah
مسكه

A hamlet of 30 mud houses a few miles north of Dhariyah; it is surrounded by a wall with 4 towers. The inhabitants are Arabs of mixed origin. The wells contain good water at 8 fathoms, and cereals are grown, but no dates. Sheep and goats are numerous and there are a few other animals. 'Ataibah and Mutair Bedouins encamp in the vicinity, the former in summer.

Nir (Jabal-an-)
جبل النير

A mass of low hills about 120 miles south by west of 'Anaizah on the south-east side of the route to Makkah and adjacent to it. Jabal-an-Nir stands in a hollow and is masked from the north by a detached hill called Nadhādiyah نضاديه; the drainage of the surrounding desert gravitates to the depression which surrounds Jabal-al-Nir and supplies several groups of wells, one of which, Hanābij, حنابج, is said to comprise 200 borings. Jabal-an-Nir is low on the north, and its contours are mild. The route divides it from the hills of Shi'ar and Shi'abah to the north-west, of which the latter is craggy and said to contain many Badūn or wild goats.

Quwai'yah
قوييه

A village in the desert, probably to the west-south-west of Washam; the route from Shaqrah to Makkah is said to pass through it. Altogether there may be 100 houses; the inhabitants are Bani Zaid, Bani Khālid of the 'Arāfah section and Bani Khadhīr, along with a few 'Ataibah and Qahtān. The Bani Khālid live in a separate Qasr which is a mile or two to the south-west of the main village. Dates, cereals, vegetables, lucerne and melons are grown. Water is at 6 fathoms. Livestock are numerous except horses. The Shaikh is of the Bani Zaid, at present 'Abdullah-bin-Mas'ūd.

Sha'arah
شعره

A largish village of 100 or more houses on the route from Riyādh to Makkah, about midway between Duwādimi and Khanūqah. The Arab inhabitants are mostly Bani Zaid of the Qaihab section, but some Sabai', 'Ataibah and Qahtān are also found. In number Bani Khadhīr and slaves predominate over the Arabs. There are a few date palms and numerous wells with sweet water at 9 fathoms.

Shibirmah
شبيرمه

A group of 20 wells on the ordinary route from 'Anaizah to Makkah, 35 to 40 miles south by west of Dukhnah. They contain good water at 3 fathoms and are frequented by 'Ataibah Bedouins.

Shiffa
شفا

A desert tract on the first part of the route from 'Anaizah to Makkah. The true application of the name is uncertain; by some it is given to the stretch between Rass and the wells of 'Afif, by others (who consider it to be identical with Hazam-ar-Rāji) to the tract next beyond 'Afif.

Political organisation and external relations.—The normal constitution of Jabal Shammar, Qasim and Southern Najd, the three states which together compose Central Arabia, is described in the articles under their names. Each of those articles, however, ends with the intimation that an ostensible Turkish sovereignty or suzerainty has been established in the tract with which it deals, and it remains to consider here how far the Ottoman Government have been successful in enforcing their pretensions.

In 1904, when a state of war had for some years prevailed between Ibn Sa'ūd, ruler of Southern **Najd**, and Ibn Rashīd, the Amīr of Jabal **Shammar**, the Turks intervened with a military force on the side of Ibn **Rashīd**; but they were defeated in two actions by the followers of Ibn Sa'ūd and the people of **Qasīm**, nor were these reverses ever made good on the field of battle. Early in 1905, however, Ottoman officials at **Basrah** succeeded in inducing Ibn Sa'ūd to negotiate. The result of the discussions became apparent in April 1905, when **Qasīm** was formally occupied by the Turks and it was understood that Ibn Sa'ūd had professed allegiance to the Sultān; the effect, Ibn Rashīd being already a Turkish vassal, was to convert the whole of Central Arabia, at least in name, into a Turkish province. A Turkish cantonment was established at Shaihiyah in **Qasīm** and Turkish garrisons of 100 men each were placed in the towns of '**Anaizah** and **Buraidah**; but no attempt was made, apparently, to occupy any point either in Jabal **Shammar** or in Southern **Najd**. The design of the Porte was plainly to create out of **Qasīm** a neutral state, garrisoned by themselves, which should serve to separate the territories of the rival native powers in Central Arabia and prevent their committing aggressions upon one another; and the Turkish Government probably hoped that their own commanding position between the disputants would throw the balance of power into their hands and enable them to dominate, with an insignificant military force, the politics of Central Arabia. So far did the confidence of the Turks in their scheme extend, that they proceeded to parcel out the country into civil administrative divisions as if it had actually been incorporated with the Ottoman dominions. Southern **Najd** was declared to be a Qadha, having its Markaz or headquarters at **Riyādh** and Ibn Sa'ūd for Qāim-Maqām. In **Qasīm**, **Buraidah** and the places dependent on it were erected into a Qadha under Sālih-bin-Hasan-bin-Mahanna, Shaikh of **Buraidah**, as Qāim-Maqām; and at the same time '**Anaizah** and its villages were constituted a Mudīriyah, of which 'Abdul 'Aziz-bin-'Abdullah-bin-Yahya, Shaikh of '**Anaizah**, was appointed the first Mudīr. The new Qāim-Maqām of Southern **Najd** and the Qāim-Maqām and Mudīr of **Qasīm** were nominally made subject to the authority of the Wāli of **Basrah**; but the relations towards each other of the last two do not seem to have been defined; and the titles of all, as soon became manifest, were honorific and implied no real subordination to the Porte. No Turkish civil officials from abroad were introduced into the new province, not even into its **Qasīm** district: indeed the whole of the arrangements from the first were little better than make-believe.

The results of the scheme were far, it may safely be said, from

corresponding with the anticipations of the projectors. The Turkish military garrison in **Qasim** was never after its institution employed to enforce compliance with Turkish policy ; and, being rapidly reduced by desertions and deaths, it soon ceased to inspire awe or even respect. In April 1906 the son of Ibn Sa'ūd, ignoring the presence of the Turks in **Qasim**, attacked and slew Ibn Rashid on the borders of that district ; and a little later he seized and deported the Shaikh of **Buraidah**, who enjoyed, equally with his own father Ibn Sa'ūd, the status of a Turkish Qāim-Maqām. The weakness of the Turks in Central Arabia was such that they dared not even manifest their displeasure at these insulting acts ; and from the latest reports it would seem that their military strength in the country soon after reached the vanishing point.

In the circumstances it does not appear that the claim of the Turks to have established effective sovereignty, or even a protectorate, over Central Arabia could at present be substantiated ; on the contrary, it would appear that, in strict accordance with facts, the whole of Central Arabia should be regarded as still independent of their authority. It is possible that in the future the Porte may take measures which will place their title to the possession of Central Arabia upon a valid basis ; but up to the present time they have not succeeded in doing so.

For want of a more distinctive term sanctioned by usage we are obliged to call by this name the assemblage of districts which form the southern part of Central Arabia and constitute the hereditary dominions of the Wahhābi Amir. Middle Najd is better known under the title of **Qasim**, and Northern Najd is generally referred to as **Jabal Shammar** ; but Southern Najd has no alternative designation, and it is not clear that the name even which we have applied to it is current among the Arabs.

NAJD*
(SOUTH-
ERN)
نجد

Limits.—Political changes keep the boundary of Southern Najd to the north in perpetual vibration ; but westward, on this side, it tends to settle at Wādī-as-Sirr between **Washam** and **Qasim**, and further to the east at Wādī-ar-Rummaḥ on its lower course from **Qasim** to the **Dahānah**. On the west the frontier of Southern Najd is approximately represented by a line parallel to the watershed between the Red Sea basin and Central Arabia and about 100 miles east of it. On the remaining two sides the limits of Southern Najd are natural and well marked : on the south it ends in the **Ruba'-al-Khāli** or Great Southern

*For information regarding authorities, maps, etc., see the footnote to the title of article **Najd**.

Desert, and on the east it is separated from the littoral districts of the Persian Gulf by that comparatively narrow, but long and perfectly continuous strip of desert which is known as the **Dahānah**.

Physical features and divisions.—Southern Najd has never been surveyed, and the greater part of it is as yet unseen by European eyes, nevertheless something is known of its chief regions and their characteristics.

The dominant feature of the country is **Jabal Tuwaiq**, a range or elevated tract which has its commencement approximately in the 27th parallel of north latitude and thence runs almost due southwards for the space of at least five degrees of latitude. Of the actual height, breadth and configuration of the northern part of this range or plateau we have little certain information; of the southern, none. Our knowledge of **Jabal Tuwaiq** is practically confined to the facts that in the north it consists of a light-coloured stone, calcareous in appearance; that its eastern slopes give birth, rather nearer its northern than its southern end, to **Wādi Hanifah**, one of the only large valleys, properly so called, of Central Arabia; and that beyond **Hautah** the hills assume a darker hue and are perhaps of a different geological formation. The existence of this imperfectly known range enables us to distribute the districts of Southern Najd into three groups, the first consisting of the districts which reach from **Jabal Tuwaiq** eastwards to the **Dahānah**, the second of the single one between **Jabal Tuwaiq** and the Great Southern Desert, and the third of those that lie on the farther (that is on the western) side of **Jabal Tuwaiq**.

The northernmost district of the first group is **Sadair**, which lies chiefly on the **Tuwaiq** plateau, and is furrowed by four well marked hollows, of which one has a westerly and the other three an easterly course. The district contains a fair proportion of arable land, and water is obtained from rather shallow wells, but does not apparently reach the surface in springs. Immediately south of **Sadair**, and not divided from it by any very conspicuous landmark, is the premier district, in the political sense, of all Najd: this is **'Āridh**, a tract hilly or even mountainous towards the north, west and south, level to the east and in the centre, and seamed across by the deep **Wādi Hanifah** with its numerous villages and (in places) highly cultivated banks. **'Āridh** includes **Dhrumah**, a valley lying to the west of the **Tuwaiq** hills but sending its drainage through that range into the lower course of **Wādi Hanifah**. The hilly mass of **Jabal 'Alaiyah**, perhaps an eastern outlier of

Jabal **Tuwaiq**, divides 'Āridh from the next trough or compartment to the southward, that formed by the three interconnected districts of **Harīq**, **Hutah** and **Kharj**. Of these **Harīq**, the north-westernmost and probably the most shut in, drains downwards into the lower but still mountain girdled plain of **Hutah**, which leads in its turn to the open arable district of **Kharj** on the east. **Harīq** and **Hutah** are covered with date groves, irrigated by water which camels raise from wells of no excessive depth. To the north-east and east of **Kharj** is **Sahābah**, a sandy and featureless tract with one large spring: not only the drainage of **Harīq**, **Hutah** and **Kharj**, but also the floods of Wādi **Hanīfah** from 'Āridh, cross **Sahābah** to be finally absorbed and disappear in the **Dahānah**. **Aflāj**, the next to the south, is the last of the eastern districts; its upper portion is divided from **Hutah** by a spur, probably of Jabal **Tuwaiq**; but its lower lies open to **Kharj**; on the south it seems to merge through the sandy and scrub-grown hollow of Maqran into the great **Ruba'-al-Khāli**. The upper or western end of **Aflāj** is covered with thorny jungle, while its centre is irrigated from flowing springs and numerous wells and at its lower extremity it passes into blank and waterless plains. Shutbah, an inhabited recess in the eastern face of **Tuwaiq**, is close to the south-western corner of **Aflāj** and may be reckoned a part of that district.

Next is reached Widyān **Dawāsir**, the only district of Najd that lies immediately between **Tuwaiq** and the Great Southern Desert: the head of the valley or aggregation of valleys composing it is said to lie towards the Red Sea watershed, its lengthy and apparently open course seems to be from west to east, and its lower extremity is the sub-district of Salaiyil, a sandy tract which is irrigated exclusively from wells and lies perhaps 80 to 100 miles south of Shutbah, with a small fertile locality called Hamām intervening. Widyān **Dawāsir** is, in parts, not ill supplied with water from wells; and it contains many villages and date plantations and much cultivation.

At some point Widyān **Dawāsir** receives, it is said, from the west a part of the drainage of Wādi **Sabai'**, the first of the trans-**Tuwaiq** districts which we have had occasion to notice. This district is a plain or system of open valleys with springs and shallow wells, where cultivable soil alternates with sandy desert and collections of stagnant water are formed after rain. With Wādi **Sabai'** is associated another Wādi, that of **Tathlith**, which lies apparently to the south of it and is sometimes reckoned a separate district of Southern Najd. The last remaining district, **Washam**, is also behind **Tuwaiq**, but less remote

from the centre of Southern Najd ; it lies immediately west of **Sadair** and 'Āridh, it is practically surrounded by sandy deserts or by hills, and its drainage seems to have no outfall. The soil of **Washam** is described as a sandy loam, at times cultivable by the unassisted rainfall. More full and exact information in regard to these districts is given under the name of each.

Southern Najd is, like **Jabal Shammar**, a portion of Central Arabia which the lava hills in the west of the peninsula have saved from burial under growing and moving sands : the limestones are still generally exposed, but here and there, especially in depressions, are strips and intervals of sand.

Climate and products.—The climate is healthy and, in the highlands, even invigorating. Pasture is abundant, but there is a scarcity of trees except date-palms. The four staple products of nearly all the districts are dates, barley, wheat and maize ; but cotton and millet are also grown. Some localities produce fruits, including figs, peaches, citrons, grapes, pomegranates and melons ; also lucerne, brinjals, onions, spinach and other vegetables. The date groves of Wādī **Hanifah** are famed for their size and luxuriance, while the palms which cover the valley of Hautah are particularly fine and prolific, a single tree there sometimes yielding (it is said) as much as 14,000 pounds weight of dates in a season : the date plantations of **Aflāj** are described as extensive but thin. Horses are bred by the nomad tribes and sent, for exportation, to 'Anaizah and **Buraidah** in **Qasim**. Camels are numerous ; those of the southern nomads have frequently a blackish tinge and are smaller than the dun-coloured animals of **Jabal Shammar**. There are no buffaloes, but cattle of a small-limbed, humped breed are comparatively abundant in the south, especially in **Kharj** : nowhere is there any lack of sheep and goats. Wild animals include leopards, wolves, and jackals ; and in the south lions are said to be found. Among the game of the country are the gazelle, bustard, partridge, sandgrouse, quail and pigeon and, possibly, the wild boar. Southern Najd, in common with **Jabal Shammar**,* is said to enjoy almost complete immunity from insect pests.

Communications.—The main routes which traverse Southern Najd are described in the article on **Najd**. In regard to minor routes we may remark that from **Zilfi** in **Sadair** a direct desert route leads to **Laqit** near **Kuwait**, and that desert routes from **Majma'** and **Riyādh** converge at **Wabrah** on the way to **Kuwait**. **Wahhābi** troops are known to

* See Huber's *Journal de Voyage*, page 179.

have reached 'Omān by land, but whether after entering **Hasa** and skirting the coast or otherwise is uncertain. There is no recognised route between Southern Najd and **Qatar**, though arms caravans follow that line; and, so far as can be ascertained, communication with **Yaman** or **Hijaz** by way of **Widyān Dawāsir** is not very frequent or active.

Population.—The population of Southern Najd, both fixed and migratory, is composite in a high degree.

The Arab tribes to which the settled inhabitants of the districts principally belong are the '**Anizah**, **Dawāsir**, **Sabai**' and **Bani Tamīm**, to whom may be added the **Fadhūl** and **Sahūl**. Of these the **Dawāsir**, besides practically monopolising **Widyān Dawāsir** and **Aflāj**, are found in all the districts enumerated above as composing the **Wahhābi** dominions except the petty ones of **Wādi-as-Sirr** and **Wādi Tathlith**; the **Sabai** are the next most widely distributed after the **Dawāsir**; and the **Bani Tamīm**, though not found in so many districts as these two, are a strong tribe and enjoy a local predominance in **Sadair**. Other Arab stocks, but of less importance as settled residents in this part of the country, are the '**Āid**, **Ashrāf**, '**Ātaibah**, **Buqūm**, **Bani Hājir**, **Harb**, **Hataim**, **Bani Khālid**, **Mutair**, **Qahtān**, **Shammar** and **Bani Zaid**; the number of persons belonging to some of these is very small. Inferior non-Arab tribes of cultivators, comprehensively described as **Bani Khadhīr**, are a large element in the population; and the menial caste of **Sunnā** is represented in many places: there are also a few '**Awāzim** or **Hawāzim**. A strong infusion of negro blood and a considerable proportion of full negroes are said to exist in the southern districts, especially in **Aflāj** and **Widyān Dawāsir**. The information available regarding the distribution and numbers of the tribes mentioned will be found in the articles under their names and the names of the districts which they inhabit.

The Bedouins of Southern Najd are for the most part these:—'**Ātaibah** in the vast stretch of country between **Qasīm** and **Makkah** and in the districts of **Wādi Sabai**', **Wādi-as-Sirr**, **Washam**, **Sadair**, '**Āridh** and **Kharj**; **Dawāsir** in **Widyān Dawāsir**, **Aflāj** and **Kharj**; **Mutair** in **Sadair**, **Washam**, **Wādi-as-Sirr** and in the direction of **Miskah** and **Dharyyah**, etc.; **Qahtān** in **Wādi Tathlith**, **Wādi Sabai**', **Washam** and even **Sadair**; and **Sabai**' in **Wādi Sabai**', **Kharj** and '**Āridh**. Besides these some '**Ajmān** visit **Kharj** and some **Buqūm** frequent **Wādi Sabai**'. The **Sulaba** wander in Southern Najd as they do elsewhere in the interior of Arabia.

The following is a rough calculation of the population of Southern Najd, excluding Wādi Tathlith for which no estimate is possible :—

<i>Fired.</i>		<i>Nomadic.</i>	
Aflāj	22,000	'Ajmān	1,000
'Āridh	30,000	'Ātaibah	6,000
Widyān Dawāsir	27,000	Buqūm	1,000
Hariq	4,000	Dawāsir	5,000
Hautah	6,000	Mutair	4,000
Kharj	3,000	Qahtān	8,000
Wādi Sabai'	16,000	Sabai'	5,000
Sadair	21,000	Sulaba, etc.	3,000
Wadi-as-Sirr	1,500		
Washam	6,500		
TOTAL . 137,000		TOTAL . 33,000	

This gives a total population of 170,000 souls distributed over a region of which the area is not less than 50,000 square miles; the average density of population consequently appears to be less than 4 persons to the square mile.

The people of Southern Najd are of good physique and often attain an age which would be considered advanced even in Europe; among the manhood of the country the palm is awarded to the Bani **Tamīm**, especially of **Sadair**, whose more than average physical development is attributed to the quantity of camel's milk that enters into their diet. The description of the settled population and nomads of Jabal **Shammar** applies in the main to those of Southern Najd, with this modification, that the inhabitants of Southern Najd are for the most part professed **Wahhābis**.

Trade.—The meagreness of exports and imports bears testimony, in spite of the agricultural wealth of a few favoured localities, to the general poverty of the country and to the almost total absence of surplus produce. Horses to India and ghi to **Hasa** are perhaps the only articles exported, while imports are chiefly arms and ammunition, piece-goods and coffee. About half of the general imports is obtained through **Hasa**, while the other half is almost equally divided between **Kuwait** and the ports of **Hijāz**. The trade in arms is of an exceptional character and

may not be of long duration ; at present it is conducted by Najdi merchants who visit the **Masqat** market once a year and, after purchasing a stock of arms, introduce them into Southern Najd by way of **Qatar**, a neighbourhood in which their operations are not exposed to interference by any civilised power. English medicines are said to be obtainable in some of the bazaars of Southern Najd and some merchants of the southern districts, especially **Hautah**, are accustomed to visit India in the course of their ordinary business.

Wholesale weights in Najd are the **Waznah** وزنه, equal to 52 dollars in silver coin or about 3 lb. 1 oz. 6 dr. English avoirdupois, and the **Mann** of 40 Waznahs or about 123 lb. 6½ oz. Wholesale weighments are generally made with a sort of steelyard. For retail transactions dry and liquid measures of capacity are employed which are really weights in disguise. These take the form of turned wooden bowls made to contain exactly a unit by weight of the substance or fluid they are intended to measure; this result is obtained by adjusting the cubic capacity of the bowl to the specific gravity of the article for which it is to be used. The standard sizes of bowl are the **Midd** مد which holds a Waznah and the **Sā'** ساع which holds two; but quarters, fifths, sixths and eighths of Sā's are also employed. The unit of lineal measure is the **Dhirā'** ذراع of 19½ inches. Turkish coins and the **Riyāl** or Maria Theresa dollar circulate in Southern Najd and form the bulk of the currency; the Indian rupee is hardly ever seen.

Government.—A genealogical table of the ruling family of Najd will be found in the historical volume of this Gazetteer, they are known as the **Āl Sa'ūd** آل سعود and the regnant member is **Ibn Sa'ūd** ابن سعود *par excellence*. As head of the Wahhābi interest the ruler was formerly often described as the Imām; but political considerations having since eclipsed religious in Southern Najd, he is now generally spoken of as the **Amīr**. The **Washam** of the **Āl Sa'ūd** is placed, on a camel, on the near quarter: their battle-cry is either **خيال العرجه انا بن مقرن** "I am a horseman of 'Aujah, a son of Mijrin," or **راعي العرجه انا بن مقرن** "I am a lord of 'Aujah, a son of Mijrin." 'Aujah means **Dara'iyah** and refers to the crookedness of Wādi **Hanifah** near that place.

The vicissitudes undergone by the Wahhābi state have been so many and so violent that a general account based on past events and implying a fixed organisation would necessarily be misleading; nor have we the materials for a complete and reliable description of the constitution and resources of the principality at the present day.

Some permanent features appear in the historical account given in the other volume of this Gazetteer, and for the rest it may be observed that in the palmy days of the Wahhābi empire the greater part of the country was in strict subjection to the Amīr; justice was administered by salaried Qādhis of the government; tribes were held responsible for crimes committed within their territory; attempts were made to abolish the blood-feud system; one-fifth of the spoils of war went into the treasury of the ruler; the ordinary Quranic Zakāt was levied on land, merchandise, capital and other forms of property; confiscation of land as a punishment for rebellion, followed by a regrant on terms of tenancy to the original owners, was not uncommon; fines were levied on law-breakers, the proceeds being applied to such purposes as the relief of paupers, the support of teachers and ecclesiastics, the repair of mosques and wells belonging to the state, the maintenance and equipment of indigent soldiers and the entertainment of strangers at public hostels; war was carried on by means of temporary levies of the Amīr's subjects collected under a requisition that usually contained the significant formula: "We shall not count those who join, but those who do not"; less regular hostilities were initiated by proclaiming the enemy to be beyond the pale of the law; a small body-guard of retainers kept by the Amīr about his person was the only semblance of a standing army.

The Wahhābis have abated the moral strenuousness of their earlier lays, but an administration modelled somewhat on these lines probably still constitutes their ideal of government. The revenues of the Amīr were estimated in 1865 at \$402,000, of which \$114,000 were derived from the Bedouins. In 1865 the annual revenue was generally received in horses or otherwise in kind: it was either collected on the spot by emissaries from Riyādh or brought to the capital by leading men in person or their deputies. The revenue of a district is now assessed about a month before the date harvest by a Wakil or subordinate official, generally a local man and frequently a merchant, who goes round the plantations and inspects them in company with a party of camel riders sent from Riyādh. This assessment is called Ikhrās اخراس; the result of it is communicated at once to the Amīr. The duty of collecting the government share, which is taken in kind and is fixed at $\frac{1}{10}$ of the gross produce, devolves subsequently on the Wakil, and the Wakil is also responsible for the storage of the same. Such is the procedure in regard to the taxation of dates, and that for ordinary agricultural produce is similar. The Amīr afterwards makes local payments due by him in the form of orders

or Hawalāhs حواله on the produce stored at convenient places ; and every six months a settlement takes place with the local officials, in consequence of which the balance of the Amīr's produce is generally sold and the net surplus to which he is entitled is remitted in money to Riyādh. It is estimated that about a quarter of the tenth share or Zakāt ultimately reaches the central treasury in this manner.

Contingents for military service are still demanded by districts and towns, and it is understood that, up to a limit of one month per annum, these contingents must be maintained by the districts furnishing them, but their expenses after the first month are defrayed by the Amīr.

The Wāhhābi ruler is represented at various places in his dominions by Amīrs or governors ; such are **Majma'** in **Sadair**, and **Dilam** in **Kharj**. These Amīrs may be either local or non-local men, and in places where Ibn Sa'ūd has reason to distrust the loyalty of the inhabitants they are generally the latter ; the Governors at the present time at **Majma'** and **Dilam** are apparently non-local. The relation of the Widyān **Dawāsir** district, which at present is almost autonomous, to the Wāhhābi government is noticed in the article under its name.

The present equivocal relations of Southern Najd with the Ottoman Empire are described elsewhere.*

A large village, or small town, at the head of Wādi-al-Hammām in the Western **Hajar** district of the 'Omān Sultanate. The site of Nakhl is enclosed on the south and east by mountains, and to the west of it is an intricate country of low hills and ravines. The approach from Wādi **Ma'āwal** is impressive : at first only a watch tower on a pinnacle 200 feet high is visible : next a fort on a hill comes in sight : finally, on skirting the base of the pinnacle and passing under a two-arched viaduct, houses, palms, gardens, orchards and cultivation burst suddenly on the view. The settlement is scattered through date-groves and covers an area of perhaps 4 square miles : the date-plantations, containing 25,000 palms, leave little space for other cultivation. There are 11 permanent quarters, some of which possess more than one Sablah or public hall, and other temporary quarters spring up in the date-season. The elevation above the sea is 1,100 feet, and, as **Nakhl** receives the sea-breeze and is sheltered from hot winds, the climate is generally fresh and agreeable. The

NAKHL
نخل

* See article **Najd** *ad fin.*

fort, which stands on an eminence between the pinnacle rock already mentioned and a hill called Jabal Labān لبان is not now in a serviceable state. **Nakhl** is celebrated for its hot springs: of these the largest group, including Hammām Thuwārah حمام ثواره and about 20 others, rise among gardens at the head of the valley: on the other side of the town is a second group, of which the best known is Hammām 'Adaisah عديسه. These springs are tasteless and inodorous: their highest temperature is 106°F.

The population of **Nakhl** is mixed: the tribes of which it is composed belong mostly to the Ghāfiri faction and include Salāmiyīn (200 houses), **Bayāsirah** (100 houses), Bani **Harrās** (65 houses), **Kunūd** (50 houses), **Ya'āribah** (50 houses), Bani **Kharūs** (40 houses), Bani Hadhram (25 houses), Sarairiyīn (20 houses), **Nabāhinah** (20 houses), Yahāmidah (15 houses), Bani **Jābir** (10 houses), **Hirth** of the Khanājirah section (7 houses), and Bani 'Azzān (4 houses). Some of the leading citizens of **Nakhl** belong to the Bani **Harrās**. There are not many negroes and those are Mutawallādīn with Arab blood: no **Zatūt** or resident Persians are now to be found here. The total population of **Nakhl** is about 3,500 souls.

The date-groves are prolific and their produce is celebrated, the Naghāl نغال date of **Nakhl**, a long-shaped variety, being held in high estimation. The water of the spring is entirely expended in irrigation. There is one water-mill for grinding flour. The bazaar consists of two streets and comprises over 60 shops. Turbans called Wizrah وزره and lungis called Taurīr تورير are made, but these manufactures are not peculiar to **Nakhl**. Porous earthenware vessels for cooling water are manufactured by local potters, mostly of the Sarairiyīn tribe, from bluish clay mixed with sand, some of which comes from Musilmāt. **Barkah** is the port of **Nakhl**.

There are 5 schools in **Nakhl**, but the people are not more educated than elsewhere in 'Omān.

The Sultān of 'Omān maintains here a Wāli who is supposed to collect as revenue for his master the value of 1/10 of the agricultural produce, especially of the dates; about \$1,200 are realised annually under this head, but there is no surplus over local expenditure to be remitted to the **Masqat** treasury. The Sultān of 'Omān's authority is maintained by a garrison of 25 men. The present Sultān (Saiyid Faisal) owns some date groves and land at **Nakhl** as his private property; they are worth \$1,000 a year and are at present assigned to the Wāli as a grant-in-aid for public purposes.

Singular Naqbi نقبي: an Arab tribe found only in the **Shārjah** Principality, and chiefly on the eastern side of the 'Omān Promontory. The principal places which they inhabit are Khor **Fakkān**, **Ghāllah**, **Lūlaiyah** and **Zubārah** in the **Shamailiyah** district; **Dibah**; **Fahlain** in the **Sir** tract; **Khattin** in the **Jiri** plain; and **Diftah** in **Wādi Hām**. The total number of the tribe appears to be about 1,800 souls, all of whom are engaged in agriculture and similar settled occupations. The Naqbiyīn belong to the **Ghāfri** political faction and are Sunnis of the **Hanbali** sect: they are quite distinct from their neighbours the **Sharqiyīn**, to whom they are generally hostile.

NAQBIYĪN
نقبيين

Nāsiri is the local Persian, **Bandar Nāsiri** the official Persian, and **Nāsiriyyeh** the Arabic form of the name. A small but flourishing place, which has sprung up, since the opening of the **Kārūn** to steam navigation, on the left bank of that river immediately below the **Ahwāz** rapids and about 1 mile from the village of **Ahwāz**; the growth of Nāsiri was somewhat tardy until about 1894, when it became more rapid.

NĀSIRI
ناصرى
or
NĀSIRI
(BANDAR)
بندر ناصري

Nāsiri stands upon a slight elevation, overlooking the river, and it now contains 118 houses, 2 caravansarais, 2 public baths, 2 mosques, 196 shops—of which 106 are occupied—and 2 coffee-shops. The houses are nearly all of stone, which is obtained from the ruins of an ancient city, but a few are of brick or mud. The population of about 1,500 souls is mixed and consists of **Shūshtaris**, **Dizfūlis** and **Arabs**.

or
NĀSIRI-
YEH
ناصرية

The importance of **Nāsiri**, which after **Muhammareh Town** is the chief place on the **Kārūn** below **Shūshtar**, depends partly upon its being the chief place in the **Ahwāz** District and the seat of a Deputy Governor representing the Shaikh of **Muhammareh**, but still more upon its favourable situation in regard to trade. The run of the "Malamir," the **Euphrates and Tigris Steam Navigation Company's** steamer on the **Kārūn**, ends at **Nāsiri**, where she has her berth to the north of the village above the lowest of the rapids; there is a **Persian Customs House** a little further down; and cargoes for the upper **Kārūn** are discharged and conveyed by tram-line to a point a quarter of a mile above **Ahwāz Village** where they are reshipped, mostly for **Shūshtar**. The tramway is owned by the **Mu'in-ut-Tujjār**, a well known **Persian merchant**, and the rate charged on it for the conveyance of goods between **Nāsiri** and **Ahwāz** is 3 **Qrāns** per ton. The English firm of **Lynch**

Brothers are the principal European traders ; besides there are a Dutch and an Armenian merchant.

There is a weekly letter post, managed by the Persian Post Office, to **Shūshtar** and **Muhammareh** ; and **Nāsiri** is connected by telegraph with those places and with **Rāmuz**. A ferry having 1 small boat affords communication with the opposite bank of the **Kārūn**. **Nāsiri** is the starting point of the **Ahwāz**-**Isfahān** road, which traverses the **Bakhtiyāri** country and is the line followed by a steadily increasing caravan trade. About 100 mules and 40 or 50 donkeys, belonging either to the place itself or to **Ahwāz** Village, are obtainable at **Nāsiri** ; but the camels used on the **Bakhtiyāri** road are all from the **Isfahān** District. Fuel is chiefly from the jungles on the **Diz** River. **Nāsiri** is a centre of local trade, and much grain for export changes hands here.

A British Vice-Consulate and a Russian Consular Agency are located at **Nāsiri** : the former is situated a short distance inland of the Customs House.

**NĀSIRĪ-
YAH**
ناصرية
QADHA

A division of the **Muntafik** Sanjāq of the **Basrah** Wilāyat in Turkish 'Irāq.

Position and boundaries.—The **Qadha** of **Nāsiriyah** is situated on the extreme lower course of the western branch of the **Shatt-al-Gharāf**, and on the **Euphrates** both above and below the confluence with it of that branch. The district is surrounded by the **Qadhas** of **Samāwah** on the west, **Shatrat-al-Muntafik** on the north, **Sūq-ash-Shuyūkh** on the east ; on the south it is bounded by the **Shāmiyah** Desert.

Topography and inhabitants.—The only large place in the **Qadha** is the town of **Nāsiriyah**, but the villages of **Azairij** اذرج and **Butaihah** بطيحة may be mentioned as they are the headquarters of **Mudirs** : the former of these is on or near the right bank of the **Euphrates** above **Nāsiriyah** Town. The **Euphrates** and **Gharāf** rivers are the dominant physical features. The Arabs of the country belong to the **Muntafik** tribe.

Population.—The fixed population of the **Qadha** is estimated at 53,000 souls, of whom all,—except 1,000 Sunnis and about 1,100 persons of other races and religions who reside in the town of **Nāsiriyah**,—are **Shī'ah** Arabs,

Resources.—The district is moist ; and rice, maize and buffaloes are among the principal assets. Salt is extracted on a large scale at a lake which is said to be distant 25 miles from Nāsiriyaḥ Town.

Administration.—Besides its Markaz Nahiyah this Qadha comprises two others, Azairij and Butaiḥah, each of which is presided over by a Mudir resident in the village after which his subdivision is named.

An important municipal town in Turkish 'Irāq, situated on the left bank of the Euphrates about 4 miles above its junction with the westernmost channel of the Shatt-al-Gharāf.

NĀSIRI-
YAH

ناصرية

TOWN

Site and surroundings.—The town stands on level ground and has a river frontage of half a mile. The date gardens attached to the place end about 1½ miles above it, where there is a boat bridge of 25 pontoons, not much used on account of its distance from the town, leading to a suburb of date-plantations and mud huts on the opposite bank: on the lower side of the town the palms extend down the left bank for some hours' journey till they meet those of Sūq-ash-Shuyūkh.

Population.—The town is unwallled but contains, in addition to a greater number of huts on the outskirts, about 600 good masonry houses arranged in broad and well-aligned streets. The population is about 10,000 souls, most of whom are Shī'ah Arabs ; but there are over 1,000 Sunnis, as well as about 300 Sabians, 300 Persians, 200 Abyssinians, 150 Jews, 50 Turks, 50 Kurds and some 20 Oriental Christians ; the Sabians are goldsmiths, carpenters and boat-builders.

Nāsiriyaḥ is a place of considerable trade, receiving its foreign imports from both Baghdād and Basrah. The chief exports are skins and hides, wheat, barley and ghi: the principal imports are Manchester piece-goods, groceries, spices and drugs. Shops number about 350, and there are 5 Khāns for the accommodation of travellers.

Resources.—There is generally some surplus of foodstuffs brought in from the rich grain-producing country around ; but transport can only be got from the Arab tribes, and the amount available is impossible to estimate. The position of Nāsiriyaḥ near one junction of the Shatt-al-Gharāf with the Euphrates is commercially favourable. Communi-

cation with abroad is mostly by boat, and about 10 large boats are ordinarily obtainable, besides which there are a number of local Ballams for crossing the river and for short journeys.

Administration.—Nāsirīyah is the headquarters of the whole Sanjāq of Muntafik, as well as of the Qadha of Nāsirīyah in the same. It is an outpost in an unsettled country, frequently disturbed in recent years by the rebellions of Sa'adūn Pasha, the Muntafik chief, and by the general lawlessness of the local Arabs. The combined functions of civil Mutasarrif and military commandant are here discharged at the present time by an officer of the Turkish regular army.

The police force consists of 100 to 150 Dhābitiyahs. There is a branch of the Public Debt Department, a post office, and a telegraph office having a single-wire connection with Durraji on the one side and with Sūq-ash-Shuyūkh on the other. Shipping and river conservancy are under the charge of a harbour master. Two Government schools exist, a primary and a secondary.

The Nāsirīyah garrison consists nominally of two infantry battalions, with a squadron of cavalry and 5 guns of which 2 are muzzle-loading; but the town is nevertheless exposed to incessant nocturnal sniping by Arabs, and the task of defending it falls chiefly on the civil inhabitants, who are armed and often exchange as many as 50 or 60 shots a night with the raiders. Only about 50 Radifs can be collected here, but the place is the headquarters of the 1st battalion of the 86th Radif regiment.

There are large blocks of Government buildings comprising civil offices, military barracks, gun-park, hospital and commissariat storehouse.

A Nāib-Kārpardāz or Consular Agent represents the Persian Government here.

NIDĀ- BIYĪN ندابیین

Singular Nidābi ندابی. A Ghāfiri tribe in the Sultanate of 'Omān, chiefly located in Wādi-al-'Aqq where the villages of Lizugh, Mizra' Bū Ba'arah, Fankh, Da'asar, and Sinsilah belong to them, and in Wādi Saijāni where they have Mizra' and Mizra'-al-Haitani, but found also at Mahbūb, Hassās and Sarūr in Wādi Samāil and at Jarda in Eastern Hajar. They are not a very large tribe, but their position in Wādi-al-'Aqq, and Wādi Saijāni commands the principal route from Sharqiyah to Matrah and Masqat Town, and their services have frequently been retained by the Sultāns of 'Omān to bar the progress

of insurgents from **Sharqiyah** towards the capital. They number about 3,500 souls: none of them are Bedouins: in religion they are Ibādhis. Their present chief is **Salūm-bin-Sa'id** in **Wādi-al-'Aqq**.

NIZWA

نِزْوَى

A town of **'Omān** Proper in the Sultanate of **'Omān**, the most central of the district, situated at an elevation of 1,900 feet above the sea near the foot of **Jabal Akhdhar**, some 20 miles west of **Izki** and about the same east of **Bahlah**. The place is divided into an **'Alāyah** ^{عليه} or upper town and a **Sifālah** ^{سفاله} or lower town, which are separated by **Wādi Kalbu**; the **Alāyah** is on the east bank and is the further up-stream. The water supply of the **'Alāyah** depends on a stream called **Dāris** ^{دارس}, that of the **Sifālah** on one called **Ghundūq** ^{غندق}. Another **Wādi**, **Wādi-al-Abyadh** ^{ابيض}, traverses the town and joins **Wādi Kalbu** near the market-place. Date groves succeed one another continuously upon the lower course of the **Wādi** from **Nizwa** down to **Raddah**, and the number of the palms is estimated at 25,000. The houses of **Nizwa** are of stone, and many are two storeys high, but the streets are narrow. The fort of **Nizwa**, in the **Sifālah**, is reputed the strongest in **'Omān**: it consists of a **Hisn** ^{حصن} or large quadrangular enclosure, in one corner of which stands a huge circular tower or keep, known as the **Qal'ah** ^{قلعه}. The whole construction rests on a solid base which rises to a considerable height above the level of the plain.

The population may be 6,000, and many tribes are represented, especially the **Bani Riyām** (500 houses), **Bani Hina** (300 houses), **Al Bū Sa'id** (250 houses), **Bani Rāshid** (80 houses), **'Awāmīr** of the **Aulād Saif** section (40 houses), **Kunūd** (40 houses), **Hirth** (10 houses), **Bani Hadhram** (10 houses), and **Bani Ruwāhah** (4 houses): besides these there are about 40 houses of mixed tribes including some **Bayāsirah** of the **Aulād Subāh** section. The **Bani Riyām** are found in the **'Alāyah**, also called **Samad-al-Kindi** ^{سمد الكندي}, and their **Shaikh** in 1902 was one of the principal **Shaikhs** of the **Bani Riyām**; he had at that time some influence with the **Bani Riyām** of **Jabal Akhdhar** and maintained a blood-feud with his brother, the **Shaikh** of **Tanūf**.

Indigo is grown at **Nizwa**, also some sugar and cotton; ordinary crops are wheat, barley, millet, maize, peas, beans, sesame and lucerne. Livestock are estimated at 7 horses, 600 camels, 60 donkeys, 150 cattle and 7,000 sheep and goats. There is some indigo-dyeing, and vessels and utensils of copper and brass are manufactured.

Nizwa is now in the possession of the Sultān of 'Omān, who has a Wālī here, and a garrison of 80 men, commanded by an 'Aqīd, in the fort. About \$3,000 is collected annually as Zakāt, but no balance is remitted to Masqat. The present Sultān (Saiyid Faisal) owns some date groves here as his private property; these have an annual value of \$2,000 and are at present assigned to the Wālī as a contribution toward the public expenditure.

NTĀ'
نظاع

Or Nata' نطاع, or Anta' انتاع*. A considerable village in the Wādī-al-Miyāh tract of the Ḥaṣa Sanjāq; it is situated about 50 miles inland, westwards, from the foot of Musallamīyah bay, and it lies approximately 140 miles south by east of Kuwait Town and 160 miles north-north-west of Hofūf. It stands in a hollow and is surrounded by hills. The isolated position of Ntā' and the one or two small villages which adjoin it is very remarkable.

Ntā' is surrounded by a mud wall, 12 feet high and 2 or 3 feet thick, which has small bastions and is pierced by 2 gates, one on the north and the other on the south side of the village. There are about 250 houses,† and the people are Hadhar or settled Arabs belonging to various tribes, among them the 'Ajman, 'Awāzim, Bani Khālid, Mutair, Bashāidah and Southern Shammar. There are 3 or 4 mosques and a small school; the people are Sunnis. A few date groves, containing about 300 trees, adjoin the place; and wheat, barley, maize and lucerne are grown by irrigation from wells. The water is the best in Wādī-al-Miyāh. Livestock include about 5 horses, 30 camels, 150 donkeys and 120 cattle, besides sheep and goats. The bazaar consists of 10 shops, and artificers such as blacksmiths, carpenters and tailors are to be found in the village; wooden bowls of a special pattern are made here. Some of the inhabitants take part in the pearl fisheries of the Persian Gulf in the hot weather.

Ntā' is said to have come into existence after, and in consequence of, the destruction of Thāj in the same neighbourhood. The Amīr, at present Muhammad-bin-Habīb of the Tuwālah subdivision of the

* Since this article was written Major Knox, Political Agent at Kuwait, has visited Ntā' with Mrs. Knox (in February 1908); no European had previously reached the place. On the night of the 18th of February the water-skins of the caravan were frozen hard, while it was halted at Ntā'.

† Major Knox makes the exact number of houses 250.

Southern **Shammar**, is the political head of the whole settled population of Wādi-al-Miyāh. It is said that the people of Ntā' are now rendering *Zakāt* to the Shaikh of **Kuwait**, though admittedly resident outside his jurisdiction; but it is not certain that they have discontinued the blackmail which they used formerly to pay the 'Ajmān and Bani Hājir tribes to let them alone.* The surrounding Bedouins are accustomed to warehouse their dates with the inhabitants of Ntā', to whom they pay hire, and to withdraw them as required.

In English formerly known as "Khore Alladeid." An inlet or creek on the coast of the Abu Dhabi Principality at its extreme western end: it lies about 180 miles, almost due west, from the town of Abu Dhabi. The boundary of **Qatar** is either at, or a short distance to the north of, the inlet.

'ODAID
(KHOR-
AL-)
خور العدید

The Khor consists of a winding channel, 6 miles long, which runs inland in a south-westerly direction; within it opens out into a lagoon 6 miles long from north-north-east to south-south-west and 3 miles broad. The lagoon contains soundings of as much as 6 fathoms; but ordinary vessels, on account of reefs, cannot approach within 3 miles of the entrance of the Khor. A ridge of stony hills, 300 feet high, on the south side of the entrance, is called *Jabal-al-'Odaid*; and on the north side of the creek, overlooking it, are sand hills known as *Niqa-al-Mahāraf*.

There are now no permanent inhabitants at 'Odaid, and it is not visited by Bedouins from the interior; but fishermen from Abu Dhabi spend some months here in winter, and fine mullet are caught by them. A village occupied by seceders from Abu Dhabi, of the Qubaisāt section of the Bani Yās, has existed at 'Odaid at various times. The village was situated on the south side of the creek at a short distance from the entrance and consisted of about 100 houses: the inhabitants lived by fishing and obtained their drinking water from 4 wells which were less than a mile from the place and contained brackish water at 2 fathoms below the surface; they had no dates or cultivation. Prior to 1856 the defences of this village consisted of a fort with two towers, of 7 other detached towers, and of blockhouses protecting the wells. The settlement was finally abandoned in 1880.

* At the time of Major Knox's visit (1908) blackmail to the Bedouins was paid, but nothing else.

'OMĀN

عمان

'Omān in the geographical sense.—**'Omān** Proper is a small plain with several towns which lies, almost encircled by hills, in the heart of the south-eastern corner of Arabia; here probably the name **'Omān** had its origin. The word **'Omān** however is now (and has for a long time been) employed, with a wider but still purely geographical meaning, to designate the whole projecting butt of the Arabian continent which is enclosed between the Persian Gulf, the Indian Ocean and the **Ruba'-al-Khāli** or Great Desert of Southern Arabia. Upon the coast the geographical **'Omān** is considered to end north-westwards with the district of Sabākhat **Matti**,* and southwards somewhere between Rās-al-Hadd and the district of **Dhufār**.

'Omān in the political sense and its divisions.—The political **'Omān** has the same inland boundary, namely, the **Ruba'-al-Khāli** desert, as the geographical; but upon the sea its extent is somewhat greater. On the north-west it is bounded at the coast by **Khor-al-'Odaid**, and it thus includes the districts of **Mijan** and **'Aqal** which are beyond Sabākhat **Matti**; on the south it takes in the entire maritime district of **Dhufār**.

The large tract thus constituted is divided chiefly between the **'Omān** Sultanate and Trucial **'Omān**, of which the boundaries are more precisely explained in the articles under those names; but there is also a small tract between the two, consisting chiefly of the districts of **Jau** and **Mahādah**, which is not subject to any recognised ruler and may therefore be styled Independent **'Omān**.

'OMĀN
(PROMONTORY and
GULF of)
عمان

The sense in which the term "**'Omān Promontory**" is used throughout the present Gazetteer may here be explained. It is used to describe that great projection of the Arabian coast of which the point nearly blocks the entrance of the Persian Gulf, and of which the base is a line running from Abu Dhabi Town to the **Baraimi** Oasis and thence to the town of **Sohār**. The point and eastern side of the promontory consist of a range of mountains which are a continuation of those forming the Western **Hajar** of the **'Omān** Sultanate: the western side is flat and open. The political distribution of the promontory is

*Some authorities would carry the geographical **'Omān** so far as to include the **Mijan** tract which lies immediately beyond Sabākhat **Matti**; but the next district on the west, that of **'Aqal**, is certainly outside **'Omān** in this sense.

rather complex. The district of **Ruūs-al-Jibāl** at its extremity is an isolated possession of the 'Omān Sultanate, divided on the eastern face of the promontory from the **Bātinah** district of the Sultanate by the **Shamailiyah** District of Trucial 'Omān. The whole western face belongs to Trucial 'Omān; but in the heart of the promontory, at or near its base, are the **Jau** and **Mahādhah** districts, which are not subject either to the Sultān or to any of the Trucial Shaikhs of 'Omān.

The expression "Gulf of 'Omān" also requires explanation. In this Gazetteer it is employed, in harmony with general European usage, to denote the arm of the Indian Ocean or Arabian Sea which forms the approach to the Persian Gulf. Its outer limit may be taken as a line joining **Gwatar** in Persian **Makrān** to **Rās-al-Hadd** on the Arabian coast; and at the inner end it may be considered to pass into the Persian Gulf in the neighbourhood of **Rās Musandam**. The terms **Bahr 'Omān** بحر عمان, and **Daryā-i-'Omān** دریای عمان are current locally, but it is not clear that they are consistently used, or that they refer with precision to the sea of which the limits have just been specified.

The most central district of the 'Omān Sultanate, enclosed by the district of **Dhāhirah** on the west, that of Western **Hajar** on the north, and that of **Sharqiyah** on the east; on the south it merges in the **Ruba'-al-Khālī** desert. The term 'Omān, now so wide in its application, appears to have belonged originally to this inland plateau, and from it, as was not unnatural, to have spread to the whole principality; until the removal of the capital to **Rustāq**, and eventually to the coast, 'Omān Proper was the principal seat of political power as well as the most prosperous and civilised district in 'Omān. OMĀN
عمان
PROPER*

Boundaries.—'Omān Proper is enclosed on the north by the lofty range of **Jabal Akhdhar** and on the west by **Jabal-al-Kor** جبل الكور and **Haddah** حدّه, offshoots of the **Hajar** hill system: on the east it is not divided from **Sharqiyah** by any marked natural feature, unless it be **Wādī 'Andām**, and similarly on the south there is no perceptible landmark between it and the desert.

Hills.—**Jabal-al-Kor** is a range 20 miles in length, which run nearly north and south and has peaks about 7,000 feet high. At

* For authorities and maps see footnote to article 'Omān Sultanate.

either extremity it is crossed by a comparatively low pass, on the north by that over the Najd-al-Barak نجد البراك, a col 3,700 feet high which connects it with Jabal Akhdhar; on the south by a pass over the Najd-al-Makhārīm نجد المخاريم, 2,500 feet high, at the point where Jabal Hamrah joins on to Jabal-al-Kor. Both passes are practicable for camels, but the descent from Najd-al-Makhārīm on the eastern side lies down a rocky torrent-bed and is not easy for loaded animals. Jabal Hamrah appears to run south-eastwards from Najd-al-Makhārīm, but its direction and extent have not been investigated by any European traveller; this range is of a terra-cotta colour and may possibly differ in geological structure, as it does in appearance, both from Jabal-al-Kor and Jabal Akhdhar.

Valleys.—'Omān Proper possesses two main channels of drainage, Wādi Kalbu وادي كلبو, and Wādi Halfain, both of which traverse it from north to south, the former from Nizwa near its centre, the latter from Izki at its eastern extremity. The western part of the district appears to be drained by various Wādis from Jabal-al-Kor which join Wādi Kalbu on its right bank; one of the principal of these is the Wādi on which Bahlah stands, formed by the junction of Wādi Ghōl وادي غول from Najd-al-Barak and a more southern Wādi called Wādi Shams. Another is Wādi Saifam containing a village of the same name; it runs south-eastwards from the neighbourhood of Najd-al-Barak, and joins Wādi Kalbu. The subsequent course of Wādi Kalbu is uncertain; but it is believed to fall into Wādi Halfain in the desert.

General configuration, etc.—The surface of 'Omān Proper outside the oases is rough and broken. The central portion, which contains the towns of Bahlah, Nizwa, and Izki but not Manah, is called the Jauf جوف, that is the hollow or basin; it is a stony plain thickly dotted with small volcanic hills and mounds, some of conical shape. The northern part of it in particular, under Jabal Akhdhar, is very barren and is seamed with dry water courses. A wide and level surface with a gentle declivity to the south separates Izki from Manah, and between Manah and Adam again is a smooth, gently descending expanse, uninhabited, but sprinkled with dwarf mimosa and bunches of desert grass and containing bustard, partridges, sandgrouse, gazelle and hares. Looking to the south and east from Adam neither hill nor habitation meets the eye, and the line of the horizon is unbroken as the sea; to the north, in the distance, the grand pile of Jabal Akhdhar towers into the sky. At many places in 'Omān Proper the springs are hot, their temperature ranging from 102 to 112 F.

Topography.—The following alphabetical table of inhabited places will give an idea of the fixed population and resources of 'Omān Proper :—

Town or village.	Position.	Houses and inhabitants.	REMARKS.
Adam ادم	See article Adam .
Aqil عقيل	6 hours from Izki, probably southwards.	80 houses of 'Awāmir.	There are two towers. Animals are 40 camels, 12 donkeys, 20 cattle and 100 sheep and goats. Date palms number 2,000.
'Awāmir (Qal'at-al-) قلعة العوامر	2 hours from 'Aqil.	70 houses of 'Awāmīr.	One of a group of 'Awāmir villages in Wādi Halfain known as Falaj-al-'Awāmir. Dates and wheat are cultivated in all the villages of the group. At this village there is a fort held by the 'Awāmir; there are 5 camels, 10 donkeys, 30 cattle and 60 sheep and goats. Date palms number 3,000.
Bahlah بهله	See article Bahlah .
Bisya بسيا	3 hours from Bahlah: direction uncertain.	120 houses of Bani Shakail.	Livestock are 40 camels, 30 donkeys, 50 cattle and 2,000 sheep and goats. There are 4,000 date trees.
Dūh دوح	A few miles east of Adam.	100 houses of Āl Wahibah of the Āl Bū Hidai section.	Resources are 50 camels, 75 donkeys, 20 cattle, 5,000 sheep and goats and about 2,000 date palms.
Falaj فلج	2 hours from Bisya: direction uncertain.	30 houses of 'Awāmir and 20 of Āl Bū Sa'id.	Animals are 10 camels, 15 donkeys, 15 cattle and 100 sheep and goats. Date palms are 2,000.
Farq فرق	On the left bank of Wādi Kalbu, 3 miles below Nizwa.	Large village of 150 houses of Bani 'Auf, 'Abriyīn and mixed tribes.	Much wheat and indigo are grown: the indigo has a high reputation. There are 10 donkeys, 60 cattle, 60 sheep and goats and 1,500 date palms.

Town or village.	Position.	Houses and inhabitants.	REMARKS.
Ghafat غافات	In Wādī Saifam, 3 miles from Bahlah.	50 houses of Bani Hina.	Here there are 4 horses, 12 donkeys, 20 cattle and 100 sheep and goats, also 1,200 palms.
Ghamr غمر	On the northern border of the district 5 miles north-east of Hamrah.	40 houses of 'Abriyin.	Animals are 4 donkeys, 6 cattle and 100 sheep and goats. Date trees number 800.
Hamaidhah حميدة	5 hours south of Izki, 2 hours west of Khadhra Bin-Daffa', 1 hour from Wādī Halfain and 2 or 3 hours from the nearest hills. It is perhaps situated in the Wādī Qant affluent of Wādī 'Andām.	50 houses of 'Awāmir; mostly of mud, but some mere huts.	Dates and wheat are grown by irrigation from springs. There is no bazaar, and purchases are made at Khadhra Bin-Daffa'. The country around is open. This village belongs to the Falāj-al-'Awāmir group. There are 10 donkeys, 10 cattle, 40 sheep and goats and 1,500 date palms.
Hamrah حمرة or Hamrat-al-'Abriyin حمرة العبريين	On the left bank of Wādī Ghōl, a few miles west of Tanūf and north of Bahlah.	300 houses of 'Abriyin built of stone and gypsum.	Livestock are 10 camels, 40 donkeys, 60 cattle and 200 sheep and goats; there are 6,000 date palms.
Izki ازكي	See article Izki.
'Izz عز	5 miles south of Manah on the route to Adam.	20 permanent huts of the Bani Hadharmi and Jannabah tribes.	'Izz is a summer resort for its owners, and in the date season the number of dwellings increases to about 50. There is a well half-way between 'Izz and Adam where travellers generally halt. Animals are 3 camels, 10 donkeys, 8 cattle and 400 sheep and goats. There are 2,000 date trees.
Jabrin جبرين	4 miles south-west of Bahlah.	Consists of a ruinous fort and the dwellings of a few cultivators.	The private estate and summer resort of one of the Shaikhs of Bahlah. The date-plantations are

Town or village.	Position.	Houses and inhabitants.	REMARKS.
Kamah كمه	On the left bank of Wādī Kalbu, 2 miles above Nizwa.	20 houses of Bani Riyām.	not good, and the cultivated fields few. Elevation above the sea is 1,800 feet. Under the Ya'ār-ibah, 1624-1741 A.D., Jabrīn was for a short time the capital of the country, and the fort must at one time have been an imposing building. There are 4 horses, 100 sheep and goats and 2,000 date palms. Dates, sugar and indigo are cultivated. There are 15 donkeys, 10 cattle and 100 sheep and goats; dates number 200 trees.
Karsha كرشا	Between Manah and Raddah.	20 houses of Bani Riyām.	Livestock are 5 donkeys, 5 cattle and 30 sheep and goats, and there are 500 date palms.
Khadhra Bin-Daffā' خضرا بن دفاع	On the right bank of Wādī 'Andām 10 or 12 miles south-west of Samad.	60 houses of Jannabāh and 60 of Bani Ruwābah.	There is an abundant water-supply. A mile or two to the south are said to be copper mines, but of little value. There is a small bazaar. Animals are 4 donkeys, 20 cattle and 200 sheep and goats. There are 4,000 date palms.
Khurmah خرمه	Half an hour from the preceding, apparently in the Wādī Qant tributary of Wādī 'Andām.	60 houses of 'Awl-mir.	There are 4 donkeys, 6 cattle and 15 sheep and goats. Grain is grown and there are 1,000 date palms.
Mahyūl محيرل	About 3 miles from Manah, east of the road from that place to Izki.	50 houses of Āl 'Umair and Āl Bū Sa'id.	Ordinary cultivation and 1,000 date trees. Animals are 2 donkeys and 70 sheep and goats.
Manah منح	See article Manah.
Muqazzih مقزح	Some miles west of Izki.	150 houses of Bani Jābir of the Bani Hadhrami section.	...

Town or village.	Position.	Houses and inhabitants.	REMARKS.
Muti مطي	On the right bank of Wādi Halfain, 4 miles above Izki.	300 houses of Bani Riyām.	Elevation above the sea 2,300 feet. Here there are 10 camels, 40 donkeys, 50 cattle and 2,000 sheep and goats, also 10,000 date palms.
Mōz (Birkat-al-) بركة الموز	See article Birkat-al-Mōz.
Nakhilah (Abu) ابو نخيله	1 hour from Manah.	Belongs to the Āl Bū Sa'id.	Now deserted. There are 50 palms.
Nizwa نزوى	See article Nizwa.
Qārūt قاروت	On the left bank of Wādi Halfain, 4 miles above Izki.	20 houses of 'Awāmir.	There is a date-grove of 3,000 trees. Animals are 8 donkeys, 40 cattle and 200 sheep and goats.
Qaryah قرية	Near Hamrah.	15 houses of Masālihah.	Animals are 6 camels, 8 donkeys, 10 cattle and 100 sheep and goats. There are 400 date palms.
Quriyatain قريتين	Adjoins Hamaidhah and is possibly also in Wādi Qant.	80 houses of 'Awāmir.	One of the same group as Qal'at-al-'Awāmir above. There are 30 donkeys, 40 cattle and 100 sheep and goats, also 6,000 dates. The place seems to be called also Qaraiti قريتي.
Raddah ردة	On left bank of Wādi Kalbu, about 5 miles below Nizwa.	20 houses of Āl Bū Sa'id.	Elevation above the sea 1,800 feet. There are 6 camels, 4 donkeys and 40 sheep and goats, also 800 date palms.
Saddi سدي	Less than a mile from Izki, at the head of the Wādi Qant, affluent of Wādi 'Andām.	30 houses of Manādharah, Darāmikah and Bani Ruwāhah.	There are 800 date palms and other cultivation. Animals are 6 donkeys, 10 cattle and 50 sheep and goats.
Saifam سيفم	At the west end of the district under Jabal-al-Kor, in Wādi Saifam about 6 miles	180 houses of Bani Shakail.	This is a flourishing place with 3,000 date palms, 10 camels, 15 donkeys, 10 cattle and 500 sheep and goats. Elevation

Town or village.	Position.	Houses and inhabitants.	REMARKS.
	below Najd-al-Barak.		above sea-level is 1,900 feet. Saifam is the head-quarters of the Bani Shakail.
Saima سيا	Some miles east of Izki; possibly in Eastern Hajar, not in 'Omān Proper.	200 houses of Bani Jābir of the Bani Hadhrami section.	...
Sait (Bilād) بلاد سیت	On the north side of the district between Tanūf and Najd-al-Barak.	40 houses of Bani Hina.	Livestock are 6 camels, 10 donkeys, 12 cattle and 100 sheep and goats; there are 1,500 date trees.
Saiyāhi سیاحی	2 hours from Izki on the right bank of Wādī Halfain.	15 houses of 'Awāmir.	One of the same group as Qal'at-al-'Awāmir above. Animals are 6 donkeys and 4 cattle; there are 400 date palms.
Shāfa' شافع	On the left bank of Wādī Halfain 2½ hours from Izki.	30 houses of 'Awāmir.	Belongs to the Falāj-al-'Awāmir group. There are 1,500 dates, and grain is cultivated. Animals are 8 camels, 6 donkeys and 20 sheep and goats.
Sūq-al-Qadīm سوق القديم	1½ hours from Shāfa' on the left bank of Wādī Halfain.	20 houses of 'Awāmir.	Also belongs to the Falāj-al-'Awāmir group. There are 4 camels, 4 donkeys and 40 sheep and goats, also 1,000 date palms.
Taimsa طيمسا	About 12 miles south-west by west of Nizwa.	40 houses of Bani Harrās.	The village with its large date-grove is picturesquely situated under a hill. One hour from Taimsa on the road to Bahlah is a mystic pool called Khamaili which is famed in 'Omān as a source of magical enchantments. Livestock are 12 camels, 10 donkeys, 4 cattle and 60 sheep and goats: there are 2,000 date palms.
Tanūf تفر	6 miles north-west of Nizwa at the exit of Wādī Tanūf from Jabal Akhdhar.	40 houses of Bani Riyām.	The site of the village, underneath cliffs, is cramped; but a good date-grove stretches westward up the Wādī by which the Tariq-ash-Shass route over Jabal

Town or village.	Position.	Houses and inhabitants.	REMARKS.
			Akhḍhar to 'Awābi leaves Tanūf. Elevation is 1,950 feet above sea-level. There is considerable cultivation. Transport is scarce and difficult to procure. There are 3,000 dates, 10 camels, 20 donkeys, 4 cattle, and 450 sheep and goats.
Zikait	1 mile south-east of Izki, further down Wādi Hal-fain.	15 houses of Bani Riyām.	There are 10 camels, 6 donkeys, 4 cattle and 100 sheep and goats, also 400 date palms.

Population.—The preceding table shows the settled population of the district to be about 34,300 souls.

The Bedouins of 'Omān Proper are numerous and belong to the Jannabah, 'Awāmir, Āl Wahibah, Darū', Āl Khamaiyis and other tribes. No close estimate can be formed of their numbers.

'OMĀN*
(SOUTH-
EASTERN
COAST of)
عمان

The coast of the 'Omān Sultanate from Rās-al-Hadd to Rās Nūs, where the district of Dhufār commences, has no general name; but it forms by itself a division of the country and may suitably be made the subject of a separate article. This stretch of coast measures nearly 500 miles in length in a direct line, and its average direction is about south-west by south and north-east by north.

Rās-al-Hadd to Rās Jibsh.—The northernmost portion, from Rās-al-Hadd to Rās Jibsh, is about 80 miles in extent and belongs mostly to the Ja'alān district. The following are its principal features :—

Name.	Position.	Nature.	REMARKS.
Rās-al-Hadd راس الحد	Point where the Gulf of 'Omān separates from the Indian Ocean.	A low, sandy cape.	The town of Hadd lies 1 mile to the south-west, inland, and 2 miles to the south is a spot with date-trees where indifferent water can be ob-

*For authorities, maps and charts, see footnote to article 'Omān Sultanate.

Name .	Position.	Nature.	REMARKS.
Rās-al-Junaiz راس الجنيز	9 miles south-south-east of Rās-al-Hadd.	A cape with low cliffs.	tained. On the cape is a tomb consisting of a simple ridge of masonry surrounded by a heap of stones; it is revered as belonging to a saint. This is the easternmost point in all Arabia and is situated in latitude 22° 26' north and longitude 59° 50½' east.
Jabal Saffān or Fānūs* (Spelling uncertain)	1½ miles inland at a short distance south-west of Rās-al-Junaiz.	A remarkable double mountain consisting of two hills, each 855 feet high, scarped to the west and falling away gradually to the east.	The only elevated point in this part of the country, visible 30 miles and forming a good sea-mark for the eastern corner of Arabia.
Rās-ar-Ruwaiz راس الرويس	15 miles south-south-west of Rās-al-Junaiz.	A low rocky point with a few sandy hillocks.	Behind the cape, concealed from the sea, is a village of the same name inhabited by fishermen of the Bani Fā 'Alī tribe. Pilots for the Masīrah channel can sometimes be obtained here. The people number 20 families and possess 3 Badans, 10 fishing boats and 300 sheep and goats. There is some flowing water.
Suwaih سويح	8 miles south-west of Rās-ar-Ruwaiz.	A permanent village consisting of a fort, a stone mosque and a temporary village of 50 huts.	The inhabitants are Bani Bū 'Alī. The temporary village is inhabited during the north-east monsoon and deserted in summer. In the season there are 4 Badans, 15 fishing boats, 8 cattle and 700 sheep and goats. Water is brought from a distance of about 5 miles.
Khor Bani Bū 'Alī خور بني بو علي	2 miles south-west of Suwaih.	An inlet of the sea said to be as large as Khor-al-Hajar, but it has not yet been examined; the entrance is masked by a large black rock.	The Khor affords shelter to coasting and fishing craft, and as many as 30 coasters may be seen hauled up here in summer, but there is no permanent village; the people frequenting the

* A view from the sea of this hill will be found in Chart Nos. 2383-38.

Name.	Position.	Nature.	REMARKS.
Jumailah جميله	6 miles south of Khor Bani Bū 'Alī.	A village of 25 houses of Bani Bū 'Alī.	place are of the Bani Bū 'Alī tribe. Slaves for Sūr were formerly landed here. The Khor was first discovered in 1886.
Lashkharah لشخرة	11 miles south-west of Jumailah.	...	1 mile south of the village is a low sandy cape of the same name. See Lashkharah in the article Ja'alān.

This section of the coast is sandy and desolate and low, except a stretch of about 25 miles adjoining Rās-al-Hadd which has a nearly continuous sea-cliff 100 feet in height. The inhabitants nearly all belong to the Bani Bū 'Alī tribe, but a few Jannabah are interspersed with them.

Rās Jibsh to Rās Mishāyu.—The next section may be considered to extend from Rās Jibsh to Rās Mishāyu, a distance of 97 miles; the whole or part of it is called Batain بطين and it is inhabited partly by Jannabah and partly by Āl Wahibah. The following are the principal points of interest:—

Name.	Position.	Nature.	REMARKS
Rās Jibsh راس جبش	31 miles south-south-west of Lashkharah.	A small sandy point having over it a hill 100 feet high covered with white drift sand.	A small village of 15 huts of Jannabah called Jibsh, invisible from the sea, stands on the south-west slope of the hill. The houses are built of midribs of date-leaves and the situation is so exposed that fuel is kept in nets attached to the houses to prevent its being blown away. The people live on fish and on dates and rice which they purchase with fish, and they own 1 Badan, 8 fishing boats, 4 donkeys and 70 sheep and goats.
Quran قرن	Some distance below Jibsh.	Village of 5 huts.	There are 3 fishing boats and 20 sheep and goats.

Name.	Position.	Nature.	REMARKS.
Sharkh شرك	25 miles south-west of Rās Jibsh.	Village of 20 huts.	The people have 7 fishing boats and 40 sheep and goats.
Rās Shaiblah راس سيبلا	25 miles south-south-west of Sharkh and 18 miles north of Masīrah island.	A low rocky point with a village, also called Shaiblah, 1 mile inland of it.	The village, consisting of 20 huts, is situated among white sand-hills; the inhabitants are Al Wahibah. 10 Badans and 300 sheep and goats are owned here.
Rās Mishāyu راس مشاير	49 miles south-south-west of Rās Shaiblah.	A low sandy point.	NzL.

The whole of Batain from Rās Jibsh to Rās Mishāyu is low and sandy except a stretch of a few miles to the north of Shaiblah: towards the south end it is covered with shrubs and bushes. Masīrah island which lies off this part of the coast is described under its own name.

The remainder of the coast may be disposed of in six sections corresponding to its principal divisions which are Barr-al-Hikmān; Ghubbat Hashīsh; Bahr-al-Hadri, a featureless stretch between Ghubbat Hashīsh and Rās Madrasah; Sauqirah bay between Rās Madrasah and Rās Sauqirah; a short stretch between Rās Sauqirah and Rās Sharbatāt; and, finally, the large bay which contains the Kuria Muria islands. Each of these we now proceed to describe separately.

Barr-al-Hikmān.—Barr-al-Hikmān ^{بئر الحكمان} is so called from being the domain of the Hikmān tribe, is a blunt promontory, 18 miles broad and only about 12 miles long, which points south between Masīrah channel on the east and Ghubbat Hashīsh on the west. It is low and sandy and contains a large salt-water lagoon called Khor-al-Milh ^{خور الملح} which is divided from the sea only by a narrow ridge of sand; the Hikmān and the inhabitants of Mahōt and Masīrah island resort to the Khor to fish and to make salt, and Sūr boats also load salt here for Sūr and India. Barr-al-Hikmān is covered with scattered bushes of tamarisk and salsola and with tufts of grass and rushes. The U. S. ship "Peacock" was wrecked on this coast in September 1835.

Ghubbat Hashīsh.—Ghubbat Hashīsh ^{غبد حشيش} is a large bay forming the foot of the Gulf of Masīrah: it is open to the southward and divides Barr-al-Hikmān from the continuation of the coast to the south-westward. The bay is 8 miles wide at the entrance and 10 miles deep, with soundings

decreasing regularly from 6 fathoms in the middle of the entrance. The shore is low, sandy, and desolate throughout. Near the centre of the bay is the small rocky islet of Abb ^{أب} frequented by natives for fish-curing. From Abb a mud-bank, which dries at low-water, extends northwards for 3 miles dividing the bay into two parts and then spreads out eastward and westward across the foot of the bay. On this mud-flat, 4 miles north of Abb, stands the island of **Mahôt** with the village of the same name; 2 miles west-north-west of **Mahôt** is Raqq ^{رَق}, a steep and rocky islet. Thick and sudden fogs are prevalent in the neighbourhood of Ghubbat Hashish during the north-east monsoon.

Bahr-al-Hadri.—The section of the coast from Ghubbat Hashish to Rās Madrasah, called Bahr-al-Hadri ^{بحر الحدرى}, possesses few points of interest. It is distinguished chiefly by the re-appearance of hills upon the coast; indeed for more than $\frac{1}{2}$ of its length, towards the southern end, it presents to the sea a line of bold cliffs which are composed of light-coloured limestone. At Rās Sarāb ^{راس صراب}, 24 miles south-west of the entrance of Ghubbat Hashish, there is a small village of huts inhabited by the Āl **Wahibah**. At Rās Sidarah again, 20 miles south by west of Rās Sarāb, the existence of a small village of **Hikmān** and Āl **Wahibah** with a date-grove has been reported. Six miles south-south-east of Rās Sidarah and 3 or 4 miles off-shore is Hamar-an-Nafūr ^{حمر النفر}, a white limestone islet 400 yards long, 300 yards broad and 320 feet high. The summit is flat and split in all directions; myriads of wild-fowl frequent it and Arabs used formerly to remove the guano for agriculture. From Hamar-an-Nafūr to Rās Madrasah ^{مدرسه} is about 58 miles in a due south direction. When approached from seaward, Rās Madrasah, which is 450 feet high, appears as an island and for this reason, or because of a small island which lies off the point of it, has received the alternative name of Rās Jazīrah ^{جزيرة} or Isolette. An outcrop of igneous rock here has greatly disturbed the strata of the prevailing limestone. The coast about Rās Madrasah and for some miles to the northwards is frequented by **Jannabah** who have no boats, but put to sea on goat-skin floats and capture sharks, of which they sell the fins and tails. There is a good anchorage* in the south-west monsoon about 1 mile north-west of Rās Madrasah in $5\frac{1}{2}$ fathoms, and good but slightly brackish water can be obtained from a well on the coast about $2\frac{1}{2}$ miles to the north-eastwards.

* A plan of this anchorage will be found in Chart No. 2369—40 c.

Sauqirah Bay.—Sauqirah سوقرة Bay extends from Rās Madrakah to Rās Sauqirah and is about 102 miles in length, but its maximum depth is only about 26 miles. The coast is barren and inhabited only by a few **Jannabah** and **Mahras**, who come here in the winter months to fish and graze their cattle, and are too poor, apparently, even to construct huts, for they camp under the sails of their boats. They attack helpless strangers and avoid armed ones, are under no human control, and seem to pass their lives in a chronic state of semi-starvation. The best known locality in Sauqirah bay is Jāzīr جازر near its south-west end, which is a favourite winter camping ground and the only point where the land-route from **Dhufār** to 'Omān Proper strikes the coast : water can be obtained by digging in the low ground near the sea. Rās Sauqirah is a prominent bluff cape rising 600 feet above the sea : connected with it is a rocky table-land which forms a background to the greater part of the bay at some miles from the coast.

Rās Sauqirah to Rās Sharbatāt.—From Rās Sauqirah to Rās Sharbatāt شربتات, a distance of 24 miles, the coast presents to the sea a noble limestone cliff, 600 feet in height, falling precipitously to the water's edge and having a table-land behind its summit.

Rās Sharbatāt to Rās Nūs.—From Rās Sharbatāt to Rās Nūs again the coast forms a slight bay, 82 miles in extent, which contains the **Kuria Muria** islands, described elsewhere under their own name. With a few intervals the coast in this part also consists of cliffs supporting a table-land 500 to 800 feet high ; they are throughout of pale-brown limestone rock except at Rās Shuwāmiyah شواميه, about the middle of the bay, where there is a remarkable outburst of igneous rock, corresponding doubtless to the **Kuria Muria** islands which lie opposite it. Rās Qarwāo قرار, 4 miles west of Rās Sharbatāt, is a headland nearly insulated by a lake at the inner end of which the water is fresh ; a few **Jannabah** fishermen reside there in caves ; and hares, foxes, partridge, plover, duck and widgeon are said to be found near the lagoon. Near the west end of the bay are Wādi Raikhūt ريخوت and Hāsik حاسك. Wādi Raikhūt is a valley opening on the sea 12 miles north of Rās Nūs, where there is a spring of fresh and a lake of brackish water ; it appears to be thickly wooded and well watered, is said to come down from the far interior, and shows signs of violent torrent action.* Hāsik is a miserable village at the mouth of a valley thickly wooded with small trees ; it is near the head of a bay of the same name three miles south-east of Wādi Raikhūt and ten miles north of Rās Nūs. What was once an inlet of the sea is now a marsh contained by a

* A sketch of the mouth of this valley will be found in Admiralty Chart No. 11.

sandbar, but there is still a well of brackish water. There are considerable ruins here and tradition relates that the place was once a thriving town; it is said to have been ruined by pirates from the coast of Trucial 'Omān who carried off the women and children into slavery at the beginning of the 19th century. The present inhabitants are some 15 families of various tribes; they are very poor, subsist almost entirely on fish, and are nearly destitute of clothing. They have about 300 sheep and goats; there are no boats, but vessels from Sūr call occasionally. There are cocoanuts here and a few dates.

Inhabitants.—As will have been observed there are no places of any importance, except Lashkharah and **Mahōt**, on the whole South-Eastern Coast of 'Omān. Such villages as exist are mostly small and fluctuating, inhabited by migratory fisher-folk who dispose of shark-fins to passing vessels and obtain in exchange the dates, grain and cloth of which they stand in need. Many of these fishermen have no boats, and between Rās-ar-Ruwais and Hāsik they commonly put to sea on a float made of a goat or sheep-skin; after this has been inflated they tie the hind and fore legs together with string and sitting on the string with the skin in front of them paddle their way with their hands to the fishing ground. As many as twenty men have been seen to enter the water at once in this manner and proceed two miles out to sea.

Exclusive of places belonging to the Ja'alān district the settled population of the South-Eastern Coast of 'Omān is extremely small in proportion to its extent. An estimate gives only 1,500 souls, distributed as follows:—

Rās Jibsh to Mishāyu, 60 families; **Mahōt**, 50 families; Bahr-al-Hadri, 40 families; Rās Sharbatāt to Rās Nūs, 30 families; and **Masirah** island, 120 families.

The Bedouins of the district, whose number is uncertain, are chiefly Jannabah, Āl Wahibah and 'Awāmir.

'OMĀN
عمان
SULTAN-
ATE*

The Sultanate of 'Omān is not, as explained in the article on 'Omān, co-extensive with 'Omān in the geographical sense; for Trucial 'Omān, the Baraimi Oasis and the Mahādḥah tract, though they belong to 'Omān, are not included among the Sultān's possessions. On the

* The matter contained in this article on the 'Omān Sultanate, and in the articles subordinate to it, has for the most part been obtained at first hand expressly for the present Gazetteer. All information regarding the country available in published books and in official reports was first condensed by the writer into 82 foolscap pages of print,—a process which was completed in August 1904,—and the resulting volume was then forwarded to Major P. Z. Cox, Resident in the Persian Gulf, and

other hand the **Gwādar** District on the coast of Balūchistān and the **Dhufār** District on the southern coast of Arabia are under the Sultān's

to Major W. Grey, Political Agent at Masqat, to serve as a basis for fresh inquiries. It was also taken by the writer him-elf on tour to the Gulf in the cold weather of 1904-05, when, with the assistance of Mr. J. C. Gaskin, at that time holding a political appointment under the Gulf Residency, a large quantity of new geographical material was collected; the investigations relating to **Ruūs-al-Jibāl** were made at **Shārjah**, those relating to the western parts of **Bātinah** and **Hajar at Sohār**, and the remainder at the town of **Masqat** itself, where informants for most parts of the country were easily obtained. Full information regarding **Gwādar** was kindly supplied in 1905 by Mr. R. Hughes-Buller, I.C.S., in charge of the Imperial Gazetteer of Balūchistān. From his own materials and from those furnished by Majors Cox and Grey and by Mr. Hughes-Buller the writer next prepared a number of draft articles which appeared in January 1906 in the form of 240 octavo pages of print and were sent to the local officers for revision and completion. These latter operations continued throughout the greater part of 1906, the **Ruūs-al-Jibāl** district being carefully dealt with by Major Cox, assisted by Khān Bahādur 'Abdul Latif-bin-'Abdur Rahmān, the British Agent at **Shārjah**, and **Gwādar** by Mr. H. Whitby Smith, Director of Persian Gulf Telegraphs; the **Kumzārī** dialect was carefully investigated by Captain A. P. Trevor, Assistant Resident; and the very large quantity of matter relating to the other districts was disposed of by Major Grey, who, at the end of 1906, paid a special visit to **Dhufār** in order to acquaint himself with that part of the country. Major Grey's principal assistants were Yusuf Stephān, Agency dragoman, and Saiyid Muhammad-bin-Sa'id, son of a late Wazir of the Sultān of 'Omān. On receipt of the reports of these officers a revised set of drafts, extending to about 300 pages, was prepared at Simla and was finished in February 1907; but there were still omissions to be supplied and doubts to be solved, and the work of local investigation was not finally brought to an end till November 1907.

It will be convenient to mention here the principal authorities to which recourse may be had for information (on specific points) more detailed than is to be found in the Gazetteer.

In geological matters, besides the Geological Appendix to this Gazetteer, for which the writer is indebted to Mr. Pilgrim, the following will be found useful: Newbold's *Descriptive List of Rock Specimens from Maskat*, 1850; Carter's *Reports accompanying Copper Ore from the Island of Maseera*; his *Geological Observations on the Igneous Rocks of Maskat*, 1850; and his *Memoir on the Geology of the South-East Coast of Arabia*, 1852.

The subject of medical topography is handled by Dr. Peter in his *Medico-Topographical Account of Maskat*, 1875, and by Surgeon-Major Jayakar in his *Medical Topography of Maskat*, 1877.

The only work dealing expressly with the botany of the country is Aucher-Élcy's *Relations de Voyages en Orient*, 1843; but occasional remarks on flora are made by Colonel Miles in some of his papers mentioned below. In the present connection we may refer to Carter's *Description of the Frankincense Tree of Arabia*. The frankincense trade is dealt with in the Government of India's Foreign Proceedings for March 1905.

The chief treatises on tribal matters are Colonel Ross's *Report on the Tribes of Oman*, 1872, and Colonel Miles' *Note on the Tribes of Oman*, 1881; but the information which they contain is generally superseded by that now given in the

Government and form part of his Sultanate. In the present article, except in the general paragraphs on administration, etc., the district of **Gwādar**,

Gazetteer. Carter, however, has some interesting *Notes on the Ghara (i.e., Qara) Tribe*, 1845, and a continuation of the same, 1847, which may still be perused with advantage.

Turning to geography, we find the literature of that subject reviewed by Colonel Miles in his *Memorandum on the Geography of Oman*, 1879; and *Arabia*, 1900, by the Rev. S. M. Zwemer contains a short account of the 'Omān Sultanate as a whole. The *Persian Gulf Pilot*, 1898, and the *Red Sea and Gulf of Aden Pilot*, 1900, deal completely and systematically with the entire coast and give details relating to navigation with a fulness which would be out of place in a political Gazetteer: the two overlap on the Arabian coast between Sūr and Rās-al-Hadd.

More restricted in their scope, but still each relating to more than one district of the 'Omān Sultanate, are the books, articles and reports by Wellsted, Aucher-Éloy, Ward and others, Cole, Colonel Miles, Captain Dowding and Major Cox which are specified and partially analysed in the paragraph on communications in the present article: among these are some of the most important contributions which we possess towards a knowledge of the geography of the Sultanate. Whitelock's *Descriptive Sketch*, 1838, and Goldsmid's *Telegraph and Travel*, 1874, deal partially with the Ruūs-al-Jibāl district; but more recent and full is a letter by Major Cox (No. 290 of the 2nd July 1902) in the Government of India's Foreign Proceedings for November 1902; Burchard's *Ost-Arabien von Basra bis Maskat*, 1906, is useful also, and contains photographs. The Bātinah district is described in Pengelley's *Remarks on a Portion of the Eastern Coast of Arabia between Muscat and Sohar*; and Stiffe has left an account of Wādī Bōshar in his *Visit to the Hot Springs of Boshar*. Carter's *Geographical Description of Certain Parts of the South-East Coast of Arabia*, 1851, deals with the entire littoral between Masqat Town and the extreme western end of the Dhufār District; while Haïnes' *Memoir of the South and East Coasts of Arabia* covers the same stretch, except the part between Masqat Town and Sūr, which is omitted. The Kuria Muria islands are the subject of more than one monograph, viz., Hulton's *Notice on the Kuria Muria Islands*, Whish's *Descriptive Sketch of the Island of Jibbleea*, Dawson's *Geography and Meteorology of the Kuria Muria Islands*, and Buist's *Kuria Muria Islands*, all of these being papers which appeared between 1840 and 1860. Colonel Miles' *Report on a Visit to Dhofar*, 1883, and his *Visit of the Political Agent, Muscat, to Ras Fartak*, 1884, are partly concerned with the South-Eastern Coast of 'Omān, the Kuria Muria Islands, etc., and partly with the District of Dhufār; but Cruttenden's *Journal of an Excursion from Morebat to Dyreez*, Mr. T. Bent's *Exploration of the Frankincense Country* and his *Land of Frankincense and Myrrh*, 1895, and the chapters XVIII to XXI of Mrs. Bent's *Southern Arabia*, 1900, refer altogether to Dhufār. Trade is dealt with in the annual Administration and Commercial Reports of the Persian Gulf Residency.

The antiquities and ancient geography of the 'Omān Sultanate have not as yet received much attention. Besides Mrs. Bent's *Southern Arabia* already mentioned, it only remains to cite under this heading Carter's *Descriptive Account of the Ruins of El Balad*, 1846, Colonel Miles' *Note on Pliny's Geography of the East Coast of Arabia*, 1878, and Stiffe's *Ancient Trading Centres of the Persian Gulf—Maskat*, 1897.

To this account of the chief sources of information we may subjoin, for the convenience of the student, a list of the most useful maps and charts in which the

which is fully dealt with elsewhere under its own name, will be left out of consideration, and our attention will be confined to the Sultān's Arabian possessions.

Boundaries.—The dominions of the Sultān of 'Omān, if taken as comprising not only regions under his direct government but also independent or semi-independent localities where his influence is stronger than that of any other recognised authority, extend along the coast of Arabia from the entrance of the Persian Gulf to the neighbourhood of Rās Sājar opposite Soqotrah, and inland as far as the confines of the Ruba'-al-Khāli or Great Desert. More precisely, the extreme points on

dominions of the Sultan of 'Omān appear. The most serviceable map including the whole Sultanate has hitherto been *Parts of Arabia and Persia*, 1888; but it is now superseded by the map, on the same scale, which is issued with the present Gazetteer. Another comprehensive map of the Sultanate is one by Colonel Ross entitled *Map of 'Omān showing the Distribution of the Principal Tribes*, 1901. Chart No. 2373-2837 A. of the *Persian Gulf* gives the whole coast from the Ruūs-al-Jibāl district to Quryāt village inclusive; No. 2369-100. of the *North-East Coast of Arabia*, partially overlapping the last, extends from Khadhra in Bātinah to Rās Saḡirah on the South-Eastern Coast of 'Omān; and No. 2365-1012 of the *Arabian Sea*, also overlapping its predecessor, reaches from Rās-al-Hadd to Aden.

The foregoing are general maps and charts, and we pass now to others which represent smaller tracts, but usually upon a larger scale. The coast and hills of Ruūs-al-Jibāl are shown in Chart No. 2375-753, *Entrance of the Persian Gulf*, and those of the Masqat District and Eastern Hajar Coast in Chart No. 2383-38, *Maskat to Karachi*. A *Sketch Map showing the Boundary between the 'Omān Sultanate and Trucial 'Omān near Murair*, 1905, gives some of the topographical details in the vicinity indicated; and a plan known as the *Environs of Sohār*, 1905, is sufficiently described by its name; both of these were prepared for the Gazetteer by Surveyor Jamna Parshad, and they have been filed in the Library of the Foreign Department, Simla, as No. 1363 and No. 1362, respectively. Black's *Sketch of the Batinah Coast*, 1874, shows approximately the positions of all villages in that district east of Makhsilif. The Indian Survey Sheets *Maskat District* and *Maskat and Matrah*, are both the result of surveys undertaken in 1904-05 in connection with the Gazetteer operations. Admiralty Plan No. 2372-2869, *Maskat and Al Matra*, covers much the same ground as the last mentioned map, but with less attention to detail except upon the sea. The following are of the highest value in connection with the geography of the interior:—*Compass Sketch of part of the Route taken by Major P. Z. Cor from Abu Dhabi to Maskat*, 1902, extending across the districts of Dhāhirah and 'Omān Proper, the map contained in Wellsted's book *Travels in Arabia*, 1838, embracing several districts; and the *Sketch Map of the Country round Sur*, 1903, covering the part of the Eastern Hajar District between Ja'alān and the northern coast. Chart No. 11, *Khorya Morya Bay and Islands*, contains only the Kuria Muria Islands and the adjacent shore from Rās Sharbatāt to Rās Nūs. The only map of Dhufār is that contained in Mrs. Bent's book *Southern Arabia*, 1900; the Chart is No. 10 B. Gwādar District and Town appear in Chart No. 2383-38, *Maskat to Karachi*, and in Sheet No. 16 N.-E. of the *North-Western Frontier* series of the Survey of India.

the coast are the village of Tibāt in **Ruūs-al-Jibāl**, on the western face of the promontory that divides the Persian Gulf from the Gulf of 'Omān, and the village of Rakhyūt 13 miles west of Rās **Sājar**. Between these the Sultān's territory is continuous but for a strip of coast-line which, extending from **Dibah** to Khor **Kalba** on the east side of the 'Omān Promontory, belongs to the Shaikh of **Shārjah** and is consequently part of Trucial 'Omān. The Sultān's land frontier on the side towards **Baraimi** may, to the northwards of the Great Desert, be placed at the watershed between that place and the coast of the Gulf of 'Omān.

Divisions.—The country is not regularly parcelled out into administrative districts, but it falls naturally into several distinct tracts which have recognised names.

The chief physical feature is a range of mountains or hilly tract which commencing at Rās **Musandam**, the entrance of the Persian Gulf, sweeps round in a curve parallel to the coast to terminate in the vicinity of Rās-al-Hadd, the point which divides the Gulf of 'Omān from the Indian Ocean. From Rās **Musandam** to **Dibah** this tract is called **Ruūs-al-Jibāl**; the remainder is known as the **Hajar** of 'Omān. **Hajar** attains its maximum altitude of nearly 10,000 feet in **Jabal Akhdhar**, a group of lofty mountains to the south-west of **Masqat** Town, and immediately beyond **Jabal Akhdhar** it is cut across by the great Wādi **Samāil**, which thus divides it into Western and Eastern **Hajar**.

Ruūs-al-Jibāl and the two parts of **Hajar** in themselves constitute three territorial divisions; and between Western **Hajar** and the sea is enclosed a long and narrow but populous maritime district, known as **Bātinah**. From Western **Hajar** a number of valleys descend across **Bātinah** to the sea, most of which are thickly inhabited in their upper courses. Immediately east of Wādi **Samāil** the mountains of **Hajar** reach down towards the coast in confused masses; and beyond this again, almost as far as Rās-al-Hadd, the range actually skirts the sea. The intricate country immediately behind **Masqat** Town has no comprehensive name; part of it is called Saih **Hatāt** and the whole of it is described in this Gazetteer under the title of **Masqat** District. The valleys of Eastern are not so numerous, nor, with the notable exceptions of Wādi **Tāyin**, Wādi **Samāil** and their tributaries, * generally so populous as those of Western **Hajar**.

* It appears advisable to include Wādi **Samāil** and its affluents in Eastern **Hajar** inasmuch as the area which it drains is chiefly on its east side.

The districts on the coast being concluded we turn next to those of the interior. Behind **Bātinah** and divided from it by Western **Hajar** lie the two inland districts of **Dhāhirah** and 'Omān Proper. Of these **Dhāhirah**, which is to the west, slopes inwards to the **Ruba'-al-Khālī** desert ; while 'Omān Proper, the physical centre of the whole country, surrounded except on the south-east by hills and situated from 1,500 to 2,000 feet above the sea, discharges its drainage towards the Indian Ocean. Inland of Eastern **Hajar** are the districts of **Sharqiyah** and **Ja'alān**, which also belong to the oceanic side of the watershed and unite their waters with those of 'Omān Proper. **Sharqiyah** adjoins 'Omān Proper, while **Ja'alān** touches the south-eastern corner of **Sharqiyah** at one end and the Indian Ocean at the other. The desolate coastal tract from **Rās-al-Hadd** to **Rās Nūs** has no general name and may simply be called the South-Eastern Coast of 'Omān: off it lie **Masīrah** and the **Kuria Muria** islands. Beyond **Rās Nūs** is the district of **Dhufār**, consisting of a maritime plain and of the crescent of the **Samhān** hills whose horns reach the sea upon either side of the plain.

Physical geography.—The orography of 'Omān has been noticed above in distributing the country into districts, and the subject of geology is fully dealt with elsewhere.* The rocks consist mostly of limestone which in places is metamorphic, but the town of **Masqat** is the centre of a remarkable outcrop of volcanic serpentine that extends for 10 miles along the coast ; and igneous rock occurs also in the neighbourhood of **Sūr**, in parts of the interior, and at various points on the South-Eastern Coast of 'Omān. The only mineral is coal, of which a small field exists about 20 miles south of **Sūr** ; deposits of silver and copper are said to exist in the neighbourhood of **Samad**, but they are not now worked.

Clayey soil, merging into sand at the coast, is found in **Bātinah** ; **Dhāhirah** is a mixture of clay and gravel ; **Omān** Proper has a stony surface ; **Sharqiyah** and **Ja'alān** tend to sandiness ; the **Hajar** districts are rocky and mountainous ; **Ruūs-al-Jibāl** consists entirely of rugged and precipitous hills. Springs and streams abound in the hilly districts and **Ja'alān** ; but in **Bātinah** the supply of water depends entirely on wells, and wells are found to some extent in 'Omān Proper and **Sharqiyah**. Many of the springs of 'Omān have a high temperature.

The two largest valleys of 'Omān are **Wādi Samāil** and **Wādi Halfain** which rise on opposite sides of the same pass. **Wādi Samāil**

* See Appendix on Geology.

reaches the Gulf of 'Omān at **Sīb**; it is a main seat of population and date culture and the chief highway between coast and interior. The course of Wādi **Halfain** is southwards; it carries the drainage of all the inland districts except **Dhāhirah** to the Indian Ocean at **Mahōt** and is the longest valley in all 'Omān.

Climate.—The summer heat of 'Omān is intense and the average rainfall scanty; but in the interior, in winter, cold and wet weather is sometimes encountered. Occasionally violent storms accompanied by floods devastate the country. The climate of the sea-coast is relaxing and oppressive except in the coldest months. The ordinary annual rainfall over the country generally is probably between 3 and 6 inches.

Wild flora and fauna.—The natural vegetation of the country is sparse and stunted, and wood of large growth is not found even in the highest hills. Mimosa, acacia, tamarisk and ber are among the commonest trees. Grass is not abundant.

Fauna are correspondingly poor. The wild mammals of the country include the Masqat gazelle or Dhabī, common all over 'Omān in suitable localities; the Marica gazelle or Rīm, which is rare except on the edge of the **Ruba'-al-Khāli**; the Beatrix Oryx or Bansōlah, which is brought in by nomads from the desert; Jayakar's wild goat—a kind of Tahr—in Arabic called Wa'al; also a lynx of which the species is doubtful. There are besides hares, jackals and foxes; the existence of leopards has not been established. Among the birds are the bustard (*Houbara Macqueeni*), grey partridge, francolin, sisi, sandgrouse and quail.

Agricultural products.—Cultivated trees and crops are more plentiful and varied than vegetation of natural growth. The principal tree and staple of agriculture is the date, of which some very fine varieties are grown; it flourishes everywhere, even in almost inaccessible valleys among the hills and at a height of over 2,000 feet; the extensive date plantations are a striking feature of the landscape, especially in **Bātinah**, **Wādi Samāil** and **Sharqiyah**. Other fruit trees more or less common are the plantain, mango, pomegranate, quince, sweet and bitter lime, olive and almond; and the walnut, fig, vine and mulberry flourish in **Jabal Akhdhar**. Cereals are wheat, barley, maize, millet and bajri; other crops are musk melons, water melons, lucerne, cotton, sugarcane and, in places, indigo and tobacco.

Domestic animals.—Camels are numerous in **Sharqiyah** and **Bātinah** and donkeys in **Hajar** and elsewhere, but horses are everywhere few.

The dromedaries of 'Omān are esteemed the best in Arabia. Cattle, sheep and goats are found everywhere, the sheep being most common in the hilly tracts and in the possession of Bedouins but less numerous than the goats. The cattle are of the humped Indian variety. On the coast livestock are largely fed on fish heads boiled up with date stones, remnants of mat bags and other refuse.

Inhabitants and tribes.—The great majority of the inhabitants of 'Omān are of Arab race and, with regard to their main characteristics, may be described as a homogeneous population.

Supposed racial divisions.—According to their traditions* they belong to two distinct Arabian stocks, the Qahtāni قحطاني or Yamani يمني and the 'Adnāni عدناني or Nizāri نزاری, but this belief has not as yet been scientifically verified. The Yamani tribes, according to the same traditions, were the first Arab settlers in 'Omān ; while the Nizāris, whose pedigree is regarded as less purely Arab, were for the most part later immigrants. Each of the supposed racial groups is divided into a large number of separate tribes, and these again into sections and sub-sections.

Political divisions.—In the 18th century there arose, in the course of a general civil war, two large factions known as the Hināwīyah هنائيّه and the Ghāfirīyah غافريّه, † to one or other of which almost every Arab tribe found in 'Omān at the present day is attached. The Hināwi faction consists chiefly of Yamani, and the Ghāfiri faction mainly of Nizāri tribes ; but there is a residue both of Yamanis and Nizāris who have joined the faction of their hereditary rivals, and transfers of allegiance from one faction to the other even now occasionally take place. Throughout the length and breadth of 'Omān the Hināwīyah and Ghāfirīyah live intermingled, usually in groups of villages belonging to one tribe or section, and thus the political balance of power is maintained ; but on the whole the Ghāfirīyah are predominant in the north-western and the Hināwīyah in the south-eastern regions.

Fixed and nomadic population.—Another broad division of the people is into settled or Hadhr حضر and nomad or Badu بدو ; but this

* That is to say, traditions which must have been current among the literati with whom Colonel Ross and Colonel Miles dealt. The ordinary 'Omāni knows nothing now of the terms Qahtāni and 'Adnāni or Yamani and Nizāri.

† These are the collective plurals ; the singulars are Hināwi هنائي and Ghāfiri غافري which are also the forms of the adjective.

distinction has no racial or political basis, either condition of life being adopted indifferently by the *Hināwīyah* and the *Ghāfirīyah*. The Bedouin element is relatively strong in 'Omān Proper and *Dhāhirah*, and generally upon the verge of the desert ; in the other districts the settled populations are completely predominant.

Tribal constitution.—Tribal organisation is loose and haphazard. Some of the tribes are scattered territorially and have no local centre ; while others, though their domains are compact, are broken up into sections headed by chiefs who acknowledge no common authority. In a few cases the tribe is governed by a *Tamimah* تميمه or president whose power extends over all the branches of the tribe, wherever domiciled ; the office of *Tamimah* is nominally elective, but in practice hereditary. Formerly each of the great political factions had also a *Tamimah*, the headship of the *Ghāfirīyah* being vested in a *Dhāhirah* family and that of the *Hināwīyah* in the ruling Sultān of the house of the Āl Bū Sa'id. As a rule small and weak tribes attach themselves as clients to more powerful neighbours, but they retain their names and separate existence.

Armament.—The tribesmen of some of the larger towns, especially at *Sūr* and in *Ja'alān*, are now well armed with modern rifles, mostly Martinis of inferior patterns. In other parts, such as Eastern *Hajar*, arms of precision are still comparatively scarce.

Religion.—A great majority of the *Hināwī* tribes belong to the *Ibādhi* sect of Islām, whose tenets were adopted as the national 'Omāni form of faith in the 8th century of the Christian era. Of their *Ghāfiri* opponents a considerable proportion are orthodox Sunnis, and a few tribes are *Wahhābi*, notably the *Bani Bū 'Ali* and the *Bani Rāsib* who were converted at the time of the *Wahhābi* invasions early in the 19th century ; but the dominant sect in 'Omān is still the *Ibādhi*. The short-lived character of occasional *Mutawwa'* مطوع or puritanic movements that have taken place in 'Omān seems to demonstrate the absence of a fanatical spirit among the people.

Non-Arab population.—The Arabs compose seven-eighths or more of the population ; the residue consists partly of aboriginal tribes and partly of immigrants whose arrival was later than that of the Arabs. Among the aborigines may perhaps be classed the *Bani Na'ab*, part of the *Shihūh*, the *Zatūt* and possibly some of the *Bayāsirah*. The later immigrants are represented by colonies of Persians,—in part relics of

Persian occupations,—in the neighbourhood of **Sohār** and elsewhere; by **Balūchis** and **Jadgāls**, the former now very numerous, who were originally introduced as mercenary troops; and by considerable Indian communities in the town of **Masqat** and **Matrah**. Nor must the large negro element which exists along the coast be overlooked, an outcome of several centuries of the slave-trade.

Character and language.—The chief characteristics of the people of 'Omān are impatience of control, strong factional and tribal feeling, unprogressiveness in the social and material aspects of life. Their settlements in East Africa however show them to have been, in the past, not devoid of enterprise of a kind.

Arabic is the language of the country as a whole, but the dialect of the **Shihūh** is peculiar, and the **Kumāzirah** section of that tribe have in addition a language of their own which belongs to the Iranian group. **Balūchi** may be heard in 'Omān among the **Balūchis** and **Swahili** where negroes are numerous. The **Qaras** of **Dhufār** have a language of their own.

Classification and distribution by factions and tribes.—The following is a conspectus of the tribes of the Sultanate of 'Omān, arranged under the heads of **Ghāfiri** and **Hināwi** :—

I.—Ghāfiri Tribes.

Tribe.	Singular.	Number of souls.	Distict.	Settlements.	REMARKS.
'Abriyīn عبريين	'Abri عبري	6,500	See article 'Abriyīn.
'Alī (Bani Bū) بنی بو علي	'Alawi علوي	7,000	See article Bani Bū 'Alī.
'Auf (Bani) بنی عرف	'Aufi عوفي	1,000	(1) Western Hajar and (2) 'Omān Proper.	(1) Qa-mitain and Taikha in Wādī Jāni 'Auf; Fara', Misfāh and Nāziyah in Wādī Fara'; 'Awābi in Wādī Pani Kharūs and (2) Farq in Wādī Kalbu.	Ibādbis.

I.—Ghāfirī Tribes—contd.

Tribes.	Singular.	Number of souls.	District.	Settlements.	REMARKS.
'Aẓīl (Āl) آل عزي	'Azīzi عزي	150	Dhāhirah.	Dhank Town.	Sunnis and Ibādhis.
'Azzān (Bani) بني عزان	'Azzāni عزاني	20	Western Hajar.	Nakhl.	Ibādhis.
Badā'ah بداعة	Eada'i بدعي	120	Do.	Bidit, in Wādī Mabrah.	Do.
Bahri (Bani) بني بحري	Bahri بحري	500	Do.	'Aliyah, and 'Awābi in Wādī Bani Kharūs and Hibra in Wādī Ma'āwal.	Do.
Bidāh بداهة	Bidāhi بداهي	100	(1) Dhāhirah and (2) Western Hajar.	(1) Dūt in Wādī Dhank and (2) Bidit in Wādī Mabrah.	Though Ghāfirīyah they are of Yamani origin. Sometimes at feud with the Miyāyihah Ibādhis.
Dalālil دلاليل	Dallāl دلال	800	Western Hajar.	Mahādhar and Hawājri in Wādī Fara'.	An inferior caste who trade in cattle; they really belong to various tribes and their name is simply taken from their occupation.
Darū' درع	Dar'i درعي	3,000	See article Darū'.
Dāwud (Fani) بني دارود	Dāwudi دارودي	200	Eastern Hajar.	The hills between Sūr and Kalhāt.	Ibādhis.
Dhahūl دهول	Dhahli ذهلي	700	(1) Western Hajar and (2) Bātinah.	(1) 'Awābi and Tau-as-Shaikh in Wādī Bani Kharūs and (2) Liwa Town.	Do.
Dhahūriyin ظهورييين	...	1,750	See article Dhahūriyin.
Filait (Bani) بني فليت	Filaiti فليت	400	Western Hajar.	Wasit in Wādī Ma'āwal.	Ibādhis.

I.—Ghāfirī Tribes—contd.

Tribes.	Singular.	Number of souls.	District.	Settlements.	REMARKS.
Futaisāt فطيسات	Futaisi فطيسي	450	Bātinah.	Furfarah in the Liwa sub-Wilayat.	Ibādhis. A tribe connected with the Riyāyisāh.
Ghāfalah غفله	Ghāfi غفلي	500	Bātinah.	Liwa Town.	Sunnis.
Hadhram or Hadharmi (Bani) بني حضرمي or حضرم	Hadhrimi حضري	500	(1) Western Hajar and (2) 'Omān Proper and (3) Masqat District.	(1) Hadash in Wādī Mistāl, Nakhl in Wādī Ma'āwal, Kafarah in Wādī Samāil, (2) 'Izz and Nizwa and (3) Matrah.	Not to be confounded with Hadharim حضار or natives of Hadhramaut, of whom there are a number in the service of the Sultān of 'Omān. There is possibly some confusion between this tribe and the Bani Hadhrami section of the Bani Jābir. The Bani Hadhram are Ibādhis.
Hanādhilah حناضه	Handhali حنضلي	1,000	Eastern Hajar.	Ghubrat-at-Tām in Wādī Tāyīn and Samā'iyah, Khabbah and Waljah in Wādī Khabbah.	Ibādhis.
Harrās (Bani) بني حراس	Harrāsi حراسي	4,000	See article Bani Harrās.
Hasrit حسريت	Hasriti حسريتي	150	South-Eastern Coast of 'Omān and Dhufār.	...	Practically Bedouin. Possibly a branch of the 'Awāmir. A very poor tribe. Ibādhis.
Hawāl (Bani) بني حوال	Hawālī حوالي	100	Western Hajar.	Muta'arishah and Hail in Wādī al-Hilti.	Ibādhis.
Hawāshim هواشم	Hashimi هاشمي	1,000	(1) Western Hajar and (2) 'Omān Proper.	(1) Falaj-al-Wusta, Shabai-kah and Dāris in Wādī Fara' and (2) Adam and Manah.	Do.

I.—*Ghāfirī Tribes*—contd.

Tribe.	Singular.	Number of souls.	District.	Settlements.	REMARKS.
Hava (Bani) بنى حيا	Hayāi حيائي	500	(1) Dhāhira rah and (2) Bātinah.	(1) Dhank Town (2) Sib and Laghshibah.	Ibādhis
Hikmān. حكمان	Hikmāni حكمانى	800	See article Hik- mān.
Hilāl (Bani) بنى هلال	Hilālī هلالى	400	'Omān Pro- per.	Bahlah and Nizwa.	Ibādhis.
Hishm هشم	Hāshimi هاشمى	8,000	See article Hishm.
'Isa (Āl Bū) آل بر عيسى	Ja'alān.	...	A small Bedouin tribe who occa- sionally visit Masirah island for nefarious pur- poses, ostensibly as fishermen but really as wreck- ers.
Jābir (Bani) بنى جابر	Jābiri جابري	25,000	See article Bani Jābir.
Jahāwar جهار	Jauhari جوهري	4,000	Western Hajar.	Hailain and Mabrah in Wādī Mabrah and Lithaibat, 'Aqair, Hai- yadh, Khabt, 'Ablah and 'Abailah in Wādī-al-Hilti.	Ibādhis.
Jannabah جنبيه	Jannaibi جنيبي	12,000	See article Janna- bah.
Jissās جساس	Jissāsi جساسى	350	(1) Dhāhira rah and (2) 'Omān Proper.	(1) Kubarah and (2) Bahlah.	Those of Kubā- rah are subordi- nate to the Ya'āqib of 'Ibri.
Ka'ab (Bani) بنى كعب	Ka'abi كعبى	1,350 (in the Sul- tana- te)	(1) Bātinah and (2) Western Hajar.	(1) Hasaifin Sūr- al-'Abri and Taraif in the Liwa sub- Wilāyat and (2) Hadaf in Wādī Hatta.	See article Bani Ka'ab.
Kahail (Bani) بنى كحيل	Kahailī كحيلى	300	Bātinah.	Majis in the sub- Wilāyat of Sohār.	Ibādhis.

I.—*Ghāfirī Tribes*—contd.

Tribe.	Singular.	Number of souls.	District.	Settlements.	REMARKS.
Kalaib (Bani) بنی کلب	Kalaibi کلبی	1,400	Western Hajar.	Kitnah, Rābi, Hail-bin-Suwaidān, Khawairij and Wāsīt in Wādī-al-Jizī and its tributaries.	They are divided into 3 sections, viz., Hadādinah هدادنه (Singular Haddani هداني at Rābi; Rashaidāt رشيدات (Singular Rassidi (رشیدی) at Hail-bin-Suwaidān; and Shawāmis شوامس (Singular Shāmsi شامسي) at Kitnah, Khawairij, and Wāsīt. By religion they are Sunnis. See article Bani Kalbān.
Kalbān (Bani) بنی کلبان	Kalbāni کلبانی	8,000	A Bedouin tribe, formerly a section of the Jannabab, but now incorporated with the Bani Bū 'Alī. Ibādhis.
Kāsib (Aulād) اولاد کاسب	Kāsibi کاسبی	400	Eastern Hajar.	Near Sūr.	
Khamaiyis (Āl) آل خمیس	Khamaisi خمیسی	400	'Omān Proper.	...	Bedouins and Ibādhis.
Kharūs (Fani) بنی خروص	Kharūsi خروسی	4,500	See article Bani Kharūs.
Khazair خزیر	Khazairi خزیری	450	Western Hajar.	Nakhl.	Ibādhis.
Kunūd کنود	Kindi کندي	1,000	See article Kunūd.

I.—*Ghāfirī Tribes*—contd.

Tribes.	Singular.	Number of souls.	District.	Settlements.	REMARKS.
Mahrūqī محرقي	Mahrūqī	2,200	(1) 'Omān Proper, (2) Sharqīyah.	Adam, Bahlah and (2) Sanāu.	Ibādhīs. Sometimes at feud with the Al Bū Sa'id of Adam. One of their sections are the Bani Wal بني رال.
Maqābīl مقابيل	Maqābālī	5,000	See article Maqābīl.
Masākīrah مساكيرة	Maskarī	6,000	See article Masākīrah.
Masālīhah مصالحه	Maslahī	150	(1) 'Omān Proper and (2), Eastern Hajar	(1) Qaryah and (2) Dawwah in Wādī Bani Khālid.	Ibādhīs. Some describe the Masālīhah as a section of the Bani Hina.
Matārīsh مطاريش	Matrūshī	700	Bātinah.	Harādī, and Murair-al-Kabīrah in the sub-Wilāyat of Shinās.	Sunnīs. This tribe are found also in Trucial 'Omān, where they are somewhat more numerous.
Mazārī' مزاريع	Mizra'i	5,000	(1) Western Hajar and (2) Bātinah.	(1) 'Alāyat-al-Mazārī' and Wushail in Wādī Fara' and (2) 'Aqr in the Shinās sub-Wilāyat and Hasaifin-al-Mazārī' in the Liwa sub-Wilāyat.	Ibādhīs. Those of Wādī Fara' are possibly of the Bani Mazru' section of the Bani Jābir. See also article Mazārī'.
Mishāqīyah مشاقية	Mashqasī	600	Do.	Hail, Mizāhīt and Wushail in Wādī Fara'.	...
Miyāyīhah مياحي	Miyāhī	7,000	See article Miyāyīhah.
Nabāhīnah نباينه	Nabhānī	600	See article Nabāhīnah.

1.—Ghāfirī Tribes—contd.

Tribes.	Singular.	Number of souls.	District.	Settlements.	REMARKS.
Ma'im نعيم	Na'aïmi نعيمي	5,400 (in the Sulta- nate).	(1) Dhāhirah (2) Bāti- nah and (3) Western Hajar.	(1) Dhank Town, Bizaili and Sanainah, (2) Sanqar in the sub-Wilāyat of Sohār and (3) Bani Habīb.	Sunnis. They are the predomi- nant Ghāfirī tribe in Dhāhi- rah, where some are Bedouinse. See also article Na'im.
Nidābiyīn ندابييين	Nidabi ندابي	3,500	See article Nidā- biyīn
Nidhairiyīn نضيرييين	Nidhairi نضيري	300	Eastern Hajar.	Dawwah in Wādī Bani Khālid.	Ibādhis.
Qara Tribe قرا	...	5,000	See article Qara Tribe.

Negroes and half-castes, bond and free, have not been shown in this table as their number, which is large, cannot be estimated.

Population, settled and nomadic.—The following is an estimate by districts of the settled population of the 'Omān Sultanate, exclusive of **Gwādār** :—

Bātinah	105,500
Dhāhirah	31,100
Dhufār	4,500
Eastern Hajar	98,400
Western Hajar	85,750
Ja'alān	12,000
Masqat	40,650
'Omān Proper	34,500
South-Eastern Coast of 'Omān (outside Ja'alān)	1,500
Ruūs-al-Jibāl	13,750
Sharqiyah	44,200

Total . 471,650 souls.

The tribal tables contained in the preceding paragraph yield the following statistics of population, both sedentary and nomadic :—

Ghāfiris	205,540
Hināwis	220,820
Others	60,000
Total						<u>486,360</u> souls.

A scrutiny in detail of these tribal tables will show, however, that the number of Bedouins in the Sultanate cannot be less than 30,000 souls, and as regards settled population the estimate by districts (which includes negroes) is probably more reliable than that by tribes. We may therefore conclude that the total population of the 'Omān Sultanate is not less than 500,000 souls, of whom at least 30,000 are Bedouins.

Occupations and mode of life.—The greater part of the fixed population of 'Omān live by agriculture, of which date cultivation is the commonest form. Cultivation, whether of date trees or of other crops, is dependent on irrigation. In the hills and where springs exist the water is brought to the field by a carefully constructed channel, sometimes subterranean and in that case called a Falaj فلاج : an open channel is called Sāqiyah ساقية. Where irrigation is from wells, as in Bātinah, the water is raised in leathern hoists, as in some parts of India.

On the sea-coast agriculture is supplemented or replaced by fishery, and inland by the keeping of flocks and herds. In Bātinah, where the fisheries are important, the nets are sometimes a mile long and form the principal possession of the village. The fishermen of 'Omān ply their business along the coast of Makrān at certain seasons.*

The livelihood of the inhabitants of Masqat and Matrah is exceptional, depending upon the presence of the Sultān's government and on foreign commerce: Sūr and Khābūrah also are ports of which sea-borne trade is the mainstay.

In some of the larger inland towns part of the population live by retail trade or by simple industries and manufactures : such are indigo dyeing at Nizwa and 'Ibri, copper and brasswork to an insignificant extent at Nizwa, pottery at Nakhl, and the weaving of cloth, turbans, and lungis in other places. Masqat Town is renowned for its gold and silver work, especially the sheaths and mounting of daggers and swords ; the workmen are Indians.

Local trade and trade between the coast and the interior maintain a carrier class ; Maqniyāt in Dhāhirah, for instance, is a place which subsists largely by the earnings of its donkey and camel owners.

* See Appendix on Fisheries.

The Bedouins are altogether pastoral in their habits, depending for a livelihood on their camels and flocks.

In hilly districts and their vicinity the houses are generally of stone and mud, but in some of the **Sharqiyah** towns, as also in **Masqat** and **Matrah**, the better houses are of stone plastered with gypsum stucco. Where stone is not easily obtainable sun-dried brick often takes its place; but throughout **Bātinah** and in part of **Sharqiyah** light sheds of date branches and mats are the commonest form of domestic architecture.

Beef is little eaten by the people, and fish is an important article of diet even in the interior.

Trade.—The trade of 'Omān which is described in full detail in the article on **Masqat Town**, is chiefly with India; and its character is by no means complicated.

The only valuable export is dates, of which the better sorts go to America and most of the remainder to India. The **Fard** فرد date, a small dark-coloured sort grown in the **Samāil** valley, enjoys high favour in America and the supply of it is never equal to the demand of the market: the Americans have lately been endeavouring to acclimatise it in Arizona, but as yet without much success. Another date called **Mibsali** مبسلي, preferred by natives of 'Omān to the **Fard** date and much appreciated in India, is grown in **Sharqiyah** and exported through **Sūr** to Bombay; a third kind is the **Khalās** خلام. Exports of secondary importance are pearls, mother-of-pearl, dried limes, fresh fruit and salt fish all of which go chiefly to India. Before 1906–1907, in which year it rose to Rs. 36,93,820, the recent average value of the exports from **Masqat**, the only steam port of the 'Omān Sultanate, was about Rs. 26,84,000 per annum.

By far the most valuable import received in return for these exports is rice from India, and after rice come arms and ammunition, consigned direct from Europe: but this is not unlikely to prove an ephemeral traffic, for the arms market in 'Omān itself is said to be already glutted and the extinction of the arms trade through **Masqat** with other countries is an object of the British Government. Next are cotton goods, Indian, Manchester and American, mostly (except the American) imported through Bombay. The American cotton is a time-honoured import which shows no sign of increasing at the expense of the other kinds. Twist and yarn, silk and silk goods, sugar, coffee, and cereals other than rice are the chief remaining imports. Timber, except date trunks, is all brought from India and Africa. The foreign trade is largely in the

hands of Indian merchants resident at **Masqat** and **Matrah**—the latter being the real commercial capital,—but there are also some wealthy Arab merchants. The annual value of the imports at **Masqat** appears, of late, to have been about Rs. 48,17,000, but in 1906-1907 it rose to Rs. 69,21,375.

The trade of 'Omān is limited, not so much by insecurity, bad communications and the difficulty of recovering debts in the interior, though these are not without their effect, as by the natural poverty of the country and the limited purchasing power of the inhabitants. The only valuable asset is the date crop, which is liable to be severely affected by drought.

The carrying trade of 'Omān is small and practically confined to **Sūr**; the only other ports of any account are **Wudām** and **Sūr Haiyān** in **Bātināh** with about 15 and 40 sea-going vessels, respectively, **Suwaik** with 10, and **Matrah** with about 7.

Weights and measures vary somewhat from place to place.* The standard of currency everywhere is the Maria Theresa dollar or **Riyāl**, but the Indian rupee also circulates. Accounts are kept in **Muhammadi**s, an imaginary unit of which $11\frac{1}{2}$ are equal to one dollar. Subsidiary coinage consists of copper pice, partly imported from India, Zanzibar and German East Africa, and partly minted by the Sultān at **Masqat** or for him in London. During 1904, the value of 100 dollars fluctuated between 126 and 139 rupees and the number of copper **Masqat** pice to the dollar varied from 220 to 270. In 1906-1907 the dollar exchange fluctuated between $151\frac{3}{4}$ and $176\frac{3}{4}$. This instability of the silver exchange occasions many shipments of specie between **Masqat** and **Bombay** and is unfavourable to general trade.

Communications.—There are three principal routes which conduct from the coast to the interior of the 'Omān Sultanate, namely, one from **Matrah** or **Sib** by **Wādī Samāil** to 'Omān Proper, which is central and the most important of all; one on the east from **Sūr** to **Ja'alān** by **Wādī Falaj**; and one on the west from **Sohār** to **Baraimi** by **Wādī-al-Jizi**. The chief lateral communications in the interior are a line from **Ja'alān** which traverses **Sharqiyah** to 'Omān Proper, connecting the **Wādī Falaj** and **Wādī Samāil** routes, and two from **Baraimi** across

* See however the article on **Masqat Town**. Here it may be added that the **Kiyās** of the interior is only $\frac{1}{4}$ of the **Masqat Kiyās**, and the same holds of the **Man**. In the interior there is a weight called **Sā'** صاع (plural صاعات) equal to $7\frac{3}{4}$ **Kiyās**, and another called **Makiyāl** مكيال (plural Makāil مکائيل) equal to 12 **Kiyās** or $\frac{1}{2}$ a **Man**.

Dhāhirah into 'Omān Proper, one *via* Najd-al-Makhārīm, the other *via* Najd-al-Barak, joining the route from the coast by Wādi-al-**Jizī** with that by Wādi **Samāil**. These are all easily passable for loaded camels and present no difficulties as to water, while other supplies also are abundant on the **Samāil** route.

Subsidiary routes in Western **Hajar** are that from **Bātinah** to **Dhāhirah** by Wādi-al-**Hawāsinah** and that from **Bātinah** by Wādi Bani **Kharūs** and over Jabal **Akhḍhar** into 'Omān Proper: the first is passable by camels, the second only by donkeys. Parallel routes to the interior are said to lie between these up Wādi Bani **Ghāfir** and Wādi **Fara**, and to be practicable for camels, but neither of them has been used in its entirety by a European traveller.

Minor routes in Eastern **Hajar** lead from Wādi **Samāil**, or from Saih **Hatāt** by the Qahza pass, into Wādi **Mansah** and thence into Wādi **Tāyīn**; these can be used by camels. Two other routes, over the 'Amdah and Manqal passes respectively, give access from Saih **Hatāt** to Wādi **Tāyīn**, but they are more difficult than those already described. There is also a camel route down Wādi **Tāyīn** from its head to the sea at **Daghmar**; and one or two routes exist between Wādi **Tāyīn** and **Sharqiyah**, the best known being that which runs up Wādi **Khabbah** from Ghubrat-at-Tām, but their character is not well ascertained. There is also a route, in favour with natives of the country, which connects Wādi **Samāil** with **Sharqiyah** by way of Wādi-al-'**Aqq**.

Ja'alān is easily accessible from Khor **Jarāmah** by a route that crosses Jabal **Khamis** into Wādi **Falaij***.

* Some notion of the character of these routes can be gained from the articles on the districts or valleys in which they lie and the mountains which they cross, some of which are specified in the text in the following sentence. The greater part of the information about routes in 'Omān that has been placed on record by European travellers who used them is contained in the following which are given in order of publication.

Principal places visited.	Authority (for full titles, see Bibliographical Appendix).	REMARKS.
Sūr, Bani Bū 'Alī, Bani Bū Hasan, Kāmil, Badiyah, Ibra, Samad, Manah, Nizwa, Tanūf, Saiq, Sharaijah, thence by Wādi Mi'aidin to Birkat-al-Mōz; Nizwa, thence by Wādi Samāil to Sīb.	Wellsted's Travels in Arabia.	A particular description of his route was not the author's object, but his narrative contains valuable information on the subject.

Fuller particulars about some of these routes and about others will be found in the articles in this Gazetteer :—Jabal Akhdhar, Dhufār District,

Principal places visited.	Authority (for full titles, see Bibliographical Appendix),	REMARKS.
Suwaïq by Wādī-al-Hawāsinah and Wādī-adh-Dhūla' to Miskin; Maqniyāt; thence by Wādī-al-Kabīr to Darīz, 'Ibri.	Wellsted's Travels in Arabia.	A particular description of his route was not the author's object, but his narrative contains valuable information on the subject.
Matrah, Wataiyah, Ruwi, Ghubrah, Khalīl, Khōdh, Nakhl; Hijār in Wādī Bani Kharūs; Saiq in Jabal Akhdhar; Tanūf, Nizwa, Jabrin, Izki, Farq and Birkat-al-Mōz in 'Omān Proper; thence back by Wādī Samāil.	Aucher-Éloy's Relations de Voyages en Orient.	The author was chiefly interested in botany, but his account of his route is not without value.
Sūr, Bani Bū Hasan, Bani Bū 'Alī.	Ward, Sylvester and Jones in the Transactions of the Bombay Geographical Society, 1847-9.	Not of much value as a route-report.
Lashkharah, Bani Bū 'Alī, Bani Bū Hasan, Wāfi, Badiyah, Sanāu, Manah, Nizwa, Tanūf, Saiq; back to Nizwa; Izki; thence by Wādī Samāil to Matrah.	Cole, in the same.	Do.
Sohār by Wādī-al-Jizi to Baraimi.	Miles, in the Journal of the Asiatic Society of Bengal, 1877.	Considerable attention is paid to the nature of the route.
Izki, Adam, Manah, Bahlah, Jabrin, Tanūf; over Najd-al-'Arak; down part of Wādī-al-'Ain; across Wādī Sharsah; Darīz, 'Arāqi, 'Ibri, Dhank; up Wādī Dhank; Miskin; across Wādī Bani Ghāfir; Rustāq, Mansūr, Jammah, Barkah.	Miles, in the Government of India's Proceedings for October 1886.	The information as to the route is somewhat desultory.
Matrah, up Wādī 'Adai; over Qahza pass; up part of Wādī Mansah; down Wādī Tayin; Quryāt; up Wādī Mijlās; across Wādī Maib; back to Matrah.	Miles, in the Geographical Journal, May 1896.	Parts of the route are well described.
Barkah; up Wādī Ma'-āwal; Nakhl, 'Awābi; up Wādī Bani Kharūs; over the Hajar pass and across Jabal Akhdhar; Saiq, Sharaijah;	Miles, in the Geographical Journal, November 1901.	Do.

Jau, Wādi-al-Jizi, Wādi Khabbah, Jabal Khamīs, Wādi Maih, Wādi Mansah, Masqat District, Wādi Mijlās, Miskin, 'Omān Proper, Ruwi, Ruūs-al-Jibāl and Wādi Tāyin.

Principal places visited.	Authority (for full titles, see Bibliographical Appendix).	REMARKS.
down Wādi Mi'aidin; Birkat-al-Mōz, Izki; down Wādi Samāil, Matrah.		
Khor Jarāmah, Mūsua, Wādi Fisāo, Wādi Falaj, Sūr.	Dowding, in the records of the Intelligence Branch, Simla, 1901.	A regular military route-report.
Daghmar; up Wādi Tāyin to its head; down Wādi Mansah, Matrah.	Do.	Do. Unfortunately the report is unfinished and deals only with the lower part of Wādi Tāyin.
Baraimi, Hafit, Dhank, 'Ibri; up part of Wādi-al-'Ain; over Najd-al-Makhārim; Saifam, Jabrin, Bahlah, Nizwa, Tanūf, Saiq, Sharaijah, Muti.	Cox, in the Government of India's Foreign Proceedings for December 1903.	Not expressly a road-report, but contains all necessary information about the road as well as other subjects.

The following additional facts about routes in 'Omān have recently been supplied by Lieutenant C. H. Gabriel and others from native information (1905) :—

1. Routes from Barkah and Masna'ah to Rustāq converge at Jammah in Wādi Fara' and thence ascend Wādi Fara' to Rustāq. The distances from Barkah and Masna'ah, respectively, are 10 and 6 hours by caravan.

2. A route from Suwaiq to Rustāq reaches Wushail in Wādi Fara' and thence follows Wādi Fara' to Rustāq. Distance 8 hours by caravan.

3. A route from Masna'ah to Dhank lies up Wādi Bani Ghāfir from Dihās to Khafdi; it then reaches Miskin, in Wādi-al-Kabir. From Miskin, there are alternative ways to Dhank, one *viā* 'Āridh in Wādi-al-Kabir and Yanqul in Wādi Dhank, the other *viā* Khadal in Wādi-al-Jailah and Fida in Wādi Dhank. Distance to Miskin 10 hours by caravan (apparently underestimated), and thence by the alternative ways 12 and 24 hours, respectively.

4. A route from Suwaiq to Dhank follows Wādi Bani Ghāfir from Hōqain to Khafdi and beyond that point is identical with the last route. Total distance 30 hours by caravan.

5. A route from Khābūrah to 'Ibri follows Wādi-al-Hawāsinah from Ghaizain to Mijzi, whence Miskin in Wādi-al-Kabir is reached; from Miskin it continues down Wādi-al-Kabir to Dariz and so to 'Ibri. Total distance 24 hours by caravan.

6. A route from Khābūrah joins the ordinary Wādi-al-Jizi route from Sohār to Baraimi at Sahallah in Wādi-al-Jizi. Distance from Khābūrah to Sahallah 12 hours by caravan.

7. There is a route from Saham to Yanqul which goes by Falaj-ash-Shakhāriyīn and Wuqbah in Wādi 'Āhin. Distance 18 hours by caravan.

8. The way from Yanqul to 'Ibri is *viā* 'Āridh in Wādi-al-Kabir, down that Wādi to Dariz, and so to 'Ibri. Distance 9 hours by caravan.

Navigation and harbours.—The navigation of the 'Omān coasts is simple, and hidden dangers are few; but there is an almost entire deficiency of harbours and safe anchorages. The Elphinstone (Khor-ash-Sham) and Malcolm (Ghubbat Ghazirah) Inlets and Dōhat Haffah in Ruūs-al-Jibāl would make good harbours, but their position in a wild and barren district renders them commercially valueless. There is not a single sheltered anchorage for vessels on the whole **Bātinah** coast. The coast of the **Masqat** District possesses the best anchorages in 'Omān, *viz.*, the bays of **Matrah** and **Masqat** and the inlets of **Bandar Jissah** and **Bandar Khairān**; but the first two are imperfectly sheltered, and the others are badly situated with regard to internal communications. From **Bandar Khairān** south-eastwards there is no sheltered anchorage till the **Sūr**, **Khor Jarāmah** and **Khor-al-Hajar** creeks are reached near **Rās-al-Hadd**; the first and third of these are only accessible to native boats, and the second, though well-sheltered, cannot be entered by vessels of more than 15 feet draft. The South-Eastern Coast of 'Omān is poor in good anchorages; indeed, excluding Ghubbat Hashish, the approaches to which are not free from danger, and an indifferent anchorage at **Rās Madrakah**, there are none until the complementary harbours of **Murbāt** and **Risūt** in the **Dhufār** District are reached.

Political constitution.—The government of 'Omān is a Sultanate or absolute monarchy, and the manner in which the present hereditary Sultanate has arisen out of an ancient elective Imamate will appear from the chapter on the history of 'Omān in the first volume of this Gazetteer. The title of Imām is inapplicable to the present ruler, who has

From the map it would seem that some of the distances have been underestimated or that a very high rate of travel has been assumed.

The following itinerary has been furnished by the Rev. Mr. Cantine of **Masqat**: the hours represent about $2\frac{1}{2}$ miles each:—

Matrah to **Ghubrah** in the **Masqat** District, 4 hours; **Ghubrah** to **Misfah** in **Wādī Bōshar**, 5 hours; **Misfah** to **Bidbid** in **Wādī Samā'il**, $5\frac{1}{2}$ hours; **Bidbid** to **Sarūr** in the same, $2\frac{1}{2}$ hours; **Sarūr** to **Hisn Samā'il** in the same, $3\frac{1}{2}$ hours; **Hisn Samā'il** to **Fanjah** in the same—apparently by **Wādī Dhaba'un**—, 6 hours; **Fanjah** to **Buwah**, 4 hours; **Buwah** to **Lājāl** in **Wādī Lājāl**, $3\frac{1}{2}$ hours; **Lājāl** to **Nakhl**, $3\frac{1}{2}$ hours; **Nakhl** to **Ghubrat Pani Ruwāhah** in **Wādī Mistāl**, 5 hours; **Ghubrat Bani Ruwāhah** to **Hijār** in the same, 5 hours; **Hijār** by **Ghubrat Bani Ruwāhah** to **Ibāi** إبي in **Wādī Ma'āwal**, 8 hours; **Ibāi** to **Barkah** on the **Bātinah** coast, 7 hours; **Barkah** to **Sīb** on the same, 6 hours; **Sīb** to **Matrah**, 8 hours.

It is understood that nearly all the routes enumerated are passable by camels and that sufficient water and grazing are available by the way.

never qualified for the semi-religious dignity of the Imamate, and he is commonly mentioned as the Saiyid. The term is not free from ambiguity however, for each member of the ruling family is also a Saiyid, though not *the* Saiyid; and the term Sultān, though possibly a British invention, * appears to be coming into general use in the capital and its vicinity.

General administration.—The government of 'Omān is without system or efficiency, and outside the districts of **Masqat** and **Bātinah** the Sultān's authority is either precarious or merely nominal. The Sultān is represented at a number of points by executive officials styled **Wālis**, who exercise their powers, according to the will of their master, to the extent which the means at their disposal permit; and there are, at some less important places, minor civil or military officials who receive their orders from the Wāli nearest them. The town of **Masqat** is ruled by the Sultān personally, but at **Matrah** there is a Wāli, the only official of that rank in the **Masqat** or head-quarters district. In **Bātinah** there are Wālis at **Sib**, **Barkah**, **Masna'ah**, **Suwaiq**, **Khābūrah** and **Sohār**; and the Wāli of **Sohār**, whose charge is in some respects the most highly organised in the Sultanate, is assisted by deputy-Wālis at **Saham**, **Liwa** and **Shinās**, each of whom is responsible for a defined district and for certain specified villages. In the **Hajar** hills the Sultān has Wālis at **Nakhl** and **Hisn Samāil** and outposts in charge of minor officials at 'Awābi, **Bidbid**, **Mizāhit**, **Hibi**, **Haiyadh**, and **Burj-ash-Shikairi**; the last three are subject to the Wāli of **Sohār** and the others to the Wāli of **Samāil**. In the **Rustāq** portion of Western **Hajar** there exists what is practically an *imperium in imperio*, held by a distant relation of the Sultān over whom he has no real control. On the coast of Eastern **Hajar** there are Wālis at **Quryāt** and **Sūr** and a post at **Hadd** under the Wāli of **Sūr**; but the position of the **Sūr** Wāli is extremely difficult, and at present he is to a large extent merely a spectator of events (1905). 'Arāqi, close to 'Ibri, is the seat of a Wāli and the Sultān's only post in **Dhāhirah**. In 'Omān Proper the Sultān has Wālis at **Izki** and **Nizwa** besides a post at **Manah** under the Wāli of **Nizwa**, but his position in this district is insecure and implies no real control.

In the detached district of **Ruūs-al-Jibāl**, where his authority

* If British, it may have had its rise in a misapprehension, the personal name of the ruler at the time of the first two treaties between **Masqat** and the East India Company having been Saiyid Sultān. It is noteworthy that on the pice minted by **Faisal-bin-Turki**, or to his order, he is variously described as "Imān of **Masqat** and 'Omān," "Sultān of **Masqat**, and 'Omān" and "Sultān of 'Omān."

is recognised rather than felt, the Sultān has a Wālī at **Khasab** ; and in the still more remote district of **Dhufār**, where Masqat rule is tolerated by the inhabitants rather than actively enforced by the Sultān, His Highness is represented at the present time by a substitute Wālī with his head-quarters at **Hisn**, by a garrison at **Murbāt** and by small detachments in other places.

In **Sharqīyah** and **Ja'alān** the Sultān has no official agents of any sort, and, though the Shaikhs profess allegiance to the Sultān of 'Omān, their attitude towards the present ruler makes it impossible to regard them otherwise than as semi-independent. The South-Eastern Coast of 'Omān between **Ja'alān** and **Dhufār** is valueless and its existence is ignored in the Sultān's administrative arrangements.

Gwādar is a Wālīship, and in the town and its environs the authority of the Wālī is complete.

Further particulars about the Sultān's 'posts are given in the paragraph on military forces below.

Criminal and civil Justice.—Criminal justice is dispensed in the name of the Sultān only in places which fall within the jurisdiction of his Wālīs. The most heinous cases, as of murder or extreme personal violence, are, if the culprit can be arrested, sent to the Sultān for disposal along with the witnesses of the crime ; and a person convicted by the Sultān of murder is frequently put to death by the same means as he employed to destroy his victim. Minor offences are tried by the Wālīs who are supposed to report their decisions to the Sultān : in these reparation to the person injured is usually exacted or, failing reparation, a term of imprisonment is awarded. The procedure is on the whole in accordance with Muhammadan law, but the requirements of the Qurān are not always strictly complied with. Outside the jurisdictions of the Wālīs there is no justice apart from the settlements which local Shaikhs are able and inclined to arrange on the basis of Arab customs of compensation and retaliation. Tribesmen are never surrendered to the Sultān by the tribal authorities as criminals for punishment.

Questions of civil right are adjudicated on by Qādhīs in the same manner as in other Muhammadan countries.

Finance.—The sea customs, here called ' Ushur, عَشْر , are the principal source of revenue in the Sultanate of 'Oman ; import duty is levied on all goods at the rate of 5 per cent. *ad valorem*, the maximum permitted by treaty. At all principal ports the customs

are now under direct management instead of being farmed, as formerly; payment of duty is accepted either in cash or in kind, and in the latter case the goods taken are generally sold by auction.

Subsidiary sources of income are the Zakāt زكاة and Bait-al-Māl بيت المال; but these terms, unless in the interior, are not employed in the strict Quranic sense. At places on the coast Zakāt, instead of signifying the impost authorised by Muhammadan law on agricultural produce and moveable property, denotes a virtual export duty which, though not fixed by treaty, is permitted by the British Government to be taken at the rate of 5 per cent. *ad valorem* in lieu of Zakāt proper; this concession has been made on account of the inability of the Sultān to collect the Zakāt in the up-country localities where it becomes due. On the seaboard Bait-al-Māl means not the public revenue from all sources, but the rent of shops and other property owned by the State.

It will be seen from the table given in the next paragraph, which is based upon inquiries made in 1906-07, that import duties and real and so-called Zakāt produce together a gross revenue of \$429,000, but that of this amount only \$290,700 or about Rs. 4,00,000 actually reaches the central treasury at **Masqat**; the remainder is absorbed in administrative expenditure at the places where the collections are made.

The Bait-al-Māl brings in about \$500 a year at **Masqat** Town and \$750 at **Matrah**, and the total proceeds of this tax are thus about Rs. 1,750.

In addition to the revenues of 'Omān the Sultān receives from the British Government a subsidy of which the origin is explained in the history of 'Omān; its amount is at present Rs. 7,200 per mensem.

The net annual public income of 'Omān from all sources is thus about—

	Rs.
from customs and Zakāt	4,00,000
from Bait-al-Māl	1,750
from the British subsidy	86,400
	<hr/>
or Rs.	4,88,150

As we shall presently see, this is supplemented to a slight extent out of the Sultān's private estate.

The expenditure of the Sultān is even more difficult to estimate than his revenue; it is certain however that his normal position is one of financial embarrassment. His personal expenses are small, but large sums are spent in placating discontented tribes of the interior and in supporting a multitude of parasites in his entourage; consequently he

forestalling his customs receipts by overdrawing on his customs officials, who are thus compelled to obtain advances from local merchants in anticipation of duty payable in the future.

Military and naval forces.—The following table shows the military posts and garrisons maintained by the Sultān in support of his civil administration, as well as the fiscal details referred to in the preceding paragraph :—

District.	Military post.	Strength of garrison.	Revenue collected (in \$)		Revenue reaching the Masqat treasury (in \$).
			Customs.	Zakāt.	
Bātinah	Barkah	20	3,000	1,800	1,200
Do.	Khābūrah	10	...	2,000	Nil.
Do.	Masna'ah	70	3,000	2,000	4,000
Do.	Sīb	40	...	1,000	1,000
Do.	Suwaiq	25	...	2,000	Nil.
Do.	Liwa	10	10,000 (with Hibi in Western Hajar)	25,000	Nil.

The total strength of the Sultān's forces is thus considerable; but the detachments are so small and dispersed that his army, if such it can be called, is everywhere powerless for aggressive action. When an effort that is more than merely defensive is required it can only be arranged by subsidising tribal levies, a method which experience has shown to be as ineffectual as it is expensive. The Sultān's soldiers or 'Askaris are partly foreign mercenaries; about 25 per cent. are Hadhramautis and 5 per cent. **Balūchis**, and these are the most reliable part of his force; but in some districts, as in **Dhufar**, they are altogether locally recruited and are consequently not to be depended on. The 'Askaris are without training and have no organisation unless by sections of about 20 men, each of which is supposed to be commanded by a sort of non-commissioned officer called an 'Aqīd عقيد. Every regular fort is in charge of a military commandant called a Jama'dār جمعدار. In the more important stations the 'Askaris are armed with breech-loading rifles. The Sultān has a number of old muzzle-loading guns, but not more than one or two of these are capable of being moved.

The once considerable navy of 'Omān is now represented by a single steam yacht, the "Nūr-al-Bahr," of 300 tons, mounting one 9-pr. R.M.L. gun and one five-barrelled Nordenfelt of .45 calibre.

*The ruling family.**—The descendants of Ahmad-bin-Sa'id, the founder of the ruling family, are now too numerous,—many of them being also

* Remarks on the principles of succession to the Sultanate in 'Omān will be found in the Government of India's Foreign Proceedings for November 1898.

obscure,—to permit of a complete genealogical table being drawn up ; but in the space given to 'Omān in the third volume of this Gazetteer will be found a table including all or most of those who retain any importance at the present time.

The present Sultān, Saiyid Sir Faisal-bin-Turki, G.C.I.E., is proprietor, as a private individual, of the following estates in his own territory :—

Where situated.	Nature of property.	Annual value.	How proceeds are disposed of.
'Auhi in the sub-Wilāyat of Sohār	Date-groves and cultivated land.	\$300	Assigned to Sulaimān-bin-Suwaylim, lately deceased, who was Wālī of Dhufār and in recent years of Sohār also.
Bidbid in Wādī Samāil	Date-groves.	\$2,500	Do.
Hail in Wādī-al-Hilti	Date-groves and cultivated land.	\$300	Do.
Khasab	Do.	\$1,000	Assigned to the Wālī of Khasab.
Manah	Grazing land.	Nil.	Assigned to the officer of Manah.
Nakhl	Date-groves and cultivated land.	\$1,000	Assigned to the Wālī of Nakhl.
Nizwa	Date-groves.	\$2,000	Assigned to the Wālī of Nizwa.
Quryāt	Do.	\$350	Assigned to the Wālī of Quryāt.
Ruwi	A few small date-groves.	...	Retained by the Sultān.
Samāil	Date-groves and land.	\$2,000	Assigned to the Wālī of Hisn Samāil.
Sidab	A few small date-groves.	...	Retained by the Sultān.
Wataiyah	Date-groves and cultivated land.	\$2,000	Assigned by the Sultān to his eldest son Taimūr.

The Sultān, as already remarked above and further explained by this table, is obliged to defray the expenses of government to some extent out of his own pocket.

Muhammad-bin-Turki, the brother of the Sultān, owns a small date-plantation at Raudhah in the **Masqat** District.

The Sultān possesses country-houses at **Bait-al-Falaj** and **Wataiyah** in the **Masqat** District and at **Falaij** in **Bātinah**.

Foreign interests.—Foreign interests in the 'Omān Sultanate, whether political or commercial, are predominantly British, and Britain is the only power represented by a Consul or Political Agent. France and the United States are each represented by a Vice-Consul. The only European firm at **Masqat** is British, as are also most of the European firms which have agencies there ; but some of the more recently established businesses in the arms line belong to French or Russian subjects,

There are at **Masqat** 12 European British subjects, also 32 British subjects or protected persons belonging to various races; and 2 of the last are found also at **Matrah**. Other British subjects or protected persons are either Hindus or Muhammadans, in the second case generally **Khōjahs**, and are distributed as follows :--

Place.	Hindus.	Muham- madans.	Place.	Hindus.	Muham- madans.
Barkah	11	1	Saham	10	6
Khābūrah	...	107	Shinās	9	...
Masna'ah	10	18	Sohār	8	13
Masqat	253	122	Sūr	28	31
Matrah	37	665	Suwaiq	7	34
Quryāt	9	1	Totals	<u>382</u>	<u>998</u>

A branch of the Arabian Mission of the Reformed (Dutch) Church of America is established at **Masqat**.

Uniformity of physical, social and political conditions throughout that part of 'Omān which extends from the frontier of the 'Omān **'OMĀN* (TRUCIAL)**
عمان

* The matter of this article and of the minor articles dependent upon it has been for the most part specially collected during the years 1904 to 1907. An abstract of the then existing information concerning Trucial 'Omān was completed by the writer in November 1904 from all available books and reports; it amounted to 17 printed foolscap pages and was only intended to serve as a basis for further investigation. Early in 1905 the writer visited **Shārjah** Town, where with the assistance of Mr. J. C. Gaskin, Uncovenanted Political Assistant in the Persian Gulf, and of 'Abdul Latif, Residency Agent at **Shārjah**, he was able to collect a quantity of fresh information. A series of articles prepared from the material thus obtained was ready in January 1906 and filled 55 octavo pages of print: this draft was circulated to the local officers whose attention it engaged during the whole of 1906. The greater part of the work of revision and amplification fell on Major P. Z. Cox, Resident in the Persian Gulf, who in July 1906 paid a special visit to **Fujairah**, and on K. B. 'Abdul Latif-bin-'Abdur Rahmān, Residency Agent at **Shārjah**, who undertook such of the inquiries as Major Cox was unable to carry out personally. In the next set of drafts, which appeared early in 1907 and extended to over 120 octavo pages of print, were incorporated the results of an important journey made by Major Cox in December 1905 from **Ras-al-Khaimah** Town to the **Baraimi** Oasis; also those of careful inquiries by the same officer regarding the **Dhafrah** tract; new data relating to communications obtained by Lieutenant C. H. Gabriel at the end of 1905; the facts contained in a series of useful reports by Captain F. B. Prideaux, Political Agent in **Bahrain**, on the whole coastal region between **Qatar** and **Abu Dhabi** Town; the observations of Commander W. S. Bowman of H. M. S. "Sphinx" on the islands of **Bū Musa** and **Tunb**, recorded after a visit to the same; and some remarks by Captain A. P. Trevor, Assistant Resident, on the islands of **Tunb** and **Nābiyu Tunb**, also founded on a personal inspection.

Sultanate on the east to **Qatar** and the **Jāfūrah** desert on the west requires that the region should be treated as a geographical unit.

For discussions of the ancient geography Sprenger's *Alte Geographie Arabiens*, 1875, and Miles *Note on Pliny's Geography of the East Coast of Arabia*, 1875, may be consulted.

The principal authority in regard to the geography of Trucial 'Omān has hitherto been the *Persian Gulf Pilot*, 1898, in which the coast and all maritime features are fully described, but little is said of the interior; similarly restricted in its scope, for the most part, is the older information contained in *Bombay Selections XXIV*, 1856. Valuable though early authorities on the country are Whitelock's *Account of the Arabs, etc.*, and his *Description of the Arabian Coast*, 1836-38, the former of which is occupied largely with the subject of population. Trade, as it was in 1863, and questions of local resources, taxation, etc., are fully dealt with by Pelly in his *Report on the Tribes, etc., around the Shores of the Persian Gulf*, 1863, in which some older statistics for 1826 and 1831 are also quoted. Recent topographical and other information regarding the interior is due almost entirely to Major P. Z. Cox, among whose communications the following are important: his *Notes to accompany Sketch Map of Route ... from Abu Thabi to Maskat* in the Proceedings of the Government of India in the Foreign Department for December 1903 (relating to the route between Abu Dhabi Town and the Baraimi Oasis); his letter No. 290 of the 2nd July 1903 in Foreign Department Proceedings for November 1902, (relating to the Shamailiyah district); and the enclosure to his letter No. 1800 of the 5th August 1906, as Resident in the Persian Gulf to the Secretary in the Foreign Department to the Government of India (describing the route from Rās-al-Khaimah Town to the Baraimi Oasis). The only other modern account of any part of the country at a distance from the coast will be found in the Rev. S. M. Zwemer's *Three Journeys in Northern Oman*, 1902; but a recent description of places on the coast, accompanied by photographs, is given by Burchardt in his *Ost-Arabien von Basra bis Maskat*, 1906.

The Annual Administration and Commercial Reports of the Persian Gulf Residency are the principal source of information in regard to trade.

The map which accompanies this Gazetteer is the most useful, for general purposes, of Trucial 'Omān; its predecessor in this respect was that known as *Parts of Arabia and Persia*, 1883, on the same scale. Smaller portions of the region are shown on a larger scale in the *Route of Lieutenant-Colonel Herbert Disbrowe ... and Captain Walter Powell ... from Dibba in the Indian Ocean to Ras-el-Khymah in the Persian Gulf*, 1865, and in the *Route taken by Major P. Z. Cox and Lieutenant C. A. Scott, R.I.M., from Ras-al-Khaima to Sohar via Baraimi*, 1905; the former of these is map No. 1366 in the Library of the Foreign Department, Simla, and the latter was reproduced by the Survey of India in 1907. *A Map of Dhafrah, Liwah, etc.*, 1906, compiled by Major Cox from native information, gives the topography of that tract so far as it could be ascertained and is filed as map No. 1367 in the Library of the Foreign Department, Simla; and one by Captain F. B. Prideaux, Political Agent in Bahrain, from a similar source,—*Map of Jāfūrah, 'Aqal, Mījan and Sabakhat Matti*, 1906, Foreign Department Library No. 1365—is the best for the tracts mentioned in its title, but is not of equal authority with Major Cox's Dhafrah map for those further to eastward.

The whole coast of Trucial 'Omān appears in Charts Nos. 2373-2374A and 2374-2374B of the *Persian Gulf*; and Chart No. 2375-753, *Entrance of the Persian Gulf*, contains parts of the same on a larger scale, viz., the stretch from Dibah

The name Trucial 'Omān.—The region in question consists of the actual possessions of the Shaikhs of 'Ajman, Abu Dhabi, Dibai, Umm-al-Qaiwain and Shārjah and of the territories of the tribes who, in fact or in theory, are directly subject to their influence ; but in Arabic it has no general name. Among the subjects of the 'Omān Sultanate the whole is known as Shamāl شمال, either on account of its position with reference to their own country or because of its exposure to the north-west wind ; and in Eastern Arabia, further to the northward, the part adjoining Abu Dhabi Town seems to be spoken of as 'Omān-ash-Shamālī because it is the northernmost part of 'Omān ; but neither of these terms is in common use among the inhabitants of the regions which they used to describe. The nearest approach to a recognised general designation is apparently Sāhil 'Omān ساحل عمان or Coast of 'Omān ; but this expression, though not unknown to the people of the country, is wanting in precision and distinctiveness and is far from being universally understood. In English official literature a part of the shore line has long been familiar under the name of " The Pirate Coast " ; but the term is not sufficiently comprehensive, and, at the present day, is obsolete and even misleading, inasmuch as the state of affairs which it once accurately connoted has long since passed away. Regard being had to a perpetual maritime truce which regulates the relations of the rulers to one another and to the British Government the pentarchy in question may be styled, not inappropriately, Trucial 'Omān* ; but it must be remembered that the trucial obligations of the Shaikhs do not extend to the interior of their dominions.

The component principalities of Trucial 'Omān are fully described elsewhere under their own names ; and the function of the present article is accordingly to correlate them, to describe the country and its inhabitants as a whole, and to dispose of certain matters (such as communications) which could not be dealt with piecemeal under the names of the separate principalities.

to Khor Fakkān on the eastern, and that from Sha'am to Dibai on the western side of the 'Omān Promontory. Of the coast between Abu Dhabi Town and the island of Yās the best delineation will be found in a *Trigonometrical Survey of the Arabian or southern side of the Persian Gulf from Abothubbee to Zaboot Island*, 1824 ; this was apparently once a chart numbered 19B, but it seems to have been withdrawn. A small sketch of *Part of Khor-al-Batīn* was prepared by Commander G. Sinclair, R.I.M., in 1906 for the information of the writer, and is now map No. 1364 in the Library of the Foreign Department, Simla.

* This name was suggested by Captain F. B. Prideaux, and in the absence of any other, either Arabic or English, it appears to be the most convenient, the most descriptive, and generally the most suitable for adoption.

Limits.—Upon the coast, Trucial 'Omān extends in the Gulf of 'Omān from Khor **Kalba** to **Dibah**, and in the Persian Gulf from **Sha'am** to Khor-al-'**Odaid**, the places named being all included in it; in other words its boundary between these two sets of points is the sea. Inland, its frontiers are more difficult to define; but it covers a considerable portion of the interior of the 'Omān Promontory. On one side there it is bounded by a line of uncertain course which runs from a spot between the contiguous villages of **Dibah** and **Bai'ah** on the east coast to **Rās Sha'am** on the west coast, and so divides it from the **Ruūs-al-Jibāl** district of the 'Omān Sultanate to the north; on another by a line, even more indeterminate, which leaves the Gulf between Khor **Kalba** and **Murair** and, after partially crossing the promontory in such a way as to exclude the **Mahādah** and **Jau** districts to the south, is eventually lost in **Khatam**. Westwards of **Khatam** the inland limit of Trucial 'Omān is at the commencement of the **Ruba'-al-Khāli** and **Jāfūrah** deserts.

Physical divisions.—Leaving out of consideration for the present the artificial political divisions of Trucial 'Omān, we find that it consists of a maritime belt (or **Taff** طاف) and islands; of inland plains; and of a mountain system: these we now proceed to describe.

Maritime features and islands of Trucial 'Omān.—The eastern coast—that washed by the Gulf of 'Omān—is bold, somewhat resembling the coast of **Ruūs-al-Jibāl**, and the hills in places come down to the water's edge. The western coast—that within the Persian Gulf—is low and monotonous. In the north the latter is diversified by occasional date groves, especially by those of the **Sir** tract between **Rams** and **Rās-al-Khaimah** Town, but as the coast trends away to south and west trees languish, and at **Abu Dhabi** they cease altogether. The hills, too, which near **Rās-al-Khaimah** Town form a pleasing background, rapidly recede inland and are soon lost to view from seaward as the coast is followed to the south-west. Salt-water creeks abound on this coast, and the lagoons at **Rās-al-Khaimah** Town and near the town of **Abu Dhabi** have a considerable superficies; yet there are no inlets of real importance. The creeks sometimes unite inland to form backwaters and mangrove swamps, which are separated by a short distance only from the coast; and quasi-islands, sometimes inhabited and sometimes not, are created in this manner. The best known instances of such islands are **Qurmah** between **Rams** and **Rās-al-Khaimah**;

Jazīrat-al-**Hamra**; the Siniyah island, formed by Khor-al-**Baidhah** near Umm-al-**Qaiwain**; **Zora**; the not altogether insulated site common to the village of **Khān** and to the Laiyah suburb of **Shārjah Town**; and, last but not least, the tract of country in which stands the town of **Abu Dhabi**. Beyond **Abu Dhabi**, as far as Khor-al-'**Odaid**, the coast is almost unknown; it is barren and generally low, but has some bluff headlands.

The only eminence and conspicuous landmark on the coast of Trucial 'Omān, **Dhafrah** being excluded, is **Jabal-al-'Āli** in **Dibai** territory.

In the Gulf of 'Omān the sea is deep at no great distance from shore. In the Persian Gulf, from **Sha'am** to **Abu Dhabi** it is open and free from dangers but rather shallow; here the coast lies open to the full fury of the **Shamāl**, there are no harbours or sheltered anchorages except for boats, and landing is often difficult. From **Abu Dhabi** to Khor-al-'**Odaid** the coast is adjoined by a labyrinth of islands, shoals and reefs, imperfectly surveyed and so intricate that even Arab vessels, if larger than pearl boats, avoid these waters. In this direction most of the space between the coast and the 20 fathom line,—which runs approximately from opposite **Shārjah Town** to the tip of the **Qatar** peninsula,—is occupied by pearl banks. Full details of these banks are given in the Appendix on the Pearl Fisheries.

A number of islands are associated with the coast of Trucial 'Omān, the most important being **Bū Mūsa**, **Tunb**, **Sīr Bū Na'air**, **Yās** and **Dalmah**; the last of these is adjoined by a number of others which are enumerated in the article on the **Abu Dhabi** Principality, and by **Shurā'awah**.

Inland plain of Trucial 'Omān.—The interior of a country so extensive naturally varies in character from one part to another, but, attention being for the moment confined to the non-mountainous portions, the variations are found to be less considerable than might have been expected. Almost the whole consists of sandy desert; uncultivable but not altogether destitute of natural vegetation or even of wood; the principal exceptions to the general infertility are the **Jiri** plain, the plain of **Dhaid** and the **Līwah** division of the **Dhafrah** tract, in all of which some cultivation, at least of dates, is carried on. These relatively small districts are fully described in the articles under the names indicated, and it is unnecessary to enter here upon the exceptional features which they present. Another tract of a different nature, which has no general name and which it is consequently impossible to make

the subject of an article, is described below in the paragraph on the topography of Trucial 'Omân. The only remaining portion of the country is that which lies between the sea and an imaginary line joining **Rās-al-Khaimah** Town to the **Baraimi** Oasis : it ends southwards in the district of **Khatam** which is elsewhere described under its own name. So far as can be ascertained this portion, from **Rās-al-Khaimah** as far south as **Dibai** Town, is not entirely composed of sand dunes, but contains also level shingly plains with sparse acacia vegetation ; southwards from **Dibai** the whole surface appears to be sandy and undulating, but desert vegetation and wells and water holes are still sufficiently plentiful to support a scanty Bedouin population. In the whole of this region no running water is found except in one subterranean aqueduct which irrigates the settlement of **Falai** ; but there are numerous wells, sunk generally on the banks or in the beds of dry watercourses, and sometimes in spots which from their elevated position might have been supposed unsuitable for the purpose. On the **Rās-al-Khaimah-Baraimi** route these wells are generally from 40 to 60 feet deep and are lined for 8 or 10 feet near the surface with timber or rough-hewn stones brought from the hills.

Acacias, which are the commonest kind of tree, are of the **Ghāf** and **Samr** varieties ; the **Ashkar** shrub, the **Markh** bush, and grass of the kind called **Arta** are frequently met with ; and the dwarf tamarisk, the wild castor oil plant, and a bulbous grass called **Qufa** are also found. Other sorts of vegetation which afford grazing are **Rimth**, a species of **Salsola** which, when green, is eaten by camels ; **Halam**, a small sand plant ; **Thamām**, a coarse grass which eventually dries up into twigs and becomes inedible ; and **Qasad**, a small vivid green shrub of the caper tribe : the last three are eaten by livestock of all kinds. There is also a bright green edible weed, somewhat resembling mignonette, which is called **Haram**.

Hills of Trucial 'Omân.—The only mountainous part of the country is in the east, where a section of the spinal range of the 'Omân Promontory is included : this section is the part between a line joining **Dibah** to **Sha'am** on the north, and another, on the south, which runs inland from **Khor Kalba**, first westwards then southwards, so as to curve round the northern and western sides of the **Mahādah** tract and the hills connected with it. The hill tract of Trucial 'Omân is thus about 50 miles in extent from north to south, and its average breadth seems to be about 20 miles. It is still almost entirely unexplored, the only part

of it as yet traversed by Europeans being that which lies on the direct route, through Wādi-al-Qaliddi, between Dibah and Rās-al-Khaimah; and even of this part no account appears to be extant. As seen from the west, from the Rās-al-Khaimah-Baraimi route, the mountains appear to be disposed in three more or less parallel ridges running from north to south: of these the westernmost terminates at a hill called Qumr قمر immediately behind the village of Adhan; and the second ridge, after curving slightly westwards, seems to continue the interrupted line of the first. The third or easternmost ridge contains the highest peaks and probably overlooks the Gulf of 'Omān: one of these high peaks, situated apparently 12 to 15 miles east of Adhan, is said to be named Jabal Sa'ta سعتا. It is possible, however, that these three ridges are apparent only, and that the hill system is more complex than from the west it seems to be. As Adhan in the Jiri plain is considered to be a village of Wadi Hām, it may be inferred that this valley pierces the whole mass of mountains from side to side and even conveys part of the drainage of the south end of the Jiri plain to the Gulf of 'Omān at Fujairah; but it has not been found possible to locate with certainty the true head of Wādi Hām: in any case, however, its average direction appears to be from north-west to south-east, and not from west to east as has hitherto been generally supposed. Wādi-al-Qor, further south than Wādi Hām, is the only other considerable valley that comes down to the sea from the hills of Trucial 'Omān on their eastern side. The drainage from the western slope of the hills never, apparently, reaches the Persian Gulf, but is swallowed up by the intervening sands.

Climate.—The climate of Trucial 'Omān in winter is pleasantly cool by day and cold at night, but frost is unknown: on the coast, in the same season, the weather is often boisterous. Between May and October the climate is excessively hot and trying; and during the worst of the heat, that is from May to September, travellers journey by night as much as possible. The rainfall is scanty and is believed to average about 5 inches a year. Most of the rain is received in midwinter, but there are also occasional showers in spring.

Population and tribes.—The people of Trucial 'Omān belong to numerous distinct tribes; indeed, the country is tribally one of the most composite and perplexing in the Persian Gulf. The comprehensive "Joasme" tribe, assumed by some writers, has no real existence. Only

the members of the family of the Shaikh of **Shārjah**, numbering at the present day about 20 adult males, are **Qawāsīm** (Jawāsīm) by blood ; and the use of the name to denote all subjects of the **Sharjah** Shaikh, though partially sanctioned by local practice, is really incorrect.

The following is a synopsis of the principal tribes of Trucial 'Omān :—

Tribes.	Singular.	Settled in Trucial 'Omān (souls).	Bedouins in Trucial 'Omān (souls).	Location.	REMARKS.
'Abādilah عبدالله	'Abdūli. عبدولي	1,150	See article 'Abādilah.
'Ali (Āl) آل علي	'Aliyi. عليي	6,750	See article Āl 'Ali.
'Amīm (Āl Bū) آل بو عميم	'Amīmī. عميمي	120	...	Abu Dhabi Town.	Originally, it is said, Bani Tamīm; but now practically merged in the Bani Yās.
'Awāmīr عوامر	Āmīri. عامري	...	Uncertain and fluctuating.	None in particular.	See article 'Awāmīr. Some of the tribe come as far west as Shārjah Town in spring for the sake of the grazing.
'Awānāt عوانات	'Awāni عواني	50	...	Khatt in the Jiri plain Dibah and Jazirat-al-Hamra.	This tribe is now practically extinct; and, according to some, those who remain are not genuine 'Awānāt. Some say that the 'Awānāt were slaves of the Qawāsīm; others that they were connected with the Maqābil.
Bahārinah بحارنه	Bahrāni. بحراني	600	...	Abu Dhabi and Dibai Towns.	See article Bahārinah.
Dahallāt دحيلات	Ad-haili. ادحيلي	200	...	Abu Dhabi Town.	By some regarded as a section of the Āl Bū Mahair.
Dahāminah دهامنه	Dahmāni. دهماني	150	...	Raha, Fashrah and Nushah in Wādī-al-Qor; also Manai'i in the neighbourhood of the same valley.	Sunnis and belong to the Ghāfiri faction.

Tribe.	Singular.	Settled in Trucial 'Omān (souls).	Bedouins in Trucial 'Omān (souls).	Location.	REMARKS.
Dhabābihah دبابحه	Adhbaihi. اذبيحي	200	...	Wādī Sfuni and its branch Wādī Naidain.	The descent of this tribe is unknown: they are said to be aboriginal.
Ghafalah غفله	Ghafaili. غفيلي	...	500	...	See article Ghafalah.
Halālamah حلاله	Hallāmi. حلامي	75	...	Abu Dhabi Town.	Formerly a section of the Bani Qitab, but now attached to the Bani Yās. In reli- gion they are Mālikī Sunnīs.
Hamīd (Bani) بني حميد	...	A few.	...	Hair in Shamai- liyah.	...
Hūwalah هوله	Hōli. هولي	1,500	...	Shārjah Town	See article Hūwalah.
Jalājilah جلالہ	Jalaijali. جليجلي	50	...	Furfār and Hail in Shamai- liyah; also Indūk in Wādī Nuslah, a side valley of Wādī- al-Qor.	The tribe is divided in allegiance between the Shaikh of Shār- jah and the rebel Shaikh of Fujairah. The name is gene- rally pronounced Yalāyilah.
Kaibi (Āl Bū) آل بو كليي	Kalbāni. كلباني	70	...	'Ajman Town	Perhaps a section of the Āl Bū Kharabān section of the Na'im.
Khaimah (Ahl Rās-al-) اهل راس الخيمه	...	2,000	...	Rās-al-Khaimah Town.	...
Khamārah خمارة	...	375	...	Abu Dhabi Town.	Originally from Khamīr in Persia. They are Mālikīs by religion and claim to be connected with the 'Utūb.
Kunūd كنود	Kindi. كندي	150	See article Kunūd.
Mahair (Āl Bū) آل بو مهيري	Mahairi. مهيري	5,500	100	...	See article Āl Fū Mahair.

Tribe.	Singular.	Settled in Trucial 'Omān (souls).	Bedouins in Trucial 'Omān (souls).	Location	REMARKS.
Mahārah محارة	Mahri. مكري	1,250	...	Rās-al-Khaimah Town.	The origin of this tribe is obscure; they appear to have some connection with the Za'āb, and according to a local tradition they are of the same stock as Mir Mahanna, the celebrated pirate of Rīg in the 18th century.
Mahārizah محارزة	Mahairizi. مكيرزي	250	...	Masāfi and Taiyibah in Wādi Hām.	Originally the Mahārizah may have been a section of the Sharqiyin; but it is admitted that in that case they have now seceded and become a separate tribe.
Manāsir منامير	Mansūri. منصوري	100	1,300	...	See article Manāsir.
Marar مرر	Marri. مري	1,350	350	...	See article Marar.
Māibah مسائبه	...	25	...	'Ajmān Town.	These are an off-shoot of the Na'im with an admixture of negro blood.
Matārish مطاريش	Matrūshi. مطروشي	1,000	...	Sharjah Town.	This tribe are found also in the Bātinah district of the 'Omān Sultanate.
Mazāri' مزاريع	Mazvū'i. مزروعي	1,400	See article Mazāri'. Those of the tribe who are clearly considered to be a section of the Bani Yās are excluded here.
Na'im نعيم	Na'aimi. نعيمي	3,500	See article Na'im.
Naqbiyīn نقبين	Naqbi. نقبى	1,800	See article Naqbiyīn.
Nāsir (Āl Bin) آل بن ناصر	Nāsiri. ناسري	120	...	Abu Dhabi Town.	These are said to be of the same stock as the Bāhārinah, but they are Sunnis by religion.

Tribe.	Singular.	Settled in Trucial 'Omān (souls).	Bedouins in Trucial 'Omān (souls).	Location.	REMARKS.
Qawāid قوائد	Qāidi. قائدي	...	250	At and in the neighbourhood of Shōkah in Wādi Hām.	By some they are believed to be an offshoot of the Mazāri', but this is doubtful. They own about 10 camels and 150 sheep and goats; but they also cultivate a little, and some of their number are semi-settled.
Qawāsim قواسم	Qāsimi قاسمي	60	See article Qawāsim.
Qitab (Bani) بني قتب	Qitbi. قطني	200	2,100	...	See article Bani Qitab.
Shahāirah شهاره	Ashhari. اشهري	125	...	'Asimah in Wādi Hām.	There is also a singular Shahyāri. The Shahāirah are considered to be aboriginal.
Shamaili (Fani) بني شميلي	Shamaili. شميلي	1,000	...	Shimil in Sir.	The Bani Shamaili are said to have been originally Jews (<i>sic</i>), but now they are closely connected with the Shihūh and may almost be regarded as a section of that tribe, though not included in either of its 2 main divisions. They are also called Shamaliyin شماليين. A few of them who are nomadic are found among the Shihūh in the Ruṭis-al-Jibāl district of the 'Omān Sultanate.
Shāqōsh شاوش	'Ajman Town.	The Shāqōsh are a section of the Bani Ma'in of Qishm.

Tribe.	Singular.	Settled in Trucial 'Omān (souls.)	Bedouins in Trucial 'Omān (souls.)	Location.	REMARKS.
Sharqiyīn شرقيين	Sharqi. شرقي	7,000	See article Sharqiyīn.
Shihūh شحي	Shihhi. شحي	2,500	See article Shihūh.
Shwaihiyīn شويحيين	...	2,050	...	Dibai and Sharjah Towns.	This tribe are apparently identical with the section similarly named of the Bani Ka'ab, with which tribe they still intermarry, but in this Gazetteer they have not been included among the latter. In religion they are Hanbalis.
Sūdān سودان	Suwaidi. سويدي	5,000	See article Sūdān.
Tanaij طنيجي	Tanaiji. طنيجي	2,500	1,500	...	See article Tanaij.
Thamairāt ثميرات	Thāmiri. ثاميري	120	...	Abu Dhabi Town.	The Thamairāt were originally Marar, but they are now reckoned among the Bani Yās.
Yās (Bani) بنى ياس	Yāsi. ياسي	10,000	2,000	...	See article Bani Yās.
Za'āb زعايب	Za'ābi. زعايب	3,500	See article Za'āb.
Zahūm زحم	Zahmi. زحمي	100	...	Siji near Wādī Hām.	They are said to have been formerly Sharqiyīn of the Hafaitāt section, but at the present time they are undoubtedly a distinct tribe.

Besides the foregoing there are about 1,400 Balūchis at Dibai Town, Ghāllah and Rās-al-Khaimah; 194 Hindus at Abu Dhabi, Dibai, Umm-al-Qaiwain and Shārjah Towns; 214 Khōjahs or other Indian

Muhammadans at **Dibai**, **Rās-al-Khaimah** and **Shārjah** Towns ; and Persians, some Arabicised and some not, about 2,400 at **Abū Dhābi** and **Dibai** Towns, **Khor Fakkān** and **Ghāllah**. Negro slaves are exceptionally numerous in the coast towns, but no separate estimate of them is possible and they may be taken as included in our tables among the Arabs to whom they belong. The Indians are not domiciled nor accompanied by their families. Here it may be useful to mention that the **Bayādīr** بيادير found in **Sīr**, at **Dibah**, and elsewhere *e.g.*, at **Khasab** in **Ruūs-al-Jibāl**, are not a tribe but a class,— the class namely of the agricultural labourer to whatever tribe he may belong. The singular of the name is **Baidār** بيدار .

The total number of Bedouins in Trucial 'Omān may be estimated in accordance with the table above at about 8,000 souls. In respect of settled population, however, the table is not exhaustive, and recourse must be had to the articles upon the principalities, from which it will appear that the figures are :—

Principality.	Settled inhabitants.
'Ajmān	750
Dhābi (Abu)	11,000
Dibai	10,250
Qaiwain (Umm-al-)	5,000
Shārjah	45,000
Total for Trucial 'Omān	<hr/> 72,000 <hr/>

By far the strongest numerically of the settled tribes are the **Bani Yās**, whose Bedouins also are the most numerous of any except the **Bani Qitab**. Next after the **Bani Yās** there rank, in point of numbers among the settled tribes, first the **Sharqiyīn** and **Āl 'Ali**, and then the **Āl Bū Mahair** and the **Sūdān**.

Political and religious distinctions.—Like the people of the 'Omān Sultanate those of Trucial 'Omān are divided between the **Hināwi** and **Ghāfiri** political factions, but **Ghāfirīyah** greatly predominate, the **Bani Yās** and the **Shihūh** alone being **Hināwi** ; and, whereas in the Sultanate the **Hināwīyah** are mostly **Ibādhīs** and the **Ghāfirīyah** mostly **Sunnīs** by religion, here the **Hināwīyah** are all **Sunnīs** of the **Māliki** school while the **Ghāfirīyah** are virtual **Wahhābis**. The **Wahhābiism** of Trucial 'Omān is not now, however, of the militant order ; it is generally described as **Sunniism** of the orthodox school of **Ibn Hanbāl**, and it even connives at the private consumption of tobacco, though not as yet at the

public sale of the same. Modern rifles are widely distributed among the people in both town and country.

Character, life and language.—The people of the western coast, at least those of the more northern parts, have shown themselves in the past a bold and energetic race. By their piratical exploits at the beginning of the 9th century they gained, under the misleading name of “Joasmees,” a permanent place in history; and they played a large part in the politics of the **Persian Coast**, especially of **Qishm** island, and in those of **Bahrain** and the 'Omān Sultanate. At the present day they lead a quiet and unobtrusive existence, but doubtless the old qualities are latent in them still.

The well-to-do classes on the coast of Trucial 'Omān have three meals a day; the first, called **Fakk-ar-Rīq**, فاك الریق or “Loosening of the Spittle,” is a kind of breakfast and consists sometimes of pancakes made of eggs, rice flour and sugar; the other two meals, at noon and evening, comprise rice with fish or meat, accompanied by dates and thin cakes of white bread. Coffee is drunk several times a day.

Virtually the whole free population is Arab, and Arabic is almost the only language spoken. Swahili, however, survives among negro slaves of the full blood.

Occupations and resources.—Pearl diving is, since the suppression of piracy, the principal and almost the sole occupation of the maritime population. In summer most of the able-bodied men, to the number of more than 22,000, are absent at the pearl banks; and the coast towns and villages are left to a great extent unprotected and deserted. The number of pearl boats in Trucial 'Omān is approximately 1,215, carrying on the average crews of about 18 men each: they are distributed as follows:—

Principality.	Number of boats.
'Ajmān	40
Dhabi (Abu)	410
Dibai	335
Qaiwain (Umm-al-)	70
Shārjah	360

In winter some of the pearl diving class take part in the ordinary sea fisheries, but the majority of them spend the season at home in idleness, supported by boat owners and contractors who thereby acquire, under the stringent rules of the industry, an indefeasible lien on their services for the next pearling season. A few of the seafaring class are employed on the cargo vessels mentioned in the paragraph on shipping below. Fish

are everywhere plentiful and excellent, and turtle are caught upon the islands.*

The settled population who do not live by the sea are herdsmen and agriculturists : to this class belong most of the non-nomads of the interior and of the eastern side of the 'Omān Promontory. The agricultural capabilities of the country are, however, very limited ; and cereals, such as wheat and jowari, are grown only in a few favoured localities such as **Sir** and the **Shamailiyah** district. Dates flourish in most places ; but on the west coast south of **Ras-al-Khaimah** Town they never fully ripen, for want of water, and are eaten fresh. Vegetables are raised at most places by means of well irrigation. Livestock are chiefly camels, donkeys, cattle, sheep and goats, and there is plenty of poultry ; but horses are few in consequence of the difficulty of feeding them ; the last are kept on barley and desert grass, with occasionally a little lucerne, which in places is grown among the date groves.

The Bedouins depend chiefly on their livestock for subsistence, but some of them take part in the pearl fisheries. In winter, when the weather is cool and grazing abundant, they are scattered far and wide in small parties ; but, as water and pasture become scarce with the approach of summer, they congregate in larger bodies around the more copious wells in the less inhospitable parts of the country. Favourite Bedouin summer resorts of this kind are the **Jiri** plain in the north and **Bainūnah** in the west. They own many camels and a number of donkeys ; but the latter are used only for work in the neighbourhood of the camps, and not for long caravan journeys.

Foreign trade.—Commercial statistics are available only for the larger towns on the western side of the 'Omān Promontory, and so much of the foreign trade of the country as is carried on from the **Shamailiyah** coast escapes observation : the amount of this trade is probably inconsiderable, but the fact of its non-inclusion should be borne in mind. Scrutiny of the trade statistics shows how artificial is the existence of the larger coast settlements of Trucial 'Omān and how entirely dependent they are on the proceeds of the pearl fishery for the means of purchasing the ordinary necessities of life, which they do not themselves produce.

Pearls are the only export of any magnitude, and the average annual value of those sent abroad (almost entirely to India) during the last seven years has been 67 lakhs of rupees : the second export in value is that of mother-of-pearl shell, worth only $\frac{1}{3}$ of a lakh of rupees per annum. **Dibai** is now the chief pearl mart of the Persian Gulf after **Bahrain** and

* See Appendix on Fisheries.

occupies in this respect the place formerly held by **Lingeh**; it has also supplanted **Lingeh** as the distributing centre for imported goods on the Arabian coast between **Ruūs-al-Jibāl** and **Qatar**.

The following are the chief imports with the average annual value of each during the past septennium (in lakhs of rupees):—grain and pulse, chiefly from Persia and India, $12\frac{1}{2}$; cotton piece-goods, from India, 4; dates and date juice, mostly from Turkish **'Irāq**, 3; coffee, from India, $2\frac{3}{4}$; miscellaneous provisions, from Persia, 2; and sugar, from or through India, $1\frac{1}{2}$. Considerable amounts of specie also pass in both directions.

In face of the facts it does not seem unreasonable to hold that all sources of profit here are subsidiary to pearl diving, and that if the pearl banks were to fail this coast would shortly be depopulated.

Shipping.—**Dibai** is the only steam port of Trucial 'Omān. Ten years ago **Dibai** was almost unvisited by European vessels, but in 1905-06 the number of steamers calling had risen to 34, all British, with a tonnage of 70,132; the progress of the place is a consequence of the decline of **Lingeh**. The number of native sailing vessels, — other than pearl boats, coasters and fishing boats, — owned in the ports of Trucial 'Omān is about 90, distributed as follows:—

Bidyah	10	Khaimah (Rās-al-) Town	15
Dhabi (Abu) Town	10	Qaiwain (Umm-al-) Town	1
Dibai Town	20	Rams	1
Fakkān (Khor)	5	and	
Ghāllah	10	Shārjah Town	18

The majority appear to be Sambūks, but a proportion of them are Baghlahs, and there are some jollyboats and Badans: these vessels are chiefly employed in running to India and ports of the Persian Gulf for supplies. The statistics of pearl boats are given in the Appendix on the pearl fisheries. Fishing boats not also used as pearlers appear to be roughly equal in number to pearl boats, but they are often extremely small. **Jazirat-al-Hamra** and **Sha'am**, though they have no large vessels, possess some coasters of a useful size.

Internal trade and manufactures.—Inland traffic is petty and is chiefly with the Bedouin tribes; but **Shārjah**, **Dibai** and **Abu Dhabi** divide with **Sohār** Town in the 'Omān Sultanate the trade, such as it is, of the **Baraimi** Oasis.

Local manufactures are few and none of them are exported. Fine sheep wool 'Abas are made at **Shārjah** Town, and daggers at **Rās-al-Khaimah**. A certain number of sailing vessels are built, chiefly at

Umm-al-Qaiwain; the average numbers launched annually are about 20 at that place, 10 at Dibai and 5 at Shārjah Town.

Topography.—The topography of nearly the whole of Trucial 'Omān is explained in the articles on the five principalities of which it consists, and in the various subsidiary articles to which clues are given in the articles on the principalities. Some additional facts may be learned from the paragraph on communications which follows below.

It only remains to deal in this place with the topography of a small landlocked tract which does not apparently belong to any one of the principalities in particular, and which has no general name; the centre of this tract is approximately the Madām plain which lies about 40 miles inland, south-eastwards, from Shārjah Town. The principal points of the tract in question are as follow * :—

Name.	Position.	Character.	REMARKS.
'Aiyōh عيوة	In the centre of the Madām plain.	A single well, lined at the top with timber.	The site is surrounded by acacias.
'Anaij (Ramlat) رملة عنيج	20 miles south of Aiyōh.	A narrow strip of rolling sand hills.	This tract lies east and west across the route from Rās-al-Khaimah Town to the Baraimi Oasis.
Badu' بدع	11 miles south by west of 'Aiyōh.	A group of water holes.	The site is a blind re-entrant among sand-hills, forming a branch of Wādī Samaini.
Dhakhar ذاخر	Between Ramlat 'Anaij and Bat-hah Surabīl on the right bank of the latter.	A well.	It is situated a little to the west of ordinary route between Rās-al-Khaimah Town and the Baraimi Oasis.
Fāyah (Jabal) جبل فايه	1 to 2 miles west of the ordinary route between Rās-al-Khaimah Town and the Baraimi Oasis, from Qallah Matāfīdh on the north to the Madām plain on the south.	A range of hills, reaching a height of about 1,000 feet; it runs north and south with a length of about 12 miles, and is roughly parallel to the main range of the 'Omān Promontory about	At the northern extremity of Jabal Fāyah are two fontaines rocks forming landmarks. They are known as Zibb-al-'Azab العزب, and Khadhā-al-Jāwīyah حدكات الجارية, names

* *Authority.*—Major P. Z. Cox from personal observation and inquiry. Most of the places mentioned in this table are shown in the map *Route taken by Major P. Z. Cox, etc., 1905.*

Name.	Position.	Character.	REMARKS.
		20 miles to the eastward of it.	of which the meanings are apparently obscene.
Fāiyah (Yahfar-al-) يعفر الفائية	8 miles north by east of 'Aiyōh.	A well similar to that of Hamdah.	This well is on the ordinary route <i>viâ</i> Wādī Hatta from Dibai to Shinās Town.
Gherif غريف	See article Gharif.
Hamdah حمد	10 to 11 miles south of Dhaid village.	A single well about 40 feet deep and timber-lined at the top	It is on the north bank of a hollow which forms the southern border of Qallah Mahāfidh.
Haza'-adh-Dhabi هزاع الظبي	17 miles south of 'Aiyōh. (The exact position is 24° 42' 18" north by 55° 49' 26" east.)	A well wooded strip of plain, 1½ or 2 miles in breadth, between Jabal Samaini and the right bank of Wādī Samaini.	The name means "The Gazelle's Bound". The place is also called Khasaib.
Madām مدام	Its centre is about 40 miles south-east of Shārjah Town.	A wooded plain several miles in diameter and containing various wells among them those of 'Aiyōh, Musāifi and Yidaiyah.	The plain is enclosed by the south end of Jabal Fāiyah on the north, by Jabal Rōdhah on the north-east, and by the northern part of Jabal Samaini on the east: on the west it is divided by Wādī Yidaiyah from a tract of sandhills. Madām is a camping ground of nomadic Na'im connected with the Baraimi Oasis.
Mahāfidh (Qallah) قلع محافظ	8 to 11 miles south of Dhaid village.	A stony plateau without water or grazing, about 20 feet higher than the country immediately to the north of it and 550 to 600 feet above sea level. It runs west and east and is 3 miles broad from north to south.	This plain slopes down gently from the base of Jabal Fāiyah on the west to the foot of the main range of the 'Omān Promontory on the east, and it also declines gradually from north to south. The soil is sound and hard, consisting of black sand and shingle; near to Jabal Fāiyah the

View at Haz'-adh-Dhabi, Trucial' Oman.

(MAJ P. Z. Cox.)

Name.	Position.	Character.	REMARKS.
Musaifi (Yahfar) يـحـفـر مـصـيـفـي	On the northern edge of the Madām plain, 2 miles west of Jabal Rōdhah.	A well.	sand is coarse and boulders take the place of shingle. There is only a single boring. At the top it is lined with timber.
Rōdhah (Jabal) جـبـل رـوـذـه	About 4 miles north-east of the middle of the Madām plain.	A detached hill about 1,500 feet high.	It forms a fine bluff peak.
Samaini (Jabal) جـبـل سـمـيـنـي	On the west side of the tract under consideration, from the Madām plain in the north to the southern extremity.	A hogbacked range running north and south for a distance of about 20 miles, and attaining in one place an altitude of about 2,000 feet.	This range is parallel to, but appears to be separated by an interval from, the main range of the 'Omān Promontory, which is to the east of it.
Samaini (Wādi) وادي سميني	In the southern part of the tract now in question.	A broad drainage hollow, enclosing the plain of Haza'-adhdhabī between itself and Jabal Samaini, and containing further down the water holes of Badu'.	It emerges from a V-shaped gap near the south end of Jabal Samaini and runs first 4 miles westwards, then 7 miles northwards, and then westwards again to the desert.
Sanaibil (Bat-hah) بطحة سنبل	Forms the southern boundary of the tract under consideration.	An ordinary drainage hollow or water scour.	It comes from the neighbourhood of Jabal Khadhra (which is connected with Mahādhab) on the east and goes westwards to the desert. The well of Dhākhra is on its right bank.
Yidaiyah (Wādi) وادي يدية	Along the western border of the Madām plain.	A fine Bat-hah or Wādi which descends, in this part of its course, from south to north.	On its right bank is the well of Yidaiyah, lined with wood like that of Masaifi.

Communications.—The principal routes of Trucial 'Omān may be divided into three groups, *viz.*, (1) those which lead across the 'Omān Promontory from the Persian Gulf to the Gulf of 'Omān, (2) those which

connect the western coast of the 'Omān Promontory with the Baraimi Oasis, and (3) those which run westwards through Dhafrah, providing access from the eastern parts of Trucial 'Omān and from the Baraimi Oasis to Qatar and the Hasa Sanjāq. We proceed to deal with them in the above order.

1(a). *Route from Rās-al-Khaimah Town to Dibah*.*—The places first passed are Falaiyah, Hail and Khatt in Sīr, which are reached at 6, 7 and 14 miles, respectively, from Rā-al-Khaimah Town. About $1\frac{1}{2}$ miles beyond Khatt the hills of the 'Oman Promontory are entered; and from this point the way lies up Wādī-al-Qaliddi to a pass near Muhtarqah village; the chief points passed between Khatt and Muhtarqah are given as Labānah لبنانه, Saram سمر, and Tuwiyain طويين, which are watering places, and the village of Ya'akal. From the pass near Muhtarqah, which is about half way from Khatt to Dibah and has good water, the route descends towards Dibah; and at five miles short of that place it emerges from the hills, continuing for the rest of the way over a plain grown with brushwood. The journey was performed (in the reverse direction to that described) by Colonel Disbrowe and Captain Powell in 1865, apparently in eight stages, but most of these were extremely short. The direct distance between the termini seems to be less than 25 miles, but the actual distance is probably about 40: the general direction is, roughly, from west-north-west to east-south-east.

1(b). *Route from 'Umm-al-Qaiwain Town to Fujairah*.†—This route runs across the desert by the wells of Muwaih مويه, Ghara غرة, and Umm-an-Naghūl أم النخول to the inland village of Falaj Āl 'Ali (or Falai), which is a dependency of Umm-al-Qaiwain and 16 miles distant, south-eastwards, from the same. From Falaj Āl 'Ali it continues 8 miles further, south-eastwards, to the Muraqqibāt wells in the vicinity of Dhaid. It then enters the hills, passes by Siji, and drops into Wādī Hām which it follows down to Fujairah. This route is said to present no difficulties to camel transport: its length, were it straight, would be under 60 miles, but in consequence of windings it is probably a good deal more than this. The average direction is nearly south-east.

* *Authorities*.—Partly Major P. Z. Cox from native information. Colonel H. Disbrowe, Political Agent, and Captain W. Powell, I.N., travelled this way in 1865; a sketch of the route by the latter is extant, but the report, if any existed, is now lost.

† From native information obtained by Major P. Z. Cox and Lieutenant C. H. Gabriel.

1(c). *Route from Shārjah Town to Murair.**—The first part of this route lies over open desert by the wells of Zibair زبير and Tāhil تاهل to Dhaid village, a distance of about 30 miles. From Dhaid it runs to the wells of Wushāh, and thereafter it enters Wādi-al-Qor, which it descends to Murair. It is asserted by native informants that Wādi-al-Qor has easy gradients and could probably be made practicable for wheeled traffic without great difficulty, but the statement must be treated with reserve. The distance direct from Shārjah Town to Murair is under 70 miles, but by road it must be considerably more. The general direction is about south-east by east.

The part of this route beyond Dhaid may be used also by travellers from Hamriyah and Umm-al-Qaiwain, those from Hamriyah making direct for Dhaid (25 miles) by the wells of Sirrah سره and Rafī'ah رفيعه, and those from Umm-al-Qaiwain following route No. 1(b) above as far as Falaj Āl 'Alī and then diverging to Dhaid (9 miles from Falaj Āl 'Alī).

1(d). *Route from Dibai Town to Shinās Town.†*—This route crosses the desert behind Dibai Town by the wells of Matinah مطينه, Khawānij خوانيج, Muhdathah محدثه, and Ghattah or Qatta قطا; passing over (or through) Jabal Fāiyah it arrives at the well of Yahfar-al-Fāiyah, 37 miles in a direct line from Dibai. It then falls into Wādi Hatta which it follows down to Shinās. The actual distance in travelling must exceed by a good deal the distance in a straight line—which is a little over 80 miles—between the extreme points. The average direction is south-east by east.

Travellers from Shārjah Town to Shinās may also avail themselves of this route, joining it at Ghattah or at Yahfar-al-Fāiyah.

2(a). *Route from Rās-al-Khaimah Town to the Baraimi Oasis.‡*—This route can be most conveniently described in tabular form, as follows :—

Starting point.	Halting place.	Character of halting place.	Description of the intermediate stage.
Rās-al-Khaimah Town	Hadathah حديثه	See article Jiri.	The total distance by road is 18 miles and the general direction south by west. The

* *Authorities.*—The same as for route No. 1 (b).

† *Authorities.*—The same as for route No. 1 (b).

‡ *Authority.*—Major P. Z. Cox, Political Resident in the Persian Gulf, from personal observation in a report submitted with his letter No. 1800 of 5th August 1906 to the Government of India.

Starting point.	Halting place.	Character of halting place.	Description of the intermediate stage.
			<p>route runs 2 miles south-westwards along the spit of sand upon which the town is situated; then turns the head of the harbour and goes eastwards over sand-hills for $1\frac{1}{2}$ miles, after which it drops into the Sir plain. The villages of Falaiyah, Hail and Fahlain, on the east, are passed at 6, 7 and 8 miles. Just beyond Fahlain the Jiri plain is entered and the route follows its western edge, the sand dunes of the desert being close upon the right, by the wells of Bū Ya'ilān at 14, and those of Hamrāniyah at 16 miles.</p>
Hadaithah	Faraikh فرایخ	See article Dhaid.	<p>The distance is 18 miles by road, and the direction is on the average south by west. The route continues to follow the western margin of the Jiri plain and passes the wells of Sā'idi at 5 miles. At $11\frac{1}{2}$ miles a high undulating tract of sand is entered, which continues for 4 miles and in which a winding course must be pursued. The remainder of the way lies down the sandy valley of Faraikh.</p>
Faraikh	Qallah Mahāfidh قلّه مَحْفَذ	See paragraph on topography above.	<p>The distance by road is 15 miles and the direction nearly due south. The Faraikh valley is followed for 2 miles, after which Wādī Manghōl (the northern boundary of the Dhaid plain) is crossed and the plain of Dhaid entered. Dhaid village is reached at a little over 5 miles. For 2 miles beyond the village the route lies over the open plain: it then drops into the bed of Wādī Kathairah, which it follows for 2 miles to the wells of Wushāh; it then cuts across another stretch of plain and</p>

Starting point.	Halting place.	Character of halting place.	Description of the intermediate stage.
Qallah Mahāfidh	Musaifi مصيفي	See paragraph on topography above.	<p>at 13 miles reaches the ascent to Qallah Mahāfidh. Just before this ascent is reached there is good grazing for camels; on the plateau beyond none is obtainable for some miles. Water for this halt is taken from Wushāh.</p> <p>The distance to the traveller is 18 miles, and the direction nearly due south. The Qallah Mahāfidh plateau is traversed for 3 miles; the hollow containing the Hamdah well is then crossed; and at 12 miles the well of Yahfar-al-Fāiyah is reached. Throughout this march, after Qallah Mahāfidh is left behind, Jabal Fāiyah is upon the right at one or two miles distance, and the path winds over a well-wooded sandy plain. An alternative halting place to Musaifi is Yidaiwi, also in the Madām plain but 6 miles further to the south-west.</p>
Musaifi	Haza'-adh-Dhabi هزاع الظبي	Do.	<p>The actual distance is 19 miles and the general direction is nearly due south. The route crosses between 10 and 12 miles a projecting tongue of the western sand desert. At 14 miles it falls into Wādi Samaini in which it continues almost until the halting place is reached.</p>
Haza'-adh-Dhabi	Misākin. مسكين (N.B.—This is not the Misākin well but a place near the right bank of Wādi Misākin higher up.)	See article Mahādah.	<p>The distance by road is 16 miles and the average direction of the track, which is crooked, is a little to the west of south. At 1 mile Wādi Samaini is crossed, and one of its tributaries is ascended from this point for 2 miles. The rolling sand-hills of Ramlat 'Anaij are then crossed for 3 miles, and at their conclusion Bat-hah Sanaibil is intersected. Sand dunes of milder and less barren appearance follow, and at 9 miles the peculiar well</p>

Starting point.	Halting place.	Character of halting place	Description of the intermediate stage.
Misākin	Jīmi Village in the Baraimi Oasis.	See article Baraimi Oasis.	<p>of Safwān is reached. At 11 miles the traveller crosses the dry lat-hah Nawai-i and ascends to the sandy Suiblāt-al-Khādim tract which continues for 10 miles: he then enters an extensive depression in the sandhills, the drainage of which is carried by Wādi Misākin.</p> <p>The distance by route is 20 miles, and the general direction is south-south-west. The route runs at first more west than south along Wādi Misākin, just before leaving which the Misākin well on the right is passed: for the next 4 miles it lies over the gentle sandy undulations of the Batīn-al-'Omān and the direction is southerly. After this it wanders for 7 miles in the difficult sandy desert of Ramlat Kahl. Mas'ūdi is the first settlement passed after dropping from the high sand-dun tract into the Baraimi Oasis.</p>

The total distance from Rās-al-Khaimah Town to Jīmi by this route is 125 miles, and the journey is generally performed by caravans in 6 to 8 days. There is no well-worn track, and no two caravans follow exactly the same course. Camel transport is the only kind used in travelling by this line; for donkeys—the only other beast of burden available—cannot, when laden, negotiate the sandy tracts that have to be crossed on the way. The wells along the route are generally from 40 to 60 feet deep and are lined for the uppermost 8 or 10 feet with timbers or rough hewn stone from the hills: the water is invariably raised by means of a leather bucket which is hauled by a rope over a pulley, the pulley being suspended from a trestle over the well mouth.

This route is the main artery of traffic in the 'Omān Promontory; the place of feeders to it is taken by routes 1 (b), 1 (c) and 1 (d) above, which intersect it at or near Muraqqibāt, Dhaid village and Yahfar-al-Fāiyah, respectively. There is reason to think that, by following a line somewhat further to eastwards and more closely adjoining the foot of

the main hills, a line might be found which could without much labour be adapted for wheeled traffic, and that it might not be difficult to connect such a road with the **Bātinah** coast by means of another road down **Wādi-al-Qor**.

2. (b) *Route from Dibai Town to the Baraimi Oasis**.—This route, which apparently runs straight across the intervening desert, is identical with route No. 1 (d) above as far as **Khawānij**. The names of points subsequently passed are given as 'Awīr العوير, **Habāb** هباب, **Badu'-al-Hilli** بدع الهلي, **Madhlūl** مظلول, **Faqa'** فقع and **Khasūb** الخصوب. The distance in a direct line is between 70 and 75 miles.

2. (c) *Route from Abu Dhabi Town to the Baraimi Oasis*.†—The distance is about 100 miles by the route ordinarily followed which runs a little south of east. The stages are **Maqta'**, where the creek behind **Abu Dhabi Town** is crossed, 10 miles; from **Maqta'** to **Sūq Iblis**, a rocky landmark, 14 miles; **Sūq Iblis** to **Nahshilah** نهشله, water holes, 28 miles; **Nahshilah** to **Bul Huwail**, wells, 15 miles; **Bul Huwail** by **Nasūriyah** نسورية to **Juhar**, water holes, 25 miles; **Juhar** to the **Baraimi Oasis**, 12 miles. Stages named **Habal** الحبل and **Muwaih Arnab** مويه ارناب, slightly more to the south, may be substituted for those of **Sūq Iblis** and **Nahshilah**. The track from **Maqta'** to **Baraimi** lies over a desert of sand dunes, and there is almost no grazing by the way.

Routes connecting the **Baraimi Oasis** with **Mahādhah** and **Mahādhah** with the route from the **Baraimi Oasis** to **Sohār Town** are shortly noticed in the article upon **Mahādhah**.

3. There is no fixed route between **Baraimi** or **Trucial 'Omān** and the **Hasa Sanjāq**, and different caravans follow different lines of wells across **Dhafrah** and the tracts beyond it. A straighter and more inland course is apparently preferred by travellers in winter; while those who make the journey in summer generally take a route less direct but nearer to the coast. **Sila'**, **Sakak** and the foot of **Dōhat-as Salwa** seem to be among the usual halting places in either season. The journey as a whole is not considered dangerous or even difficult; for water, though brackish, is found in many places, and it is seldom necessary to carry a supply

* *Authority*.—From native information.

† *Authority*.—Major P. Z. Cox from personal observation and enquiry.

for more than two days. A messenger can cover the distance from Baraimi to Hofūf in ten days; caravans take about a month.*

Administration.—Each of the five principalities of Umm-al-Qaiwain, 'Ajmān, Shārjah, Dibai and Abu Dhabi is ruled by an independent Shaikh, whose possessions on the sea coast are generally under full control; while all except the Shaikh of 'Ajmān, and particularly the Shaikh of Abu Dhabi, exercise some authority or influence over Bedouin tribes in the interior. For further details the separate article on each principality may be consulted.

Political position, foreign relations and foreign interests.—The political position of Trucial 'Omān in regard to Great Britain is difficult to define with exactitude; it is regulated in the main by two agreements, each of which has been signed by, and is individually binding upon, the five Shaikhs of 'Ajmān, Abu Dhabi, Dibai, Umm al-Qaiwain and Shārjah.

The earlier in date of these agreements is a perpetual truce, concluded in 1853, which provided for the entire cessation of hostilities at sea among the signatories, and imposed on the British Government the duty of enforcing peace and obtaining reparation for maritime aggressions committed in contravention of the arrangement. It is in virtue of this treaty that the Shaikhs of the principalities are styled Trucial Shaikhs and that their country may appropriately be styled Trucial 'Omān.

By the second treaty, signed in 1892, the Trucial Shaikhs bound themselves not to enter into any agreement or correspondence with a power other than the British Government; not to permit, without the assent of the British Government, the residence within their territories of the agent of any other government; and not to cede, sell, mortgage or otherwise give for occupation any part of their territories save to the British Government.

The exact international effect of these two agreements is a matter for publicists to determine, but taken together they evidently create preferential and almost exclusive relations between the British Government and the Trucial Chiefs,—relations which might be held to imply the dependence of the Shaikhs on the British Government in foreign affairs and a moral obligation on the part of the British Government to protect the Shaikhs in so far as they may be endangered, or disabled from defending

* Col. Miles (*vide* J. A. S. B. Volume XLVI, Part I, Nos. I—IV, 1877, pages 59-60) gives more precise directions than these, but the positions and even the order of his stages do not always agree well with the results of the most recent enquiries.

themselves, in consequence of the treaties of 1853 and 1892. That the existence of some such position has been in a sense recognised by the Government of the French Republic will be apparent on reference to the historical volume of this Gazetteer.

British subjects in Trucial 'Omān are distributed as follows and include at each place a proportion of women and children :—

Town.	Hindus.	Muhammadans.
Dhabi	65	<i>Nil.</i>
(Abu)		
Dibai	67	23
Qaiwain	11	<i>Nil.</i>
(Umm-al-)

TOTALS	194	214

If some Persians from the opposite coast and their concerns are left out of account, Great Britain is still the only foreign country which possesses any moral or material interests or subjects in Trucial 'Omān : for the protection of these a Native Agent of the Persian Gulf Residency is maintained at **Shārjah** Town. The subjects in question are the Indians, Hindus and **Khōjahs**, who are settled in the larger ports.

The name is very frequently pronounced 'Ojair. A coastal tract in the Sanjāq of **Hasa** containing the port of 'Oqair; it falls naturally within the main boundaries of **Biyādh** and should perhaps be regarded as forming part of that division.

'OQAIR
(BARR-AL-)
بر العقير

Boundaries.—Barr-al-'Oqair extends upon the sea from Tall-az-Zabanāt, on the south side of the entrance of Dōhat **Ruhum**, to Rās-as-Sufairah, a promontory of the mainland opposite the south end of **Zakhnūniyah** island; its length from north-north-west to south-south-east is thus roughly 38 miles. Its depth inland is undefined but small: possibly however the easternmost of the wells which are enumerated in the article on **Biyādh** (division VI) should be regarded as belonging to Barr-al-'Oqair, in particular those of **Dannān**, **Rughwān**, **Mijāma'ah** and **Sūwād**.

Physical characteristics.—Barr-al-'Oqair is similar in character to Barr-adh-Dhahrān, from which it is divided only by Dōhat Ruhum; like its congener it is inferior to the Dabaisi and Hushūm areas, but superior to the rest of Biyādh, and it contains many wells and numerous small date plantations owned and tended by the Bani Hājir.

Topography.—The principal features of the coast are the following, which are described in alphabetical order:—

Name.	Position.	Nature.	REMARKS.
Ajali (Rās Abu) (spelling uncertain)	5 miles due north of 'Oqair Port.	A cape.	...
Bazkhah (Tall-al-) تل البرخه	17 miles south-east by south of 'Oqair Port, opposite Zakhnūniyah island towards its south end.	A hillock at the coast.	The bay on which it is situated is similarly named, Lōhat-al-Bazkhah.
Dhalūm (Lōhat) ظلم	From Rās-al-Qaraiyah on the north to Rās-al-Madhbah on the south.	A bay.	It is nearly 7 miles in extent from north to south, but the indentation which it forms in the coast is slight. (In the present Charts the name "Dūhat Thalūm" is wrongly given to Dōhat Ruhum <i>q.v.</i>)*
Hamaidiyah (Tall-al-) تل الحميديه	2½ miles north-north-west of Rās Abu Ajali.	A sandy hill near the shore.	It is stated that a small collection of fresh water sometimes exists 2 or 3 miles inland from this hill. In the present Charts the name "Hamadiya" is wrongly given to Tall az-Zabnāt at Dōhat Ruhum <i>q.v.</i>)*
Idhaim Island (spelling uncertain)	About 1 mile east of the south end of Zakhnūniyah island and the same north of Rās Limail.	An island about 1 mile square.	Idhaim may be regarded as a satellite of Zakhnūniyah.
Madhbah (Rās-al-) راس المذبح	6 to 7 miles south of Rās-al-Qaraiyah and 7 to 8 miles north-north-west of Tall-al-Hamaidiyah.	A cape.	Forms the southern point of Dōhat Dhalūm.

* This error has been established by Captain F. E. Prideaux, Political Agent in Bahrain, by very careful enquiry. See also the article on Dōhat Ruhum.

Name.	Position.	Nature.	REMARKS.
Mamlahah (Dohat al-) دوحة الملاحه	From Tall-az-Zabanāt on the south side of the entrance of Dohat Ruhum to Rās-al-Qaraiyah.	A bay.	It is about 3 miles in extent from north to south, but does not run any distance inland.
'Oqair Port العقير	64 miles south by east of Qatif Town and 24 miles west-south-west of the southern extremity of Bahrain Island.	...	See article 'Oqair Port.
Qaraiyah (Rās-al-) رأس القرية	4 miles south-south-east of Tall-az-Zabanāt on the south side of the entrance to Dohat Ruhum.	A cape.	Forms the south point of Dohat-al-Mamlahah and the north point of Dohat Dhalūm. On it stand a few deserted houses and a ruined fort (In the present Charts the name "Kureya Point" is wrongly given to Fās Bīraq t on the north side of Dohat Ruhum g. v.) *
Sufairah (Rās-as-) رأس السفيرة	3 miles east of Tall-al-Bazkhah and opposite the extreme south end of Zakhnūniyah island.	Do.	Barr-al-'Oqair ends, southwards, at this point.
Zakhnū- niyah زخنييه Island	About 2 miles off the coast of Barr-al-'Oqair, 10 miles east-south-east of 'Oqair Port.	...	See article Zakhnū-niyah island.

By the Turks called Askalat-al-'Oqair اسكالة العقير; the name is very frequently pronounced 'Ojair. The port of 'Oqair is situated in Barr-al-'Oqair in the Hasa Sanjaq about 64 miles south by west of Qatif Town

'OQAIR†
العقير
PORT

* This error has been established by Captain F. B. Pridaux, Political Agent in Bahrain, by very careful enquiry. See also the article on Dohat Ruhum.

† Described by Captain J. A. Douglas in his *Journey*, 1897, and by Herr H. Burchardt in his *Ost-Arabien von Basra bis Maskat*, 1906.

and 24 miles west-south-west of the southern extremity of **Bahrain** Island; **Hofūf** lies about 40 miles in a direction south-west by west.

'Oqair stands on the south-western shore of a bay* which runs inland north-north-westwards for about 4 miles. The point round which the bay turns in taking this peculiar course—almost parallel to the coast outside it—is Rās Saiya راس سية, a low sandy promontory covered with scrub; the entrance to the bay, on the south of this cape, is 200 or 300 yards wide. The entrance channel and part of the bay inside are 3 to 4 fathoms deep; but the sea without is shallower, in places, and dangerous for ships.

The only buildings at 'Oqair are a fort and a large Khān or caravan-sarai which closely adjoin one another. The fort is an old dilapidated building with bastions at the corners. The Khān is a spacious enclosure 150 yards long by 80 broad; it consists of a wall 16 feet high which has sheds on 3 of the inner sides with a parapet of 3½ feet above them; the entrances to the enclosure are in the centres of the front and rear faces. The Khān contains 3 shops, and all travellers passing through 'Oqair lodge in it. The ordinary water supply of the place is from sand pits at a spot called Abu Zahmūl رمل, a short distance south-west of the fort; if better water is required it is fetched from the wells of Sūwād in **Biyādh** (VI).

The civil population of 'Oqair consists of a customs Mudir, who lives in the fort; and of a few petty Turkish officials, including a Rāis-al-Limān or harbourmaster, and some agents of merchants in the **Hasa** Oasis, who reside in the Khān. A military detachment which was quartered here as lately as 1897 has been withdrawn, and the garrison now consists of 50 mounted and 20 unmounted Dhābitiyahs. The surrounding Arabs are Bedouins of the Āl **Morrah**, 'Ajmān and Bani **Hājir** tribes.

'Oqair is the port of the **Hasa** Oasis and indirectly, to a considerable extent, of Southern **Najd** as well: the imports are chiefly rice, piece goods, coffee, sugar and hardware. The volume of trade is considerable and it has been estimated that on the average 200 to 300 loaded camels leave 'Oqair every week for the interior.

'Oqair is the headquarters of a Nāhiyah in the **Hasa** Qadha. The customs of the port are stated to have been leased in 1904-05 for a sum equivalent to £5,148 sterling; and in the following year a larger amount was obtained.

*A rough plan of the 'Oqair inlet will be found in Douglas's *Journey* opposite page 5.

The districts of the Persian Coast of the Gulf are described elsewhere, each under its own name; but the districts are so numerous, their physical differences though subtly graduated are so considerable, and the adminis-

**PERSIAN
COAST
OF THE
PERSIAN
GULF***

* This principal article on the Persian Coast and the numerous related articles on the districts, etc., of the same depend mainly upon special investigations made in connection with the present Gazetteer between 1904 and 1907. An abstract of the information at the time available was compiled by the writer in November 1904, amounting to 28 foolscap pages of print, and was circulated to all local officers for further enquiry and report. Want of time prevented the writer, though he visited Būshehr and Bandar 'Abbās on tour in the winter of 1904-05, from personally initiating the new enquiries upon the Persian Coast; consequently the whole of the arrangements for procuring information devolved here from the first upon Major P. Z. Cox, the Political Resident at Būshehr, and upon his subordinate officers.

In the operations of 1905-06 the districts north of Būshehr, and also those south of it as far as Dashti, were dealt with by Āgha Muhammad Mohsin and Āgha Muhammad Khalil, native Persian gentlemen, working under the direct superintendence of the Residency; the districts of Shībkūh and Līgeh were disposed of by Khān Sāhib Āgha Badar-bin-Muhammad Amin, Residency Agent at Līgeh, who also supplied some information regarding the districts of Dashti and Tangistān included in the Būshehr circle; Lieutenant W. H. I. Shakespear, British Consul at Bandar 'Abbās, reported on Bandar 'Abbās, the districts of Shamil, Mināb and Biyābān and the islands of Qishm, etc., which fell within the limits of his political charge; and Mr. R. W. Lobo of the Indo-European Telegraph Department submitted a monograph on Hanjām. The Līgeh Agent was assisted by Āgha Muhammad Khalil. The data obtained were worked up by the writer into draft articles, which were ready in March 1906 and extended to about 200 printed octavo pages.

The revision of the draft by the local officers occupied the remainder of the year 1906, and a personal share was taken in it not only by most of the officers who supplied the original information, but also by Major Cox, the Resident; Captain A. P. Trevor, Assistant Resident; Mr. J. H. Bill, Assistant Resident; Captain de V. Condon, Residency Surgeon; and Mr. H. Whitby Smith, Director of Persian Gulf Telegraphs. Lieutenant R. L. Birdwood, 2nd Assistant Resident, made a special tour in the Mināb and Biyābān districts, on the villages of which he reported in detail; and Mr. G. Grahame, Consul at Shīrāz, afforded valuable information in regard to administrative divisions. An improved draft, founded on these further investigations, was finished by the writer early in 1907 and extended to over 250 pages: portions of it were again sent to the Gulf for further correction and completion. The work remaining at this time fell chiefly to Mr. Bill and to Lieutenant C. H. Gabriel, who had now succeeded Lieutenant Shakespear as Consul at Bandar 'Abbās.

A list of publications bearing on the districts, islands, etc., of the Persian Coast is given below, but many useful works are omitted from it—e.g., those of Niebuhr, Morier and Binning—in which the author has dealt but slightly with the region in question, or has subordinated geographical topics to others. The following are concerned expressly with the whole or with portions of the Persian Coast region: Kinneir's *Geographical Memoir of the Persian Empire* (with map), 1813; Buckingham's *Travels in Assyria, Media and Persia*, 1829; Fraser's *Historical and Descriptive Account of Persia* (with map), 1834; Kempthorne's *Notes made on a Survey along the Eastern Shores of the Persian Gulf*, 1835; Winchester's *Note on the Island of Karrack*, 1838; Whitelock's *Descriptive Sketch of the Islands and Coast situated at the Entrance of the Persian Gulf*, 1838; Bombay

trative arrangements are so complex and confusing, that a general statement is required to present the tract as a whole in its physical and administrative aspects. A few general remarks on currency, weights and

Selections. XXIV, 1856; Monteith's *Notes on the Routes from Bushire to Shiraz*, 1857 (but refers to 1810); Colonel L. Pelly's *Remarks on the Tribes, etc.*, 1865; Colonel Pelly and Dr. Colvill's *Recent Tour round the Northern Portion of the Persian Gulf*, 1865; Colonel Pelly's *Remarks on a Recent Journey from Bushire to Shiraz*, 1865; Mr. H. W. Warner's *Report on the Bay and Fort of Sheeroo*, 1865; Colonel Pelly's *Remarks on the Port of Lingeh, the Island of Kishm, and the Port of Bunder Abbas. etc.*, 1865; Dr. W. H. Colvill's *Land Journey along the Shores of the Persian Gulf from Bushire to Lingah*, 1867; Mr. J. R. Prece's *Notes of a Journey made between Shiraz and Jashk* (with map), 1884; and Lord Curzon's *Persia*, 1892. Reports by Dr. Colvill on the Persian Coast were forwarded to Government by the Resident with his letters No. 73 of 31st December 1864 and No. 46 of 4th May 1866. Besides these there are a number of military works on Persia dealing with the southern districts upon the Gulf, mainly from the military point of view; such are Lieutenant R. E. Galindo's *Record of Two Years' Wanderings in Eastern Persia and Baluchistan*, 1890; Captain H. B. Vaughan's *Report of a Journey through Persia*, 1890; and his *Reconnaissances in Persia*, 1892; the *Gazetteer of Persia*, 1892; Surgeon-Major G. W. Brazier-Croagh's *Reconnaissance through Persian Baluchistan and Eastern Persia*, 1895; *Routes in Persia* (with index map), 1898; and a *Military Report on Southern Persia* (with sketches and maps), 1900. The *Persian Gulf Pilot*, 1898, is the best authority upon the coast and all maritime features. An apparently valuable source of information which came into the writer's hands too late to be utilised in connection with the present *Gazetteer* is a bulky volume in Persian, descriptive of the entire province of Fārs and accompanied by a large scale map: it is entitled *Fārs-Nāmah-i-Nāsiri*, was lithographed in 1895, and is the work of Hāji Mirza Hussein, Fāsā'. It is probably a good authority for the spelling of names, and it explains by means of village lists the administrative organisation of the province.

The subject of trade has hitherto been treated of from year to year in the *Persian Gulf Administrative Report*, but the place of the latter for this purpose has now been taken by various commercial and consular reports. Recent reports of value on questions of trade are Mr. H. W. Macken's *Conditions and Prospects of British Trade in Persia*, 1903, and Mr. A. H. Gladstone-Newcomen's *Commercial Mission to South-Eastern Persia*, 1906.

The principal work on the ancient geography of the Persian Coast is Mr. Le Strange's *Lands of the Eastern Caliphate*, 1905, and the following also deal with the same or with kindred subjects: Vincent's *Voyage of Nearchus*, 1797; Kemptorne's *On the Ruins at Tahrir*, 1838, and his *Narrative of a Visit to the Ruins of Tahrir*, 1857; Captain A. W. Stille's *Ancient Trading Centres of the Persian Gulf*, viz., I. *Siraf*, 1865, II. *Kais*, 1896, III. *Pre-Muhammadan Settlements*, 1897, V. *Kung*, 1899, and VI. *Bandar Abbas*, 1900; also his *Persian Gulf Notes—Kharag Island*, 1898.

The principal maps of the Persian Coast region at the present time are the Survey of India's *South-Western Asia* series, Sheets Nos. 72 S. E., 73 N. E. and S. E., 74 N. E. and 89 N. W., S. W., and S. E., also their *North-Western Frontier* series, Sheets Nos. 7 N. W. and S. W.: most of the foregoing are correct to date being founded on surveys by Lieutenant A. A. Crookshank, R.E., and K. S. Sher Jang, Surveyor, in 1900-02. These have been utilised in the compilation of the map which is issued with the present *Gazetteer*. A useful map in its day and

measures also find their place most appropriately in this article. For information on topics not dealt with below the reader is referred to the articles on the separate districts.

Physical conformation.—The Persian littoral tract is monotonous, but not without variety of detail. It may be described in general terms as a narrow strip of flat land, situated between the sea and a great maritime range of limestone which runs parallel to the coast. Inland from **Būshehr**, however, and again between **Bandar 'Abbās** and **Mināb** at the entrance of the Gulf, the hills retreat from the coast with the effect of widening the maritime plain; and behind **Lingeh** the same effect is produced in a different manner by the projection of a low sub-montane tract outwards into the Gulf. At one part of the coast, from **Kangūn** to **'Asalu**, the maritime range may be said to fall directly into the sea, and here the littoral plain is in abeyance; in other places the plain is itself diversified, or is screened from seaward, by subsidiary ridges and hills which only the most recent survey enables us to distinguish from the main maritime range.*

We may now proceed to examine the conditions more in detail, by sections of coast-line taken in order from the head to the entrance of the Gulf.

The first section consists of the coastal districts of **Lirāvi** and **Hayāt Dāvud** and the inland district of **Shabānkāreh**. Here the configuration may be styled normal, for these three districts compose a plain from 15 to 20 miles in depth inland, of which the surface is unbroken save by the **Kūh-i-Bang** ridge skirting the coast at one place for about 12 miles. The true maritime range is here of no great elevation and

still of service is Colonel E. C. Ross's *Sketch Map of Fārs*, which is included with the Persian Gulf Administration Report of 1875-76. Recent and special Survey of India maps are *Bushahr* (i.e., the whole **Būshehr** Peninsula), 1904-05, and a *Map of Parts of the Behbehān, Hindiyān, Jarrāki and Fallākhīyeh Districts* by Janna Parshad, Surveyor, 1905. A good map of communications in Persia was published by the Postal Department of that country in 1906.

Marine surveys and charts are: the *Persian Gulf*, No. 2373-2837A. (with insets of **Chārak**, **Chiru**, **Hanjām**, **Qais** and **Qishm**); the *Persian Gulf*, No. 2374-2837B. (with insets of **Shaikh Shu'aib**, **Khārag**, **Khārgu** and **Būshehr**); the *Entrance of the Persian Gulf*, No. 2375-753; *Basidu*, No. 2376-35; and *Abu Shahr*, No. 2378-27, now superseded by a preliminary chart of the same which depends on a re-survey of the harbour by Captain T. H. Heming, R.N. (retired), in November 1904.

* Distant views of the coast range from the sea between **Būshehr** and **Shivuh** are given in Chart No. 2374-2837B., and between **Shivuh** and **Bandar 'Abbās** in Chart No. 2373-2837A., *Persian Gulf*.

behind **Dīlam**, where it most nearly approaches the coast, it is only about 1,000 feet in height. The plain itself in this section consists in some places of grass lands and in others of good arable soil ; here and there it is pierced by light-grey protruding sandstone rocks, and everywhere it is more or less seamed by lines of drainage from the hills.

The second section of the littoral tract comprises the littoral districts of **Rūd-hilleh**, **Angāli**, **Dashtistān** and the **Būshehr** Peninsula, besides the small districts of **Zira** and **Mazāra'i** which are cut off from the sea by the others. This is one of the exceptional parts of the coast, for, partly by the receding of the hills in a curve that passes inland of **Dāliki** and partly by a protrusion of the coast about **Būshehr**, the depth of the sub-montane region is here increased to about 45 miles, the greatest width which it anywhere attains. Moreover this section is distinguished by the possession of a river, the **Rūd-hilleh**, which gives it an alluvial character and is, as we shall see, an unusual feature upon the Persian Coast. The maritime range behind this second group of districts varies in altitude from about 3,000 to about 6,000 feet and is highest towards the south and east: the plain, which at the foot of the hills is not unfertile, degenerates as it approaches the sea into a barren desert of baked clay, and at the coast is gradually merged in extensive and ill-defined mud-flats.

The third section consists of the districts of **Tangistān** and **Dashti** only. In it the maritime range is 25 miles from the coast and at one place reaches a height of 6,500 feet ; but there are two subsidiary ridges immediately skirting the coast which are unusually conspicuous and give these districts the character of troughs parallel to the sea, not connected with it except by two passages of which the more important is the valley of the **Münd** river. The coast range north of the **Münd** river is straight, and in one place it rises to a height of over 2,500 feet: south of the **Münd** river it forms a half moon with the convex side to the sea, and the plain that it encloses is open to the coast only at one point between **Daiyir** and **Kangūn**. The **Münd** river is, with the exception of the **Rūd-hilleh** and **Mināb** rivers, the only considerable stream which reaches the Gulf on the Persian side in the districts now under consideration.

The next or fourth section, consisting of the **Shībkūh** and **Lingeh** districts, is the most extensive and in some ways the most remarkable of all. The main maritime range, which at the commencement of this section at **Kangūn** abuts upon the coast, extends thence in an unbroken and almost straight line for over 200 miles, with heights of 3,000 to 5,000 feet, to a point between **Lingeh Town** and **Khamīr** where the

coast again meets and terminates it. In this section the physical geography of the land enclosed between the range and the coast is very complex, and, being fully described in the articles on the **Shībkūh** and **Lingeh** districts, need not be dealt with in detail here. Its principal features are two subsidiary coast ranges *en échelon*, meeting the main range at a slight angle and so forming the valleys which reach the sea at **Nāband** and **Mugām**. To these may be added a third feature, the **Lingeh** plain, in which the submontane terrace attains its maximum breadth (in this section) of 20 miles; the plain is basin-shaped, containing a marsh in the centre, and its rim towards the sea is studded with detached coast hills 1,000 to 2,000 feet in height. Throughout this section the main range is of limestone and supports some vegetation, whereas its outliers upon the sea are of sandstone and absolutely barren.

The sea-front of the **Bastak** district upon **Clarence Strait** constitutes in itself a section. As far as **Khamīr** it is free of hills and is in fact the mouth of an immensely long valley which has followed the back of the maritime range all the way from a point inland of **Tāhiri** and here discharges its drainage into **Clarence Strait**. A little beyond **Khamīr** another range of hills, running in a direction parallel to the original maritime range, strikes the coast and accompanies it for some miles.

The sixth section is entirely cut off by the section preceding it from the littoral of the upper Gulf, but it is not dissimilar from it in character. It consists of the district of **Shamīl** alone and bears some analogy to the widening of the maritime plain at **Būshehr**, but its maximum depth inland is only about 25 miles and its two streams, the **Kul** and **Shamīl** rivers, are not comparable with the **Rūd-hilleh** river in volume or importance. The hills however which form its inland boundary are of great height, attaining in **Kūh-i-Ginau** nearly 8,000 feet. This section is subdivided at its western end by a low sandstone ridge, which is parallel to the coast, into two belts; the coast belt is for the most part sandy and swampy, while the inland belt is comparatively fertile.

The seventh and last section of the Persian Coast of the Gulf is a plain, co-extensive with the **Mīnāb** and **Biyābān** districts and tapering from 20 miles in width at its north end to 10 miles and less at its southern extremity. The portion situated in **Mīnāb** is swampy towards the coast and elsewhere fertile; in **Biyābān** the surface is partly sand and partly clay. The maritime range behind this section decreases in height from about 2,000 feet in the north to 1,000 in the south. In the northern part of this section the not inconsiderable **Mīnāb** river reaches the sea.

Beyond this section commences Persian **Makrān**, which lies outside the Persian Gulf on the shores of the Gulf of 'Oman, but of which the westernmost or **Jāshk** district belongs for administrative purposes to the Persian Coast.

Administration.—The administrative system—if such it can be called—which prevails on the Persian Coast of the Persian Gulf is difficult to explain and even to understand; it is full of irregularities, complexities and fluctuations, and there is no recognised nomenclature even for territorial divisions or for official appointments.* The arrangements are haphazard and undefined. The districts of the Persian Coast at present are divided,† in the manner shown in the following table, between the jurisdiction of the Governor-General of **Fārs** and that of the Governor of the **Gulf Ports**, each of whom is directly subordinate to the central Government at **Tehrān** :—

* Persevering attempts by local officers to establish a consistent terminology have ended in proving that none exists. Large provinces such as **Fārs** and **Kirmān** are ordinarily called **Mamlakats** مملکت or **Ayālats** ایالت, and the Governor-General placed over such a province is generally styled **Farmān-Farmā** فرمان فرما. At present, however, the Governor-General of **Kirmān** happens to possess the title of **Farmān-Farmā** as a personal honour, and in his official capacity is frequently called **Vālī** والي instead. The Governor-General of **Fārs** appears to be generally spoken of in the Gulf as “the **Ayālat**” and not as the **Farmān-Farmā**. **Behbehān** and **Lār** are both sub-provinces of **Fārs**, and each is administered by a Governor subordinate to the Governor-General and styled **Hakim** حاکم; yet the former territorial unit appears to be described as a **Mahallat** محالط while the latter is denominated a **Khittah** خطه. The **Gulf Ports** form a **Mamlakat**, but are governed by a **Hukmrān** حکمران. For a district, in the sense in which the word is used in the present article, there appears to be no current term; and such expressions as **Mazāfāt** مضافات (meaning “dependencies”), **Qasbajāt** قصبجات (meaning “small towns”) and **Dihāt** دھات (meaning “villages”) are loosely employed as a substitute: in a similar manner **Tavābi** توابي (meaning “dependencies”) is sometimes used instead of **Mahallat**. There is also a word **Bulūk** بلوک which seems to denote a territorial division intermediate in size between a sub-province and a district. The official called in the table below a Deputy-Governor appears generally to rank in the Persian hierarchy as a **Nāib-ul-Hukūmeh** نائب الحکومه. In the Gulf the other rulers of districts are **Khāns**, **Shaikhs**, **Kalāntars**, etc.; and the local executive authority in a small group of villages is sometimes called a **Zābit** ضابط. Among the higher officials position and title are frequently determined by personal rank instead of by official status, and the confusion regarding the relative importance of appointments is thus further increased.

† The political constitution of the Persian Coast in 1873 is described in the **Gulf Administration Report for 1873-74**, and that obtaining in 1875 is given with much detail in the **Report for 1875-76**.

Administrative synopsis of the districts of the Persian Coast in order from the head to the entrance of the Gulf.

Serial No.	Name of district.	Local administrative capital.	Local executive authority.	Principal jurisdiction in which situated.	Estimated population (souls).	Annual revenue to the Persian Government or their grantees except from sea-customs (in Tūmāns).
1	Lirāvi	Chāh Tahl.	A hereditary Khān.	The Behbehān sub-province of Fārs.	6,000	7,500
2	Dīlam Town	Dīlam Town.	Two hereditary Khāns, brothers.	Gulf Ports.	1,500	1,250
3	Hayāt Dāvud	Rīg.	A hereditary Khān.	Do.	12,000	8,000
4	Shabānkāreh	Dih Kuhneh.	Do.	Fārs.	10,000	5,500
5	Rūd-hilleh	Mahmadi.	The Khān of Hayāt Dāvud on behalf of the Fath-ul-Mulk and Sa'id-ul-Mulk, holders in Tiyl.	Gulf Ports.	4,000	3,500
6	Angāli	Mahmadshāhi.	A hereditary Khān.	Do.	2,700	1,500
7	Zīra	Durūgāh	The Khān of Shabānkāreh on behalf of Mehdi Khān, holder in Tiyl.	Do.	3,000	10,000
8	Mazārā'i	Mazārā'i Village.	Do.	Fārs.	3,000	2,500
9	Dashtistān	Burāzjān for the greater part of the district.	A Deputy-Governor at Burāzjān appointed by the Governor-General of Fārs, also a hereditary Khān at Burāzjān and a hereditary Shaikh at Chāh Kutah.	Chiefly Fārs, but partly Gulf Ports.	15,000	5,000

Administrative synopsis of the districts of the Persian Coast in order from the head to the entrance of the Gulf—contd.

Serial No.	Name of district.	Local administrative capital.	Local executive authority.	Principal jurisdiction in which situated.	Estimated population (souls).	Annual revenue to the Persian Government or their grantees except from sea-customs (in Tumanis).
10	Būshehr Peninsula and Town.	Būshehr Town.	The Governor of the Gulf Ports and the Deputy-Governor of Būshehr.	Gulf Ports.	24,500	35,000 (or 55,000 with Lingeh and Bandar 'Abbās).
11	Tangistān	Ahram.	A hereditary Khān, chiefly on behalf of the Persian Government, but partly on behalf of the Nizām-as-Saltaneh who holds certain villages in Tiyūl.	Fārs.	10,000	7,300
12	Dashti	Khurmūj.	A hereditary Khān.	Do.	20,000	16,000
13	Shībkūh	Various capitals: see article Shībkūh district.	Various authorities: see article Shībkūh district.	Fārs, except 'Asalu and Nāband and the villages connected with them, which belong to the Gulf Ports.	42,500 (inclusive of Gābandi and certain other valleys).	21,960 (inclusive of Gābandi, etc.)
14	Lingeh	Lingeh Town.	A Deputy-Governor appointed by the Governor of the Gulf Ports.	Gulf Ports.	20,000	15,000 (or 55,000 with Būshehr and Bandar 'Abbās).

15	Qishm Island	Qishm Town.	A hereditary Shaikh, on behalf of the Mu'in-ut-Tujjar who farms the revenue of the island.	Do.	13,500	800
16	Hanjām Island	...	Do.	Do.	1,200	Nil.
17	Lārāk Island	Labtiyāb.	Do.	Do.	200	Do.
18	Hormūz Island	Hormūz Village.	A resident Agent of the Mu'in-ut-Tujjar who farms the revenue of the island.	Do.	1,200	14,000
19	Bastak (coastal strip only)	Khamir (of this portion).	A hereditary Kalantar, on behalf of the Mu'in-ut-Tujjar who farms the revenue.	Nominally Fārs but really Gulf Ports: see article Bastak.	2,300	400
20	Bandar 'Abbās Town	Bandar 'Abbās Town.	A Deputy-Governor appointed by the Governor of the Gulf Ports.	Gulf Ports.	10,000	5,000 (or 55,000 with Bū-shehr and Lingeh).
21	Shamīl	Ziyārat.	A hereditary Kalantar appointed by the Governor of the Gulf Ports and nominally subordinate to the Deputy-Governor of Bandar 'Abbās.	Do.	25,000	8,000
22	Mināb	Mināb Town.	An agent of the Mu'in-ut-Tujjar who farms the revenue of the district.	Do.	26,000	14,000
23	Biābān	Sirik.	A Kalantar appointed by the Governor of the Gulf Ports.	Do.	8,000	2,500
24	Jāshk	Old Jāshk.	Two hereditary Mīrs.	Do.	22,000	Nil.

The population of the Persian Coast thus appears to be about 283,600 souls; while the Government revenues, assigned and non-assigned, amount to about 184,710 Tūmāns.

It will be seen that four different kinds of administrations exist side by side in the districts dealt with in this table. The first of these is direct rule by Persian officials at places where the Persian Government have retained the full rights of sovereignty in their own hands; such are the **Būshehr** Peninsula and Town, **Lingeh** District and Town, and **Bandar 'Abbās**. The second is government by a local hereditary chief to whom the revenues of his own domain have been farmed, and this is the kind which predominates in the part of Persia now in question. The third is administration by a non-local, but wealthy or otherwise influential personage, who has farmed the revenues of the tract from the Persian Government; on the Persian Coast of the Gulf an arrangement of this nature exists only in regard to the islands of **Qishm**, **Hanjām**, **Lārak** and **Hormūz**, the district of **Mināb** and part of the district of **Bastak**, all of which are farmed by the Mu'in-ut-Tujjār. The fourth is the rule of a holder on *Tiyūl*,* that is by royal grant, instances of which are found on the Persian Coast in the districts of **Rūd-hilleh**, **Zīra** and **Mazāra'i**.

It should be noted that the Persian Government in making a *Tiyūli* grant or in farming out revenue do not regard existing administrative boundaries, and the effect of such operations is consequently to dismember or confuse previously recognised districts; the present districts of **Mazāra'i**, **Zīra**, **Angāli** and **Shabānkāreh** appear to have been carved in this manner out of the formerly larger district of **Dashtistān**, and in common parlance the name **Dashtistān** is still sometimes used as if it included the smaller and now separate districts.

In all cases the general political control and the power of inflicting death or mutilation as a punishment for crime are understood to be reserved to the Governor-General of **Fārs** or the Governor of the **Gulf Ports**, as the case may be; but, with these exceptions, where there is a revenue farmer (either of the local or non-local class) or a grant holder, the whole powers and functions of government are delegated to him and

* *Tiyūl* تیول is of two kinds. The first is a free assignment by the Shāh, generally in lieu of a pension: it corresponds to an Indian "Jāgīr" and is called *Nāni* نانی. The second is a grant made by the same authority in return for a lump sum paid into the treasury or for an engagement to make periodical payments at a fixed rate; in the latter case *Tiyūl* differs from an ordinary farm of the revenue only in being for more than a year, or for an indefinite period. Here we may mention that the ordinary agricultural revenue is styled in Persia *Mālyāt* مالیات, while the total assessment of a district in view of its assets of every kind is known as *Tūmār* طومار. The existence of the *Tūmār* is said to date from early Qājār times.

he uses them to wring the highest possible revenue out of the tract thus placed under his authority. There are no criminal courts and no forms of procedure in criminal matters. Civil justice of a kind is dispensed by the Shara' courts, which exist everywhere; but these are hopelessly venal, and conflicting decisions can be bought by the parties from rival Mujtahids, and sometimes even from the same Mujtahid. Civil cases accordingly drag on for years, and frequently they cannot be settled at all except by agreement of the parties, a result which is sometimes brought about by arbitration.

The principal defects of the administration which we have now described are intermixture and conflict of jurisdictions, anomalous forms of decentralisation which in practice are almost the same thing as local independence, and an entire want of fixity or permanence. The Persian authorities are feeble and opportunist and maintain themselves chiefly by keeping dissensions afoot among the local powers. The small military force at their disposal is concentrated for the most part at **Būshehr** Town, where there are 50 artillerymen and 200 infantry; trifling detachments however are maintained at **Lingeh** Town, **Bandar 'Abbās** and in the **Mināb** district.

The results of this system, especially in the group of Persian districts nearest to **Būshehr** and in the semi-Arab district of **Shībkūh**, are in the highest degree unsatisfactory, and they appear occasionally to strike even the Persian mind in this light. In the **Būshehr** neighbourhood the Khāns of **Burāzjān**, **Shabānkāreh**, **Angāli**, **Hayāt Dāvud** and **Līrāvi** and the Shaikh of **Chāh Kūtāh** are constantly engaged in intrigues against one another and form combinations and counter-combinations among themselves for the promotion of their ends. Burglaries by night and cattle raids by day in the various districts are the outcome of these factions, and they are sometimes followed by general encounters between the subjects of the different chiefs, in which many persons are slain and wounded, for in these days nearly every fighting man possesses a modern rifle and a cartridge-loading machine. The local Persian officials appear indifferent to these disturbances and are sometimes suspected of bringing them about, which they can easily do at any time by displacing a hereditary chief in favour of a neighbour or enemy who undertakes to pay a higher farm for the district. Disorders of which the *raison d'être* is to discredit the new chief soon break out, while the rivals lay their complaints before the central government by post and telegraph and each receive in reply satisfactory assurances which have passed into a proverb among the peasantry as "**Tehrān promises**". Eventually the

question is settled on the spot by force or by negotiation between the parties chiefly concerned.

In the **Shībkūh** district also disturbances are not uncommon ; but for these the Persian Government is perhaps less to blame, inasmuch as their control over the **Zābits** or rulers of groups of villages, in this district for the most part Arab Shaikhs, is slight and insecure. Here they find it practically impossible to replace a Shaikh except by a member of his own family, for an intruder from outside would soon be removed by assassination, and the certainty of such a fate deters aspirants.* Intrigues and enmities are no less rife here than among the local chiefs near **Būshehr**. The principal groups are the **Hamadis** and **Haramis**, who are in alliance together against the **Nasūris**, and the **Hamadis** and **Marzūqis** who are combined against the **Āl 'Ali**, the **Bushri** section of the **Āl 'Ali** however being in league with the **Hamadis** and **Marzūqis** against their own kinsmen. The **'Obaidlis** also are on bad terms with the **Āl 'Ali**. These warring communities and their leaders occasionally, when common interests appear to be in danger, undergo formal reconciliations ; but their pacts, though solemnly entered into by an oath on the **Qurān**, are of short duration, and their power has been much weakened by internecine feuds which the Persian authorities have carefully fostered.

Currency, weights and measures.† --As this is the only article which deals with the tract as a whole, the present is a convenient opportunity for dealing with the currency, weights and measures of the **Gulf Ports** and the coast districts of **Fārs**. The money table of the Persian Coast is as follows :—

50 Dīnārs دينار	= 1 Shāhi شاهي
20 Shāhis or 1,000 Dīnārs	= 1 Qrān قران
10 Qrāns or 10,000 Dīnārs	= 1 Tumān تومان ‡

The **Dīnār** is an imaginary coin, and there is another fictitious unit called **Pūl** پول which is used by native traders in their calculations and is equal to $\frac{1}{10}$ of a **Qrān** ; the Imperial Persian Customs in their accounts

* Recent events have now shown this to be no empty conjecture (1907). See article **Shībkūh**.

† For further information under this head the reader is referred to the *Persian Gulf Administration Report, 1877-78* ; Mr. H. W. Maclean's *Report on the Conditions and Prospects of British Trade in Persia, 1903* ; and Mr. A. H. Gleadowe-Newcomen's *Reports on the Commercial Mission to South Eastern Persia, 1906*. The subjects of credit, exchange, etc., are fully explained by Mr. Maclean.

‡ **Tumān** means 10,000, *sc.* **Dīnārs**.

divide the Qrān into hundredths or "Cents" called Ghāz خاز. The average value of the Qrān is at the present time about four pence English, but the number of Qrāns to the pound sterling fluctuates between 52 and 65 according to the rate of exchange, and 100 Indian rupees are worth from 360 to 410 Qrāns. Actual coins are the following :—

Nickel	$\left\{ \begin{array}{l} 1 \text{ Shāhi piece, called Yakshāhi} \\ \text{or Dūpūli.} \\ 2 \text{ Shāhi piece, called Dūshāhi} \\ \text{or Chahārpūli.} \end{array} \right\}$	Besides these there are old copper coins of the same face values in circulation, but they are not necessarily accepted at their face value.
Silver	$\left\{ \begin{array}{l} \frac{1}{2} \text{ Qrān piece} \quad . \quad . \quad . \\ 1 \text{ Qrān} \quad , \quad . \quad . \quad . \\ 2 \text{ Qrān} \quad , \quad . \quad . \quad . \\ 5 \text{ Qrān} \quad , \quad . \quad . \quad . \end{array} \right\}$	Of these the two Qrān piece is the commonest.
Gold	$\left\{ \begin{array}{l} \frac{1}{2} \text{ Tūmān} \quad , \quad . \quad . \quad . \\ 1 \text{ Tūmān} \quad , \quad . \quad . \quad . \\ 2 \text{ Tūmān} \quad , \quad . \quad . \quad . \\ 5 \text{ Tūmān} \quad , \quad . \quad . \quad . \end{array} \right\}$	These coins are not so common as they are in the north of Persia. Other gold coins are seen, but have no fixed values in circulation.

The newer Persian coins are all of Belgian mintage. Notes of 1 Tūmān value and upwards, issued by the Imperial Bank of Persia, are in circulation. English sovereigns and Indian rupees are accepted in **Būshehr** Town at the current rate of exchange.

The unit of weight throughout Persia is the Man من ; but it varies, within considerable limits, from place to place. The Tabriz Man تبریز or Batman,* equal to 6.547 lbs. English, has been adopted by the Imperial Persian Customs as a standard of weight for the use of the department in all parts of the country ; but in the Gulf region a local Man varying from 5 lbs. 13 oz. to 10 lbs. 10½ oz. is still universally employed in all but customs transactions. The weight of this Man in each district is given in the article on the district : at **Būshehr** Town, where before the advent of the Imperial Persian Customs it was wrongly described as a Tabriz Man, the local Man is equal to 7¾ lbs. English. In each of the Persian Coast districts there is, in addition to the simple Man, a larger Hāshim هاشم Man consisting of 16 local Mans.

The table of weights on the Persian Coast runs as follows :—

24 Nakhūd نخود	= 1 Misqāl مئقال
48 Misqāl	= 1 Qiyās قیاس
16 Qiyās	= 1 Man من
16 Man	= 1 Hāshim هاشم Man
100 Hāshim Mans	= 1 Kharvār خروار

There is no liquid measure in Southern Persia, and the quantity of liquids is estimated by weight, the weight of the receptacle being deducted from the total weight.

* The writer has not been able to ascertain the origin of this word or the language to which it belongs.

The table of lineal measure is as follows :—

4 Gireh گره	= 1 Chahārak چهارک
4 Chahārak	= 1 Zara' ذرع or Gaz گز

The Gaz is ordinarily equal to $40\frac{1}{2}$ inches English ; local variations in a few districts are noted in the articles under their names. The Zara' is supposed to be the distance from the tip of a man's middle finger (when one of his arms is extended horizontally) to his nose, his face being at the same time turned in the opposite direction. There is also a Zara'-i-Dast ذرع دست or cubit, which is not now in general use ; it is defined as the distance from the tip of a man's middle finger to his elbow, and it is regarded as being half of the ordinary Zara'.

The only unit of square measure for land is a very indefinite one called Gāu گاو ; it is described as the area which one yoke of animals can plough in the ploughing-season of about 25 days, or alternatively as the area which requires 6 Hāshim Mans of seed grain to sow it, and it appears to be approximately represented by a square of which the side is 250 yards.

QAFĀR قفار

Frequently pronounced Gufār or Jifār ; the second town in importance in Jabal Shammar proper, hardly inferior (if it is not equal) to the capital in population. Qafār is situated about 9 miles south-west of Hāil, than which it stands about 400 feet higher ; it consists of two main parts and there are 4 distinct quarters. The place with its cultivated fields and date-groves stretches some $2\frac{1}{2}$ miles ; palms are more numerous than at Hāil itself. The people are Bani Tamīm and number 3,000 souls or more. This is the westernmost point between Hāil and Taimah where women are seen veiled. The wells are said to be 15 to 18 fathoms in depth, and there are the usual livestock.

QAHTĀN قحطان

The singular is Qahtāni قحطاني ; and, as distinguished from the collective plural Qahtān, there is a distributive plural Qahtān قحاطين. The Qahtān are an important tribe, principally nomadic, of Central Arabia.

Distribution and number.—The eastern, southern and western limits of the territory of the Qahtān are not precisely ascertained ; but on the

north they wander in **Sadair** and **Washam**; sometimes they dispute the pastures of **Qasim** with the **Mutair** or visit the districts of **'Āridh** and **Summān**. They are believed to be numerous in **Wādi Sabai'**, **Wādi Bishah** and **Wādi Tathlith** and to be found also in the **Tihāmah** of the Red Sea basin; but in **Widyān Dawāsir** they have no place. The distribution of their Bedouins is explained in greater detail in the table of tribal divisions below; and we may note that settled communities of reputed Qahtāni blood are found in the south-western part of **Najd** at **Quwai'yah** and **Sha'arah**; in **Qasim** at **Basr** and **Hatān**; in **Sadair** at **Majma'**, **Raudhah** and **Zilfi**; in **'Āridh** at **Malqa** and **Manfūhah**; and in **Hautah** at **Hautah town**. By some the **Hamadi** tribe of Arabs found at places on the **Persian Coast** of the **Persian Gulf** are said to be of Qahtāni extraction.

Divisions.—Some of the principal divisions of the tribe are the following, but the list is probably not exhaustive * :—

Division.	Location.	Name of present Shaikh.
Ābidah عبيد	Tihāmah.	Zaid-ash-Shifūt.
Asumah عصمه	Wādi Tathlith.	Hamad-al-Āmmāj.
'Ālif (Ā) آل علف	North of Wādi Sabai'.	Hadhdhāli-bin-Hashar.
Jamb جمب	Wādi Tathlith.	Ma'adhdhi-bin-Hashar.
Jumal (Āl) آل جمل	Wādi Bishah.	Sahli Āl Āli.
Khanāfir خنافر	Wādi Sabai'.	Shilaiwih-bin-Ma'adhdhi.
Muhammad (Āl) آل محمد	Washam and the neighbourhood of Duwādimi and Sha'arah	Nāsir-bin-'Umr.
Rōq (Āl) آل روق	About Ranyah in Wādi Sabai'.	Manahi-al-Hādi.
Sa'ad (Āl) آل سعد	Wādi Sabai'.	Sālim-bin-'Abūd.

* A list of Qahtān sections by Ross will be found in the *Persian Gulf Administration Report for 1879-80*.

Division.	Location.	Name of present Shaikh.
Sahamah سهامه	Wadi Sabai'.	Mubammad-bin-'Umairah.
Shifūt (Āl) آل شفلوط	About Ranyah in Wādī Sabai'.	Fahad-bin-Lahjān.
Sūdah سودة	Tihāmah.	Haraimis-bin-Asal.

The smaller constituents of the divisions given above have not been investigated, except in the case of the Āl Muhammad whose sections are these :—

Section.	Location.	Name of present Shaikh.
Da'iyah (Bin) بن دعية	Washam.	Numrān-bin-Nāsir.
Hādī (Āl) آل هادي	Do.	Muhammad-bin-Qarma l a h, but a certain Nāsir-bin-'Umr has more actual power.
Hatlān (Āl) آل حتلان	Do.	'Ali-adh-Dhā'in.
Nuwāsir نواصر	About Quwai'iyah.	'Ali Āl Muqbil.
'Ubaidān (Āl) آل عبيدان	Washam, but in the date harvest Ranyah in Wādī Sabai'.	Nāsir-bin-Hādī.
'Umr (Āl) آل عمر	About Duwādīmi.	Nāsir-bin-Muhammad.

Some of the settled Qahtān of 'Āridh are said to belong to a section called 'Āidh عائد, and those in Zilfi are Mashī' مشيع.

The total number of nomadic Qahtān in Central Arabia has been estimated at 8,000 souls, but this is little better than a conjecture.

Character and possessions.—The Qahtān appear to be unpopular among the more northern tribes with whom they are in contact; by these the term "Qahtāni" is sometimes used as an invective. Many reports to the disadvantage of the Qahtān are current among their neighbours; as for instance that they murder smokers, that they eat the flesh of their slain

enemies, and that their own dead are thrown to the birds without burial. These stories are probably untrue, but they are in reality an evil-natured race and "austerely fanatical" in religious matters to an unusual degree. That they are habitually treacherous in war is a well established fact. Nevertheless they are an Arab tribe of the noblest lineage, and none of the Bedouins excel them in arms except perhaps the 'Ataibah. They are fairly rich in cattle and horses.

Political position.—In 1864, in consequence probably of their nearness on one side to the centre of Wahhābi power, they were under the influence of **Riyādh**, but their loyalty to the Amīr was apparent only. In 1878 they intruded close to 'Anaizah and raided the **Mutair**; but they were surprised in their turn and suffered a disastrous defeat by the wells of Dukhnah at the hands of the **Mutair** and the townsmen of 'Anaizah.

In English formerly known as "Kaeese," "Ghes" or "Kenn": **QAIS** * قيس the origin of the last name is not now traceable. An island in the Persian Gulf still of considerable, and in former times of great importance; it is situated 11 miles off the coast of the **Shibkūh** district, slightly nearer to **Chīru** than to **Chārak**, and is divided from the mainland by a fine channel from 20 to 30 fathoms deep. Qais in its conformation resembles an oval and slightly convex stud: it measures about 10 miles in length from west to east by $4\frac{1}{2}$ in breadth, and it rises from the coast to a plateau in the interior which is 120 feet above sea level. The shores of the island are low, and the beach is sandy with rocky points; eastwards and westwards Qais ends in very low cliffs. The island is encompassed by a reef which is nowhere more than a mile broad and has deep water immediately outside it; it is surrounded by pearl banks except at one place on the east side off Māsheh. The general colour of the island is a light brown, and it is bare of vegetation except a few scattered date groves and some stunted herbs. The water level is high, and at a cape called **Sar Māsheh** ماشه, or **Mamzar** ممزر, at the north-eastern corner of the island sweet water can be obtained near the beach by digging to a depth of between 1 and 4 feet.

* For a plan of the anchorage and port of the island see Admiralty Chart No. 2373—2337 A., *Persian Gulf*; and for an older plan of the whole, *Bombay Selections XXIV* of 1856, page 45.

The island contains the following villages :—

Name.	Position.	Houses.	REMARKS.
Bāgh باغ	At the south-west corner of the island.	15 houses.	Resources are 4 donkeys, cattle, 30 sheep and goats, 80 date-palms and 4 fishing boats.
Dalmeh دلْمِه	On the north coast, immediately east of Dih.	5 houses.	There are 4 donkeys, 5 cattle, 15 sheep and goats, 300 date-palms and 5 fishing boats.
Dih دِه	On the north coast, $1\frac{1}{4}$ miles north-west of Māsbeh.	30 houses.	The inhabitants possess 4 donkeys, 6 cattle, 80 sheep and goats, 200 date trees and 6 fishing boats. There are some gardens.
Fabail فَحِيل	In the middle of the south coast of the island.	6 houses.	There are no boats, and date trees only number 30. Live-stock are 2 donkeys, 2 cattle and 10 sheep and goats. Also called Fahāl فَحَال.
Falai فَلِي	On the north side of the westernmost point of the island.	15 houses.	Animals are 3 donkeys, 4 cattle and 30 sheep and goats. There are 4 fishing boats and 200 date trees. The name is properly Falaj فَلَاج.
Halah حَلَه	On the east coast, a little south of Māsbeh.	50 houses.	There are 8 donkeys, 10 cattle and some sheep and goats. Date trees number 200 and water melons are grown. There are 10 fishing boats.
Māsbeh * مَاشِه	On the east coast, immediately south of the cape (Sar Māsbeh) which projects from the north-eastern corner of the island.	400 houses (the majority at present unoccupied).	The village extends about a mile along the shore; it has two square forts and a round tower and there are some banyan trees. Resources are 80 donkeys, 50 cattle, 400 sheep and goats, 1,000 date trees and 40 fishing boats. An Agent of the Snaikh

* From *Bombay Selections XXIV* of 1856, page 47, it would appear that this village, now the most important on the island, did not exist in 1856.

Name.	Position.	Houses.	REMARKS.
Raval رارل	On the north side of the south-easternmost point of the island.	5 houses.	of Chāarak resides in one of the forts, which was built about 1900. There is a water cistern here. Animals are 8 donkeys, 2 cattle and 10 sheep and goats. Date-palms number 40.
Safil سفيل or Safain سفين	On the northern coast, 4 miles west of Dih.	100 houses.	There are 2 water reservoirs. Resources are 40 donkeys, 30 cattle, 200 sheep and goats, 1,000 date-palms and 20 fishing boats.
Saifat-al-Ghāfeh سيفت الغافه	On the southern coast at its eastern end.	3 houses.	..
Sajam سجم	A short way inland of Dalmeb.	20 houses.	There are 10 donkeys, 10 cattle, 30 sheep and goats, 1,700 date trees and 5 fishing boats.

There are thus in all about 450 occupied houses, and the total population may be estimated at 2,250 souls, chiefly of the Āl 'Alī tribe. They possess only a score of modern rifles. In summer the population is considerably increased by an influx from the Arabian and Persian coasts generally. Some cultivation of dates, wheat and barley is carried on at all the villages by means of irrigation from wells and, at Māsheh, of an inferior aqueduct. Onions, cucumbers, water melons and marsh melons are also grown; but the principal resources are fishing and pearling. There are 26 large pearl boats, chiefly Sambūks, which go to the pearl banks on the Arabian side in the season; also 27 small Baqārahs and 40 Shū'ais which are used for fishing in winter, and in summer for pearling off the coasts of the island itself. There is also some general trade. To the island belong 3 trading Bāghlahs which make voyages to Basrah, Bahrain, India, and even Yaman. The bazaar at Māsheh contains about 50 shops and 9 commercial warehouses. About 12 Hindus, British subjects, without their families are settled here as shopkeepers and pearl merchants, and about 10 more sojourn temporarily in the island during the pearl season. Pearl boats working in the vicinity call at

Māshah twice or thrice during the diving season to dispose of their takings and replenish their stock of provisions and water.

Qais island was till lately understood to belong to the Shaikh of Chārak, who is locally represented by an agent, at the present time his nephew ; and the comparative wealth of the Shaikh was attributed to his possession of Qais. Towards the end of 1906, however, it became known that the Qawām-ul-Mulk of Shirāz and his family claim absolute ownership of the island on the strength of an autograph deed of gift, said to have been executed by Nasr-ud-Dīn Shāh about 1878 in favour of 'Alī Muḥammad Khān, Qawām-ul-Mulk, as a reward for services rendered by him in the Gulf provinces. The Qawāmi family allege that they derive about 800 Tūmāns a year from Qais, chiefly by way of dues on the pearl fisheries.

From the antiquarian standpoint Qais is interesting on account of ruins,* probably those of the mediæval Muhammadan town of Qais or Harīrah حريرة, which line the northern coast for about half a mile midway between the villages of Dih and Safil. These ruins are of less extent than the supposed ruins of Sirāf at Tāhiri and consist now of mere mounds of stone and fragments of masonry. A mosque, however, which was of well-cut stone, had one minaret standing until about 50 years ago ; the pillars of this mosque were octagonal in section and the blocks of which they were composed were mortised together by central tenons. There are remains of several large oblong water-reservoirs, formerly vaulted over, two of which measured 150 feet by 40 feet and in 1857 were still 24 feet deep. Near these began a fine Qanāt nearly half a mile in length, cut in the solid rock and running at its deeper end 20 feet beneath the surface : it had about 40 shafts at intervals of 15 to 20 yards apart, and the bottoms of the shafts were accessible in four cases by a stairway of shallow steps cut in the rock.

QAIWAIN
(UMM-AL-)
المقيرون
TOWN
and
PRINCIPALITY

In English at one time known as "Amulgavine". A town on the western coast of Trucial 'Omān forming, with the country adjoining it, a small independent principality of which the political position is described in the general article on Trucial 'Omān.†

* These are described by Capt. Stiffe in an article on Qais in the *Geographical Journal* for 1896, Volume 7, page 644. Qais, by the mediæval Arab and Persian geographers also styled Qaish and Kish, was the principal centre of trade in the Persian Gulf in the 12th century A.D., having succeeded to the position of the earlier Sirāf (*vide* Tāhiri). See Le Strange's *Lands of the Eastern Caliphate*.

† For authorities, maps, charts, etc., see first footnote to article Trucial 'Omān.

The town of Umm-al-Qaiwain is 27 miles south-west of Rās-al-Khaimah Town and 18 miles north-east of Shārjah Town. It is peculiarly situated on the eastern end of a peninsula which is so turned in as to point towards the coast and to form, with the island which Khor-al-Baidhah divides from mainland, a landlocked creek 3 or 4 square miles in area and containing several low islets. This creek, at the town, is 600 yards wide and 6 to 8 fathoms deep; but its entrance, which is 3 miles to the north-north-east, carries only 2 feet at low water; nor can a depth of 5 fathoms be found at sea nearer to the town than 1 mile. Umm-al-Qaiwain is defended by a wall with towers, which traverses the isthmus to the west of the town, and by several detached blockhouses. The town, except for a quarter called Lazimah لَازِمَة, which is situated $\frac{1}{4}$ of a mile west of all the others, is compactly built and arranged; the western part of it, in which the Shaikh has his residence, is called Libinah لِبْنَة.

There are in all about 1,000 houses of which $\frac{1}{4}$ are of masonry, the remainder being huts of date branches. The people, except a few Āl Bu Mahair and others in the Lazimah quarter, all belong to the Āl 'Ali tribe and may number some 5,000 souls. Three Hindu traders are settled in the place, two of whom are accompanied by their families and one of whom has a Hindu servant. The inhabitants of Umm-al-Qaiwain are chiefly pearl divers and fishermen, owning about 70 pearling and 60 fishing boats. One Baghlah, which runs to Bombay, is the only sea-going vessel belonging to the port. There are about 38 horses, 720 camels, 40 donkeys, 10 cattle and 200 sheep and goats: the water supply, which is from wells about 6 feet deep, is good: the date plantations comprise about 1,500 trees. The bazaar contains 20 shops. About 20 boats per annum are built here, or more than at any other place on the coast of Trucial 'Omān.

The Shaikhdom of which Umm-al-Qaiwain town is the capital has no clearly defined boundaries, but it forms an enclave in Shārjah territory. On the coast it reaches north-eastwards to Jazīr'-al-Hamra and south-westwards part of the way to Hamriyah: the Siniyah island formed by Khor-al-Baidhah is thus included in it.

The only place of importance not on the coast which belongs to Umm-al-Qaiwain is Falaj Āl 'Ali فَلَاحِ آلِ عَلِي, — for short generally called Falai فَلَاحِي, — which is about 16 miles south-east of Umm-al-Qaiwain town and perhaps 8 miles north-west of Dhaid village. Falai is said to consist of some 60 households of the Āl 'Ali tribe who possess 50 camels and a few other animals. There are here about 5,000 date palms, irrigated by the Falaj from Thiqbat-as-Sanaibil on Wadi Manghöl and all belonging to the Shaikh of Umm-al-Qaiwain.

Falai is the regular rendezvous for Bedouins in the Umm-al-Qaiwain service when they are called to arms.

The Shaikh of Umm-al-Qaiwain derives a regular income of about Rs. 19,000 a year from the pearling industry in his state, besides which he himself engages in trade as a pearl merchant, and to a lesser extent as a dealer in rice; his date plantation at Falaj Āl 'Ali, if it is not a source of wealth, at least enables him to avoid certain pecuniary expenses. In one year he obtained enormous profits by obliging the pearl fleet of Umm-al-Qaiwain to purchase all their provisions from himself.

QALAI'AH
(KHOR-AL-)
 خور القليعة

The name is commonly pronounced as if it were "Khor Lijlai'ah." A lagoon 2 miles in width by 3 miles in length, lying to the southward of Muharraq Island in Bahrain.

Shelter.—It is enclosed on the south by Sitrah Island and its fringing reef; on the west by the Island of Bahrain; on the north by Muharraq Island; and on the east by a barrier-reef extending 3 miles to the southward from Muharraq Island and terminating in a rock, one foot above sea level at high water, which is called Qassār-ad-Diṡān قَصَّار الدِيَّان.

Entrance.—The only entrance available for shipping lies between Qassār-ad-Diṡān and the Sitrah reef; it is two cables wide and has a bar, formed by an extension of the eastern barrier-reef which stretches right across its mouth and is 120 yards across at its narrowest part. In the centre of the bar is a gut, 60 yards wide and generally 16 to 17 feet deep; but the bottom is rocky and uneven, and in places the depth is only 14 feet. The remainder of the entrance-channel is from 5 to 7 fathoms deep and steep-to on both sides. A shoal lies outside the entrance, and there are two approaches, one to the north, the other to the south of the shoal, of which the northern is the better.

Interior.—Within the Khor the 5-fathom line extends for a mile, enclosing a gutter from 1 to 2 cables wide with an average depth of 6 fathoms; this gutter is situated between the barrier-reef and a large sandbank which lies in the middle of the Khor. The 4-fathom line extends further northward and encloses an anchorage about 1 mile long and 3 to 4 cables wide, suitable for vessels of moderate draught. The bottom here is hard and covered with a thin layer of sand; it does not afford good holding-ground. There are two other good anchorages, lying

respectively south and west of the middle ground, with mud bottoms and depths of 4 to 5 fathoms; but they are difficult of access. There is abundant anchorage for light-draught ships up to within a mile of **Muharraq** Town. A channel which leads from the north-west corner of the Khor into **Manāmāh** harbour is 2 feet deep at low water and consequently fit only for small boats.

Tides.—The velocity of the tidal streams in the Khor is generally about $\frac{1}{2}$ a knot, the flood setting to the northward. In the entrance they are much stronger, being about 3 knots at springs, with swirls, eddies and overfalls at the bar.

Naval value.—The entrance to Khor-al-Qalai'ah could be very easily defended by forts erected on the reef, and ships lying within would be secure from torpedo attack. The Khor is also perfectly sheltered from all winds. On the other hand it would be expensive, if indeed it were possible, to dredge out the entrance and anchorages to the depth necessary for large ships; the entrance even after improvement would be difficult, and the holding-ground inside, as already remarked, is indifferent: in these respects Khor-al-Qalai'ah does not lend itself to the establishment of a large defended port, but it might serve as a station for a torpedo flotilla.

Survey.—The Khor was surveyed and reported on by Lieutenant and Commander H. B. Somerville of H.M.S. "Redbreast" in 1905 and the above are the principal results of his inquiry.*

A village on the north-east coast of **Muharraq** Island in **Bahrain**. It consists of about 450 mud and reed huts with two good masonry houses, of which the one nearest to the sea resembles a square tower and is a good mark for mariners. On the ground near the square house lie three old iron guns, relics of former times but of uncertain origin. The inhabitants of Qalālī are all Sunnis, chiefly of the **Manāna'ah** tribe (100 houses), engaged in pearl-dealing, pearl-diving and sea-fishing. About 60 sailing vessels belong to the village, *viz.*, 55 **Shū'ais** and **Sambūks** and 4 **Māshuwahs** and jollyboats; out of these 21 are used for pearling.

QALĀLĪ

قلالي

* For full details see Lieutenant Somerville's report, with two charts, printed in the Foreign Department of the Government of India, Simla, July 1905.

There are no dates of cultivation : livestock are 12 donkeys and 2 cattle. The islet and springs of Jurdi lie off Qalālī.

QALIDDI*
(WĀDĪ-AL-)
وادي القلدي

The name also appears in the forms Al-Qaldi and Liqladdi. A valley in the hills of the 'Omān Promontory within the limits of the Shaikhdom of Shārjah: the route from Rās-al-Khaimah Town to Dibah lies up it. The pass from which Wādi-al-Qaliddi apparently descends in a west-north-westerly direction to the neighbourhood of Khatt in the Jiri plain seems to form the watershed between the two coasts and to be situated about 11 miles in a straight line to the west-north-west of Dibah; and the Qaliddi hill, from which perhaps the valley takes its name, is said to occur about midway between the pass and Khatt.

The following two villages are in or near Wādi-al-Qaliddi, but their exact positions are uncertain :—

Name.	Situation.	Inhabitants.	REMARKS.
Muhtarqah مخترقه	Near the pass where the valley rises.	Sharqiyyin.	The water supply is good, and there are some dates.
Ya'akal يعكل	A little below the pass on the way to Khatt.	...	There are some dates.

Muhtarqah is administered from Dibah, whither the Zakāt on its dates goes, but its cattle Zakāt is paid at Rās-al-Khaimah Town.

QARA
قرا
TRIBE

An uncivilised tribe of the Samhān hills and certain coast villages in the district of Dhufār: in their own tongue they call themselves Haki وكي, and the word Qara is locally pronounced Gurrah. Their range is from Sadah on the east to Rakhyūt on the west and inland as far as the country is habitable, that is to say for no great distance.

Physical characteristics.—The Qaras are commonly stated to be a branch of the Mahra tribe. They differ greatly in appearance and character from the typical Arab, and, though they are generally regarded

* This valley is shown in the map *Route of Lt.-Col. Herbert Disbrowe, etc.*, 1865.

as belonging to the Ghāfiri faction, it may be doubted whether they are really a part of the Arab race. They are an active and well-built people, too slender to be termed athletic and formed for agility and endurance rather than for strength. The typical Qara face is oval, with a forehead low but not receding, a prominent frontal sinus, and eyebrows horizontal rather than arched. The cheekbones are high and prominent; the nose is long; the lips are thin, the upper one short; and the chin tends to protrude. The Qaras have generally handsome features and a pleasant expression.

Character, religion and language.—The Qaras appear to be excitable and untrustworthy. They profess Islām and undergo circumcision, but they pay little attention to other forms or ceremonies and are regarded as heathens by the ordinary Arab. Their beliefs are said to relate chiefly to Jinns and sorcery, but they are classed as Sunnis. No specimens have as yet been obtained of their language which has been described as a dialect of Mahri.

Food and clothing.—The food of the Qaras is chiefly milk and flesh with honey, wild fruits, roots and vegetables. They are much addicted to smoking, and the men all carry short pipes carved out of stone. The clothing of the male sex is a piece of cloth 7 cubits long by 4 cubits broad, fringed or tasselled at the ends; this they wrap round their loins allowing it to hang down to their knees like a short kilt. The men wear their hair long and secure it in a bunch by means of a leather fillet or a cord made of their own hair: the fillet serves upon occasion for many other purposes. The women dress in a piece of cloth measuring 9 cubits by 2 cubits; it is fashioned with short sleeves and descends a little below the knee in front, while behind it trails upon the ground: in addition to this they throw a cloth 4 cubits long by 2 cubits wide over the head and shoulders. Female ornaments are nose and toe-rings, armlets and necklaces of silver; the women divide their hair in the middle and collect it on each side in a tress which passes behind the ear and hangs loosely over the breast. The garments of both sexes are dark blue, being dyed with indigo, and men and women alike mark themselves upon the cheekbones with 3 vertical cicatrices.

Mode of life and customs.—During the greater part of the year the majority of the Qaras inhabit thatched huts, and a few of them live in small tents: but in the 3 winter months they occupy caverns. Certain of their cave-dwellings are of great size, accommodating the flocks and

herds as well as the families of the owners; in some there is an upper storey. One of these caverns at Dirbāt is 150 feet in span, 50 feet high and 30 feet deep.

The Qaras keep camels, cattle, sheep and goats; they have very little cultivation. They subsist chiefly by collecting frankincense and other gums but they deal also to a small extent in hides and ghi.

The Qaras salute strangers by touching fingers with them, they do not shake hands. Qara relations kiss one another upon each cheek by way of greeting. A distinctively Qara custom is to slaughter a bullock at the grave on the occasion of a funeral and to distribute the meat to the assembled poor. As a race the Qaras are quarrelsome and addicted to mutual slaughter. The blood-feud is tempered only by the employment of Rabi's ربيع, or third persons specially engaged as protectors, whose duty it is to take up the feud should the person for whose safety they are responsible be attacked while under their protection. Qara disputes, so far as they are not fought out with arms, are settled by the authority of elders.

Arms.—The arms of the Qaras are a wooden, shark-skin, basket-work or metal shield, about $1\frac{1}{4}$ feet in diameter and conical in shape, which is also used as a stool, as a head-dress and for carrying water; a throwing-stick a yard long and pointed at both ends which they can deliver with great precision at 30 feet, causing it to turn over once in its flight, and can also make to ricochet along the ground; and an iron sword without a guard, straight-bladed, 3 feet long and 2 inches broad, which they carry on the right shoulder without a scabbard: the sword is sometimes of German manufacture. They also wear daggers and a few of them have muzzle-loading guns.

Tribal divisions and number.—The principal divisions of the tribe are:—

Section.	Fighting strength.	Habitat.	REMARKS.
'Ak'āk (Bait) بيت عكاك	150	At Rakhyūt.	Nil.
Barā'amah براعمه	160	In the Samhān hills behind Saīālah.	Do.
Hardān (Bait) بيت حردان	70	In the hills near Rakhyūt.	Do.

Section.	Fighting strength.	Habitat.	REMARKS.
'Īsa (Bait) بيت عيسى	80	At Rakhyūt.	Nil.
Jabūb (Bait) بيت جبوب	160	In the Samhān hills.	Do.
Qatan Bait بيت قطن	150	Do.	The chiefs of the Qaras belong to this section, which is in every way the élite of the tribe.
Ka'bōb (Bait) بيت كعبوب
Kishōb (Bait) بيت كشوب	170	In the Samhān hills.	Nil.
Kathōb or كثوب	700	At Tāqa and in the Samhān hills about Wādī Dirbāt.	Their present chief is Fankhār.
Ma'ashani معشني			
Sa'id (Bait) بيت سعيد	300	In the Samhān hills and behind them at Hāsiki.	Nil.
Shamāsah شماشه	90	At Rakhyūt.	Do.
Tabōk (Bait) بيت تبوك	170	In the Samhān hills.	Do.
'Umr (Bani or Ahl) بني—اهل عمر	1,200	At Murbāt and in the Samhān hills near that place.	This section, which is friendly to the Sultan of 'Omān, includes a sub-section called Bait Makhaijir بيت مخير.

The tribe is supposed to number in all about 5,000 souls, of whom all except a few hundred are nomadic: settled Qaras are found only at Kharifōt (30 houses), Murbāt (10 houses), Rakhyūt (65 houses), Sadah (20 houses) and Tāqa (20 houses).

Political characteristics.—Politically the Qaras appear to be a restless and irresponsible, but not a resolute or really dangerous tribe. Saiyid Muhammad-bin-'Āqil, pirate and self-constituted governor of Dhufār,

was murdered in 1829 in pursuance of a blood-feud by Sālim-bin-Thori, the head of all the Qaras. In 1845-6 parties of British officers in Dhufār were fired on by the Qaras, and it was found unsafe to move about in their hills without the company of a Qara Rabi'; but other and more recent travellers experienced no trouble. In unsettled times the tribe sometimes cause annoyance to the villagers of Dhufār plain, especially by damaging their crops at night; but they never attack the settled villages, and the Āl Kathīr say they are not afraid of them.

QĀRAH
(BARR-AL-)

بر القاره

A coastal tract in Eastern Arabia which may perhaps be reckoned as included in the Sanjāq of Hasa. It reaches from Rās-as-Sufairah on the north to the bottom of Dōhat-as-Salwa on the south, a distance of about 36 miles; and inland it extends to a depth of about 12 miles. Upon the coast it meets Barr-al-'Oqair to the north, and Qatar to the south of it; and inland, in all directions, it merges in the Jāfūrah desert. Some authorities would even make Barr-al-Qārah a part of Jāfūrah.

The following are the chief features of all kinds in Barr-al-Qārah:—

Name.	Position.	Nature.	REMARKS.
'Ashaiyir (Khariqat-al-) خريقه العشير	Inland, 9 miles west by south of 'Adāmat-al-Muqīl at the coast.	Wells.	...
Ba'aij بعيج	Inland, 10 miles west of the foot of Dōhat-as-Salwa.	Do.	The desert route between Hofūf in the Hasa Oasis and Dōhah in Qatar passes by these wells.
Bahailiq بحيلق	Inland, 10 miles west of Rās Umm Huwaidh.	A group of 3 or 4 wells.	The water is fairly good.
Ghubaitain (Jabalain-al-) جبلين الغبيتين	On the coast immediately south of Dōhat Hamāh.	A double-headed hill.	It appears to be also called Jabalain Lughbatain جبلين لغبتين.
Hamāh (Dōhat) دوحة حماه	On the coast; the entrance is 6 miles south of Rās Umm Huwaidh and 17 north of the foot of Dōhat-as-Salwa.	A bay.	Small, but forms a decided indentation in the coast.

Name.	Position.	Nature.	REMARKS.
Hamrūr حمرور	Inland, 8 miles west of Dōhat Hamāh, behind Khashm-az-Zainah.	Wells.	A halting place on one of the Hofūf-Dōhah routes, the next before Ba'a'ij.
Huwaidh (Rās) and Jabal Umm) راس - جبل ام حريض	On the coast, 15 miles south-south-east of Rās Līmail.	A cape and hill.	...
Huwaiqīl (Dōhat) درحة حريقيل	On the coast, immediately south of Rās Umm Huwaidh.	A bay.	In February 1905 an attack on 2 Bahrain boats was committed here by Al Morrah of the Al Bahaih section.
Līmail (Rās) راس ليميل	On the coast, 1 mile east of Rās-as-Sufairah and about 14 miles south-east of 'Oqair Port.	A cape.	This is the point at which the coast after running from west to east south of Zakh-nūniyah island again begins to run from north to south.
Mahārah (Rās Abu) راس ابو محارة	On the coast, 8 miles south-south-east of Rās Līmail.	A cape.	...
Muqīl ('Adāmat-al-) عدامة المقييل	At the coast 8 miles north of the foot of Dōhat-as-Salwa.	A mound.	The mound stands in a small bay.
Qārah (Jabal-al-) جبل القارة	Inland, 10 miles south-west of Rās Līmail.	A hill of insignificant height, forming a landmark from the side of the interior but invisible from the sea on account of intervening sand-hills. It is of black rock and there is a considerable flat surface on the top.	There are wells in the vicinity at which Bedouins are usually to be found encamped; the hill is utilised by them for ambuscades.
Qōz-bin-Ashruḥ (Jabal) جبل قوز بن اشرفي	At the coast, 3 miles north from the foot of Dōhat-as-Salwa.	A hill or mound.	...

Name.	Position.	Nature.	REMARKS.
Salwa (Khīsat-as-) خيسة السلوى	A short distance inland, about midway between Qōz-bin-Ash ru fi and the foot of Dōhat-as-Salwa.	A group of 2 or 3 wells.	The water is indifferent.
Salabah (Rās-as-) راس الصلبيه	On the coast, 5 miles south-south-east of Rās Līmail.	A cape.	...
Zainah (Khashm-az-) خشم الزينه	Inland, 1 or 2 miles west of Dōhat Hamāh.	A hill.	...

QARĀRAH

قارار

In Turkish 'Irāq, on the left bank of the Tigris, about 4 miles south-east of Baghdad City by road but 12 miles by river. Qarārah consists of large date plantations in which stand the summer houses of the owners, who are mostly inhabitants of Baghdād, and the residences of the cultivators. Here are 4 distilleries, owned by Jews and worked under the control of the Public Debt Department, which supply nearly the whole of Turkish 'Irāq with native liquor. There is a long boat bridge of 36 to 45 pontoons, according to season, of which 7 adjoining the left bank are swung down stream to let vessels pass. There are no shops. A Nāhiyah which formerly existed was abolished about 10 years ago, and only a few police now remain. When epidemic disease prevails lower down the Tigris, steamers for Baghdād undergo a sanitary inspection at Qarārah.

QARNAIN*

قرنين

An island about 53 miles from the coast of the Abu Dhabi Principality, lying in the middle between the islands Arzanah, Dās and Zirko. It is $1\frac{1}{2}$ miles long, north-west and south-east, by $\frac{1}{2}$ a mile broad. Qarnain has three remarkable detached peaks, one of which is 190 feet high, near its northern end; the southern part of it is low. There is no fresh water. The following pearl banks are in the neighbourhood of

* A view of this island will be found in Chart No. 2374—2837 B.

Qarnain :—Qidair, 4 miles to the north ; and on the south, closely adjoining, the great group known as Sutūh Arzanah which reaches from **Zirko** almost to **Arzanah**. The Shaikh of Abu Dhabi appears to be the owner of Qarnain.

A small sandy islet in the Persian Gulf, situated in latitude $28^{\circ} 49'$ north and longitude $48^{\circ} 47'$ east, about 25 miles off the **Kuwait** coast and 24 miles south-east of the island of **Kubbar**. Its diameter is 200 yards, and its level 3 or 4 feet above high-water. There are some tufts of grass but no fresh water. The island swarms with sea-birds and is covered in the season with their eggs and young: it is overlaid with a deposit of guano a few inches thick. Qāru is reckoned to the Shaikhdom of **Kuwait**.

QĀRU
قار

A small, but comparatively populous and highly important district in the very midst of Central Arabia ; in shape it is compact and measures on the average about 80 miles across.

QASĪM

قاصم

or
MIDDLE
NAJD*

نجد

Limits.—Qasīm is bounded on the north and north-west by the frontier of the Jabal **Shammar** principality, which runs between the Shammar village of **Kahāfah** on the one side and the Qasīm villages of Quwārah and **Qusaibah** on the other ; on the east it meets the **Sadair** district of Southern **Najd** ; on the south-east it is divided from the district of **Washam** by the desert containing Wādi-as-Sirr ; on the south and west it ends where a country of igneous rock begins, a little beyond **Rass**.

Physical geography.—Qasīm is a flat and almost featureless tract. Its elevation above the sea probably varies above and below 2,500 feet, and its surface is thus 1,000 feet lower than the plains of Jabal **Shammar**. Qasīm falls from both sides to the Wādi-ar-Rummaḥ in its centre, of which the slope and direction, within the bounds of Qasīm, are downwards from south-west to north-east. Though Qasīm contains numerous villages the greater part of it is stony or sandy desert ; and accidents of surface are generally insignificant. Where rock protrudes it is

* For information regarding authorities, maps, etc., see the footnote to the title of article **Najd**.

generally sandstone, the volcanic formations which belong to the territory of Jabal **Shammar** and girdle Qasīm on north, west and south not apparently penetrating within the district. The water table is generally high, few wells having a depth of as much as 10 fathoms, but the water is commonly brackish and in many places almost undrinkable.

Wādī-ar-**Rummaḥ** is the chief physical feature of the country, but it is scarcely distinguishable, owing to the width and ill-defined character of its bed, from the country on either side of it; more than one European traveller has crossed it without, apparently, becoming aware of its existence. Jabal Sārah سارة is a low sandstone ridge which has its origin in the vicinity of **Buraidah** and runs thence north-westwards for about 30 miles, the villages of Shiqqah, Qara'ah, 'Ayūn and Rōdh lying in bays upon its south side; a little to the west of Rōdh it throws off a low spur which is crossed by the road from **Buraidah** to Samīrah in Jabal **Shammar**. A great plain, called Fuwailik فويلك, remarkable even in Central Arabia for the unbroken level of its surface, begins on the south side of Jabal Sārah near Rōdh and extends westwards for some 25 miles; its breadth however is inferior to its length.

A number of the villages of Qasīm are situated in remarkable hollows or pits, in which water and loamy soil approach the surface: such are the depressions, several miles in extent, which contain the villages of Quwārah, **Qusaibah** and 'Ayūn, and the valley a little to the west of **Buraidah**, free of sand though surrounded by desert, along which the plantations of Khabb, Huwailān and Qisai'ah extend for 7 miles; such too is the Sarif hollow to the north-east of **Buraidah**, which is 5 miles long by a mile broad and like the Khabb valley has a northerly and southerly direction.

Certain of the larger deserts which separate the cultivated basins of the villages from one another are known by special names. Among these may be mentioned Batain بطين, a tract of which Jabal Sārah possibly forms the scarp on the south-west; it consists towards its southern end of sandstone boulders and towards its northern of round pebbles; not a blade of green is to be seen in its whole extent of 25 miles from Wathāl to **Qusaibah**. Another is Tarmus طرمص, a wilderness of disintegrated sandstone bearing not a single shrub, which stretches along the border of Qasīm between **Qusaibah** and **Kahāfah**, with a length from east to west of 20 miles and a breadth of 10. Tarmus is remarkable for a small, deep depression near its centre, called Thiqbat-az-Zarrāq ثقبۃ الزراق, which holds rain water for 3 or 4 months in the year and is adjoined on the south by a small hill named 'Anz عنز. A some-

what similar hollow exists some 10 miles to the west of Quwārah ; it is known as Baqriyah بقرية, contains tamarisks and tall grass, and holds rain water throughout the year.

Climate, products and livestock.—The air of Qasīm is often stagnant and sultry. From April to June the weather is warm, with overcast skies and on some days light rain.

Dates and cereals—especially wheat, barley, maize and millet—are the principal crops, and both are abundant ; the barley harvest is in the end of April. Fruits also are grown, including grapes, pomegranates, figs, citrons, melons and peaches ; radishes and onions are among the vegetables ; lucerne is raised in the date groves. Cultivation is everywhere dependent on irrigation from wells which are worked by camels, and in the less favoured localities it is desultory and fluctuating.

The usual domestic animals are horses, camels, donkeys, horned cattle, sheep and goats.

Inhabitants.—A large proportion of the population both in town and country are probably Bani Tamīm, and the people may perhaps be assumed to belong to that tribe when no other is specially mentioned. Next in number to the Bani Tamīm are the 'Anizah, 'Ataibah, Harb and Mutair, and there are some representatives also of the once renowned tribe of the Bani Khālīd. It is possible however that in some cases the connection claimed with well known Bedouin tribes is fanciful. In consequence of the flatness of the country, and of the insecurity of property when Bedouins are about, almost all villages in Qasīm are provided with watch towers ; these, when the village, as is often the case, stands in a hollow, are the first indications of its existence to the approaching traveller.

The Qusmān قُصَمَان (Singular, Qasīmi, or Qasaimi قُصَيْمِي) or settled inhabitants of Qasīm are a prudent, industrious and not unintelligent race ; but Wahhābi-ism has soured their disposition, and nowhere does their reputation for hospitality stand high. Qasīm furnished a strong contingent of labourers to the original Suez Canal works, and the Qusmān are almost the only villagers of Central Arabia who ever take service with the Turks in border provinces ; these are facts which seem to indicate some enterprise and energy. It is said that one of the principal purveyors of camels at Damascus, a supplier at the same time of escorts to Muhammadan pilgrims, is at the present time Bin-Rawwāf, a native of Qasīm. Their history and institutions bespeak a sturdy love of freedom among the people of Qasīm ; and, though mainly addicted

to husbandry and trade, their citizen infantry have always borne a good name for steadiness in the wars of **Najd**. The main peculiarity of dress in Qasīm is among the women, who wear sleeves so loose as sometimes unexpectedly to expose their persons to view from the shoulder to the knee. The men generally wear their hair short.

A number of the Qusmān, but probably less than half, are Wāhhābis ; and, among these, Wāhhābi doctrines as late as 1878 carried more weight than law or civil authority. Yet even then Wāhhābi-ism was not really popular, for intercourse with abroad had rendered the people comparatively tolerant, and the word "Wāhhābi" had even begun to be used among them as a term of abuse applicable to an ill-natured fellow.

The Bedouins of Qasīm are chiefly **Mutair**, but the **Harb** and **Qahtān** also visit the district, and a few **Shammar** encamp in summer within its northern border.

On the data available the fixed population of Qasīm may be roughly estimated at 45,000 souls ; if 2,000 be added on account of Bedouins the total population will be 47,000. The area of the district being approximately 5,000 square miles, the density of population works out at less than 10 individuals to the square mile.

Occupations and trade.—Agriculture and the carrying trade are the principal means of subsistence ; the latter, it is calculated, employs one-third of the population of Qasīm, and the operations of the Qasimi camel masters extend to Makkah, Madīnah, **Hāil**, **Baghdād**, **Basrah**, **Kuwait** and **Riyādh**. Dates, which in Qasīm are sold by weight, are commonly exported to **Jabal Shammar**. and ghi to Makkah ; and in some years, when the rate is favourable, the dates and corn of Qasīm find their way to Madīnah. There is also an important trade in horses bought from the Bedouins, chiefly with India through **Basrah**, and horse and camel dealing are accounted highly respectable occupations. 'Anaizah, supplied by the **Qahtān**, and **Buraidah**, supplied by the **Mutair**, are the two principal horse markets ; at **Buraidah** the number of animals is generally larger, while at 'Anaizah they are of better class. 'Anaizah is the principal trade centre of the country, and further details of the trade and industries of Qasīm will be found in the article on that town. Both 'Anaizah and **Buraidah** are wealthier places than **Hāil**. Usury is common in Qasīm, and agriculturists, and even Bedouins, in the neighbourhood of the towns are frequently burdened with debt ; the cash rate of interest is 15 per cent. a year, and the rate in kind 50 per cent. at harvest prices. The weights and measures of Qasīm are identical with those of Southern **Najd**.

Political position and administration.—Qasīm has generally enjoyed a virtual autonomy, but at times the whole or parts of it have been dependent or semi-dependent, now on Southern Najd and now on Jabal Shammar. It has frequently played the part of a make-weight, causing the scale to dip on this side or on that in the long contest between the Wahhābi Amīr of the south and the Shammar Amīr of the north. Qasīm is moreover the battle-field of Central Arabia; but its people, unlike those of Belgium, have ever taken an active and frequently a decisive share in the combats waged upon their own soil. Qasīm contains the principal cross-roads of Central Arabia, routes* from Riyādh, Kuwait, Hāil, Madīnah and Makkah meeting at Buraidah or 'Anaizah.

The internal political constitution of Qasīm is loose; but, such as it is, it seems little subject to change under the influence of external events, and it has outlasted many vicissitudes of foreign war and alliance. The affairs of Qasīm are dominated by the great municipalities of 'Anaizah and Buraidah, each ruled by an Amīr or chief who is in name a tyrant but in practice effectually restrained by public opinion. Between the twin capitals there is perpetual rivalry and sometimes war; but they are not incapable, in great emergencies, of sinking their differences and taking united action for the common weal. Each stands at the head of a cluster of dependent townships and villages, related to it in various and varying degrees of closeness and subordination; as a rule places south of Wādī-ar-Rummah are thus attached to 'Anaizah and places north of it to Buraidah. In 1878 some of the places subject to Buraidah paid to it a tribute of one-twentieth of their produce, the corn by measure and the dates by weight. About 1878-80 'Aushaziyah, Shabibiyah, Wādī and Wahlān were included in the 'Anaizah sphere of influence, while that of Buraidah comprised 'Ayūn, Bukairiyah, 'Ain Ibn-Fahaid, Hilālīyah, Huwailān, Khabb, Khabrah, Khadhar, Nabqīyah, Qara'ah, Qisai'ah, Qusaibah, Quwārah, Nabqīyah, Rakaiyah, Rass, Rōdh, Rōdhat-ar-Rubai'i, Sarif, Shamāsiyah, Shiqqah, Tarfiyah and Wathāl. The distribution at that period was probably normal, and from the positions of the places mentioned it is easy to infer what must have been the political situation of most of the remainder; in some cases however the present political connection is specified in the table below. Between 1874 and 1884 the village of Mudhnib and the Washam town of Shaqrah were also tributary to Buraidah: Mudhnib is still so. The administrative and military system of 'Anaizah is described in the article upon that town, and the system at Buraidah is similar.

* See article Najd_āḍ fin.

There is at present (1906) a Turkish cantonment at Shaihiyah and small Turkish garrisons are stationed in 'Anaizah and Buraidah ; in all but name, however, the district is still independent.

Topography.—The following is a table of the principal inhabited places in Qasīm, in which is embodied such information as it has been possible to procure regarding each of them :—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Amūdiyyah عمودي	3 miles north-west of Qusaibah.	One small Qasr. Shammar Bedouins camp here in summer.	There are a few date-palms and some corn is grown. Water is saline at 3 fathoms from the surface.
'Anaizah عنيزة	See article 'Anaizah.
Anbūwān انبران	1 or 2 miles east of Qusaibah.	2 enclosures occupied in seasons of agriculture only.	A small tract where corn is cultivated and Shammar Bedouins encamp in summer. Water is at 2 fathoms and is drinkable.
'Aqaiyil (Qasr Ibn-) قصر ابن عقيل	About 7 miles west of Rass.	A Qasr of about 15 houses of 'Ataibah.	There are dates, wells 8 fathoms deep, and some cultivation of wheat. This place was the scene of a Turkish defeat in 1904. Under Buraidah.
A'raimdhī الاعرمدحي	6 miles west-south-west of Buraidah.	50 houses scattered among date groves.	Ordinary cultivation (including dates) and animals ; good water at 8 fathoms.
Athlah الاثله	In the extreme south-west of Qasim.	A walled village of 40 houses of 'Ataibah.	There are no dates but a good deal of wheat. Water is good at 7 fathoms. The place is under Buraidah.
'Aushaziyah عوشيزه	7 miles east by north of 'Anaizah.	20 houses of Arabs, said to be Sabai' of the Matarid section.	On the west side are a number of small date groves, and cereals are grown. There are a few of the ordinary livestock. Irrigation is from wells of good water, 5 fathoms or rather more deep. Salt deposits are said to exist.

Name.	Position.	Houses and inhabitants.	REMARKS.
'Ayūn عُيُون	25 miles north-west by west of Buraidah.	...	See article 'Ayūn.
Badāyah بدايه	Several miles westwards of 'Anaizah.	A collection of Qasrs occupied by Sabai' and 'Ataibah.	The settlement is said to cover an area of 2 or 3 miles and most of the melons sold at 'Anaizah are grown here. The wells are inside the Qasrs which are strong and defensible. (Possibly this is the same as Shabibiyah below.)
Barūd-as-Siyāh برود السياه	30 miles north of Buraidah.	Several small Qasrs occupied by cultivators.	The wells are inside the Qasrs for safety; they are 5 fathoms deep and the water is good. There are no dates. Livestock are placed at 30 camels, 8 donkeys and 20 cattle. Mutair encamp here sometimes, also Shammar.
Rasr البر	7 miles west of Buraidah.	50 houses of 'Ataibah, Harb and Qahṭān — principally the first.	Water at 6 fathoms; the date groves are extensive.
Bitāh بطاح	Adjoins Jan'i on the north-west.	About 15 watch towers guarding wells, occupied by 'Ataibah.	Water is sweet and at 2 fathoms from the surface. Some corn is grown.
Bukairiyah بكيره	5 miles north-north-west of Khabrah.	150 houses, said to be of the 'Ataibah, Harb and Mutair tribes.	The village is walled and has some towers. Dates of good quality and citrons are grown; and the inhabitants, who are well-to do, own camels and do some trade with the Bedouins. There is a small bazaar. The Turks were defeated here by the people of Qasim on or about the 15th July 1904. The place is under Buraidah.

Name.	Position.	Houses and inhabitants.	REMARKS.
Buraidah بريدة	See article Buraidah .
Butainiyāt البطينيات	5 miles north-north-east of Buraidah .	Some 50 houses and towers of Mutair and Shammar .	There are no dates but considerable cultivation of cereals.
Dhalfa'ah ضلفعه	About 16 miles south-west of Buraidah and the same north-east of Bukairiyah .	15 houses of 'Anizah.	There are a few palms and cereals and vegetables are grown. Irrigation is from wells 7 to 8 fathoms deep of which the water is drinkable.
Dharās الظراس	7 or 8 miles north-west of Buraidah .	100 houses of Arabs, believed to be 'Anizah.	The place stands in the desert; it contains a few shops and has several large date groves. Water is at 6 or 7 fathoms from the surface and is good.
Dhīdah ضيدة	15 miles north-west of 'Ain Ibn-Fahaid.	...	A watering-place with numerous wells, some of which are lined with stone. The water is good and is at a fathom or less from the surface.
Dilaimīyah دليميه	About 10 miles north-west of Rass	A halting-place on one of the routes from Buraidah to Madīnah . There are a score of wells, 3 fathoms deep, with slightly saline water. Corn is grown by cultivators from Rass , and Harb Bedouins occasionally camp here in summer.
Dūd (Ab-ad-) أبا الدود or Ahlab-ad-Dūd أحلب الدود	About 40 miles north by east of Buraidah and 20 from Wādī-ar-Rummah : it is the northernmost village in Qasim .	40 houses of people of 'Ataibah and Shammar origin.	A walled village with a few old date palms. Melons and cereals are grown, the cultivation of wheat and maize being considerable. Irrigation is from wells of good water 8 to 9 fathoms deep or less. Livestock are estimated at 50 camels (chiefly used for drawing water), 50 donkeys and 50 cattle. Mutair and Sham-

Name.	Position.	Houses and inhabitants.	REMARKS.
Duwairah دويره	Several miles north or north-east of Buraidah.	...	mar Bedouins occasionally encamp here in summer. Under Buraidah. A cultivated tract with 4 wells of sweet water, 5 fathoms deep, where corn is grown by agriculturists of Buraidah.
Fahaid ('Ain Ibn-) عين ابن فهد	About 35 miles north-north-east of Buraidah.	75 houses, chiefly of 'Ataibah, but there are some Harb and 'Anizah families.	A village with date palms and cornfields. Water for irrigation is provided by a spring; it is clear but undrinkable, and potable water is brought from Wasaitah 6 miles to the southwards. Livestock are said to be 10 horses, 50 camels, 50 donkeys and 100 cattle besides sheep and goats. At 2 miles east of the village is an ancient ruined fort called Qasr Mārid قصر مارد and adjoining it is a table-rock with many Himyaritic inscriptions; a few such inscriptions and many more in Arabic are found on stones to the west of the village. 'Ain Ibn-Fahaid is a stage on the route from Kuwait to Makkah: cattle, sheep, dates and grain are available in small quantities.
Ghāf (I) غاف	2 miles west of Buraidah, near Quwai'ah.	35 houses of 'Anizah, 'Ataibah and Mutair.	Ordinary cultivation and livestock. Water at 7 fathoms in wells.
Ghāf (II) غاف	3 miles west-south-west of 'Ayūn in the same large depression.	20 houses.	There is a great date plantation, partially smothered in desert sand.
Ghammāsh غمّاش	12 miles west-south-west of Buraidah.	About 10 houses of 'Ataibah forming a vil-	There is a considerable number of palms, also cultivation of wheat

Name.	Position.	Houses and inhabitants	REMARKS.
		lage and 15 more scattered in date groves.	and lucerne.
Haid الحيد	In the south-western part of Qasim.	A village of 15 houses and some Qasrs of 'Ataibah.	There are no dates, but other cultivation exists. Under Buraidah.
Hajnāwi حجناري	Perhaps 20 to 30 miles south-west of 'Anaizah; the name appears to cover a considerable stretch of country.	A locality with corn cultivation on the south bank of Wadi-ar-Rummah.	Dates, wheat and lucerne are grown. The village, which is a well-to-do one, is under 'Anaizah. The surrounding gravel desert also is called Hajnāwi.
Hamar الحمر	4 miles west of Buraidah.	50 houses, said to be of Harb and Shammar.	The usual cultivation. Water is at 5 fathoms but half the wells are brackish. Under Buraidah.
Hanaidhil حنيدل	In the neighbourhood of Tarfiyah, but a few miles from it—probably north-westwards.	A dozen houses contained in a fortified enclosure.	The place exists chiefly for the protection of some cultivation and wells which adjoin it. It is a dependency of 'Ain Ibn-Fahaid.
Hilaliyah هلالية	3 miles north by west of Khabrah.	80 houses of Arabs, said to be Harb.	The village is walled. There are many date groves; cereals, melons and other fruits are grown. Irrigation is from wells of brackish but drinkable water 11 fathoms deep or less. The place is under Buraidah.
Huwailān حويلان	Between Khabb and Qisai'ah, in the same hollow.	25 houses, said to be of Dawāsir. There are more houses among the date trees.	The date plantations are nearly 2 miles long. They almost meet those of Qisai'ah, but are separated by a short interval from those of Khabb. There is good water at 9 fathoms.
Janāh (Wādi-al) وادي الجناح	2 miles north-west of 'Ansizah, on the right bank of Wadi-ar-Rummah.	25 houses of mixed Arabs.	There are a few poor date gardens irrigated from wells 5 or 6 fathoms deep. The place was at one time altogether deserted,

Name.	Position.	Houses and inhabitants	REMARKS.
Jan'i جرعي	1 or 2 miles south-west of Rass.	20 houses in the form of Qasrs guarding wells: the people are said to be Harb and 'Ataibah.	after the departure of the original founders who are said to have been Bani Khālid of a section called Janāh. It is reputed older than 'Anaizah, and is perhaps only a part of the settlement described below under the name Wadi.
Khabrah خبرة	35 miles south-west of 'Anaizah.	...	See article Khabrah.
Khabb خب	4 miles west of Buraidah, in the same hollow as Huwailān and a little to the north of it.	80 houses, chiefly of Bani Khālid or, according to another account, of 'Anizah and Mutair.	The date groves, which are very valuable, extend between 2 and 3 miles from north to south.
Khabb-al-Qabar خب القبر	2 miles east of Buraidah.	40 houses of Mutair scattered among date groves.	Water is brackish.
Khadhar خضر	4 miles from Buraidah on the route to 'Anaizah, north of Wadi-ar-Rummah.	50 houses of mixed Arabs, mostly 'Anizah.	There are numerous small date groves; and fruit, grain and vegetables are grown by irrigation from wells of sweet water 8 or 9 feet deep.
Khudhairah الخضيره	Adjoins Khabb-al-Qabar on the south-west.	15 houses of Mutair, together and others scattered.	An ordinary village.
Mudhnib or Midhnib مذنب	20 to 25 miles south-east of 'Anaizah.	200 houses of 'Anizah or possibly 'Ataibah.	The place is walled and has 4 gates; in recent years building has extended beyond the walls and houses are also scattered among the date groves to some distance. A good proportion of the houses

Name.	Position.	Houses and inhabitants.	REMARKS.
			have an upper storey. The bazaar contains 20 shops and there are 3 mosques. The date groves are extensive; and wheat, maize, lucerne, fruit and vegetables are grown. Water in wells about 6 fathoms deep is abundant but rather bitter. Marble blocks of which coffee-mortars are made are quarried in the vicinity. Mudhnib is under Buraidah.
Muraïd Saiyid مرید سید	5 miles west-south-west of Buraidah.	100 houses, said to be of Mutair, Harb and 'Anizah.	There are large date groves and much lucerne is grown between the palms. The wells are 8 fathoms deep.
Nabḥāniyah نبحانیہ	About 20 miles west or west-north-west of Rass.	40 houses of Harb.	There are a number of date groves and corn is grown. The wells are 10 fathoms deep and the water is sweet. Harb Bedouins sometimes camp near by. This village is on the route from Rass to Madinah.
Nabqiyah نبقیہ	About 25 miles north-east of Buraidah.	30 houses of mixed Arabs.	Date palms are scattered and only number 300 or 400. Cereals, melons and vegetables are cultivated. Irrigation is from wells 9 or 10 fathoms deep; the water is good. Under Buraidah.
Nafi النفي	3 miles south of Haid.	30 houses of 'Ataibah.	No dates. Under Buraidah.
Naqīb نقیب	6 miles north-north-east of Buraidah.	No permanent habitations.	Desultory cultivation by agriculturists from Buraidah.
Qara'ah قرعہ	14 miles west-north-west of Buraidah, under Jabal Sērāh on its south side.	100 houses of mixed Arabs.	The village is in 2 parts, the smaller called Qasr al-Hawaiti قصر الحویطی is a mile north of the other. There are dates, fruit trees, grain and

Name.	Position.	Houses and inhabitants.	REMARKS.
Qaryah قرية	2 miles north-west of Buraidah.	15 houses of Harb scattered among date groves.	vegetables, all irrigated from wells of brackish but drinkable water which are 13 to 14 fathoms deep. About 2 miles from Qara'ah is a lake, about 1 mile in extent, which sometimes dries up leaving a thick deposit of salt. There are a number of small date plantations and a little cultivation of wheat. There is good water in wells at 5 fathoms.
Qisai'ah قصية	4 miles south by west of Buraidah in the same hollow as Khabb and Huwailān, to the south of the latter.	60 houses of Bani Khālīd or perhaps of 'A n i z a h. There are also outlying houses among the plantations.	The date plantations extend north and south nearly 2 miles and on the north almost meet those of Huwailān. Fruits, cereals and vegetables as well as dates are grown by irrigation from wells holding sweet water at 7 to 8 fathoms. There are no horses, but all the usual animals. The place is under Buraidah.
Qusaibah قصبه	45 miles north-west by north of Buraidah.	...	See article Qusaibah.
Quwai'ah قوية	2 miles west of Buraidah.	20 houses of 'A t a i b a h, D a w ā s i r and Harb; others also are scattered among the plantations.	The wells are 7 fathoms deep, and dates and a little wheat and lucerne are grown. Grapes, and oranges are abundant.
Quwārah قواره or Quwarah قورة	24 miles north-west of 'Ayūn; Quwarah is the nearest village in Qasim to the Jabal Sh a m m a r frontier. Height above the sea is about 2,640 feet.	70 houses of mixed Arabs, noted for their indolence and poverty.	Quwārah stands in a basin smaller but more fertile than that of Kahāfah. The village consists of two portions which lie more than a mile apart. Date groves are numerous but small, and the trees indifferent. Cultivation of cereals, melons and vegetables also is carried on by irrigation from wells,

Name.	Position.	Houses and inhabitants.	REMARKS.
Rafi'ah الرعيه	1½ miles east of Buraidah.	A Qasr containing 8 households of Mutair.	2/3rds of which yield drinkable water; the water of the rest is clear but bitter. The place is under Burai- dah.
Rakaiyah ركيه or Qasr Mahanna قصر مهنا	About 18 miles north-east of Buraidah and east of Wādi-ar- Rummah.	A fort containing half-a-dozen houses of vari- ous Arab tribes. There are also a number of watch towers in the fields, some of which are occupied.	This place was founded about 1860 by Mahanna, Amir of Buraidah; it stands in the middle of a depression 2 miles in diameter. The fort is remarkable for contain- ing a magnificent well or water-pit with an opening 78 feet square and a depth of about 70 feet, the upper 30 feet in sand and earth and the remainder in sandstone rock. The water is raised by camels and after pass- ing out through the wall of the fort irri- gates fields of wheat, barley, maize and melons. In good years the water in the well stands 45 and even 60 feet in depth. Better water for drinking pur- poses than that of the well is said to be ob- tained from a hollow Quwaitir called قويتير 2 miles to the south- ward. There are camels for working the wells and some other animals.
Rasais رئيس	Between Rass and Jan'i.	20 houses.	There are some date groves and corn is grown. Water, which is drinkable, is from wells 2 fathoms deep.
Rass رأس	40 to 45 miles south-west of Buraidah.	...	See article Rass.

Name.	Position.	Houses and inhabitants.	REMARKS.
Baudh روض	6 miles west-south, west of 'Ayūn, under the south side of Jabal Sārah.	50 houses of mixed Arabs.	There are a number of small date groves, and fruit and cereals are grown. The water is sweet in wells 9 to 10 fathoms deep.
Rōdhat-al-Mahanna روضة المهنا	15 to 20 miles east-north-east of Buraidah, east of Wādi-ar- Rummaḥ and about 12 miles south of Sarif.	40 houses, said to be chiefly Mutair.	Some dates and good water. About 10 miles further east (or accord- ing to a different account, several miles further west) is Ruw- aidḥah روضة, where Ibn Rashīd was killed on 11th April 1906. One report identifies Rōdhat-al-Mahanna with Rōdhat-ar-Rub- ba'i below, from which it cannot be very far distant.
Rōdhat-ar-Rubai'i روضة الربيعي	Apparently 15 miles east of Buraidah.	70 houses partly of 'Anizah.	There are here a large Qasr belonging to the family of the Shaikhs of Buraidah and about 30 date planta- tions, most of which are owned by them. The wells contain sweet water at 7 or 8 fathoms. Dates, fruits, cereals and vegetables are grown. The people are well-to-do. One account identifies this place with Rōdhat-al- Mahanna above.
Sa'id (Qasr) قصر سعيد	5 miles north- east of Buraidah.	Half a dozen houses of the family and dependants of a Shammar Arab named Sa'id.	Date palms are few, but wheat cultivation is fairly extensive. There are the ordinary livestock. The wells are brackish, 8 fathoms deep, and good water is from a hollow called Madassah مداسة, 2 miles to the north, which holds rain water.
Saib السيب	12 miles south- west of Buraidah.	40 houses of 'Anizah and 'Ataibah, scattered amidst date groves.	Under Buraidah.

Name.	Position.	Houses and inhabitants.	REMARKS.
Saqiyah ساقية	3 miles west of Qusaibah.	5 small scattered enclosures, occupied at certain seasons only.	Water is at 3 fathoms and saline; cereals are grown. Shammar Bedouins encamp here in summer.
Sarīf صريف	20 miles north-east by north of Buraidah and west of Wādī-ar-Rummaḥ.	3 small ruined enclosures occupied by cultivators from Buraidah at the times of ploughing and reaping.	Sarīf stands in a valley of the same name, 5 miles long from north to south and 1 mile wide, with some volcanic rocks near the northern end. Barley and sometimes wheat are grown in favourable seasons. The wells are 1 to 4 fathoms deep. Between Sarīf and Tarīyah Mubarak, Shaikh of Kuwait, was defeated on the 17th of March 1901 by the Amīr of Jabal Shammar.
Shabībīyah شبيبیه	8 miles south-south-west of 'Anaizah.	A corn-growing tract with a dozen inhabited enclosures, but no dates or other trees. The cultivators are from 'Anaizah.	Water is drinkable and abundant in wells 7 to 8 fathoms deep. 'Ataibah and Qahtān Bedouins encamp hereabouts. The place is under 'Anaizah.
Shaihiyah شايحيه	5 miles north-west of Bukai-riyah.	Formerly 60 houses of 'Anīzah, 'Ataibah, Harb and Shammar, but now (1906) almost deserted on account of the Turkish soldiery.	There are a number of small date groves, and fruits, cereals and vegetables are grown. Water is brackish, in wells 10 to 11 fathoms deep. The principal Turkish cantonment in Najd in 1906 was here.
Shamāsīyah شماسیه	18 miles south-east of Buraidah and 3 from the south bank of Wādī-ar-Rummaḥ.	100 houses of mixed Arabs mostly Dawāsir.	The village is walled. It contains half-a-dozen shops and about $\frac{1}{3}$ rd of the houses have upper storeys. Dates, fruit cereals and vegetable are grown by irrigation from wells, 8 to 9 fathoms deep, of drinkable water.

Name.	Position.	Houses and inhabitants.	REMARKS.
Shiqqah شققة or Shaqūq شقوق	10 miles west-north-west of Buraidah.	100 houses of mixed Arabs chiefly 'Anizah, Harb and Shammar.	Shiqqah is really the name of a depression on the south side of Jabal Sarah, 9 miles long and containing several villages of which the principal are Rafi'ah رفيعه and Sufailah سفيله the latter is 2 or 3 miles south-east of the former village. There are extensive date plantations, and wheat, barley, millet, pomegranates, figs, pumpkins, radishes, and onions are grown. The wells are 7 or 8 fathoms deep. To the west or south of the village is a place called Dhari ذاري with a salt deposit. The water of Shiqqah is generally brackish and the place is poor.
Shimās شماس	1 mile north of Buraidah.	20 houses of mixed Arabs.	There are date plantations and orchards irrigated from wells, also the usual livestock. This place is said to mark the original site of Buraidah.
Shinānah شنانه	See article Rass.
Subaih صبيح	About 20 miles north-west of Rass.	35 mud houses of Harb.	There are a few dates and corn is grown. Water is 10 fathoms from the surface and sweet. Harb Bedouins encamp here when there is pasture.
Subākh الصباح	Immediately adjoining Buraidah, on the south side.	No permanent habitations, but Buraidah people encamp here for coolness in summer.	There are a great number of wells, 7 to 8 fathoms deep, of good water.
Suwair السوير	East of Buraidah, at the south end of Rafi'ah.	15 houses scattered in date gardens.	Wheat and barley and a few dates are grown; water is brackish.

Name.	Position.	Houses and inhabitants.	REMARKS.
Ta'amiyah الطعمية	15 or 20 miles eastwards of 'Anaizah and Buraidah.	40 houses and towers of 'Anizah and Mutair.	No dates, but wheat and maize are grown.
Tanūmah ننومه	Apparently between 'Ain Ibn-Fahaid and Tarfiyah.	30 houses said to be of Sham-mar.	The village is walled and surrounded by date groves irrigated from springs and wells. Wheat, barley and millet are grown.
Tarfiyah طرفيه	15 miles north-north-east of Buraidah.	35 houses of mixed Arabs.	Formerly a considerable place but ruined by the deterioration of the wells, only one of which now yields drinkable water. Water is at 6 fathoms. There are still a few dates, and corn is grown. The inhabitants bring grass and firewood for sale to Buraidah. Tarfiyah is on the route from Kuwait to Makkah; supplies are very scanty.
Wādi وادي	On the right bank and scattered in the bed of Wadi-ar-Rum-mah, about 3 miles north of 'Anaizah.	100 houses of servants and cultivators from 'A n a i z a h, mostly Sabai'.	Water here is only about 1 fathom below ground. The inhabitants tend the palms of Wādi-ar-Rum-mah and in the off-season many of them live in 'Anaizah town. Janāh above is perhaps only a part of this settlement.
Wahlān وهلان	3 miles south-west of 'Anaizah not far from the right bank of Wadi-ar-Rum-mah.	A number of small enclosures stand here among date plantations and fields; they are only occupied at certain seasons.	Irrigation is from wells, 6 to 7 fathoms deep. The country surrounding the place is flat and sandy. Wahlān is the rendezvous of travellers proceeding by caravan from 'Anaizah to Makkah.
Wahṭān الوحدات	A little south-east of Buraidah.	90 houses of Q a h t ā n, Dawāsir and Mutair.	There are huge date groves, but little other cultivation. The wells, 8 fathoms deep, are brackish, and drinking water is brought from Subākh, one mile to the westwards. Under Buraidah.

Name.	Position.	Houses and inhabitants.	REMARKS.
Watāt وَأَتَات	About 4 miles north of Tarfiyah.	30 houses of mixed Arabs, chiefly 'Anizah.	The village is walled. Wheat, barley and millet are grown and there are a few dates. The wells, which are brackish, are 5 fathoms deep.
Wathāl وَأَثَال	14 miles north-west of Shiqqah.	45 houses of 'Anizah.	There are a score of small date groves, and wheat, barley, millet, melons and vegetables are grown. Irrigation is from wells of drinkable water 8 to 9 fathoms deep.
Wudhākh الْوَضَاخ	1 mile east of Nafi.	10 houses of 'Ataibah.	There are no dates. The place is under Buraidah.
Zaid (Qasr) قَصْر زَيْد	2 miles east of Buraidah.	A Qasr of about 8 houses of Mutair.	An ordinary Qasir village in all respects.
Zarqah الزَّرْقَة	Immediately north of Quwai'ah.	A hamlet of 5 houses.	Water is good at 5 fathoms. There are some dates.
Ziyābah (Ummahāt-az- أُمَمَاتُ الزِّيَابَة)	About 20 miles west of Buraidah.	Some 30 houses and towers, said to be of Harb and Mutair.	Water and ordinary cultivation, but no dates.

Properly a spot 7 miles above Warbah island, on a prolongation northwards of the 'Abdullah and Sabiyah Khors. **QASR* (UMM)**

* An account of Umm Qasr and its surroundings by Mr. F. E. Crow, Consul at Basrah, will be found in the Government of India's Proceedings in the Foreign Department for January 1904. *Vide* also a report by Commander T. W. Kemp, R.N., in the Government of India's Foreign Proceedings for July 1902; Captain H. Smyth's *Reconnaissance Report*, 1904, in Foreign Proceedings for February 1905; and a report, dated 24th July 1905, by Captain E. W. S. Mahon, R.E., relating particularly, as does also the last, to the suitability of Umm Qasr as a terminus for the proposed Baghdad railway. Detailed information was also supplied by Lieutenant C. H. Gabriel, I.A., who visited the place in 1904. The most recent authority is however Commander W. G. Beauchamp, R.I.M., whose report was forwarded to the Government of India by Major P. Z. Cox, Resident in the Persian Gulf, with a demi-official letter, dated the 20th November 1906; the results of Commander Beauchamp's survey are embodied in Chart No. 2381—3293 (1907 edition).

ام قصر

For 6 miles above **Warbah** island the inlet on which Umm Qasr stands is on the average three-quarters of a mile broad and its depth varies from 6 to 9 fathoms: at 6 miles it divides into two branches, one of which runs for a short distance (perhaps 3 miles) north-westwards, narrowing as it goes; while the other continues northwards in the direction of **Basrah**. The former branch at low tide is a mere mud-flat with a channel not more than 3 or 4 feet deep close to its western bank; but the branch which runs northwards continues undivided, with a depth generally exceeding 7 fathoms, for a distance of 14 miles and then splits into two arms of minor importance. Of these arms one, going north-north-east, reaches to within 12 miles of the Shatt-al-'Arab at Abul **Khasib** with soundings of $3\frac{1}{2}$ fathoms and over; while the second, going north-north-west, has its head only 11 miles south of **Basrah** and 10 miles east-south-east of **Zubair** Town; but it is narrower and much shallower than the other. Nowhere within Khor Umm Qasr or Zubair is the navigation easy, for the channel is winding and the banks are submerged and disappear at high tide.

There is some doubt as to the true nomenclature of these waterways; but the main inlet for 6 miles above **Warbah** island appears to be known locally as Khor-ath-Tha'alab خور النعلب, the small branch running to the north-west as Khor Umm Qasr, and the large branch running to the north as Khor Zubair.

Umm Qasr proper is situated about 1 mile above the point where the inlet first divides and about half a mile inland from the western bank of the western branch (Khor Umm Qasr): the usual landing-place, however, is opposite to the point of separation of the branches. The country to the east of the main inlet and to the north of Khor 'Abdullah appears to be a marsh several miles in extent; but it is possible from **Hamdān** on the Shatt-al-'Arab to reach, without leaving *terra firma*, a point about 5 miles east of Umm Qasr proper.

The only building at Umm Qasr proper is now a small Turkish fort, garrisoned by an infantry detachment from **Basrah** of about 30 men under an officer. The fort is nearly square, measuring about 120 feet each way, and having one entrance in the middle of the north face: a recently constructed salient on the west side enfilades two faces. The walls are 15 feet high, loop-holed at $4\frac{1}{2}$ feet from the ground, and are built chiefly of mud: but the gateway and coping of the wall are of burnt bricks. There are wells with a plentiful supply of water to the northward, opposite the entrance to the fort at 250 yards distance, and the water used by the garrison is sweet: whether it is obtained from these wells or from

elsewhere is uncertain. No supplies are obtainable at Umm Qasr and not even vegetables are grown; there is grazing for sheep, but not for horses. The wells are a favourite camping ground of Bedouins. At 300 yards to the east of the Turkish fort are the remains of an old Arab Qasr. The ground in the neighbourhood is firm and gravelly.

Umm Qasr is 15 miles east-south-east of **Safwān** and about 34 miles south and a little east of **Basrah**; there are no wells on the direct route from **Zubair** to Umm Qasr, and travellers between **Basrah** and Umm Qasr ordinarily pass through **Zubair** and **Safwān**.

Frequently pronounced Gatar, and sometimes spoken of as Barr-al-Qatar **قطر**, especially when the reference is to the interior rather than to the coast. Qatar is a remarkable tongue of land projecting from the Arabian coast of the Persian Gulf midway between its entrance at Rās **Musandam** and its head at the mouth of the Shatt-

QATAR*

قطر

* The bulk of the information contained in this principal article on Qatar, and in the minor articles subordinate thereto, was obtained expressly for this Gazetteer during the years 1904-07; previously little was known regarding the promontory. The data at the time existing were condensed by the writer in November 1904 into 6 foolscap pages of print, which formed the basis of the subsequent investigations. The further enquiry was begun by the writer in Bahrain early in 1905, was continued by Mr. J. C. Gaskin, Political Assistant in the Persian Gulf, and was completed by Captain F. B. Prideaux, Political Agent in Bahrain, in the same year: the greater part of the information obtained was supplied by the last named officer. A set of draft articles was then compiled by the writer, which extended to nearly 40 printed octavo pages and was ready at the end of 1905; it was sent to Captain Prideaux for revision, a process which occupied a considerable part of the year 1906. Early in 1907 the draft, improved and somewhat amplified, was reprinted, and investigations for the purpose of clearing up uncertain points continued to be made by Captain Prideaux throughout the year.

Previous to these recent enquiries, as already remarked, there was a deficiency of information concerning Qatar. The principal authorities up to 1904 were *Bombay Selections XXIV*, 1856, Palgrave's *Central and Eastern Arabia*, 1865, and the *Persian Gulf Pilot*, 1898, of which the last was the most valuable. The most important public contribution to a knowledge of Qatar since 1904 is Herr H. Burhardt's article *Ost-Arabien von Basra bis Maskat*, 1906.

The best small scale map of Qatar is that issued with the present Gazetteer, superseding the Map of *Parts of Arabia and Persia*, 1883; as regards the interior the new map is founded on a *Rough Map of the Qatar Peninsula*, 1907, by Captain Prideaux from native information, which is filed in the Library of the Foreign Department, Simla, as No. 1368. The only chart showing the whole Qatar coast is No. 2374-2387B., *Persian Gulf*; but a portion of that coast is included in Preliminary Chart No. O. 2, *Bahrain to Ras Rakkīn*, Poona, 1902.

al-'Arab: the axis of Qatar runs due north and south, and the promontory as a whole measures about 85 miles in length by about 40 in breadth.

Boundaries.—On the east, north and west Qatar is surrounded by the sea. The southern boundary is somewhat indeterminate. It begins at the foot of Dōhat-as-Salwa on the western side of the promontory, and from that point runs south-eastwards to the wells of **Sakak**: thence, according to one account, it strikes east-north-east to the north end of the Naqiyān sandhills, or, according to another, east by south to the southern end of the same hills on the north side of the entrance to Khor-al-'Odaid. As the territory of the Trucial Shaikh of **Abu Dhabi** has never clearly been asserted to extend beyond Khor-al-'Odaid, and as the Āl Thāni Shaikhs of Qatar undoubtedly claim the Naqiyān tract, the latter of the two alternative lines is to be preferred: the British Government have recognised Khor-al-'Odaid as belonging to Abu Dhabi and the boundary consequently cannot be placed nearer to Trucial 'Omān, though the Āl Thāni Shaikhs assert a right to the whole coast as far as the Sabākhat Matti. It is said that three men, stationed at Dōhat-as-Salwa, **Sakak**, and Niqa-al-Mahārah, respectively, can watch the whole southern border of **Qatar** from sea to sea.

Physical characteristics.—The interior of **Qatar** has only once been visited by a European,* but its nature is tolerably well known from native accounts, and a list of the chief wells and camping grounds is given in this article: the principal features of the coast line also are enumerated and described below. Practically the whole promontory consists of undulating rocky and pebbly desert, and the northern part at least is very low; the level of the rest is generally higher than that of **Bahrain** Island. The only hill of any importance is Jabal-at-Tawār. Wells are numerous, and in winter there are also many pools of water among the rocks. The soil is poor, consisting in the best localities of gravel and marl mixed with sand; fields and date groves there are almost none, and such gardens as exist near towns and villages are small and unproductive, while hardly a tree is to be seen anywhere. The only natural vegetation is coarse grass, growing in tufts upon the sandhills, and stunted brushwood in places. The climate is dry, and at a few miles inland the air appears to be entirely destitute of moisture; nevertheless the rainfall appears

* *Viz.*, the German traveller Herr H. Burchardt, who traversed Qatar from Dōhat-as-Salwa to Dōhah *via* Mukainis in January 1904. In December 1905 Capt. F. B. Prideaux visited the Bū Hasa oasis, 12 miles from Lūsail.

to be less scanty than in **Bahrain**, and fine crops of natural hay are said to be produced.

Places and features of the coast.—The following are alphabetically arranged lists of the chief places, bays, headlands, hills, and islands which form or adjoin the coast ; the first table is of those upon the eastern side, the second of those upon the western :—

East side of Qatar.

Name.	Position.*	Nature.	REMARKS.
'Abūd (Rās Abu) راس ابو عبدود	3 miles below Dōhah.	Cape.	...
'Āliyah (Jazīrat-al-) جزيرة العالیه	3 miles off the coast, 8 miles above Dōhah.	Island.	Small and uninhabited.
'Arq (Rās-al- or Fasht-al-) راس فشت العرق	8 miles below Wakrah.	A coral reef.	Projects from the coast and almost forms a cape. Also called Fasht Shuwaimsah شويسمه.
Bishairiyah (Jazīrat-al-) جزيرة البشيرة	A short distance off the coast, 18 miles below Wakrah.	Island.	Small, barren and uninhabited. Pearl-fishers wade around it at low tide searching for pearls in shallow water. It is also called Mishairyāt.
Dha'āin الضعائن	See article Dha'āin.
Dhakhīrah الدخيرة	See article Dhakhīrah.
Dōhah دوحة	See article Dōhah.
Fuwairat فويرط	See article Fuwairat.
Ghāriyah الغارية	1 mile above Fuwairat.	A deserted village.	There are remains of a large fort.
Hasāh (Rās Umm) راس ام حساه	7 miles from the tip of the promontory.	Cape.	...

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

East side of Qatar—contd.

Name	Position.*	Nature.	REMARKS.
Hassān (Khor) خور حسان	See article Khor Has-sān .
Hul (Dōhat Umm-al-) دوحة أم الحول	5 miles below Wakrah .	A small bay.	There was formerly a small settlement of the Sūdān tribe here, but it has been abandoned in consequence of the badness of the water supply. Remains are visible of a village and fort.
Huwailah الحويله	See article Huwailah .
Ibrāhīm (Bilād) بلاد ابراهيم	5 miles above Wakrah .	A deserted village.	Ruins of a fort remain. There is no water nearer than Wakrah .
Kandūwi (Tall- al-) تل الكندوي	3 miles east of Ruwais .	Hillock.	...
Laffān (Rās) راس لفان	8 miles below Huwailah .	Cape.	On account of a feud between the 'Amā-marāh of Bahrain and the Al Bin 'Ali of Qatar , pearl boats from Bahrain do not at present work below, nor those from Dōhah above, this cape.
Lūsail لوسيل	See article Lūsail .
Marrūnah (Rās- al-) راس المرونة	3 miles below Fuwairat .	Cape.	A hillock stands on the cape, 1 mile from the sea, and there is a small well of bad water.
Mashūt (Rās Abul) راس ابو المشوط	7 miles above Wakrah and rather less below Dōhah .	Do	...

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

East side of Qatar—contd.

Name.	Position.*	Nature.	REMARKS.
Matbakh (Rās-al-) راس المطبخ	On the north side of the entrance of Khor Shaqīq.	Cape.	The cape is continued seawards by a coral reef called Fasht Ardh-al-Matbakh.
Mijtalāh (Dōhat-al-) دوحة المجتله	2 or 3 miles below Dōhah.	Bay.	There was once a village here, but now it is deserted.
Mishairiyāt مشيريات	See Bishairiyah (Jazīrat-al-) above.
Mukaiyār (Jazīrat-al-) جزيرة المكيار	Near the coast between Dha'-āin and Lūsail.	Islet.	...
Mulaiji (Dōhat) دوحة مليجي	7 or 8 miles above Khor Shaqīq.	Bay.	Waterless and uninhabited.
Naqiyān or Naqiyān-al-Qatar نقيان القطر	From a point 10 miles below Wakrah to the entrance of the 'Odaid inlet.	A narrow range of high white sandhills skirting the coast.	The length of the range is about 80 miles. Two sandhills at the extreme north end of the range are called Naqiyān Abu Qasbatāin نقيان ابو قصبتين, and one at the other end, abutting on Khor-al-'Odaid, bears the name of Niqa-al Mahāraf نقى المحارف.
Nazwah نزوة	1½ miles below Rās Abul Mashūt.	A deserted village.	Until recently inhabited by 30 families of the Ma'ādhiḍ tribe.
Nisa'ah (Rās-an-) راس النسة	At the eastern end of Dōhah town.	Cape.	The Āl Bin 'Alī and Sulutah quarters of Dōhah town stand on this cape.
Nōf (Rās-an-) راس النوف	On the south side of the entrance of Khor Shaqīq.	Do.	A coral reef which prolongs this cape seawards is called Fasht Ardh-an-Nōf.

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

East side of Qatar—contd.

Name.	Position.*	Nature.	REMARKS.
Qarrādh (Jazīrat) جزيرة قرأض	At the northern extremity of Qatar between Jazīrat Rās Rakan and Jazīrat Umm Tais.	A small islet.	...
Qirtās (Rās) رأس قرطاس	4 miles below Huwailah.	Cape.	...
Qutaifān (Rās) رأس قطيفان	12 miles above Dōhah.	Do.	5 wells of brackish water exist near its base.
Ruwais الرويس	See article Ruwais.
Sāfiyah (Jazīrat-as-) جزيرة السافليه	5 miles north-east of Dōhah town.	A small island.	...
Shaqiq (Khor) خور شقيق	See article Khor Shaqīq.
Shūwa' (Rās-ash-) رأس الشوع	1 mile above Dōhah town.	Cape.	...
Sidir (Rās-as-) رأس السدير	6 miles above Fuwairat.	A deserted village.	...
Smaik (Dohat-as-) دوحة السميك	4 miles above Huwailah.	Bay.	A short distance inland is a hill called Jabal-as-Smaik. The nearest drinking water is at Jasāsiyah half a mile south of the hill.
Sumaismah سميسمة	See article Sumaismah.
Ta'am (Rās Abut) رأس ابو الطعام	On the south side of the entrance of the Dhakhirah inlet.	Cape.	A coral reef called Fasht Ardh Abut Ta'am prolongs this cape seawards.
Tabainah (Jabal-at-) جبل الطبينه	Near the northern extremity of Qatar, 5 miles east of Ruwais.	Hill.	...

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

East side of Qatar—concl'd.

Name.	Position.*	Nature.	REMARKS.
Ta'is (Jazirat Umm) جزيرة أم تيس	4 miles east by north of Ruwais.	Islet.	No water is obtainable here.
Tha'a'ilib (Rās) راس تعيلب	6 miles above Dōhah.	Cape.	...
Wakrah الركرة	See article Wakrah.
Zarka زرقا	1 mile above Fuwairat.	Well.	Contains only brackish water.

Off the north-eastern and eastern coasts of Qatar lie numerous pearl banks, of which details are given in the Appendix on the Pearl Fisheries.

West side of Qatar.

Name.	Position.*	Nature.	REMARKS.
Aburūk (Rās) راس أبروك	Forms the west side of Dōhat-al-Hasān.	Cape.	Points northwards and measures 8 miles across. At spring-tides the northern portion is separated from the remainder by a shallow channel.
Adkhān (Ghāriyat) غارية ادخان	3 miles below Zikrit.	Do.	...
Ajirah (Jabalat) جبلّة أجيرة	Between Rās Aburūk and Jazirat Hawār.	Island.	Small, but has a hill of some height. There is no fresh water.
Akhadāi (Rās) or Khidāi راس اخداي خدائي	Between Dōhat-ar-Ruwaidhah and Khor Hassān.	Cape.	There were once a few houses here, and the ruins of a fort are still visible. The nearest water is at Thaghab.
'Amrān (Rās Abu) راس ابو عمران	Between Ruwais and Abu Dhālūf.	Do.	Barren.

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

West side of Qatar—contd.

Name.	Position.*	Nature.	REMARKS.
'Anaibar (Jazīrat) جزيرة عنبير	In Dōhat-as-Salwa, 10 or 12 miles north from the foot of the bay.	Island.	It is small and carries a low peak.
'Aqalah (Dōhat-al-) درحة العقلة	18 miles below Rās Aburūk.	A Bedouin camping-place.	Some date trees and a few wells of bad water exist here. The place is now nearly forsaken by the Bedouins.
'Araish العريش	1 mile below Khor Hassān.	Tower.	Now ruinous and deserted.
'Ashairiq (Rās) راس عشيرق	Between Zubārah and Rubaijah.	Cape.	Forms the southern side of the Zubārah harbour and carries a ruined tower.
Da'asah (Rās) راس دعسة	18 miles above the foot of Dōhat-as-Salwa.	Do.	There is a masonry well of good water at 1 mile inland.
Dhabaiyah (Rās-adh-) راس الذبيّه	10 miles below Zubārah and just above entrance to Dōhat-al-Ūsaiwad.	Do.	...
Dhalūf (Abu) ابو ضلوف	See article Abu Dhalūf.
Fahāl الفهال	16 miles north of the foot of Dōhat-as-Salwa.	An uninhabited place.	There are 4 masonry wells of good water.
Fahaihil (Rās) راس فحيعيل	6 miles below Zubārah.	Cape.	Points north and encloses a bay of the same name between itself and the mainland. There is a well here.
Faishshākh (Dōhat) درحة فيشخ	The innermost and southernmost portion of Dōhat-al-Hasain.	Bay.	There is a masonry well of good water about $4\frac{1}{2}$ miles north-east of the foot of the bay at $2\frac{1}{2}$ miles inland.
Falitah (Jazīrat Abu) جزيرة ابر فليتة	In Dōhat-al-Hasain, near its foot.	Island.	It is small and has no water.

*In this column "above" means nearer to the tip of the promontory and "below" means further from it, in following the coast line.

West side of Qatar—contd.

Name.	Position.*	Nature.	REMARKS.
Faraihah فرائح	2 miles above Zubarah.	A deserted village.	There are ruins of a fort.
Ghubaibah الغببية	West of Ruwais and adjoining it.	A deserted village.	...
Hadiyah حديثة	See article Hadiyah .
Hasain (Dohat-al) دوحة الحصين	Its entrance is half- way down the west side of Qatar.	Bay.	This bay is large and runs inland in a southerly direc- tion. The foot of it is called Dohat Faishshakh. It con- tains Jazirat Abu Falitah, and Ras Aburuk forms the western side of its entrance. Ras-as- Sumaiyah projects into it from its eastern side. On the west side of the bay are the ruins of a fort which was built by Rahmah-bin-Jabir early in the 19th cen- tury. There are 4 or 5 masonry wells of brackish water near the site of the fort.
Hawar (Jazirat) جزيرة حوارة	Due west of the point of Ras Aburuk and about 5 miles from it.	Island.	About 10 miles long, north and south, and roughly parallel to the Qatar coast. There are no wells, but there is a cistern to hold rain- water built by the Dawāsir of Zallaq in Bahrain, who have houses at two places on the island and use them in winter as shooting boxes. Fishermen also fre- quent Hawar. The island is adjoined on the north by Jazirat Rubadh and on the south by Jazirat

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

West side of Qatar—contd.

Name.	Position,*	Nature.	REMARKS.
Imhish (Rās) راس إمشيش	The southern entrance point of the Dōhat-al-Ūsaiwad inlet.	Cape.	Janān, while Jabalat Ajirah and Jazirat Suwād lie in the channel between it and the mainland. The ford called Maqta'-al-Imhish in Dōhat-al-Ūsaiwad starts from this promontory.
Janān (Jazirat) جزيرة جان	In the channel between Jazirat Hawār and the mainland.	Islet.	Waterless.
Jumail الجميل	Midway between Abu Dhalūf and Khor Hassān.	A deserted village.	Also called Yamail and Lumail. There are remains of houses and of a fort.
Mā (Dōhat Umm-al-) درحة أم الما	12 miles below Ras 'Ashairiq and just above Dōhat-al-Ūsaiwad.	Bay.	There are some good masonry wells inland and a ruined fort built by 'Ali-bin-Khalifah, late Shaikh of Bahrain, who used to spend part of the cold weather here.
Madakhkhan (Rās-al-) راس المدخن	7 or 8 miles above Rās Aburūk.	Cape.	...
Nakhsh (Jabal-al-) جبل النخش	5 miles above the foot of Dōhat-as-Salwa.	A hill on the coast.	One mile above the hill is a bay of the same name, without habitations or fresh water.
Nagaiyah (Bandar) بندر نغية	Between Rās Imhish and Rās Madakhkhan.	Anchorage.	Uninhabited but occasionally visited by native boats for the sake of water obtainable at 'Aqalah, 1½ miles inland.
Qil'ah (Rās-al-) راس القلعة	8 miles below Rās 'Ashairiq.	Cape.	There is a landing-place for native boats called Bandar-al-Qil'ah. The name is frequently pronounced Lijla'ah.

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

West side of Qatar—contd.

Name.	Position.*	Nature.	REMARKS.
Rahhāl (Dōhat Bin-) دوحة بن رحال	10 miles below Ras 'Ashairiq.	Bay.	No wells or houses.
Rakan (Jazīrat Rās) جزيرة راس ركن	About 2½ miles north or north by east of Ruwais.	Island.	The channel between the mainland and this island is not passable for boats, and Jazīrat Rās Rakan may accordingly be considered to form the northern extremity of the Qatar promontory.
Rubādh (Jazīrat) جزيرة رباط	Close to the northern extremity of Jazīrat Hawār.	Islet.	Destitute of fresh water.
Rubaijah البريجية	1 mile below Zubārah.	An old village, now deserted.	...
Ruwaidhah (Dōhat-ar-) دوحة الروضة	3 miles above Khor Hassān.	A deserted village.	The inhabitants migrated to Zubārah when the latter was founded.
Saiwa (Dōhat-as-) دوحة السلوى	See article Dōhat-as-Salwa.
Sumaiyah (Rās-as-) راس السمية	See Dōhat-al-Husain above.
Suwād (Jazīrat) جزيرة سواد	Between Jazīrat Hawār and Ras Aburūk.	Island.	No fresh water.
Usaiwad (Dōhat-al-) دوحة الاوسيد	14 miles below Zubārah and the same above Dōhat-al-Hasain.	Inlet.	This inlet opens between Rās Dhabaiyah to the north and Rās Imhish to the south. It can be crossed on foot, but only at low tide, by a ford called Maqta'-al-Imhish.

* In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

West side of Qatar—concl'd.

Name.	Position.*	Nature.	REMARKS.
Yūsufiyah (Rās) راس يوسفیه	Between Abu Dhalūf and Jumail.	Cape.	Remains of a deserted village of the same name exist here.
Zikrīt (Dōhat) دوحة زكريت	10 miles below Rās Aburūk.	Bay.	There are about 12 masonry wells of brackish water and a deserted and ruinous fort which was built by Rahmat-bin-Jābir early in the 19th century.
Zubārah الزبارة	See article Zubārah.

*In this column "above" means nearer to the tip of the promontory, and "below" means further from it, in following the coast line.

Places and features of the interior.—The list below gives in alphabetical order the more important wells, camping grounds and other points of interest which lie inland in Qatar; the positions assigned to them are of necessity only approximate.

Name	Position.	Nature.	REMARKS.
'Adhbah العذبة	9 miles south-east of Ruwais and 6 from the east coast.	A Bedouin camping ground.	There are 5 masonry wells, 4 fathoms deep, of good water.
'Adhām (Umm- al-) أم العظام	18 miles south of Ruwais and 8 from the west coast.	Do.	There is a masonry well of good water, 10 fathoms deep.
'Aqalah العقلة	3 miles south of Dōhat-al-Ūsaiwad and 1½ miles from the west coast.	Do.	An unlined well, 1 fathom deep, yields indifferent water.
'Aqdah العقدة	4 miles south-west of Khor Shaqīq and 5 from the east coast.	Do.	At this place is a masonry well, only two fathoms deep, of good water.
Aqlām اقلام	4 miles south-east of Huwailah and 3 from the east coast.	Do.	A well, on the north side of which are two hillocks called Jibāl Aqlām. It is unlined, only one fathom deep, and the water is in- different.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
'Araiq-al-Janūbi عريق الجنوبي	12 miles east of the foot of Dōhat-as-Salwa.	A Bedouin camping ground.	A stage on the route from Hofūf in Hasa to Dōhah in Qatar.
'Araiq-ash-Shamālī عريق الشمالي	14 miles east by north from the foot of Dōhat-as-Salwa.	Do.	There is a masonry well here, 5 fathoms deep, of indifferent water.
'Aras عرص	10 miles west-south-west of Khor Shaqīq and 9 miles from the east coast.	Do.	Here is a masonry lined well, 20 fathoms deep, of good water.
Aswajjah (Umm) أم اسويجة	5 miles west-south-west of Khor Shaqīq and 6 from the east coast.	Do.	A masonry well here, 6 fathoms deep, yields good water.
'Awainat Bin Hasain عويطة بن حسين	9 miles south-west of Khor Shaqīq and 4 from the east coast.	Do.	At this place are several small masonry wells, of good water, 4 fathoms deep, from which the villagers of Sumaismah and Dha'ain obtain their supply.
'Awainat Hasan عويطة حسن	8 miles south-east of Ruwais and 5 from the east coast.	Do.	Here is a small masonry well of good water, 4 fathoms deep.
'Awainat-ash-Shuyūkh عويطة الشيوخ	11 miles west of the foot of Dōhat Faishshākh, and 1 mile from the sea at Rās Ghāriyat Adkhān.	Do.	Good water is obtainable here from a masonry lined well, 8 fathoms deep.
'Awaisah (Abu) أبو عويسة	10 miles south-south-east of Ruwais and 5 from the east coast	Do.	There is a masonry well of good water, 4 fathoms deep.
Bahath (Sabākh-at-al-) سبخة البحث	2 to 3 miles inland from the west coast, beginning from a point 14 miles north of the foot of Dōhat-as-Salwa and running up into Rās	A marshy tract.	This swamp is about 20 miles in length from south to north with a breadth varying from 2 to 4 miles. Parts of it are dangerous to travellers. About 1 mile from the south

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
	Aburūk between Dōhat-al-Hasain and the sea.		end, at 4 miles from the sea, are some 10 wells of indifferent water which have given their name to the whole Sabākhah; they are of dry-stone masonry and their depth is $1\frac{1}{2}$ fathoms.
Busaiyir-al-'Aqār بصير العقار	21 miles south-west of Khor Shaqīq and 15 miles from east coast.	A Bedouin camping ground.	Here is a masonry well of good water, 27 fathoms deep.
Busaiyir-al-'Aud بصير العرد	25 miles west by north of Dōhah.	Do.	There is a masonry well, 27 fathoms deep, which contains good water.
Busaiyir Bin-Jimāz البصير بن جيماز	19 miles north-east from the foot of Dōhat Faishshākh and $12\frac{1}{2}$ from the west coast.	Do.	This camp has a masonry well of good water, which is 8 fathoms deep.
Busaiyir-az-Zor بصير الزور	12 miles north from the foot of Dōhat Faishshākh and 2 from the west coast.	Do.	Do., but the well here is only 3 fathoms in depth.
Dahail الدحيل	6 miles west-north-west of Dōhah.	Do.	Here is a rocky pool containing good water; it is in a cave at the foot of a low hill.
Dahal-adh-Dhalām دحل الظلام	17 miles west by south of Dōhah.	Do.	At this place is another pool in the rock containing good water; it is in a dark cave and cannot be approached without an artificial light.
Dahal-as-Sifar دحل السفر	17 miles west of Dōhah.	Do.	Here also is a pool in a cave at the foot of a low hill.
Dhā'an (Umm) أم ضاعن	$1\frac{1}{2}$ miles south of Ruwais and the same south-east of Abu Dhalūf.	An altogether uninhabited spot.	A masonry well here, 3 fathoms deep, supplies good water to the people of Ruwais and Abu Dhalūf.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Filihah فليحه	2 miles south-west of Fuwairat.	A Bedouin camping ground.	Fuwairat depends for part of its water supply on a well at this place, 3 fathoms deep, which yields good water.
Ghāfāt الغافات	16 miles south-east of the foot of Dōhat Faishshākh and 22 from the west coast.	Do.	There are several masonry wells of good water, 18 fathoms deep, and some high Ghāf trees from which the place derives its name.
Ghailam (Umm-al-) أم الغيلم	11 miles south-south-east of Ruwais and 7 from the east coast.	Do.	A masonry well, 6 fathoms deep, containing good water.
Ghashāmīyah الغشامية	10 miles west-north-west of Huwailah and 5 from the east coast.	Do.	Here are 2 masonry wells of good water, 2 fathoms deep, and the ruins of a fort.
Ghuwair الغوير	11 miles west-south-west of Huwailah.	Do.	At this place are found a masonry well, 5 fathoms deep, of good water, and the ruins of a fort. The fort is old and the Arabs have a tradition that it was built by Persians. It is said to cover a space about 40 yards square and to have had walls 10 feet thick which in some places are still 20 feet high.
Ghuwairiyah الغويرية	12 miles south-west of Huwailah.	Do.	There is a masonry well, 8 fathoms deep, yielding good water.
Hadāyāt الهدايات	18 miles north-north-east of the foot of Dōhat Faishshākh and 9 from the west coast.	Do.	A masonry well here, 3 fathoms deep, contains good water.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Hadhan حاضن	11 miles south-west of Khor Shaqīq and 6 from the east coast.	A Bedouin camping ground.	This place has an unlined well which holds good water at 7 fathoms.
Halwān حلوان	3 miles south-east of Zubārah and $3\frac{1}{2}$ from the west coast.	Do.	Here are 2 masonry wells of bad water, 2 fathoms deep, and the ruins of a fort.
Hamalah الهمل	3 miles north of the foot of Dōhat-as-Salwa and $1\frac{1}{2}$ from the west coast.	Do.	A few date trees tended by Bedouins and 4 or 5 unlined wells of brackish water, $1\frac{1}{2}$ fathoms deep, are found here.
Hamāmah الجمامه	12 miles north of Dōhah and 2 from the east coast.	Do.	There is a masonry well of brackish water, 2 fathoms deep.
Hamār (Abu) أبو حمار	8 miles north-west of Khor Shaqīq.	Do.	There is good water in a masonry lined well 6 fathoms deep.
Hasa (Bū) بر حسا	10 miles west by north of Lūsail.	An oasis or Rōdhah.	It consists of about 300 acres of low ground, very suitable for sheep grazing. The well of Lūthailah is in it. Shaikh Jāsim-bin-Thāni sometimes camps here.
Jadidah الجديده	4 miles south of Dōhah and 6 from the east coast.	A Bedouin camping ground.	Indifferent water is obtainable from a large masonry well 4 fathoms in depth.
Jassāsiyah جساسيه	4 miles west of Huwailah and immediately south of Jabal-as-Smaik.	Do.	A masonry well, 3 fathoms deep, contains good water.
Jidād (‘Ayūn- al-) عينون الجيداد	10 miles north-north-west of Khor Shaqīq.	Do.	There are 2 masonry lined wells here which are 3 fathoms deep and contain indifferent water.
Jifārah الجفاره	6 miles south of Ruwais and 2 from the west coast.	Do.	There are 6 masonry lined wells at this place, 4 fathoms deep, but the water is indifferent.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Jimaliyah الجميلية	16 miles east-north-east of the foot of Dōhat Faishshakh.	A Bedouin camping ground.	Good water is yielded by a masonry lined well 18 fathoms in depth.
Jirthāmah جرتامة	Half way between Kara'anah and Kharāij.	Do.	There is a masonry well of good water, 10 fathoms deep.
Judai' جديع	8 miles west of Huwailah.	Do.	Fairly good water is obtainable here from a masonry well 1 fathom deep.
Kara'anah الكرعانه	23 miles east from the foot of Dōhat-as-Salwa.	A stage on the route from Hofūf in Hasa to Dōhah in Qatar.	There is a masonry lined well here; it yields good water, but the depth is 25 fathoms.
Khadhairah الخضيره	9 miles south by east of Huwailah and 8 from the east coast.	A Bedouin camping ground.	There is a masonry well of 7 fathoms depth, containing good water.
Khanaifsil خنيفسيل	2 miles south of Zubārah and 1 from the west coast.	Do.	There is a lined well at this place only 1 fathom deep, but the water is bitter.
Kharaiḃ الخرب	19 miles south-west of Khor Shaqīq and 16 from the east coast.	Do.	Good water is obtainable here from a masonry lined well, 15 fathoms deep.
Kharāij خرايج	9 miles north-north-east of the foot of Dōhat-as-Salwa and two from the west coast.	Do.	There is a masonry well, 1½ fathoms deep, of bad water.
Kharais الخريس	10 miles north-west of Khor Shaqīq.	Do.	There is a tower here, also a masonry well 4 fathoms deep of indifferent water.
Kharrārah الخراة	20 miles south of Dōhah and 6 from the east coast, between Naqiyān and Jabal-at-Tawār.	Do.	A masonry well here, 27 fathoms deep, contains good water.

Interior of Qatar—contd.

Name.	Position.	Nature,	REMARKS.
Kharsa'ah الخرسعة	11 miles north-east of the foot of Dōhat-as-Salwa and 6 from the west coast.	A Bedouin camping ground.	There is good water at 18 fathoms in a masonry well.
Khayaisah (Umm) أم خييسه	14 miles south by east of Zubarah and 5 from the west coast.	Do.	A masonry well, 5 fathoms deep, supplies good water.
Khisah الخيسه	12 miles north-north-west of Dōhah and 4 from the east coast.	Do.	This station has 2 unlined wells, 5 fathoms deep, of indifferent water.
Labraqah لبرقه	7 miles south-west of the foot of Dōhat Faishshākh and 8 from the west coast.	Do.	Here is a masonry well of good water, 10 fathoms deep.
Lagtah لقطه	5 miles west of Dōhah.	Do.	At this place is a small date grove belonging to the Shaikh of Dōhah; there are also 2 wells of indifferent drinking water which are 2½ fathoms deep.
Lisha لشا	4½ miles south-east of Zubarah and 5 from the west coast.	Do.	There is a ruined fort with 2 masonry wells of indifferent water, 2½ fathoms deep.
Lubwairdah لبريرة	5 miles north of Khor Shaqīq and 2 from the east coast.	Do.	Here is a masonry well of fairly good water from which the villagers of Dhakhīrah fetch their supply; it is 2 fathoms deep.
Luthaifah لوثيفه	10 miles west¹ by north of Lūsail, in the Bu Hasa oasis.	Do.	Here is a masonry lined well, 10 fathoms deep, containing good water.
Mahairqah محيرة	8 miles south-west of Dōhah.	Do.	An unlined well, 1 fathom deep, yields indifferent water.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Mahārah (Niqā-al-) نقى السكاره	11 miles inland, westwards from Jazīr at-al-Bishairiyah on the east coast; it is about midway between Dōhah and Khor-al-'Odaid, 25 miles from either.	A solitary hill of sandstone or sand.	The hill is used as a lookout post by the people of Dōhah in time of war.
Maharaqah المحرقه	3 miles south-south-east of Zubārah and 3 from the west coast.	A Bedouin camping ground.	Here are 2 masonry wells of indifferent water, 1 fathom deep, and a ruined tower.
Makīn مكين	7 miles north-east of Zubarah.	Do.	This place has 6 wells of good water, 2½ fathoms deep, and a ruined tower.
Malaiḥah (I) ملايحه	10 miles south by east of Zubārah and 4 from the west coast.	Do.	There are 2 masonry wells, 2 fathoms deep, of brackish water.
Malaiḥah (II) ملايحه	13 miles south by east of Dōhah and 3 from the east coast.	Do.	A well here was re-lined with masonry by the Sūdān tribe in 1905. It is 4 fathoms deep and the water is brackish.
Maraikh مريخ	9 miles west by south of Dōhah.	Do.	Here is a masonry well, 2 fathoms deep, of good water.
Markhiyah المريخيه	4 miles north-west of Dōhah and 2 from the east coast.	Do.	A masonry well, 3 fathoms deep, yields good water. There is also some cultivation including dates; it is enclosed by a wall, and belongs to Jāsim-bin-Thāni, the most influential Shaikh in Qatar.
Mashrab المشرب	8 miles south-south-east of Huwailah and 7 from the east coast.	Do.	There are 9 unlined wells of fairly good water; they are 1 fathom deep.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Mazrū'ah المزرعة	14 miles north-west of Dōhah and 10 from the east coast.	A Bedouin camping-ground.	There is a masonry well, 7 fathoms deep, which yields good water. There are trees, but cultivation is wanting, notwithstanding the name.
Milaihāt المليحات	6 miles south-east of Huwailah and 3 from the east coast.	Do.	Do., but the depth in this case is $1\frac{1}{2}$ fathoms.
Misaimir مسيخير	7 miles south of Dōhah and 8 from the east coast.	Do.	There are about 10 unlined wells, $1\frac{1}{2}$ fathoms deep, of good water. This is the spot where Turkish troops were cut up in February 1893, when the Wālī of Basrah visited Dōhah.
Muhammad ('Ain) عين محمد	2 miles north-east of Zubārah.	Do.	Here is a masonry well, 3 fathoms deep, of indifferent water; also a ruined fort.
Muhanna ('Ain Bin-) عين بن مهنا	6 miles west by south of Dōhah.	Do.	This place is also called Abu Sadairah. It has a masonry well, 4 fathoms deep, of indifferent water.
Mukainis مكينس	18 miles west by south of Dōhah.	A stage on the route from Hofūf to Dōhah.	Good water is supplied by a masonry lined well, 7 fathoms deep.
Murair (Qal'at) قلعة مريير	$1\frac{1}{2}$ miles south-east of Zubārah.	A ruined and deserted fort.	Inside the fort is a well 2 fathoms deep, and outside it are 5 wells, 1 fathom deep; the water of all is good.
Musaikah مسيكه	6 miles east by south of Zubārah.	A Bedouin camping ground.	There are a masonry well of good water, 5 fathoms deep, and the ruins of two forts.
Mushairib مشيرب	1 mile west of Dōhah.	A group of about 15 wells of fairly good water; they are 2 fathoms deep.	The place is protected by a watch-tower. Vegetables and dates are grown in a garden which belongs to the Turkish garrison of

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Na'aijah عيجيه	4 miles south of Dōhah.	A fort and wells.	Dōhah and the troops and the poorer people of Dōhah fetch their water from here. The officers of the Turkish garrison and the wealthier people of Dōhah get their drinking water from here. Depth of the wells is $2\frac{1}{2}$ fathoms: the best of them is called 'Asailah عسيلة. There are some date palms.
Na'amān نعمان	$7\frac{1}{2}$ miles south of Zubārah and $2\frac{1}{2}$ from the west coast.	A Bedouin camping ground.	There are a ruined fort and a well of good water: the latter is masonry lined and 7 fathoms deep.
Nafāfis النفاقيس	10 miles south- south-west of Dōhat Faishshākh and the same from the west coast.	Do.	There are here 2 masonry wells, 3 fathoms deep, and containing good water.
Nahī النهي	15 miles south by east of Ruwais and 11 from the east coast.	Do.	This place has a masonry lined well, 8 fathoms deep, of good water.
Nasrāniyah نصرانيه	11 miles south of the foot of Dōhat Faishshākh and 16 from the west coast.	Do.	There is a masonry well, 25 fathoms deep, of good water.
Qa'abiyah القعييه	9 miles south- south-east of Ruwais and 7 from the east coast.	Do.	Here is a masonry well of good water.
Qa'aiyah القاعيه	16 miles west of Khor Shaqīq.	Do.	Good water is obtainable from a masonry well, 15 fathoms deep.
Qain (Umm) أم قين	4 miles north-west of Khor Shaqīq and the same from the east coast.	Do.	There is a masonry well, 5 fathoms deep, of good water.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Qalailah (Abu) أبو قليلة	16 miles south-west of Khor Shaqiq and 12 from the east coast.	A Bedouin camping ground.	A masonry well, 15 fathoms deep, contains good water.
Qarāfah القرافة	6 miles west of Dōhah .	Do.	Here is a masonry well, 3 fathoms deep, of good water.
Qarābah (Umm-al-) أم القريه	13 miles south of Huwailah and 9 from the east coast.	Do.	Do., but the depth is 12 fathoms.
Qatawah (Qalābāt-al-) قليبات القطاره	4 miles west-north-west of the foot of Dōhat Faishshākh .	Do.	Here are 2 masonry wells of bad water which are $1\frac{1}{2}$ fathoms deep.
Rakaiyāt الركيات	5 miles north-north-west of Zubārah .	A ruined fort.	Here is a masonry lined well of fairly good water, 3 fathoms deep.
Raki الركي	12 miles south of Ruwais and 10 from the east coast.	A Bedouin camping ground.	Good water is supplied by a masonry lined well, 8 fathoms deep.
Rasnidah رشيدة	11 miles west-south-west of Khor Shaqiq and 10 from the east coast.	Do.	Do., but the depth of the well here is 23 fathoms.
Rōdhah روضه	8 miles west-north-west of the foot of Dōhat Faishshākh and 1 from the west coast.	Do.	There is a masonry well here which contains good water and is 2 fathoms deep.
Rōdhat-al-'Ajuzah روضه العجوزه	13 miles south-west of Khor Shaqiq and 10 from the east coast.	Do.	Do., but this well is 7 fathoms deep.
Rufaigh الرفيع	10 miles south-south-west of foot of Dōhat Faishshākh and 10 from the west coast.	Do.	There is an unlined well here dug in stony ground; it is 5 fathoms deep and contains indifferent water.
Sadairah (Abu) أبو سديرة	See Muhanna ('Ain-Bin-) above.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Sahalah سهلة	21 miles west of Dōhah.	A Bedouin camping ground.	A masonry well here contains good water at 22 fathoms.
Sahnāt (Umm- as-) أم السحانات	8 miles south-west of Huwailah.	Do.	Do., but the water in this case is at 7 fathoms.
Sailiyah السيلية	13 miles west by south of Dōhah.	A stage on the route from Hofūf to Dōhah.	Do.
Sakak السكك	See article Sakak.
Sakhāmah صخامة	13 miles south- south-west of Khor Shaqīq and 5 west of Lūsail.	A spot with a garden of about 4 acres en- closed by a neat, low wall of mud and bordered on all sides by a line of tamarisk trees.	The garden was laid out a few years ago by Jāsim-bin-Thāni, the principal Shaikh in Qatar; it contains about 300 date palms, some pomegranate trees, and cultivation of lucerne. Irriga- tion is from 8 large masonry wells, 7 fathoms deep, each of which is worked by a pair of donkeys. There are quarters for the gardeners, who are all negroes; also a small rest house for the Shaikh which, having a roof- less tower, appears to have (but has not) an upper storey.
Sanān ('Ain) عين سنان	4 miles south-west of Fuwairat.	A fort with a masonry well, 6 fathoms deep, containing good water.	The fort was originally built by the Ma'ādhid, but they allowed it to fall into disrepair. It is now held by the Al Bū Kuwārah of Fuwairat in order to protect their water supply.
Sarriyah سريه	15 miles north- wards from the foot of Dōhat-as- Salwa and 2 miles from the west coast.	A Bedouin camping ground.	There is an unlined well here, 1 fathom deep, which contains indifferent water.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Shahīniyah الشاهينيه	10 miles south-south-east of Ruwais and 7 from the east coast.	A Bedouin camping ground.	Here is a masonry well of good water, 6 fathoms deep.
Shaqab شقب	7 miles west of Dōhah and a little north-east of Maraikh.	Do.	There is a fort here with a masonry well, 6 fathoms deep, of good water inside; it is on the way from Dōhah to Wajbah.
Shariyah شريه	16 miles west by north of Dōhah and the same from the east coast.	Do.	There is a masonry well, 9 fathoms deep, but the water is bad.
Shifahliyah شفحليه	14 miles west-south-west of Khor Shaqīq and 10 from the east coast.	Do.	There is a masonry well here, of good water and 7 fathoms deep.
Shuwail (Umm-ash-) أم الشويل	4 miles east of Zubārah.	Do.	At this place are a ruined fort and one masonry well, 5 fathoms deep, yielding good water.
Sidarrah (Abu) أبو سدره	16 miles north-north-east of Dōhat Faishshākh and 8½ from the east coast.	Do.	Indifferent water is supplied by an unlined well 1 fathom deep.
Sinqais سنقيس	1½ miles west of Dōhah.	Do.	There is a masonry well, 3 fathoms deep, with indifferent water, and an empty tower stands on a hillock near by.
Suwaihaliyah السويحليه	15 miles south-south-east of Zubārah and 8 from the west coast.	Do.	A masonry well, 3 fathoms deep, yields indifferent water.
Tāqah (Umm) أم طاقه	14 miles south of Dōhat Faishshākh and 16 from the west coast.	Do.	There is a masonry well, 25 fathoms deep, of good water.

Interior of Qatar—contd.

Name.	Position.	Nature.	REMARKS.
Tawār (Jabal-at-) جبل الطوار	20 miles south by west of Dōhah and 12 from the east coast.	Hill.	The largest and highest hill in the Qatar promontory: it is 4 miles long and runs east and west, and from descriptions by Arabs it would appear to be about 500 feet high. The northern part of the Naqiyān sand-hills separates it from the coast.
Thaghab الغيب	3 miles south-east of Khor Hassān.	A well and fort in good condition.	The people of Khor Hassān fetch their drinking water from here. The well is of masonry 6 fathoms deep, and yields good water.
Tinbak تنباك	4 miles south of Khor Shaiqi and close to the east coast.	A fort and camping ground.	There are 6 masonry wells at this place; they are 2 fathoms deep and the water is fairly good.
Tuwaim التويم	11 miles west by north of Huwailah and 7 from the east coast.	A Bedouin camping ground.	There is a masonry well here sunk in stony ground; its depth is 7 fathoms and the water good.
Tuwaiyil الطويل	14 miles north-east of the foot of Dōhat-as-Salwa and 6 from the west coast.	Do.	A masonry well 25 fathoms deep, yields good water.
Wajbah الرجبة	12 miles west of Dōhah.	A walled garden with a tower and mosque; Bedouins also camp at the place.	There are 3 masonry wells, 7 fathoms deep, containing good water. The garden belongs to Shaikh Khalifah-bin-Jāsīm, of the Āl Thāni, and is cultivated by negroes.
Wushāh (Umm) أم وشاح	25 miles west of Dōhah.	A Bedouin camping-ground.	The water is good in wells 24 fathoms deep.

Interior of Qatar—concl'd.

Name.	Position.	Nature.	REMARKS.
Wnthailah (Abu أبو وثيله)	13 miles west-south- west of Khor Shaqiq and 11 from the east coast.	A Bedouin camping ground.	There is a masonry well of good water 23 fathoms deep.
Yughbi يغبى	9 miles south of Zubarah and 2 from the west coast.	Do.	A masonry lined well here contains good water. Depth 2 fathoms.
Zaghāb الزغاب	7 miles south-south- east of Ruwais and the same from the east coast.	Do.	Do. Depth 4 fathoms.
Zaghawah الزغوة	9 miles west-north- west of Dōhah and the same from the east coast.	Do.	Do. Depth 5 fathoms.

The fact that nearly all the desert wells of Qatar are masonry-lined is a remarkable peculiarity of the district; the masonry is generally dry, but at places where villages formerly existed the stones are sometimes set in mortar. It will be observed that a few gardens are the only places permanently occupied which are not situated upon the coast: this also is a noteworthy circumstance.

The people.—The inhabitants of Qatar, as of most of the districts on the western shore of the Persian Gulf, may be conveniently classified as fixed and nomadic.

The sedentary population consists of a number of different communities and tribes of which nearly all are common to Qatar and the Bahrain islands; the following table gives its composition in some detail:—

Name of tribe or community.	Number of souls in Qatar.	Where found in Qatar.
'Ainain (Āl Bū)	2,000	Wakrah.
'Ali (Āl Bin-)	1,750	Dōhah.
'Amāmarah	200	Dōhah and Wakrah.

Name of tribe or community.	Number of souls in Qatar.	Where found in Qatar.
Arabs of Najd	500	Dōhah and Wakrah.
Bahārinah	500	Do. do.
Baqāqalah	50	Dōhah.
Dawāsir	150	Do.
Hamaidāt	250	Lūsail and Dha'āin.
Hūwalah	2,000	Dōhah and Wakrah.
Khalaiḡāt	850	Wakrah.
Kibisah	700	Khor Hassān, Fuwairat, Hadiyah and Sumaismah.
Kuwārah (Āl Bu)	2,500	Sumaismah, Dha'āin and Fuwairat.
Ma'ādhid	875	Dōhah, Wakrah and Lūsail.
Madhāhakah	A few.	Dha'āin.
Mahāndah	2,500	Khor Shaḡiq and Dha-khīrah.
Manāna'ah	400	Abu Dhalūf and Dōhah.
Maqla (Āl Bin-)	50	Wakrah.
Musallam (Āl)	40	Dōhah, Fuwairat and Wakrah.
Negroes (free)	2,000	Dōhah and Wakrah.
Negroes (slaves, but not living in their masters' houses)	4,000	Do. do.
Negroes (slaves, living with their owners)	Are reckoned in this table to the tribe in which they are owned.	
Persians	425	Dōhah and Wakrah.
Sādah	350	Ruwais and Dōhah.
Sūdān	400	Dōhah.
Sulutah	3,250	Do.
Yās (Bani) of the Āl Bu Falāsah and Qubaisāt sections	125	Dōhah and Wakrah.

Of the tribes mentioned above the **Hamaidāt** and the **Mahāndah** appear to be peculiar to Qatar. The settled population of Qatar—that, namely, of the towns of **Dōhah** and **Wakrah** and of the villages of **Dha'ain**, **Dhakhīrah**, **Abu Dhalūf**, **Fuwairat**, **Hadiyah**, **Khor Hassān**, **Lūsail**, **Ruwais**, **Khor Shaqīq** and **Sumaismah**, together with the Turkish military garrison at **Dōhah** and a few families of negro gardeners at 2 or 3 small gardens in the interior—cannot be far short of 27,000 souls. A considerable proportion of the settled tribes of Qatar go into camp in the interior in winter with their flocks and herds.

The Bedouins properly belonging to Qatar are the **Bani Hājir** and the small **Ka'abān** tribe of whom about 60 families usually roam there. A large body of the **Na'im** of Trucial 'Omān, however, have become detached from the parent stock and now fluctuate between **Bahrain** and **Qatar**. Qatar is also visited by **Āl Morrah** from **Hasa** and in the cold weather by **Manāsīr** from Trucial 'Omān; 'Ajmān too are sometimes seen, but not frequently.

The inhabitants of Qatar—whether townspeople, villagers or Bedouins—are **Māliki** Sunnis in religion. From this statement we must however except the **Sūdān** and a few of the **Ma'ādhīd**, who are **Hanbalis**; the **Sādah**, who are **Hanafis** and **Shāfi'is**; the **Bahārinah** and **Persians**, who are not Sunnis but **Shi'ahs**; and the **Arabs of Najd** who are **Wahhābis**. Negroes generally follow the religion of their masters.

Occupations, resources and trade.—The principal and almost the exclusive source of livelihood in Qatar is pearl-fishing, supplemented in some places by the breeding of camels. Agriculture hardly exists. The only date palms—and they are not numerous—appear to be those in the gardens at **Laqtah**, **Markhiyah**, **Mushairib**, **Na'ajjah**, **Sakak**, **Sakhāmah** and **Wakrah**; and it is not clear that any vegetable gardens exist except at some of the same places. A few semi-wild clumps of dates are found on the west coast near **Dōhat-as-Salwa**. Besides camels the settled villagers have a few horses and cattle, which they keep in their own possession, and some sheep and goats which are tended for them by the Bedouins. They also fish along the coast of the district.

These remarks are not intended to apply to the Bedouins of Qatar, who are pastoral in their habits, like the rest of their race elsewhere, and own livestock in the proportions usual among Arab nomads.

A tabular estimate of the principal resources of Qatar follows below, from which the property of Bedouins is excluded :—

Town or village.	Number of pearl boats.	Number of other sea- going boats.	Number of fishing boats.	Camels.	Horses.
Dha'āin	70	10	10	60	10
Dhakhīrah	15	2	5	10	Nil.
Dhalūf (Abu)	20	5	10	30	Nil.
Dōhah	350	60	90	800	150
Fuwairat	35	9	12	100	20
Hassān (Khor)	20	Nil.	5	20	Nil.
Lūsail	9	2	3	70	20
Ruwais	18	2	10	20	4
Shaḡīq (Khor)	80	20	30	100	Nil.
Sumaismah	50	10	10	70	6
Wakrah	150	20	30	150	40
Totals	817	140	215	1,430	250

The boats, it may be remarked, are built by carpenters who come over from **Bahrain** and from **Persia**. The Qatar pearl fleet carries about 13,000 men, the average crew of each pearl boat being about 16 men.

Such foreign trade as Qatar possesses is carried on chiefly with **Bahrain** and **Lingeh**. Pearls are the only export of value.

Routes.—As may be judged from the remarks above on the physical characteristics of the promontory and from the table of wells, travel is not more difficult in Qatar than in any other barren but open country which is without inhabitants but not altogether without water. The lines of movement from point to point are generally optional, but caravans from **Hofūf** in **Hasa** to **Dōhah** in Qatar after leaving the Ba'aij wells in **Hasa** generally proceed by the wells of 'Araiq-al-Janūbi, Kara'anah, Mukainis and Sailiyah, giving 5 stages between Ba'aij and **Dōhah** of 20, 12, 15, 6 and 14 miles respectively, or 67 miles in all.

Political conditions.—Prior to 1766 A.D. the peninsula of Qatar, it is believed, was included in the dominions of the Bani **Khālid** Shaikhs,

whose head-quarters were at that time in **Hasa** and whose jurisdiction then extended as far north as **Kuwait**; and it is probable that the 'Utūb, when they arrived at **Zubārah** in 1766, found the **Āl Musallam** occupying a pre-eminent, though not a paramount position in the country. In the course of about 20 years the pre-eminence of the **Āl Musallam** appears to have been transferred to the 'Utūb; but the attention of the latter was for some time held in another quarter by their conquest of **Bahrain**. By the middle of the 19th century, however, the Shaikh of **Bahrain** had established a suzerainty—more apparent than real—over **Qatar**, and was represented at **Bida'** (**Dōhah**) by a political agent who was a member of his own family. In 1868 direct negotiations took place between the British Government and the tribal Shaikhs of **Qatar**; and, in the result, the interest of the Shaikh of **Bahrain** in **Qatar** was limited to the receipt of tributes probably on behalf of the **Wahhābi** Government of **Najd**. In 1872 the Turks established a garrison in **Dōhah**; and with the cessation of the **Wahhābi** **Zakāt** the political connection, such as it was, between **Bahrain** and **Qatar** came to an end.

At the present time the Turks are still in occupation of **Dōhah**, which they hold with a regular infantry battalion, nominally 350 strong, commanded by a **Bimbāshi** or Major; there are also 2 old guns. The title of the Porte to the ownership or possession of any part of the **Qatar** promontory is not admitted by the British Government; but want of British recognition has not prevented the Turks from acquiring strict control over the foreign relations of the Shaikh of **Dōhah**—a control which possession of the **Dōhah** fort enables them to enforce without difficulty. Otherwise Turkish authority in **Qatar** is merely nominal extending to little or no distance beyond the walls of their military posts*; nor does the pretence of government at **Dōhah** go beyond the conferment by them on the Shaikh of **Dōhah**, a junior member of the **Āl Thāni** family, the Turkish title of "**Qāim-Maqām** of **Qatar**." Occasional efforts have been made by the Turkish authorities to introduce a Turkish official as "**Assistant Qāim-Maqām**," but these as yet have been unsuccessful, and matters which arise in the town continue to be disposed of by the Shaikh, or, if of a legal nature, by the local **Qādhī**. It is reported that a **Rāis-al-Limān** or Turkish harbourmaster is about to be appointed at **Dōhah**. In 1903 the Porte were about to attempt the establishment of **Mudirates** in charge

* The evidence of the German traveller Herr H. Burchardt is conclusive on this point; the position of the garrison in 1904 even struck him as precarious.

of Turkish officials at **Wakrah** and **Zubārah**, but they desisted in deference to a protest by the British Government. Communication between the Turkish garrison and the outside world appears to be kept up by means of a letter post exchanged monthly with **Hofūf** across the desert.

The **Āl Thāni** family of the **Ma'ādhid** tribe, to whom reference has just been made, are the natural leaders among the Shaikhs of **Qatar**; their authority however is not by any means absolute or despotic throughout the district. The present senior member of the family is **Jāsim-bin-Muhammad-bin-Thāni**, who usually resides at **Lūsail** or in the interior to be out of the way of the Turks; and the coast from **Lūsail** to **Khor-al-'Odaid** may perhaps be regarded as strictly subject to his rule. 'Abdur **Rahmān**, the governing Shaikh of **Wakrah**, is **Jāsim's** third son; and 'Abdullah, recognised as Shaikh of **Dōhah** both by his own father and by the Turks, is 'Abdur **Rahmān's** next brother. **Jāsim** from being a **Māliki** Sunni has become a **Hanbali**, that is to say, a proselyte to **Wahhābī-ism**, and has carried a portion of his tribe with him in his change of belief. The Shaikhs of **Qatar** are said to exact forced labour under the name of **Sukhraḥ** سُكْرَا from foreigners and poor Bedouins in their jurisdictions; and occasionally they compel their tribesmen to work "out of kindness" (*i.e.*, without pay) for the public good.

There are now no Indian or other British subjects anywhere in **Qatar**.

A well watered maritime tract in the **Sanjāq** of **Hasa**, the counterpart upon the coast of the larger and richer **Hasa** Oasis in the interior.

QATĪF
قطيف
OASIS*

Position and extent.—The oasis of **Qatīf** immediately adjoins the coast for a short distance on both sides of the town of the same name: on the east it is bounded by the sea, and on the other sides it is enclosed by the large desert tract of **Biyādh**, except at its south end upon the coast where it meets **Barr-adh-Dhahrān**. The oasis extends about 9 miles north and the same distance south of **Qatīf** Town and has thus a total length of about 18 miles; its depth from the coast inland is on the average about 3 miles.

* The principal authorities, maps, etc., on this tract are included among those specified in a footnote to the title of the general article on the **Hasa** **Sanjāq**.

Physical characteristics and climate.—The greater part of the Qatif Oasis is a sandy plain, saturated with spring water and raised only a few feet above the level of the sea. The springs are not warm like those of the **Hasa** Oasis, but the source from which they are supplied is doubtless the same—the drainage, namely, of Southern **Najd** which disappears underground in the **Dahānah** desert and the **Sahābah** tract. There are also various marshes producing reeds, especially in the north about Safwa and Umm-as-Sāhak.

Not the whole area comprehended by the boundaries above described is cultivated. On the south cultivation ends altogether in the latitude of Saihāt, or about 6 miles south of **Qatif** Town, and to the north and north-westwards it is somewhat dispersed; the villages of Safwa, Umm-as-Sāhak and Lājām stand, as it were, in separate small oases of their own, and these are divided from one another and from the main oasis by intervals of 2 or 3 miles. The intervals are occupied partly by sandhills, but partly also by the marshes already mentioned.

Throughout Qatif generally the atmosphere is denser and heavier, the heat more oppressive, and the vegetation ranker and more luxuriant than in the twin oasis of **Hasa**. The climate of Qatif is damp and unhealthy, and the results of malarial fever are manifest in the sallow complexion and poor physique of the inhabitants.

Population and inhabited places.—The settled population of the Qatif Oasis is not large; it may be reckoned at 26,000 souls in all, *viz.*, 5,000 in the town proper of **Qatif**, 5,000 more in the suburbs of the same, and 16,000 in the remaining villages of the oasis, which are 17 in number. Except some non-nomadic **Bani Khālid** chiefly at Umm-as-Sāhak and a few **Hūwalah** and Turkish officials and troops at **Qatif** Town—who are Sunnis—the people of the oasis are by race nearly all **Bahārinah** and by religion Shi'ahs. There are some negroes, both enslaved and free, who have been included for statistical purposes in the communities with whom they live or by whom they are owned; in religion the great majority of these are Shi'ahs. The 'Utūb, who a century ago dominated the district along with the rest of the coast on both sides of it and later were displaced by the Wahhābis, have now entirely disappeared. In addition to the sedentary population some Bedouins, chiefly of the **Bani Hājir**, **Bani Khālid** and 'Awāzim tribes, frequent the oasis and are held in fear by the timid **Bahārinah**. It is reported that nearly every male adult in the villages of the oasis possesses a rifle.

The following, given in alphabetical order, are the principal places at present or formerly inhabited in the oasis :—

Name.	Position.	Nature and inhabitants.	REMARKS.
'Anik عنك	On the coast, 4 miles south-south-east of Qatif Town.	A walled hamlet of 20 permanent houses forming a quarter which is called Farīq-al-'Alaiwāt after the family of the Bahārīnah by whom it is inhabited. During 3 months in the hot weather the population is greatly increased by an influx of Bedouins, chiefly of Bani Khālīd from the interior and from Musallamiyah island and of Bani Hājir, but among them are a few Al Morrah and 'Aj-mān; these visitors occupy tents and huts arranged in Farqān or quarters of their own and may be regarded as semi-permanent residents.	The name is generally pronounced 'Anich. The Bedouins who flock in during the summer tend date plantations which they own here and work on the pearl banks. There is a fort at 'Anik, upon the sea; it is garrisoned by a battalion of Turkish infantry under the command of a Major, supplying a military detachment for Qatif Town; and it is the headquarters of 150 mounted Dhabitiyahs, a few of whom are detached to Sai-hāt.
'Awāmiyah العوامية	3 miles north-north-west of Qatif Town and 1 to 2 miles inland.	A walled village of 300 houses of Bahārīnah.	This village is excellently watered by the springs of Taibah, A'rāf, Hashaish and Jadīdah. The people own 5 pearl boats.
Bāb-ash-Shamāl باب الشمال	Immediately outside the gate in the north-west face of the Kūt of Qatif Town.	An unwalled village of 80 houses, chiefly date stick huts of Bahārīnah.	A suburb of Qatif Town. The inhabitants are pearl divers, fishermen and makers of mats, baskets and cages; they also own date plantations.
Bahāri بحاري	1½ miles north-west of Qatif Town 1 mile inland from the sea.	A walled village of 100 houses of Bahārīnah; there are some huts outside the walls, and the dwellings within are partly buildings of mud and stone and partly huts.	The people of this village cultivate dates and make gypsum mortar. To this place belong 7 pearl boats.

Name.	Position.	Nature and inhabitants.	REMARKS.
Dabaibiyah دبابية	$\frac{1}{2}$ a mile south-west of the Kūt of Qatīf Town.	A walled village of 250 houses of Bahārīnah; most of the habitations are of stone and lime, but some are huts.	A suburb of Qatīf Town. The inhabitants are date growers, shopkeepers and merchants; they own 4 pearl boats. The lands of the village are watered by a spring which rises near by and is also called Dabaibiyah.
Dammām الدمام	On the coast, 9 miles south-east of Qatīf Town.	Now deserted. (When occupied was called in English "De maum").	This place is really about 3 miles beyond the southern end of the oasis. There are the remains of a considerable fort built by the notorious 'Atbi, Rahmah-bin-Jābir: it stood on an island on the shore reef nearly joined to the mainland. Remains of a smaller fort, containing a good spring of water, and of a village, which was occupied by Rahmah's Al Bū Samait and Sulutah followers, are visible on the adjoining shore. The old guns still lie neglected in their former positions. There are no date gardens. The channels through the reef by which native boats approach the place are shallow and probably not practicable except at high water.
Jarāri جراري	200 yards west of Bāb-ash-Shamāl.	An unwalled hamlet of 40 houses of Bahārīnah, mostly huts of date sticks.	A suburb of Qatīf Town. The inhabitants are date growers and potters.
Jārūdiyah جارودية	$2\frac{1}{2}$ miles west-south-west of Qatīf Town.	A walled village, of 150 houses of Bahārīnah; most are of stone and mud, but a few are huts.	The lands are watered by the Saddain spring which rises inside the village itself.

Name.	Position.	Nature and inhabitants.	REMARKS.
Jishsh جش	4 miles south of Qatif Town and 3 miles from the sea.	Some of the houses are outside the village wall. A walled village of 250 houses of Bahārinah; some are of stone and mud, and a number of them are without the wall.	This village has 3 fine springs near a mosque outside the wall on the east side: it also receives water from the Ka'abah spring.
Kawaikib كويكب	At the south end of the Qatif Town bazaar, about $\frac{1}{4}$ of a mile south of the Kūt and the same inland from the sea.	A walled village of 250 houses of Bahārinah, most of stone and lime but some of them huts.	Pronounced Chawai-chib. The place is a suburb of Qatif Town, and the inhabitants are date-growers, shop-keepers and pearl-divers: they possess 5 pearl boats.
Khamām (Umm-al-) أم الحمام	3 miles south of Qatif Town and $2\frac{1}{2}$ miles west of 'Anik.	A walled village of 250 houses of Bahārinah; within the walls they are mostly of mud and stone, but outside there are some huts.	
Khuwaildiyāh خويلدية	$1\frac{1}{2}$ miles west south-west of Qatif Town.	A walled village resembling the last, except that the houses here only number 150.	The fine spring called Qashfuriyah waters the village, and 3 miles to westwards are deposits of fuller's earth which is exported chiefly to Bāsrāh.
Lājām لاجام	6 miles west-north-west of Qatif Town.	A walled village of 50 mud and stone houses of Bahārinah.	Lājām is the centre of a cultivated area which is detached from the rest of the oasis. Its springs are "Aq'aq and Buddi.
Madāris مدارس	150 yards west of the south-western corner of the Kūt of Qatif Town and the same south of Jarāri.	A village, walled on the west side only, of 120 houses of Bahārinah; the buildings are mostly of stone and lime.	A suburb of Qatif Town. The inhabitants are cultivators of dates and traders.
Mahaish (Hillat) حلة محيش	2 miles south of Qatif Town and 1 mile inland from the sea.	A walled village of 135 houses of Bahārinah: some which are outside	...

Name.	Position.	Nature and inhabitants.	REMARKS.
Mallāḥah ملاحه	1½ miles south-west of 'Anik.	the walls are huts, those which are within are partly mud and stone buildings and partly huts. A walled village of 50 houses of Bahārīnah, some of mud and stone and the rest huts.	...
Maīyās مياس	200 yards west of the middle of the bazaar of Qatif Town.	A walled village of 150 houses of Bahārīnah, built of stone and mud or stone and lime.	A suburb of Qatif Town. Some of the inhabitants are date growers; the rest are shopkeepers, bakers and butchers.
Qatif Town قطيف	On the coast of Eastern Arabia about 230 miles south-east by south of Kuwait Town and 36 miles north-west by west of the nearest part of Bahrain Island.	...	See article on Qatif Town.
Qudaih قدح	2¼ miles north-north-west of Qatif Town and 1½ miles inland from the coast.	A large walled village of 350 houses of Bahārīnah. About ¼ of the habitations are date-stick huts outside the walls; the remainder, within, are partly huts and partly stone and lime houses.	The lands of this village are watered by the Jauhariyah, Sadriyah and Umm-al-Majālis springs. The inhabitants own 10 pearl boats.
Safwa مقوى	8 miles north by west of Qatif Town and three miles inland from the sea.	A large walled village of 350 houses of Bahārīnah; inside the wall they are partly houses of mud and stone and partly huts, outside they are all huts.	This is the northernmost village in the oasis and stands at the west end of a detached block of cultivation which is separated by an interval of two or three miles from that of 'Awāmiyah to the southwards. Springs are Dārūsh, the finest in the oasis, and 'Atīqah. Some of the inhabitants are pearl divers.

Name.	Position.	Nature and inhabitants.	REMARKS.
Sāhak (Umm-as-) أم الساهك	2 miles west of Safwa.	A village of 60 houses: the people are a mixed lot, both Shi'ahs and Sunnis.	Umm-as-Sāhak stands in a small detached area of cultivation of its own. It was founded about 1902 by the Shaikh of the Bani Khālīd, who is allowed to keep $\frac{1}{4}$ of the revenue and pays $\frac{3}{4}$ of it to the Turks.
Saihat سيهات	2 miles south-east of 'Anik; at the south end, upon the coast, of the oasis proper.	A walled town of 600 houses; of these about 200 are huts situated beyond the wall upon all sides; the rest within are mostly buildings of stone and mortar. The people are Bahārinah.	This is a prosperous place depending chiefly on agriculture; it has date groves and cultivation on its north and west sides, and its lands are watered by the Ka'abah spring. There are also 30 pearl boats. The people have a Shaikh of their own, who is in executive charge of the town and through whom they pay revenue to the Turks on account of their pearl boats and date trees. There is a small detachment of mounted Dhābi-tīyahs here, sent from 'Anik to assist the Customs; they are accommodated in ordinary houses in the town.
Shari'ah شريعة	100 yards west of the middle of the Qatif Town bazaar.	An unwallled village of 120 houses of Bahārinah, mostly built of mud and stone.	A suburb of Qatif Town. This place has a graveyard on its north side, the bazaar on its west, and a thick forest of dates to southwards. Part of its own land lies on the further side of the bazaar. The people are shopkeepers, rice-huskers, copper-smiths, black-smiths and donkey owners.

Name.	Position.	Nature and inhabitants.	REMARKS.
Shawaikah شوبكه	$\frac{3}{4}$ of a mile south of Qatif Town and $\frac{1}{2}$ a mile inland from the sea.	A walled village of 200 houses of Bahārinah; most of them are date-stick huts and $\frac{1}{2}$ of them are outside the walls.	Pronounced Shawai-chah. The people are date-growers and weavers.
Tābi تربي	2 miles west by north of Qatif Town.	A walled village of 100 houses of Bahārinah.	Irrigation is apparently from the Qasair spring.

The villages on Tārūt, which lies off the coast of the Qatif Oasis, are described in the separate article on that island.

Irrigation.—As in the Hasa Oasis, the land in Qatif is irrigated chiefly, if not entirely, by flowing streams which have their origin in springs: the following is a list of the principal among these springs:—

Name.	Position.	REMARKS.
'Aq'aq عققي	About $\frac{1}{2}$ a mile east of Lājām village.	One of 2 springs which irrigate the cultivation of Lājām.
'A'raf اعراف	2 miles north-west by west of 'Awāmiyah village.	Apparently irrigates the plantations of 'Awāmiyah next on the south to those watered by Hashaish.
'Atiqah العتيقه	1 mile south of Safwa village.	One of two springs on which the cultivation of Safwa depends.
Buddi بدي	$\frac{1}{2}$ a mile south-west of Lājām village.	One of 2 springs from which the cultivation of Lājām is irrigated.
Dabaibiyah دبيبيه	Closely adjoining the village of the same name.	The lands of Dabaibiyah village are watered by this spring.
Dārūsh داروش	About $\frac{1}{4}$ of a mile south of Safwa village.	Dārūsh is the finest spring in the whole oasis: with 'Atiqah it waters the entire lands of Safwa village and is not exhausted. The surplus waters reach the sea towards the top of Qatif bay by 3 separate channels, the only case in Qatif in which water is partially wasted in this fashion.
Hashaish حشيش	$1\frac{1}{2}$ miles north-west by north of 'Awāmiyah village.	Hashaish apparently waters the northernmost part of the plantations of 'Awāmiyah.

Name.	Position.	REMARKS.
Jadidah جدیده	3 miles west-north-west of 'Awāmiyah village.	Assists to irrigate the southern part of the cultivation of 'Awāmiyah.
Jauhariyah جوهريه	1½ miles west-north-west of Qudaih village.	The water of this spring apparently goes to the lands of Qudaih village.
Ka'abah كعبه	About ½ a mile south of the village of Jishsh.	The cultivation both of Jishsh and of Saihāt benefits by this spring.
Majālis (Umm-al-) أم المجالس	In a line between the villages of 'Awāmiyah and Qudaih, about ½ a mile from either.	The irrigation of Qudaih depends partly on this spring.
Qasair قصير	About ½ a mile to the north of Tōbi village.	This spring must apparently irrigate Tōbi, the village nearest to it.
Qashūriyah قشورية	About ½ a mile south of the village of Khuwaildiyāh.	Qashūriyah waters the lands of Khuwaildiyāh.
Saddain صدين	Within the village of Jārūdiyāh.	As is natural, this spring irrigates the Jārūdiyāh cultivation.
Sadrīyah صدرية	1½ miles west of Qudaih village.	Sadrīyah helps to irrigate the plantations of Qudaih.
Taibah طيه	Close to the north side of 'Awāmiyah village.	One of the various sources of irrigation belonging to 'Awāmiyah.

Agriculture and livestock.—Dates are the staple crop in Qatif, no village being without its date grove; the water irrigating the plantations is in some places brackish, but this does not appear to affect the trees injuriously, and the total annual yield of dates in the oasis is computed at 24,000 tons. Cultivation other than dates—mostly wheat, barley and rice—is inconsiderable. Fruits are abundant and of fair quality; they include pomegranates, figs, peaches, grapes, bitter limes and citrons: besides these there are musk and water melons, the last sometimes of gigantic size, and a few mangoes are produced at Saihāt. Vegetables of many sorts are grown.

Domestic animals are the same as in the Hasa Oasis. Transport animals in the possession of villagers are estimated at 50 horses, 200 donkeys of the famous white Hasa breed, and 650 donkeys of ordinary breeds; the last are small and generally grey or dark in colour.

Communications, transport and supplies.—The only important route is that from **Qatif Town** to **Hofūf**, which lies for a short way only in the oasis ; it is dealt with in the article on the **Hasa Sanjāq**.

There is no definite information as to the quantity of transport and supplies locally available ; but the resources of the district may be roughly gauged by means of the village table and the remarks on agriculture and livestock above.

Manufactures, trade, civil administration and military arrangements.—These matters are disposed of in the general article on the **Hasa Sanjāq**, except the trade in dates, the nature of which is explained by the following table :—

Quantity in tons.	Disposal.	REMARKS.
2,500	Exported to Bahrain.	For local consumption in Bahrain.
12,500	Exported to 'Omān and Persia.	...
4,000	Exported to India, partly direct and partly <i>via</i> Bahrain.	These are boiled dates.
5,000	Locally consumed in the Qatif Oasis.	...

The sea customs of the Qatif Oasis were leased in 1904-05 for a sum equivalent to £4,230 sterling ; and in the following financial year a larger amount was obtained.

QATĪF قطيف TOWN

The principal place and only considerable town in the **Qatif Oasis** ; it is situated on the coast of Eastern Arabia about 230 miles south-east by south of **Kuwait Town**, 36 miles north-west by west of the nearest part of **Bahrain Island**, and 64 miles north by west of **'Oqair Port**.

Site and marine approaches.—**Qatif town** stands on the shore of the bay which reaches from **Rās Tanūrah** to **Dammām** and may be called **Qatif Bay**. The coast at this point runs nearly north and south ; and **Tārūt** island, in the bay, bears east-north-east from the town at a distance of about 2 miles.

Landing at Qatīf is inconvenient, for boats of over 6 feet draft cannot in any circumstances reach an inner berth. The reef opposite the town extends about 10 miles to seawards ; and upon it, 2 miles east of the town, is an islet carrying a small and ruinous but conspicuous fort, of which the name is Burj Abul Līf برج ابو الليف. On the north side of Burj Abul Līf 3 channels leading from the open sea converge ; two of them are in the shore reef and come from the south-east and east respectively, the second of these passing immediately south of Tārūt island ; the third approach is round the north side of Tārūt, but it is only practicable at high water. From the basin in which these three channels unite, a single passage conducts landwards to the town and a passenger by boat feels as if he were ascending a river. The berth of Turkish Government vessels calling at Qatīf is just within Rās Tanūrah, at a place where the Ottoman Government maintains a coal depôt, upon the side of the cape nearer to Tārūt island : this anchorage is 10 miles east-north-east of Qatīf Town, Tārūt island being between, and the circumstance helps to illustrate the defects of Qatīf as a port.

Town and suburbs.—The town proper consists of a Kūt كوت, or fortified quarter, and of a long bazaar outside but connected with it ; and besides these there are various suburbs.

The Kūt, called also Qal'at-al-Qatīf, is surrounded by a bastioned wall 30 feet high and presents a front, about 400 yards long and containing a gate, to the sea ; the shorter faces on the north and south measure about 300 yards each. There are gates also in the western and southern faces, the former opening on the suburb of Bāb-ash-Shamāl, to which it gives its name, and the latter leading into a cemetery. The front of the Kūt is almost upon the beach ; but between the gate and the sea are a pier and the Port Office of Qatīf, and a building known as Mansūr Pasha's house stands at the water's edge a short distance to the south of them. Immediately to the north of the Kūt is a dense forest of date palms, and on the west and south sides are suburbs which will be mentioned further on. The whole space within the walls of the Kūt is filled by about 700 houses, mostly constructed of stone and gypsum mortar but a small proportion of them mere huts. There are no shops in the Kūt ; but the Turkish Government offices stand in its extreme south-eastern corner, and a minaret of considerable height towards the southern end is one of the most conspicuous objects at Qatīf.

The bazaar, joining on externally to the south-western corner of the Kūt, runs due south for quarter of a mile to the suburb of Kawaikib in which it ends; it is built of stone and lime, is roofed, and contains about 300 shops. There is also a quarter known as Farīq-al-Maqbarah مقبرة perhaps from its adjoining a graveyard which is situated on the east side of the bazaar, between the bazaar and the south wall of the Kūt.

The principal suburbs are Bāb-ash-Shamāl, immediately outside the back gate of the Kūt; Jarāri, 200 yards west of Bāb-ash-Shamāl; Madāris, 200 yards west of the Kūt end of the bazaar; Maiyās, a similar distance west of the middle of the bazaar; Dabaibīyah, $\frac{1}{4}$ of a mile south-west of Maiyās; Kawaikib, at the south end of the bazaar; and Sharī'ah, a little east of the middle of the bazaar, between it and the sea. All of these are capable of being regarded as distinct villages and they have accordingly been described, each under its own name, in the general article on the Qatīf Oasis. The ground between Bāb-ash-Shamāl, Jarāri and Madāris is open; that between Madāris, Maiyās and the bazaar is occupied by enclosed yards and godowns; that between Maiyās, the bazaar and Kawaikib is open.

Defences.—There are no defences except the wall of the Kūt. The Turkish garrison of Qatīf consists of a detachment of 50 infantry furnished by the battalion at 'Anik.

Population.—The total population of Qatīf town, inclusive of the 7 suburban villages of which the names have been given, is estimated at 10,000 souls; or, without the suburbs, at 5,000. Nearly all the inhabitants belong to the class called Bahārinah and are consequently Shi'ahs by religion; but there are a few Hūwalah artisans, who are Sunnis, and to the latter sect must be reckoned most of the Turkish officials, but these are not many. There are no Oriental Christians or Jews, neither are there any permanently settled Persians. British subjects, even Indians, are entirely absent.

Occupations, manufactures and trade.—Some of the people engage in pearling and 13 pearl boats belong to the town, of which 4 are owned in the Farīq-al-Maqbarah quarter and 4 and 5 respectively in the suburbs of Dabaibīyah and Kawaikib.

There are no manufactures of importance at Qatīf.

As a port and market Qatīf serves only the oasis in which it stands and the nomad country dependent on the same; it does not compete with 'Oqair for the foreign trade of the Hasa Oasis or Najd. The principal

exports of **Qatif** are dates to **Bahrain**, largely for the Indian market, to 'Omān and to Persia; date syrup to **Bahrain**, Trucial 'Omān and Persia; date branches for firewood to **Bahrain** and Persia; fuller's earth, used for ablution, to **Bahrain** and **Basrah**; reeds for mat-making to **Bahrain**; hides to **Bahrain** and Persia; and finally, **Qatif Town** being a market of the **Kuwait** pearling fleet, a quantity of pearls and mother-of-pearl shells to **Bahrain** and some to **Bombay**. The imports of **Qatif** are mostly from **Bahrain**, through which come rice, coffee, piece-goods, spices, sugar and metals, these being to a great extent of Indian origin; but unhusked rice is also received from **Basrah** and wheat from Persia. **Qatif** traders visit **Bahrain** periodically to buy goods and there are some Bahraini merchants settled at **Qatif**; but inconsiderate treatment and insufficient protection by Turkish officials have brought about the removal of the Hindu traders at this port, who before the Turkish occupation numbered 70 or more and had a share estimated at 15 lakhs of rupees annually in the trade of the place. There is a small direct trade with India, the goods consigned in both directions being transhipped at **Bahrain**.

Government.—The place of **Qatif** in the civil and military administration of the **Hasa Sanjāq** is described in the article under that name: it is the headquarters of the **Qatif Qadha**. **Dhābitiyahs** actually present in the town, for duty there, number 20 to 30. The port is in charge of a Turkish **Rais-al-Limān** or harbourmaster.

Generally pronounced **Jawāsim** and sometimes even spelt جواسم : the singular is **Qāsimi** قاسمي or **Jāsimi** جاسمي. This is the family (or small tribe) to which the ruling Shaikh of **Shārjah** and his relations belong: they claim to be **Shurafa** descended from the family of the prophet **Muhammad**.

QAWASIM
قواسم

At the present time the genuine **Qawāsim** in Trucial 'Omān number only 18 adult males, viz., 5 at **Shārjah Town**, including the Shaikh himself; 8 at **Rās-al-Khaimah Town**, including a son of the Shaikh who is Deputy-Governor of that place; 2 at 'Ajmān, namely, a cousin of the Shaikh who holds the **Shamailiyah** district in fief and his son; and 3 at **Hamriyah**, viz., an exiled uncle of the Shaikh and his two sons.

Outside Trucial 'Omān, for example on the **Bātinah** coast, the subjects of **Shārjah** generally are sometimes spoken of as **Jawāsim**, and

a tribe which has submitted to the Shaikh of **Shārjah** is said to have become "Jāsīmi"; to this fact is probably due the indiscriminate application, in old British records, of the term "Joasmee" * to all the piratical inhabitants of what is now Trucial 'Omān. The trucial flag of 1820 unfortunately come to be known (and is still known) as the Jāsīmi flag, and the Bani Yās of Abu **Dhabi** have consequently always shown a certain disinclination to fly it.

A tribe of Qawāsim, by some supposed to be identical with the Qawāsim of Trucial 'Omān, are found in the 'Omān Sultanate at Miltīqa in Wādi **Samāil**, at Nafa'ah in Wādi **Mansah**, in Wādi **Risail**, at Falaj-al-Hijāri in the sub-Wilāyat of **Saham** in **Bātinah**, at Mizra'-al-'Alowī in Wādi **Maih**, and at Bandar **Jissah** on the coast of the **Masqat** District. According to some authorities, however, these Qawāsim are a section of the **Nidābiyīn**.

Other Qawāsim, about 650 souls, occur at **Duvvān** in the **Lingeh** District of the **Persian Coast**.

QISHM † قشم ISLAND

Also pronounced Jishm, and by Arabs occasionally styled Jazīrat-at-Tawilah جزيرة الطويلة. The largest and most important of all the islands in the Persian Gulf; it is situated off the coast of the Persian districts of **Bastak** and **Shamil**, which it subtends from **Lingeh** almost to Bandar 'Abbās, and is divided from the mainland by the channel 1 to 15 miles in breadth known to British mariners as **Clarence Strait**. The islands of **Lārak** and **Hanjām** may be regarded as being physically appendages of Qishm.

Size and configuration.—The extreme length of Qishm from east-north-east to west-south-west is 68 miles; its average breadth is difficult to calculate on account of the irregularity of its outline, but may be roughly stated at 10 miles, though in one place, nearly abreast of the adjoining island of **Hanjām**, it actually exceeds 20. The shape of Qishm is somewhat that of a fish, the eastern end representing the head, the western end the tail, and **Lāft** point a projecting dorsal fin. The coast is

* This term, it may be observed, is in any case an ungrammatical compromise between "Jāsīmi" and "Jawāsim."

† A monograph on Qishm island by Lieutenant V. Hunt will be found in the Government of India's Foreign Proceedings for May 1901; and the marine surroundings of Qishm are best shown in Chart No. 1375—753, *Entrance of the Persian Gulf*. There is another report by Captain W. Grey in the Proceedings for June 1904. In the writings of the mediæval Arab and Persian geographers Qishm appears to figure under the names of Bani Kanān, Abarkāfān, Abarkumān and Lāft: its inhabitants in those days were hardy sailors, much given to piracy; *vide* Le Strange's *Lands of the Eastern Caliphate*.

COPYRIGHT.

Salt Rocks on Qishm Island near Namakdān.

(RAJA DEEN DAYAL & SONS.)

generally rocky : its two principal salients are Lāft لاف point and Khārgu خارگو point, both about the centre of the island, the former on the northern, the latter on the southern coast. Khārgu point is low and rocky, but Dairistān دیرستان bay to the west of it is sandy and has swamps behind it. Rās Dastakān دستکان, the south-western point of the island, is also low and rocky : Bāsīdu point, the westmost, is described in the article on Bāsīdu.

Hills and geology.—Qishm is nearly covered with table-topped hills of a light brown colour, having broken-down sides and in some cases of very remarkable appearance ; there is however a general absence of dominant or characteristic peaks. The land which rises immediately behind Qishm Town continues increasing in elevation till, at one point 3 miles west of the town, it reaches 560 feet ; it then falls away abruptly to a low plain which reaches across the island from sea to sea and is several miles in breadth. Beyond the plain the hills recommence, but without any remarkable features until Kishkūh کیشکوه, the highest summit on Qishm with an elevation of 1,300 feet, is reached at about 17 miles from Bāsīdu and nearly in the middle of the island. About 3 miles west of Kishkūh a range of dark red hills with patches of slate colour crosses the island from north to south ; where it abuts upon the southern coast, with which it is in contact for 5 miles, it contains great salt-caverns and is known by the name of Namakdān نمکدان. The largest cave is at the eastern end of Namakdān ; it is over 200 feet in height, is about as deep as it is high, and has a span of 60 or 70 feet.* The general geological formation of the island is the same as that of the adjoining coasts. The upper strata are of coarse sandstone grit and conglomerate, supported by a blue lias marl and interrupted in one place by the salt hills already described : the aspect of the whole island is that of a plateau rising by a perpendicular scarp from the sea beach and eroded by weather into many valleys, some of which are parallel to the coast.

Flora and fauna.—The surface of the island along the southern coast has the bleak and barren appearance generally associated, in this part of the world, with the formation to which it belongs. Qishm is in fact, apart from its villages, almost a desert ; but the hills contain some wild goats, black and grey partridges and pigeons, and the plains some gazelle.

* This cave, with the methods of working, and the Namakdān generally are described by Pelly in the Bombay Geographical Journal, Volume XVII, 1865, pages 239—241.

Inhabitants.—The population, including **Qishm Town**, amounts to about 13,500 souls. Nearly all are Arabs by race and Sunnis by religion; but there are Persian communities at **Qishm Town** and **Dīrāku**, who together may number 500 souls and among whom also the Sunni form of Islām prevails. The Arabs belong for the most part to tribes of Trucial 'Omān, but their tribal divisions are not here of much importance; the Shaikh of the island belongs to a tribe called Bani Ma'in or Mu'ain بني معين who are said to be connected with the **Shammar** of **Najd** and number in **Qishm Town** about 100 persons, and of whom a few belonging to a section called **Shāqōsh** are found at 'Ajmān in Trucial 'Omān. The population of **Qishm** is said to have been considerably reduced by a severe earthquake which in 1898 visited **Qishm** and levelled many villages with the ground. Arabic is the language of the island.

Resources.—Salt is the only natural product of value, but most of the villages possess date-groves and some have small expanses of cultivation, these forming the only verdurous spots. Fishing, navigation and boat-building are the principal occupations, **Qishm Town** and **Lāft** village being centres of the last mentioned industry; but there is also some weaving of **Lūngis** and **Chādars**, and some villages are given up to camel-breeding and stock-raising.

Shipping.—The following is a table of the native craft belonging to **Qishm** :—

Kind.	Number.	Aggregate tonnage.	Aggregate hands employed.
Horis	100	40	200
Zārūqahs*	60	550	240
Jolly-boats	4	20	20
Māshuwabs	80	400	480
Ghunchahs	15	1,875	240
Sambūks	15	2,000	240
Baghlahs	5	1,896	190
TOTAL	279	6,781	1,610

* The **Zārūqah** is long and narrow with a high stem. See Appendix on Native Sailing Vessels.

Of these vessels fully $\frac{2}{3}$ belong to **Qishm Town**, about $\frac{1}{3}$ are owned at **Lāft**, and the remainder are distributed among the small seaport villages of the island.

Political position.—Qishm island is held in farm by the Mu'in-ut-Tujār of Tehrān, whose authority is concurrent with a general political control exercised by the Governor of the **Gulf Ports**. The Deputy-Governor of Bandar 'Abbās occasionally attempts to assert jurisdiction over the island, but his authority is not respected. The local chief through whom the general administration is carried on is the Shaikh of Qishm, who resides at **Qishm Town** and is an Arab of the Bani Ma'in tribe, at present Shaikh Hasan. The Persian central government is unrepresented save by officials of the Imperial Customs at **Qishm Town**, **Lāft**, Dairistān and Sūzeh.

Topography.—The following is a table of the villages of the island in alphabetical order :—

Name.	Position.	Houses and inhabitants.	REMARKS.
A'la Mulk اعلي ملك	On the north coast of Qishm island, 4 miles east of Lāft point.	There are no permanent dwellings, but the people of Lāft resort to this place in summer.	There are 70 date-palms.
Bāsīdu باسيدر	At the westernmost point of the island.	...	See article Bāsīdu.
Bāsīdu (Old) باسيدر	Immediately east of Bāsīdu, $\frac{1}{2}$ a mile inland from Clarence Strait	See Nakhlistān below.
Chāhu چاهر	Near the north coast of the island, 14 miles east-north-east of Bāsīdu.	20 houses of Arabs.	The people own 700 date palms, 20 cattle and 50 sheep; a few of them are fishermen. There is water from wells and from a reservoir; and some grass and fodder are available.
Dairistān ديرستان	Inland, towards the south side of the island, about 4 miles north from Rās Khārgu.	100 houses of Arabs.	The inhabitants grow dates, catch and cure fish and are sailors. There is water from wells and reservoirs, and provisions are

QISHM ISLAND

Name.	Position.	Houses and Inhabitants.	REMARKS.
Dargāwan درگوان or Dargāhān درگاهان	On the north coast of the island, 13 miles west of Qishm Town.	40 huts of Arabs.	obtainable, but scanty. Resources are 1,000 date palms, 30 camels, 30 cattle and 40 sheep and goats. An Imperial Persian Customs post here is occupied by a Mudir and 2 Tufang-chis. A fishing village, but possesses some good arable land. Water is from reservoirs. Date trees number 40, and there are 30 camels, 20 cattle and 30 sheep and goats.
Dirāku دیراکو	On the north coast of the island, 8 miles east of Bāsīdu.	25 houses of Arabs and Persians.	The inhabitants are agriculturists growing barley, and some fruit and vegetables also are produced. Water from wells and reservoirs is sweet. Livestock are 6 camels, 10 cattle, and 20 sheep and goats, and there are 120 date palms.
Gurān گوران	On the north coast of the island, 21 miles east by north of Bāsīdu.	30 houses of Arabs.	The people own 30 camels, 10 cattle and 30 sheep and goats. They are also wood-cutters and generally have large supplies of firewood on hand. Water is from wells and reservoirs. A shrine dedicated to Saiyid Ahmad stands on the shore. There are 80 date palms.
Gūri گوری	Near the north coast, 6 miles east by south of Bāsīdu.	15 houses of Arabs.	The people are mostly fishermen, but own about 300 date trees, also 12 camels, 6 cattle and 35 sheep and goats. From this place a track runs over the hills to the south coast of the island.

Name.	Position.	Houses and inhabitants.	REMARKS.
Halôr حلور	On the north coast about 2 miles east of Dargawân.	70 houses of Arabs, Sunnis.	The inhabitants cultivate a little barley and are weavers of Lūngis and Chādars. Water is from reservoirs and some supplies are obtainable.
Jijiyân جيجيان or Jijūn جيجون	In the centre of the island about 25 miles from Qishm Town.	30 houses of Arabs, Sunnis.	Fishing and cattle grazing are the chief occupations. The people have 300 date trees, 10 donkeys, 15 cattle and 40 sheep and goats.
Kari (Qal'eh) Hāji قلعه حاجي كريم	On rising ground close to the shore of Clarence Strait, about 2 miles east of the boundary of the British Bāsīdu station.	Now deserted: there were formerly 20 huts.	There are here the ruins of a fort from which the people of Nakhlistān take stones for building their huts.
Kunār Siyāh كنار سياه	On the north coast of the island, 9 miles east of Bāsīdu.	20 houses of Arabs, Sunnis.	The people are date-growers. Water is from reservoirs and wells. There are 20 date palms, 4 camels, 6 cattle and 60 sheep and goats.
Kūsheh كوشه	In the centre of the island, about 30 miles from Qishm Town and 3 miles north-west of Jijūn.	60 houses of Arabs, Sunnis.	Dates, barley and a little wheat are cultivated and Lūngis and Chādars woven. Date palms number 800, and there are 12 donkeys, 20 cattle and 50 sheep and goats. Water is from wells and a reservoir: supplies are scanty. There is a shrine of Shaikh al-Barkeh بركة or Barkh برنج.
Kuwāi كراي	On the north coast, 16 miles west of Qishm Town.	30 houses of Arabs, Sunnis.	The inhabitants are fishermen and own 30 date trees, 7 donkeys, 10 cattle and 40 sheep and goats. Water is from a reservoir.

Name.	Position.	Houses and inhabitants.	REMARKS.
Kuwairin کويرين or Kuwardin کوردین	About 3 miles south of Lāft.	120 houses of Sunni Arabs.	The people are fishermen and breed camels, of which they are said to possess 80. Other resources are 1,000 date palms. 30 cattle and 60 sheep and goats. Water is from wells and a small quantity of supplies is available.
Lāft لافت	On the north coast about half way between the ends of the island, $3\frac{1}{2}$ miles on the Bāsīdu side of Lāft point.	...	See article Lāft.
Lāft Qadīm لافت قدیم	On the north coast 2 miles east of Lāft point at the narrowest part of Clarence Strait.	...	Here are two ruinous mosques, some reservoirs and a plantation of 80 palms. The place was destroyed by an earthquake; its anchorage was inferior to that of the present Lāft.
Masān مسان	On the south coast of Qishm Island, $4\frac{1}{2}$ miles north-east of Rās Khārgu.	15 houses of Arabs.	The people are fishermen and cultivators owning 200 date trees. Water is from wells, fodder is available, and there are a very few camels, donkeys, cattle and sheep.
Nakhlistān نخلستان	Immediately outside the eastern boundary of the Bāsīdu Station, and $\frac{1}{2}$ a mile inland from Clarence Strait.	35 stone huts of immigrants from Chārak, Kung, etc.	Or Old Bāsīdu. The village stands amidst Portuguese ruins, some of which have been adapted for occupation. There are extensive date groves, and wheat and barley are cultivated. Some of the inhabitants are fishermen. There are 1 or 2 wells, but they do not suffice, and the people obtain their drinking water from the reservoirs within the limits of the British station of Bāsīdu.

Name.	Position.	Houses and inhabitants.	REMARKS.
Paipusht پیش	On the north coast of Qishm Island, 23 miles west by south of Qishm Town.	100 houses of Arabs.	The inhabitants are mostly boat-builders working in yards at Qishm Town. Water is from reservoirs and wells, and provisions are available in small quantities. Resources are a few camels, donkeys, cattle, sheep and goats and 500 date trees.
Qishm قشم	On the eastern point of the island.	...	See article Qishm Town.
Town			
Ramchāh رمچاه	On the south coast of Qishm Island.	150 houses.	Fishing and navigation are the chief resources. Water is from reservoirs and wells, and some transport is available. There are 1,200 date palms, and a few camels, cattle, sheep and goats.
Ramkān رمكان	About 5 miles north-east of Dairistān.	100 houses of Arabs.	Cattle and sheep are reared and Lūngis and Chādars woven. Water is from reservoirs and wells; supplies are scanty. There are 1,600 date trees, and livestock are 8 camels, 50 cattle and 100 sheep and goats.
Salagh سلغ	On the south coast of Qishm Island, 12 miles west of Rās Khārgu.	50 houses of Arabs.	The inhabitants are fishermen, date-growers and sailors; they have 20 camels, a few cattle, sheep and goats and 80 date trees. Water is from wells; supplies are scanty. Naptha from springs near by is said to be used locally for lighting, but the spring is too small to be of commercial value.

Name.	Position.	Houses and inhabitants.	REMARKS.
Suhli سهلي	Not far from Lāft, to the south-westwards.	20 huts.	A little barley is grown, and the inhabitants possess 30 camels, 40 cattle, 60 sheep and goats and 600 date trees. Water is slightly brackish, from reservoirs and wells.
Sūzeh سوزة	On the south coast of the island, 12 miles north-east of Rās Khārgu.	200 houses.	The inhabitants are sailors, fishermen and date-growers and some of them are camel-breeders; they have 200 date palms, 60 camels and a few cattle, sheep and goats. Water is good and plentiful from wells and reservoirs. A Mudīr and 2 Tufangchis of the Imperial Persian Customs are stationed here.
Taul طول or Tabl طبل	South-west of Lāft, in the centre of the island.	100 houses.	The people fish and own a few camels and other livestock, besides 170 date trees. Water is slightly brackish from wells and reservoirs, and some supplies and transport are obtainable.
Tumbānu تنبانو	About 3 miles west of Namakdān.	30 houses.	Barley is cultivated and livestock owned. Water is from reservoirs: supplies are scanty. There are 400 date trees.
Tariyān تريان	In the interior east of and close to Kishkūh hill.	50 houses.	A few camels, cattle, sheep and goats are kept and Lūngis and Chādars are woven. Water is from reservoirs and is good. There are 400 date trees.

Name.	Position.	Houses and inhabitants.	REMARKS.
Zainubi زینبی	On the north side of Qishm Island, 20 miles west by south of Qishm Town.	100 huts of Arabs.	The people fish, cultivate dates and barley, and own 12 camels and a few other live-stock. There are 120 date palms.
Zirāng زیرانگ	In the centre of the island about 20 miles west of Qishm Town.	50 houses of Arabs.	The inhabitants are graziers, owning a few cattle, sheep and goats; they are also weavers of Lūngis. Water is sweet from reservoirs, but supplies are scanty. There are 200 date trees.

The chief place and only town in Qishm Island, on the easternmost extremity of which it is situated. The town stands on a fairly level, sandy site close to the water's edge; it has a small date-plantation on either side of it and several domed water reservoirs at a short distance to southward. Behind it and to the south of it the land rises in a gradual slope from the sea; the hill thus formed breaks off precipitously on the north and west. Qishm is a well-built town and formerly contained several high Bādġirs reaching 50 to 60 feet above sea-level, but they were destroyed by an earthquake in 1898; there is an old Portuguese fort now in a ruinous condition. A number of the private houses in the town still bear witness to the violence of the earthquake, and many of the inhabitants still avoid residence in stone-built houses. There are several wells in and about the town; but only one, which is about 1 mile from the fort, furnishes good water: 7 Birkehs also exist for storing rainwater and these generally suffice for the needs of the population. The climate is cooler than that of Bandar 'Abbās. The population may amount to 3,000 souls and comprises 100 families of Persians, of whom 8 are 'Avazis, and 2 of Hindus (goldsmiths); the remainder of the people are Arabs of the same tribes as occupy the rest of the island. The inhabitants are mostly engaged in fishing, in trade, in boat-building and in the weaving of Lūngis. The chief exports are dried fish, shark-fins, Lūngis salt, and a small quantity of ghi collected from the villages of the island; the

QISHM
قشم
TOWN

leading imports are rice from Bombay or Karāchi, piece-goods, planks and beams, coffee and sugar. Some common pottery is manufactured from local clay. Date-palms number about 900 and livestock are a few camels, 30 donkeys, 60 cattle and 200 sheep and goats. The bazaar contains 47 general shops, besides which there are 19 fish shops. The shipping of the port (included in that of Qishm Island *q. v.*) is considerable; but there is no harbour, and off the town there are several reefs of rock and sand. Vessels of moderate or large size must anchor a mile or more from the beach, but there they are fairly well sheltered from the prevailing winds.* Qishm is the seat of a Shaikh who, under the Persian authorities, has executive power over the whole island, but cannot inflict the penalty of death. The town possesses a Madrasah in which advanced instruction in Arabic and theology is said to be given.

**QITAB
(BANI)**
بني قتب

This or Qatab (rather than Kitab كُتَب or Katab) appears to be the correct form of the name, though colloquially it seems to be sometimes pronounced Chitab or Chatab: the singular is Qitbi قُتْبِي. The Bani Qitab are an Arab tribe of the 'Omān Sultanate and Trucial and Independent 'Omān, having a considerable range over the 'Omān Promontory and extending into the district of Dhāhirah.

They are divided into the following sections: -

Section.	Location.	Fighting strength.	REMARKS.
Faṣāriyah فَارِيَّة	Anywhere within the tribal territories	100	Nomadic.
Hawāfir حَوَافِر	Chiefly between Wādī-al-Qor and Wādī Hām and about Yahfar-al-Fāyah.	80	These are Bedouins dependent on the Bani Qitab, but did not perhaps originally belong to the tribe.
Khasāwinah خَسَّارَنَة	As a rule at the western foot of the hills of the 'Omān Promontory, between the	120	Nomadic

* A plan of the Qishm anchorage will be found in an inset in Chart No. 2373-2837 A., Persian Gulf.

Section.	Location.	Fighting strength.	REMARKS.
	Jiri plain on the north and the Baraimi Oasis on the south.		
Ma'āliyah معالية	In the neighbourhood of the Baraimi Oasis.	40	Nomadic.
Mass'īd مساعيد	Generally in the country adjoining the towns of Shārajah and Dibai.	180	Do.
Midhāqarah مضارة	In Gharif and about Jabal Fāiyah.	30	Do.
Mughāribah مغاربة	Aflāj Bani Qitab in Dhāhirah.	100	Settled.*
Shibānāt شبانات	...	50	Nomadic.

The settled part of the Bani Qitab tribe is approximately equal to the nomadic: it is represented by about 500 households at the cluster of villages known as Aflāj Bani Qitab in the Dhāhirah district of the 'Omān Sultanate and by 40 families at Dhaid in the Shārajah Principality, and it may therefore be reckoned at about 2,700 souls in all, exclusive of the Balūchi colony at Aflāj Bani Qitab who are generally included for the purposes of tribal calculation.

The limits of the Bani Qitab Bedouin territory are the northern end of the Dhaid plain, the towns of Shārajah and Dibai, the Baraimi Oasis and the western slope of the hills of the 'Omān promontory. These Bedouins do not as a rule enter the hills, but they occasionally send their women and children and flocks and herds thither for asylum in time of danger. The fighting men of the nomadic sections being estimated at 600, the total strength of those sections may be assessed at 2,100 souls; and they are believed to own about 1,300 camels, 200 donkeys, 200 cattle, and 2,000 sheep and goats.

The Bani Qitab have recently been recognised by the Shaikh of Abu Dhabi, the most powerful chief in Trucial 'Omān, as clients of the Shaikh of Umm-al-Qaiwain and entitled to claim the protection of that ruler.

* Either the number of the Mughāribah fighting men is greatly underestimated here or other settled sections must be represented at Aflāj Bani Qitab: see page 429.

QOR
(WĀDI-AL-)
وادي القور

A valley which rises in the hills of the 'Omān Promontory between Wadis **Hatta** and **Hām** and reaches the sea at Bū Baqarah village in **Bātinah**: it is the last Wādi of **Hajar** in this direction of which any part is included in the 'Omān Sultanate.

The places in Wādi-al-Qor, in descending order, are :—

Village.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Raha رحا	Uncertain; probably a considerable way below the head of the valley.	Right.	3 houses of Dahāminah.	This place is considered to pertain to the Rās-al-Khaimah District of Shārjah. There are 5 donkeys, 5 camels, 5 cattle and 20 sheep, also 200 date palms.
Fashrah فشرة	$\frac{1}{2}$ an hour below Raha.	Right.	15 houses of Dahāminah.	This place also is considered to pertain to the Rās-al-Khaimah District of Shārjah. There are 300 date trees, a few animals and a little cultivation.
Nuslah نصلا	$\frac{1}{4}$ of an hour below Fashrah, in a side valley called Wādi Nuslah.	Left.	6 houses of Dahāminah.	Likewise belongs to Shārjah; dates number 150. Wādi Nuslah also contains a village Indūk اندوك which consists of about 14 houses of Jalājilah.
Aswad اسود	1 hour below Nuslah: here Wādi-al-Qor emerges from the hills and enters Bātinah.	Right.	80 houses of Washāhāt.	This place, which is 3 hours from the sea, is regarded as belonging to the Sultanate of 'Omān. The inhabitants cultivate and have 5,000 date palms.

In a Wādi called Manai'i منيعي, closely connected with and possibly a tributary of Wādi-al-'Qor, is a village Manai'i, consisting of 10 houses of Dahāminah, with date plantations; and a Wādi called Sfai مفي which joins Wādi-al-Qor near Nuslah contains some small villages of **Mazārī'**.

At the head of the Wādi, above the highest village, are camping-places of Bedouins of the Bani **Ka'ab** and other tribes. Of the settled inhabit-

ants about 400 appear to be subjects of the Sultan of 'Omān and 250 of the Shaikh of Shārjah.

Native informers state that the gradients of Wādi-al-Qor are easy and that there is no rugged pass at the top; they believe that a road for wheeled traffic could be made up the valley without great difficulty, but the point must be regarded as doubtful. The route from Murair to Dhaid lies for the first part of the way in Wādi-al-Qor.

QRĀ'AH*

قراة

A barren sandy tract in the Kuwait Principality, bounded on the north by Kuwait Bay, on the east by the sea, on the south by the district of 'Adān, and on the west by the locality called Kabd: its dimensions are thus about 15 miles either way. Qrā'ah contains, besides the town of Kuwait, the village of Dimnah and the fort of Sirrah, the following places, which we give in alphabetical order:—

Name.	Position.	Character.	REMARKS.
'Adailiyah عدايلية	3 miles south of Kuwait Town.	About 100 wells.	A little cultivation and, in the cold weather, many Bedouin tents. Water is scanty and brackish and about 40 feet from the surface. The supply improves after rain.
Qalaisiyah قلايسيه	10 miles south-east of Kuwait Town and $1\frac{1}{2}$ miles from the coast.	6 wells.	Good water at 27 feet; no cultivation.
Kaifān كيفان	On the east side of Ras-al-Ardh, about $\frac{1}{2}$ a mile from the point.	A few wells.	The wells are sunk in sandstone, and there is a fisherman's hut near by.
Majīwah مجبوة	1 mile north of Malah.	Numerous wells.	Only one contains good water, at 20 feet.

* Qrā'ah is a common noun rather than a proper name; it is used to denote any tract of land which has been denuded of its natural vegetation. The district adjoining Kuwait Town naturally answers to this description; but the propriety of using Qrā'ah in this case as a geographical expression is doubtful.

Name.	Position.	Nature.	REMARKS.
Malah ملح	15 miles south of Kuwait Town and 8 miles west of Abu Halaifah on the coast.	5 wells.	Depth of wells 20 feet ; water brackish but drinkable. The place was formerly cultivated and has the remains of an old fort.
Mishrif مشرف	2 miles east of Qasr-as-Sirrah .	A group of wells.	The water is good, and some is supplied to the Shaikh at Kuwait .
Sulaibikhat صليبيخات	6 miles south-west of Kuwait Town, less than 2 miles from the shore of Kuwait Bay.	White sandhills.	Nil.

Besides the above the wells of **Jadādiyah** and **Sulaibiyah** (mentioned under Route IV in the article on the **Kuwait** Principality) are perhaps in **Qrā'ah** ; but this is uncertain.

Rās' Ajūzah and **Rās-al-Ardh**, both described in the article on the **Kuwait** Principality, are among the maritime features of the **Qrā'ah** district.

QRĀIN

قرين

The name of a small isolated hill, of a **Khor** or depression, and of some wells, all situated in **Kuwait** territory on the boundary between the '**Adān** and **Salū'** districts. The hill is about 40 miles south of **Kuwait** Town and about 14 miles inland from the sea-coast, and the wells are 4 miles from it to the south-south-west. The **Khor** or depression lies to the north and east of the hill, between it and the sea ; it measures about 6 miles in each direction and is overgrown with grass and bushes. In spite of the fact that it is called a **Khor** or inlet, it appears to have no communication with the sea and its drainage is said to sink into the ground.

QRĀIYN

القرين

A small sandy islet, hardly above high-water level, 4 miles south of **Qrān** Island. There is apparently no territorial authority.

An island off the coast of the **Hasa Sanjāq**, about 36 miles north-east by east of **Rās-al-Bidya'**. It stands only a few feet above sea level and is quite flat and covered with brushwood. There is an anchorage on the south side, in 8 fathoms, $\frac{1}{2}$ a mile off the island. The island is frequented by fishermen from **Musallamiyah** and **Jinnah** islands, from **Hadd (II)** in **Bahrain** and possibly from **Khārag** island, who dry fish and make turtle oil for sale at **Basrah** and **Kuwait**. The oil is used as a remedy both for rheumatism and for costiveness. The ownership of **Qrān** is apparently indeterminate.

QRĀN

القران

Generally pronounced Gubbān. A deserted site on the western border of the **Fallāhiyeh** District of Southern **'Arabistān**; it lies at the point where the **Khors Bū Khadhair** and **Khuwairīn** unite to form the **Qanāqeh** branch of **Khor Mūsa**, and it is thus distant about 12 miles south-eastwards from the **Mārid** creek on the **Kārūn** river and 7 miles north and somewhat east of the village of **Bū Shaneh** on the **Bahmanshir**. The highest point attainable by boat on **Khor Qanāqeh** is about $1\frac{1}{2}$ miles east-south-east of the place. A bush-grown hollow, in former times probably a canal, connects the **Mārid** creek with **Qubbān**: and the **Salmāniyeh** canal, now nearly dry, which crosses the **Fallāhiyeh-Mārid** canal in a south-easterly direction a short distance east of **Mārid**, also runs in the direction of the settlement and may have been originally constructed for its benefit. In dry weather, *e. g.*, November, there is a scarcity of water about **Qubbān**; but at other seasons, *e. g.*, May, the whole country to the northward as far as the eye can reach becomes a swamp and the mounds mentioned below are converted into islands. **Qubbān** was formerly the capital of the **Ka'ab** tribe, but was deserted by them about 1747 A.D.—whether on account of drought or of flooding, or for some other reason, is not known. The only traces of occupation now remaining are 3 large earthen mounds, about 20 feet high, which appear to be relics of fortified mud buildings, possibly of the corner towers of a village.

QUBBĀN *

قُبْبَان

* *Authority*: Chiefly Major Cox, who examined the spot in November 1905 and May 1907, and was the first European to visit it since Colonel Chesney's Expedition in November 1836. In Colonel Chesney's map **Qubbān** is shown nearly 10 miles south of its true position: the latter is given in Commander Shearme's *Topographical Sketch showing Dry Bed of Blind Karun River, 1908*, and is $30^{\circ}22'20''$ N. by $48^{\circ}25'55''$ E.

QUMĀRAH
قُمَرَة

Singular Qamairi قميري. A small tribe of non-Bedouin Arabs found in the Bahrain Principality in Muharraḡ Town, where they have about 10 houses in a quarter named after them Farīq-al-Qumārah. They are Māliki Sunnis in religion and pearl divers by occupation. They are said to have come from Qatar with the 'Utūb.

QUMĀT
قُمَاط

A large village in the Dizfūl District of Northern 'Arabistān: it is situated about 4 miles from the right bank of the Diz River at a point 6 miles above Kūt Bandar, and 8 miles from the left bank of the Shāūr. The place consists of about 400 mud houses and mat huts inhabited by mixed Arabs, and it is divided into 4 Qariyehs or hamlets known by the names of Saiyid Ahmad, Saiyid Sāim, Saiyid Sālīh, and Saiyid Khalaf. The inhabitants possess about 100 rifles, and of the fighting men 100 are mounted. Livestock are estimated at 200 camels, 100 mules, 200 buffaloes, 4,000 cattle, and 10,000 sheep and goats. The community has gathered round the sacred personality of Saiyid Ahmad, the principal man, who is a "Tufakh"—that is a diviner or exorciser credited with power to discover thieves, cure the bites of rabid animals, etc. Saiyid Ahmad is much respected by the surrounding Arabs, who even make use of his name in oaths.

QURAIN
or
QRAIN
قُرَيْن

Frequently pronounced Grain. A small barren islet in Kuwait Bay, about half a mile off shore at a point 4 miles to the west of Kuwait Town. Towards its south end is a small brown-coloured mound 27 feet high. On the south-east side of the island, between it and the shore, there is a small basin called Bandar-ash-Shuwaikh بندر الشويخ where native boats may ride, perfectly sheltered from all winds, in 3 to 4 fathoms of water. This harbour is connected with the open bay by a long, narrow gut, which over a distance of 400 yards carries only 12 to 13 feet of water at low spring tides: the obstruction appears to be of rock which could not be very easily removed.* "Graine," the old English name for Kuwait Town, was probably taken from this island.

*For an account of this anchorage and channel, see the Government of India's Foreign Proceedings for September 1905 and plan there.

A division of the Basrah Sanjāq of the Basrah Wilāyat in Turkish 'Irāq.

QŪRNAH

قرنه

QADHA

Position and boundaries.—The Qadha of Qūrnah is situated on both banks of the Shatt-al-'Arab immediately below the point where that river is formed by the junction of the **Tigris** and **Euphrates**; a small portion of the district also, containing the administrative centre, is enclosed between the **Tigris** and **Euphrates** above their confluence. Conterminous tracts are the Qadhas of **Shatrat-al-'Amārah** and (perhaps) **Zubair** on the north, Persian territory on the east, the Qadha of **Basrah** on the south, and that of **Sūq-ash-Shuyūkh** on the west.

Topography and inhabitants.—The *chef-lieu*, **Qūrnah Village**, which is elsewhere described in a special article, is the only place of any importance in the Qadha, and it too is of small size. The only other villages deserving of mention are **Madinah**, **Nashwah** and **Sharish**, which are the seats of **Mudīrs**: the first of these is the subject of a separate article, and the other two are noticed in the article on the Shatt-al-'Arab. The only great natural features of the district are the rivers **Tigris**, **Euphrates** and **Shatt-al-'Arab**, on which its entire character depends. The principal tribes of the Qadha are **Ahl-al-Jazāir**, **Qatārnah**, **Bani Mālik** and **Bani Mansūr**; of these the first and the last are found on both banks of the **Euphrates** and on the right bank of the **Shatt-al-'Arab** the whole way from **Hammār** to **Sharish**, while the **Bani Mālik** are found chiefly on the eastern side of the **Shatt-al-'Arab**.

Population.—The fixed population of the Qadha is estimated at 30,000 souls, and nearly all of these are Arabs belonging to the **Shi'ah** section of **Islām**.

Resources.—Qūrnah is a damp and unhealthy district, but fertile and well-irrigated. Large quantities of dates and rice and smaller quantities of wheat and barley are produced year by year; and livestock are abundant, especially buffaloes. The only local manufacture is one of reed mats.

Administration.—Qūrnah is divided into 4 **Nāhiyahs** besides that forming the headquarters or **Markaz**: they are **Dair-wa-Sharish** دیر و شروش on the right bank of the **Shatt-al-'Arab**; **Madīnah** مدینه, upon both sides of the **Euphrates** before its junction with the **Tigris**; **Bani Mansūr** بنی منصور; and **Nashwah** نشوة on the left bank of the **Shatt-**

al-'Arab. The headquarters of the first, third and fourth of these are the villages of Sharish, **Madinah** and Nashwah, respectively.

QŪRNAH

قورنه

VILLAGE

A small municipality in Turkish 'Irāq, situated between the **Euphrates** and **Tigris** rivers at the point of their junction.

Qŭrnah consists of about 160 houses with a larger number of huts ; and the inhabitants, who are almost all Shi'ah Arabs of the Bani Mansūr and Ahl Nahairāt tribes, may number about 2,000 souls. Many natives of the place are employed as lightermen at **Basrah** and elsewhere. The neighbourhood produces dates, barley, wheat and rice and many buffaloes ; but the climate is unhealthy and there is very little trade. The only manufacture is of fine summer 'Abas, some of which (it is said) can be passed through a finger-ring and are called Khāchīyah خاچیه: Qŭrnah is also famous for a kind of cheese which is made in strands and plaited together for sale.

The position of the town, commanding both rivers where neither is more than 100 yards broad and the water in each is 20 to 30 feet deep, is one of high administrative and military importance, and the fact has been realised, though imperfectly, by the Turks. Qŭrnah is the headquarters of the Qadha of the same name. There are a customs-house, a quarantine station and a telegraph office, the line from **Basrah** to **Baghdād** dividing at the latter into two branches, one of which follows the **Tigris** and the other the **Euphrates** valley. The Department of Public Debt is represented by a Mamūr, and river conservancy is controlled by a harbour-master. The military garrison of Qŭrnah consists of 50 men, commanded by a lieutenant.

The present Qŭrnah was founded more than 100 years ago by the Turks, who fortified it with a double wall on the landward side against Persian attack ; but the name existed as early as the 17th century, and there was a "castle" even in the 16th. Qŭrnah is said to occupy the site of a more ancient place called Dighah دینه, while local tradition even places the Garden of Eden here and points to a tree, still in existence, as planted by the patriarch Noah.

QURYĀT*

قريات

A town on the coast of the Eastern **Hajar** district of the 'Omān Sultanate, on the south side of a creek formed by **Wādi Mijlās** at its

* A distant view of the hills behind Quryāt is given in Chart No. 2383—38.

mouth; Quryāt is situated 31 miles south-east of **Masqat** Town and 4 miles to the north-west of **Daghmar**. Quryāt consists of 12 hamlets, of which 3 stand upon the sea-shore and the remainder upon a plain, about 2 miles wide, between the coast and the hills of Eastern **Hajar**. This plain is traversed by two Wadis from the hills, one being Wādī **Mijlās** at the northern end, and the other Wādī Bani **Battāsh** at the southern.

The hamlets or detached quarters composing Quryāt are :—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Afa عفا	2 miles inland near the left bank of Wādī Bani Battāsh .	70 houses of Bani Battāsh and other tribes.	The people keep camels and burn lime for export to Masqat Town. There are 50 camels, 20 donkeys, 30 cattle and 200 sheep and goats; some grain is cultivated.
'Aqibah عقيبه	1 mile north-west of 'Afa.	10 houses of Bani Wahaib .	The people are cultivators.
'Ainain عينين	$\frac{1}{2}$ a mile south of 'Aqibah.	15 houses of Bani Battāsh .	Ditto.
Ghāfah غانه	The south-eastern-most of the coast villages, near the left bank of Wādī Bani Battāsh .	20 houses of mixed tribes.	The people are boatmen owning 8 Badans and 10 small boats.
Hājir حاجر	Inland.	25 houses of Bani Wahaib .	The inhabitants are carriers.
Hijrah حجرة	Do.	10 houses of Bani 'Adi.	The people are traders.
Janain جنين	Inland, a short distance south-west of Ghāfah.	120 houses of Balūchis.	The people are fishermen and own 15 small boats.
Jazairah جزيرة	The north-western-most of the coast villages, on the right bank of Wādī Mijlās .	100 houses of Bani Sinān .	Fishermen owning 3 Badans and some small boats.
Ma'lāh ملا	Inland.	30 houses of mixed tribes, chiefly Bani Wahaib .	The inhabitants cultivate.

Name.	Position.	Houses and inhabitants.	REMARKS.
Minshikmah منشكمة	The middle village upon the coast.	150 houses of mixed tribes.	The inhabitants are fishermen and have 20 small boats.
Sūq سوق	$\frac{1}{4}$ of a mile inland, half way between Wādī Mijlās and Wādī Bani Bat-tāsh.	Ditto.	Cultivation is carried on. This quarter contains the bazaar and a fort belonging to the Sultān of 'Omān.
Waljah ولجة	Inland.	10 houses of mixed tribes.	Do.

The total population of the place is about 3,500 souls. In the Sūq quarter there is a good bazaar with 7 shops of Hindus who reside here for the sake of the trade with the interior *viā* Wādī Tāyīn, of which Quryāt is the port. There is also one family of Khōjah traders, under British protection. The date-plantations are considerable and barley and musk and water melons are cultivated. All the hamlets have date plantations, but they are small and unimportant. The people are also fishermen and export lime, which they burn, and firewood to Masqat Town: they own a dozen large Badans by means of which communication is maintained with Masqat Town, 12 smaller ones used for fishing, and about 50 Horis or skiffs. There is a tradition that horses were once bred here for the Indian market, but that the trade expired some two centuries ago in consequence of political troubles. The Sultān of 'Omān maintains at Quryāt a Wālī and a military detachment of 15 men who occupy the fort in the Sūq quarter. The customs of the port bring in a revenue of \$3,000 and Zakāt yields \$1,700 a year, but, with the exception of about \$1,000 remitted annually to Masqat, the whole is swallowed up by the expenses of the local administration. The present Wālī holds an assignment at Quryāt from the private property of the actual Sultān (Saiyid Faisal); it consists of date plantations and arable land at Quryāt and is worth \$ 350 a year.

QUSAIBAH

قصيبة

A large village or small town in Qasīm near its northern border; it is about 45 miles north-west by north of Buraidah. The site of Qusaibah is in a natural basin with sides about 100 feet high. The place consists of

4 detached quarters, at considerable distances apart, lying along the west side of the basin. The population of the entire settlement is about 2,500 souls, mostly 'Anizah, Bani Khālīd and negroes; they are small, thin and weak and have a drawn and emaciated appearance. This is doubtless due to the climate, which varies little with the season, mosquitoes and fever being prevalent all the year round. The date plantations of Qusaibah extend $2\frac{1}{2}$ miles, and there is cultivation of fruits, cereals and vegetables as well: the dates are reputed among the finest in Oasīm. A small artesian well of warm water is one of the features of the place. The ordinary wells are unreliable, frequently failing or turning salt so as to necessitate the digging of new ones. It is reported that there are about 8,000 goats and sheep, but that larger and transport animals are not numerous at Qusaibah.

The strait between Ghanam island and the coast of the Ruūs-al-Jibāl district in the 'Omān Sultanate. It is 2 miles long, 600 yards wide at its northern and southern entrances and 1,000 yards broad in the middle. The soundings are 15 to 10 fathoms, and the bottom is of sand and gravel without hard rock. A well-sheltered, safe and commodious anchorage, Khor Quwai is also naturally defensible and would make a good naval flying-base, but there is no water supply deserving the name.

QUWAI
(KHOR)*
خور قوی

A strong and well-to-do Arab tribe in Turkish 'Irāq.

RABĪ'AH
(BANI)

Territory.—The Bani Rabī'ah inhabit both sides of the Tigris in the neighbourhood of Kūt-al-Amārah: on the left bank their territory extends from opposite Bghailah to Kūt-al-Amārah and on the right bank from Bghailah to Shaikh Sa'ad, with a depth in either case of 20 to 25 miles from the river. They are also found sporadically in other places, as for example at Mahmūdīyah on the route between Baghdād and Karbala.

بنی ربیعہ

* A full report on Khor Quwai by Commander W. Kemp, R.N., will be found in the Government of India's Proceedings, Political, for June 1904; also some remarks by Admiral Atkinson-Willes, R.N.

Divisions and number.—The principal divisions of the Bani Rabī'ah are the Amārah* امارة, the largest of the clans and the one from which the Shaikhs are drawn, occupying the right bank of the Tigris for some distance below Bghailah; the Maiyāh مياح or Maiyāh مياہ in the angle between the Tigris and the right bank of the Shatt-al-Gharāf; the Sarāi سراي or Sirāj in the corresponding position between the left bank of the Shatt-al-Gharāf and the Tigris, and around Hai Town; the Maqāsīs مقاصيس between the Sarāi and Shaikh Sa'ad; the Bulhah بلحه between the Amārah and the Maiyāh; and the Khammās خمّاس upon the left bank of the Tigris. A section called Karaish كرش are found chiefly in the Kūt-al-Amārah Qadha; the most important of their subsections are (1) the Kawām كولم, who are found on the left bank of the Tigris between Kūt-al-Amārah Town and occur also in the Kādhimain Qadha, and (2) the Bani Tamīm بني تميم, who are represented in both the same Qadhas. Of the above sections the Maqāsīs are respected as Saiyids by the other Bani Rabī'ah and wear their hair long; they engage in agriculture and also in robbery, and some of them are considered to belong to the Bani Lām rather than to the Bani Rabī'ah. There is also a predatory section called Kinānah كنانة, every member of which owns a breech-loading rifle. The distribution and composition by subsections of the Kawām and Maqāsīs sections of the tribe are explained in the article on the Kūt-al-Amārah Qadha, where the names of a number of petty sections not mentioned above will also be found. In number the Bani Rabī'ah are inferior to the Muntafik and the Bani Lām, but no exact estimate is possible.

Religion and life.—All the Bani Rabī'ah, with the exception of the Kawām, are Shī'ahs by religion and live in tents; they both cultivate themselves and employ others to cultivate for them; their chief crops are wheat and barley; they possess many sheep, cattle, horses, and camels.

Military strength and political position.—About one-fourth of the fighting strength of the tribe are horsemen and are well mounted. A proportion of old-fashioned firearms is still carried by the Bani Rabī'ah, who are in fact on the border line between the well-armed tribes of Lower and the worse-armed tribes of Upper 'Irāq.

As revenue to the Turkish Government, the Bani Rabī'ah pay one-fifth produce on account of lands classified as easily irrigable, and

* Apparently the section whose subdivisions are given at page 180 of the Gazetteer of Baghdad, 1889. Kūt-al-Amārah appears to be named from them.

one-tenth for those which are only irrigable with difficulty: there is also a tent-tax of 3 Majidis a year, but it is not rigorously collected.

A tract in the north of the **Hasa Sanjāq**: it is bounded on the north by the district of **Sūdah** in the **Kuwait** Principality and on the other sides by tracts in the **Hasa Sanjāq**, namely, by **Wādī-al-Miyāh** on the west between **Jabal Na'airiyah** and **Jabal-al-Hass**; by **Sanfān-al-Hanna** and **Jau Shamīn** on the south, the former as far as the wells of **Hajrah** and the latter to those of **Mistannah**; and finally by the **Sabakhat-al-Mutāya** on the east, from the wells of **Mistannah** north to the borders of **Sūdah**. The extreme length of **Radāif** from **Jabal Na'airiyah** to its southernmost limit is about 40 miles and its average breadth about 14; its eastern boundary is some 20 or 25 miles from the sea.

Radāif consists of dark, firm soil, with here and there stony mounds or patches of rising ground. There are no trees, and grazing consists of **Thamām** grass and **'Arfaj** and **'Ausaj** plants; **Hamdh** and **Rimth** are not found. Except in the matter of vegetation **Radāif** very closely resembles the adjoining tract of **Jau Shamīn**.

The water of **Radāif** is generally indifferent, and the average depth at which it is found below the surface is about $2\frac{1}{2}$ fathoms. The following are the best known wells:—

Name.	Vernacular equivalent.	Position.
Ahfariyah	احفريه	7 miles south-east of Hasānah .
'Aqbi	عقبي	5 miles east-north-east of Hammar .
Atmah	اطمه	3 miles north-west of Hammar .
Dahainah	الدهينة	7 miles south of Hammar .
Gha'aithah	غعيثه	7 miles south-west of Hammar .
Hammar	الحمر	16 miles west-south-west of Jabal Manifah at the coast, and 19 miles east by south of Jabal Na'airiyah .
Hasānah	الحسانه	10 miles north-east by east of Jabal-al-Hass .
Jamāl (Umm-al-)	أم الجمال	2 miles north-east of Jabal-al-Hass .
Khamairiyah	خميرية	7 miles west of Jabal-al-Hass .

RADĀIF
ردائف

Name.	Vernacular equivalent.	Position.
Khuwaisah (Umm)	أم خويسه	About midway between Gha'aithah and Na'airiyah.
Makbrūq	مخرق	3 miles east of Jabal-al-Hass.
Muraikh	مريخ	3 miles north of Hammar.
Na'airiyah	النعيرية	At the foot of Jabal Na'airiyah on its east side.
Shahamah	الشحه	7 miles north-west by north of Hasānah.
Shinaifiyah	شنيقية	4 miles south-east of Hammar.
Shubāk	شباك	8 miles east-south-east of Hasānah.
Subaiqain	سبيقين	4 miles east of Hammar.
Suwābah	الصوابه	4 miles south-west by west of Hasānah.
Tataifah	الطريقه	7 miles north-west by north of Hammar.

A deserted site is said to exist near the Na'airiyah wells, similar to those in Wādi-al-Miyāh.

RAHBIYĪN

رحبيين

Singular Rahbi رحي . A tribe of the Eastern **Hajar** of the 'Omān Sultanate, Ghāfiri in politics and Ibādhi in religion : they are found in the upper part of Wādi Tāyīn and in Wādi **Mansah** and have frequently been retained by the Sultān of 'Omān to bar the advance of **Sharqīyah** rebels through their passes against **Masqat** Town. Their chief settlements are Wāsīt (35 houses), Manaithīrah (35 houses), Rahbah (20 houses), Sharabat (30 houses), Mizra' Halilah (10 houses), Mizra' Sidr (30 houses), Jārdamān (15 houses), Mizra'-al-Ghāf (40 houses), Musibt (50 houses), Lāhan (15 houses), Murr (15 houses), Mala (30 houses), Ghurābah (50 houses), Dāmdam (30 houses) and Khatwah (30 houses) in Wādi **Mansah** and its tributaries ; Wāsīt (60 houses) between Wādi **Mansah** and Wādi Tāyīn ; Ba'ad (60 houses), Naqsi (30 houses), Hindarūt (30 houses), Miss (150 houses), Mizbur (30 houses), Hūk (15 houses), Ghiyādhah (50 houses) and Baiyadh (60 houses) in Wādi Tāyīn. They are also found at **Matrah**. The total number of the tribe is thus about 5,000 souls. Wāsīt is the seat of the principal Shaikh. One of the sections of the Rahbiyīn are the Suwābiq سوابق who are found at Baiyadh ; another are perhaps the Aulād

or Bani Mahriz محرز at Ba'ad and Mizbur, who according to some accounts are a separate tribe, not Rahbiyin, and who oscillate between the Ghāfiri and Hināwī sections.

A village on the coast of the Rās-al-Khaimah District of the Shārjah Principality, about 8 miles north-east of Rās-al-Khaimah Town. It stands on the south side of a small creek, the entrance of which is nearly dry at low water; the shore in the vicinity is swampy; and another creek, which opens from the sea 2 miles south-west of Rams, enters the bay at Rās-al-Khaimah Town after running parallel to the coast for 5 miles. There are no trees at Rams itself.

RAMS

رامس

Rams consists of about 400 houses, mostly of mud and stone, but a few of date branches; the inhabitants are all Tanaij. The principal occupations are pearl diving and fishing; the inhabitants own some 3 pearl boats and 10 fishing boats, also 1 sea-going Sambūk, which fetches dates from Basrah. The only shop at Rams is kept by a Persian.

The date plantations belonging to Rams are partly situated at Dhāyah ذياه, a place 2 miles inland to the eastwards, and on the south they join the plantations of Sir, forming a belt of palms which is continuous as far as Rās-al-Khaimah Town: they are said to comprise about 7,000 trees and to be irrigated from wells about 10 feet deep. Livestock at Rams are estimated at 20 camels, 50 donkeys, 20 cattle, and 500 goats.

The place Dhāyah, just mentioned, is now uninhabited; but there are wells and the remains of a fort situated upon a hill. A century ago Dhāyah was of more importance, and in 1820 the general treaty of peace between the British Government and the Shaikhs of Trucial 'Omān was signed by the Shaikh of "Zyah" among the others; this was Hasan-bin- 'Alī, a prominent partisan in his day of the Wah-hābi interest.

The easternmost district of 'Arabistān; it is attached for fiscal purposes to the northern division of that province and may therefore be reckoned, though administered separately from the rest, to belong to Northern 'Arabistān.

HURMUZ

رام هرمز

DISTRICT

Boundaries.—The Rāmuz district is bounded along its north-eastern side, beginning at some naphtha springs known as Naft-i-Safid نفت سفید

at its northern corner, by the range of Kūh-i-Gach کوه گچ or the Gypsum Hills, which reaches to the Rāmuz river; its south-eastern corner is on the Mārūn river, above Jaizān which is included in the district. From Jaizān the boundary runs, at a short distance from the left bank of the Mārūn, to a point Cham Manī' چم منیع on the Jarrāhi 3 miles below the confluence of the Rāmuz river and the Mārūn; from Cham Manī' it is continued to the low mud and rock hills through which the Jarrāhi breaks above Cham-as-Sābi, crosses that river and, following the same hills, arrives at a point on the Rāmuz-Nāsiri route on the eastern verge of the Bu'airish plain and about 9 miles east of the village of Mīrbacheh. The remainder of the boundary is a line connecting Bu'airish with the naphtha springs first mentioned; this line crosses the Gūpāl stream about 4 miles above the barrage on the same.

Physical characteristics.—The district is a fertile plain, about one-half of which is said to be watered from various streams and springs. The most important of the streams are the Rāmuz river (or upper course of the Jarrāhi) between its exit from the hills and its junction with the Mārūn and a short section of the Jarrāhi proper between that junction and its exit from the district, also the Mārūn river which is the principal feature of the south-eastern part of the district; information concerning these will be found in the articles on the Jarrāhi and Mārūn. The Gūpāl stream, which traverses a part of the district north of the Rāmuz-Nāsiri road, is described elsewhere under its own name. It remains to mention the Zarnīni and Muwailheh streams which are features of some importance in the neighbourhood of Mīrbacheh. The Zarnīni زریني or Zarīni زرینی is crossed about 4 miles from Rāmuz Town on the way to Mīrbacheh; at that point it is (in winter) a swiftly flowing stream of fresh water, 1 to 2 yards wide and 2 to 3 feet deep, with perpendicular banks 4 or 5 feet high except at the crossing place, and its course is to the west-south-west. The subsequent course of the Zarnīni is uncertain; a good deal of it is probably expended in irrigation, but it has been identified conjecturally with a fresh water stream of about the same size which passes a mile to the east of Mīrbacheh village travelling in a north-westerly direction; possibly however it goes southwards towards the Jarrāhi river. The Muwailheh is a salt stream which is crossed about 2 miles west of Mīrbacheh on the way to Nāsiri; at that place it is running to the north-west, its bed is 200 to 300 yards across, and on the left bank,

which is scarped, there are stony hillocks rising as much as 80 feet above the level of the water. The stream here resembles a canal and hugs the left bank of its channel ; its average breadth is about 10 yards, but even in winter a place was observed at which its breadth was only 4 yards and its depth nevertheless did not exceed $1\frac{1}{2}$ feet. About 5 miles from the crossing place the Muwailheh falls into the **Gūpāl**. Besides these two streams in the neighbourhood of **Mirbacheh**, springs of fresh water are said to exist 10 or 12 miles to the south or south-east of that village.

People.—The inhabitants of the Rāmuz district are chiefly Ahl-i-Rāmuz, a local breed of mixed Arab, **Lur**, Behbehāni and Qanawāti blood, who are related to the surrounding population much as “Dizfūlis” and “Shūshtaris” are to the tribes in the districts of **Dizfūl** and **Shūshtar**. The **Lurs**, who are the next most numerous, are chiefly Chahārlang **Bakhtiyāris**, including Shīr ‘Alis and Talāwaris, or Kūhgalus of the Bagdali, Bahmāi, Bair Ahmadi, Āgha Jari and Taibi sections. The balance of the population are Arabs or Saiyids. The Arabs belong chiefly to the **Hamaid**, Āl **Khamīs** and Bani **Lām** tribes and are mostly settled or semi-settled cultivators. It is calculated that among the **Lurs** one-half of the fighting men are armed with rifles and one-fifth are mounted. **Rāmuz Town** is the principal place in the district : a conspectus of the villages is given at the end of this article. The total population of the district is probably about 12,000 souls inclusive of the Āl **Khamīs**, only a few of whom, though the tribe is now semi-settled, appear in the table of villages below.

Agriculture.—Rice, sesame, cotton, wheat, barley, beans, linseed, and tobacco are produced, and the fruits grown include dates, oranges, sweet and bitter limes, pomegranates, plums, apples, grapes, figs, quinces, citrons, apricots, pears, and almonds ; the fruits, except dates, are mostly of recent introduction. The district, under its present judicious managers, the **Bakhtiyāri Khāns**, promises to improve in every respect and is attracting settlers from all directions, especially from the **Jarrāhi** region and further east. There are 20 flour mills driven by water power in the district.

The ordinary unit of land measurement in the district is the **Khīsh** خیش, or area which requires 5 Rāmuz Mans of wheat or 3 of barley to sow it. As the thickness of the sowing varies with the nature of the soil, the **Khīsh** cannot be expressed in terms of acreage.

Trade.—Rāmuz Town is the only commercial centre. Exports are wheat, barley, sesame, rice, beans, linseed, ghi, wool, and hides, which are the produce of the district, and wool, Zidu زیدو or gum-arabic, a kind of logwood called Rūniyeh رونیه and various nuts, which are brought from the hills. Exportation takes place direct to both Nāsiri and Muhammareh, but nearly all imports—namely, piece-goods, metals, sugar, tea, coffee, spices, crockery, and candles—are received through Nāsiri; the more highly taxed of these commodities, however, as also prohibited articles such as firearms and ammunition, are brought by muleteers from ports such as Fallāhīyeh, Ma'shūr, Hindiyan and Dilam, into which they are smuggled from abroad. The Man of Rāmuz is equal to 106 lbs. English.

Administration.—The district is subject to the rule of the Bakh-tiyāri Khāns, who also enjoy its revenues subject to a yearly payment of 15,000 Tūmāns into the Persian treasury at Shūshtar. The agricultural taxes are generally collected in kind at the rate of one-fourth of the gross produce in the case of wheat, barley, linseed, cotton, beans, and tobacco, and at the rate of one-third in the case of rice and sesame. Unirrigated crops ordinarily pay revenue in cash at the rate of 33 Qrāns per Faddān.* In 1904 the revenue collections in kind consisted of 2,000 Rāmuz Mans of wheat, 12,000 of barley, 100 of beans, 1,500 of linseed, 70 of tobacco, 12,000 of rice, and 1,000 of sesame, and their total value was estimated at 55,600 Tūmāns: in the same year the area cultivated by rainfall was 2,000 Faddāns and yielded 6,500 Tūmāns in cash.

The revenue-paying cultivation of the district at the present time is estimated as below by a reliable authority:—

Unirrigated land.

Area in Khish.	Proprietors.
600	The Samsām-us-Saltaneh and the Muntazim-ud-Dauleh.
600	The Shahāb-us-Saltaneh and others.

* One good authority, however, states that the annual payment to the Persian Government is only 10,000 Tūmāns, and that the tax on agriculture is $\frac{1}{4}$ of produce in all cases.

Irrigated land.

Area in Khish.	Proprietors.	Owner's share of produce in 1906-1907 (in Rāmuz Mans).	REMARKS.
500	The I'tizād-us-Sultān.	550	But for damage by hail the owner's share should have been 700 to 800 Rāmuz Mans.
100	The Samsām-us-Saltaneh.	600	In this case the rent was a full one.
500	The Muntazim-ud-Dauleh and the Mu n a z z i m-ul-Mulk.	10,000	Do.
450	The Shahāb-us-Saltaneh and the Mu'in Humāyūn.		
350	Arsalān Khān, } Hasan Khān } and the heirs of } the late Sardār } Mufaghgham } (or Sipahdār). }	10,000	Do.
250	The Sarum-ul-Mulk and the Shujā'-us-Sultān.	1,500	Do.

The remarkable differences in the rate of these rentals are said to be justified by corresponding differences in the productiveness of the estates. The people are generally contented under the present régime, and the land-owners are busy in improving their properties by extending the irrigation canals.

The Khāns pay one Qrān per Man of their rents into a common fund which is maintained by them for the internal government of the **Bakhti-yāri** tribe.

Topography.—The following is a table of the principal inhabited places in the Rāmuz district and contains such information about them as it has been possible to collect.

RĀMUZ DISTRICT

Name.	Position.	Houses, inhabitants and arms.	REMARKS.
'A b d u l l a h (Qal'eh-i-Mir) قلعه مير عبدالله	1½ miles east-south-east of Rāmuz Town.	45 houses of Ahl-i-Rāmuz They have 25 rifles.	The village is also called Bunneh-i-Akhūnd اخوند and part of it bears the name of Bunneh-i-Qal'eh Pūlād پولاد. It is owned by the Muntazim-ud-Dauleh.
Ahmad (Bun- neh-i-Mulla) بنه ملا احمد	2 miles or less to the south-east of Rāmuz Town.	15 houses of Ahl-i-Rāmuz, with 10 rifles.	The property of the Muntazim-ud-Dauleh.
'Ali K h ā n (Bunneh-i-Qaid) بنه قائد علي خان	Adjoins the last.	20 houses.	Belongs to Arsalān Khān, Hasan Khān and the heirs of the late Sardār Mufaghgham (or Sipahdār).
Bāsaidi باسيدي	About 4 miles south-south-east of Rāmuz Town, on the further side of the Rāmuz river.	50 houses chiefly of Ahl-i-Rāmuz, but a few of Bagdali and Bahmāi (Kūhgalu) Lurs. There are 25 rifles.	Water is from the Rāmuz river. The village is the property of the Shahāb-us-Saltaneh and the Mu'in Humāyūn.
Bāyamān بايمان	Between Qal'eh-i-Mir 'Abdullah and Dih Yūr, on the western side of the Rāmuz river.	20 houses of Saiyids and a few Ahl-i-Rāmuz. There are no rifles.	Pronounced Bāyamūn. The owner is the Muntazim-ud - Dauleh. There are a few date palms and a shrine known as the Imām-zādeh Hārūn.
Daur-i-Kal دور كل	About 1 mile from the right bank of the Rāmuz river a little below its exit from the hills, and about 5 miles east of Rāmuz Town.	40 mud houses of Bahmāi (Kūhgalu) Lurs.	Owned by the I'tizād-us-Sultān. There is a garden here and a caravansarai with a building having an upper storey.
Dūkubak دو کبهک	4 miles east of Dih Yūr; there is a small hill between with some Kunār trees.	30 houses, chiefly of Bahmāi (Kūhgalu) Lurs, but a few of Ahl-i-Rāmuz.	There are two mills owned by Saiyids and some trees and a garden. The place belongs to the Sarum-ul-Mulk and the Shujā'-us-Sultān.
Jaizān جيزان	33 miles south-south-east of Rāmuz Town, 34 miles north-west of Behbehān town and 1 mile from the right	Normally 125 houses chiefly of Kūhgalu Lurs of the Agha Jari, Bahmāi and Bair Ahmadī sections, but also partly of Arabs. At present	Pronounced Jaizūn. The lands of the village are irrigated: it is the property of the Shahāb-us-Saltaneh and the Mu'in Humāyūn. The Rāmuz District ends

Name.	Position.	Houses, inhabitants and arms.	REMARKS.
	bank of the Mārūn river. Elevation above the sea is 350 feet.	the village is reduced to $\frac{1}{2}$ of its usual dimensions, having been plundered by Kūhgalu Lurs at the instigation of the Shāikh of M u h a m m a r e h during a split in 1906 between two factions of the B a k h t i y ā r i Khāns. Some of the houses are of mud, the rest grass huts.	a few miles beyond Jaizān.
Jū Āsiyāb جو آسیاب	About $\frac{1}{2}$ a mile north of Rāmuz Town.	30 houses of Ahl-i-Rāmuz.	The property of the Muntazim-ud - Dauleh. There is a shrine of Imām Riza. A canal passes Jū Āsiyāb, running in the direction of Paigachi.
Kīneh کینه	1 mile south and slightly west of Rāmuz Town.	100 mud houses of Ahl-i-Rāmuz. They have about 65 rifles.	Half belongs to the Shahāb-us-Saltaneh and the Mu'in Humāyūn, and half to Arsalān Khān, Hasan Khān and the heirs of the late Sardār Mufaghgham (or Sipahdār). A large brick house here is nearly finished and a garden is being laid out.
Māl Qāidi مال قائدی	Near the left bank of the Rāmuz river, about $1\frac{1}{2}$ miles above Bāsaidi.	30 houses of Ahl-i-Rāmuz. There are 15 rifles.	The property of the Shāhāb-us-Saltaneh and the Mu'in Humāyūn.
Mamuhīyeh ماموئییه	On the left bank of the Gūpāl stream and 1 mile from the foot of the Gypsum Hills, 7 miles from Rāmuz Town on a Bearing of 308° from the west end of the same. There is a direct track from Mamuhīyeh to Rāmuz Town.	10 reed huts of Ahl-i-Rāmuz.	By Persians the name is pronounced Mamuhi or Mamuwī. The village belongs to the Muntazim-ud-Dauleh and is surrounded by cultivation which is irrigated partly from the Gūpāl stream. A dilapidated shrine adjoined by an enclosure containing 60 or 70 date palms and 1 or 2 Kunār trees stands $\frac{1}{4}$ of a mile from

RĀMUZ DISTRICT

Name.	Position.	Houses, inhabitants and arms.	REMARKS.
			Mamuhīyeh on the side towards Rāmuz Town, and the trees form a good landmark. On the west side are encampments of Al Khamīs of the section called Zubaid.
Mirbacheh میر بچه	About 11 miles west by south of Rāmuz Town, on a bearing of 265° from the west end of the same.	...	See article Mirbacheh.
Pāigachi پای گچی	About 2 miles north-north-east of Rāmuz Town, on bearings of 13° to 20° from the west end of the same.	65 houses and reed huts, partly of Bahmāi (Kūhgalu) Lurs, partly of Zarganeh, who are reckoned to the Chahārlang Bakhtiyāris, and partly of Ahl-i-Rāmuz. There are 15 rifles.	The Samsām-us-Saltaneh has large stables here. Water comes by canal from Saratāo.
Palīm پالیم	6 or 7 miles south-south-east of Rāmuz Town, to the east of the Rāmuz river.	75 houses, chiefly of Bagdali (Kūhgalu) Lurs, but partly also of Talāwari Bakhtiyāris and a few Ahl-i-Rāmuz. They have 25 rifles.	Just east of Palīm is a dry shingly ravine running down to the Mārūn river which is 6 miles to the southward. Palīm is owned by Aīsalān Khān, Hasan Khān and the heirs of the late Sardār Mufaghgham (or Si-pahdār).
Qumār قمار	1½ miles south of Rāmuz Town.	10 houses of Kūhgalu Lurs of the Bahmāi and Taibi sections and of Talāwari Bakhtiyāris.	Pronounced G u m ā r. The owners are Aīsalān Khān and Hasan Khān.
Qindaqi قندقی	A short distance to the west of Kimeh.	25 houses of Ahl-i-Rāmuz and of Zarganeh, who are reckoned to the Chahārlang Bakhtiyāris.	...
Rāhdār (Kurūhi) کره‌ی راه دار	Some miles beyond Mamuhīyeh, reckoning from Rāmuz Town.	Some houses of Shir 'Alī Bakhtiyāris and Arabs.	Owned by the Samsām-us-Saltaneh.

Name.	Position.	Houses, inhabitants and arms.	REMARKS.
Rāmuz Town رامز	About 48 miles almost due east of Nāsiri on the Kārūn.	...	See article Rāmuz Town.
Rustamābād رستم آباد	3 miles north-west of Sultānābād.	50 mud houses and grass huts of Kūhgalu Lurs of the Bagdali, Bahmāi and Bair Ahmadi sections and of Talāwari Bakhtiyāris. There are 20 rifles.	The owners are Arsalān Khān and Hasan Khān.
Sar-i-Chishmeh سرچشمه	About 4 miles north-west of Rāmuz Town, on a bearing of 315° from the west end of the same.	25 reed huts of Ahl-i-Rāmuz, with a few Arabs, apparently Al Khamis of the Zubaid section.	Owned by the Muntazim-ud-Dauleh. Near this place is a shrine named Ma'sūmeh-i-Khātūn, erected in honour of a woman.
Saratāo سرتار	About 3 miles east of Rāmuz Town in a straight line with Daur-i-Kal.	125 houses chiefly of Bahmāi (Kūhgalu) Lurs and 10 of Saiyids from Rāmuz Town. The main village is of mud huts, and is surrounded by small groups of reed huts, each group bearing a distinctive name	The property of the I'tizād-us-Sultān. There are a garden and canal. A shrine called Imām-zādeh 'Abbās is not far off.
Shaikh (Kūt-i-) کرت شیخ	4 or 5 miles from Mamuhīyeh on a bearing of 281° from that place and of 295° from Rāmuz Town.	Two mounds with Arab camps of reed huts at 1½ miles to the north-east of them.	...
Shaikh (Qal'eh-i-) قلعه شیخ	12 miles south by east of Rāmuz Town, in the angle between the Rāmuz and Mārūn rivers at their junction.	100 houses chiefly of an Arab tribe called Mir. There are about 35 rifles.	Arsalān Khān and Hasan Khān are the proprietors. Some buffaloes are kept. A fort belonging to the place stands on the opposite or right bank of the Rāmuz river.
Sultānābād سلطان آباد	18 miles south-south-east of Rāmuz Town, 1 mile from the right bank of the Mārūn river.	55 houses, chiefly of Shīr 'Alī Bakhtiyāris, but partly of mixed Lurs, and partly of Al Khamis of the Bani Rashaid section.	The village belongs to Arsalān Khān and Hasan Khān, one of whom has a large house here. A small saline stream runs into the Mārūn river between this village and Rustamābād.

Name.	Position.	Houses, inhabitants and arms.	REMARKS.
Tughali تغلي	Near Kimeh.	20 huts of Āl Khāmis of the Rizaij-as-Sultān section. They have 10 rifles.	The owners are Arsalān Khān and Hasan Khān. Water is from the Zar-nini.
Yūr (Dih) ده يور	5 miles east-south-east of Rāmuz Town.	80 mud houses chiefly of Saiyids, but there are some Bahmāi (Kūhgalā) Lurs. Rifles are few, if any.	There are fruit gargens here and about 1,000 date palms: also a shrine called Saiyid Husain Zāhidān. The proprietor of the village is the Sarum-ul-Mulk.
Zarnini زرني	4 to 5 miles from Rāmuz Town, south of the road to Mīrbācheh	50 huts of Āl Khāmis of the Mansūr and Rizaij-as-Sufur sections, forming 3 small Bunnebs or hamlets.	Or Zarini زرني . This settlement is situated on the lands of the Muntazim-ud-Daulah and the late Sardar Mufaghgham (or Sipahdār) but some land belonging to the I'tizād-us-Saltaneh approaches it very nearly.

These villages are all agricultural. In the Persian villages the livestock, consisting of cattle, sheep and goats, are not in excess of the requirements of the villagers; but the Arab settlers are believed to possess a considerable surplus of sheep.

RĀMUZ رامز TOWN

Also called Rām Hurmuz رام هرمز and Sūq Rām Hurmuz سوق رام هرمز, is the chief town of the district similarly named. It stands 2 or 3 miles from the right bank of the Rāmuz river about 12 miles above its junction with the Mārūn river and is situated about 48 miles almost due east of Nāsiri. The hills of the Bakhtiyāri country begin about 2 or 3 miles north of the place. Rāmuz is a thriving town and consists of about 600 houses; most of these are of mud, but a few are of brick and plaster, the latter being the property of the Bakhtiyāri Khāns, who reside at Rāmuz in winter. The population is about 3,000 souls and consists entirely of a class of mixed origin who are described as Aḥl-i-Rāmuz. There are about 100 indifferently supplied shops, partly collected in a vaulted bazaar 100 yards in length and partly scattered through the town; there are also two water mills. Wood,

fuel, and charcoal are cheap. Several good gardens already exist on the south side of the town, and others are being laid out on the north side. The trees are dates, oranges, pomegranates, figs, lemons, and vines. Irrigation is from a canal which takes out of the Rāmuz river near its exit from the hills and about 5 miles to the east of Rāmuz; the water is fresh and good and is used for drinking. There are also wells, said to be about 50 feet deep, but they are little used. Rāmuz town is the chief centre of trade in the district, and here the produce of the adjacent hills finds a market. Messrs. Lynch Brothers have an agency at Rāmuz in charge of a native. There is a Persian Government telegraph to Nāsiri on the one side and to Behbehān on the other; but there is no post office. The town appears at one time to have covered an area much greater than that which it at present occupies; it possesses two shrines; one, Haft Tanān هفت تنان, in the north-east corner of the town among some date palms; the other, 'Alamdār علمدار, of a tapering shape, north of the centre of the town in the outskirts.

Rāmuz in the 10th century A. D. was a prosperous place, famous for its raw silk. There were excellent markets and a fine Jāmi' mosque built by the Buyids; also a celebrated library. The name Rām Hurmuz, received from King Hurmuz, grandson of Ardashīr Bābgān, was already in the 14th century A. D. generally shortened to Rāmuz.*

A river in Persian Makrān which comes down by Bint in the Gail district and reaches the coast by two mouths 9 miles apart, of which the western, Khor Rāpch, is 92 miles east by south of New Jāshk, and the eastern and more important, Khor Gālag, is 78 miles west by north of Chahbār Town. Both estuaries have shallow bars with deep water inside, and on each is situated a small village having the same name as the Khor; neither place however is much frequented except by fishing boats.† Khor Rāpch is the more considerable on account of a large tidal backwater, and it could be used by small vessels if it were buoyed. The coast on both sides of the river is low and sandy and full of creeks and backwaters. At about 12 miles from the coast the Rāpch river is crossed by the land telegraph line between New Jāshk and Gwādar, its width from bank to bank being at this point 612 yards. On the east bank is a telephone hut. This spot is chiefly memorable as the

RĀPCH

راپچ

* *Vide* Le Strange.

† For Khor Rāpch see Admiralty plan No. 145.

scene of the cruel murder by Kārwānis on the 2nd December 1897 of Mr. E. Graves, Telegraph Superintendent. The country on both banks of the river from near Balak on the east to the Kāshi stream on the west, at a distance of 10 to 25 miles from the sea, forms the district of **Kārwān**, which is described in a separate article. The Rāpch river, when in flood, inundates the country on both sides of it. The usual ford is at the telegraph crossing, but a better one exists $1\frac{1}{2}$ miles further down, while the last ford to become impassable in floods is 3 miles further up.

**RASHĀ-
IDAH**
رشاده

Singular Rashīdi رشیدی. An inferior Bedouin tribe found in **Kuwait** territory, in the fixed villages of Wādi-al-Miyāh and in other parts of the Sanjāq of **Hasa**. In some respects they resemble the 'Awāzim; they appear to be of **Hataim** extraction; and they are clients or dependents of the **Mutair**. Their fighting strength and numbers are about the same as those of the 'Awāzim. The Rashāidah in **Hasa** breed horses and camels and take menial service under various Shaikhs.

RĀSIB
(BANI)
بنی راسب

Singular Rāsibi راسبی. A tribe of the **Ja'alān** district of the 'Omān Sultanate, where they possess the one large village of **Wāfi**. They are said to be of Nizāri descent and in politics are Ghāfirīyah; but although, according to tradition, they were the first tribe in 'Omān to embrace the national Ibādhi form of Muhammadanism, they are now bigoted Wahhābis, having been converted during the Najdi invasions at the beginning of the 19th century. They have an old feud with the Bani Bū **Hasan** and amicable relations with the Bani Bū 'Ali and the **Hishm**. They intermarry chiefly with the Bani Bū 'Ali and in conjunction with the **Hishm** are able to close the route from **Sūr** into **Sharqīyah**. At present they are at feud with the **Hajriyīn**. Their number is reckoned at 1,500 souls. Their principal sections are the Aulād Fāris ارلاد فارس, Marāziqah مزارقه and Aulād Rabi' ارلاد ربیع. The Bani Rāsib are better off than most of the tribes of 'Omān. Their chiefs are Sa'ūd-bin-Sulaimān and Nāsir, his brother, who reside at **Wāfi**.

An important township or oasis of **Qasim**, about 40 to 45 miles south-west of **Buraidah** and perhaps 10 miles south-south-west of **Khabrah**, situated on one bank (most probably the southern) * of **Wādi-ar-Rummaḥ**; it is the last place of importance on this side of **Qasim**, and immediately beyond it begins a granitic and basaltic region which stretches to **Makkah**. The name **Rass** means "place of pits for watering." **Rass** is described as consisting of 3 quarters lying north and south; the first and largest, **Ruwaïdhah** روضة, is a walled town †; the second, **Raḥī'ah** رفيع, (or perhaps **Rass** proper), is a village with a high watch tower rising above its palms; the third, **Shinānah** شنانة, is the smallest but is sometimes accounted a separate village.‡ The total population of **Rass** is about 3,500 souls and is regarded as belonging to the 'Anizah, 'Ataibah and other tribes. The oasis is girdled, except on the east, by date groves§ and orchards and possesses much arable land, the last lying in the bed of **Wādi-ar-Rummaḥ**; water is good and abundant at 6 to 7 fathoms below the surface. Several outlying granges also, where corn is grown, are associated with **Rass**. **Rass** lies on the route between **Kuwait** and **Makkah** and is consequently in the path of many caravans; supplies are plentiful and many of the inhabitants live by the carrying trade. The place is usually subordinate to the Amīr of **Buraidah**; the local Shaikh is said to be one of the 'Ataibah.

RASS

رَس

A considerable village with several dependencies in the **Aflāj** district of **Najd**, where it lies about 3 miles south of **Kharfah** and 10 miles north

RAUDHAH

روضه

* This is doubtful. See Doughty's index *sub* Jarada, but also Huber's map and our article on **Najd**, Route II. Two recent and entirely independent reports concur in placing **Rass** south of **Wādi-ar-Rummaḥ**.

† According to a recent report, however, **Ruwaïdhah** is no less than 10 miles north-west by west of "Rass" and is separated from it by **Wādi-ar-Rummaḥ**.

‡ According to one report **Shinānah** lies 5 miles south-west of the centre of **Rass**; according to another it is $1\frac{1}{2}$ miles to the north-west and nearer to **Wādi-ar-Rummaḥ**. Both reports agree that it is south of **Wādi-ar-Rummaḥ**. It appears to have been unoccupied since the fighting in the neighbourhood in 1904 between **Ibn Sa'ūd** on the one side and **Ibn Rashīd** and the Turks on the other, and the cultivators are said to live at present in **Rass** proper.

§ The major portion of these are now said to have been destroyed by **Ibn Rashīd** in the recent war, before his defeat in 1904.

by west of Badi'. Raudhah has about 1,200 inhabitants belonging to these tribes :—

Tribe.	Section.	Houses.
'Anizah	Ijdaimāt	10
Dawāsir	Huqbān	50
Do.	Mubārak (‘Ammār)	100
Fadhūl	Mughairah	20
Khadhīr (Bani)	...	50

The date palms number about 5,000, and there are citrons and the other fruits usual in Najd except peaches. Lucerne and melons are produced, and the ordinary livestock are found but not horses. The water in wells is at about 7 fathoms. The present Amīr or headman of Raudhah is Ghusan-bin-Mashnān.

The table below shows the principal quarters of Raudhah and other points of interest connected with it :—

Name.	Position.	Nature.	REMARKS.
Bakhāit بخايت	To the south-west of Sughu.	An outlying Qasr, but forms part of Raudhah proper.	The inhabitants are a few Bani Khadhīr.
Jahaishah جهيشه	To the north-east of Raudhah proper.	A tract of cultivated land with a Qasr.	The Qasr is inhabited by cultivators from Saih, but only in the seasons of agriculture. Water is at 5 fathoms and there are no dates.
Mafaraji مفرجي	A short distance to the west of Sughu.	An outlying Qasr.	The only inhabitants are a few caretakers.
Mahaqaniyah (spelling uncertain)	In the direction of Kharfah, <i>i. e.</i> , north.	Do.	Sometimes reckoned to Kharfah.
Mazyadi مزدي	Not far to the south-west of Sughu.	Do.	The occupants are Ijdaimāt 'Anizah.
Mithna مثنى	About midway between Raudhah and Kharfah.	A distinct village, but administered from Raudhah. There are about 60 houses,	Mithna boasts 1,500 date palms and the usual fruits; lucerne, melons and cereals

Name.	Position.	Nature.	REMARKS.
		<i>viz.</i> , 40 of Bani Khadhīr and 20 of Mughairah, a shaikhly section of the Fadhūl.	are also grown. Water is at 7 fathoms in wells. There are no horses, but ordinary livestock of other kinds are kept.
Naqāil نقائل	To the south-east of Sughu.	An enclosure and two date groves.	The owners are Bani Khadhīr.
Riqāiyyah ريقيه	To the north of Sughu.	A quarter of Raudhah proper.	The people are Bani Khadhīr.
Rumaiyyah رميه	On the side towards Saih, i.e., north-east.	Arable lands without permanent dwellings.	The cultivators are Bani Khadhīr of the Qāsim section belonging to Saih. Water is at 5 fathoms. There are no dates.
Sa'idiyyah سعيديه	Do.	Cultivated lands with enclosures, which are occupied in winter and spring and deserted in summer.	The cultivators are from Saih. There are no date trees. Water is at 5 fathoms.
Sughu مغور	In the centre of Raudhah.	This is the principal quarter of Raudhah.	The Amīr of Raudhah has his residence in Sughu.
Zara'aniyyah زرعنيه	Near to Rumaiyyah.	A stretch of arable land.	This ground had been allowed to fall out of tillage, but has recently been cultivated again by people from Saih.

In name a Qadha of the Karbala Sanjāq of the Baghdad Wilāyat in Turkish 'Irāq; in practice rather a Muqāta'ah of the Karbala Qadha. Razāzah is really a small estate situated on the north-western bank of the Rashdiyyah branch of the Husainiyyah canal, about 12 miles south-west of the town of Karbala: on the south side of it is the swamp known as Hor Abu Dibis, fed by the water of the canal. Originally the property of the Turkish Government, Razāzah was, as a measure of policy, conferred by the Porte as a free grant on Fahad Baig-bin-'Abdul

RAZĀZAH

زازة

Muhsin, a leading Shaikh of the 'Anizah tribe, and about 1875 was constituted a Qadha of the third class, the Shaikh being at the same time appointed Qāim-Maqām. At a later period Fahad Baig, while allowed to retain the ownership of the estate, was deprived of the official post of Qāim-lMaqām in favour of his cousin Fahad-bin-Daghaiyin, by whom it is now held. The emoluments of the Qāim-Maqāmship consist in monthly allowance of $12\frac{1}{2}$ Līrahs and one-fourth of the net amount of the cattle tax collected from the Arabs under his authority. Both the owner and the so-called governor of Razāzah lead a wandering life in the desert with their tribe; the former is represented locally by a negro agent and has a small mud fort there, in which he used at one time to reside and which is now used as a granary. The ordinary inhabitants of the place live in huts and number about 750 souls. The value of the Government share ($\frac{1}{3}$) of the crops of Razāzah is estimated at 500 Līrahs per annum.

**RIFĀ'-AL-
GHARBI**
رفاع الغربي

Or Rifā'-al-Qibli رفاع القبلي. A village situated on the bleak, stony plateau of Bahrain Island, $1\frac{1}{4}$ miles west-north-west of Rifā'-ash-Sharqi and overlooking the great central depression of the island from the north. It consists of about 40 reed huts and one masonry house, the latter inhabited by Khalifah-bin-Ahmad, a member of the ruling family; the village however is in the jurisdiction of Shaikh Khālid, brother of the ruling Shaikh of Bahrain. The people are Māliki Sunnis, chiefly of the 'Utūb tribe, but there are 3 houses of Kibisah, 4 of Na'im and 3 of natives of Hasa. Most of them are engaged in the sale of drinking water at Manāmah, whither they convey it on camels. The well,* Umm Ghuwaifah, in the water of which they traffic, is situated on the high plateau and is considered by natives to be the best in the island: it is probably however not so pure, being practically in the village, as that of the Hanaini wells belonging to Rifā'-ash-Sharqi. There are no dates or other trees or cultivation here. Animals include 8 horses, 35 donkeys and 7 cattle. This place and Rifā'-ash-Sharqi are the sanitarium of Bahrain.

* An analysis of water from this well will be found in Lieutenant Somerville's report on Khor-al-Qalai'ah, printed by the Foreign Department of the Government of India, Simla, July 1905.

A large village of fortified aspect, with several watch towers, overlooking the central depression of **Bahrain** Island at its north-eastern corner: it is 7 miles south of **Manāmah** fort and occupies a dreary and barren site. It contains about 300 mud houses and two large masonry houses, one of which is occupied by Shaikh Khālīd-bin-'Alī, brother of the ruling Shaikh of **Bahrain**, and the other by Shaikh Sabāh-bin-Hamūd, the oldest member alive of the ruling family. In the middle of the village is the fine well of 'Ain Khālīd عین خالد, in which the water stands at 20 fathoms below the ground level. Close to the village, beneath the cliffs that enclose the central depression, are the wells of Hanaini. The inhabitants of Rifa'-ash-Sharqi are Maliki Sunnis, and may be classified as follows: **Utūb**, 170 houses; natives of **Hasa**, 60 houses; free negroes, 20 houses; and slaves living apart from their masters, 50 houses. The place is in the jurisdiction of Shaikh Khālīd. Most of those who are not members of the ruling family live by purveying drinking water at **Manāmah**. Except a few dates near the Hanaini well no vegetation is visible here. Animals however include 16 horses, 85 donkeys and 20 cattle. **Rifa'-al-Gharbi** and this village are the natural sanitarium of **Bahrain**.

RIFA'-ASH-
SHARQI
رفاع الشرقي

The port and chief town of the **Persian Coast** district of **Hayāt Dāvud**; it is situated on the coast 31 miles north-north-west of **Būshehr** Town and 156 miles due east of **Kuwait**.

RĪG
ریگ

Situation and character.—**Rīg** stands upon a low sandy coast which runs north and south; there is a creek at the town fronted by two sandy islets or banks inside which native boats lie aground at low water. On the north and south the town is adjoined by cultivated lands and on the east, at about 2 miles distance, is a chain of low sand-hills which screen it from the view of the traveller as he approaches on that side. The only defensive work is the loopholed, semi-fortified residence of the Khān, built of stones and mud. The smaller houses are built of sundried brick; in the construction of those of a better class stone from the **Būshehr** Peninsula and cement from **Khārag** Island are employed; but the Khān, fearing the cupidity of the Persian Government, quietly does his best to prevent the improvement of the town. **Rīg** possesses a few date trees. There are two unimportant shrines. The place is said to be very ancient

Population.—The inhabitants number about 2,500 souls: they are a mongrel breed in whom Arab and Lur blood predominate. Persian modified by the Lur dialect is the language spoken. The people are cultivators, boatmen, sailors and traders; they are reputed peaceable and not fanatical, but there are about 3 Martini rifles to every 5 houses. The inhabitants of Rīg are Shī'ah Muhammadans, but traditions survive of a time when some of them were Gabrs.

Trade and supplies.—Rīg is a fairly prosperous port, dealing principally with Būshehr and Kuwait, and serving the considerable district of Hayāt Dāvud, and part of the district of Shabānkāreh. The bazaar contains about 50 shops, and trade has increased during the last few years; the monthly imports are said now to average 100 packages or bags of sugar, 5 cases of tea, 50 bags of Indian rice, 100 cases of kerosine oil and 50 bales of Manchester prints, all from Būshehr. There is also a considerable importation of camels from Kuwait. Exports are wheat, barley, gum, wool and cattle, all to Būshehr except the wheat of which the bulk is sent to Kuwait, Bahrain and Masqat. The Persian Qrān is the basis of the currency, but rupees and dollars also circulate. The standards of weight are those of the Hayāt Dāvud district. The unit of length is a Gaz of 38½ inches.

Resources and communications.—Water is from wells, and some wheat, barley and straw are locally obtainable. About 50 horses, 100 camels and 150 donkeys are owned in the town, also 100 cattle and 600 sheep and goats, and there are 8 Būms of various sizes besides 10 Māshuwahs and about 15 fishing boats. A Persian post office was opened here 4 years, and a telegraph office about 1½ years ago (1905); but very little use is made of the latter, which is intermediate between Burāzjān and Dilam on the Burāzjān-Ahwāz branch line. There is frequent communication with Būshehr by sailing-boat.

Administration.—Rīg is the residence of the hereditary Khān and governor of the Hayāt Dāvud district. The Imperial Persian Customs established a post here in 1903.

RIND رند TRIBE

A tribe of Makrān who claim to be of Arab origin and to have come from Aleppo, but are to all intents and purposes Balūchis. Their headquarters are at Mand مند, about 80 miles north of Gwādar and a short

distance east of the Persian frontier, but a few are found scattered through the districts of Persian **Makrān**. Their fighting strength is estimated at 1,500 men. The majority of the Rinds ordinarily follow peaceful pursuits, but the headmen exercise little influence over individuals, and the tribe is consequently prone to misbehaviour and difficult to control. The Rinds hardly fall within the scope of this Gazetteer but for their connection with **Gwādar**, in the neighbourhood of which they have sometimes given trouble by raiding. In recent years, however, they have conducted themselves peaceably and have taken to cultivation, of which their country, which is open, is not incapable.

A group of wells situated within the limits of the **Bātin**, apparently in the bed of a tributary from the south-east at or near the point where it joins the **Bātin**. **Riqa'i** lies about 105 miles west by south in a direct line from **Kuwait** Town and may be regarded as marking the **Kuwait** frontier in this direction; it is the usual third halting place on the route from **Kuwait** to **Qasim** and lies 61 miles north-east of **Hafar**. At a short distance from **Riqa'i**, on the side towards **Kuwait**, a torrent bed (which is perhaps identical with that containing the **Riqa'i** wells) drops in its descent to the **Bātin** over a ledge of limestone rock about 50 feet wide and 10 feet high. The wells of **Riqa'i** are dotted about in the middle of the hollow which contains them and are connected by subterranean galleries. In January 1906 they were found empty except one, named **Umm Khurjin** **أم خرجين**, which descended vertically for about 7 feet and then divided into two pockets which continued downwards, obliquely and in opposite directions, for a few feet further; this well yielded half a skin of water. It is said however that, should a full flood occur in spring, water may be obtained at **Riqa'i** throughout the whole following summer.

RIQA'I
رقي

A small valley at the west end of the **Masqat** District of the 'Omān Sultanate; it comes down from the Eastern **Hajar** and reaches the sea four miles south-east of **Hail Āl 'Umar** in **Bātinah**. Its course for some

RISAIL
(**WĀDI**)
رادي رسيل

* From a report by Captain S. G. Knox, the first and as yet the only European to visit **Riqa'i**.

six miles below its source at Najd Bidbid is sinuous ; it then runs in a generally north-north-east direction, but making a slight curve to the west, and passes the following places :—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Marairāt مريرات	12 miles due south of Hail Al 'Umair.	Left.	2 or 3 houses of Siyābiyin.	There are 20 sheep and goats and 100 date palms, and lucerne is cultivated.
Jafnain جفين	3 miles below Marairāt.	Do.	10 houses of Siyābiyin.	Watered by a Falaj. Lucerne is grown and there are 200 dates ; animals are 4 donkeys and 40 sheep and goats.
Risail رسيل	2 miles below Jafnain.	Right.	10 houses of Siyābiyin.	There is cultivation of lucerne and indigo, irrigated from a Falaj. Date palms number 200 ; animals are 6 donkeys, 4 cattle and 100 sheep and goats.
Mawalikh مزالخ	7 miles below Risail, on the sea.	Do.	40 houses of Qawāsim.	Lucerne is grown and there are 800 date palms. Livestock are 10 camels, 6 donkeys, 20 cattle and 200 sheep and goats.

The settled population of the valley is thus about 300 souls.

There is water in the valley, but the flow is not constant. At Risail the Wādi receives a tributary called Wādi Jaba جب which comes down from the west end of Wādi Bōshar.

RIYĀDH

رياض

The capital of the Wahhābi dominions and the principal town of the 'Aridh district in Southern Najd : it is about 195 miles south-east of 'Anaizah in Qasim and the same west-south-west of Hofūf in Hasa.

The name Riyādh is the plural of Raudhah, meaning not only a garden but any moist hollow in which natural vegetation grows.

Riyādh stands about 2 miles from the left bank of Wādi **Hanifah** upon a plateau with higher ground to the northward. The town is walled and has 6 gates, and in the midst of it is the fortified palace of Ibn Sa'ūd. There are about 20 mosques, of which 3 are recognised as Jāmi's. Sundried brick is the only building material. In the suburbs, especially on the south and west sides, are many cultivated enclosures and very extensive date groves. Neither the town itself nor its surroundings are in the slightest degree picturesque. *

The population of Riyādh amounts to about 8,000 souls; the majority are said to be of 'Anizah descent, but some are Bani Tamīm of a section called Wahūb, and there are also many Bani Khadhīr and slaves.

Drinking water is obtained from wells in the town and its environs, which are from 40 to 50 feet deep; and the date plantations are said to be irrigated entirely from this source. Wādi **Hanifah** also, after good spring rains, contains flowing water for some months.

Trade is mostly with **Hasa**, whence the bulk of the imports is derived; the remainder are from **Kuwait** and Hijāz in about equal proportions. Coffee mortars and pestles are manufactured at **Riyādh** from local marble.

The Wahhābi ruler maintains a small standing force in Riyādh; the defence of the capital however rests chiefly with the citizens, who are said to be well armed with Martini rifles. There are half a dozen muzzle-loading guns belonging to Ibn Sa'ūd, some of brass and some of iron, which are said to be in good condition.

Singular Riyāmi ريامي. A somewhat peculiar tribe of the 'Omān **RIYĀM** Sultanate, found chiefly in 'Omān Proper, but also in Jabal **Akhdhar** and **(BANI)** in the upper villages of some of the valleys in the seaward slopes of **بنی ريام** **Hajar**. In 'Omān Proper their settlements are Izki (450 houses), Kamah (20 houses), Karsha (20 houses), **Manah** (140 houses), Birkat-al-Mōz (250 houses), Muti (300 houses), **Nizwa** (500 houses), Tanūf (40 houses), and Zikait (15 houses); in Jabal **Akhdhar** they have **Sharaijah** (100 houses) and **Saiq** (60 houses); in Wādi Bani **Kharūs** they are found at **Misfah** (100 houses), and in Wādi **Mistāl** at **Hijār** (50 houses), and **Qorah** (40 houses). Those of **Saiq** belong to a section called **Jawāmid**

* For a plan of Riyādh, as it was 40 years ago, see Palgrave.

شرقيين , and those of Misfāh to a section called Sharaiqiyyīn. The 'Azūr عزر of Khashbat 'Azūr in the Baldān-al-Habūs division of the **Sharqiya** district are believed to be connected with the Bani Riyām.

The Bani Riyām are said to be of Yamani descent and are reputed to have been among the earliest Arab settlers in 'Omān; but they are now attached to the Ghāfiri political faction. In religion they are Ibādhis: none of them are Bedouins. They are a large tribe of perhaps 11,000 souls, well-to-do and peaceably inclined, but those of the hills do not bear a good reputation among the people of 'Omān generally, who regard them as irascible, slothful, immoral and wanting in hospitality; the prejudice against them may be partly due to their disregard of Muhammadan principles in drinking a wine which they themselves manufacture from home-grown grapes. The men, in the hills, are described as haggard and prematurely old, without the usual vivacity and robustness of mountaineers; the women go unveiled and are sometimes of a clear, ruddy complexion. The Tamīmah of the Bani Riyām is Hamyār-bin-Nāsir, who resides at Tanūf; his father Nāsir-bin-Sulaimān exercised much real authority over the tribe and unlike most other Tamīmahs was equally conspicuous in peace and in war.

RUBA'-AL-KHĀLI

ربع الخالي

This great desert of Southern Arabia skirts 'Omān along its entire western boundary, and most of the Bedouin tribes of inner 'Omān roam the fringe of it with their camels. The number of the wanderers is small, for the only water is that left in hollows after rain and some springs of brackish fluid which well up here and there. The soil on the side next 'Omān is said to be generally salty or nitrous. The oryx, wild ass and two species of gazelle are said to be found in most parts of this desert.

RŪD SHŪR

رود شر

A salt stream which rises in the coast range where it is called Tāvīseh, to the north-east of Rīg; it passes the villages of Khalīfeh, Samiyeh, Anjīru, Chāhrūsāhi and Bīdu and finds an independent outlet to the sea. Throughout the greater part of its length this watercourse forms the boundary between the district of Hayāt Dāvud and the district of Shabānkāreh. Its bed, where it is crossed by the route between Dih

Kuhneh and **Chāhrūsahī**, is about 150 yards wide, and in May is almost dry.

A small district of the **Persian Coast**, subordinate to the Governor of the **Gulf Ports**; it is wedged in between the district of **Hayāt Dāvud** on the north, the sea on the west and south, and the districts of **Angāli** and **Shabānkāreh** on the east.

RŪD-
HILLEH
رود حله
DISTRICT

Limits and physical characteristics.—The Rūd-hilleh district comprises only the banks of the river of the same name to a distance of 15 miles inland, together with the uncultivated mud-flats which extend from the river to the north shore of the **Būshehr** harbour: including the latter it measures about 15 miles in each direction. The coast of the district opposite **Būshehr Town** is swampy, but at its extreme southern point, called **Tahima** طحمة, there is a rocky patch; throughout its length the coast is only a few feet above high-water level. The district is flat and its only important feature is the **Rūd-hilleh River**. The winter is said to be colder than in **Būshehr**, while in summer the day-breezes are less scorching than those of **Angāli** and **Shabānkāreh** and the nights are fairly cool.

Population.—The inhabitants of the district number somewhat over 4,000 souls. The majority are Arabs who speak both Persian and Arabic and are Sunnis by religion. Some of them claim to be the descendants of **Ka'ab** immigrants from the **Fallāhīyeh** district in Southern 'Arabistān, and the remainder represent themselves as Bani **Hājir** and Bani **Tamīm** from the mainland of Arabia; both classes say their ancestors came to the country 150 years ago and that they were refugees from Turkish oppression (*sic*). The Bani **Tamīm** claim to have been the earlier settlers. The villages consist of huts and are generally defended by small towers.

Agriculture.—Wheat and barley are the ordinary staples; musk and water melons also grow; and there are dates, but not many. Cattle and sheep and goats are fairly numerous.

Trade.—Trade is insignificant. Exports are a little wool and some wheat, barley and melons, which go to **Būshehr**, **Muhammareh**, **Kuwait**, **Bahrain**, and **Lingeh**. Imports are piece-goods, rice, tea, coffee and

sugar from **Būshehr**. The Persian **Qrān** is the medium of exchange; the standards of weight are a **Man** of 8 lbs. 4 oz. English and a **Hāshim Man** of 16 ordinary **Mans** or 132 lbs. English. The **Gaz** or unit of length is here 40½ inches.

Communications and transport.—The **Rūd-hilleh** River is a considerable obstacle to movement, especially in summer. There is a ferry over it at **Mahmadi**, where it is crossed by a land-route from **Būshehr** to **Behbehān**.* The district can produce about 250 horses, 200 mules and 1,300 donkeys. The inhabitants own about a dozen cargo boats of small size by means of which they maintain communication with **Kuwait** and even **Basrah**.

Administration.—The district is subject to the general control of the Governor of the **Gulf Ports**, who at the present time also farms the collection of the revenue from the holders in **Tiyūl**, the **Fateh-ul-Mulk** and the **Sa'id-ul-Mulk**. About 60 years ago the district was leased to the **Khān** of **Angāli**, with whom it remained until its transfer by the farmer of the revenues, 6 years ago, to the **Khān** of **Hayāt Dāvud**; the latter now manages it through a brother of his own stationed at **Mahmadi**. Justice is dispensed as in the **Khān**'s own district of **Hayāt Dāvud**. The taxes are 60 to 80 **Qrāns** per **Gāu** of cultivation; also ⅓ of the produce of the date-palms or, in a bad year, 2 or 3 **Qrāns** in cash on account of each tree. The district is at present farmed for an annual sum of 3,500 **Tūmāns**. An official of the Persian Imperial Customs at **Mahmadi** is the only direct agent of the Persian Government in the district.

Topography.—The villages of **Rūd-hilleh**, with some details concerning them, are given in the table below:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Ahmadi (Khashm) خشم احمدی	On the right bank of the Rūd-hilleh River at its mouth.	100 houses of Bani Hājir and Bani Tamīm Arabs.	Wheat and barley are grown. There are 20 horses, 20 mules, 150 donkeys, 100 cattle and 200 sheep and goats, also 6 boats (small Māshu-wabs) and 2 fishing boats.
'Askari عسكري	On the left bank of the Rūd-hilleh River 12 miles from the sea.	60 houses of Arabs, said to be immigrants from Fallāhiye .	Wheat and barley and some dates are cultivated. There are 10 horses 10 mules, 80 donkeys, 50 cattle and 200 sheep and goats.

*See *Routes in Persia*, I, No. 21.

Name.	Position.	Houses and inhabitants.	REMARKS.
Farākeh فراک	On the left bank of the Rūd-hilleh River at its mouth.	80 houses of Bani Hājir and Bani Tamīm Arabs.	Wheat and barley are grown. There are 20 horses, 15 mules, 100 donkeys, 50 cattle and 200 sheep and goats, also 7 small Māshuwahs and 3 fishing boats.
Guvābin کوابین	On the right bank of the Rūd-hilleh River, 9 miles from its mouth.	50 houses of do.	There is cultivation of wheat and barley and the inhabitants have 20 horses, 20 mules, 100 donkeys, 40 cattle and 100 sheep and goats.
Hāj Hājī (Khashm) خشم حاج حاجي	Do. 5 miles from its mouth.	25 houses of do.	The crops are wheat and barley: there are 10 horses, 6 mules, 40 donkeys, 20 cattle and 100 sheep and goats.
Halqeh (Cham) چم حلقه	On the left bank of the Rūd-hilleh River, west of Muhrazi.	6 houses of do.	Ordinary cultivation. Animals are 11 horses, 6 mules, 40 donkeys, 20 cattle and 100 sheep and goats.
Hamūd (Khashm Shaikli) خشم شيخ حمود	Uncertain.	20 houses of do.	There are a few horses and donkeys. Wheat and barley are grown.
Karāband کراوند	On the left bank of the Rūd-hilleh River, 4 miles east of Askari.	120 houses of Bani Tamīm Arabs and Lurs in about equal proportions: the former speak both Arabic and Persian and are Sunnis, the latter speak Persian only and are Shī'ahs.	There are a few dates and wheat and barley are cultivated. Transport animals are 30 horses, 30 mules and 200 donkeys. There are two small shrines.
Majnū. مجنون	On the right bank of the Rūd-hilleh River, 1 mile west of Qal'eh Sirhān.	70 houses of Bani Hājir and Bani Tamīm Arabs.	Wheat and barley grow and there are 30 horses, 20 mules, 150 donkeys and 400 sheep.
Mahmadi مهدي	On the right bank of the Rūd-hilleh River, 10 miles from the sea.	...	See article Mahmadi.

Name.	Position.	Houses and inhabitants.	REMARKS.
Muhrazi مهرزي	2 miles west-south-west of 'Askari.	75 houses of Ka'ab Arabs, said to have come originally from Fallāhiyeh.	Wheat and barley are cultivated and some dates. There are 20 horses, 12 mules and 100 donkeys. Also called Muhammad Razāi محمد رزاي
Nāsiri ناصري	6 miles north-west of Ahmadi.	6 houses of Arabs from Khārag Island; they are Sunnis and speak both Persian and Arabic, also 2 or 3 houses of Lurs.	The inhabitants are fishermen only and have 6 small Māshuwahs.
Rustami رستمي	3 miles south-west of Muhrazi.	50 houses of Lurs and of Bani Hājir and Bani Tamīm Arabs; the Lurs, about $\frac{1}{2}$ are Shi'ahs, and the Arabs are Sunnis.	There is cultivation of wheat, and 20 horses, 16 mules and 60 donkeys are owned.
Sirhān (Qal'eh) قلعه سرحان	On the right bank of the Rūd-hilleh River opposite 'Askari.	40 houses, $\frac{2}{3}$ of Sunni Ka'ab Arabs from Fallāhiyeh, and $\frac{1}{3}$ of Shi'ah Persians from the Shabānkāreh district.	Wheat and barley are grown; there are a few horses, 20 mules, and 40 donkeys.
Sūkhteh (Qal'eh) قلعه سوحته	On the left bank of the Rūd-hilleh River $2\frac{1}{2}$ miles above 'Askari.	70 houses divided as at Qal'eh Sirhān.	There are 20 horses, 16 mules and 100 donkeys, and the usual wheat and barley are grown.

**RŪD-
HILLEH**
رود حله
RIVER

A river in Persia formed at about 25 miles inland from the coast of the Rūd-hilleh district by the junction at Durūgāh, near the meeting point of the Zira, Shabānkāreh and Dashtistān districts, of the Rūd Shīrīn or Shāpūr شاپور river with the Dāliki stream.* The Rūd Shīrīn comes from Shūlistān شولستان and the Mamasani ممسنی hills, passing Khisht† خشت immediately before it breaks through the last barrier of

* In mediæval times the whole Rūd-hilleh River appears to have been known as the Shāpūr: see Le Strange's *Lands of the Eastern Caliphate*.

† Consequently it is sometimes called the Khisht River.

hills and enters the maritime plain ; the waters of the Rūd Shīrīn, as the name betokens, are sweet and potable. The Dāliki stream rises in the hills far to the south-east of Dāliki ; but near that place, at its exit from the mountainous country, its course suddenly changes to south-west. The Dāliki stream differs from the Rūd Shīrīn in being brackish, at least below Dāliki. Neither of these streams is fordable in winter ; but when the water is low it is possible to march from Burāzjān to Sa'adābād and thence to Dih Kuhneh by fording both streams, which upon this route are each over 100 yards in width. The Rūd-hilleh, as the joint waters are called below the place of union, is described as a sluggish stream flowing in a firm bed between banks of considerable height : the depth is said to be about 20 feet on the average, but at the shallowest parts it varies from $2\frac{1}{2}$ or 3 feet in summer to 4 or 5 feet in winter. In floods the river sometimes rises as much as 20 feet and submerges its banks. There is a ford between the villages of 'Askari and Qal'eh Sirhān, the river being 100 yards wide at this place ; fords are said to exist also near Karāband and Mahmadi, and there is a ferry at the village of Mahmadi ; these places are all situated in the Rūd-hilleh district. The Rūd-hilleh stream divides the Shabānkāreh district on its right bank from the districts of Dashtistān and Angāli on its left ; and in its lower course it bisects longitudinally the fertile part of the district which is called, after it, Rūd-hilleh.

A large shallow bay in the coast of the Hasa Sanjāq ; it is situated in Biyādh between Qatīf Town and the port of 'Oqair, about 35 miles from the former and 26 miles from the latter ; and it divides Barr-adh-Dhahrān to the north of it from Barr-al-'Oqair to the south. The entrance, the north side of which is marked by Rās Buraīqat in Barr-adh-Dhahrān, is about 3 miles wide ; inland the bay expands and has a roughly circular shape and a diameter of 6 or 7 miles. Along the south side of the entrance stretches a line of sand hills called Tall-az-

RUHUM
(DŌHAT)*
رُحْمَة (حم)

* Captain F. B. Prideaux, Political Agent in Bahrain, has ascertained, by very careful inquiry, that several names in the neighbourhood of Dōhat Ruhum are misplaced in the present naval charts. Thus the real Dōhat Ruhum has been marked " Dūhat Thālūm " ; the name of " Kureya " has been transferred to Rās Buraīqat ; and Tall-az-Zabanāt figures as " Hamadiya ". These incorrect names are taken from places in Barr-al-'Oqair, the article on which may be consulted,

Zabanāt تَلّ الرّينات; and to the west of these again, at the south-western corner of the bay, is a detached sandy eminence known as Niqa-al-Mahāraf نقي السّحارف. Wells adjoining Dōhat Ruhum are mentioned in the articles on **Biyādh** (Division V) and **Barr-adh-Dhahrān**.

RUMAIH
(ĀL BŪ)
آل بر زميخ

A small tribe of non-Bedouin Arabs in **Bahrain**, all of whom are pearl divers. They have 80 houses at Jau, 20 at **Busaitīn** and 15 at **Muharraq Town**. In religion they are Māliki Sunnis.

RUMAI-
THAH
رميثه

A town or settlement in Turkish 'Irāq, now half deserted on account of the drying up of the reach of the **Euphrates** upon which it stands; it is situated upon both banks of the river above **Samāwah Town**, apparently less than half way from that place to **Diwāniyah**. The houses of the place are scattered about among gardens and plantations so that their number is difficult to estimate; but it is placed at 600, mostly low mud huts, of which a large proportion are now deserted. There is no bridge connecting the two parts of the town. The inhabitants of Rumaithah, whose number does not exceed 2,500 souls, are all Shi'ahs by religion, and with the exception of about 70 Persians they are all Arabs by race. Animals are kept, except camels; and the place possesses about 3,500 date palms. There are 180 shops, chiefly of cloth merchants, grocers and druggists; but of these 40 are now unoccupied. A few rough carpets manufactured by the surrounding tribe are obtainable. Rumaithah deals with both **Basrah** and **Baghdad** and in the days of its prosperity was a centre of commercial distribution serving a considerable area: after the date harvest a good deal of business is still transacted here with the Arabs of the neighbourhood. Manchester cottons and drugs and groceries are the chief imports, while the principal articles of export are barley, wheat, Idhrah, ghi, wool and hides: the annual value of the imports is estimated at about £T.12,000 and of the exports at about £T. 23,500. Rumaithah is in the Nāhiyah of Abu Juwārīr (also called the Nāhiyah of Rumaithah) in the Qadha of **Samāwah** and is the seat of the Mudīr. This official formerly had his residence in a stone fort on the left bank of the river near the end of the town, but he has changed his quarters.

The longest valley in all Arabia, it begins in the Harraṭ Khaibar حرة خيبر towards the western side of the peninsula and sweeps north-eastward; after bisecting the district of Qasīm and traversing the Dahānah it ends near Jabal Sanām in the neighbourhood of the Shatt-al-'Arab. In the successive stages of its course this great Wādi bears different names, and though really one valley it does not form, at the present time, a continuous waterway: the floods of the upper portion never, it is said, succeed in passing the Dahānah, and the lower end is blind and seems to lose itself in the gravelly plains to the north of Kuwait.

RUMMAH
(**WĀDI-AR-**)
وادي الرمة

Its place of origin, which is at the eastern foot of Jabal Abyadh, * a peak of Harraṭ Khaibar, lies about 35 miles west-south-west of Hayat and has an elevation of some 5,000 feet or more: Jabal Abyadh has itself an altitude of 6,000 † feet above the sea, and is therefore the highest known point in Najd. From its commencement to the point where it enters Qasīm near Rass, a distance of about 200 miles in a direct line, the Wādi is generally called Wādi Risha رشا and has an almost due easterly direction; here it runs through an uninhabited country, the banks are often of clay and gravel, and the bed is sometimes 3 miles across from cliff to cliff. On its downward way it receives several tributary Wādis, the first being Wādi Makhīt مخيط, which comes down on its left bank from the exceedingly barren and monotonous desert of Zarb in the Harrah, and the next Wādi Qahid قهيد at the head of which stands Thurghud, also on the left and from the Harrah. The third tributary, Mubhil مبهل, is likewise on the left, and between it and the last lies the wilderness of Kalankuwah. Then follow Wādi Rakūb on the right; Wādi Sha'abah, on the left, draining the Sha'abah district of Jabal Shammar and having the villages of Ghazālah and Mustajiddah not far from its left bank; Wādi Jadak on the right; Wādi-al-Miyah مياه or Wādi Jarir جرير, the greatest of all the tributaries, coming in from the right at a place called Hamaliyah; Wādi Thalabūt from the left, the outlet of the drainage of the country immediately east of Qasīm; finally Wādi Garīb on the right, after the twin hills of Abanāt, between which the main valley passes, have been left behind.

The next section is that situated in Qasīm, the true Wādi-ar-Rummaḥ, often called simply "Al-Wādi." At Rass where it enters

* Most of the names in this paragraph are from Huber, who has not given the Arabic equivalents of all; the rest are from Doughty.

† As calculated by Lieutenant F. Fraser Hunter from Huber's observations (see footnote to article Jabal Shammar).

Qasīm, its course turns to the north-east, a direction which it thereafter steadily pursues. In the sandy plain of **Qasīm** the bed of the **Wādi** is hardly discernible by an unpractised eye; it first passes the towns of **Rass** and **Khabrah**, and after them it leaves the **Qasīm** capitals of '**Anaizah** and **Buraidah** on its right and its left respectively. The arable lands of **Rass** lie in the **Wādi** bed; its palm groves are upon the high banks. Below the fields of **Rass** are those of **Khabrah** stretching for 5 miles down the hollow of the valley. Between '**Anaizah** and **Buraidah**, **Wādi-ar-Rummaḥ** is full of palm groves attaining a breadth of as much as a mile; the water here is only 5 to 10 feet below the surface, but it is brackish and fever is prevalent among the negroes who tend the plantations. These outlying plantations, which belong to '**Anaizah**, are ancient; but they are the first to suffer in time of war and old trees are consequently seldom found among them. A village here, called **Wādi**, is for the most part temporary and is at its full size only in the date harvest. In the centre of the bed is much good loam, but it cannot be tilled on account of the saltiness of the subsoil water; it bears only tamarisks and desert bushes, and in places the ground is covered with a white efflorescence. In leaving **Qasīm** **Wādi-ar-Rummaḥ** seems to take temporarily a more northward direction, for it is reported to pass between **Sarif** and **Rakaiyah**.

From **Qasīm** downwards the valley preserves its general north-easterly direction and perhaps bears the comprehensive name of **Bātin**; but some distinguish the portion lying in the **Dahānah** as **Wādi-al-Mustawī** رادي المستوي and call only the remainder **Bātin** or **Batain**. Of the section between **Qasīm** and the frontier of **Kuwait** little is known except that at **Thuwairāt** الثويرات, about 50 miles below '**Anaizah**, the valley is blocked by a great natural dam consisting of sand dunes; that it is a route of caravans from and to the north, and that it contains a few halting places with a little water, the most important politically being that of **Hafar**, about 160 miles west south-west of **Kuwait Town**.*

Except in time of flood **Wādi-ar-Rummaḥ** is dry. Great floods do not occur on the average more than twice or thrice in a century, and the **Wādi**, even when the water rises, can be crossed by camel riders except where the stream is confined. The last great flood was about 1838, when the waters pent up by the **Thuwairāt** dam washed back towards '**Anaizah** and formed a lake of about 200 square miles which remained

* Some of the other stages are described in the article on the **Kuwait** principality and, under Route II, in the article on **Najd**: see also the articles **Bātin**, **Hafar** and **Riqa'i**.

for two years and attracted many water-fowl not seen before, within the memory of man, in Central Arabia.

The following are places or features of interest connected with Wādi-ar-Rummah :—

Name.	Position.	REMARKS.
Abanāt ابنات	Some 50 miles west by south of 'Anaizah.	A mountain ridge running north and south, through a breach in the middle of which Wādi-ar-Rummah passes. The portion north of the Wādi is called Asmar اسمر, that south of it Ahmar احمر. In the latter lies a village of the Madhāribah Hataim which is approached through a narrow gorge.
Mislāwi مصلوي	Immediately east of Qasim.	A tract of country.
Qatan قطن	On the left bank of Wādi-ar-Rummah between Rass and Abanāt.	A solitary hill with very shallow wells of sweet water at which 'Ataibah Bedouins encamp.
Zighaihiyah (spelling uncertain)	Perhaps 40 miles below 'Anaizah.	A great depression with corn lands, flooded in the winter rains; salt is dug here for 'Anaizah.

In English formerly "Rostag." The meaning of the term Rustāq is ambiguous: in its wider sense the name embraces all Wādi Fara' in the Western Hajar district of the 'Omān Sultanate, from Hazam inclusive upwards, with its villages; in a narrower sense it denotes only the village and fort properly known as Qal'at Kasra قلعة كسرى. The full name of this last place is Qal'at Kasra Bin-Sharwān, and some educated Arabs suppose this to be a corruption of the name of the Persian King Anōsharvan or "Naushirwān." The fort is said to date from pre-Islamic times and is now in an extremely dilapidated condition. The village is the capital of the whole Fara' valley; it stands 800 feet above sea-level and consists of 400 houses of the Miyāyihah tribe. Livestock are 20 horses, 240 camels, 400 donkeys, 400 cattle and 1,000 sheep and goats. Crops are wheat, barley, millet, beans and lucerne. Date palms number about 12,000 and every kind of fruit grown in 'Omān

RUSTĀQ
رستاق

is found here. There are about 80 shops, forming a considerable bazaar, besides flour-mills driven by water which are somewhat of a rarity in 'Omān. Qal'at Kasra is the seat of Saiyid Sa'id-bin-Ibrāhīm-bin-Qais, a relation of the Sultān of 'Omān, and the fort is held in his name by a tribal garrison of 100 men of the **Miyāyihah**.

RUŪS-AL-JIBĀL*

رووس الجبال

The name of a mountainous district in the 'Omān Sultanate, forming the northern part of the great 'Omān Promontory: the name is practically a synonym for the country of the **Shihūh** tribe.

Limits.—The coast of Ruūs-al-Jibāl may be considered to begin at **Dibah** bay in the Gulf of 'Omān and to terminate, after running round Rās **Musandam**, at Rās Sha'am in the Persian Gulf. The inland boundary of Ruūs-al-Jibāl between **Dibah** and Rās Sha'am has not been determined; but the route which runs from **Dibah** by **Khatt** to Rās-al-**Khaimah** Town is regarded as the boundary between the country of the **Shihūh** on the north and that of the **Sharqiyin** and other tribes on the south. These are the boundaries of Ruūs-al-Jibāl in the political sense and define the scope of the present article, but geographically the **Shamailiyah** tract with its hills belongs to Ruūs-al-Jibāl.

Physical characteristics.—The whole district is a maze of barren mountains. On the east side these rise abruptly from the sea, and the east coast is accordingly precipitous throughout, the cliffs being frequently undercut at the water-level; where valleys come down from the hills, however, small sandy bays often occur. The northern portion of Ruūs-al-Jibāl is indented by numerous deep-water inlets, some of considerable extent, the largest being **Ghubbat Ghazirah** or Malcolm Inlet and **Khor-ash-Sham** or Elphinstone Inlet; their navigation is rendered difficult for sailing vessels by baffling winds, and only such native boats enter them as can be propelled by oars. On the western coast the hills, from the entrance of **Khor-ash-Sham** to Rās-ash-Sha'am, closely adjoin the sea. The mountains of Ruūs-al-Jibāl are almost entirely bare; but some scanty vegetation affording pasture for goats grows in the fissures of the rock, and there are date-groves in some of the valleys, especially where they debouch upon the coast. Wild animals

*Three views from the sea of Ruūs-al-Jibāl will be found in Chart No. 2373—2337A. For authorities, maps and charts, see footnote to article 'Omān Sultanate; *vide* also the Foreign Proceedings of the Government of India for March 1905, where a naval appreciation of particular places will be found.

(FROM A PHOTOGRAPH IN THE POSSESSION OF H. GABLER ESQ I. E T. D.)

are said to include the fox, jackal, and striped hyæna ; and Jayakar's wild goat is fairly common, especially in the hills near Līmah. The chief peaks in the district are that by Europeans called Fine Peak, 4,470 feet high, 8 miles south-west of **Khasab**; Jabal-al-Harīm حرم, by the **Shihūh** called Tūtūh توتوه, in the centre of the peninsula 15 miles south of **Khasab**, 6,750 feet high with a small table-top ; and Jabal Qa'awah قعوه, 8 miles north-north-west of **Dibah**, height 5,800 feet. There are also 2 peaks, each 3,000 feet high, which overlook Khor-ash-Sham and are called Jabal-ash-Sham and Jabalash Sibi or, by the **Shihūh**, Jabal Sa'adūn and Qarn Ghubār. A peak adjoining the Fakkal-Asad strait is named Jabal Qafa'an قفان.

Inhabitants.— The fixed population of Ruūs-al-Jibāl are entirely of the **Shihūh** tribe, with the exception of some **Dhahūriyīn** who inhabit the villages of Shābūs and Shīсах and most of the villages in **Ghubbat Ghazīrah** and Khor-ash-Sham ; from the topographical table below it will be seen that the number of the settled inhabitants of the coast, where alone such are found is about 13,750 souls. In the interior of the district the people are all Bedouins of the **Shihūh** tribe. The mode of life of both sections of the community is described in the article **Shihūh**.

Topography.— The following alphabetical table contains particulars of the principal places on the coast of the district ; some others in the interior are mentioned in the article on the **Shihūh** tribe :—

Name.	Position.	Nature.	REMARKS.
'Aqabah عقبه	On the promontory which forms the eastern side of Līmah bay.	Village of 48 houses.	The people are Shihūh fishermen, of the Bani Hadiyah section. They own 20 fishing Batils.
'Ali (Ghubb) غيب علي	On the west coast, about midway between Kumzār and Khasab .	Inlet with a village of about 150 houses of stone and mud situated on a sandy beach at the foot of the inlet.	The inlet runs inland, nearly straight, for 4 miles with a breadth of about 1 mile. The people of the village are Shihūh of the Bani Shatair section, fishermen and owners of some dates at Khasab . There is some good water ; but no dates grow. 20 small Batils are owned here.

Name.	Position.	Nature.	REMARKS.
Bai'ah بيعه	See article Bai'ah.
Bakhah بخه	On the west coast, 8 miles west-south-west of Khasab.	Village of 200 houses situated in a shallow sandy bay which is open to northward. Water is from wells 30 to 60 feet deep in a date-plantation behind the village. There is a square fort on a hillock $\frac{1}{2}$ a mile east of the village.	Population is $\frac{1}{4}$ Shi-hūh of the Bani Hadiyah section and $\frac{3}{4}$ Persians, living by date-cultivation and fishing. They have 7 sea-going vessels running to Bātinah, Trucial 'Oman and the ports of Fārs, also 30 fishing boats.
Chī : (Abu) ابو چدر	2 miles west of Gūn island and separated from the mainland by the Mukhālif ^{مخالف} strait, which is $\frac{1}{4}$ mile broad with 35 fathoms of water in it and a high rock in mid-channel.	Island 1,200 yards long from north to south, having cliffs all round and a peaked hill 400 feet high.	In charts called "Jazīrat Abu Sir." (A view of a bay near the Mukhālif strait is given in Burchardt's <i>Ost-Arabien, etc.</i>)
Dorsinni دورسنی	A the extremity of the peninsula at Ras Qabr Hindī.	A fishing station with one house owned by the fishermen who frequent it.	Visited by Shihūh of the Bani Shatair section from Kum-zār.
Elphinstone Inlet	See article Khor-ash-Sham.
Fadhghah فضه	On the west coast 2, miles south-west of Bakhah.	Village of 40 mud and stone houses with a few date-trees, situated on a sandy beach with deep water close to it.	People are Shihūh of the Bani Hadiyah section, subsisting by fishing and cultivation of dates. They have only 3 or 4 fishing boats.
Faiyārīn (Umm-al) أم الفيارين	On the east coast, 7 miles north-east of the middle of the entrance of G h u b b a t Ghazirah.	Rocky islet 360 feet high and about $\frac{1}{2}$ of a mile long.	Nil.
Fanakhah فنه	On the east coast, 2 miles east of Khasab, within the entrance of Khor-ash-Sham.	Village of 5 or 6 mud and stone houses.	People are Shihūh of the Bani Hadiyah section. They own 2 or 3 fishing boats.

Name.	Position.	Nature.	REMARKS.
Film فلم	At the bottom of the outermost large cove which runs out of G h u b b a t Ghazirah on its north side.	Village of 60 mud-built houses.	Inhabitants are Dha-hūriyīn , who fish and own some dates at Dibah . They possess 5 large Sambūks and 30 small fishing Batils.
Ghamdhah غمضة	On the west coast, $3\frac{1}{2}$ miles south-west of Bakhah.	Village of 35 houses with a few date-trees, situated on a sandy beach.	People are Shihūh of the Bani Hadiyah section who live by dates and fishing. They own 5 or 6 fishing boats.
Ghanam (Jazīrat-al-) جزيرة الغنم	See article Ghanam island.
Ghassah غصه	On the west coast, about midway between the entrances of Ghubb 'Alī and Khor-ash-Sham.	Village of 30 houses, situated on a sandy beach.	This place is only occupied in winter for fishing purposes. The ownership is in dispute between the Bani Shatair and the Bani Hadiyah sections of the Shihūh , who have referred the question to the arbitration of the Sultān of 'Omān.
G h u b b a t Ghazirah عُبة غزيرة	See article Ghubbat Ghazirah .
Gharam غرم	On the west coast, opposite the south end of Ghanam island.	Village of 20 huts standing on the hills in a little cove of the same name: it has some dates.	People are Shihūh of the Bani Shatair section, Kumāzirah subsection. They have 4 fishing boats.
Gūn (island) گون	3 miles west of Musandam island and 3 miles north-east of Kumzār .	Precipitous island, 600 feet high towards the west end.	1 mile long, east and west, with a depression in the centre.
Habalain حبالين	At the westernmost end of Ghubbat Ghazirah .	Village of 25 houses.	Inhabitants are Dha-hūriyīn with 5 or 6 fishing boats.

Name.	Position.	Nature.	REMARKS.
Haffah حفه	Mouth of cove is 7 miles north of Dibah, on east coast.	Cove and village. The cove runs inland northwards, keeping parallel to the coast for $2\frac{1}{2}$ miles. It varies from $\frac{1}{4}$ to $\frac{1}{2}$ a mile in width, has regular soundings of 7 to 8 fathoms and is completely landlocked to seaward. It might be useful for naval purposes of secondary importance.	The cove contains a village of 10 mud and stone houses occupied by Shihūh of the Bani Shatair section, Kumāzirah subsection, who fish and own some dates at Dibah. They have 5 fishing boats.
Harf حرف	On the hills above Rās Shaikh Mas'ūd.	Village of a dozen houses.	People are Shihūh of the Bani Hadiyah section. They have 4 small boats kept at 'Idah عبدة cove, $1\frac{1}{2}$ miles south-west of Rās Shaikh Mas'ūd, where there is a well of good water 10 feet deep.
Hanah حانه	$1\frac{1}{2}$ miles south of Rās Shaikh Mas'ūd on its east side.	Cove and village of 15 houses.	Inhabitants are Shihūh of the Bani Hadiyah section. They have some dates, and there is a well of good water 300 yards from beach. There are 3 or 4 fishing boats.
Humsi حمصي	In Khor-ash-Sham on the south side, about a mile eastwards of Nadhifi.	Village of 6 houses.	Inhabited by Shihūh of the Bani Hadiyah section, owning 2 fishing boats.
Jādi جادي	On the west coast, 2 miles north-north-east of Bakhah.	Village of 150 houses.	People are Shihūh of the Bani Hadiyah section. There are some dates and wells of good water near the beach. Four sea-going boats running to Bātinah and Makrān ports and to Masqat Town are owned here; also 5 or 6 fishing boats.
Jirri جيري	On west coast, $3\frac{1}{2}$ miles north-east of Bakhah.	Village of 45 mud and stone houses, standing on a beach which extends from here to Bakhah.	People are Shihūh of the Bani Hadiyah section: they live by date-growing and fishing. There are 5 fishing boats.

Name.	Position.	Nature.	REMARKS.
Karshān كَرْشَه	On the north side of Bai'ah, adjoining it.	Village of 20 houses.	People are Bani Shatair Shihūh of the Kumāzīrah subsection; they have no boats.
Khasab خَصَب	See article Khasab.
Kumzār كُمَزَار	See article Kumzār.
Limah لَيْمَه	On the east coast, 23 miles north-north-east of Dibah.	Village of 150 houses, partly built up the side of the hills on the steps of the strata, one hut above another. It stands at the bottom of a bay open from east-north-east to north-north-east. The eastern horn of the bay forms a promontory 2 miles long, and off its extremity lies Jazīrat Limah, a small island 285 feet high.	There are dates and some other cultivation, also a fair number of goats and a few cattle, but only 3 or 4 donkeys. The people are Shihūh of the Bani Shatair (Kumāzīrah) section (a few however belonging to the Bani Hadiyah section) and own 8 sea-going boats which voyage to Masqat Town, Trucial 'Omān and the Persian ports. They have also 15 fishing boats. Cattle are procurable, but firewood is a difficulty and good water is rather scarce. A path crosses the hills to the neighbouring village of 'Aqabah, and there is a route through the mountains to Rās - al - Khaimah Town, which can be reached in 2½ days.
Ma'īli (Jabal) مَعِيلِي	Near the north coast, 2½ miles south-east of Kumzār.	Remarkable sharp peak 1,894 feet high and overhanging slightly to the east.	At the foot of it, on a sandy beach in a bay, is a fishing station frequented by fishermen from Kumzār.
Malcolm Inlet	See article Ghubbat Ghazīrah.
Mansal مَنْصَل	On the southern shore of Ghubbat Ghazīrah.	Village of 6 houses.	The people are Dhahūriyin and own 4 fishing boats.

Name.	Position.	Nature.	REMARKS.
Maqlab مقلاب	See article Maqlab .
Mas'ūd (Rās Shaikh) مسعود	On the west coast, 11 miles north by east of Fine Peak.	A prominent cape pointing north and covering the entrance of Khor-ash- Sham from the west.	The land slopes up gently from this point towards Fine Peak. In a little bight at the northern end of the cape is the tomb of the Shaikh from which it takes its name. The Shihūh say that the Shaikh was a Saiyid from the Persian coast who was killed in battle with the Turks (<i>sic</i>) about 200 years ago. They take no interest in the tomb and do not even repair it
Maqāqah مقاقه	In the western of the two large coves that run northwards out of Ghubbat Ghazirah , at the north-east corner of the Maqlab isthmus.	Village of 100 houses.	Inhabitants are Dha- hūriyīn . Houses are of dry stone with roofs of timber sup- porting stones. There are 5 Sambūks run- ning to Makrān ports and 15 fishing boats.
Midah مدح	On the north side of Khor-ash-Sham , about the middle	1 house.	There are some wells of good water, said to be the best in Khor-ash- Sham . The inhabitant is an emigrant from Sibi who quarrelled with his wife and removed to this place with his daughter. He has a boat.
Mūkhi مورخي	On the west side of the entrance of the Qidah cove.	Village of 70 houses, of which only 30 are at present in- habited.	People are Bani Hadiyah Shihūh and live by fishing; they own 10 fishing boats. There are wells of fairly good water.
Muntaf منطف	On the northern shore of Ghubbat Shābūs .	Village of 15 houses.	People are Dhanūri- yīn , owning 6 or 7 fishing boats.
Musan am Is. land مسندم	See article Musan- dam Island.

Name.	Position.	Nature.	REMARKS.
Nadhīf نظيفي	On the west side of a little land-locked cove in the south shore of Khor-ash-Sham, 1 mile south-east of Fanakhah.	Village of 15 houses.	People are Bani Hadiyah Shihūh . The cove would be a convenient place to lay a vessel aground. There are 4 or 5 fishing boats.
Qabal (Dōhat) دوحة قبال	On the east coast 6 miles north of Līmah.	Inlet $1\frac{1}{2}$ miles wide at the entrance: it runs inland for over 3 miles turning south as it goes.	The cove teems with fish. In a valley at its head are several huts of Bani Shatair Shihūh . They are herdsmen and fishermen and their diet consists largely of shellfish (<i>Strombus Baluchensis</i>), but they have only 1 boat. In a western branch of the same valley are ruins of an extensive village which was built of large stones without mortar. This place is closely connected with Līmah by land, and there is said to be a route from here over the hills to Khasab .
Qabbah قبه	In a small bay on the west coast between the south end of Ghanam island and the headland which forms the north point of Ghubb Ali .	Village of 60 houses.	People are Bani Shatair (Kumāzirah) Shihūh . There are 15 fishing boats.
Qanah قانه	On the south side of Khor-ash-Sham, immediately west of Maqlab bay.	Village of 40 houses standing in a sandy bight.	People are Dhahū-riyin and have an alternative settlement at Sham. They have 10 fishing boats. See Sham below.
Quwai (Khor)	See article Khor Quwai .
Qidah قده	Between Khasab and Rās Shaikh Mas'ūd.	Cove and village of 30 houses.	The village stands at the bottom of a little cove and has a considerable number of

Name.	Position.	Nature.	REMARKS.
Sakhr-al-Makhrūq صخر المخروق	Close to the north-westernmost point of the Ruūs-al-Jibāl mainland.	An islet 40 feet high, with perpendicular sides.	dates. The people are Pani Hadiyah Shihūh and own 6 fishing boats. A horizontal hole traverses the islet and can be seen through: hence the name "Perforated Rock" (A view will be found in Burchardt's <i>Ost-Arabien</i> , etc.)
Salāmah wa Bināt-ha سلامه و بنتها	See article Salāmah wa Bināt-ha.
Sawik سارك	2 miles west-north-west of Musandam island.	Precipitous islet, 400 feet high.	It is similar in size and appearance to Salāmah. In charts called "Tawakkul."
Shābūs (Ghubbat) غبة شابوس	Immediately north of Ghubbat Ghazirah.	A considerable bay running inland 4 miles and turning north as it goes.	On the north side of the bay is the village of Muntaf already described, and at the south-west corner is a village called Shābūs or Balad بلد, consisting of 20 houses of Dhahūriyin, who have 4 fishing boats. On the south side of the bay is a place Sawairāt صويرات where there was formerly one house of Dhahūriyin, but it is now deserted. Ghubbat Shābūs would afford shelter to small craft.
Sham شم	On the north shore of Khor-ash-Sham, opposite to Maqlab bay on the south side.	Village of 25 houses of Dhahūriyin.	This is an alternative settlement to Qānah, where water is scarce. The people remove from Qānah to Sham in autumn and return to Qānah as soon as rain falls.
Sham (Khor-ash-) شم	See article Khor-ash-Sham.

Name.	Position.	Nature.	REMARKS.
Sharih شریه	Between Haffah and the 'Aqabah cove, in Dôhat Sharih or Sharjah شرجه.	Village of 20 houses.	Occupied by Shihûh of the Bani Shatair section.
Shariyat شريات	In Dôhat Shisah.	3 or 4 adjoining places, each called Shariyah.	These are fish-drying grounds. There are no permanent inhabitants, but wandering fishermen of the Bani Shatair section of the Shihûh resort to them.
Shisah (Dôhat) دوحه شيصه	On the east coast, between Musandam island and Ghubbat Shâbûs. The northern entrance point of this inlet is known as Râs Qabr Hindi قبر هندي, a name which local tradition explains by affirming that many years ago an Indian who died on board an Indian sailing vessel was buried here by his companions.	Inlet $4\frac{1}{2}$ miles wide at the entrance and $5\frac{1}{2}$ miles in diameter within: its foot is separated by an isthmus 1 mile wide from the foot of Ghubb 'Ali on the opposite side of Ruûs-al-Jibâl and by a still narrower one from Khor-ash-Sham.	On the south-west side of the inlet, on the isthmus dividing it from Khor-ash-Sham, is a village of 15 stone and mud houses of the Dhahûriyin tribe called Shisah; it belongs properly to Kumâzirah of the Bani Shatair section of the Shihûh. There are 3 large boats running to Bâtinah and 20 fishing Batils. This inlet also contains the fishing stations of Sif-al-Bait, Tâsah and Shariyat. The people draw their supplies from Khasab and in summer migrate to Dibah and Khor Fakkân.
Sîbi صبيي	In Khor-ash-Sham, at its east end under Jabal Sibi	Village of 7 houses on a sandy beach with deep water off it.	People are Dhahûriyin and own 2 fishing boats. There is a well 40 feet deep which is said to be brackish after drought. The inhabitants migrate to Karshah and Dibah in summer on account of the intolerable heat. There is no land route from Sibi to any other place.

Name.	Position.	Nature.	REMARKS.
Sif-al-Bait سيف البيت	On the northern shore of Dōhat Shisah near Rās Qabr Hindi.	A fishing station.	There are no permanent inhabitants, but fishermen from Kumzār resort to the place.
Sir (Abu)	See Abu Chīr above.
Tāsah طاسه	In Dōhat Shisah, close to Sif-al-Bait.	A fishing station.	There are no habitations, but Kumzār fishermen visit the place.
Tawakkul	See Sawik above.
Tibāt تبات	On the west coast, nearly 5 miles south-south-west of Bakhah.	Village of 15 houses on a sandy beach with some date trees.	Shārjah jurisdiction begins 2½ miles south-south-west of this village at Rās-ash-Sha'am: Tibāt is the last village of Ruŭs-al-Jibāl in this direction. The people live by fishing and are Shihūh of the Bani Hadīyah section. There are 4 fishing boats here.

In the foregoing table a few unimportant and uninhabited islands are omitted, of which the native names have not been ascertained with certainty.

Administration.—Ruŭs-al-Jibāl is a district in the Sultanate of 'Omān. The Sultān is represented by a Wālī who has his seat at **Khasab**, in the article on which his position is described. The district brings in no revenue to the Masqat exchequer and it probably does not even pay for its own administration—if the slight political supervision exercised by the Wālī may be called by such a name. The amount annually collected by the Wālī as Zakāt is about \$ 600, and the present Sultān of 'Oman (Saiāyid Faisal) has in addition, out of his own private property, assigned him at **Khasab** a date plantation and land of the value of \$ 1,000 annually.

RUWĀHAH
(BANI)
بني رواحه

Singular Ruwāhi رواحي or Ruwaihi رويحي. This important tribe of **Hajar** in the Sultanate of 'Omān are said to be of Nizāri descent, but they are now attached to the Hināwi political faction; in religion they

are Ibādhis. Their principal seat is the upper part of Wādi **Samāil**, called Wādi Bani Ruwāhah, which they entirely monopolise, and where they have about 900 houses; but they also inhabit the lower villages of 'Adhdah (50 houses), Rissah (II) (20 houses), Rufai'ah (80 houses), Qarwāshiyah (50 houses), Naghzah (50 houses), Suharah (100 houses), Hijrat Wilād Sa'ad (50 houses), Jammār (75 houses), Hijrat-al-Bakriyīn (100 houses), Ibrāhīmīyah (40 houses), Bait Walad-al-Khalīlī (100 houses), Dighāl (100 houses), Subārah (50 houses), Daqdaqain (20 houses) and Tasāwir (25 houses). In Wādi **Bōshar** they are found at Falaj-ash-Shām (15 houses), in Wādi **Dima** at Hājir (100 houses), and in 'Omān Proper at **Izki**, Khadhra Bin-Daffā' (60 houses), **Nizwa** (4 houses) and Saddi (10 houses). In Wādi **Mistāl**, on the northern side of the Western **Hajar** hills, they occur at Ghubrat Bani Ruwāhah (40 houses) and Hail (40 houses). The greater part of Wādi '**Andām** belongs to them and the whole of Wādi **Mahram**. Their total number is perhaps 18,500 souls.

The Bani Ruwāhah are a troublesome tribe; they were consistently adversaries of the Sultān of 'Omān during the reign of Turki (1871-88) and are supposed to be still very hostile to the ruling power; but they can be subsidised when necessary, and in 1905 the Sultān made use of them against the Bani **Riyām** of **Izki** and Birkat-al-Mōz. They are perpetual enemies of the Bani **Jābir**, the hostility between the tribes being, it is believed, a remnant of the ancient historic feud of Abs and Dhubyān. The Bani Rawāhah have no general Tamīmah: each section is ruled by a Shaikh of its own.

The principal subdivisions of the Bani Ruwāhah are:—

Section.	Houses.	Habitat.	REMARKS.
'Ali (Wilād) ولاد علي	200	Wādi Mahram.	Nil.
'Aqīd (Aulād) الولاد عقيد	95	Wādi 'Andām.	Do.
'Awāmīr عوامر	200	Rissah and Rufai'ah in Wādi Samāil , also Wādi ' Andām .	Do.
'Āyish (Wilād) ولاد عايش	200	Wādi Mahram, etc.	Do.

Section.	Houses.	Habitat.	REMARKS.
Bahālīl بهايل	..	Naghzah in Wādī Samāil.	Nil
Bahīs (Aulād Bin) اولاد بن بحيس	30	Sabārah in Wādī Samāil.	Do.
Bakriyīn بكريين	160	Hijrat-al-Bakriyīn, Ibrāhīmīyah, and Sabārah in Wādī Samāil.	Do.
Barkat (Wilād) ولاد بركة	80	Wādī Mahram.	Do.
Hamad (Wilād) ولاد حمد	100	Do.	Do.
Hamīm (Bani) بني هميم	100	Do.	Do.
Harmal (Wilād) ولاد حرم	150	Wādī 'Andām.	Do.
Hasan (Wilād) ولاد حسن	180	Do.	Do.
Hāshim (Bani) بني هاشم	60	Mihall in Wādī Samāil, etc.	Do.
Husain (Wilād) ولاد حسين	50	Wādī 'Andām.	Do.
Ibrāhīm (Wilād) ولاد ابراهيم	60	Wādī Samāil.	Do.
Khalf (Wilād) ولاد خالف	70	Wādī in Wādī Samāil.	Do.
Khalīl (Wilād) ولاد خليل	200	Suharah and Bait Walad-al-Khalīl in Wādī Samāil	Do.
Khamīs (Wilād) ولاد خميس	60	Biyaq in Wādī Samāil, etc.	Do.

Section.	Houses.	Habitat.	REMARKS.
Mas'ūd (Wilād) ولاد مسعود	80	Bivāq in Wādī Samāil and Himamt, etc.	At these villages are two different sections bearing the same name.
Na'amān (Bani) بنی نعمان	50	Wādī 'Andām	Nil.
Nāsir Muhammad (Wilād) ولاد ناصر محمد	20	Wabāl in Wādī Samāil.	Do.
Qurūn قرون	70	Subarah in Wādī Samāil.	Do.
Rāshid (Wilād) ولاد راشد	200	Himamt, etc.	Do.
Sa'ad (Wilād) ولاد سعد	100	Hijrat Wilād Sa'ad in Wādī Samāil.	Also styled (perhaps more correctly) Bani Sa'ad.
Salim (Wilād) ولاد سليم	120	Wādī Mahram.	Do.
Sulaimān-bi-n-'Umr (Wilād) ولاد سليمان بن عمر	10	Hibāt in Wādī 'Andām.	Do.
Wakil (Anlād) اولاد وكيل	140	Dighāl in Wādī Samāil, etc.	Do.

This table of sections appears to be incomplete: no mention is made in it of the Bani Ruwāhah in 'Omān Proper and in some other places.

A village of **Qatar**, the nearest to the tip of the promontory, about 2½ miles south of Jazirat Rās Rakan. It is inhabited by about 70 families of **Sādah** who own 18 pearl boats, 2 other sea-going vessels, and 10 fishing boats; they have also 4 horses and 20 camels. There is a reef in front of the village within which the boats belonging to it anchor. The place is protected by a small fort with four towers, and drinking water is fetched from the Umm Dhā'an well, 1½ miles inland south of Ruwais.

RUWAIS
الرويس

RUWI

روى

An important but not large village in the **Masqat** District of the 'Omān Sultanate, $2\frac{1}{2}$ miles south-south-west of **Matrah**; it is situated in a small Wādi of its own which is a right-bank tributary of Wādi 'Adai. It consists of about 50 houses, a few of mud, the rest huts; the inhabitants are 'Awāmīr and Bani Wahaib. Plenty of good water is obtainable from wells 50 feet deep, and the cultivation of the village, which is a market-garden for **Matrah** and **Masqat** Town, includes sugar, maize, onions, lettuce, radishes and brinjals. There are fine dates, about 400 trees, also mangoes and tamarinds; some of the palms are the private property of Saiyid Faisal, the present Sultān of 'Omān. A reference to the article on the **Masqat** District will show that Ruwi is the point from which all routes from **Matrah** to the interior diverge, and this fact has more than once invested it with military importance when rebellious tribes were threatening an attack on **Masqat**. There is a fort, now practically in ruins, resembling the smaller fortifications at **Masqat** Town.

SA'AD
(BAIT)

بیت سعد

A numerous tribe of Arabs occupying part of both banks of the **Diz** above the territory of the 'Anāfijeh, and found also in the **Miyānāb** and even on the left bank of the **Gargar**; upon the **Diz** they are to some extent interspersed with the **Kathir** tribe. Their total number may be about 14,000 souls. The Bait Sa'ad claim descent from Ja'far the Barmecide جعفر البرمكي. Their main divisions are:—

Section.	Location.	Fighting strength.	REMARKS.
Dailam ديلم	Left bank of the Diz river about Abul Bishr, <i>viz.</i> , above Dih Nau and below the 'Ajrub.	400, all armed with rifles but none mounted.	This section have about 1,500 buffaloes, 3,000 cattle and 2,000 sheep and goats.
Hamdān (Āl Bā) آل برحمدان	Between the left bank of the Diz and the right bank of the 'Ajrub.	500, all with rifles, of whom 30 are mounted.	Livestock owned are 2,000 buffaloes, 3,000 cattle and 4,000 sheep and goats. This section are subjects of Shaikh Farhān Asad of the Kathir tribe.

Section.	Location.	Fighting strength.	REMARKS.
Hāyi (Āl) آل حايي	To the west of the Ka'ab-as-Sitāleh section, at 3 or 4 miles distance from the right bank of the Diz river.	500, all armed with rifles but none mounted.	They are said to own 1,000 buffaloes, 5,000 cattle and 2,000 sheep and goats.
Ka'ab-as-Sitāleh كعب السطاطله	Right bank of the Diz river about Ishāreh, near and a little below the Imāmzadeh of Abur Ridha; also on the right bank of the Shatait at Bunnat 'Abbas.	700, all with rifles, of whom 50 are mounted.	This section possess 150 camels, 2,000 buffaloes, 5,000 cattle and 3,000 sheep and goats.
Mahāmīd محميدي	Saiyid Hasan and Hilāleh on the left bank of the Gargar, and in that neighbourhood.	100, of whom 50 have rifles and 30 are mounted.	The Mahāmīd are subjects of Farhān Asad, the Kathīr Shaikh. They possess 60 mules, 200 cattle and 6,000 sheep and goats.
Mizra'eh مزرحه	Hawasīyeh, between the Shāūr and the Diz, immediately above the 'Anāfi-jeh.	300, of whom 200 are armed with rifles, but none are mounted.	This section live in mat and grass huts; they own 150 buffaloes and 800 cattle. They are really Bani Turuf, but attached themselves to Shaikh Farhān Asad of the Kathīr tribe about 10 years ago.
Nais نيس	Scattered, but mostly at 'Adhāfeh on the right bank of the Gargar.	200, of whom 40 are mounted and 40 have rifles.	The Nais are believed to be of the same stock as the section similarly named of the 'Anāfi-jeh. They own 40 mules, 200 cattle and 5,000 sheep and goats and live both in huts and tents.
Sa'ad (Bait) بيت سعد	Left bank of the Diz river about Dih Nau.	800, of whom 600 have rifles and 400 are mounted.	The animals belonging to this section are estimated at 400 camels, 200 mules, 1,000 cattle and 20,000 sheep and goats. This section is divided between Shaikh Farhān of the Kathīr tribe and his brothers, and is accordingly sometimes described as consisting of the following sub-sections:— Farhān, Shāya', Muttalīb and 'Abdul Hasan.

Section.	Location.	Fighting strength.	REMARKS.
Taraif طرف	Chiefly in Miyā-nāb, but a few also on the right bank of the Taraifi canal, between Jajis on the Diz and the Shāūr river.	300, of whom 50 have rifles, but none are mounted.	The Taraif inhabit huts. They own 20 mules, 100 buffaloes, 300 cattle and 4,000 sheep and goats.
Zahariyeh زهريه	Nawāsiyāt on the Shāūr; also Cham Faraj, opposite 'Abdun Nabi, on the left bank of the Gargar.	150, of whom 40 are mounted and 50 have rifles.	The livestock of this section are 60 mules, 200 cattle and 5,000 sheep and goats.

The Bait Sa'ad, with certain exceptions noted above, are all dwellers in tents. The whole tribe pay revenue, through Shaikh Farhān Asad of the **Kathir**, to the Persian Governor of Northern 'Arabistān. Both the principal Shaikhs of the **Kathir** at the present time, Shaikh Haidar and Shaikh Farhān Asad, are said to be of Bait Sa'ad extraction and not true **Kathir**.

SA'AD (SHAIKH)

شيخ سعد

A village in Turkish 'Irāq with a small police post and a customs house; it is situated in the Qadha of **Kūt-al-Amārah** on the right bank of the **Tigris**, 25 miles above 'Ali-al-Gharbi and 60 below **Kūt-al-Amārah** by river. It consists of 50 to 100 houses of sun-dried brick and about 25 shops. The inhabitants are mostly **Kurds**, and the adjoining Arab tribes are the Āl Bū Darāj on the east and the Bani Rabi'ah on the west. The trade, such as it is, resembles that of 'Ali-al-Gharbi.

SA'AD (YĀL)

يال سعد

Singular Sa'adi سعادى. A numerous tribe of the 'Omān Sultanate estimated at 13,000 souls. The Yāl Sa'ad occupy a block of territory, 25 miles in length, towards the east end of **Bātinah**, but a number of the coast places in their tract are in other hands. Their traditional boundary on the east is the lower course, called for this reason **Wādi-al-**

Qāsim, of Wādī Bani **Kharūs**; on the west the furthest point they occupy is Khadhra. Their principal villages or towns are **Masna'ah** (50 houses), Tau-ash-Shawi (20 houses), Tarif (60 houses), Muladdah (400 houses), Raqqās (100 houses), Gharaifah (500 houses), Sūr-al-Qarat (200 houses), Tharmad (250 houses), Bat-hah Suwaiq (600 houses), **Khadhra** (230 houses), and Sūr Haiyān (50 houses); of these only the first and the three last are upon the coast. They are also found at Khabbah and Hadhīb (II).

The Yāl Sa'ad belong to the Hināwi faction and are Ibādhis by religion. Among other Arabs they are reputed unwarlike, mean-spirited and inhospitable and are little respected. They are wealthy, owning hundreds of thousands of date-palms and a good deal of land under grain, also many trading and fishing-boats; but some of them are Bedouins. They have always shown a predilection for the 'Azzān branch of the ruling family in 'Omān, perhaps because **Rustāq** adjoins their own territory; and they pay no taxes to the present Sultān of 'Omān. In 1874, when Ibrāhīm of **Rustāq** seized **Masna'ah**, they plundered some British subjects of the place and a heavy fine was recovered from them at the instance of the British Government, not without difficulty. On the whole, however, they are peaceably disposed, and, so long as they are left alone, give no trouble to the Sultān's Government.

The principal subdivisions of the Yāl Sa'ad are: -

Section.	Fighting strength.	Habitat.	REMARKS.
Haiyiz (Yāl) يال حيز	700	Muladdah, Bat-hah Suwaiq and Khadhra.	Nil.
Hilāl (Yāl) يال هلال	550	Masna'ah , Sūr-al-Qarat and Tharmad.	Do.
Khanaijarah خنايجرة	400	Do.	Do.
Khuwaitar خويطر	300	Tarif, Muladdah and Raqqās.	Do.
Maghābishah مغابشه	400	Masna'ah , Tau-ash-Shawi, Raqqās and Khadhra.	Do.
Shuwaikāt شويكات	300	Khabbah and Hadhīb (II).	Do.

SA'ADĀN
(JAU-ĀS-)
جو السعدان

A tract in the **Hasa** Sanjāq, of the ordinary desert character; it is enclosed by **Habl** on the north, by **Taff** on the west, by **Wādī Farūq** and **Na'alāh** on the south, and by **Badd-al-Āsīs** on the east. Its north-western, south-western, south-eastern and north-eastern corners are marked respectively by the hills of **Mathlūth**, **Hamrat Jūdāh**, **Ghār-ash-Shuyūkh** and **Dām**; and **Jabal Barāim** is situated on its eastern border between the two last. **Jau-as-Sa'adān** is a low tract covered with a thin coating of yellow sand. The name is said to be derived from a plant called **Sa'adān** which grows in the tract and of which the thorns or prickles, falling off when the plant withers, make it impossible for people to walk about barefoot.

SABAI'
سبيع

An important tribe of **Najd**, partly migratory and partly settled.

Distribution — The **Sabai'**, both Bedouin and non-Bedouin, have a wide distribution.

Their nomads are found as far to the north-east as **Banbān** in '**Āridh**, as well as about **Hāir** on **Wādī Hanifah** and in the district of **Kharj**, and they sometimes visit **Summān**; but their headquarters are in the district of **Wādī Sabai'** in the far south-west, to which they have given their name. They are probably not unknown in the districts intermediate in position between those just mentioned.

Non-nomadic **Sabai'**, like their Bedouin fellow-tribesmen, are found chiefly in **Wādī Sabai'**, especially at '**Amāir**, **Dhurum**, **Hanqān**, **Hazam**, **Khazām**, **Lamlah**, **Ranyah**, **Raudhah**, **Suwaiyid** and **Ziyād**, and at **Khurmah** in the **Wādī Turabah** division of that district. Further to the north-east they occur at the desert villages of **Duwādimi**, **Khanūqah** and **Sha'arah**; in **Washam** at **Shaqrah** and **Wathaihiyah**; in **Qasim** at '**Anaizah**, '**Aushaziyah**, **Badāyah** and **Wādī**; in **Sadair** at '**Attār**, **Ghāt**, **Harmah**, **Hautah**, **Khatāmah**, **Khīs**, **Majma'** and **Ruwaidhah**; in '**Āridh** at '**Awainidh**, **Barrah**, **Ghiyānah**, **Haraimlah**, **Hizwah**, **Malham**, **Rghabah**, **Salbūkh** and **Sidūs** in **Mahmal**, at '**Ammāriyah**, '**Ilb**, '**Audah**, '**Arjah**, **Masāni'** and **Hāir** on **Wādī Hanifah**, and at **Ḍarumah**; in **Kharj** at **Dilam** and **Yamāmah**; in **Harīq** at **Harīq** town; in **Hautah** at **Hautah** town and **Hilwah**; and in **Aflāj** at **Lailah**.

SABAI' (WADI)

*Divisions and number.**—The following are the principal divisions of the Sabai' which have come to notice in the course of our inquiries:—

Ajmān-ar-Rakhm.	عجمان الرخم	Mijāmi'ah, at Dhurum, ^{مجامعه}
'Amir (Bani), at Kburmah in Wadi Turabah.	بني عامر	Hanqān, Lamleh and Suwaiyid in Wadi Sabai'.
'Amr (Bani).	بني عمر	Muhāwirah, at Ziyād in ^{محاوره} Wadi Sabai'.
'Askar, in Kharj.	عسكر	Qaraishāt. ^{قريشات}
'Azīz (Al 'Abdul), at Dhrumah.	آل عبد العزيز	Rashīd (Al Bin), at ^{آل بن رشيد} Malham in 'Aridh.
Khanaizān (Āl), at 'Awainidh in 'Aridh.	آل خنيزان	Rasbūl, at Lailah in ^{رشول} Afīāj.
Khathlān, at Hariq town in Hariq and at Hautah town and Hilwah in Hautah.	حثلان	Sūdah, at Shaqrah in ^{سودة} Washam and at Ranyah and Raudhah in Wadi Sabai'.
Marāghin, at Raudhah in Wadi-as-Sabai'.	مراغين	Thaur (Bani), at Khur- ^{بني ثور} mah in Wadi Turabah.
Matārīd, at 'Aushazīyah in Qasim.	مطاريد	Wuzrān, at 'Anāir and ^{وزران} Khazām in Wadi Sabai'.

Some authorities regard the entire **Sahūl** tribe as being a section of the **Sabai'**.

The number of the nomad Sabai' is altogether uncertain: the settled Sabai' are included in the estimated populations of the districts where they are found.

Character.—Little is known of the Sabai' Bedouins, and the settled Sabai' resemble in their characteristics the other sedentary tribes of **Najd**. In religion the Sabai' are Hanābilah, or, in other words, Wahhābis who claim to be Sunnis.

Political position.—The bulk of the Sabai' have always been subject to the ruler of **Riyādh**, and 40 years ago the value of their annual tribute was estimated at \$8,000. During the recent struggle in **Najd** the Sabai' were ranged on the Wahhābi side.

Wadi Sabai' is the south-westernmost district of Southern Najd.

* A list of sections of the Sabai' is given by Col. E. C. Ross in the Persian Gulf Administration Report for 1879-1880.

SABAI'
(WADI)

وادي سبيع

Boundaries.—Wādi Sabai' is bounded on the east by Widyān Dawāsir; on the south by Bishah and Wādi Tathlith; on the west by the Hijāz province; and on the north by an unknown tract which separates it from Hazm-ar-Rāji.

Physical character and divisions.—Arabs state that the surface of Wādi Sabai' is level, but that it is traversed by occasional hollows. It is mostly sandy desert, but here and there earth crops up, and in such places dates, wheat, barley and maize are grown. Both springs and wells exist, the wells being generally shallow; and there are depressions in which rain water collects and forms ponds that remain for as much as a year and become the abode of aquatic birds.

Little is known of the district except from native accounts*; but it seems clear that the name Wādi Sabai' applies not, as might have been expected, to one great valley, but rather to an open plain with two main lines of drainage. The north part of the district appears to fall to Wādi Turabah, Turabah or Trubah تروبه, which has its head in the Hijāz mountains about 150 miles east of Makkah and is reported to send water down to a depression called 'Irq عرق near Shaqrah in Washam; if these data are accurate the direction of Wādi Turabah is from south-west to north-east and its length some 350 miles. The drainage of the southern portion of Wādi Sabai' appears to be carried by a Wādi called Ranyah, which rises near the head of Wādi Turabah and runs eastwards for perhaps 120 miles to a point where it is joined by a great Wādi named Bishah. Wādi Bishah seems to have its origin in the district of 'Asir, possibly 150 miles to the south-west of its junction with Wādi Ranyah. It should be added that the term Wādi Sabai' seems to be used at times in a restricted sense to describe Wādi Ranyah only, or even a part of it.

Topography of Wādi Ranyah or Wādi Sabai' proper.—The following appear to be the principal villages and points of interest in Wādi Ranyah or Sabai' proper :—

Name.	Position.	Nature.	REMARKS.
'Amāir عمائر	About 12 miles east-south-east of Ranyah.	A village of about 250 houses of Sabai' of the Wuzrān section,	This is a settlement rather than a village or town, and is scattered over a large

*Jomard's map at the end of Mengin's *Histoire de l'Égypte* takes in a part of it only.

SABAI' (WADI)

Name.	Position.	Nature.	REMARKS.
Bahrah (Raudhat-al-) (spelling uncertain)	About 30 miles west of Ranyah.	houses, huts and dispersed Qasrs being all reckoned together.	space. Dates, figs and grapes are grown by irrigation from wells, 3 fathoms deep, of good water.
Dhurum ضرم	20 to 25 miles west-south-west of Ranyah.	A tract containing trees.	The western villages of the Wadi supply themselves with wood from this place.
Hanqān (spelling uncertain)	About 15 miles west-south-west of Ranyah.	A village of about 200 houses of Sabai' of the Al Mijāmi'ah section, exclusive of a number of huts scattered among the date groves.	Cultivation as at 'Amāir above, but there are also peaches and melons, and irrigation is assisted by drainage from hills near by. These hills are called Jabal Dhurum; they begin here and stretch westwards passing between Harrah and Khasah below.
Harrah حره	40 or 45 miles west by south of Ranyah, on the north side of the Jabal Dhurum.	A village of 100 houses of Sabai' of the Al Mijāmi'ah section, exclusive of huts in the date gardens.	Dates, figs, peaches, grapes and melons are grown, but no cereals. The wells contain good water and are 2 fathoms deep.
Hazam حزم	About 8 miles north-west of Ranyah.	A winter camping ground of Bedouins with a number of scattered wells.	The nomads frequenting this place are Sabai', Shalāwah شالوا and Buqūm. Harrah is said to be infested by scorpions and by snakes of the kinds called Haiyah and Hanash.
		A walled village of 80 houses of Dawāsir and of a tribe called Shanābirah: there are also a few Sabai'.	Dates, figs, grapes and pumpkins are grown; and the wells, which are 2 fathoms deep, contain good water. Here resides a Sharif named Mansūr-bin-Mādhi who about 30 years ago was deputed to Wadi Sabai' to collect

Name.	Position.	Nature.	REMARKS.
Huwaiyah حويه	About 20 miles north-north-west of Ranyah.	A summer camping ground of Sabai' and 'Ataibah Bedouins.	Zakāt by the Sharif of Makkah. This emissary was unable to realise anything on behalf of the Sharif; but he continues to reside here, enjoying the barren respect of the people. There are about 15 wells here, 3 fathoms deep and containing good water, but no cultivation of dates or cereals exists.
Khasah خسه	About 50 miles west by south of Ranyah, on the south side of Jabal Dhurum.	A summer camping ground of Sabai' Bedouins.	There are some 10 wells here, 4 fathoms deep and containing good water, scattered over an area of about 3 miles in extent.
Khazām خزام	About 8 miles south-west of Ranyah.	A walled village of about 150 houses of Sabai' of the Wuz-rān section.	There is cultivation of dates, figs, peaches, grapes and pomegranates. Wells are 2 fathoms deep and the water good.
Lamlah لمله	About 7 miles south-west of Dhurum, at the foot of Jabal Dhurum.	A walled village of Sabai' of the Al Mijāmi'ah section.	Dates, figs, and grapes grow here, also the Bambar tree of which the fruit and leaves are used as medicine. A number of the inhabitants were once slaves of the Al Shanaif, but now they have obtained their freedom and some of them own land. The Shaikh of Lamlah is Shaikh also of Su-waiyid.
Munkhashshah (spelling uncertain)	About 35 miles east-north-east of Ranyah.	A camping ground of Sabai' Bedouins.	This is a sandy locality with a dozen wells, 3 fathoms deep, of good water.
Namlah نمله	About 40 miles north-west of Ranyah.	A summer camping ground of Sabai' Bedouins.	There are about 8 wells here, 3 fathoms deep, of good water.

Name.	Position.	Nature.	REMARKS.
Qunsaliyah قنسلية	50 to 60 miles north-north-west of Ranyah.	A summer camping ground of Sabai' Bedouins.	The ground is sandy and the wells, about 10 in number, are $2\frac{1}{2}$ fathoms deep and contain good water.
Ranyah رانية	This may be taken as the central place in Wādi Sabai', but it seems to lie between the actual centre of the district and its south-west corner. It is probably 90 to 100 miles east of Turabah.	The capital of Wādi Sabai' proper, though perhaps not the largest place in it; Ranyah consists of 200 houses of Sabai' of the Sūdah section, exclusive of a very large number of huts which are scattered among the date plantations. In summer the population is about doubled by an influx of Bedouins of the Sabai' tribe.	This is the seat of Fidai'-bin-Bāhas, titular Shaikh of Wādi Sabai' proper, but he has little influence over the Shaikhs of villages, and some parts of the Wādi are altogether exempt from his authority. The date plantations are fine and extensive; and figs, peaches and pomegranates are also produced. Wells are numerous and contain good water at 2 fathoms.
Raudbah روضه	About 6 miles south-west of Ranyah.	A walled and fortified village consisting of about 400 houses of Sabai' of the Marāghīn, and Sūdah sections, Dawāsīr, and a few 'Anizah.	There is a fort called Qasr-al-Marāghīn قصر المراغين occupied by the Shaikh of the place; also a considerable bazaar, said to contain 100 shops, and a large Jāmi' mosque. This is the market town of the district and goods are imported chiefly from Makkah; coffee however is brought from Najrān and arms and ammunition from Qatar via Aflāj and Wādi Dawāsīr. Swords, lances and daggers come either from Wādi Dawāsīr or from Hachramaut, the best daggers—called Hadhram—being from the latter. There are not many craftsmen here, only a few blacksmiths, carpenters and cobblers. Wells are 3 fathoms deep and contain good water. The date plan-

Name.	Position.	Nature.	REMARKS.
Riqah ريقه	About 20 miles south-east of Ranyah.	A tract where wheat and barley are extensively grown in winter, this being one of the few places in Wādi Sabai' where there is any cultivation of cereals.	tations are extensive; and figs, peaches, melons, grapes and even, it is said, oranges are produced. The cultivation is carried on by agriculturists from different villages, who build themselves huts of date leaves here for the season. The number of huts, it is said, sometimes amounts to 1,000. There are 200 or more wells with good water at 3 fathoms, but dates are entirely absent. Several miles to the south-east of Riqah is a hill called Jabal Sillah الجبل السيل .
Sharif (Qulbān) قلبان شريف	In the extreme north-west corner of the district, near Wādi Turabah.	A summer camping ground of Sabai' Bedouins.	The ground here is stony. There are half a dozen wells, of good water, 3½ fathoms deep.
Suwaiyid (spelling uncertain)	Apparently near Lamlah.	A village of 100 houses, mostly of Sabai' of the Al Mijāmi'ah section, but a few of Dawāsir.	The Shaikh of Lamlah is Shaikh also of the greater part of Suwaiyid; but the small Dawāsir community have a separate Shaikh of their own. Dates, figs, peaches and grapes are the chief products and there are many wells, 2 fathoms deep, of good water.
Taghdawi (Jabal) جبل تغدوي	Begins on the north side of Hazam and runs north for some miles.	A ridge or line of hills in the middle of Wādi Sabai' proper.	...
Ziyād زياد	About 6 miles south of Ranyah.	A settlement of 100 or more houses and huts scattered through date gardens; the people are Sabai' of the Mahāwirah section.	Dates, peaches, figs and grapes are grown. The wells are 3 fathoms deep and the water good.

Of Wādi Bīshah, which in its lower course joins Wādi Ranyah, but little has as yet been ascertained. It is said to contain a large village named Bīshah, which is partly inhabited by Buqūm Arabs and partly by negroes. In the Bīshah district are other villages called Janainah جنينه , Nimrān نمران and Raushan روشنى .

Topography of Wādi Turabah.—The chief points in Wādi Turabah are these :—

Name.	Position.	Nature.	REMARKS.
Khurmah خرمه	In Wādi Turabah, at a long distance (perhaps 80 miles or more) from Turabah village, apparently north-eastwards and probably lower down the Wādi.	A large walled village of 300 houses of Sabai' of the Bani 'Amir and Bani Thaur sections, of 'Anizah, of Bani Zaid, and of Dawāsir. Besides the town proper there are many Qasrs, houses, and huts scattered in the very extensive date plantations: some of these are practically separate villages. If these suburbs be included the estimated size of the place must be doubled. The people, as elsewhere throughout this valley, are Wahhābis. The Shaikh of Khurmah, at present Malaisān-bīn-Dhabbān of the Bani Thaur, divides with the Amir of Turabah the sovereignty of the Wādi. Large numbers of Bedouins camp in the environs of Khurmah in winter.	There is a large fort belonging to the Shaikh, one mosque of great size, and a bazaar containing a considerable number of shops. Trade is chiefly in the hands of Dawāsir and of immigrants from Qasim; imports are partly from Makkah and partly from Qasim. Coffee and American piece-goods are brought from Yaman and Najrān, while arms and ammunition are imported either from Kuwait <i>vid</i> Qasim and Washam or from Qatar <i>vid</i> Aflāj and Wādi Dawāsir. Gun-powder is obtained from Makkah also. The date plantations are described as being of enormous size and owned exclusively by the Bani 'Amir and Bani Thaur, between whom they are about equally divided. A good deal of wheat and barley is grown among the dates, but very little elsewhere. Water is good and stands at about 4 fathoms below ground level.

Name.	Position.	Nature.	REMARKS.
Rumadān رمدان	Apparently a short way from Turabah village in the direction of Khurmah.	A walled village of 250 houses of Buqūm. Shalāwah, ^{شلاله} , Dawāsir, and Bani Zaid. There are suburbs in the date plantations but not so large as those of Khurmah.	The bazaar here is as large as that at Khurmah, and trade is carried on in much the same manner, but is more brisk. Water is good and is obtainable at 3 fathoms. Rumadān is independent in internal matters, but in its external relations it is politically dependent on Turabah village. Sultān-bin-Ja'afar, a refugee from the Sharif of Makkah, resides here.
Shudhub شدب	About 15 miles east of Khurmah.	A camping ground of Sabai' Bedquins of the Bani 'Amir and Bani Thaur sections.	There are a score of good wells, only 2 fathoms deep.
Turabah ترابه	On the south-south-east side of Jabal Hadhan ^{جحدان} , a hill which is about 150 miles east of Makkah and can be seen from the Buraidah-Makkah pilgrim route.	A long narrow village of 150 houses of Buqūm, surrounded by date groves; there is a considerable suburban population, who inhabit houses, huts and watch towers among the date groves. Large numbers of Bedouin Buqūm encamp in the environs in summer.	There is little or no trade at Turabah, of which the market town is Rumadān. There is one large mosque. Cultivation is chiefly of dates; the wells are 3 fathoms deep, and the water is good. The Amīr of Turabah, at present Manāhi-bin-Mahmil, rules the southern (that is probably the upper) part of Wādi Turabah, which is outside the jurisdiction of the Shaikh of Khurmah. There is no Qādhi at Turabah and cases are referred by the Amīr to the Qādhi of Rumadān.

General.—The preceding tables sufficiently explain the facts regarding the population, agriculture, trade and political organisation of Wādi Sabai', and no further analysis is necessary here. On the information available the settled population may be roughly estimated at 16,000 souls, of whom about 10,000 are located in Wādi Sabai' proper and the

remainder in Wādī Turabah. Except in the villages of Rumadān and Turabah, which belong to the **Buqūm, Sabai'** everywhere greatly predominate; but a few **Dawāsir** and even '**Anizah** and **Bani Zaid**, also tribes known as **Shalāwah** and **Shanābarah**, are intermingled with them. Camels are numerous and horses not rare, but cattle and donkeys appear to be scarce in proportion. Ranyah, Turabah and Khurmah are, as will be seen, the three political centres.

A village situated on the right bank of the **Jarrāhi**, but separated from the stream by a few hundred yards of low-lying ground, a little below the point where the river emerges from a low range of hills and enters the **Jarrāhi** District. The village is $24\frac{1}{2}$ miles from **Rāmuz** Town on the route to **Ma'shūr**. An old disused canal of considerable size takes off from the right bank of the **Jarrāhi** about 1 mile above the village; after passing a large flat-topped mound which seems to be an ancient site, it cuts through a low mud ridge and can be traced beyond this for several miles running nearly parallel to the river. At **Cham-as-Sābi** there are about 15 permanent habitations, mud houses, belonging to **Bani Khālid** who are connected with the **Bāwīyeh**; and in winter a large encampment of about 200 tents of the same tribe is located here. The low land near by is regularly cultivated. The village is said to derive its name from **Sabians** who formerly inhabited it; and among this sect a vague tradition is current that many of their faith were once massacred here, but they are unable to assign any date to the supposed event. Along with the rest of the **Jarrāhi** District, **Cham-as-Sābi** is farmed by the Shaikh of **Muhammareh** from its owner the **Nizām-as-Saltaneh**.

SĀBI
(CHAM-AS-)
چم الصابي

In Arabic and Persian **Subba** صَبَا: singular **Sābi** صَابِي. The Sabians are a remarkable people dispersed in small communities over parts of Turkish '**Irāq** and Persian '**Arabistān**, but united everywhere by the possession of a common religion. In '**Arabistān** they claim a Syrian origin and say that their ancestors formerly owned most of **Shūshṭar**, and they have also a tradition that many of them were once massacred at **Cham-as-Sābi**.

SABIANS

Distribution and numbers.—**Sūq-ash-Shuyūkh**, on the **Euphrates**, where they number 700 souls, is now the headquarters of the Sabians;

and they are found also at 'Amārah (1,000 souls), Nāsiriyaḥ (300 souls), Qal'at Sālih, and Shatrat-al-Muntafik in 'Irāq. In Southern 'Arabistān they occur at Muhammareh (40 families), at Hawīzeh Town which 60 years ago was one of their important places (20 families), and at Amīniyeh on the Kārūn river (4 families): there are also a few at the port of Buziyeh. The numbers of the Sabians have greatly declined in recent years and are still dwindling. There are none now at Ahwaz Village or Dizfūl or Shūshtar Towns, but there are still 15 families at Shāhwali in the Shūshtar District. Their religious head, known as the Qāri قاري or Reader, has his residence at Sūq-ash-Shuykh.

Life and occupations.—In dress and appearance the Sabians are indistinguishable from their Arab neighbours, nor do they, perhaps, differ from them in descent, though their speech is different and their Arabic is broken and less emphatically pronounced than that of the Musulmāns. The men all wear their beards long. They show a special aptitude for working in gold and silver, and probably a considerable majority of them follow that profession: in 'Irāq, however, many are canoe builders and carpenters: few or none are agriculturists. The use of the term "Sabian" by different authorities at different times has not been consistent, and it may be doubted whether the Subba of the present day are the same as the Sābiūna صابئون of the Qurān.

Religion and customs.—The exact nature of the Sabian religion and its affinities with star-worship, Judaism, Christianity, and Muhammadanism have not been clearly ascertained. It is stated, however, that baptism is one of the principal rites and that water enters into all the important ceremonies; that the Sabians respect Yahya or John the Baptist as a prophet, regarding him as a re-incarnation of Seth, and that they consider both Moses and Christ to have been false teachers: their paradise is said to be located in the North Star. They possess scriptures of their own and a book of ritual. It is said that strangers are not admitted to their rites and that these are conducted in Syriac. They are an uncircumcised race, not monogamous; but a second wife is seldom taken except when the first has proved barren.

SABIYAH
(KHOR-AS-)
 خور الصبسية

A remarkable inlet of the sea running north-north-west for nearly 30 miles from the entrance of Kuwait Bay to Warbah island, and dividing, throughout its entire course, the island of Būbiyān from the

main. A small prolongation of the Khor passing west of Warbah island joins Khor-ath-Tha'alab on a branch of which Umm Qasr stands; and a channel with soundings of 3 to 8 fathoms, apparently known as Khor Būbiyān بوبيان, runs along the south side of Warbah island and unites the head of Khor-as-Sabiyah with that of Khor 'Abdullah.*

The average width of Khor-as-Sabiyah appears to be about three-quarters of a mile; at its mouth it is one mile broad, but at places higher up it contracts to as little as half a mile. The banks are swampy, but there are a good many boulders, especially among the eastern shore. A route which runs along the western side of the Khor is part of the first route described in the article on the Kuwait Principality. The soundings appears to vary from 1 to 5 fathoms; but navigation just outside the mouth of the Khor is difficult on account of numerous patches and rocks which are almost dry at low water, and even native boats cannot enter at less than half flood.

Qasr-as-Sabiyah is a fortified mud enclosure belonging to the Shaikh of Kuwait; it is situated on the east bank of the Khor about 3 miles from the tip of the promontory that divides the mouth of Khor-as-Sabiyah from Kuwait Bay. The enceinte of the Qasr is about 100 yards long by 80 yards broad, and at high tide the sea approaches it very closely; in spite, however, of a rather steeply shelving bank, landing is difficult, on account of mud, in all states of the tide. The garrison consists of about a dozen retainers of the Shaikh of Kuwait. The supply of water, from wells outside the enceinte, is brackish; there is a plantation of about 300 young date trees. Qasr-as-Sabiyah formerly boasted some cultivation, which it owed to Yūsuf-bin-Ibrāhīm, the enemy (now deceased) of the present Shaikh of Kuwait: but the place was ruined in hostilities between Shaikh Mubārak and some of his nephews about 1899. Qasr-as-Sabiyah is surrounded by some tamarisks which, in approaching the place from the west, first become visible at a distance of about 5 miles.

* From a report by Commander Kemp, R.N., which, with a sketch chart, will be found in the Government of India's Foreign Proceedings for July 1902, it may be gathered that Khor Būbiyān and the upper part of Khor-as-Sabiyah were found navigable by H.M.S. "Sphinx," but that the channel to the west of Warbah island was too narrow to be safe. The latter is a mere boat channel, 100 yards broad at the northern end, but widening to $\frac{1}{2}$ of a mile (including swamps at high tide) at the southern end: see a report dated 24th July 1905 by Captain E. W. S. Mahon, R.E., who calls this channel "Khor Salem."

SĀDAH
ساده

Or Saiyids; singular Saiyid سَيِّد. This article relates to a community of Saiyids who had their origin in **Qatar** and afterwards, for the most part, removed to **Bahrain** in the train of the conquering 'Utūb. There are still 70 families of Sādah at **Ruwais** in **Qatar** and a few at **Dōhah**; in **Bahrain** their headquarters are **Hadd** where they have 150 houses, and they have also 10 houses on **Tārūt** Island off **Qatif**. In **Bahrain** and **Qatar** they are pearl merchants or divers; some of those in **Qatar** are breeders of cattle. By religion they are Sunnis of the Hanafi and Shāfi'i schools, and they continue to be notorious for their fanaticism and slave-dealing propensities.

SADAIR
سدائر

Sometimes pronounced Isdair. A district of **Najd**, the northernmost of the Wahhābi dominions proper, and one of much general and political importance. Sadair is bounded on the east and north by deserts,—on the east, namely, by the **Dahānah**, and on the north by a **Nafūd** which passes between **Jabal Tuwaiq** and **Qasim** and contains **Wādi-ar-Rūmah**; on the west the **Jaraifah** جريفه valley separates Sadair from the district of **Washam**, and on the south the valley of 'Ajjsh marks its border with 'Aridh. The length of Sadair, which is greatest from north-west to south-east, is about 145 miles.

Physical features.—The district thus defined practically coincides with the northern part of the **Tuwaiq** plateau or range, consequently the geography of the hills hereabouts is also the geography of Sadair; from this statement, however, must be excepted the flat, low country in the extreme north between **Zilfi** and **Wādi-ar-Rumma**, lying between the **Tuwaiq** hills and the northern part of **Qasim**. The hilly portion of the district has an elevation increasing from north to south; the bulk of its drainage goes eastward to the **Dahānah**; and its principal features are four valleys or torrent beds which we now proceed to describe in order.

The northernmost or **Ghāt** valley, rising at no great distance to the east of **Majma'**, the capital of Sadair, pursues a winding but generally northerly course by the villages of **Ruwaidhah** and **Khis** to **Ghāt**, where it emerges from the hills and, being deflected by a projecting spur of **Tuwaiq**, turns westward into the **Nafūd**; at one place shortly before reaching **Ghāt** its fall is extremely abrupt. In time of flood the stream

from this valley penetrates into the Nafūd as far as the sand hills of Imghair-az-Zilfi **امغير لزلفي**, 10 miles from Ghāt, where it is absorbed and disappears. At this place Imghair there are wells, and in favourable seasons some cereals are grown by cultivators from Zilfi. The Ghāt valley is the only one in Sadair which drains to the west side of **Tuwaiq**; the other three all run eastwards.

The next valley, that of **Majma'**, has its origin in a group of 5 summits of **Jabal Tuwaiq**, called **Mishqar** **مشقر**, to the south-east of **Majma'**; **Mishqar** is said to overlook from the north the plains of **Washam**. From **Mishqar** the valley of **Majma'** is described as running northwards for about 12 miles to **Dhalmah** **ذلمه**, and thence 6 miles north-eastwards to **Majma'**, which is situated upon it. A little beyond **Majma'** it receives on the left a small tributary from **Harmah**; and at about 10 miles beyond **Majma'** and to the east-south-east of that place, it reaches **Qadhaimah** **قضيمة**, a locality where there are wells of 7 fathoms and where an affluent from the villages of **Wu-hai** and **Ijwai** comes in, apparently from the south-west. From **Qadhaimah** the hollow continues for about 9 miles eastwards to **Amtaiwi** **امطيري**, and then for 12 miles further in the same direction till it ends in a **Rōdhah** or bottom named **Shahāmah** **شحه**. **Shahāmah** is situated in the **'Iblat-as-Sadair** **عيلة السدير**, which seems to be a sort of plain lying entirely to the east of the **Majma'**-**Jalājil** route and reaching almost as far south as **Tamair**.

The third valley, which we may call that of **Tuwaim**, begins in the neighbourhood of **Dhalmah** and trends at first south-eastwards to **Jalājil** which it leaves on the right, and **Tuwaim** which it leaves on the left bank; it then goes eastwards for about 15 miles and terminates in a **Rōdhah** under **'Abaid-al-Iblah** **عبيد العبله**, a hill in the centre of **'Iblat-as-Sadair**.

The fourth valley, known as **Bātin-as-Sadair**, is by far the most important and contains, with its affluents, a majority of the villages of the district. Its head is apparently a little to the west of **Tuwaim**, and it runs at first southwards, having **Dākhilah**, **Raudhah**, **Hasūn** and **Hautah** upon its left bank, and then **Janūbiyah**, **'Attār** (with **Janaifi** over against it) and **'Audah** upon its right; at **'Audah**, where it is about 15 miles north-west of the hamlet of **Hasi** in **'Aridh**, it turns eastwards and exchanges the name of **Bātin-as-Sadair** for that of **'Ajsh** **عجش** or **Aj** **اج**. From this point to its termination, 15 miles to the eastward, in a **Rōdhah** called **Haqāqah** **حقانه**, it forms the boundary between **Sadair** and **'Aridh**. **Haqāqah** is about 25 miles north-west of the **Khafs** basin

in 'Āridh. 'Ajsh has two tributaries from the north which enter it before it reaches Haqāqah; the more western of the two comes down from the villages of Khatāmah and 'Ashairah and the other from Tamair. It is stated that when the Tuwaim valley is heavily flooded part of its water overflows into the Khatāmah affluent of 'Ajsh.

Sadair is partly arable, especially in the north, and in the valleys just described which furrow its surface at intervals and are sometimes steep-sided. The rest of its surface is down-land with some pasture, but bearing few trees. The rocks and soil of Sadair are reported to be generally calcareous.

Inhabitants.—The settled population of the district appears, from the table of towns and villages at the end of this article, to amount to about 21,000 souls. The predominating tribe are the Bani **Tamim** with about 7,500 persons; after them come the Bani **Khadhīr**, or inferior tribes of the district collectively, who number about 4,000. These again are followed by the **Dawāsir**, **Fadhūl**, **'Anizah**, and **'Ataibah**, with strengths of 2,500 to 1,000 each; the remainder are chiefly **Shammār**, or **Qahtān**, neither of whom are numerically considerable; there are also a very few **Harb**, Bani **Khālid**, **Mutair** and **'Awāzim** or **Hawāzim**. The villagers of Sadair are described as hardy and of good physique, with a complexion in some cases almost ruddy. Their houses have ordinarily stone foundations, but the walls are of clay.

The district is subject to visits from various Bedouin tribes, among whom are the **'Ataibah** and the **Mutair**.

Agricultural and other resources.—The nature of cultivation in Sadair will be apparent from the topographical table which concludes this article. The crops are watered from wells of 6 to 20 fathoms; the most important staples are dates, wheat and barley; but lucerne, melons, water melons and some ordinary fruits such as grapes, citrons and pomegranates are also grown. Domestic animals are chiefly camels, donkeys, horned cattle and sheep and goats; both camels and bullocks are used to work the water lifts. Horses are few. Poultry and pigeons are plentiful in the villages of Sadair; but ducks, unless an occasional wild duck, are never seen. There is little local trade: **Majma'** and **Zilfi** are the sole commercial centres, and they are so only upon a small scale.

Communications.—The principal route is that from **Buraidah** to **Biyādh**, which traverses the district lengthwise; it is described in the

article on **Najd**. The roads of Sadair are not entirely safe, and the 'Ajsh valley in particular has an evil reputation as being haunted by marauding Bedouins, generally **'Ataibah**; this fact is referred to by a local poet in a line in which he speaks of جنوب العيش درب الجمع الصائل , "the neighbourhood of 'Ajsh, the highroad of the attacking bands."

Administration.—Sadair belongs to the Wahhābi dominions; it was formerly ruled through an indigenous family who had their seat at **Majma'**; but, as early as 1862 at least, a Wahhābi governor had been stationed at Tuwaim. There is again at the present time a non-local Wahhābi official in Sadair, but he has his headquarters at **Majma'**. The present relations of the Shaikh of **Majma'** with the Wahhābi ruler are noticed in the article on that town.

Topography.—The following are the chief towns and villages of Sadair in their alphabetical order:—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Ashairah عشيرة	Upon a hollow which is a left bank tributary of 'Ajsh.	About 150 houses, viz., 60 of Bani Tamīm, 40 of Fadhūl, 4 of Mutair and 50 of interior tribes. The houses are of clay and are perched on a hill overlooking the date groves. Half the able-bodied population of this village are said to be at present at Kuwait or Basrah in search of employment (1907).	There are considerable date groves, but no other fruit trees. The ordinary cereals, lucerne, melons and water melons are grown. The wells are 6 to 14 fathoms deep, but sometimes dry up, causing the village to be deserted. Livestock are estimated at 200 camels, 100 cattle, and 40 donkeys, besides sheep and goats, but there are no horses.
'Attārah عطار	On the west side of the Bātin-as-Sadair near its lower end, a few miles above 'Audah.	About 125 houses, viz., 80 of Sabai', 25 of Shammar of the Qidārah section, 20 of Fadhūl and 50 of Bani Khadhīr.	There are large date plantations; the only other fruits besides dates are grapes and citrons. The usual cereals, lucerne, melons and water melons are cultivated. The water level is at 8 to 14 fathoms. There are 30 camels, 20 donkeys and 50 cattle, besides sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
'Audah عودة	On the west side of the Bātin-as-Sadair at its southern end, about 15 miles north-west of the hamlet of Hasi in 'Aridh.	200 houses, viz., 70 of Dawāsir, 70 of Bani Tamīm and 60 of Bani Khadhīr.	The ordinary crops are those of the preceding villages; the date groves are large, and besides dates there are vines, citrons and pomegranates. Water is at 12 to 20 fathoms. Animals are 150 camels, 200 cattle and 50 donkeys, also sheep and goats. Both camels and bullocks are used to work the water lifts.
Dakhilah داحله	At the head of the Bātin-as-Sadair, a few miles east of Tuwaim.	About 45 houses, viz., 25 of Bani Tamīm, 8 of 'Anizah of the Al Bū Raba' section and 10 of Bani Khadhīr.	The date plantations are small and there are no fruit trees. The other crops are as in the villages above. Water is at 8 to 14 fathoms. The usual animals are kept. There are no horses.
Dhalmah دلمه	About 6 miles south-west of Majma', further up the torrent on which Majma' stands, and about the same distance (probably southwards) from Ruwaidhah.	15 houses, viz., 10 of Bani Tamīm of the 'Abdul Jabbār section and 5 of 'Anizah of the 'Askar section, the whole forming a Qasr.	There are wells 6 to 10 fathoms deep and some dates.
Ghāt غات	About 20 miles south-south-east of Zilfi and 25 miles west-north-west of Majma' on the route between the two, at the exit from Jabal Tuwaiq of a torrent bed which comes down from Ruwaidhah and Khīs.	170 houses, viz., 130 of Dawāsir, 20 of Sabai' and 20 of Bani Khadhīr. There are also some 'Awāzim or Hawāzim.	The village is built in terraces on the slopes of Jabal Tuwaiq upon the east side of the torrent bed. The date plantations are extensive; they are chiefly on the same side of the valley as the village and extend along it for some miles. Citrons, grapes, pomegranates, figs, peaches and the ordinary cereals and other crops of Sadair are grown; all the cultivation is irrigated. Some date plantations near the 'Adhaidān spur of Jabal Tuwaiq on the way to Zilfi are owned by the

Name.	Position.	Houses and inhabitants.	REMARKS.
Harmah حرمه	Close to Majma' on the east or north-east, upon a left bank tributary of the drainage hollow which passes Majma'.	240 houses, viz., 140 of Bani Tamim of the Al Madhi section, 40 of 'Anizah, 30 of Sabai' and 30 of Bani Khadhīr.	'Awāzīm of Ghāt. Water is good; the depth of the wells varies from 6 to 14 fathoms according to rainfall. There are 3 or 4 horses here, also 200 camels, 80 donkeys and 300 cattle, besides sheep and goats. Some 'Abas are manufactured.
Hasūn حصون	On the east side of the Bātin-as-Sadair a few miles below Raudhah.	About 40 houses, viz., 15 of Dawāsīr, 14 of Bani Tamim and 10 of Bani Khadhīr.	There are the usual dates, other fruits, and crops of Sadair; also livestock, but no horses. Water is at 7 to 14 fathoms.
Hautah حوطه	On the east side of the Bātin-as-Sadair about the middle of its course.	150 houses, viz., 110 of Bani Tamim (40 of the Nawāsīr and 70 of the Husain section), 10 of Sabai' and 30 of Bani Khadhīr.	The date groves are extensive. Other fruits, cereals and lucerne grow, as elsewhere in Sadair. The water level is at 7 to 18 fathoms. Animals are about 40 camels, 30 donkeys and 100 cattle, besides sheep and goats.
Ijwai اچوي	About 6 miles from Majma' on the way to Jalājil, on a hollow that drains to Qadhaimah on the Majma' torrent.	20 houses of 'Anizah.	There are some dates.
Jalājil جلالجل	On the route between Majma' and Tuwain, considerably nearer to the latter.	400 houses, viz., 180 of Bani Tamim, 150 of Dawāsīr of the Bidārin section, and 70 of Bani Khadhīr.	The place is walled and many of the houses have upper storeys. There are very large date plantations, also the other ordinary fruit trees; cereals, lucerne and melons are produced in abundance. The

Name.	Position.	Houses and inhabitants.	REMARKS.
			depth of the wells is 6 to 14 fathoms. There are no horses, but about 400 camels, 150 donkeys and 200 cattle besides sheep and goats are kept.
Janaifi جنيفي	East of and close to 'Attār, on the eastern side of the Bātin-as-Sadair.	About 20 houses.	There are some inconsiderable date plantations.
Janṭbiyah جنوبية	On the west side of the Bātin-as-Sadair immediately below Hautah.	About 80 houses, viz., 50 of Bani Tamīm, 14 of 'Anizah and 15 of Bani Khadhīr.	There are considerable date groves; and citrons, pomegranates, figs and grapes are cultivated as well as dates. The usual cereals, lucerne, melons and water melons are grown. The water level is at 7 to 18 fathoms. No horses; but the ordinary livestock of the country are kept.
Khatāmah خطامة	On the same drainage hollow as 'Ashairah, a little above and to the north of it.	40 houses, viz., 20 of Sabai, 10 of Bani Tamīm and 10 of Bani Khadhīr.	Dates are few, and there are no other fruit trees. Lucerne, melons and water melons are in small quantities only. Water is scanty, at 6 to 14 fathoms.
Khis خيس	To the west of the route between Ghāt and Majma', on the valley that goes down from Ruwaidhah to Ghāt.	About 40 houses, viz., 14 of Bani Tamīm, 10 of 'Anizah, 10 of Sabai' and 5 of Bani Khadhīr.	An ordinary village of Sadair in every respect.
Ma'ashibah معاشبه	South and somewhat west of Jalājil, midway between that place and Haraiyiq in Washam.	20 houses of Dawāsir.	Some dates grow here.
Majma' مجمع	About 25 miles south-east of Ghāt and perhaps 34	...	See article Majma'.

Name.	Position.	Houses and inhabitants.	REMARKS.
	miles north-north-west of Tuwaim, on the route from Zilfī to Riyādh.		
Raudhah روضه	On the east side of the Bātin-as-Sadair near its head, perhaps 10 miles to the south of Jalājil.	280 houses, <i>viz.</i> , 130 of Bani Tamīm of the Al Mādhi section, 60 of Dawāsir, 40 of Qahtān and 50 of Bani Khadhīr.	The date groves are large and other cultivation is ordinary. The wells are 8 to 18 fathoms deep. There are the usual livestock of Sadair and two or three horses.
Ruwaidhah رويضه	Near the head of the hollow which goes down by Khis to Ghāt.	About 70 houses, <i>viz.</i> , 20 of 'Anizah, 20 of Bani Tamīm, 8 of Dawāsir, 8 of Sabai' and 15 of Bani Khadhīr.	There are the usual cultivation and livestock of Sadair. The wells vary in depth from 6 to 12 fathoms.
Tamair تمير	About 10 miles south-south-east of Tuwaim on the way to Thādiq.	270 houses, <i>viz.</i> , 240 of Bani Tamīm and 30 of Bani Khadhīr.	A light coloured rock bearing the remains of a fort adjoins the place. The date groves are extensive and there are the usual fruit trees and cereals, besides lucerne, melons and water melons. The water level is at 6 to 12 fathoms. Horses there are none, but the usual livestock are found, and this village is described as specially rich in sheep and goats.
Tuwaim تويم	About 33 miles south-south-east of Majma' on the route to Riyādh and 35 miles north by west of Thādiq.	220 houses, <i>viz.</i> , 70 of 'Anizah, 40 of Fadhūl, 40 of Bani Tamīm and 70 of Bani Khadhīr.	A walled village, described as standing high on the second step of the Tuwaiq plateau. It contains a number of upper-storeyed houses. The date groves are extensive, other cultivation and livestock are average. In 1862 Tuwaim and not Majma' was the seat of the Wahhābi governor of Sadair.

Name.	Position.	Houses and inhabitants.	REMARKS.
Wushai وشي	Adjoins Ijwai on the south-west and is situated on the same torrent.	10 houses of Bani Tamim.	There is a little date cultivation here.
Zilfi زلفي	About 60 miles east of Buraidah and a little over 40 north-west of Majma'. By some Zilfi is reckoned to Qasim and not to Sadair.	...	See article Zilfi.

It will be observed from the paragraph above on physical geography that these places, only Ghāt, Khis, Ruwaidhah, Zilfi and perhaps Ma'ashibah being excepted, must lie in the eastern slopes of Jabal Tuwaiq.

SAFWĀN صفوان

A village in Turkish 'Irāq situated on slightly rising ground, just within the Turkish frontier, 17 miles south of Zubair Town and 56 miles north of Jahrah in Kuwait territory : it is visible to a distance of about 10 miles from both north and south. The place consists of two or three small enclosures containing a few houses and of a date grove, surrounded by a wall, belonging to the Naqib of Basrah. Lucerne and a few sheep are the only supplies available. To the east of the date grove is a post garrisoned by a detachment of 40 regular Turkish infantry, and 1 mile to the west is a Bedouin halting place with wells of passable water 12 feet deep : between the halting place and the village is a ruined enclosure. Jabal Sanām stands 5 miles west of the village.

SAHĀBAH سهبه

An extensive tract, said to measure 5 caravan-days (perhaps 100 miles) in any direction, and to lie between Southern Najd and the Dahānah desert, immediately to the north-east of the district of Kharj ; it begins about three miles from the village of Yamāmah in Kharj.

Sahābah proper has a sandy soil, but some wheat is grown by irrigation from an unfailing spring, called Umm Khīṣah أم خيسه, of which the waters reach to a distance of 18 miles from its source. The drainage of Wādī Hanīfah and of the Harīq-Hauta-Kharj system flows across Sahābah and is lost in the Dahānah. Parts of Sahābah are swampy at times and oblige caravans from Kharj to Hasa to make a détour.

The south-easternmost subdivision of the Wilāyat of Sohār in the Sultanate of 'Omān : it is governed by an official subordinate to the Wālī of Sohār and its capital is the town of Saham. The villages, which are mostly upon the coast, lie in the following order from south-east to north-west :—

SAHAM
SUB-
WILĀYAT

Village.	Houses and inhabitants.	REMARKS.
Qasbiyat-az-Za'āb قصبية الزعاب	25 houses of Za'āb.	The people are date-owners, cultivators and fishermen. There are no shops, and supplies are obtained from Khābūrah which lies 4 miles to the south-south-east. There are a few Shāshahs, but no livestock worthy of mention.
Qasbiyat-al-Hawāsinah قصبية الحواسنة	30 houses of Hawāsinah of the Aulād Rashaid section.	The inhabitants cultivate and f-h. They have a few Shāshahs, but not many animals.
Qasbiyat Āl Bū Sa'id قصبية آل بو سعيد	20 houses of Āl Bū Sa'id.	There are 20 Shāshahs, and animals are 10 camels, 8 donkeys, 10 cattle and 30 sheep and goats. Here Wādī Shā'ān reaches the sea.
Qasbiyat Yāl Braik قصبية يال بريك	70 houses of Yāl Braik.	Livestock are 7 camels, 10 donkeys, 15 cattle and 60 sheep and goats. There are 20 Shāshahs.
Sahailah سهيله	80 houses of mixed tribes.	Near the Qasbiyat. Henna is grown, and there are 10 camels, 40 donkeys, 20 cattle and 60 sheep and goats. No boats.
Khor-al-Milh خور الملح	80 houses of Bani Khālid.	The people cultivate and possess 8 camels, 15 donkeys, 20 cattle and 90 sheep and goats. No boats.

Village.	Houses and inhabitants.	REMARKS.
Falaj-al-Hijāri فلج الحجري	20 to 30 houses of Qawāsīm.	A mile inland from Khor-al Milh. Plantations belong to Badr-bin-Saif; they are not of great value. Livestock are 9 camels, 18 donkeys, 10 cattle and 80 sheep and goats. No boats.
Manātif منطيف	1,000 houses of Bani Khālid.	Village is scattered and consists of 5 quarters, each of which is called Mantaifāh منطيفه. It extends along the coast for 3 or 4 miles, rather nearer to Khābūrah than to Saham.
Dil Yāl Braik ديل يال بريك	90 houses of Yāl Braik.	A mile or so from the other Dil. The people grow dates, wheat, sugar and cotton and export firewood from Hajar to Masqat Town. There are 10 Shāshahs, 15 fishing boats, 6 camels, 15 donkeys, 10 cattle and 40 sheep and goats.
Dil Yāl 'Abdas-Salām ديل يال عبد السلام	100 houses of Yāl 'Abdas-Salām.	There are 10 Badans, 15 Shāshahs and 25 fishing boats. Animals are 8 camels, 20 donkeys, 20 cattle and 50 sheep and goats.
Umm-al-Ja'arīf ام الجعاريف	50 houses of Yāl Braik.	This is a fishing village only, with 7 Badans, 8 Shāshahs and 15 fishing boats. There are 7 donkeys and 10 sheep and goats.
Makhailif مخيليف	70 houses of Fazāra.'	There are dates and cultivation of sugarcane, wheat and barley. No boats. Animals are 10 donkeys, 7 cattle and 20 sheep and goats. This place is 15 miles north-west of Khābūrah.
Khor-al-Hamām خور الحمام	30 houses of Marāzīq, also Shamūs and Fazāra'.	The people depend on dates and cultivation. There is no trade and they own no large boats. They have 3 Shāshahs, 4 fishing boats, 6 donkeys, 5 cattle and 10 sheep and goats.
Saham Town صحم	See article Saham Town. Wādī Sarrāmi reaches the sea on the east side of this place, and Wādī 'Abīn a little to the west of it.

Village.	Houses and inhabitants.	REMARKS.
Sūr-ash-Shiyādi سور الشياطي	60 houses of Shiyādi and Persians.	Earthenware is made here. There are no boats. Animals are 8 donkeys, 10 cattle and 30 sheep and goats.
Ghuwaisah غويسة	30 houses of Shiyādi, Bani 'Adi and Persians.	This village is a little inland of Sūr-ash-Shiyādi. The people are mostly shepherds, etc., owning 80 camels, 15 donkeys, 30 cattle and 600 sheep and goats. No boats.
Abu Dhurūs أبو ضروص	40 houses of Za'āb and Shiyādi.	Earthenware is manufactured: there are 8 Shāshahs, 4 donkeys, 20 cattle and 15 sheep and goats.

These villages are supplied with water from wells, which are numerous. The palm groves of the whole group comprise about 30,000 trees. The settled population of the sub-Wilāyat appears to be about 12,800 souls.

A town upon the Bātinah coast of the 'Omān Sultanate composed of a number of separate quarters; it is the capital of the Saham subdivision of the Sultān of 'Omān's Sohār Wilāyat and is situated 18 miles north-west of Khābūrah and 15 miles south-east of Sohār Town, a mile or two to the east of the mouth of Wādi 'Āhin. It is the largest port next to Sohār in the Wilāyat of Sohār, serving Wādis Sarrāmi and Shāfān and to some extent Wādi 'Āhin, and to it belong some 30 Badans running to Masqat Town, Shinās Town and the Persian Gulf, also 30 fishing-boats and 40 Shāshahs. The divisions of the town are the following:—

SAHAM
صحم
TOWN

Quarter.	Houses and inhabitants.	REMARKS.
Ruwaitah (I) رويله	100 houses of Yāl Braik.	People are sailors and fishermen.
Ruwaitah (II) رويله	40 houses of Za'āb,	Do.
Hillat-as-Sūq حلة السوق	200 houses of Za'āb, Bayāsirah, Bani 'Ali and Balūchis.	There is a bazaar of 50 shops. Ten or twelve Hindu traders reside here.

Quarter.	Houses and inhabitants.	REMARKS.
Hillat Bani Suhail حَلَّةُ بَنِي سُهَيْل	100 houses including a few of Shibūh of the Bani Shat'air section who are servants of the Bani 'Ali.	This quarter is on the west side of Hillat-as-Sūq.
Sūr-al-Balūsh سُورُ الْبَلُوش	300 houses of Balūchis.	This is a suburb and stands a little back from the sea.
Hillat-al-Manqal حَلَّةُ الْمَنْقَل	20 houses of mixed tribes, mostly menial.	This also is a suburb.

The total population of the town is thus about 3,800 souls.

Most of the dwellings in the town are mere huts. The inhabitants are fishermen and cultivate dates, their palms numbering about 15,000; livestock are 30 camels, 40 donkeys, 300 cattle and 300 sheep and goats. Water is from wells, which are numerous. There are at this place six Hindu traders and one Muhammadan trader who is under British protection. The garrison under the orders of the sub-governor consists of only 10 men.

SAHTAN
(WĀDĪ)
وَادِي سَحْتَن

A valley in the Western Hajar district of the 'Omān Sultanate; it is a right bank tributary of Wādi Bani Ghāfir, which it joins close to the village of Tabāqah, and contains the following villages:—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Amq عَمَق	At the head of the valley.	50 houses of 'Abriyīn.	There is a fort here held by the inhabitants. Animals are 60 camels, 20 donkeys, 20 cattle and 150 sheep and goats. Date palms are estimated at 2,000.
Fashah فَشَح	1½ hours below 'Amq.	30 do.	Wheat is grown and there are 20 camels, 40 cattle and 50 sheep and goats. Date trees number about 2,000.
Maqamma مَقَامَا	2 miles below Fashah.	20 do.	Wheat is grown and there are 600 palms. Livestock are 80 camels, 150 cattle and 1,000 sheep and goats.
Mabu مَبْر	2 hours below Maqamma.	4 do.	The people are grass cutters and have only 4 cattle; there are 700 date trees.

Name.	Position.	Houses and inhabitants.	REMARKS.
Khadhra خضرا	2 hours below Mabu and 1 hour from Tabā- qah in Wadi Bani Ghā- fir.	40 houses of Miyāyihah.	Wheat is cultivated and animals are 20 cattle and 250 sheep and goats. Palms number 500.

The fixed population of the valley is about 700 souls.

Wadi Sahtan contains flowing water, and a Falaj called 'Atābi عطابي runs through it.

An Arab tribe of Southern Najd, both settled and nomadic. Fixed Sahūl are found in Āridh at Barrah, Malham and Dhrumah; in Hariq at Hariq town and Mufaijir; in Hautah at Hautah town; and in Aflāj at Harādhah and Stārah. Those at Malham belong to a section Āl Sulaimān آل سليمان, those at Harādhah to a section 'Anājīd عناجيد, and those at Stārah to a section Qubābinah قبابنه.* Sahūl Bedouins camp in 'Āridh and sometimes in the Turkish province of Hasa. By some authorities the Sahūl are regarded as a branch of the Sabai'.

SAHŪL
سهول

Singular Āl Bū Sa'idī آل بو سعيدي; an important and widely diffused though not very large tribe in the Sultanate of 'Omān, to which belongs the family of the Sultāns of 'Omān. The Āl Bū Sa'id are of the Hināwi political faction and Ibādhis by religion except a few who reside in Bātinah and are Sunnis.

SA'ID
(ĀL BŪ)
آل بو سعيد

The Āl Bū Sa'id are found at Masqat Town (8 houses), where they mostly belong to the Sultān's family; at Sawāqim (20 houses)

* A list by Col. E. C. Ross of the sections of the Sahūl will be found in the Persian Gulf Administration Report for 1879-80.

in Wādi **Mijlās**, and at **Hail-al-Ghāf** in Wādi **Tāyīn**; at **Dhiyān** (65 houses) and at **Qasbiyat Āl Bū Sa'id** (20 houses) in **Bātinah**; at **Hibra** (80 houses) in Wādi **Ma'āwal**; at **Fath Āl Bū Sa'id** (50 houses) in Wādi **Bōshar**; at **Hārat-al-Jabah** (20 houses) and at **Bait-al-Qarn** (5 houses) in Wādi **Fara'**; at **Jammār** (75 houses) in Wādi **Sāmāil**; and at **Samad** (50 houses), **Khadhar** (25 houses) and **Shari'at Āl Bū Sa'id** (10 houses) in Wādi **Samad**. In 'Omān Proper, which is their headquarters, they have settlements at **Adam** (150 houses), **Birkat-al-Mōz** (20 houses), **Falaj** (20 houses), **Mahyūl** (10 houses), **Manah** (200 houses), **Nizwa** (250 houses) and **Raddah** (20 houses). In all the tribe number about 6,000 souls.

SAIH

سايح

A somewhat populous village or group of villages in the **Aflaj** district of **Najd**, covering a space of about six miles in length from north to south by two miles in breadth; the central portion of **Saih** appears to be about four miles south-east of **Lailah** and seven miles north-east of **Raudhah**. The settlement is said to consist of about 1,000 houses, of which 50 are occupied by **Ashrāf** of the **Hāmid** section and the remainder by **Bani Khadhīr**. Some of the inhabitants of **Lailah** own date palms in **Saih**, but they never reside at **Saih** except in the date season, and even then their interests are sometimes left in charge of their cultivators or agents. On the other hand a large number of **Dawāsir** of the 'Ammār section, estimated at 2,000 souls, flock into **Saih** in the hot weather; nearly all the subsections of the 'Ammār own date groves here. The winter population may accordingly be estimated at 5,000 and the summer population at 7,000 persons; or, with the dependent village of **Mishrif**, at 5,500 and 7,500, respectively. The date plantations are described as extensive and as containing a prodigious number of trees; the other fruits of **Najd** are also grown. Wheat is cultivated, also maize and millet to a small extent, but not barley. Lucerne is plentiful. Water stands in the wells at less than a fathom below the surface of the ground and is of fair quality. Camels are few, but other livestock are found in the proportions usual in **Najd**, except horses; these the 'Ammar **Dawāsir** possess in large numbers, but they do not keep them at **Saih**.

The following table contains some particulars of the principal quarters and other points of interest in Saih :-

Name.	Position.	Nature.	REMARKS.
Fuwaidhaliyah فويضاليه	On the road from Saih to Lailah, at the point where the Saih date plantations end.	A tiny hamlet of 5 houses.	Included in the estimate of total population given above.
Khizām خزام	On the eastern confines of the Saih plantations.	One of the enclosures composing Saih.
Lazīdi لذيدي	Towards the western side of Saih, in the bounds of the village called Mishrif.	A fort with mud walls which has not been occupied within the memory of man.	This is described as a huge square construction, with faces each 200 yards long and walls very high and thick which are still in good preservation. It is ascribed by local tradition to the Banul-Asfar بنو الاصفر, a race of foreigners who flourished in the ages before Muhammad.
Masīmah مسيمة	On the western margin of the Saih date groves.	One of the Qasrs, surrounded by plantations, which compose Saih.	It consists of about 30 houses of Bani Khadhīr.
Mishrif مشرِف	On the west side of Saih, round the fort called Lazīdi.	A distinct village rather than one of the quarters of Saih: this has been recognised in calculating the population of Saih (see above).	Mishrif consists of about, 100 houses of Bani Khadhīr of the Qasim section; these appear to be peasant proprietors and not mere cultivators as are the rest of their tribe in Aflāj.
Qatain قطاين	Towards the east side of the Saih date plantations.	One of the two principal quarters which compose Saih, the other being Thillah.	The permanent inhabitants are Bani Khadhīr and there is a great influx of nomads in the season.
Thillah ثله	Ditto. It is about 2 miles south and slightly to the east of Qatain.	This is the other principal quarter of Saih besides Qatain.	Ditto.

SAIJĀNI
(WĀDI)

وادي سيجاني

A small valley in the Eastern Hajar of the 'Omān Sultanate; it rises to the west of Wādi-al-'Aqq which it joins at the village of Fankh.

Wādi-Saijāni contains the following villages :—

Name.	Position.	On which bank situated.	Houses and inhabitants.	REMARKS.
Mizra' مزرح	At the head of the valley.	Right.	20 houses of Nidābiyin.	12 camels, 20 donkeys, 15 cattle, 60 sheep and 600 date trees.
Mizra'-al-Haitani مزرح الهيتاني	1 mile below Mizra'.	Do.	30 houses of Nidābiyin.	15 camels, 20 donkeys, 20 cattle, 70 sheep and 300 date palms.
Rissah رسة or Bū Mubāsili بو مباسلي	Immediately below Mizra'-al-Haitani.	Left.	20 houses of Siyābiyin of the Mubāsili section.	10 camels, 15 donkeys, 12 cattle, 50 sheep and goats and 1,500 palms.
Saijāni سيجاني	1 mile below Rissah and 2 miles above the junction with Wādi-al-'Aqq.	Do.	100 houses of Siyābiyin.	75 camels, 70 donkeys, 50 cattle, 270 sheep and goats and 1,500 palms.

The total population of the valley is thus about 850 souls.

SAIQ
سيق

A village in Jabal Akhdhar in the Sultanate of 'Omān, the largest and most important after Sharaijah, from which it lies about $1\frac{1}{2}$ miles westwards. It is picturesquely situated under a scarp, 400 feet high, which is ascended by a staircase cut in the rock. The houses are of stone plastered with yellow clay, but stand out white from a green setting of fruit trees. The inhabitants are 60 families of Bani Riyām of the Jawāmīd section. There is a small Falaj for irrigation, and two crops of wheat and jowari are reaped in the year. The gardens contain roses, myrtle and jasmine, and there are vines supported on rude but strong trellises; also pomegranate and plum trees, but no date palms. Animals are 40 donkeys, 40 cattle and 600 sheep and goats. The place consists like Sharaijah of a parent village and of two offshoots named 'Ain and 'Aqar. "Saiq" is said to mean a cleft or a chasm.

A place on the southern border of **Qatar** about midway between the eastern and western coasts ; it is approximately 37 miles south-south-east of the foot of **Dōhat-as-Salwa** and 44 miles south-west of **Dōhah**. There are here a masonry well and some small date plantations which are tended by the servants of **Jāsim**, the chief Shaikh of the **Āl Thāni** of **Qatar**. In the vicinity are some hills, one carrying a look-out post where a man is stationed in times of trouble to watch for hostile Bedouins.

SAKAK
السكك

The capital of the **Dhufār** District, situated about 6 miles from the west end of the plain of **Dhufār** Proper at a short distance inland. The village consists of two portions about $\frac{1}{4}$ of a mile apart and at equal distances from the sea: a few hundred yards to the north of either portion is a cemetery surrounded by a low wall. The eastern division of the village contains about 150 houses, some of them good with one and even two upper storeys, also a spacious and well built mosque ; the western division is composed of about 100 houses ; in both the houses are nearly all of stone. There is no school. The inhabitants of **Salālah** are **Āl Kathīr** of the **Bū Ghawwās**, **Bait 'Amr-bin-Muhammad** and **Bait-al-Marhūn** sections. There are no Indians nor **Balūchis**. A few traders in piece-goods from **Shihr** do business here in summer and return to their homes for the winter. Cotton and wheat are grown, also tobacco, sugarcane, melons and a few figs. About $\frac{1}{4}$ of a mile from **Salālah** on the way to **Hisn** are quarries of a peculiarly white and handsome but not very durable stone : of this material most of the houses in the neighbourhood are constructed. **Salālah** is garrisoned by about 20 'Askaris of the Sultān of 'Omān.

SALĀLAH
صلالة

A long island or chain of islands off the coast of **Dhafrah** in Trucial 'Omān ; it begins 28 miles south-west of **Abu Dhabi** Town and extends westwards some 30 miles, parallel to the mainland and at a short distance from it. If we regard the group as one island, the land being practically continuous at low water, we may say that the east end is called **Salāli**, the middle **Abul Abyadh** ابو الابيض, and the west end **Miqaishit** مقيشيت. The extreme western end is called **Rās Miqaishit**. **Salāli** is included in the **Abu Dhabi** Principality.

SALĀLI
سلالي

**SALĀMAH-
WA-
BINĀT-
HA***

سلامه وبناتها

“Salāmah and her daughters,” known to Europeans as “the Quoins,” a remarkable group of 3 rocky islets lying in the entrance of the Persian Gulf north of Musandam island. Salāmah or the Great Quoin, 540 feet high, is 7 miles from Rās Musandam and visible, in clear weather, 27 miles. It is half a mile across, and in profile wedge-shaped, having the perpendicular fall on the south-east side: the north-west side alone is accessible: there is a small detached fragment of rock in the sea about 80 yards off the north side. The Little Quoin, 168 feet high, is 5 miles from Rās Musandam: its highest bluff is on the south side and this island is accessible from the north only. Between the 2 Quoins and a little to the north-east of a line joining them is “Gap Island,” the third of the group, which has cliffs all round and a peak 250 feet high in the centre. The Shihūh of Kumzār call the Great Quoin Mūmar مومر, the Little Quoin Didāmar دیدامر or Shanaku شنکو and Gap Island Fanaku فنکو: Mūmar appears to be a Kumzārī word for “mother” and Didāmar for “daughter.”

SALĀMĀT

سلامات

An Arab tribe of the Ahwāz District in Southern 'Arabistān, numbering perhaps 1,600 souls; they are connected politically with the Bāwiyeh. Most of the Salāmāt live in tents: they grow wheat and barley and own a considerable quantity of livestock. The particulars available about the Salāmāt are given in the following table, from which it will be seen that they have some 460 fighting men, of whom half possess rifles and 130 are mounted:—

Section.	Subsections.	Location.	Fighting strength.	REMARKS.
Hamad-as-Sālim حمد السالم	...	North of the Haddām, 5 miles east of Saiyid Hasan on the Gar-gar.	100, of whom 40 have rifles and 30 are mounted.	This section, named after its present Shaikh, includes a subsection called Āl Bū Ghuwainam آل بو غوينم. The Hamad-as-Sālim have 4,000 sheep and goats and are said to pay 100 Tūmāns a year as revenue to the Shaikh of Muḥam-mareh.

* A view of these islets is given in Chart No. 2373—3837 A.

Section.	Subsections.	Location.	Fighting strength.	REMARKS.
Māsakh ماضح	Huwaidi هريدي and Suwaidāt سويدات.	Buwairdeh, 4 to 5 miles east of Wais.	200, of whom 100 have rifles and 60 are mounted.	This section is named after its present Shaikh. The live- stock belonging to it are 50 camels and 6,000 sheep and goats. The revenue payable yearly by this section to the Shaikh of Muham- mareh is said to be 400 Tūmāns.
Wais ('Abdu) عبدوريش	Badrān (Al Bā) آل بو بدران, Dhāhi (Bait) ضاهي and Bait Hāji Tubbāsh. طحباش. The Bait Tubbāsh includes a small- er division called Al Bū Warrāo آل بو ورار.	Hubaishiyāt, 5 miles on the Ahwāz side of Raghai- weh.	160, of whom 80 have rifles and 40 are mounted.	This section also is called after its present Shaikh. The 'Abdu Wais have 70 mules, 50 cattle and 5,000 sheep and goats.

A few of the tribe are settled at the villages of Kraidi, Saiyid Hasan and Saiyid Muhammad upon the Gargar; but the sections to which these belong are uncertain. The rest of the tribe are nomads.

This is the commoner name and is derived from that of the original settler, but the island is also known as Muhilleh محله. It is situated on the Persian side of the Shatt-al-'Arab and belongs to Persia, being separated from 'Abbādān island, which it subtends from Hārtheh to Baraim, only by a shallow channel. The length of the island is about 5 miles, and its greatest breadth $2\frac{1}{2}$ miles; its upper end is about 4 miles below the junction of the Kārūn with the Shatt-al-'Arab. Hāji Salbūq is very fertile and is being gradually brought under cultivation: on the southern side, called Bahriyeh بحريه, there are several small villages. The ground appears to be rising, and already there are date plantations and wheat fields on the higher grounds, while in the lower rice is still

SALBUQ
(HĀJĪ)

حاجي سلبوق

grown. The whole of the cultivated land is irrigated by canals from the river.

In 1836 the main channel of the Shatt-al-'Arab ran between Hāji Salbūq and 'Abbādān island; what now remains of it is a boat passage, nearly closed at its upper end by a shoal, but having a width elsewhere of 400 to 700 yards and a depth in the fairway of 9 to 16 feet.*

SĀLEH (BANI)

بنی سالة

A large and strong Arab tribe of the Hawizeh District in Southern 'Arabistān, amounting to perhaps 15,000 souls. Their territory from north to south has an extent of about 20 miles, beginning a few miles south of Hawizeh Town; its eastern boundary is at a place called Shaikh Muhammad; and on the west it includes part of the Karkheh or Karkheh-Tigris marshes. The majority of the tribe engage in wheat and barley cultivation and own large flocks of sheep and herds of cattle besides about 3,000 camels; but certain of the subdivisions inhabit the marshes, where they cultivate rice, keep buffaloes and cattle, and move about in Mashhūfs and Tarādahs. The fighting strength of the Bani Sāleh is estimated at 1,000 horsemen and 3,350 footmen, and the proportion of rifles is about 1 to every 2 men. The tribe, which is Shī'ah in religion, is composed of the following divisions and subdivisions:—

Division.	Subdivision.	Fighting strength.	REMARKS.
'Adhār (Āl Bū) آل بو عذار	250	The family of the ruling chiefs belongs to this division.
Birāhineh براهينه	100	...
Ghanīmeḥ (Āl Bū) آل بو غنيمه	200	...
Halāf حلاف	'Abaiyid (Āl Bū) آل بو عبید	450	This subdivision is among those which inhabit the marshes.
Do.	Braiheh بريحه	200	Do.

* Details are fully shown in Commander Sinclair's *Sketch Survey*, 1905.

Division.	Subdivision.	Fighting strength.	REMARKS.
Halāf	Ghurbeh (Āl Bū) آل بو غربه	280	...
Do.	Hiyādir حيادر	550	This subdivision is among the marsh dwellers.
Do	Sakain (Bani) بنى سكين	200	
Do.	Sawaijit سورجيت	160	...
Do.	Sūdān سودان	350	...
Hamūdi حمودي	'Alwān علوان	550	...
Do.	Manjūr منجور		
Do.	Nahaiyo نحايو		
Do.	Suwairi صويري		
Do.	Suwaiyid سويد		
Do.	Dirairāt دريرات		
Do.	Hawaishim هويشم		
Do.	Mir'i مرعي	50	...
Do.	Zahairiyeh زهيرييه	80	...
Manāsīr مناصير	300	..
Qraiyyeh قرييه	100	...
Suwāt (Āl Bū) آل بو صواط	150	...

The Halāf Division were originally a separate tribe: they are now found among the Bani Turuf also, and perhaps among the Bani Tamīm.

SĀLIH
(NABI)
نبي صالح

In Bahrain generally spoken of simply as "Jazīrah." An island of the Bahrain group, situated in the large inlet of **Kabb** on the east side of Bahrain Island off the north-west corner of **Sitrah** Island. Jazīrat Nabi Sālih measures about $\frac{1}{2}$ a mile in each direction and is practically one large date grove, being entirely covered with palms which are said to number 16,000. At the south-eastern corner is a patch of sandstone, supplying material for the numerous solidly built tombs that are a feature of the place. Fresh water, derived from two copious springs named 'Ain-as-Safāhīyah عَيْن السَفَاحِيَّة and 'Ain-al-Khadhra عَيْن الْخَضْرَاء, is abundant. There are two villages inhabited by **Bahārinah**, who are pearl-divers, fishermen and cultivators : one, **Kāflān** كافلان, has 40 houses ; the other, **Quryah** قُريه, has 35. To these places belong 1 Baqārah, 8 Māshuwahs and jollyboats and one other boat, all used for pearling ; also 11 donkeys and 6 cattle.

About 200 yards north of Nabi Sālih is a still smaller island without houses, except 2 huts, but covered with date trees : it is called Jazaiyirah جزيره. The date palms here are now in the possession of Shaikh Khālid, brother of the Shaikh of Bahrain, but they were formerly attached to a Shi'ah mosque, of which the ruins are still visible at the spot.

Nabi Sālih is subject to the jurisdiction of the Shaikh of Bahrain's brother, Khālid-bin-'Ali, who ordinarily resides at **Rifā'**, ash, **Sharqi**.

SĀLIH
(QAL'AT)
قلعة صالح

Officially known as Shatrat-al-'Amārah شطرة العبارة ; a small town in Turkish 'Irāq on the left bank of the **Tigris**, 27 $\frac{1}{2}$ miles above 'Azair and 32 $\frac{1}{2}$ miles below 'Amārah Town by river ; it has grown up out of a small village during the last twelve years in consequence of the general pacification of the country and the development of the rice trade, of which it is a centre.

The town, divided into two portions by a canal, consists half of brick houses and half of huts ; and the population is 2,000 or somewhat more. The people, said to be of Central Arabian origin, are nearly all Muhammadans, Sunnis greatly predominating ; but there are some 400 Shi'ahs, about 50 Jews, and some **Sabians**. The **Sabians** are goldsmiths and make Mashhūf canoes. The surrounding tribe are the Āl Bū Muhammad ; the original fort, to which the place owes its name, belonged to Faisal, one of their chiefs.

There are some dates and the chief local products are rice, maize, millet, sesame, cucumbers, onions and radishes. The bazaar is well stocked with cotton cloth, sugar, coffee and tea, mostly from **Basrah**.

Qal'at Salih is the headquarters of the Qadha of Shatrat-al-'Amārah in the Sanjāq of 'Amārah; it has one Sabian and three Muhammadan schools and a customs house; and it is connected by a single line of telegraph with Qūrnah Village on the one side and Amārah Town on the other. The Dāirat-as-Saniyah have an office here.

A range of granite hills in Jabal Shammar, resembling Jabal Aja but inferior in size and importance. Jabal Salmah runs parallel to Jabal Aja at a distance of 30 miles to the south-east; it is lower than Jabal Aja and only about half the length, reaching to a corresponding distance on the north-east but falling short on the south-west. Hāil stands on the plain, called Batn, which is enclosed between the two ranges. Jabal Salmah is divided into two nearly equal lengths by a pass called Ri'-ash-Shara' ربيع الشرع, over which the road from Sab'an to Tābah runs at an elevation of 3,990 feet above the sea, or nearly 500 above the Batn plain. Both sections of the range contain craters or amphitheatres, accessible only by narrow gorges and exhibiting in their interiors basalt, granite, red basaltic schist and gravel conglomerate. The principal crater in the northern part of the range is entered by a gorge at the north-eastern corner which is called Ri' Fuqqah ربيع نقه and is the most difficult of the many passes in Jabal Salmah, being obstructed at its narrowest part by a step $3\frac{1}{2}$ feet high over which only strong unloaded camels can pass; it can also be reached however by a pass from Tābah. The approach to the chief amphitheatre in the south end is by Wādis Madhaiyih مضيق, Hōrah هرة, Matrafiyah مطرفيه, Dahshamiyah دهشميه and Mahdaj مهدج, and finally through a gorge called Ri' Mahdaj which loaded camels can pass in single file. Each of the principal amphitheatres contains many petty valleys, of which 49 belonging to the northern and 22 belonging to the southern have special names. Jabal Salmah also possesses a number of external valleys, the chief of these in the northern section being Na'ai نعاي, Rak رك, Jūb جوب, Amlah املاح, Shināyin شنين, Hamrah حمرة, Halqūm حلقوم, Hafiyah حفيه, Umm Harūj أم حرج, Tiryān تريك and 'Adwah عذرة; all drain towards Faïd except Tiryān, which has no outlet, and 'Adwah which goes towards the north-east. The exterior valleys of the southern section are those already mentioned as affording access to the southern amphitheatre, they form a series of which one leads into the next and all five are

SALMAH
(JABAL)
جبل سلمه

absolutely barren. The valleys of the north on the contrary mostly contain date palms belonging to **Shammar** of the Aslam section; these palms flourish on the natural water of the subsoil and receive no attention except when they are fertilised and again in the date harvest, when the owners camp beside them. Some of the Rī's can be passed by horses only after they have been unshod. Jabah Salmah is crossed by the route from **Hāil** to **Faid**, not however *viâ* the Rī'-ash-Shara,' but by a pass near the northern extremity of the range which is narrow, difficult, for camels even dangerous, and was in former times a noted lurking place of brigands.

SALŪ'

سارح

A tract in the **Kuwait** Principality between the district of 'Adān on the north and that of **Hazaim** on the south. Its extent is uncertain but may be considerable, possibly 30 miles from north to south and 20 miles from the sea inlands. Other accounts make it only a small locality towards the north end of the region between 'Adān and **Hazaim**. The name is derived from a peculiar geological formation consisting of more or less horizontal strata of rock interspersed with layers, about three feet thick, of sand and earth: the Arabs are accustomed to obtain water by excavating the soft parts. There are no very celebrated wells in **Salū'**, and water, where found, is generally fit only for animals. The surface of the **Salū'** tract is described as extremely sterile, consisting of a somewhat loose and dark-coloured sand, and bearing little or no vegetation except the **Silajj** plant.

On the coast the following maritime features between 'Adān on the north and **Hazaim** on the south may be regarded as connected with the **Salū'** tract:—the southern end of **Dōhat-az-Zarq**, **Rās-az-Zor**, **Ardh-al-Khor**, **Jabal Banāyah** and **Rās Bard-halq**. These are all described in the article on the **Kuwait** Principality.

SALUBA

صلبا

or

SALAI'B

صليب

Singular **Salubi** صليبي. A race or tribe dispersed in small nomadic groups all over **Najd**, in **Kuwait** territory, and to some extent in Turkish **Irāq**; their range is said to be from Syria in the north to Yaman in the south. In particular they are known to frequent **Haiyāniyah**

in the **Nafūd** and **Bir Taiyim** on the direct route from **Hāil** to **Najaf**.*

Numbers and divisions.—No estimate exists of their numbers, and nothing is known of their divisions; the different sections, however, appear to have fixed limits within which they wander; and there is said to be one section, called **Ghanaimi** غنيمي, which declines to intermarry with the others.

Appearance and character.—The Saluba are a peculiar and interesting people, but the problems of their origin and history are as yet unsolved, and may be insoluble. The cast of their features is almost European, their complexion is fair, their eyes are often light-coloured; and in character they are tolerant and humane, less suspicious and reserved than the Arabs, more peacefully inclined and more intelligent.

Mode of life.—The Saluba, though they own some cattle and flocks of sheep and goats, are extremely restless, and can hardly be described as a pastoral race. They are to a great extent hunters who live by the chase, but they eke out their subsistence by mechanical industries and veterinary surgery. They are reported to be excellent marksmen and unrivalled in the art of finding and stalking the gazelle and even the ostrich; in landcraft generally they are as superior to the Bedouins as the Bedouins are to the Hadhar or settled Arabs; and in the desert the Saluba are the safest of guides and the surest of water-finders. They own an exceptionally fine breed of donkeys, with which they go hunting and perform desert journeys that are difficult even to Bedouins mounted on dromedaries. They mend firearms, they tin pots and kettles, and they manufacture hatchets, sickles and flint-steels for the Bedouins and the inhabitants of the oases; but their work in this line is ruder than that of the **Sunnā'**. Workers in wood also, they make well-pulleys, milk-vessels and camel-saddles of desert acacia. They are besides the farriers and cattle surgeons of the Bedouins, to whom they also act as guides and for whom they perform many menial services. Their occupations vary with the season, and the summer, when the Bedouins have no milk to give them, is generally devoted by the Saluba of **Najd** to hunting in the desert: those of the **Kuwait** side encamp near the coast for four months in the hot season.

The Saluba subsist chiefly on dates, on the milk and ghi afforded by their flocks and herds, and on the flesh of the animals they kill in the chase; dried locusts are also a part of their diet; and the Arabs accuse them of feeding on carrion, such as sheep and camels that have died a

* See Route III (*ad fin.*) in the article on **Najd**.

natural death. In personal habits they are far from clean. Their dress often consists of a smock-frock made of gazelle skins.

Religion.—In religion they now conform, at least outwardly, to the Muhammadanism by which they are surrounded; but it is certain that they also possess, or possessed till 40 years ago, a religion of their own. When following their ancestral opinions they profess, it is said, belief in one God and respect for Muhammad as a man; revere some nameless celestial beings whom they style the “confidential friends of God”; pray three times a day, at sunrise, noon and sunset; fast three times a year, to wit for 30 days in Ramadhān, for 4 to 7 days in Sha’bān and for 5 to 9 days in one of the summer months; adore the Pole Star, which they call Jāh ج, by facing it and spreading out their arms so as to form a cross; respect a star named Jādī in the constellation Aries; and consider a part of Mesopotamia to be holy ground. They sometimes declare that they were originally Sabians, and the position of the North Star in their system of belief gives colour to the assertion. But it is difficult to predicate anything of a religion which is now concealed and is moreover in course of being superseded by another.

Customs.—Some of the customs of the Saluba appear to be peculiar to themselves. It is said that a child 40 days after its birth is seven times immersed in water, and that all male children are circumcised before they are seven years old; at the circumcision sheep are killed and all comers are made welcome to the feast. The marriage ceremony is simple and is performed in the presence of the fathers or next-of-kin of the bride and bridegroom; the voluntary consent of the principals is necessary and a present is given to the bride’s father; after this has been done, a greybeard asks the parties whether they agree to the union, receives a fee, pronounces them married, and sends them off to cohabit. Corpses are washed, wrapped in a white shroud, or when cloth is not procurable in a new deerskin mantle, and then interred with a prayer. The characteristic feature of Salubi festivals, especially their circumcisions and weddings, is the erection of a cross,* draped with red cloth and topped with feathers, at the door of the tent where the ceremony takes place: the planting of the cross serves as a general invitation to the neighbours to assemble and dance round it. In the Salubi dance the men lightly kiss their female partners on the shoulder, but do not otherwise touch them.

* Some of the authorities accordingly derive the term Saluba from Salīb صليب the word for a cross. Their cross-like attitude in addressing the North Star will also be recollected.

Political position.—The political position of the Saluba is peculiar, somewhat resembling that of the **Zatūt**. It is one of semi-subordination to the Arabs as a race. The Saluba wander among the Arab tribes and are friends with all, but remain entirely distinct and take no part in Arab feuds. The Arabs do not intermarry with them, and in joint camps the two communities pitch their tents apart. The Saluba have a patron in every considerable Arab tribe who protects them from wrong, and they pay a small tribute wherever they go. They themselves never plunder, and the Arabs generally disdain to injure them. Socially they are contemned by the Arabs, and an Arab will not drink out of the same vessel as a Salubi. To the west of **Hāil** in **Najd** they are called **Khalūwah** خَلْوَة or “Solitaries”; sometimes, in disdain, **Kilāb-al-Khala** كلاب الخلا or “Dogs of the Desert.” The term Salubi is sometimes used opprobriously in addressing members of other inferior tribes such as the **Hataim**, **Sharārāt** and **Sunnā**; yet a sickly Bedouin Arab child is occasionally named “Salubi” or “Khalūwi” in the hope of propitiating the fates to spare him.*

A considerable bay forming the southern extremity or foot of what may be called the Gulf of Bahrain, the sea, namely, which divides the shores of **Qatar** from those of **Hasa**. On the eastern shore of the bay is a small group of date groves belonging to Bedouins who profess allegiance to the **Āl Thāni Shaikh** of **Qatar**, also a few wells of indifferent water. One of the plantations, now abandoned, has a small spring of water which runs down to the sea and is resorted to by **Bani Hājir**. The route between **Hofuf** and **Dōhah** passes close to the foot of **Dōhat-as-Salwa**.

SALWA
(DŌHAT-
AS-)

دوحة السلوى

An important oasis and township of about 2,500 inhabitants; it is situated on the left bank of **Wādi Samad** in the **Baldān-al-Habūs** division of the **Sharqiyah** District of the **'Omān** Sultanate. The inhabitants are **Habūs** (130 houses), **Jahādhim** (100 houses), **Zikāwinah** (60 houses), **Āl Bū Sa'id** (50 houses), **Shurūj** (50 houses), **Hirth** (40 houses), and **Warūd** (40 houses). The crops grown are

SAMAD
سمد
TOWN

* The chief authorities on the Saluba are Doughty, *passim*, and Colvill in a note appended to Pelly's *Report on a Journey to the Wahabee Capital*.

wheat, barley, sugarcane and lucerne. Livestock are 300 camels, 200 donkeys, 200 cattle and 1,000 sheep and goats.

SAMAD
(WĀDI)
وادي سمد

A valley which rises in the Eastern Hajar in the Sultanate of 'Omān, and, after traversing part of the Baldān-al-Habūs division of the Sharqiyah District, joins Wādi 'Andām from the eastern side at a point opposite Khadhra Bin-Daffā'. The following are, in descending order, the villages of this Wādi:—

Name.	Position.	On which bank situated.	Houses and inhabitants.	REMARKS.
'Alo علو	Within the hills of Eastern Hajar.	Left.	40 houses of Habūs.	Resources are 10 camels, 30 donkeys, 10 cattle, 300 sheep and goats and 1,000 palms.
Rōdhah روده	Half an hour below 'Alo and a very short distance below the exit of the valley from the hills.	Do.	300 houses of Habūs.	But for the character of its water supply, which is unsatisfactory, Rōdhah and not Mudhaibi would be the tribal capital of the Habūs. The inhabitants of Rōdhah have 20 camels, 60 donkeys, 30 cattle, 700 sheep and goats and 2,000 date trees.
Khadhar خضر	Half an hour below Rōdhah.	Right.	50 houses of Habūs and Āl Bū S 'id.	Livestock are 25 donkeys, 10 cattle, 100 sheep and goats and 1,000 palms.
Sharī'at Āl Bū Sa'id شریعة آل بو سعید	One mile below Khadhar.	Left.	100 houses of Āl Bū Sa'id.	Here are 10 camels, 30 donkeys, 15 cattle, 200 sheep and goats and 1,500 date palms.
Samad Town سمد	...	Left.	...	See article Samad Town.
Maghsar مغسر	One mile below Samad Town.	Right.	70 houses of Habūs.	The inhabitants possess 30 camels, 20 donkeys, 50 cattle, 300 sheep and goats and 1,500 palms.

The junction of Wādi Samād with Wādi 'Andām at Khadhra Bin-Daffā' is about 6 miles below Maghsar. The population of Wādi Samād is about 5,500 souls. This valley forms part of the boundary between Sharqiyah and Eastern Hajar.

Also called Kūt Samāil كوت سمائل. An important place situated **SAMĀIL** on the right bank of Wādi Samāil in the 'Omān Sultanate and dividing **(HISN)** the 'Alāyah or upper valley, tenanted by Hināwi tribes, from the Sifālah حصن سمائل or lower valley, which is occupied by tribes of the opposite faction. The main feature is a fort, in the possession of the Sultān of 'Omān, commanding the great highway between coast and interior that lies up the valley. It stands on an isolated rocky eminence, scarped all round at the base and presenting a high precipitous cliff on the side towards the valley. On the east or lower side is a massive barbican containing 2 unfailing wells cut through the solid rock. The keep is a circular stone tower built on the highest point of the rock and contains a capacious water reservoir. The curtain walls connecting the keep and barbican enclose a considerable area of irregular shape. Immediately under the fort on the west side stands a collection of 30 or 40 houses and 60 shops which is called Sūq Samāil سوق سمائل. A Wāli ordinarily resides at Hisn Samāil on the part of the Sultān of 'Omān, and his authority is supported by a detachment of 25 'Askaris, under an 'Aqīd. About \$2,400 is annually collected as revenue, and of this a balance of \$1,000 reaches the Masqat treasury. Saiyid Faisal, present Sultān of 'Omān, owns some land and date plantations here as his private property; these have an annual value of \$2,000 and are at present assigned as a grant-in-aid to the Wāli.

The largest, the most populous, and politically the most important **SAMĀIL** valley in the Sultanate of 'Omān. It cuts the range or mountainous **(WĀDI)** district of Hajar across, dividing it into an eastern and a western mass, **وادي سمائل**, and is thus a leading feature in the physical geography of 'Omān.

Rising at Najd-al Mughbāriyah, called also Qarn-ad-Darū قرن الدرع, over which a pass leads into 'Omān Proper, the Wādi runs in a

north-north-easterly direction and reaches the coast by several mouths in the neighbourhood of **Sīb** after a course of about 50 miles. In different parts of its course it bears different names, and in strict parlance only a portion is called Samāil: within the hills it is first Wādī Bani Ruwāhah, then Wādī Samāil; after emerging from the higher hills it becomes successively Wādī Bidbid, Wādī Fanjah and Wādī Khōdh.

The Wādī Bani Ruwāhah section extends from Najd-al-Mughbāriyah to Darwāzah, a distance of 10 miles. The following, in descending order, are its villages:—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Mughbāriyah مغباريه	At the head of the valley.	Both.	100 houses of Bani Ruwāhah.	Resources are 25 donkeys, 20 cattle, 200 sheep and goats and 5,000 palms.
Hammah حمه	Near Mughbāriyah.	Right.	40 houses of Bani Ruwāhah.	Livestock are 20 donkeys, 30 cattle and 70 sheep and goats and 1,000 palms.
Mihall محل	Immediately below Hammah.	Do.	50 houses of Bani Ruwāhah.	The people are of the Bani Hāshim section. They have 25 donkeys, 40 cattle, 80 sheep and goats and 1,200 date trees.
Jināh جناح	Half a mile below Mihall.	Both.	70 houses of Bani Ruwāhah.	Resources are 30 donkeys, 50 cattle, 300 sheep and goats and 2,000 palms.
Rissah (I) رسة	One mile below Jināh.	Do.	50 houses of Bani Ruwāhah.	Here are 20 donkeys, 40 cattle, 200 sheep and goats and 1,500 date palms.
Biyāq بياق	3 miles below Rissah (I).	Right.	40 houses of Bani Ruwāhah.	The inhabitants belong to the Wilād Khamis and Wilād Mas'ūd sections. They have 15 donkeys, 30 cattle, 200 sheep and goats and 1,000 palms.
Qari قري	One mile below Biyāq.	Left.	20 houses of Bani Ruwāhah.	Resources are 10 donkeys, 20 cattle, 100 sheep and goats and 800 palms.

Persian Battery at Muhammareh.

[MAJ. P. Z. COX.]

Name.	Position.	On which bank.	Houses and inhabitants	REMARKS.
Himamt حميت	Between Qari and Wasād.	Both.	400 houses of Bani Ruwāhah.	Resources are 10 camels, 60 donkeys, 40 cattle and 600 sheep and goats.
Wasād وصاد	One mile below Qari.	Do.	70 houses of Bani Ruwāhah.	The people are of the Wilād Khalf section. They possess 30 donkeys, 50 cattle, 400 sheep and goats and 4,000 palms.
Wabāl وبال	$\frac{1}{2}$ a mile below Wasād and the same above Darwāzah.	Right.	50 houses of Bani Ruwāhah.	The inhabitants of Wabāl are of the Wilād Nāsir Muhammad section. A short distance below Wabāl is Darwāzah mentioned below.

Half a mile below Wabāl is a wall with towers, through a gate in which the highway passes; this barrier is Darwāzah دروازہ and its object is to close the route up the valley; it is permanently occupied by a tribal garrison of the Bani Ruwāhah. A desert plain called Saih سايح follows and forms the transition to the Samāil section of the valley.

About 4 miles below Darwāzah the village of Qurain is reached: particulars concerning it and the other villages which follow it in Wādi Samāil Proper are given in the table below:—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Qurain قرين	...	Right.	100 houses of Bani Hina.	The people are cultivators and carriers.
'Adhdah عصده	Opposite Qurain.	Left.	50 houses of Bani Ruwāhah.	Do.
Habbās حباس	Do.	Do.	20 houses of Shawāmis and 80 of Bani Hina.	Do.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Rissah (II) رساه	A little below Habbās.	Right.	40 houses of Zātūt Balūchis, and Bani Ruwāhah of the 'Awāmir section.	Opposite, on the left bank, there stood formerly a village Mad-rah مده, but it is now deserted.
Rufai'ah رفيعه	Immediately below Rissah.	Left.	80 houses of Bani Ruwāhah of the 'Awāmir section.	The people are traders.
Haili حيلي	Opposite Rissah.	Do.	200 houses of Bani Hina.	The inhabitants are cultivators and gardeners.
Qadimah قديمه	$\frac{1}{2}$ of an hour below Haili.	Do.	40 houses of Bani Hina.	Do.
Jammah جمه	Immediately below Qadimah.	Do.	50 houses of Bani Hina.	Do.
Sharqatain شرقتين	Partly opposite Jammah.	Both banks.	30 houses of Nabāhinah and Balūchi slaves.	The people are gardeners and carpenters.
Qarwāshiyah قراشيه	Do.	Do.	50 houses of Bani Ruwāhah of the Āl Mahram section.	Traders and gardeners.
Naghzah نغزه	Partly opposite Qarwāshiyah.	Right.	100 houses of Bani Hina and Bani Ruwāhah of the Bahālil section.	Do.
Suharah صحره	Partly opposite Naghzah.	Do.	100 houses of Bani Ruwāhah of the Wilād Khalil and Qurūn sections.	Dates are cultivated.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Hijrat Wilād Sa'ad حجرة ولاء سعد	Immediately below Suharah.	Right.	100 houses of Bani Ruwāḥah of the Wilād Sa'ad section.	Date cultivators and traders.
Jammār جمار	Opposite Hijrat Wilād Sa'ad.	Left.	150 houses of Bani Ruwāḥah and Al Bū Sa'id.	Do.
Hijrat-al-Bakriyīn حجرة البكريين	1 mile below Jammār.	Right.	100 houses of Bani Ruwāḥah of the Bakriyīn section.	The inhabitants are gardeners.
Ibrāhimiyyah ابراهيميه	Immediately below Hijrat-al-Bakriyīn.	Do.	40 houses of Bani Ruwāḥah of the Bakriyīn section.	Do.
Bait Walad-al-Khalilī بيت ولاء الخليلي	Immediately below Ibrāhimiyyah.	Do.	100 houses of Bani Ruwāḥah of the Wilād Khalilī section.	Nil.
Dighāl or Hijrat Dighāl حجرة دغال	Opposite Ibrāhimiyyah.	Left.	100 houses of Bani Ruwāḥah of the Aulād Wakil section.	The people are traders and cultivators.
Hārithiyyah حارثيه	Opposite Dighāl.	Right.	20 houses of Bani Hina.	Do.
Suhāriyyah صحاريه	Opposite Hārithiyyah.	Left.	30 houses of Balūchis.	The inhabitants are gardeners and carriers.
Salārah صدارة	Immediately below Hārithiyyah.	Right.	50 houses of Bani Ruwāḥah of the Aulād Bin-Bahis and Bakriyīn sections.	Nil.
Daqdaqain دقدقين	Opposite Hisn Samāil.	Left.	20 houses of Bani Ruwāḥah.	Gardeners.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Hisn Samāil حصن سمائل	Partly opposite Hārithiyah.	Right.	...	See article Hisn Samāil.
Hijrat-ad-Dābah حجرة الدابة	Just below Hisn Samāil.	Do.	80 houses of Bani Jābir.	The people are gardeners and provision merchants.
Murriyah مرية	Just below Hijrat-ad-Dābah.	Do.	50 houses of Bani Jābir.	The inhabitants trade and cultivate.
Khallūt خلوت	Just below Murriyah.	Do.	10 houses of Bani Jābir or their slaves and servants.	Cultivators.
Bistān بستان	1 mile below Hisn Samāil and just below Khallūt.	Do.	15 houses of Bani Jābir.	Do.
Jabailiyāt جبيليات	Opposite Bistān.	Left.	60 houses of Bani Jābir.	Cultivators and silver-smiths.
Sib-adh-Dhafar سيب الضفر	Immediately below Jabailiyāt.	Left.	40 houses of Siyābiyīn.	The inhabitants are carriers.
Kafarah كفرة	Partly opposite Jabailiyāt.	Right.	13 houses of Bani Hadharmi.	Gardeners of Sa'id-bin-Nāsir, 'Aqīd of Matrah.
Ghail-ad-Dakk غيل الدك	Opposite Sib-adh-Dhafar.	Do.	20 houses of Siyābiyīn.	Carriers.
Manqal 'Asīn منقل عسين	Opposite Kafarah.	Left.	10 houses of Bayāsīrah.	Cultivators.
Hājir حاجر	$\frac{1}{2}$ a mile below Manqal 'Asīn.	Do.	80 houses of Bani Jābir (Dafāfi section) and Bayāsīrah.	Cultivators and carriers.
Misā'ad مصاعد	Opposite Hājir.	Right.	50 houses of Bani Jābir.	Do.
Hijrat-as-Sufa حجرة الصفا	$1\frac{1}{2}$ miles below Hisn Samāil and opposite Hājir.	Do.	100 houses of Bani Jābir.	Do.

Wadi Samail near Hisn Samail.
(MAJ. P. Z. Cox.)

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Mahbūb مهوب	Opposite Hijrat-as-Sufa.	Left.	40 houses of Bani Jābir and Nidā-biyīn.	Cultivators and carriers.
Hisn-bīn-Hammās حصن بن حماس	Immediately below Mahbūb.	Do.	10 houses of Bani Jābir.	Do.
Ghubrah غبرة	2 miles below Hisn Samāil.	Right.	50 houses of Bani Jābir and Siyā-biyīn.	Do.
Dan دن	$\frac{1}{2}$ a mile south-east of Ghubrah.	Do.	40 houses of Bani Jābir and Siyā-biyīn.	Do.
Fāru فارو	1 mile below Ghubrah.	Do.	40 houses of Bani Jābir.	2 miles south-south-east of Fāru in the hills is a village called Siyāh صياه. The people of Fāru are cultivators and carriers.
Hillat or Khūbār-al-Majālibah حلة or خوبار المجالبه	1 mile below Fāru.	Do.	30 houses of Majālibah.	The inhabitants are cultivators and carriers.
Hillat or Khūbār Bani Harrās حلة or خوبار بني حراس	1 mile below Hillat-al-Majālibah.	Do.	100 houses of Bani Harrās.	A short distance below this place is a spring called Furdhat Hassās فردة حساس.

The villages in Wādī Samāil Proper above Hisn Samāil are called collectively 'Alāyat Sāmāil علاية سماعيل or Upper Samāil, and those below it Sifālat Samāil سفالة سماعيل, or Lower Samāil: the 'Alāyah has a length of 2 and the Sifālah of 4 miles. The 'Alāyah, it will be seen, is entirely Hināwī, while the Sifālah is not less exclusively Ghāfirī. Wādī Samāil Proper ends at the spring called Furdhat Hassās, a short distance below Hillat Bani Harrās.

The remaining course of Wadi Samāil to the sea contains the following villages and towns:—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Hassās هساس	1½ miles below Hillat Bani Harrās.	Right.	25 houses of Nidābiyīn.	Melons are grown.
Sarūr سورور	4½ miles below Hassās.	Do.	500 houses of Nidābiyīn and Bani Jābir.	Here are 60,000 palms bearing Fard dates. Animals are 50 camels, 700 donkeys, 700 cattle and 400 sheep and goats.
Miltiqa ملتقى	1½ miles below Sarūr.	Left.	40 houses of Qawāsīm.	Ordinary cultivation.
Bidbid بدبد	3 miles below Miltiqa.	Do.	40 houses of Bani Jābir (Aulād Wādī section) and Siyābiyīn.	There is a fort here belonging to the Sultān of 'Omān; it is held by a garrison of 20 'Askaris. Musk and water melons and lucerne are grown. ⅔ of the village belongs to the present Sultān of 'Omān as his private property and is generally leased for \$2,500 a year.
Mizra' مززع	¾ of a mile below Bidbid.	Do.	30 houses of Siyābiyīn.	Ordinary cultivation.
Qurtā' قراطع	1 mile below Bidbid, between Wādīs Samāil and Mansah at their junction.	Right.	50 houses of Siyābiyīn.	Ordinary cultivation, especially lucerne.
Milaiyinah ملينه	1 mile below Qurtā'.	Do.	20 houses of Siyābiyīn.	Do.
Amqāt عمقات	1½ miles below Qurtā'.	Do.	40 houses of Siyābiyīn, Bani Jābir and Bani Mahārib.	A route leads over a pass called 'Aqabat 'Amqāt, 2 miles east of this place, into Wādī Bōshar.
Sharn شرر	1 mile below 'Amqāt.	Left.	60 houses of Fawāris and Hadādah.	Ordinary cultivation.
Fanjah فنجة	1 mile below Sharu.	Do.	450 houses of Hadādah and Fawāris, mostly of stone.	There is a small bazaar. Mats, cloth and pottery are made. Here there are 30,000 palms, but the dates are not of the Fard variety. Animals are 60 camels, 120 donkeys, 700 cattle

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Tasāwīr تصاوير	2 miles below Fanjah.	Both.	25 houses of Bani Ruwāhah.	and 1,200 sheep and goats. There are two hot springs. There is a small bazaar here.
Khōdh خوص	6 miles below Tasāwīr and 9 miles from the coast at Sib.	Right.	120 houses of Bani Hina and 80 of 'Awāmīr.	There is a fort here, belonging to Hamaid bin-'Umair of the Bani Bahri.

The principal tributaries of Wādī Samāil are Wādī-al-'Aqq, on the right bank, 2 miles below Hassās; a Wādī, possibly also called 'Aqq, 1 mile above Sarūr; Wādī Bani Jābir (II) on the left bank immediately below Miltiqa, of which the upper course is separated only by low watershed from Wādī Samāil; Wādī Mansah, on the right bank immediately below Qurtā'; finally, on the left bank immediately below 'Amqāt, Wādī Dhaba'un مضعون, in the basin of which lie the following villages:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Hamīm حميم	1½ miles west of the junction of Wādis Dhaba'un and Samā'il, in the hills.	40 houses of Bani Jābir.	Dates are cultivated.
Thumaid ثميد	1 mile south of Hamīm.	15 houses of Bani Jābir.	Do.
Farfārah فرقارة	1 mile south of Thumaid, on the Wādī.	45 houses of Bani Mahārib.	Do.

The settled population of Wādī Samāil appears to be about 27,500, or, including Wādī Dhaba'un, 28,000 souls.

In its course through Hajar, that is, in its Bani Ruwāhah and Samāil sections, the Wādī is enclosed between lofty ranges of irregular outline which rise to heights of 5,000 and 7,000 feet: the eastern wall of mountains has fewer high peaks, but presents more broken contours than the western. Wide in some places and narrow in others, Wādī Samāil is extremely contracted near Ghubrah; its aspect also varies, desolate stretches of sand and pebbles alternating with well-cultivated and thickly-populated tracts. As far as the middle of Wādī Samāil Proper, the slope is somewhat rapid, though free from sudden falls; lower down it is more gradual, and the soil, which is dark in the Wādī Ruwāhah, becomes lighter coloured and more sandy as the valley descends. The famous Samāil date groves are watered by open conduits, not by the subterranean Falajs common elsewhere, and the palms are estimated at 600,000

of all sorts. Samāil is the home of the Fard date, and cotton is extensively grown. Below Sarūr the hills recede, especially on the west; and the stream, perennial above this point, vanishes under ground to reappear again nearer the coast. At Bidbid the Wādi bed is broad, barren and sandy: finally it breaks up into branches as it approaches the coast.

Wādi Samāil was at the beginning of the 17th century the seat of a chief who, in coalition with the Bani Hina tribe and the Ya'arabi chief of Rustāq, successfully resisted and eventually overthrew the power of the dynasty of the Nabāhinah. In recent times it has generally been submissive to the Sultāns of 'Omān, but it is often disturbed by feuds between the Hināwiyah of the upper and the Ghāfiriyah of the lower valley.

The trade of the Wādi is with Matrah and Sib.

SAMAIT
(ĀL BŪ)
آل بو سميط

A restless tribe of non-Bedouin Arabs, at the present time settled on the Persian Coast, chiefly in Lingeh Town. In Ghāriyeh, an eastern suburb of Lingeh, upon the sea face, they are said to own 340 houses; and in Lingiyeh, a western quarter of the town, 2. Besides these there are about 4 houses of Āl Bū Samait at Mughu, 10 at Barku, and about 10 at Hālat Nāband, all places in the Shībkūh district. The total number of the tribe is approximately 1,800 souls. It is estimated that among them they own 3,500 date palms; but they are chiefly engaged in pearl fishing and other seafaring occupations, and they possess a number of boats. In religion they are Māliki Sunnis.

The original habitat of the Āl Bū Samait appears to have been at a place near Khor Shaqīq in Qatar, but towards the end of the 18th century they removed to Zubārah, where they joined the 'Utūb. About 1810 they migrated from Zubārah to Jau in Bahrain, and there they remained for about 20 years; afterwards, a blood feud having arisen between themselves and the Na'im in Bahrain, they transferred their abode to Dammām in Qatif. At Dammām they stayed for about 7 years only and then returned for a short period to Bahrain, eventually emigrating about 1840 to Lingeh, where they still remain. In 1899 they incurred the displeasure of the Persian authorities by supporting the cause of the Arab Zābit of Lingeh, who was expelled in that year; and in 1900 they appear to have entertained some idea of emigrating to the British station of Bāsīdu, but did not carry it into effect. Their relations with the Shaikh of Bahrain have never ceased to be friendly, and it is believed that oppression by Persian officials might even now cause them to return to his jurisdiction.*

* The history of the Āl Bū Samait is contained in the Foreign Proceedings of the Government of India for June 1901.

A division of the Diwānīyah Sanjāq of the Baghdād Wilāyat in SAMĀWAH
 Turkish 'Irāq. ساماره
QADHA

Position and boundaries.—The Qadha of Samāwah is situated on both sides of the river **Euphrates** immediately above the point where it leaves the Wilāyat of Baghdād and enters that of Basrah. It is bounded on the east by the **Nāsiriya**h Qadha of the Muntafik Sanjāq, on the south and west by the **Shāmiyah** Desert, on the north-west by the Qadha of **Shāmiyah**, and on the north by that of **Diwānīyah**.

Topography and tribes.—The only considerable town in the Qadha is **Samāwah**, which is the headquarters of the local administration; the other principal places are **Rumaithah**, which forms the subject of a separate article, and **Durrāji**, **Abu Juwārīr** and **Khidhar**, all of which are described in the article on the **Euphrates**, besides **Īshān** (إيشان) (100 houses), **Sādah** (سادة) (30 houses) and **Wusaitah** (وسيطه) (40 houses). The ancient site of **Warkah** (وركه) is situated in the **Durrāji** Nāhiyah of this Qadha.

The **Muqāta'ahs** or tracts that compose the district are, with the tribes and section that occupy them, the following :—

Tracts.	Tribes or sections.	Tracts.	Tribes or sections.
1. 'Ājīb (Nusf-al- نصف العجيب)	Zubaid of a Jabūr section, 'Ājīb subsection.	39. Kankūn كنكون	Al Bū Hassān .

38. Jūri (Umm) أم جري	Do.	76. Zaiyād (Hor-az-) هرر الزیاد	Zaiyād.

Population.—The fixed population of the Qadha is estimated at 60,000 souls, of whom 3,000 only are Sunni Muhammadans; the remainder, except some 500 Persians and 200 Jews at **Samāwah** Town, are nearly all Shī'ah Arabs.

Resources.—The date palms of the district are estimated at 75,000: agriculture and livestock do not differ from those of the other Qadhas of the Sanjāq. In many parts of the Samāwah Qadha the soil produces salt; and about 10 miles south of **Samāwah** Town there is a lake, fed by salt streams, which yields by evaporation a large quantity of excellent salt resembling rock-salt. The deposits of the lake are not under the management of the Department of Public Debt, but the dépôts of the Department at the towns of **Samāwah**, **Diwāniyah**, **Nāsiriya** and **Sūq-ash Shuyūkh** are stocked from them, as also to some extent the dépôts at **Hillah** and **Najaf**. It is estimated that the lake could produce about 15,000 tons of salt a year.

Administration.—Samāwah is a Qadha of the 2nd class: the head-quarters of the district are at the town similarly named. Besides the Markaz Nāhiyah of Samāwah there are 2 others,—Durrāji (3rd class) and Abu Juwārīr or Rumaithah (1st class): the Mudīr of Abu Juwārīr has his head-quarters at **Rumaithah** and the Mudīr of Durrāji at Khidhar. Durrāji belongs to the Dāirat-as-Saniyah.

A large and flourishing municipal town in Turkish 'Irāq, situated on the **Euphrates** about 5 miles below the point where the water drawn off by the **Hindiyah** near **Musaiyib** rejoins it. Samāwah is about 50 miles south by east of **Diwānīyah** Town and 70 miles west-north-west of the town of **Nāsirīyah**.

SAMĀWAH
سماوة
TOWN

Situation and buildings.—The river divides the town into two parts, of which that on the right bank is the larger and better and contains the Government offices ; but there are brick houses in both quarters, and the military barracks, ruinous but occupied, are upon the left bank. There are 6 Khāns and 8 mosques. The river is crossed at the town by a boat bridge.

Inhabitants.—The population, which may be about 10,000 souls, is almost entirely Arab and Shī'ah, but there are some 500 Persians, 200 Jews, 80 Abyssinian slaves and 60 Turks ; Christians, Afghāns and Indians there are none. Samāwah is much frequented by the **Muntafik** tribe, especially as a market.

Agricultural resources and transport.—The neighbourhood as far as **Rumaithah** is well cultivated ; but it is also studded with forts, and among the Arabs there is constant tribal warfare. The town possesses some 20,000 date palms, the groves being chiefly on the right bank of the river, but these do not suffice for the local consumption : the case of cereals, vegetables and fruit is however different, for of these the town possesses and exports a considerable surplus.

All kinds of transport animals, except camels, are owned by the surrounding tribes ; but the number that might be forthcoming if required cannot be calculated.

Trade and manufactures.—Importation and exportation take place chiefly by river, and there are complaints of an insufficiency of boats. There is a bazaar of over 250 shops, and commercially the town has a prosperous appearance. The chief exports are wool, wheat, barley and lambskins ; while the imports of most value are Manchester piece-goods, coffee, sugar and indigo. Most of the trade, both export and import, is with **Basrah** Town, but the tribes of **Najd** also make purchases here, and cotton piece-goods and articles such as glass and chinaware come from **Baghdād**, while the lambskins exported mostly go to Russia. The only local manufacture is of a kind of woollen carpet, which sometimes fetches as much as 4 Līrahs the piece, but is not ordinarily exported.

Administration.—The ordinary officials of a Qadha are stationed at Samāwah, and the police force consists of about 50 Dhābitiyahs. The Department of Public Debt and the Tobacco Régie are each represented by a Mamūr, and there is a harbour master for the river. Samāwah is connected with **Diwanīyah** Town above and **Durrāji** below, both on the **Euphrates**, by a single line of telegraph. The military garrison consists of one battalion of infantry and two guns ; but, as usual, the greater part of the force is generally absent, engaged in collecting the revenue of the tribes. Samāwah, though not shown in the distribution scheme of the Radif, seems to be a centre for about 300 reservists. Politically Samāwah is important as one of the chief points at which the Turks come in contact with the tribes of **Najd**.

SAMHĀN
(JABAL)
جبل سمحان

A range of mountains which extends along the southern coast of Arabia from Rās Nūs to Rās Sājar, a distance of 120 miles. At both extremities of the range, and also near **Murbāt**, it impinges upon the coast ; but it does not follow the sinuosities of the shore line, and the hills are in places removed to a considerable distance from the coast. Between Rās Nūs and **Murbāt** a level plain with a maximum width of about 10 miles divides the hills from the sea ; and, at the deepest part of the curve into which the range falls behind the maritime plain of **Dhufār** Proper, its crest is 20 miles from the coast. There are no spurs of importance upon the seaward side, and the inland slopes subside through a waterless table land styled **Qatan** قطن towards Hadhramaut and Central Arabia. The highest points in the Samhān range are one of 3,600 feet, 6 miles north of **Murbāt**, and Rās Sājar, the western termination of the range, which has an altitude of 3,380 feet ; behind **Dhufār** Proper the range has a constant elevation of about 3,000 feet. Between Rās Nūs and **Murbāt** the range, which is here of limestone supported on sandstone, drops almost in one scarp to a plain of igneous rock at its base ; in the neighbourhood of **Murbāt** the scarp is relieved by sloping buttresses reaching $\frac{2}{3}$ of the way to the top ; inland of **Dhufār** the fall of the hills towards the coast is gradual, not precipitous. The portion of the range to the east of **Murbāt** is bare and rocky ; that to the west is covered with grass which in winter withers for want of rain, bears patches of trees, and is furrowed by several well-marked valleys.

The easternmost of these valleys is Wādi Murbāt, which reaches the sea about one mile north-west of **Murbāt**; it is inhabited by the **Qara** tribe and is said to be of considerable length and to contain wells of good water throughout its course. The next to westward and the most remarkable is Wādi Dirbāt دربات, which reaches the sea by Khor Rori: it rises in Jabal Qarhah قرح and at first flows from east to west for about 25 miles; then, turning, it runs 8 miles southwards to the sea. About $4\frac{1}{2}$ miles from the coast the valley is divided by an isolated hill into two branches, the larger being on the western side, each of which immediately drops sheer over a calcareous ledge 250 feet high. The ledges are white and grey, adorned with long white stalactites, and feathery waterfalls are continually adding fresh materials to the chalky secretions composing them. Below the ledges is vegetation of luxuriant growth, including plantains and the castor-oil plant; above is a small grassy plateau with pomegranate, fig and lime trees, and some cultivation of grain, indigo and onions. About $\frac{3}{4}$ of a mile above the ledges begins the lower of two narrow lakes which extend up the valley for about $1\frac{1}{2}$ miles: they are connected by a running stream and are the resort of various aquatic birds. The greatest breadth of these sheets of water is about 30 yards and the greatest depth about 12 feet; they are overhung in places by trees and bordered here and there with bulrushes. Wādi Dirbāt is inhabited by the Ma'ashani section of the **Qara** tribe. The third Wādi is that of Rizāt ريات, about 12 miles west of Dirbāt; its stream waters the settlement of the same name in the plain of **Dhufār**. The fourth Wādi, Sahannūt سحنوت, comes down to the sea about the middle of **Dhufār** Proper; at several different points it feeds water-courses; the water-supply is unfailing and there is good pasture. Wādi Nahīz نهيز, the fifth of the series, belongs to the **Qatan** section of the **Qara** tribe and reaches the coast in the neighbourhood of Bilād-al-Qadimah. The sixth and westernmost of the series is Wādi Jarzīz جرزيز (pronounced Garzīz), which emerges from the hills behind **Salālah**; it contains a spring forming a pond at a place about 2 miles above the entrance of the valley. About the pond grow figs, limes, cactus, aloe and mimosa, while jessamine and maiden-hair fern also are found. Here Wādi Jarzīz, or the lower part of it, ends in a *cul-de-sac* surrounded by high rocky cliffs, in which are a number of caves. The valley is said to afford good grazing in June and July; in the rains a considerable stream issues from it; and the remains of a stone aqueduct leading from the spring to the plain of **Dhufār** may be traced in places upon the face of the cliff. The main route to the interior, for travellers by land to

Hadhramaut or 'Omān, lies up Wādi Jarzīz. The highlands of the Samhān range behind the plain of Dhufār are grassgrown and studded with groups of trees, which give them a park-like aspect. Behind the hills, on the confines of the Great Desert, is a place, Hāsiki حاسكي, inhabited by the Bin Sa'id section of the Qaras, where frankincense of the best quality is obtained.

The chief product of Jabal Samhān is frankincense,* by the Qaras called Shihaz, شـحـز which is obtained in May and December: the gum is collected 7 days after the scratching of the stem, an operation which is repeated 3 or 4 times in the month; the trees are marked and are recognised as belonging to particular families. The tree yielding caoutchouc, called Tishkāt by the Qaras, grows 15 to 20 feet high; the Akor tree producing Muql مقل or bdellium is found; and the Sulbur tree of Soqotrah, which grows upon limestone without visible soil, is said to attain a height of 3 to 15 feet. Regarding the fauna of the Samhān hills we have no very precise information, but it is said to include a kind of ibex, the civet cat, fox and hare; also guinea-fowl and partridges. There is also a large black and yellow spider which produces a strong filament of a bright golden colour resembling silk. No minerals are known to be present, but natives report the existence of something resembling coal.

The terms Samhān range and Qara country are practically synonymous; and the Qaras live by the great herds of camels, cattle, sheep and goats which they pasture upon the sides of Jabal Samhān. The Bedouin sections of the Āl Kathīr tribe also inhabit the Samhān hills.

SANAISAL (WADI)
وادي سنيسل

An important valley in the Dhāhirah district of the 'Omān Sultanate; it is formed by the junction of Wādi-al-Kabīr and Wādi Sharsah and runs southwards or south-eastwards to the desert, where it is lost. The principal places in Wādi Sanaisal, containing altogether a settled population of about 6,400 souls, are:—

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Bait-al-'Ainsin بيت العيينين	Below the junction of Wadis Kabir and Sharsah.	Right.	A fort occupied by a tribal garrison of Miyāyah. Connected with	The fort is reputed the second strongest in Dhāhirah and its possession was fiercely contested for many years by the

*An important article by Carter on the frankincense tree and libanophorous region will be found in the Journal of the Bombay Asiatic Society for 1844—47, pages 380—80.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
'Arāqi عراقي	Adjoins Bait-al-'Ainain.	Right.	the fort is a village of 20 huts of the same tribe; it is also known by the name of Sana'isal.	surrounding tribes; but in 1885 it was found to consist merely of a large house with 2 flanking towers. A great date-grove watered by 3 Falajs is attached to the fort.
Ghabbi غبي	Adjoins 'Arāqi.	Do.	...	See article 'Arāqi.
'Ibri عبري	2 miles below Ghabbi.	Do.	There are now only two houses here, garrisoned and used as forts by the Bani Kal-bān and Ya'āqib.	There was formerly a large village of Bani Shakail and Miyāyihah here. It was destroyed in the course of tribal wars about 1875, and the people dispersed to 'Ibri, 'Arāqi, Dariz, etc.
Dabaishi دبيشي	3 miles below 'Ibri, at the junction of Wādi Sana'isal with Wādi-al-'Ain.	Do.	...	See article 'Ibri.
			25 houses of Darū' and other tribes.	There is a fort here. Livestock are 100 camels, 15 donkeys, 10 cattle and 400 sheep and goats.

At Dabaishi Wādi Sana'isal is joined by Wādi-al-'Ain from the east. South of Dabaishi, perhaps upon this Wādi, is a settlement of the Darū' tribe called Tana'am تنعم which is described in the article on Dhāhirah.

A remarkable isolated hill, five miles west of the village of Safwān, on the frontier between Turkish 'Irāq and Kuwait. It is one mile long from north to south, half a mile in breadth and covers a lozenge-shaped space; its height is 430 feet and its summit commands an excellent view of the flat, featureless country by which it is surrounded. The hill first becomes visible from the south near the southern end of Bātih, at a distance of about 30 miles: it can also be seen from three miles beyond Umm Qasr to the east-south-east. The Bātin passes about 15 miles west of Jabal Sanām,

SANĀM
(JABAL)
جبل سنم

SANĀU
سنار

A town of nearly 3,500 inhabitants in the Baldān-al-Habūs division of the **Sharqiyah** district of the 'Omān Sultanate, probably about 4 miles to the east of **Mudhaibi**; with reference to **Samad** its position is uncertain. The houses are of mud and some have upper storeys. The town stands upon an eminence with date groves below. The inhabitants are Bani Rāshid (300 houses), Suwāwifah (200 houses), Mahāriq (100 houses) and Yāl Bin Rashid (60 houses). There are also a few Bani Na'amān. Resources are 18,000 date-palms, 20 camels, 100 donkeys, 100 cattle and 500 sheep and goats.

**SANFĀN-
AL-HANNA**
صنفان الحنّا

A small triangular desert tract in the **Hasa Sanjāq**; some Bedouins would include it in **Habl** and a few in **Wādi-al-Miyāh**, but the predominant opinion seems to be that it is distinct from both. The border of **Sanfān-al-Hanna** on the side next **Wādi-al-Miyāh** is 15 miles in length and runs south-south-east from **Jabal-al-Hass** to **Jabal Labtalāh**; on the south-east the tract is conterminous for 12 miles with **Habl**, the line which divides them running from **Jabal Labtalāh** about east-north-east to the **Hajrah** wells at the corner of **Jau Shamīn**; the remaining side is in contact with **Radāif** throughout its whole extent of 16 miles from the wells of **Hajrah** to **Jabal-al-Hass**.

The soil of **Sanfān-al-Hanna** is superior to that of **Habl**, but less fertile than that of **Wādi-al-Miyāh**. The tract receives part of the drainage of the **Hass** and **Labtalāh** hills as well as of the northern part of **Wādi-al-Miyāh**. There are only 3 wells, of which the particulars follow, but their water is excellent:—

Name.	Vernacular equivalent.	REMARKS.
Hanna	حنّا	8 miles north of Jabal Labtalāh and the same south-east of Jabal-al-Hass .
Qannūr	قنّور	4 miles south-south-east of Hanna .
Thamailah	ثميلة	4 miles north-north-west of Hanna .

SANNĀ'
صناع

Singular **Sāni'** صانع. As a common noun this Arabic word denotes handicraftsmen or artificers of any race; but it is also used, almost as a

tribal name, to distinguish the members of a certain menial caste (or castes) who are found distributed among the Arabs everywhere in Central Arabia. These Sannā' are blacksmiths and carpenters, and as workmen they are more skilled than the **Sulaba**. The Arabs do not intermarry with them.

Or Sarami **صرامي**, a valley in the 'Omān Sultanate: it rises in the northern slopes of Western **Hajar** and crosses **Bātinah** to the sea, which it reaches near **Saham**, apparently somewhat to the east of that town.

The following is a list of the villages in this Wādi in their order from above downwards:—

SARRĀMI
(WĀDI)
وادي صرامي

Name.	Position.	On which bank situated.	Houses and inhabitants.	REMARKS.
Hībi حيبي	At the head of the valley.	Right.	...	See article Hībi .
Khadd خد	1½ hours below Hībi .	Left.	150 houses of Hawāsinah of the Hawā -mid section.	Ordinary livestock and 1,000 date palms.
Khadhra خضرا	½ an hour below Khadd .	Do.	50 houses of Hawāsinah of the Bani Sa'id section.	Do. and 1,000 palms.
Sakhiyāt سخيات	½ an hour below Khadhra .	Right.	100 houses of ditto.	Do. and 800 palms.
Qal'ah قلعة	1 hour below Sakhiyāt .	Do.	200 houses of ditto.	Do. and 2,000 palms.
Khabt خبت	1½ hours below Qal'ah .	Do.	100 houses of ditto.	Do. and 1,000 palms.
Saiharah سيهره	1 mile below Khabt .	Do.	40 houses of ditto.	Do. and 700 palms.
Falaj Harmal فلج حرمال	1 hour below Saiharah .	Do.	50 houses of ditto.	Do. and 700 palms.
Rattah رته	2 hours below Falaj Harmal .	Left.	90 houses of Bani Kalbān .	Do. and 800 palms.

Name.	Position.	On which bank situated.	Houses and inhabitants.	REMARKS.
Dhuwaihirah ظويهرة	$\frac{1}{2}$ an hour below Rattah.	Left.	100 houses of Hawāsinah of the Bani Sa'id section.	Ordinary livestock and 1,000 palms.
Fajaij فجيج	1 hour below Dhuwaihirah.	Do.	80 houses of ditto.	Do. and 400 palms.
Hail Rāsah حيل راسه	$\frac{1}{2}$ an hour below Fajaij.	Do.	70 houses of ditto.	Do. and 500 palms.

From Hail Rāsah the town of **Saham** on the coast is visible.

The total population of the valley seems to be about 5,500 souls.

SHA'AM الشعم

A village on the west coast of Trucial 'Omān, 17 miles north-north-east of Rās-al-Khaimah Town. It is the northernmost village in the Rās-al-Khaimah district of Shārjah; 2 miles north of it is Rās-ash-Sha'am which marks the boundary between that principality and the Ruūs-al-Jibāl district of the 'Omān Sultanate. Sha'am stands on a sandy shore with a plain 1 to $1\frac{1}{2}$ miles broad between it and the mountains of the 'Omān Promontory. Five miles south of Sha'am, half-way to Rams, is a creek called Khor Khuwair خور خوير, which can be used by boats at high water and near which is a village of the same name, described in the article on the Rās-al-Khaimah District.

Sha'am consists of about 300 houses, mostly of mud; it is protected by a small tower on a hillock 50 feet high about 1 mile south of the town. The people are all Shihūh of the Bani Shatair section; they live by pearl diving and fishing, and by date and other cultivation. They have only 2 pearl boats and no large vessels, but they own 6 or 7 coasters in which they bring firewood and dried fish to Shārjah Town for sale, also 8 fishing boats, Sambūks. About 30 camels, 50 donkeys, 20 cattle and some sheep and goats belong to the place, and there are about 7,000 date-palms.

SHĀBĀDĪ رادي شاب

A valley in the Eastern Hajar district of the 'Omān Sultanate, reaching the sea at a point 26 miles north-west of Sūr and 37 south-east of Quryāt; it is the north-westernmost of the 3 valleys called Wādī Bani

Jābir (I). From the coast it appears as a deep chasm in the hills from which issues a fine stream of fresh water; the course of this stream between its exit from the hills and the coast is short, and it forms a lagoon within 50 yards of the beach. The principal village of Wādi Shāb is one at the coast called Hillat-ash-Shāb حلة الشاب or Ghail-ash-Shāb غيل الشاب: it stands on the eastern side of the mouth of the stream, is built upon a slight eminence and consists of about 50 stone and mud houses. The inhabitants are Bani Jābir of the Bani Muqīm section; they grow quinces, bananas, pomegranates and betel-nut. A mile or two inland of Hillat is Qata'ah قطعه, within the hills; it has a large date-plantation and is merely a summer resort for date-owners, and above Qata'ah are various other plantations possessing distinctive names. The only fixed villages are Jahl جال a place of 30 houses, and Jailah, both villages of the Bani Muqīm; they are said to be distant respectively 4 and 6 hours' journey on foot from the sea. The settled population of Wādi Shāb (inclusive of Ghail-ash-Shāb) may be about 500 souls.

An inland district of the Fārs province, separated from the sea by the Gulf Ports district of Hayāt Dāvud, and meeting on the south the Gulf Ports districts of Dashtistān, Angāli and Rūd-hilleh. Shabānkāreh is said to have been originally a part of Dashtistān and to have been separated from it for administrative reasons.

SHABĀN-
KĀREH*
شبانکاره

Limits.—Shabānkāreh is bounded on the west by the Rūd Shūr, which divides it from Hayāt Dāvud; on the north and east by the outer range of the Persian hills, in this neighbourhood called Taviseh; and on the south by the Rūd-hilleh River. Its length from north-west to south-east is thus about 20 and its breadth about 12 miles.

Physical characteristics.—Except for the seaward slopes of the Taviseh hills, which are included in the district, Shabānkāreh appears to consist entirely of flat open country. It is crossed by various watercourses from the hills, but there is none of importance between the Rūd Shirin or Shāpūr River on the east and the Rūd Shūr on the west. Water is generally derived from wells, but the villages on the Rūd-hilleh River

* The name Shabānkāreh appears to have been taken from a Dailami family or tribe. By the mediæval geographers of the country it was applied not to the district now in question, but to one further eastward in Fārs, having its capital at Dārābjird. See Le Strange's *Lands of the Eastern Caliphate*.

derive their supply from that stream. In summer, hot winds blow for 3 months from June to August, but the temperature falls considerably at night.

Inhabitants.—The population mostly belong to Persian-speaking tribes who have been settled here from time immemorial, but there are a few villages of immigrants from neighbouring Persian districts and of Arab settlers. Most of the people belong to small or obscure tribes: the inhabitants of **Dih Kuhneh**, the principal place, are described as **Haijah** حایج and **Khājahvān** خواجه‌ران, the latter from **Behbehān**. With few exceptions the people are Shī'ahs. They are neither fanatical nor turbulent, but they are well armed and Martini rifles are almost as numerous as households. The dwellings in most places are huts, but about $\frac{1}{3}$ are houses of sun-dried bricks and mud. A list of the villages, most of which have one or two small towers for defence, is given below, with particulars of each village, under the head of topography: the total population amounts to about 10,000 souls.

Agriculture.—Wheat and barley are the staples of cultivation, but there are date plantations in some of the villages, and in particular places tobacco and water melons are grown. Cotton has recently been introduced on a small scale. Livestock includes a fair number of cattle, sheep and goats.

Trade.—There is a small export of wheat, barley, tobacco, straw and wool; and piece-goods, rice, tea, coffee, sugar and spices are imported to a limited extent. Business is chiefly with the town of **Būshehr**, the more northern villages dealing with that place through the port of **Rīg** and the more southern through **Shif**. The standard of length is a **Gaz** of $33\frac{1}{2}$ inches; the unit of weight is a **Man** of 9 lbs. 11 oz.; and there is also a **Hāshim Man** of 16 ordinary **Mans** or 155 lbs. English. Persian **Qrāns** make up the bulk of the currency.

Communications and transport.—**Dih Kuhneh**, the principal place in **Shabānkāreh**, lies upon the route from **Burāzjān** to **Dilam** and **Zaidān**, and from **Dih Kuhneh** there is a track to the sea at **Rīg**.^{*} **Shif** on the coast opposite **Būshehr** Town is easily accessible across country from the southern villages of **Shabānkāreh**, the distance being about 15 miles. The transport resources of the district are roughly estimated at 200 horses, 100 mules and 3,000 donkeys. In most villages where there are horses mules are found, to about half the number of the horses. There are also some camels.

^{*} See *Routes in Persia*, I, Nos. 19 A. and 21 A.

Administration.—Shabānkāreh is ruled by a hereditary Khān who is subject to the Governor-General of Fārs; the present incumbent is Ismā'il Khān. The Khān at present pays 5,500 Tūmāns a year for the farm of the district; he manages it through the Kadkhudas or headmen of villages. There are no arrangements for the administration of justice, and private retaliation of injuries is the rule, though to a certain extent disputes are adjusted by the Khān, by village-headmen and by local Qāzis and Mullas. Land revenue is collected at the rate of 60 Qrāns per Gāu of cultivation. There is also a cash tax on dates, equal to $\frac{1}{4}$ of the value of the produce, and an annual poll tax of one Qrān per man is collected. There is no official directly representing the Persian Government in the district.

Topography.—The villages of the Shabānkāreh district are the following:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Anjiru انجير	8 miles south-west of Dih Kuhneh, close to the bank of the Rūd Shūr stream.	15 houses of Persians of unknown origin.	Wheat, barley and water melons are grown. There are 7 horses, 30 donkeys, 20 cattle and 400 sheep and goats.
'Atibeh عطيه	4 miles west of Dih Kuhneh.	50 houses of do.	Ordinary cereals are cultivated and there are 10 horses and 80 donkeys.
Bahrāmābād بهرام آباد	6 miles south-east of Dih Kuhneh.	30 houses of Shaikhs who are said to have immigrated from Khisht.	Besides wheat and barley, a good deal of tobacco is grown, some being exported to Būshehr Town <i>via</i> Rīg. There are 50 donkeys.
Band Muhammad 'Abdullah بند محمد عبدالله	5 miles south-west of Dih Kuhneh.	20 houses of a Persian tribe from Khisht.	The people cultivate and export some wool: they have a few donkeys and 700 sheep.
Basri بصري	On the right bank of the Rūd-hil-leh River, 15 miles in a direct line from its mouth.	40 houses, two-thirds Persians of unknown origin and the remainder immigrants from Kāzarūn.	The people cultivate cereals and own a few horses, 50 donkeys and 500 sheep.
Buvairi بويري	East of Dih Kuhneh.	50 houses of Persians of unknown origin.	Ordinary crops are grown and there are 100 donkeys.

Name.	Position.	Houses and inhabitants.	REMARKS.
Chahdūl چاه دول	West of Dih Kuhneh.	80 houses of a tribe who claim to be Bani Tamim of Central Arabia. They speak Arabic as well as Persian and were till lately Sunnis.	Dates and cereals are grown. There are a few donkeys.
Chahārburg چهار برج	At the south-east corner of the district close to the right bank of the Rūd-hilleh River.	60 houses of Persians, origin unknown.	There is a small fort with three towers. The people grow dates and cereals and own 80 donkeys.
Chihilgazi 'Ajam چهل گزي عجم	7 miles west of Dih Kuhneh.	80 houses of Persians, origin unknown.	Dates, wheat and barley grow and there are 100 donkeys.
Chihilgazi 'Arab چهل گزي عرب	$\frac{1}{2}$ of a mile south of the preceding.	80 houses of a tribe speaking Arabic and Persian and claiming to be Jamālah جمالہ (sic) from Central Arabia.	Wheat and barley are cultivated and 20 horses and 100 donkeys are owned here.
Dehdārān Hāji 'Abdul 'Alī ده داران حاجي عبدعلي	3 miles south-west of Dih Kuhneh.	80 houses of a Persian-speaking tribe of unknown origin.	There are a few horses and 100 donkeys; wheat, barley and dates are cultivated.
Dehdārān Hāji Farūmeh ده داران حاجي فرومه	$\frac{1}{2}$ a mile south of the last.	100 houses of do.	There are about 15 horses and 200 donkeys. Cereals are grown.
Dih Kuhneh ده کهنه	About 15 miles north-west of Burāzjān.	...	See article Dih Kuhneh.
Darvāi (Cham) چم دروي	Probably south of Dih Kuhneh.	40 houses of aboriginal Persians.	There are 50 donkeys; wheat and barley are cultivated.
Darvāi Pāi Rūd درواي پاي رود	9 miles south of Dih Kuhneh.	100 houses of Ruūseh, said to have immigrated from the Dashti district some generations ago.	The village has a small fort with 3 towers. Dates, wheat and barley are grown and there are a few donkeys. There is an old shrine, the history of which is obscure.

Name.	Position.	Houses and inhabitants.	REMARKS.
Dashti دشتي	On the right bank of the Rūd-hil-leh River, 2 miles above Basri.	100 houses of aboriginal Persians.	There is a small fort with 4 towers. Wheat and barley and a few dates are grown, some wool is exported, and 20 horses, 100 donkeys and 1,000 sheep are owned.
Qaid (Bunāri) بناري قائد	On the right bank of the Rūd-hil-leh River, 4 miles above Dashti.	Do.	The village has a small fort with towers. Dates, wheat and barley are grown, and some wool is exported to Būshehr Town <i>via</i> Shif. There are 20 horses, 15 mules, 200 donkeys, 100 cattle and 500 sheep and goats.
Khalifeh خليفه	Perhaps 7 miles west of Dih Kuhneh, close to the Rūd-Shūr.	100 houses of Arabs, tribe unknown.	The crops are wheat, barley and dates; there are a few horses and 150 donkeys. The village is said to be named after a learned man named Khalifah Muham-mad, who founded it.
Khayārzār خيآرزار	About 9 miles west of Dih Kuhneh.	30 houses of aboriginal Persians.	There is a tower. Cereals and water melons are cultivated, and animals are 5 horses, 40 donkeys, 30 cattle and 400 sheep and goats.
Lāyipeh لايپه	2 miles west of Dih Kuhneh.	30 Do.	This village has a small tower. Some wool goes from here to Būshehr Town <i>via</i> Shif. Wheat, barley and melons are the crops. There are 7 horses, 40 donkeys, a few cattle and 400 sheep and goats.
Makābari مکابري	On the right bank of the Rūd-hil-leh River, 3 miles below Basri.	80 houses, $\frac{2}{3}$ of Bani Tamīm Arabs and $\frac{1}{3}$ of Persians; the former are Sunnis speaking both Persian and Arabic, the latter are Shī'ahs, and speak Persian only.	Some wool is exported to Būshehr Town, through Shif. Wheat, barley, dates and melons are grown. A few donkeys and horses are owned, and 800 sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
Muhammad Jamāli محمد جمالي	2 miles north of Dih Kuhneh.	30 houses of Khishtis and immigrants from Mazārā'i District.	There is cultivation of wheat and barley; the people collect gum in the Tavīseh hills and own about 50 donkeys.
Mushki (Chāh) چاه مشكي	About 11 miles south-east of Dih Kuhneh.	30 houses of aboriginal Persians.	The inhabitants grow wheat, barley and tobacco and own 400 donkeys.
Rustam Khāni (Qalāi) قلای رستم خانی	About 8 miles south of Dih Kuhneh.	80 Do.	Wheat, barley and tobacco are grown: of the last about 1,000 Hāshim Maus a year are exported to Būshehr Town through Rīg. The inhabitants own 100 camels and 100 donkeys.
Samiyeh سمیدی	8 miles west of Dih Kuhneh, near the Rūd Shūr.	20 houses of Lurs from the Lirāvi district.	Crops are wheat and barley. Tobacco and water melons are grown also.
Shahpiru شهپیر	4 miles north of Dih Kuhneh.	40 houses of Lurs, immigrants from the Hayāt Dāvud district.	Wheat and barley are grown: there are a few horses and 50 donkeys.
Sihkunār سه کنار	Uncertain.	30 houses of aboriginal Persians.	Crops are wheat and barley: there are 40 donkeys and 800 sheep and a little wool is exported by Shif to Būshehr Town.
Sulaimāni (Bunāri) بناری سلیمانی	On the left bank of the Rūd-hilleh River, perhaps 4 miles east of Bunāri Qaid.	100 Do.	Wheat and barley are the crops: there are about 20 horses, 15 mules, 200 donkeys, 100 cattle and 500 sheep and goats. A small 4-towered fort protects the place.
Tangu (Cham) چم تنگر	On the right bank of the Rūd-hilleh River, a little above Makābari.	70 houses, half of Bani Tamīm Arabs and half of Persians of unknown origin.	Wheat, barley, dates and water melons are grown, and a little wool is exported to Būshehr Town through Shif. There are a few horses and donkeys and 500 sheep.

Name.	Position.	Houses and inhabitants.	REMARKS.
Turkaki ترککي	About 8 miles south-east of Dih Kuhneh.	50 houses of aboriginal Persians and immigrants.	Wheat, barley and tobacco are grown; some of the last goes to Būshehr Town <i>via</i> Rig. The people have about 60 donkeys and 40 camels.
Zakaryāi دکړياي	2 miles north of Dih Kuhneh.	10 Do.	Ordinary cultivation here and about 20 donkeys.
Zangi (Chāh) چاه رنگي	5 miles west of Dih Kuhneh.	20 ditto. Half the inhabitants are Saiyids from Gumārūn, in the Hayāt Dāvud district, who are religiously inclined but not very intelligent.	There are about 30 donkeys and 400 sheep and goats here: wheat and barley are grown. The headmanship is hereditary in a Saiyid family.

A valley in the Sultanate of 'Omān; it rises in the northern slopes of Western Hajar and reaches the sea at Qasbiyat Āl Bū Sa'id in the Saham sub-Wilāyat of the Bātinah district.

SHĀFĀN
(WĀDĪ)
رادي شانان

The villages of this Wādī, from above downwards, are:—

Name.	Position.	Bank.	Houses and inhabitants.	Resources.
Aqair عقير	At the head of the valley.	Right.	A fort and 100 houses of the 'Abriyīn.	The ordinary live-stock of 'Omān (camels, donkeys, cattle, sheep and goats) and 2,000 date palms.
Hail Bani 'Ali حیل بني علي	2 hours below 'Aqair.	Do.	50 houses of Bani 'Ali.	Do. and 1,000 palms.
Nakhshah نخشه	3 hours below Hail Bani 'Ali.	Left.	40 houses of Hawāsinah of the Bani Sa'id section.	Do. and 2,000 palms.
Ghashain غشبن	1 hour below Nakhshah.	Right.	100 houses and a fort of the same.	Do. Do.

Name.	Position.	Bank.	Houses and inhabitants.	Resources.
Safa صفا	3 hours below Ghashain.	Left.	150 houses of the same.	The ordinary live- stock of 'Omān (camels, donkeys, cattle, sheep and goats) and 3,000 palms.
Khishai خشي	1 hour below Safa.	Do.	100 houses of Hawā- sinah of the Hawāmid section.	Do. and 4,000 palms.
'Iqli عقلي	2 hours below Khishai.	Do.	180 houses of Hawā- sinah of the Bani Sa'id section.	Do. and 1,000 palms.
Bī'aik بيعي	2 hours below 'Iqli.	Do.	180 houses of the same.	Do. and 4,000 palms.

Qasbiyat Āl Bū Sa'id is situated an hour or less below Bī'aik.

From the table it will be seen that the total population of the valley is about 4,500 souls. Livestock are estimated at 60 camels, 200 donkeys, 250 cattle and 5,500 sheep and goats, distributed in a rough proportion to the size of the villages.

SHĀH
ABUL
SHĀH
شاه ابر الشاه

So styled by Persians, but by Arabs called Shaikh 'Abdullah شيخ عبدالله. It is the easternmost village on the coast of the Hindiyān District of Southern 'Arabistān; 8 miles to the south-south-east of it is Dilam. Shāh Abul Shāh is situated on a ridge of sand which has evidently at some former time been an island and is still surrounded by mud flats. High tides reach the present village on its western side. There is a small coasting-trade. The inhabitants are sometimes at feud with the people of Dilam. A white-domed tomb gives its name to the place: the Mullas in charge of it are hospitable and have even lodged a European traveller in the gateway. On the sand dunes to the north-west of the village of Shāh Abul Shāh are the remains apparently of some considerable place, with much broken pottery and other débris. According to local tradition 'Abdullah, Ibrāhīm and Bibi Hakimeh, two brothers and a sister of Imām Riza, having fled from Baghdād took refuge and died in this part of the country, and Shāh Abul Shāh is the burying place of 'Abdullah. The shrines of the other two are in the hills, and that of Bibi Hakimeh is the most respected of the three.

Singular is Shakaili شكيلی. A Ghāfiri tribe of the 'Omān Sultanate, Ibādhīs by religion; they are sometimes at feud with the 'Abriyīn, and in the rebellion of 1883 they sided with the Sultān of 'Omān. They are found chiefly in Western Hajar, where they occupy Umm Himār (30 houses) in Wādi Fara' and Maihah (60 houses), Maqham (18 houses), Mīdān (30 houses) and Sani (120 houses) in Wādi Bani Ghāfir, also Qariyah قريه, a village of 120 houses, and Hail Ghāfah حيل غافه, one of 60, in a valley to the west of Wādi Bani Ghāfir. Others of their settlements are 'Āridh (20 houses) in Dhāhirah, and Bahlah (40 houses), Bisya (120 houses) and Saifam (180 houses) in 'Omān Proper. Their total number is about 4,000 souls. Saifam is the tribal capital. The principal Shaikhs are Muhammad-bin-'Alī at Saifam, 'Abdullah-bin Sulaimān at Qariyah and Nāsir-bin-'Umair at Sani.

SHAKAIL
(BANI)
بنی شکیل

Also called Elphinstone Inlet. This is an extensive and winding arm of the sea by which the Ruūs-al-Jibāl promontory is indented on its western face about 14 miles from its northernmost extremity; it runs inland for about 10 miles, first for 3 miles to the south-south-east and then for 7 in an east-north-easterly direction; and its width varies from half a mile to 1½ miles. On the south side, throughout the greater part of its inner reach, it is divided from Ghubbat Ghazīrah on the other side of the peninsula only by the slender isthmus of Maqlab, while the barrier separating its foot from Dōhat Shisah is also very narrow. On its northern side stand the villages of Sham and Midah; on the southern side are Fanakhah, Nadhīf and Humsi near the entrance; further in is Qānah; at the foot of the inlet is Sibi: these with their positions are described in the article on the Ruūs-al-Jibāl district. The principal islands of the inlet are Sham and Sibi, opposite the places similarly named, and Telegraph Islet, 50 feet high, on which once stood a British telegraph station, 600 yards south by west of the island of Sham. The foundations of the telegraph buildings are still visible. Immediately south of Telegraph Islet is Maqlab bay, which gives its name to the better known isthmus and also to the islet itself, by the Arabs called Jazīrat-al-Maqlab. Two peaks, each 3,000 feet high, overlook Elphinstone Inlet: they are Jabal-ash-Sham on the eastern side of the entrance,

SHAM*
(KHOR-
ASH-)
خور الشام

* Some remarks on this inlet by Admiral Atkinson-Willes, R.N., will be found in the Government of India's Proceedings for June 1904.

which has a great precipice on its south-east side, and Jabal Sibi at the bottom of the inlet between it and Ghubbat Shābūs. Among the **Shihūh** Jabal Sham is called Jabal Sa'dūn سعدون, while Jabal Sibi is styled Qarn Ghubār قرن غبار. Khor-ash-Sham is a fine natural harbour, but the heat in summer is intolerable.

SHAMAILĪ-YAH* A littoral tract situated on the eastern side of the 'Omān Promontory, but forming part of the **Shārjah** Principality.

الشميلية^w

Boundaries.—Upon the coast Shamailiyah extends from **Khor Kalba** on the south to Gharafah (not Gharaifah) on the north, and includes both of these villages; **Dibah**, immediately north of Gharafah, is the only place belonging to **Shārjah** on this side of the 'Omān Promontory which is outside the limits of Shamailiyah. Inland Shamailiyah reaches for some distance into the hills, and north of the Wādi **Hām** it is in contact there with the Rās-al-**Khaimah** district of the **Shārjah** Shaikhdom: the lower part of Wādi **Hām** belongs to Shamailiyah and the upper to Rās-al-**Khaimah**. South of Wādi **Hām** the inland frontier of Shamailiyah is altogether indefinite.†

Physical features.—The coast for the most part resembles that of **Ruūs-al-Jibāl** further to the north; but opposite the villages of **Ghāllah**, **Gharaifah**, **Fujairah** and **Saqamqam** the desolate coast hills retire inland, forming a curve between which and its chord—the latter represented by some 11 miles of coast—these villages are enclosed. From **Saqamqam** to **Khor Fakkān**, a distance of 12 miles, a mass of low hills comes down to the sea; but the coast is broken by numerous small indentations, in which stand little hamlets and date plantations. The principal feature of the interior of the district is **Wādi Hām**, elsewhere separately described.

Topography.—The following are the principal places in the Shamailiyah district; those in **Wādi Hām** and **Wādi-al-Qor** are excluded, as they are given elsewhere, and some in the hills behind the maritime

*For authorities, maps, charts, etc., see first footnote to article **Trucial 'Omān**.

†Another view as to the limits of Shamailiyah must however be mentioned, according to which the district so styled only reaches from **Khor Kalba** to **Khor Fakkān**, and does not extend into the hills,

COPYRIGHT.

Eastern Face of Jabal-ash-Sham

plain are included because they belong to Shārjah and yet are not reckoned to the Rās-al-Khaimah District :—

Name.	Position.	Nature.	REMARKS.
Bidyah بدية	On the coast, 5 or 6 miles north of Khor Fakkān.	...	See article Bidyah.
Dhadnah ذدنه	On the coast, 15 miles north of Khor Fakkān.	A village of 50 houses of Sharqiyyin.	There are 3 fishing boats. The inhabitants also own a few camels and donkeys, 100 cattle, 100 sheep and goats, and about 500 date palms.
Fakkān (Khor) خور فکان	In the centre of the coast of Shamailiyah, about 23 miles north of Khor Kalba and 20 miles south-east of Dibah.	...	See article Khor Fakkān.
Fujairah فجيرة	Two miles from the coast at a point 15 miles south of Khor Fakkān and 27 miles north-north-east of Shinās in Bātinah.	...	See article Fujairah. Wadi Hām reaches the sea near this place.
Furfār فرفار	In the hills near Bithnah, possibly in Wadi Hām itself.	A village of about 10 houses of Kunūd and Jalājilah.	...
Ghāllah غاله	On the coast, midway between Khor Kalba and Fujairah, 4 miles from either.	...	See article Ghāllah.
Gharaifah غريفه	On the coast, abreast of Fujairah.	A village of 50 huts of Sharqiyyin.	The people live by fishing and cultivation of dates; they also grow tobacco and a little wheat. They have about 10 donkeys, 100 cattle, and some 3,000 date palms. Gharaifah is the landing place for passengers, but not the commercial port

Name.	Position.	Nature.	REMARKS.
Gharfah غرفه	On the coast, the northernmost village of Shamailiyah and immediately south of Dibah.	A village of 100 houses of Shar-qiyyin.	of Fujairah. It is now in possession of the rebel Shaikh of Fujairah. There are 10 fishing boats and 6,000 date palms. Livestock are 30 camels, 30 donkeys, 50 cattle and 300 sheep and goats.
Ghūnah غونه	Said to be at the foot of the hills, 2 miles inland from Khor Fakkān.	A village of 50 houses of Bani Sa'ad, a section of the Shihūh, or possibly of the Dhawāhir.	Resources are estimated at 1,500 date trees, 400 sheep and goats and a few camels, donkeys and cattle.
Hail حيل	Inside the hills behind Fujairah.	A village of about 10 houses of Jalajilah and Kunūd.	...
Hair حير	At the foot of the hills, south-west of Khor Fakkān and north-west of Fujairah.	A hamlet of 6 houses of Bani Hamīd.	This village is under Khor Fakkān. Livestock are 30 donkeys, 20 cattle and 300 sheep and goats. Date palms are about 300.
Kalba (Khor) خوركلبا	On the coast, the southernmost village of Shamailiyah, 20 miles north-north - west of Shinās in Bātinah.	...	See article Khor Kalba.
Lūlaiyah لولىيه	In the plain by the the sea, apparently about 2 miles northwards from Khor Fakkān.	A village of 50 houses of Naqbiyyin.	There are about 40 camels here, also some 20 donkeys, 30 cattle, 150 sheep and 2,000 date palms.
Mad-hah مدحه	In the hills, 8 miles west of Khor Fakkān, but said to be visible from the sea.	A village of 100 houses of Bani Sa'ad, a section of the Shihūh or possibly of the Dhawāhir.	...
Marbah مربح	On the coast, 3 or 4 miles north of Gharaifah.	A village of 100 houses of Shar-qiyyin.	Date trees number about 6,000, and livestock are estimated at 15 camels, 50 donkeys, 100 cattle and 300 sheep and

Name.	Position.	Nature.	REMARKS.
Qaraiyah قرية	On the coast, 1 or 2 miles north of Gharaifah.	A village of 100 houses of Sharqiyyin.	goats. This place is at present in possession of the rebel Shaikh of Fujairah. Also in possession of the revolted Shaikh of Fujairah. Resources are 20 camels, 100 donkeys, 100 cattle, 300 sheep and goats, and about 8,000 date palms.
Qidfa' قدفع	On the coast, 4 or 5 miles north of Gharaifah.	Do.	Also pronounced Jidfa'. Livestock are some 60 camels, 60 donkeys, 100 cattle, and 100 sheep and goats. Date trees number about 7,000. The insubordinate Shaikh of Fujairah holds this place at present.
Rul Dhadnah رول ضدنه and Rul Dibah رول دبه	On the coast, between Gharfah and Dhadnah, Rul Dibah being the more northern of the two.	A pair of villages, about 2 miles apart, each containing about 40 houses of Sharqiyyin.	Between them these two villages possess about 2,500 date trees, 200 cattle and 200 sheep and goats, besides a few donkeys and fewer camels.
Saqamqam سقبقم	A short distance inland from a point on the coast 12 miles south of Khor Fakkān.	A village of 30 houses of Sharqiyyin.	The hills rise immediately at the back of the village. There are a few camels and donkeys, about 30 cattle, 200 sheep and goats, and perhaps 1,000 date palms. This is one of the villages at present held by the rebel Shaikh of Fujairah.
Sfai (Wadi) رادي صفى	A tributary or branch of Wadi-al-Qor, with which it connects near Nuslah.	A valley.	Said to contain some small villages of Mazāri' which acknowledge the Shaikh of Shārajah.
Sharam شرم	On the coast, the next village south of Dhadnah.	A village of 40 houses of Sharqiyyin.	Here there are about 2,000 date palms, 4 camels, 10 donkeys, 50 cattle and 200 sheep and goats.

Name.	Position.	Nature.	REMARKS.
Sufad صُفَاد	About 5 miles inland, a short distance north of Fujairah . Sufad should perhaps be reckoned to Wādī Hām , being situated in the same valley as Manāmah .	A hamlet of 15 houses of Sharqiyyin of the Hafaitāt section.	Livestock are estimated at 3 camels, 20 donkeys, 15 cattle and 200 sheep and goats; and there are said to be about 3,000 date trees.
Zubārah زُبَارَة	On the coast, 4 miles north of Khor Fakkān .	A village of 50 houses of Naqbiyyin .	The inhabitants own 15 fishing boats and have about 40 cattle, 30 donkeys, 400 sheep and goats, and 2,000 date palms.

Population and resources.—From the preceding table it will be apparent that the population of the district amounts to about 10,000 souls, of whom about 6,000, or more than half, are **Sharqiyyin**; the other tribes represented are, in order of numerical strength, the **Naqbiyyin**, **Shihūh**, **Za'āb**, Persians, **Balūchis**, **Jalājilah** and **Kunūd**, but of these only the **Naqbiyyin** number more than 1,000 persons. **Bidyah** is apparently the largest, though it is not the most important, place.

The inhabitants are settled; they are date growers, farmers and fishermen, but only upon a small scale.

Administration and political position.—The **Shamailiyah** tract is a part of the **Shārjah** Principality; for some time past, however, the district has not been directly managed by the Shaikh of **Shārjah**, but has been held of him as a fief by one of his relations. In 1902 the fief-holder was **Hamad-bin-Majid**, a first cousin of the Shaikh; this feudatory had his residence at **Ghāllah** and was in a position to collect about \$ 2,000 a year by way of revenue for himself. The position in **Shamailiyah** subsequently became complicated through the action of **Hamad-bin-'Abdullah**, **Sharqi**, headman of **Fujairah**, who had for some years been striving to render **Fujairah** and certain other villages in **Shamailiyah**, occupied by his adherents, independent of **Shārjah** jurisdiction; the rebel now holds adverse possession not only of **Fujairah** but also of **Bithnah**, **Gharaifah**, **Marbah**, **Qaraiyah**, **Qidfa'**, **Saqamqam** and **Sufad**. **Sa'id-bin-Hamad**, the successor of the **Qāsimi** fief-holder of 1902, now resides at **'Ajmān**; and the connection of the **Shārjah**

family with Shamailiyah appears to be, at the present moment, little more than nominal. As the ownership by the Shaikh of Shārjah of the whole of Shamailiyah was explicitly recognised by the British Government so recently as 1903 and as the actual state of affairs has now ceased to correspond with the view then taken, the present position in Shamailiyah is somewhat difficult to define.

A district of the **Persian Coast** bordering the north-west side of the loop formed by the Gulfs of Persia and 'Omān at their junction; it encloses the port of Bandar 'Abbās, which however is not administratively included in the district.

SHAMĪL
شمیل
or
SHAMĪLĀT
شمیلات
DISTRICT

Limits.—The bulk of Shamīl lies eastward of Bandar 'Abbās in the form of a somewhat elongated parallelogram with its south-west corner at that town: the boundaries of this portion are, on the north, a line running from Kūh-i-Namak to Kūh-i-Niyān in such a manner as to include Khurgu village and thence crossing the valley of the Shamīl river to the Zindān hills; on the east, the Zindān hills from the Shamīl river almost to the breach formed by the exit of the Mīnāb river; and, on the south, an imaginary line running from the point last mentioned to the coast at the mouth of the Shamīl river, and beyond the Shamīl estuary, the sea-coast as far as Bandar 'Abbās. To the west of Bandar 'Abbās the district is irregularly bevelled off to the coast at the mouth of the Kul river; the northern boundary is first carried south from Kūh-i-Namak to the eastern shoulder of Kūh-i-Gīnau, the crest of which it follows westwards to the Kul river; from the point where the boundary strikes the river to the sea the Kul itself is approximately the boundary, but a few villages, of which the most important are the two Kishārs, though lying to the west of the river are included in the Shamīl district.

Physical characteristics.—The district is in fact a maritime plain enclosed between the sea and some bold mountain ranges of which the elevation generally exceeds 3,000 feet. The dominant feature of the whole country is Kūh-i-Gīnau کوه گنر, of which the summit reaches 7,783 feet at a point 18 miles north-north-west of Bandar 'Abbās. The mountains to the north of the district rise very steeply from the plain and attain 4,481 feet in Kūh-i-Namak کوه نیک at their western end and 6,057 feet in

Kūh-i-Niyān کوه نیان at their eastern extremity;* between these points they are interrupted by 4 gaps through which valleys of some size descend to the plain giving the range a disconnected appearance. The Kūh-i-Zindān کوه زندان range (also called the Rūdbār رودبار hills) on the east of the district appears to have a nearly constant elevation of over 3,000 feet. A great mountain situated beyond the district but visible from the Persian Gulf is Kūh-i-Bakhūn کوه بخون, which is 42 miles north of Bandar 'Abbās, 10,660 feet high, and covered with snow in winter.

Besides these considerable mountains the district possesses a generally low and in places ill-defined sandstone ridge, which subtends the sea-coast at a distance of from 3 to 10 miles and divides the country into two portions that differ widely in their characteristics; the ordinary height of this ridge is perhaps 200 feet, but at a point 13 miles west by north of Bandar 'Abbās and 6 miles from the sea it reaches a height of 1,645 feet. On the east this ridge dies away a little beyond Bāghu. Between this ridge and the mountains the land is a fertile plain; between it and the coast it is a sandy expanse, impregnated with salt and diversified, at intervals only, by date groves and small patches of cultivation. From the sandstone ridge numerous steep sided and extremely tortuous ravines, containing no water except during heavy rain, run down to the coast. The seashore is sandy in its whole extent.

The only valleys of importance are the Tang-i-Zāj تنگ زاج, which enters the district between Kūh-i-Ginau and Kūh-i-Namak, and that of the Shamīl river, known as Dareh-i-Salūgalam دره سلوگلم, which emerges between Kūh-i-Nivān and Kūh-i-Zindān. The former contains a salt stream, called the Rūd Shūr رود شور, of which the channel, turning to the south and leaving the villages of Nung and Bāghu on its right bank, reaches the sea at a point 8 miles east of Bandar 'Abbās. The bed of the Shamīl divides on reaching the district, sending one branch straight to the village of Shamīl and thence south-south-east to the sea, while another branch strikes south-westwards until it receives, near Budik village, an affluent from the hills known as the Jāmūsh جاموش, when it turns to the south-south-west and rejoins the eastern branch at 8 miles from the sea: in the neighbourhood of the coast the united stream bears the name of Rūd Shīrīn رود شیرین. Both the Rūd Shūr and the Shamīl river vary greatly in volume, being sometimes wide rippling streams a few inches in depth

*A distant view from the sea of Kūh-i-Niyān (called Jabal Shimil) will be found in Chart No. 2373—2387A, *Persian Gulf*.

and after rain impassable torrents ; the western branch of the Shamīl river is frequently dry. The Rūd-i-Kul رودکول, or Kul river which bounds the district on the west is very salt, and its riparian villages depend on wells for their drinking water ; near Gūrband it receives from the north a stream called the Rūd Shūr. In the neighbourhood of its mouth the Kul is about 70 yards wide, with a bed of soft mud and banks of sand 3 or 4 feet in height ; it is said never to contain less than $1\frac{1}{2}$ feet of water, and after rain it is liable to become a raging flood. The Kul river carries part of the drainage of the southern slopes of Kūh-i-Ginau ; the remainder of the southern drainage of that mountain is borne by a channel which runs eastwards to Chāh Chakūr, then breaks through the sandstone coast range and, turning southwards, reaches the sea a very little to the west of the stream from Bāghu.

The Shamīl district contains some clear flowing streams and a number of springs, especially in proximity to the hills ; the water of most of these is absorbed in irrigation or sinks into the porous soil before reaching any channel by which it could be brought to the coast. Mimosa and oleander are among the commonest plants, and in places the country is covered with thorny jungle.

The climate of Shamīl resembles that of Bandar 'Abbās, but inland the summer heat is even more intense, owing to the distance from the sea and the reflection of the sun's rays from the bare sandy soil.

Population.—The inhabitants of the Shamīl district are of Persian race, but there is probably a considerable infusion of Balūchi and Arab blood. The universal language is Persian of a purity which increases with the distance from Bandar 'Abbās ; Arabic is scarcely understood, and Balūchi is not heard except at the eastern end of the district. On the west side of the mouth of the Shamīl river, however, is a cluster of villages near the coast, of which the inhabitants are all Balūchis speaking both Persian and a debased form of Balūchi. There are no distinct or well-known local tribes.

The people are mostly Shī'ahs except the inhabitants of about a dozen villages, to the west of Bandar 'Abbās, which are either altogether or predominantly Sunni. As subjects the inhabitants of Shamīl are weak, peaceable and oppressed : as cultivators they are idle and unthrifty. The majority live in a squalid fashion in date leaf huts, and as long as they can obtain enough dates to eat they are content to do nothing. In the interior they are cultivators, on the seaboard fishermen and boatmen ; in the season every man, woman and child becomes a date picker. There are

practically no arms among them ; only a headman here and there owns a rifle or two. The total population, excluding Bandar 'Abbās, which is not reckoned to Shamīl, probably amounts to about 25,000 souls. Villages are somewhat numerous, but they are small, and those that possess so many as 100 houses are less than a score.

Agriculture and trade.—Dates and barley are the staples of cultivation, but in some places wheat and tobacco are grown, and a few villages possess a considerable acreage of henna. In a number of the villages the lands are watered by means of channels cut from the Shamīl river and other streams ; in a few irrigation is from wells, the water being raised by means of a balanced pole called Dūro درو, similar to that used in Egypt ; elsewhere the crops are grown by rainfall. The grain harvest is in April and May, the date harvest in August and September. Potatoes, turnips, radishes, tomatoes, lettuce, cucumbers, carrots, and water melons grow.

The grain raised is only sufficient for home consumption ; but there is a small surplus of dates which is exported. Imports are trifling on account of the poverty of the people and comprise little except tea and cotton goods. The commercial capital of Shamīl is Bandar 'Abbās, and the currency, weights and measures of the district are (with some trifling differences) the same as those of the town, except that the Indian rupee is seldom met with in the district. The area of land is generally estimated by Mans, that is, by the number of Mans of seed grain required to sow it.

Communications and transport.—The land routes which radiate from Bandar 'Abbās all lie in their first stages within the Shamīl district.

1. The coast route from Bandar 'Abbās to Mināb (54 miles) runs within the Shamīl district as far as the Shamīl river ; and the first halting place, Qulūghān (at 24 miles), is in Shamīl. Several muddy and swampy streams have to be crossed which might at any time present difficulties to wheeled carriage, and in wet weather this route would be impracticable.* The remaining stages are mentioned in the article on Mināb District.

2. The Rāh-i-Miyan راه میان, or middle route from Bandar 'Abbās to Mināb runs by Dih Nau (at 20 miles) and Jallābi (at 30 miles) to Gavarband (at 50 miles) which is on a direct route from Shamīl Village to Mināb and distant 18 miles from Mināb. This route is said to be a good one, and passable except in very wet weather. This is the

* See *Routes in Persia*, I, No. 15.

route by which caravans for Bam, Kirmān, Sistān and Khurāsān ordinarily leave the district in winter.

3. The best known and most frequented route in the district is one still further to the north which runs from Bandar 'Abbās by Bāghu (15 miles) and Kalkāzi (32 miles) to Kushku (50 miles); beyond Kushku it enters the hills by the Tang-i-Zindān تنگ زندان or gorge of the Shamīl river. This route is free from obstacles, at least in ordinary weather; but some streams are crossed here and there, the plains traversed are hard and stony going, and there is some swampy ground just before Kushku. In summer caravans for Kirmān generally leave the district by this route, and it is frequently used by hot weather caravans for Yazd. It is also a section of the Persian postal road between Bandar 'Abbās and Kirmān.

4. The preceding routes are linked together by various cross-roads, which are considerably used. The principal of these is a route from **Mināb** Town by Gavarband already mentioned under Route No. 2 (at 15 miles), and **Shamīl** Village (at 30 miles) to Kushku (at 40 miles); this route is good from **Mināb** Town to **Shamīl** Village,* but between **Shamīl** Village and Kushku it is bad and liable to be swept by floods.† There is also a route, said to be fairly good, which runs due north from **Shamīl** Village and joins Route No. 3 near the Tang-i-Zindān.

5. The route to Furg and Shīrāz, also to Sa'idābād and Yazd, goes north by Chāh Chakūr (at 9 miles) and Ginau village (at 22 miles), leaving the district by the Tang-i-Zāj. Within Shamīl it lies over rough stony or rocky ground.‡

6. The route to Lār (137 miles) and by Lār to Shīrāz goes by Chistāneh (at 15 miles) and Gachin Bāla (at 23 miles) and so leaves the district: the only part at all difficult in dry weather lies apparently in broken country 4 miles beyond Chistāneh.§

Ordinary supplies are obtainable throughout Shamīl in small quantities, but it is estimated even a single regiment moving rapidly would have difficulty in subsisting upon the country. Not much transport is available. The only animals are camels and donkeys, and according to a rough estimate the district possesses only about 700 camels and 1,000 donkeys, which could ill be spared by the owners.

* Described by Preece in his *Notes of a Journey made between Shiraz and Jaskh*.

† See *Routes in Persia*, I, Nos. 13 and 17, and Preece's *Notes*.

‡ See *Routes in Persia*, I, No. 60, and Preece's *Notes*.

§ See *Routes in Persia*, I, No. 20.

Administration.—The district of Shamīl is under the Governor of the **Gulf Ports**; the local ruler or Kalāntar (at present Asad Ullah Khān) has his residence at Ziyārat, is virtually independent of the Deputy-Governor of Bandar 'Abbās, and holds his position in virtue of a lease of the revenue in his favour by the Governor. The district is not capable, in its present condition, of paying more than 8,000 Tūmāns even in a good year as land revenue, but nominally it was leased in 1904 for 11,000 and in 1905 for 13,000 Tūmāns.

The administration is carried on through the headmen or Kadkhudas, each of whom is responsible to the Kalāntar for the behaviour and revenue of his village. There is no system of police or of civil or criminal justice. The land revenue, which is payable in cash and represents $\frac{1}{10}$ of the gross produce as valued by the Kalāntar's Kharrās خراس or assessor, is the only recognised form of taxation; but the Kalāntar levies as many irregular extra imposts as he can.

Ecclesiastical authority is not strong in Shamīl. The principal local families are that of the Kalāntar and another at Shamīl Village of which one Mīr Ahmad Shāh is the present head.

Topography.—The following are the principal villages and points of interest in the Shamīl District:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Āb Pīsh آب پیش	See Budik below.
'Ali (Birkeh Band-i-) بركه بند علي	On the coast 10 miles west of Bandar 'Abbās, on the route to Lār.	Nil.	One reservoir containing water.
Alu Mihtari الر مهتري	3 miles south by east of Shamīl Village.	100 huts of Persians, Shī'ahs.	There are about 100 date palms and a large area is sown with barley. Cattle are about 100 and sheep and goats 200. Water for all purposes is from the Zarūvi زروى stream, a tributary of the Shamīl river. The annual Malyāt is 50 Tūmāns.
Angūru انگور	30 miles west-north-west of Bandar 'Abbās.	30 houses of Persians, Sunnis.	Dates, barley and wheat are cultivated, the palms numbering 500, and there are 20 cattle and 60 sheep and

Name.	Position.	Houses and inhabitants.	REMARKS.
Bāghu باغو	13 miles north-east of Bandar 'Abbās, but only 20 feet above sea-level.	40 permanent date leaf huts of Persians, Shī'ahs; the number of the inhabitants is greatly increased in the hot weather.	<p>goats. The annual Malyāt with several adjacent small villages is 175 Tūmāns.</p> <p>The first stage on the caravan route from Bandar 'Abbās to Kirmān. The village, which is surrounded by date groves with a rocky eminence in the middle, is subdivided into the three hamlets of Karīmābād, Husainābād and Bāghu proper. The date crop averages 12,000 'Abbāsī Mans (of 9 lbs.) annually, and much fire-wood is collected and sold in Bandar 'Abbās. Water is by a canal from Nung; there are wells also, but brackish. There are 50 doukeys and 200 sheep and goats. The village and its lands belong to the Agha Khān of Bombay and pays 40 Tūmāns of annual revenue. There is a Qadamgāh of Murtaza 'Alī.</p>
Banūband بنو بند	12 miles north-west of Bandar 'Abbās.	20 houses of Persians, Shī'ahs.	Wheat and barley are grown. Water is from wells 30 feet deep. Livestock are 10 camels, 30 donkeys and 100 sheep and goats. The annual Malyāt is 15 Tūmāns.
Bilandu بلندر	20 miles west by north of Bandar 'Abbās, near the left bank of the Rūd-i-Kul.	Half-a-dozen houses of Persians, Sunnis.	Woollen 'Abas and cloaks are manufactured. Water is brackish from a well 25 feet deep. Livestock are 8 cattle and 50 sheep and goats.
Budik بدی	3 miles south-east of Ziyarat.	25 houses of Shī'ahs.	Budik includes a hamlet called Ab Pish on the north-east of the village proper. Dates

Name.	Position.	Houses and inhabitants.	REMARKS.
<p>Bnstāneh بسنانه</p> <p>or Bustānu بستانو</p>	<p>On the coast, 18 miles west by south of Bandar 'Abbās.</p>	<p>30 houses of Persians, nearly all Sunnis.</p>	<p>and barley are cultivated; there are no other resources. Water is from the Shamīl river and there is outlying cultivation at Shōkam. Budik is included in the revenue assessment of Gōdu below.</p> <p>The people are fishermen and boatmen, quarry stone in the adjacent hills, make millstones and grow a few dates. There are 10 camels, 30 donkeys, 10 cattle and 150 sheep and goats. Water is from a reservoir and wells. The hills behind, called Kūh Kulā-tu کلا تر, are said to yield sulphur, salt, copper and red iron oxide; the salt and oxide deposits are to some extent worked. There are 5 boats.</p>
<p>Chāhistān چاهستان</p>	<p>6 miles north-east of Ziyārat on the Bandar 'Abbās-Kirmān route.</p>	<p>50 houses of Shī'ahs; the population is largely augmented by immigration in the hot weather.</p>	<p>A prosperous village with large date groves and cultivation of wheat and barley irrigated by lifts from wells only 8 to 10 feet deep. The soil is gravelly. Water is good and plentiful, but grazing is poor; there are 50 cattle and 150 sheep and goats, but no transport animals. There is a solidly built square domed structure, the shrine of Hazrat Amīr, which stands on the north side of the place and forms a good landmark. The annual revenue is 50 Tūmāns with Dih Nau.</p>
<p>Chāh Tang چاه تنگی</p>	<p>1 mile east of the Kirmān route, between Bāghu and Kalkāzi.</p>	<p>Nil.</p>	<p>A place in a dry hollow where water can sometimes be obtained: it is used by camel owners and graziers.</p>

Name.	Position.	Houses and inhabitants.	REMARKS.
Chāhu چاهو	14 miles west-north-west of Bandar 'Abbās, on the left bank of a watercourse.	A dozen houses of Sunnis.	Dates are grown and there are a couple of wells; the place has no other resources.
Chakūr (Chāh) چاه چکور	8 miles north by east of Bandar 'Abbās.	30 houses of Sunnis.	The people are graziers and date growers. The water, which is slightly brackish, comes by a Qanāt from 'Isīn. Livestock are 20 camels and 100 sheep and goats. The annual revenue is 10 Tūmāns.
Chārmaidān چارمیدان	18 miles west-north-west of Bandar 'Abbās, beyond the Rūd-i-Kul.	25 huts of Sunnis.	Really a part of Kishār village, where the Kadkhuda resides. The people cultivate barley and possess 6 cattle and 30 sheep and goats. There are 5 water reservoirs. The annual revenue is 10 Tūmāns.
Chiju چيجو	1 mile from the coast, 7 miles west of Bandar 'Abbās.	Half-a-dozen houses of Sunnis.	The people fish, cultivate dates and own 5 cattle, 30 sheep and goats and 5 small fishing boats.
Chistāneh چستانه	15 miles west of Bandar 'Abbās on the route to Lār and 3 miles from the coast.	Nil.	There are a caravan-sarai and reservoir in good repair; the latter contains good water.
Chūj چوج	17 miles north-east of Bandar 'Abbās.	Temporarily occupied at times when there is pasture by families of herdsmen and camel owners from Dih Nau.	Water is from wells 15 to 20 feet deep.
Damāgh Bīr دماغ بیر	15 miles west of Bandar 'Abbās, on the route to Lār.	Nil.	A date grove with a well of good water.
Damīlu دمیلو	30 miles west by north of Bandar 'Abbās, a little north of the route to Lār.	50 huts of Persians, Sunnis.	The village is scattered; only about half the houses are in one place. Lātīdān لاتی دان hamlet, 3 miles to westward on the east bank

Name.	Position.	Houses and inhabitants.	REMARKS.
Dam Shehr دم شهر	18 miles south-south-east of Shamīl Village.	50 houses and huts of Shī'ahs.	of Rūd-i-Kul, is part of Damīlu. Dates and barley are grown, and there are 100 sheep and goats besides a few camels and cattle. Water is fair, from wells and ponds. The headman is a Mulla. The annual revenue is 20 Tūmāns.
Darohiju درجهجو	10 miles south-south-west of Shamīl Village, a little to the north of the Rāh-i-Miyān route.	25 houses of the Mazājān مزاجان tribe.	There is a mud fort here. Livestock are 20 camels, 30 donkeys and 100 sheep and goats. The date groves and gardens are said to be irrigated with water brought through the hills from the Mināb river. The annual revenue is 28 Tūmāns.
Dargīr درگیر	10 miles north by west of Bandar 'Abbās.	20 houses of Shī'ahs.	Barley is grown: water is from wells. A few donkeys, cattle, sheep and goats are obtainable, but the place is poor. The annual revenue is 5 Tūmāns.
Darmugh دارمغ	14 miles north-north-west of Bandar 'Abbās, at the foot of Kūh-i-Gināu.	15 do.	Dates and barley are grown. There are a few cattle, donkeys, sheep and goats. Water is from wells.
Dih Nau ده نو	9 miles south-south-west of Ziyārat, on the north side of the Rāh-i-Miyān route.	30 houses of Persians, Shī'ahs.	The crops are wheat and barley. Water is from a perennial spring. There are 8 cattle and 10 donkeys.
			The people grow henna and own 30 camels, 50 cattle and 100 sheep and goats. Drinking water is from wells, and irrigation is from a brackish canal. For revenue purposes this village is connected with Chāhistān above.

Name.	Position.	Houses and inhabitants.	REMARKS.
Dizak دیزک	15 miles north of Bandar 'Abbās, at the south-east corner of Kūh-i-Ginau.	A dozen houses of Shī'ahs.	There is a stream of fresh water ; date palms and fruit trees are cultivated. No supplies except a little fodder. There are 10 donkeys.
Fatīlu Jari فاطلو جری	16 miles north-north-east of Bandar 'Abbās.	Nil.	A garden of dates, lemons and other fruit trees, watered by a tributary of the Bāghu stream.
Fehleh (Chāh) چاه فله	16 miles south of Ziyārat, on the R ā h-i-M i y ā n route.	15 houses of Shī'ahs.	The inhabitants cultivate barley and have some camels, goats and sheep. A date plantation has recently been laid out (1905). The annual revenue is 10 Tūmāns.
Gachīn Bāla گچین بالا	23 miles west by south of Bandar 'Abbās, 1 mile south of the Lār route and 6 miles from the coast.	150 houses ; the inhabitants are mostly Sunnis.	The people are stone-workers, fishermen and date growers ; they own 30 camels, 100 cattle and 400 sheep and goats. Water is from wells. There are a dilapidated Sarāi and reservoir on the Lār route near the village. There are also two shrines, one called Chihil Tanān, the other a Qadamgāh of Murtaza 'Alī. The annual revenue of this village and the next jointly is 124 Tūmāns.
Gachīn Zīr گچین زیر	2 miles from Gachīn Bāla, nearer the coast.	70 houses ; the people are mostly Sunnis.	The inhabitants fish and work stone : mill and building stones are sent from here to Bandar 'Abbās. Water is from wells. There are 20 camels, 20 cattle and 100 sheep and goats, but supplies are scanty. Half-a-dozen small skiffs and 2 or 3 larger boats are owned here.

Name.	Position.	Houses and inhabitants.	REMARKS.
Garāshi گراشي	11 miles east by north of Bandar 'Abbās, on the Rāh-i-Miyan route, just west of Rāhdār.	Nil.	Here are remains of old earthenware vessels called Khumreh خمره, let into the ground to catch rain water.
Garūr گرور	On the coast, 6 miles west of Bandar 'Abbās.	Nil.	Date groves and a well of sweet water.
Gavarband گواربند	14 miles south-south-east of Shamīl Village.	300 houses of Sunnis.	The village stands on a flat sandy site with hills to the east of it. There is an old and dilapidated mud fort. Wheat and barley are grown in abundance, but there are only about 300 date palms; the people are all agriculturists. Live-stock are 75 camels, 200 donkeys, 300 sheep and goats and 100 cattle. Water is from wells 40 feet deep. There is a shrine called Saiyid Bāba, also a Qadamgāh of Amīr. This is a thriving village, but the annual land revenue is said to be only 25 Tūmāns.
Gazrīz گازرئز	20 miles south-south-west of Shamīl Village, on the right bank of the Shamīl river at 5 miles from its mouth and adjacent to the coast route from Bandar 'Abbās to Mināb.	20 houses of Persians and Balūchis, Sunnis.	The people grow barley and own 30 camels and 75 sheep and goats.
Ginau گنو	20 miles north of Bandar 'Abbās, at the north-eastern foot of Kūh-i-Ginau.	20 houses of Shī'ahs: the population is greater in summer than in winter owing to an influx from Bandar 'Abbās.	The inhabitants cultivate dates and fruit. Water is from a reservoir and a few saltish springs. A hot spring near by, impregnated with sulphur, is used to turn

Name.	Position.	Houses and inhabitants.	REMARKS.
Gīshān گیشان	3 miles north of Ziyārat, on the Bandar 'Abbās-Kirmān route.	20 houses of Shī'ahs.	mills. There are 10 donkeys, and the annual revenue is 10 Tūmāns. Dates and barley are grown: water is from a spring in the hills to the north. There are 8 cattle and 50 sheep and goats, but supplies are scanty. The annual revenue is 8 Tūmāns.
Gōdu گودر	2 miles south of Ziyārat, on the right bank of the stream called Jāmūsh.	150 houses.	There is a small mud fort. Dates and henna are cultivated, also barley. Water is from the stream. There are 50 camels, 50 donkeys, 50 cattle and 300 sheep and goats. The annual revenue, with Budik and Shōkam, is 500 Tūmāns.
Gulistān گلستان	5 miles west of Bandar 'Abbās, near the coast.	Nil.	Date groves only, and a well of sweet water.
Gum Surkh گم سرخ	8 miles south-west of Shamīl Village.	Half-a-dozen huts, occupied in winter by labourers who attend to the water-channels and cultivation of neighbouring villages.	There is water from wells and canals.
Gūrband گوربند	16 miles west by north of Bandar 'Abbās, on the left bank of the Rūd-i-Kul.	50 houses of Sunnis.	The inhabitants cultivate date groves, which are all on the right bank of the Rūd-i-Kul, and own 50 cattle and 100 sheep and goats. There is no transport. The river is salt, and water is from 3 reservoirs and a pond. The annual revenue is 25 Tūmāns.
Hasan Langi حسن لنگي	9 miles south of Shamīl Village.	200 houses of Shī'ahs.	The village is very widely scattered and its size difficult to estimate. Dates, barley

Name.	Position.	Houses and inhabitants.	REMARKS.
			and heenna are cultivated; the date palms number at least 5,000. Livestock are 50 donkeys, 50 cattle and 250 sheep and goats. Water is from the Shamīl river and a local spring. There is a large garden here belonging to the Kalāntar of Shamīl. The village pays an annual assessment of 300 Tūmāns.
Hurmūdar هرمردر	10 miles north by east of Bandar 'Abbās.	40 houses of Shī'ahs.	A double village, the northern portion being called Hurmūdar Bala and the southern Hurmūdar Qal'eh. It stands on the left bank of the ravine, a wide bed with high sandstone cliffs on each side, down which the road to Bandar 'Abbās runs for some distance. The inhabitants are date growers. Water, from the stream, is slightly brackish. The annual revenue is 30 Tūmāns.
Husain (Chāh) چاه حسين	21 miles west-south-west of Bandar 'Abbās, on the coast.	Nil.	Date groves only.
Husainābād (I) حسين آباد	2 miles west of Bandar 'Abbās.	Nil.	A garden and two new reservoirs, the property of Hāji Amin-ut-Tujjār of Bandar 'Abbās.
Husainābād (II) حسين آباد	11 miles south by west of Shamīl Village and 2 miles west of the place where the Rāh-i-Miyān route crosses the Shamīl river.	Nil.	There is cultivation of barley at this place; water is from the Shamīl river.

Name.	Position.	Houses and inhabitants.	REMARKS.
'Īsīn عیسین	10 miles north of Bandar 'Abbās, near the left bank of a stream of the same name.	100 houses of Shī'ahs.	The inhabitants grow dates and fruit. Water is from the stream and from wells. Some fodder and supplies are obtainable; livestock are 50 donkeys and 100 sheep and goats. The annual revenue of this place along with Tāziyān Bāla is 150 Tūmāns.
Ismā'il (Chāh) چاه اسماعیل	1 mile west of Chāh Ismā'ili.	Half-a-dozen houses of Shī'ahs.	Resembles Chāh Ismā'ili.
Ismā'ili (Chāh) چاه اسماعیلی	13 miles south-east of Shamīl Village.	Do.	Wheat and barley are grown; the water, from wells, is slightly brackish. The revenue of this place together with the last is 12 Tūmāns a year.
Jaghūn جنون	7 miles north of Ziyārat and 4 miles north of the Bandar Abbās-Kirmān route.	10 houses of Persians, Shī'ahs.	The people cut wood and burn charcoal in the hills to the northward. There are a few date trees but no supplies. A shrine of Imām Riza exists here.
Jallābi جلابی	6 miles south by east of Ziyārat, on the Rāh-i-Miyān.	75 houses and huts of Persians, Shī'ahs.	The people are barley growers and graziers, owning 30 camels, 50 cattle and 150 sheep and goats. Water is from wells about 25 feet deep. The revenue assessment is 120 Tūmāns a year.
Kalāt Bāla and Zīr کلات بالا و زیر	15 miles north-west of Bandar 'Abbās, near the left bank of the Rūd-i-Kul.	80 houses of Persians, Shī'ahs.	Kalāt Bāla contains a ruined mud fort, also a shrine of Aqāi Sādāt آقایی سادات, a local saint of whose history nothing is now known; it is situated 2 miles north-north-east of Kalāt Zīr. Tobacco, dates and barley are grown. Water in both villages is from wells about 15 feet deep, and there are 15

Name.	Position.	Houses and inhabitants.	REMARKS.
Kalkāzi كلكاضي	25 miles north-east of Bandar 'Abbās; it is the second stage on the route from there to Kirmān; elevation above the sea is 140 feet.	250 flat-roofed mud houses of Shī'ahs.	camels, 40 cattle and 100 sheep and goats. The annual revenue is 46 Tūmāns. The village is rich and is hidden in its date groves, which are very extensive; numerous well-grown mimosas also are scattered about. Dates, wheat, barley, tobacco and henna are cultivated. Water is sweet and abundant, from a number of shallow wells which are used for irrigation as well as for other purposes. Supplies are plentiful but transport is scarce; 20 camels, 30 donkeys and 15 cattle are the only livestock. There is a Qadmgāh of Imām Riza, and shrines also exist of Bībī Sālihūh صالحه, Murtaza 'Ali and the 12 Imāms.
Kandāli کندالي	13 miles west by north of Bandar 'Abbās, on the left bank of a watercourse.	Nil.	A small tract where large tanks have been dug to collect rain water.
Karandu کرندر	16 miles north-west of Bandar 'Abbās, not far from the left bank of the Rūd-i-Kul.	15 houses of Shī'ahs.	Dates and barley are grown and there are 30 sheep and goats and a few camels and cattle. Water is from 4 wells about 15 feet deep and is fairly good except when the wells are low; it then becomes somewhat brackish.
Kārvānsarai کاروانسرای	24 miles east by north of Bandar 'Abbās and 3 miles from the sea, on the coast route from Bandar 'Abbās to Mināb.	Nil.	Here are ruins of a Sarāi and reservoirs said to be of the time of Shāh 'Abbās.

Name.	Position.	Houses and inhabitants.	REMARKS.
Khājeh Khizar خواجہ خضر	On the coast 3 miles south-south-west of Kārvānsarāi.	Nil.	A shrine of Khizar which forms a good landmark; it is a high domed structure of solid appearance.
Kharg (Chāh) چاہ خرگ	5 miles south by east of Shamīl Village, on the route to Mināb.	150 houses of Shī'ahs.	A prosperous village, situated in flat and rather stony country. Wheat and barley are grown, and water is plentiful in canals from the Shamīl river. There are ordinary supplies, and livestock amount to 20 camels, 30 donkeys, 50 cattle and 200 sheep and goats. The annual revenue is 80 Tūmāns. A route from here to the south-west through H san Langi connects with the Rāb-i-Miyān route between Mināb and Bandar 'Abbās.
Khargūn خرگون	15 miles west by south of Bandar 'Abbās, near the coast.	10 Do.	The people cultivate dates and are fishermen. Water is from wells 15 feet deep which are slightly brackish; there are a few cattle and 40 sheep and goats. A few small boats are owned here.
Khūn Surkh خون سرخ	15 miles west by south of Bandar 'Abbās, on the coast.	15 Do.	Some of the houses, 2 miles inland, form a group called Jabāzi جهازی. Dat-s are grown, one of the plantations being Tōq Mahmūd; and the inhabitants fish and are graziers, owning a few cattle and donkeys and 50 sheep and goats. Water is from a cistern and from wells.
Khurgu خرگو	In the hills, 13 miles north-west of Ziyarat.	250 houses.	There are a small fort and a Qadamgāh of Imām Riza, besides shrines of Murtaza

Name.	Position.	Houses and inhabitants.	REMARKS.
Kishār Bāla کشار بالا	20 miles west-north-west of Bandar 'Abbās, beyond the Rūd-i-Kul.	35 houses of Sunnis.	'Alī, Khājeh Khizar, and Bibi Shehrbānu. The people grow dates and barley, the former to a large extent, and are wood-cutters and charcoal-burners. Water is from springs, two of which are large. There are 150 donkeys, 50 cattle and 300 sheep and goats. The annual revenue of the village is 400 Tūmāns.
Kishār Zīr کشار زیر	2 miles west of Kishār Bāla.	50 Do.	Dates are grown, stone is quarried, and sulphur is mined from a hill to the north called Kūh Tankhāh کوه تنگراه; at the last mentioned place a hot sulphurous spring exists. Water is from 7 reservoirs, sweet, and from wells, brackish. There are a few cattle and donkeys. The village possesses a shrine of Shaikh Sangur سنگر.
Kūh Siyāh کوه سیاه	11 miles north-east of Bandar 'Abbās.	A cold weather village of 20 mat huts.	Part of the village is detached from the rest and is called Sargap سرگپ; the whole is very scattered. The people are date cultivators and graziers with 20 cattle and 100 sheep and goats. Water is from 3 reservoirs and from brackish wells about 20 feet deep. The joint annual revenue of this village together with the last is 100 Tūmāns. The people are graziers and migrate elsewhere in summer. Water is brackish from a stream $\frac{1}{2}$ of a mile to the east called Tāsbar طاسبور.

Name.	Position.	Houses and inhabitants.	REMARKS.
Kūkām کوکم	8 miles south-east of Ziyārat, on the Rāh-i-Miyān route and near the left bank of Shamīl river.	20 houses of Shī'ahs.	There is a small fort. The people grow barley and have a few sheep and goats.
Kunak کنک	6 miles north-west of Ziyārat, at the exit of the Jāmūsh stream from the hills.	A few huts in the season for cultivation.	Barley is grown here by the people of Musāfirī. There is a spring of rather brackish water.
Kunāru کنار	15 miles north-west of Bandar 'Abbās.	20 houses of Shī'ahs.	Dates and barley are grown and there are a very few cattle and donkeys. Water is from wells.
Kurangi (Bāgh) باغ کورنگی	17 miles north-north-west of Bandar 'Abbās, in the seaward slopes of Kūh-i-Gīnau.	2 or 3 huts.	A garden watered by a spring from the mountain and owned by Hājī 'Abdur Rasūl of Bandar 'Abbās.
Kushku کشکو	7 miles west-north-west of Shamīl Village, the 3rd stage from Bandar 'Abbās on the route to Kirmān, but inferior as a camping ground to Chāhīstān.	300 houses, many flat-roofed and of mud, the rest huts, tenanted by Shī'ahs: in the hot weather the people mostly migrate to the north side of Kūh-i-Niyān.	The site is bare and stony and some of the houses are built of stone; being immediately under the hills, the heat in summer is extreme. The inhabitants are cultivators and graziers, owning 50 cattle and 200 sheep and goats, but no transport animals. The lands lying south of the caravan route between this village and that of Shamīl are irrigated from the Niyān stream. There is sweet water from wells and a spring called Chāh Sar. The annual revenue is 400 Tīmāns. There are shrines of Hazrat 'Abbās and the Amīr, of Imām Rīza, and of Khīzar and Iliyās. Kushku appears to be one of 7 places, all in the same neighbourhood, which were

Name.	Position.	Houses and inhabitants.	REMARKS.
Mābaini (Chāh) چاه مابیني	9½ miles north-east of Bandar 'Abbās, on the route to Kirmān.	20 huts of Shī'ahs.	taken and burnt by Timūr at the end of the 14th century A. D. There are a few date palms, but the main resources are pastoral. Besides sheep and goats there are a few camels. Water is from 3 wells 15 feet deep; it is scanty and slightly brackish.
Mab Darwaishi مه درويشي	On the coast, 17 miles west by south of Bandar 'Abbās.	Nil.	A date grove of about 200 trees.
Mazlūm Kushteh مظلوم کشته	8 miles east-north-east of Bandar 'Abbās, between Tāsbar and the sea.	Nil.	A large plain which affords a little grazing in winter, but in summer is a desert.
Mirzāi ميرزاي	20 miles west of Bandar 'Abbās, on the route to Lār and about 6 miles from the sea.	Nil.	A reservoir with good water.
Mugh Kamāl مغ کمال	14 miles north by west of Bandar 'Abbās, at the foot of Kuh-i-Ginau.	A few huts of gardeners.	There is a date plantation, the joint property of several owners who reside at Bandar 'Abbās. Water is from a spring and is good and sweet.
Muhmadi (Chāh) چاه مهدي	20 miles north-west of Bandar 'Abbās, on the western route to Sa'id-ābād, near the left bank of the Rūd-i-Kul.	Do.	There is a well, 20 feet deep, but the water is slightly brackish and is liable to run dry.
Musāfirī مسافري	3 miles north-west of Ziyarat, on the left bank of the Jāmūsh stream just outside the hills.	20 huts of Shī'ahs.	The village is much dispersed. The whole property of the people consists in date groves which are scattered along

Name.	Position.	Houses and inhabitants.	REMARKS.
Nāiband نای بند	On the coast, 3 miles east of Bandar 'Abbās.	30 houses and huts of Shī'ahs and Sunnis; the former are in a proportion of 6 to 1 to the latter.	several streamlets that issue from the hills. The British Consulate for Bandar 'Abbās and the Persian quarantine station are situated here. There is a date grove between the village and the shore, and in the village is a high house with an upper storey which as seen from the sea resembles a tower. Water is sweet and plentiful in shallow wells and is exported to Bandar 'Abbās. There is a shrine of Saiyid Muzaffar. There are no boats, and the only animals are 5 camels, 20 donkeys and 10 cattle. The village exists chiefly on account of the Consulate and the quarantine station.
Nakhl Nakhuda نخل ناخدا	On the coast, 5 miles east of Bandar 'Abbās.	50 houses of Shī'ahs.	This place supplies Bandar 'Abbās with fodder and vegetables. One-third of the people are fishermen, owning 10 Māshuwahs and small boats; the remainder are date and barley cultivators and graziers. There are 10 camels, 10 donkeys and 100 sheep and goats; water is from wells. The annual revenue is 15 Tūmāns.
Nauband نوبند	19 miles south-south-east of Shamīl Village.	30 Do.	The village is surrounded by date groves and by fields irrigated from the Mināb river. The people are cultivators of dates, wheat and barley and own 10 camels, 25

Name.	Position.	Houses and inhabitants.	REMARKS.
Niyān نیان	4 miles north-north-west of Shamīl Village.	30 houses of Balūchis.	<p>donkeys, 10 cattle and 200 sheep and goats. Water from the irrigation channels is sweet and plentiful. The annual Malyāt is 30 Tūmāns.</p> <p>The village is situated at the southern foot of the Kūh-i-Niyān on exceedingly stony ground; the inhabitants are pastoral but cultivate some dates and barley. Water is from a stream called Gīru گیرو, which falls into the Shamīl river and its tributaries. There are 30 camels, some cattle and 150 sheep and goats. The annual revenue is 15 Tūmāns.</p>
Nung ننگ	17 miles north-east of Bandar 'Abbās.	50 houses and huts of Shī'ahs.	<p>Situated on the right bank of the Bāghu stream, which makes a bend round the village. There are extensive date plantations, containing 3,000 trees, and on the north are low but abrupt hills. The inhabitants are date growers; water is from the stream and from wells 15 feet deep; the water of the wells is slightly brackish. This place is a favourite resort of the townspeople of Bandar 'Abbās in summer. The annual revenue is 158 Tūmāns.</p>
Pinjeh پنجہ	3 miles north by east of Bandar 'Abbās.	Nil.	<p>There are an old Sarāi and water reservoir in good repair, and a shrine in ruins.</p>

Name.	Position.	Houses and inhabitants.	REMARKS.
Piyādeh پیاده	On the coast, 17 miles west by south of Bandar 'Abbās.	Nil.	A date grove.
Qādabār قادهار	15 miles north-north-east of Bandar 'Abbās.	15 houses of Shi'ahs.	There is a shrine of Saiyid 'Abdul Qābir قابر. The inhabitants are mostly beggars, but they cultivate a little barley and keep a few goats and sheep. Water is from a spring.
Qalāti Khātūn قلاتي خاتون	5 miles north-west of Bandar 'Abbās.	Nil.	This is a wilderness of ravines and of jagged sandstone ridges which reach a height of 150 feet. The name is said to have belonged to a fort, of which even the traces are now lost.
Qalātu قلاتو	6 miles west by north of Bandar 'Abbās and some distance inland.	20 houses of Shi'ahs.	The inhabitants are date growers and gardeners. Water is from wells. There are 50 sheep and goats and a few camels and cattle. The traces are visible of an old canal from the sea, which must have been large enough to carry native sailing vessels of average size. The village has a shrine. There are no boats.
Qirtāi قرطاي	23 miles east by north of Bandar 'Abbās, on the coast route to Mināb.	Half-a-dozen huts of Balūchis and Persians.	The people own 6 cattle and 80 sheep and goats; water is from wells. There are no other resources.
Qulūghān قلوغان	22 miles east by north of Bandar 'Abbās on the coast route to Mināb, at 2 to 4 miles from the sea and 50 feet above sea-level.	80 houses of Balūchis.	The place consists of 7 small hamlets to the name of each of which Qulūghān is prefixed: 4 lie north and 3 south of the caravan road. They are 'Abdullah عبد الله, 'Ashū Shutur اشتر, 'Ashū

no.	Position	Houses and inhabitants.	REMARKS.
			عاشور, Ghulām Hasan غلام حسن, Mahmād محمد میرعلی, Mir 'Alī Mahmād شاهر شاهر, Shāhu حسین جات 'Husain Husain Muhammad 'Abdul- lah. The people have a few dates and are graziers owning 10 camels, 100 cattle, some donkeys and 150 sheep and goats. The annual revenue is 40 Tūmāns.
Rāhidu راحدر	25 miles east by north of Bandar 'Abbās and 3 miles north of the coast at the mouth of the Shamīl river.	Half-a-dozen huts of Shī'ahs.	Water is from wells. 200 date palms have recently been planted. A desert tract which surrounds Rāhidu and bears only a few gum trees is called kāhdār راهدار; it is low-lying and in winter becomes a saline swamp.
Rāneh (Bāgh) باغ رانه	17 miles north- north-west of Bandar 'Abbās, in the southern slopes of Kūh-i- Ginau.	A couple of huts only.	A fruit garden watered by a spring.
Sagbānu سگبانر	1 mile west of Bandar 'Abbās on the south side of the route to Lār.	Nil.	A hill with a reservoir beneath it.
Samāt (Chāh) چاه سماء	11 miles south- south-east of Sha- mīl Village.	A few huts, occupied only while the crops are growing.	Wheat and barley are cultivated; water is from wells, scanty and brackish.
Sardāreh سرداره	1 mile east of Ziyārat.	100 houses of Shī'ahs.	Dates are grown: there are at least 1,000 trees. Water is from the Ziyārat stream and from irrigation channels. The annu- al revenue is 300 Tūmāns.

Name.	Position.	Houses and inhabitants.	REMARKS.
Sarkhūn سرخون	17 miles north-north-east of Bandar 'Abbās.	70 houses of Shī'ahs.	Dates, henna and tobacco are grown; water is good, from wells 25 feet deep and from a spring. There are a few cattle, sheep and goats. A Qadamgāh of Imām Riza and a shrine of Khājeh Khizar exist here. The annual revenue is 170 Tūmāns.
Sarvistān سروستان	Between Shamīl Village, Niyān and Kushku.	Nil.	A highly cultivated tract.
Sehrangi سهرنگي	2 miles south of Shamīl Village.	90 houses of Shī'ahs.	Dates and barley are grown and there are 30 donkeys, 20 cattle and 350 sheep and goats. Water is from the Shamīl river. The annual revenue is 30 Tūmāns.
Shaghūn شغون	9 miles north-east of Bandar 'Abbās, on the route to Kirmān.	30 Do.	The people are graziers owning 30 camels, 10 donkeys and 250 sheep and goats; a few are cultivators of barley.
Shamīl Village شميل	42 miles east-north-east of Bandar 'Abbās and 22 miles north-north-west of Mināb Town.	Nil.	See article Shamīl Village.
Shebru شهر	12 miles north-east of Bandar Abbās.	50 houses of Sunnis.	Really a group of 3 distinct villages bearing the same name. The people grow barley and possess 100 camels, 20 cattle and 100 sheep and goats. Water is from wells 15 feet deep and is slightly brackish. On the west side is a stream called Gurind, which flows into the Bāghu stream; it is dry except after rain. The annual revenue is 40 Tūmāns.

Name.	Position.	Houses and inhabitants.	REMARKS.
Shōkam شوکم	5 miles south-east of Ziyārat.	Nil.	There is cultivation here belonging to the village of Budik above. Water is from wells.
Sūdaru (Chāh) چاه سودر	9 miles south-south-east of Shamīl Village.	20 houses.	There is extensive cultivation of wheat and barley. The water, from wells 20 to 25 feet deep, is slightly brackish.
Sūdru سودر	18 miles west by north of Bandar 'Abbās, on the left bank of the Rūd-i-Kul.	15 huts of Sunnis.	There are a few date trees, but most of the inhabitants work as hired labourers in the groves and fields of Kishār village. Water is from a reservoir and from wells 15 feet deep; the well water is slightly brackish.
Sūru سور	On the coast 2 miles west of Bandar 'Abbās.	200 houses of Shī'ahs and Sunnis in the proportion of 5 of the former to 2 of the latter.	A large village with gardens, practically a suburb of Bandar 'Abbās. The wealthier inhabitants are traders in Bandar 'Abbās; the poorer are fishermen, boatmen, and weavers. Water is from 9 reservoirs at Husainābād and also from wells 15 feet deep; the water of the wells is fairly good but slightly brackish. There are 10 small boats, and corn and dates are cultivated; but the palms do not number more than 500.
Takht تخت	4 miles north-north-east of Ziyārat.	300 houses of Shī'ahs.	The village occupies both sides of a dry and shallow water-course in which the caravan road runs; when there is water in the nullah in winter

Name.	Position.	Houses and inhabitants.	REMARKS.
			<p>another path is used. Large areas here are cultivated with henna : there are also dates (1,000 trees), wheat and barley. Water is from wells and by channels from the Jāmūsh stream. There are cattle, sheep and goats, but no transport animals except a few donkeys. This is a prosperous village and the Kalantar of Shamīl at present pays 900 Tūmāns a year for it.</p>
Tai Siyāh تل سیاہ	7 miles west of Bandar 'Abbās and 2 miles from the coast.	20 houses of Shī'ahs.	<p>The people are graziers and cultivate barley ; they possess cattle, sheep and goats. Water is from wells 15 to 20 feet deep.</p>
Tāslar طاسلار	8 miles north-east of Bandar 'Abbās, on the Kirmān route.	80 Do.	<p>Dates and barley are grown, and water is sweet and plentiful in wells and from a stream on the east of the village. There are no transport animals. The annual revenue is 5 Tūmāns.</p>
Tashtak (Birkoh) بركه تشك	18 miles north of Bandar 'Abbās, on a road that runs past the east end of Kūh-i-Gināu.	Nil.	<p>A reservoir in excellent order at the meeting of several roads from the interior, from Bandar 'Abbās and from the Shamīl plain.</p>
Tāziyān. تازيان	11 miles north-west of Bandar 'Abbās.	60 houses of Shī'ahs.	<p>The village is a double one consisting of two parts, Bāla and Zir, which are about 1 mile apart, the former being to the north. Wheat, barley, tobacco and some dates are grown and there is a fruit garden in Tāziyān Bāla. Water is from wells. The people own 10 camels,</p>

Name.	Position.	Houses and inhabitants.	REMARKS.
			20 cattle and a dozen donkeys. There is a Ziyaratgāh of Saiyid Sulaimān Darwaish Muhammad. Tāziyān Bāla is included for revenue purposes with 'Isin : the annual revenue of Tāziyān Zīr is 5 Tūmāns. Tāziyān was taken and burnt by Tīmūr at the end of the 14th century A. D.
Tehlu تھلو or Tehrū تھرر	21 miles north-west of Bandar 'Abbās on the right bank of the Rūd-i-Kul.	Half-a-dozen houses of Sunnis.	The inhabitants are labourers in the date plantations and fields of other villages. There is sweet water from reservoirs and brackish water from wells 15 feet deep.
Tihrrū تھرر	13 miles south-south-east of Shamīl Village.	10 houses of Shi'ahs.	Barley is grown and a very few dates. Water, from wells 20 to 25 feet deep, is slightly brackish.
Tōq Mahmūd طوق محمود	15 miles west by south of Bandar 'Abbās and 2 miles from the coast.	Nil.	A date plantation belonging to Khūn Surkh village.
Zamīn-i-Sang زمین سنگی	4 miles south of Shamīl Village.	30 houses of Shi'ahs.	Barley is cultivated and there are 100 sheep and goats. Water is from a stream.
Ziyarat زیارت	28 miles north-east of Bandar 'Abbās and 19 miles west by south of Shamīl Village.	Nil.	See article Ziyarat.
Ziyarat Murtaza 'Ali زیارت مرتضی علی	13 miles south-south-east of Shamīl Village.	Half-a-dozen houses of Shi'ahs.	Barley is cultivated and there are 70 sheep and goats. Water is scanty and slightly brackish from wells 25 feet or more deep.

Name.	Position.	Houses and inhabitants.	REMARKS.
Zughālī زغالي	20 miles east by north of Bandar 'Abbās and perhaps 4 miles from the coast.	Nil.	A sandy plain of no great extent.
Zarrāt زرآت	8 miles south-west of Shamīl Village.	A few huts of labourers who tend some irrigation canals and a few date trees belonging to the villages of Chāh Kharg and Shamīl.	The water, from wells, is brackish.

The largest and most important place in the Persian Coast district of Shamīl; it is not however the administrative centre, the residence of the Kalāntar being at Ziyārat. Shamīl consists of 4 separate quarters or villages named Pākam پاکم (20 houses), Lād Āqa لاد آقا (15 houses), Gaz Shāni گزشانی (20 houses) and Shamīl proper (300 houses), all of which are buried in dense date plantations. On the east side of the place, on a gravelly eminence, stands a dilapidated mud fort. Some of the houses are very well built; the total population is about 1,800 souls. The inhabitants are Shī'ahs; they belong to no well-known tribes. Besides date palms, which number not less than 10,000, wheat and barley are very extensively cultivated, the fields being irrigated from the Zarūvi زاروی stream, a tributary of the Shamīl river. There are 100 cattle, 300 sheep and goats, 100 donkeys and a few camels. Water is abundant. A Qadamgāh of the Amīr (*i.e.*, 'Alī) and a shrine of Shāh Ghaib are situated here. Shamīl is a flourishing place and the yearly Mālyāt is 770 Tūmāns. Shamīl was one of 7 places, all in the same neighbourhood, taken and burnt by Tīmūr at the end of the 14th century A. D.*

SHAMĪL
شمیل
VILLAGE

A long and narrow tract in the Sanjāq of Hasa, running from north-north-west to south-south-east, with a length of about 45 and an average breadth of 10 miles. Its north-western corner is at the Hajrah wells

SHAMĪN
(JAU)
جو شمین

* See Le Strange's *Lands of the Eastern Caliphate*.

these it may be taken to include, and at or near them it meets the 3 adjoining tracts of **Radāif**, **Sanfān-al-Hanna** and **Habl**. On the west and south Jau Shamīn is bordered by **Habl**; and on the east, from its south-eastern corner for two-thirds of the distance northwards, by **Biyādh**, and for the rest of the way by **Huzūm**. The parts of Jau Shamīn nearest to the sea are distant from it about 40 miles in the south and 20 miles in the north. The north-eastern corner of the district is at the Mistannah wells, which are regarded as belonging to **Huzūm** but at the same time are the meeting place of **Huzūm**, Jau Shamīn, **Radāif** and **Sabákhāt-al-Mutāya**. On the north Jau Shamīn is divided from **Radāif** by a line connecting the Mistannah and Hajrah wells.

Jau Shamīn is a sandy plain. Its vegetation consists chiefly of **Thamām** grass and of the shrubs known as **Hamdh**, **Rashād**, **Markh**, **ʿAbal** and **Arta**. The water level is about 12 feet below the surface of the ground; the wells, of which the following is a list, are said to fill up with sand when disused by the Bedouins:—

Name.	Vernacular equivalent.	Position and remarks.
Dhabbiyah	ضبيه	Near the western border of the tract, 12 miles due east of Jabal Labtalāh . Also called Dhubbān (see below).
Dhubaib	ضبيب	1½ miles north-north-east of Dhabbiyah .
Dhubbān	ضبان	The same as Dhabbiyah above, <i>q.v.</i>
Hajrah	الحجرة	12 miles north-east of Jabal Labtalāh . This is the quadri-junctional point of the Jau Shamīn, Habl , Sanfān-al-Hanna and Radāif tracts.
Jafiyah	الجفيه	10 miles south-east of Dhabbiyah .
Jahaimi	الجهيمي	In the south-east corner of the tract, 18 miles west by south of the Mubarakiyah hill in Biyādh .
Jaʿul	الجعول	9 miles south-east of Hajrah .
Jaʿulāh	الجعوله	2 miles north-north-west of Jaʿul .
Nassāsah	نصاصه	10 miles north-west of Jahaimi .

The name applied by dwellers in Turkish 'Irāq to the great desert which intervenes between the **Euphrates** and Syria and which is consequently regarded by them as the "Syrian" desert: the term as ordinarily understood, however, refers only to the part which is nearest to 'Irāq. The Qadha of **Shāmīyah** takes its name from this desert, which it adjoins; and the part of **Hillah** Town on the west bank of the **Euphrates** is likewise called **Shāmīyah** because it is on the side of the river towards the desert and not, like the other quarter, in Mesopotamia.

SHĀMĪYAH

شامية
DESERT

A division of the Diwānīyah Sanjāq of the Baghdad Wilāyat in Turkish 'Irāq.

SHĀMĪYAH

شامية

QADHA

Position and boundaries.—The Qadha of **Shāmīyah** is situated between the **Euphrates** river on the east and the Bahr-an-Najaf or lower course of the **Shatt-al-Hindiyah** on the west. On the south it is bounded by the beginning of the **Shāmīyah** Desert, from which it derives its name; on the west by the Qadha of **Najaf** in the Sanjāq of **Kartala**; and on the north and east by the Qadhas of **Hillah** and **Diwānīyah** respectively.

Topography and inhabitants.—The administrative headquarters of the district are at **Hamīdiyah**, a place described in the article on **Umm-al-Ba'rūr** which was formerly the seat of the administration: the largest places in the Qadha are probably **Hamīdiyah** and **Shināfiyah**, the latter a village which forms the subject of a separate article. The **Mushkhāb** tract, **Ja'arah** and **Abu Sikhair**, important places in the Qadha, are noticed in the article on the **Shatt-al-Hindiyah**.

The following is a list of the **Muqāta'ahs** or tracts in the Qadha, so far as ascertainable :—

Tracts in the Ghamās غماس Nāhiyah.

- | | |
|---|----------------------------------|
| 1. Butliyah
بطليہ | 4. Fatūrah

رغيلة |
| 10. Hawa
هوا | 15. Rumāh (Abu)
ابو رماح |
| 11. Jamdah Shalāl
جمدة شلال | 16. Tuwailah
طويلة |

The inhabitants of these tracts nearly all belong to the Āl Khuzaim division of the Āl Shibīl tribe, but those of Hamaidāt are Hamaidāt, those of Rghailah are 'Awābid, Āl Budair, Hamaidāt, and Uwaizāt, and those of Dahaisīyat-ash-Shalāl, Jamdah Shalāl and Abu Rumāh are Shalāl. The Rghailah tract is owned by Saiyid Jawwād, Kilīd-dār of the Najaf shrine.

Tracts in the Hor Allah هور الله Nāhiyah.

قطعة وارث |

The inhabitants of all the tracts of this Nāhiyah are Hamaidāt.

Regarding the Markaz Nāhiyah and the Nāhiyah of Shināfiyah we have no detailed information; but the latter, it is said, is not divided into Muqāta'ahs.

There is also, either separate or included in one of the above Nāhiyahs, a Muqāta'ah of Ja'arah which is owned in its entirety by the Dāirat-as-Saniyah and is cultivated by Āl Bū Fatlah, Ghazālah, Ibrāhīm, and Āl Shibīl of the Ahl-ad-Dawāb and Āl Lajām sections: it extends for about 20 miles along both banks of the Shatt-al-Hindiyyah below Kūfah. In this Muqāta'ah, which is one of the most flourishing and prosperous at the present time in Turkish 'Irāq, are situated the villages of Abu Sikhair and Ja'arah and the tract of Mushkhāb, which are described in the article on the Shatt-al-Hindiyyah. Most of the inhabitants of Sāmiyah are agriculturists; the rest are breeders of horses, sheep, goats, etc.

Population.—The fixed population of the Qadha is estimated at 65,000 souls. With the exception of about 500 persons in the employment of the Turkish Government, who are Sunnis, all are Shī'ah Muhammadans belonging to local tribes.

Resources.—The number of date palms in the district is calculated at about 75,000. Besides wheat and barley, grown in spring, large quantities of rice are cultivated in the summer, and rice may perhaps be regarded as the staple crop of the district. The whole district is marshy and unhealthy, and only a proportion of its area is in present circumstances capable of cultivation. Livestock are numerous, and there are many buffaloes. The grazing in Shāmīyah is excellent, and even the northern **Shammar** are said to visit the Shāmīyah pastures in summer. Nothing is manufactured locally except mats of reeds.

Administration.—Shāmīyah is a Qadha of the 1st class. It is divided into 5 Nāhiyahs, *viz.*, that of the Markaz or headquarters, that of Ghamās, and those of Hor Allah, Salāhīyah and Shināfiyah; these subdivisions are all of the second class. The Markaz is Hamīdiyah near Umm-al-Ba'rūr: the headquarters of Ghamās are at an Arab encampment between Hamīdiyah and Shināfiyah; those of Hor Allah at an Arab encampment between Shināfiyah and Samāwah Town; those of Salāhīyah at an Arab encampment between the Shatt-al-Hindiyah and Hamīdiyah; and those of Shināfiyah at Shināfiyah.

The interest of the Dāirat-as-Saniyah in Ja'arah, which is one of the largest and most prosperous places in the Qadha, has already been mentioned above.

SHAMMAR (JABAL)

جبل شمر

or

NORTH-
ERN

NAJD*

This term primarily denotes the hilly portion of the territory of the **Shammar** tribe in northern Central Arabia, that is, the region which has for its chief landmarks the **Aja** and **Salmah** hills. On the plain between these two ranges lies **Hāil**, the capital of the **Shammar** Amīr, and from this circumstance, doubtless, the words **Jabal Shammar** have come to be employed,—almost as an equivalent of **Dīrat Ibn Rashīd** ديرة ابن رشيد—to designate the whole of the Amīr's dominions.

As the principality governed from **Hāil** is a political unit, and as, in some other respects also, it lends itself to a general description, we shall proceed to deal with it as a whole under the title of **Jabal Shammar**. "**Jabal Shammar**" in the more restricted sense will be styled in this article "**Jabal Shammar proper**."

* For information regarding authorities, maps, etc., see footnote to the title of the article **Najd**.

Boundaries of Jabal Shammar.—The dominions of Ibn Rashid extend on the north to the **Hamād**, a portion of the Syrian desert, and embrace the oasis of **Jauf-al-'Āmir** and **Wādi Sirhān**, but the frontier in this direction is indefinite. The **Ruwalah** and **Dhafir** tribes to the north and north-east may be regarded as entirely independent of the **Amīr**; but the **Sharārāt** owe him a nominal allegiance, and the whole of the **Nafūd** or Great Northern Desert, in which he maintains posts at **Haiyāniyah** and **Trubah**, is under his control. On the east his influence does not extend beyond the **Dahānah** desert. On the south **Wādi-ar-Rummaḥ** is the approximate limit of the **Amīr's** jurisdiction; but on this side we must exclude that portion of **Qasīm** which, with **Buraidah** for chief town, lies north of the **Wādi**, and include, midway between **Qasīm** and **Madīnah**, a considerable district south of **Wādi-ar-Rummaḥ** where the authority of the **Amīr**, if of any ruler, may be considered to prevail. To the west the watershed between the Red Sea and the plateau of Central Arabia is roughly the boundary of the **Amīr's** possessions, which comprise **Taimah** and **Hāyat** but not **Madāin Sālīh** or **Khaibar**. **Madīnah** lies about 100 miles from his south-western border.

Physical features of Jabal Shammar proper.—The more outlying possessions of the **Amīr** of **Hāil—Jauf-al-'Āmir** and its connected villages, **Wādi Sirhān**, the **Nafūd**, and the **Taimah** oasis—are described in separate articles under their own names.

The central region or **Jabal Shammar** proper may be shortly described as a granitic and basaltic plateau with a mean elevation above the sea of 3,000 to 4,000 feet,* diversified by some mountain ranges but generally consisting of gravelly plains with intervals of sand. The bulk of this region drains southwards to **Wādi-ar-Rummaḥ**, but the **Batn** plain between **Jabal Aja** and **Jabal Salmah** discharges its floods to the north-eastern desert, in which they are soon lost. A few springs occur in the hills, but in the plains flowing water is not seen: life and cultivation depend on wells, of which the depth is usually considerable but the water, as a rule, is soft and wholesome. On the north the igneous central region of **Jabal Shammar** proper passes abruptly into the sands of the **Nafūd** desert; on the east and south-east it merges, through a transi-

* The elevations given in this Gazetteer and in the map accompanying it have been very carefully worked out by Lieutenant F. Fraser Hunter of the Survey of India from the observations taken by Huber in 1883-84 and with reference to barometric pressure at mean sea level at **Karāchi** at the actual times of the observations. The results are closely corroborated, in some cases, by heights given in the recent Turkish survey for the **Hijāz Railway**.

tional stage of sandstone, into the sands of **Dahānah** and **Qasim** ; on the south it stretches unbroken up to and far beyond the Shammar boundary ; on the south-west it has a unique termination in the Harraṭ Khaibar ; on the west it gives place to a wide sandstone tract that reaches to **Taimah** and beyond.

The cardinal features of **Jabal Shammar** proper are the twin ranges of **Aja** and **Salmah**, to which principally it owes its title of " **Jabal**," and the plain between them, called **Batn** بطن. **Jabal Aja** is fully described elsewhere ; it is a great parapet of granite, 75 miles in length, with a maximum elevation above the plain of 2,000 feet, which protects the country on the north-west side against the advancing sands of the **Nafūd**. **Jabal Salmah**, also the subject of a separate article, is a miniature **Aja** parallel to the first and distant from it 30 miles to the south-east. The plain of **Batn**, enclosed between the two, is the heart of the Shammar principality ; on it stands the capital, **Hāil**, and the town of **Qafār**.

Some of the subfeatures of **Jabal Shammar** proper are the following :—

Name.	Position.	Nature.	REMARKS.
Bahārat Sharhān بهارة شرحان	About 10 miles west of Sab'an .	A plain several miles in extent.	Overgrown with scrub and contains good camel-grazing.
Da'aijān (Wādī) وادي دعيجان	Begins in the slopes of Jabal Aja about 35 miles south-west of Hāil .	A valley on the right bank of which stands Hāil town ; immediately beyond Hāil it pierces Jabal Samra .	Also called Wādī Hāil . The whole course of the Wādī is from south-west to north-east, and it appears to end in the Baq'a'a hollow 45 miles north-east of Hāil , or even earlier, and not to join Wādī ar-Rummaḥ as was at one time supposed.
Fitiq (Jabal) جبل فتق	18 miles south-east of Hāil .	A small chain of granitic hills.	Parallel to Jabal Aja and Jabal Salmah and about midway between them, but only some 20 miles in length.
Habshi (Jabal) جبل حبشي	Begins a few miles east of Samirah and skirts the north side of the road thence to Buraidah for some miles.	A range of black basaltic hills.	Jabal Salmah is about 30 miles distant to the north-north-west. The top of part of Jabal Habshi , forming a watershed between Wādī ar-Rum-

Name.	Position.	Nature.	REMARKS.
*Jildiyah (Jabal) جبل جلدیه	35 miles east-north-east of Hāil.	An isolated sandstone hill beyond the limits of the basaltic tract. The base is 3,170 feet above the sea.	mah and the country to the north, is 3,870 feet above sea level. The height above the plain is over 600 feet and the slope of the sides about 70° or 80°. There is fair pasture about, and the place is often named by the Amīr of Jabal Shammar as a rendezvous for his military expeditions. The rocks of this and neighbouring hills abound in Himyaritic inscriptions and pictures.
Rummān (Jabal) جبل رمان	50 miles south of Hāil.	A small range running south-westwards from the southern extremity of Jabal Salmah.	The range is traversed by a gorge through which runs a route from Hāil to the south. Jabal Rummān may be regarded as the limit of the Batn plain on the south.
Samra (Jabal) جبل سمر	Adjoining Hāil town on the north and east.	...	See article Hāil.
Sirrah (Jabal) جبل سره	40 miles south by west of Hāil.	A hill on the route from Hāil to Mustajiddah.	Remarkable for a long Himyaritic inscription of 93 characters. Jabal Sirrah rises 3,890 feet above sea level.

Two other important features of Jabal Shammar, though they lie beyond the limits of Jabal Shammar proper, may be mentioned here; they are Jabal Misma مسمما and the Harraṭ Khaibar حرة خيبر, to which allusion has already been made.

Jabal Misma is a range of reddish sandstone in vertical stratification; it is crossed by the ordinary route from Hāil to Taimah about 60 miles west of Jabal Aja, to which it is approximately parallel, and it abounds in Aramaean and Himyaritic inscriptions.

Harraṭ Khaibar is a great lava region which begins about 100 miles south-west of Hāil and extends perhaps 100 miles further in the same

*A coloured sketch of this hill will be found at the end of Huber's *Journal de Voyage*.

direction with an average breadth of probably 50 miles. The town of Khaibar, which does not belong to the Jabal Shammar principality, is situated in the Harrah towards the further end, and the village of Hayat, which acknowledges Ibn Rashīd, lies in a cleft in the nearer extremity. Wādī-ar-Rummah has its origin in this tract.

Climate, products and animals of Jabal Shammar proper.—The climate of Jabal Shammar proper is healthy. There is considerable cold in winter: indeed snow has been known to fall and to lie for a few days, causing much mortality among camels. Rain is uncommon; and showers, when they fall, are local and erratic.

Date palms are abundant in the plains and flourish even in clefts and hollows of the hills, as for instance in the remarkable amphitheatre of 'Aqdah. Other fruit-trees are found, but their number is limited by difficulties of irrigation. Wheat, barley, oats, millet, and maize are grown, partly on unirrigated lands; also lucerne for fodder: it is said that the grain produced is in good years sufficient for local consumption, and that it fetches a higher price than what is imported from abroad. Gourds of uncommon size and pumpkins and melons of different sorts are raised and are stored in large quantities for winter consumption. Truffles grow in the desert.

Horses are more numerous than in Southern Najd and are owned in greater or smaller numbers by all the wealthier men. The camels of the country are good, though not equal to those of Southern Najd or 'Omān; they are of lighter colour, better tempered and more tractable than those of Southern Najd. Donkeys, frequently white, are used for short journeys between inhabited places. Cattle are few and poor. Sheep and goats are numerous, the former being all of the broad-tailed variety and yielding fine wool; the sheep of the Harb tribe are mostly black. Dogs are not many and are kept at a distance for religious reasons. There is a sufficiency of fowls.

Wild animals include the leopard (Nimr), wolf (Dhib), hyæna (Dhaba'), jackal, fox (Husani), mountain-goat (Badan and Wa'al), gazelle (Dhabi) of various kinds, and wild cat (Fahd); also the hare (Arnab), and a curious creature called Wabar, resembling a large grey Alpine rat, but arboreal in its habits in spite of the want of claws. Besides these are found a large variety of lizard called Dhabb, the hedgehog (Abu Shauk), the jerboa, scorpions and snakes. In some of the deserts there are ostriches; other birds are the hawk, buzzard, small black eagle and small white

carion eagle ; the true vulture is not found.* The climate, flora and fauna of the **Nafūd** are described in the article on that region.

Population of Jabal Shammar.—The settled inhabitants of Jabal Shammar proper are chiefly **Shammar**, mingled on the side towards **Wādī-ar-Rummaḥ** and **Qasīm** with some **Bani Tamīm** ; the **Shammar** are enterprising both in trade and war, while the **Bani Tamīm** are skilful and diligent in agriculture but take little interest in other matters. In the west, beyond the limits of the central region, especially at **Hāyat** and **Huwaiyat**, are negro communities ; and there are a few sedentary **Hataim**. The villages of the plain are surrounded with mud walls and flanked by watch towers resembling lighthouses ; generally they stand in date groves which rise from amidst an expanse of sand.

Villagers and townsmen are commonly lean and tall, and often of unhealthy appearance ; they have somewhat remarkable eyes and long faces of a flat or hollow type. Diseases of vision are rife ; it is even said that one person out of every three is partly blind. The men wear a long garment of white cloth under a black, brown or black-and-white striped 'Aba ; their head-dress is a cloth kerchief and their foot-wear sandals : the garb of the women consists of a blue gown, beneath a black or brown 'Aba which covers the figure from head to foot, and of a black crape veil. In mind the people are more active, and in disposition more magnanimous, than the sedentary population of **Hijāz**. The national character is temperate and self-restrained ; brawls are consequently uncommon.

Wahhābi-ism no longer tyrannises over the land, but in some families moustaches are still shaved and smoking is discountenanced ; devotion to the coffee cup is however universal. Pastimes are few and gambling is unknown. The prevailing form of religion is **Sunni-ism** of a fanatical cast, which does not readily tolerate the presence of Jews or Christians. The law of inheritance is that of the **Qurān**. There is a strong prejudice against the marriage of Arab women with negroes or half-castes.

Many of the people can read and write, but men of real education are rare ; the art of extempore composition in verse, however, is said to be commonly practised among both sexes. The people consider their language to be purer than that of **Mesopotamia**, **Syria**, **Egypt** or **Hijāz**, but admit that it has departed from the standard of the **Qurān** ; the final *n* of nouns is by them pronounced indistinctly.

* Full information about the animals and birds of the country will be found in Huber's *Journal de Voyage*, pages 568—71 and 576—80.

The foregoing remarks refer to the fixed population of the central tract : information regarding the settled inhabitants of the outlying parts of the state will be found in the articles on **Jauf-al-'Āmir**, **Wādi Sirhān**, the **Nafūd** and **Taimah**. Roughly estimated the non-nomadic population amounts to 28,000 souls, composed as follows :—

Jabal Sammar proper	15,000
Jauf-al-'Āmir and district	10,000
Wādi Sirhān	250
Nafūd	750
Taimah	2,000
TOTAL	28,000

The Bedouins of Jabal Shammar comprise the whole of the nomad **Shammar**, inhabiting the country round **Hāil** ; part of the **'Anizah**, in the northern **Nafūd** and on the west between **Jabal Aja** and **Taimah** : some of the **Sharārāt**, in and about **Wādi Sirhān** ; and part of the **Harb** and most of the **Hataim**, upon **Wādi-ar-Rummaḥ** between **Harrat Khaibar** and **Qasīm**. Most of these are Arabs, but the **Sharārāt** and **Hataim** belong to inferior castes, as do the despised **Sulaba** and **'Awāzim**, or **Hawāzim**, who also have their recognised beats and locations in **Jabal Shammar** territory. The nomadic population may be set in round numbers at 27,000 souls, as below :—

'Anizah	12,000
Harb	3,000
Hataim	3,000
Shammar	4,000
Sharārāt	3,000
'Awāzim, Sulaba, etc.	2,000
TOTAL	27,000

The life of these Bedouins is at once free and hard, roving and monotonous. For nine months of the year they are dispersed over the country in small **Farqān** or nomad villages, each **Farīq** consisting of families more or less connected by blood ; but in the height of summer the **Farqān** collect together and form large **Manzils** or standing encampments at the principal watering places of the **Dīrah**, that is, of the territory belonging to the tribe. The Bedouin women wear a silver ring in the right nostril and have a braided forelock hanging over the temple ; the majority of them cover their faces from the mouth downwards.* Close and friendly intercourse

* Some of the customs, etc., of a typical Bedouin tribe, though not one belonging to **Jabal Shammar**, are described in the article on the **Muṭair**.

between the village and desert populations is a peculiar feature of Jabal Shammar, and one by which national life and unity are sensibly strengthened; it results probably from community of blood, the bulk of both sedentary and nomad classes being here of one tribe, the **Shammar**. The townspeople, in whose hands is the caravan trade, frequently send their worn-out camels to recover in the desert under the care of the **Bedouins** and hire fresh animals from the nomads to take their place. Again, most **Bedouin** families own date gardens in the **Aja** and **Salma** hills and encamp beside them in the date season, whereby a complete exchange of rôles takes place, for some town families are accustomed to wander in the desert in spring accompanied by their horses, camels and sheep. Occasional companionship in arms also brings the two classes together, but in skill and courage the townsman or villager enjoys an indisputable superiority over the nomad.

We may estimate the total population of Jabal Shammar at 55,000 souls; and as the area of the principality (including the **Nafūd**) is 70,000 square miles at the least, there is less than one person on the average to the square mile.*

Trade and industries.—Jabal Shammar is an entirely pastoral and agricultural country, yet it is hardly self-supporting even as regards the necessaries of life. In bad years there is a heavy import of grain from Turkish 'Irāq through **Karbala** and **Najaf**; and rice, which is a luxury, is brought from that side at all times. Manufactured goods come from abroad through Turkish 'Irāq, Southern **Najd** and **Hijāz**, and are hawked about the country by itinerant vendors. Iron, metal for tinning, English pig-lead and English gunpowder can be obtained in the **Hāil** market, and most of the cotton cloth worn in the country is of **Bombay** or **Manchester** make. Horses, collected from the **Bedouin** breeders by merchants for sending *viâ* **Basrah** to India, and camels, which find a sale in Turkish 'Irāq, are the most noteworthy exports; some ghi and wool also are sent abroad.

Common cloth is woven by the women in their homes, and striped 'Abas and coarse carpets are made; other than these there are no manufactures.

Usury and money-lenders are said to be as yet unknown. **Riyāls** or **Maria Theresa** dollars and Turkish **Majidis** make up the ordinary currency, while the small silver is mostly **Persian**. The weights and

* The detailed estimates given above of population are of course in a high degree conjectural.

measures of Jabal Shammar are the same as those of Southern **Najd**, but at **Hāil** there is a **Sā'** used for measuring **ghī** which is double the size of the ordinary **Sā'**.

Internal administration.—In the prosperous days of the Jabal Shammar principality, about 1880, it was governed with vigour and efficiency.

The Amīr or Mahfūdh **مهفظ**, as he was at that time generally styled, maintained a fluctuating force of 500 to 1,000 armed retainers, distinguished by brown cloaks, red and blue **Kafiyahs** and silver-hilted swords, who formed the nucleus of his fighting force. For the rest a loose system of compulsory military service prevailed. According to a cautious estimate, the Amīr had at call in the settled villages about 2,000 fighting men, mostly mounted on dromedaries; but only about a fourth of this number could be mustered for a particular expedition. It was calculated that he could raise about 1,300 nomads as well, mounted on dromedaries; but this Bedouin contingent was not trusted. The fire-arms of the country were at that time old fashioned, but modern rifles are now widely distributed.

From the attention bestowed by more than one European visitor on taxation and finance we may infer that the subject was a prominent one at **Hāil** a quarter of a century ago. There were taxes on date trees, on corn and on sheep, which were regularly collected even in the remoter districts; Turkish coin was accepted in the villages north of the **Nafūd**, and elsewhere payment seems to have been made in kind. An incidence of £1 per head of taxation seems to have been not uncommon in either town or country. The ordinary Government revenue, exclusive of large receipts from pilgrim caravans, was about £50,000 a year, the greater part being derived from the settled population, besides which the Amīr owned valuable private property. His chief expenditure was on hospitality, which he dispensed on a lavish scale, and large sums also went in military expeditions and stores, in presents and political bribes, especially in disbursements at **Makkah** and **Madīnah** made to secure his border from Turkish encroachments.

Justice was well administered; theft, in consequence of the rigorous infliction of the usual Muhammadan penalty, was almost unknown; highway robbery had been stamped out; and arms were not usually carried in Jabal Shammar proper. The Government was popular with all classes, and its policy was influenced by public opinion to an extent not universal in the countries of Europe. The chief political weakness was uncertainty regarding the succession to the chiefship.

In recent years the prestige and power of the Amīr have been seriously reduced by the defeats which he has suffered at the hands of his rival Ibn Sa'ūd and by the dependent relations which he has found it necessary to form with the Turks ; it is probable however that his system of internal government, so far as it has escaped disorganisation, remains substantially the same as it was before.

The ruling family of Jabal Shammar, which belongs to the Ja'far section of the 'Abdah branch of the **Shammar** tribe, is generally characterised by ability and caution ; but there is a strain of insanity in the blood which has shown itself most strongly in the collaterals of 'Obaid's line.* From the fact that the father, or possibly a more remote ancestor, of the founder of their house was named Rashīd, the family are known as the Āl Rashīd آل رشيد ; and their head, the ruler of the day, is often spoken of as Ibn Rashīd ابن رشيد in contradistinction to Ibn Sa'ūd, the Wahhābi Amīr of Southern Najd. A petulance which is apt to distinguish the Āl Rashīd princes in early youth is attributed to their upbringing along with slaves. The family own large private estates in Jabal Shammar (*e.g.*, at Hāyat and Laqītah), in Jauf-al-'Āmir and at Taimah, which alone would secure to them consideration in a country so poor as Jabal Shammar. The Wasm of the Āl Rashīd is IX or +, which is placed, in camels, on the near quarter ; their battle-cry is خيل الرحمان سنعوسي, "A horseman of the Compassionate, a descendant of Sin'ūs." Sin'ūs is believed to have been an ancestor of the tribe, and the chief in addressing his followers sometimes calls them سناعيس Sinā'is.

Political position.—Jabal Shammar has, as we have seen, a fixed population of about 28,000 and a nomadic population of about 27,000 souls, or in all 55,000 inhabitants, and the density of population falls short of one person to the square mile. Such a country would ordinarily be a cypher in politics, but Jabal Shammar is rescued from insignificance by its central and commanding situation. Practically equidistant from Damascus, Baghdād and Makkah, it lies also midway between the Red Sea and the Persian Gulf and dominates several routes. Its external relations, however, are more restricted than might be anticipated from such a position ; and,—with the reservation that Jauf-al-'Āmir and the part adjoining it are in communication with Syria while normally, that is in the absence of hostility between the rulers, there is some slight intercourse with Kuwait,—Jabal Shammar may be said to have no

* A genealogical table of the family will be found in the historical volume of this Gazetteer.

dealings except with Turkish 'Irāq. There is but one route to Syria, by Jauf-al-'Āmīr; to Turkish 'Irāq there are at least two, a western and an eastern, the former being the safer though the more arduous, while the latter is a section of the Najaf-Makkah route. These routes are dealt with at greater length in the article on Najd.

There is an inveterate enmity between the rulers of Northern and Southern Najd, and the chances of war have for some years been adverse to Jabal Shammar, of which the fortunes are now correspondingly depressed. The principality has for the present sunk into a state of semi-vassalage to Turkey, but it does not appear that any part of its territory is occupied by Turkish troops, or that the Amīr has renounced the right of negotiating with foreign powers.*

Topography.—The principal inhabited or frequented places in Jabal Shammar proper are given below; with them are included three which belong to the Harrat Khaibar:—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Adwah عدوة	Near the entrance of the pass by which the route from Hāil to Faīd traverses Jabal Salmah.	4 small enclosures, only occupied in the seasons of agriculture.	The cultivators are from Sab'ān. The wells are 3 fathoms deep.
'Aqdah عقدة	6 miles west-south-west of Hāil.	...	See article 'Aqdah.
'Aqlah عقلاء	45 miles south-west of Hāil, on the way to Khaibar.	Shammar and Harb Bedouins encamp here in summer.	A tract some miles in extent and partly cultivated in the season. There are wells.
'Alaq علق	10 miles north-east of Sab'ān and 4 from the foot-hills of Jabal Salmah.	20 mud houses of Bani Tamīm and Shammar of the Aslam subdivision.	Cereals are grown by irrigation from wells 8 or 9 fathoms deep.
'Ashīrwāh (Qasr-al-) قصر العشيراء	13 miles south-west of Qafār.	30 houses chiefly of Bani Tamīm.	Cereals, vegetables and melons are cultivated, and there are half-a-dozen small date groves. The water is good but the wells are 15 to 16 fathoms deep.

* The relations of all Central Arabia with the Ottoman power are discussed in the article on Najd *ad fin.*

Name.	Position.	Houses and inhabitants.	REMARKS.
Baqa'a بقعا	45 miles north-east of Hāil on the route to Najaf.	...	See article Baqa'a.
Balāziyah بلازية	15 miles west of Samirah.	No fixed inhabitants.	Harb Bedouins encamp and grow corn here. There are wells of drinkable water 4 fathoms deep.
Bida' بدع	A few miles north of Qasr-ar-Rabai'iyah, near Wādi Da'ajān.	20 mud houses of Shammar.	There are a few date palms and corn is grown. Water is at 10 to 11 fathoms and is sweet.
Duwairah دويره	5 miles south-west of Faid.	A depression where Shammar Bedouins cultivate corn.	There are 4 wells of sweet water 5 fathoms deep.
Faid فيد	45 miles south-east by east of Hāil, on the route to Qasim.	...	See article Faid.
Fuwārah فواره	A short day's march west or north-west of the north end of Abanāt.	A Qasr belonging to a Mustajiddah villager existed here 85 years ago, but has since been abandoned owing to the hostility of the 'Ataibah.	The Bani 'Ali sub-division of the Harb collect here to be taxed by Ibn Rashid's agent and remain in camp in the vicinity during the summer. There are wells of sweet water.
Ghamrah غمرة	15 miles south-west of Ghamr in Jabal Aja.	No fixed inhabitants.	There are dates belonging to Shammar Arabs, who camp beside them in summer. The wells are shallow.
Ghazālāh غزاله	10 miles west of Mustajiddah, near the route from Hāil to Madīnah.	60 mud houses of Shammar, 'Anizah and Hataim.	There are date groves and orchards, and cereals and vegetables are grown. Irrigation is from wells 8 to 9 fathoms deep.
Ghumaisah غميسه	½ of a mile south-east of Kahāfah.	10 mud houses.	There are several date plantations and corn is grown. Water is at 6 fathoms and better than that of Kahāfah.

Name.	Position.	Houses and inhabitants.	REMARKS.
Hafainah حفينة	A mile north-east of Hafnah.	20 mud houses of Shammar.	There are palms and corn is grown. Water is at 4 to 5 fathoms and sweet.
Hafnah حفنة	A few miles north-east of Mustajiddah.	50 houses of Shammar.	Do.
Hāyat* حايط	Between Mustajiddah and Khaibar, about midway or 75 miles from either. It is on one route from Mustajiddah to Madinah.	100 houses of negroes, half-castes and Hataim. The non-African blood in the place is increasing by intermarriage.	An ancient and prosperous oasis village, almost hidden in a cleft of Harrat Khaibar up which its plantations extend for 2 miles. There are three springs of drinkable water. Dates are abundant, but not very good, and wheat, barley, maize and tobacco are cultivated; there are no cattle or beasts of burden. The place originally belonged to the 'Anizah, who were expelled by Ibn Rashid. The present occupants pay half the produce of the dates to the Amīr as his proprietary share and also 1/10th of the remainder as revenue.
Hāil حالل	See article Hāil.
Huwaiyat† حويط	20 miles south-west of Hāyat.	40 houses of negroes.	There are palms. The route from Hāyat to Madinah passes this way.
Jadhāmiyah جداميه	8 miles north by east of Hāil.	Half-a-dozen mud houses of Shammar.	There are palms and corn. The place was founded in 1830 and was once larger than it is now.
Jafaifah جفيفه	20 miles south-west by west of Mūḡaq	25 houses.	The plantations‡ extend along a valley, with great intervals, for 10

* Hayat actually lies outside Jabal Shammar Proper.

† Huwaiyat actually lies outside Jabal Shammar Proper.

‡ The names will be found in Huber's *Journal de Voyage*, pages 235-236.

Name.	Position.	Houses and inhabitants.	REMARKS.
			miles. Corn is grown, and water is plentiful and good at 4 fathoms. Palms were first planted here in 1872; they were brought from Mūqāq. Shammar Arabs encamp here in summer.
Kahāfah كهفه	About midway between Hāil and Buraidah, nearly 80 miles from either.	...	See article Kahāfah .
Khashabah (Umm-al-) أم الخشبة	A few miles south-east of Kahāfah.	Formerly there were permanent hamlets, now there are only 3 Qasrs occupied for ploughing and reaping by people from Kahāfah.	A corn-growing tract. Water is at 4 fathoms and good.
Kihailah كحيله	Half-way between Kihlah and Najibah.	Wells only.	Water is at one fathom and drinkable.
Kihlah كحله	2 or 3 miles north-east of Mak-hūl.	Do.	Shammar Bedouins camp here when there is pasture. Water is at 2 fathoms and drinkable.
Laqītah لقيط or Laqitah لقطه	12 miles north of Hāil.	35 houses of Shammar .	The houses are scattered in small groups through nearly a score of date groves. There are some fruit orchards. One-fifth both of groves and orchards is owned by Ibn Rāshīd. The place has declined greatly in recent years.
Mak-hūl مكحول	Some miles east of 'Odham.	4 Qasrs, only occupied in the agricultural seasons.	Water is at 2 or 3 fathoms and is drinkable.
Mūqāq موقق	Nearly 20 miles west-south-west of Hāil.	100 mud houses (or possibly very many less) of Shammar .	Lies at the foot of a prominent hill which juts out from the western flank of Jabal Aja, and is the nearest village to that end of

Name.	Position.	Houses and inhabitants.	REMARKS.
			the Rj'-as-Salf pass. The subsoil water is lukewarm and fetid, and fever is prevalent except in summer. Dates are grown but they are dry, scanty and of poor flavour. Wells are 9 to 10 fathoms deep and surface water is received from Jabal Aja. In years when the best pasturage is on this side of the hills Ibn Rāshid's stud are sent here to graze.
Mustajiddah مستجددة	About 60 miles south and very slightly west of Hāil.	100 mud houses, Bani Tamīm, also Shammar and Hataim.	The place was formerly larger. Dates, fruits, cereals and vegetables are grown. Water is good and the wells are 14 fathoms deep. There are 4 shops. There is cultivation of corn at a place called Ghadhwār غضار at some distance to the south-west.
Najibah نجبه	8 miles east of Kihlah.	Wells only.	Shammar Bedouins camp here when there is pasture. Water is at 2 fathoms and drinkable.
Nathīl (Baidha) بيضا نثيل	About 75 miles west-south-west of Hāil on one route to Khaibar.	A great watering-place, in dispute between the Shammar and the Bishr ('Anizah).	The water is brackish and the wells are 4 to 9 fathoms deep. Cereals are grown.
'Odham عصيم	About 80 miles south-east of Hāil and the same west of Buraidah.	2 or 3 permanently inhabited Qasrs of Aslam Shammar.	Water is at 2 fathoms and is drinkable. Corn is grown. Harb Bedouins sometimes encamp here.
Qafār قفار	9 miles south-west of Hāil.	...	See article Qafār.
Qusair قصير	Near Ghazālah.	3 hamlets of 1 or 2 houses each.	There is some sweet water at a depth of 75 feet.

Name.	Position.	Houses and inhabitants.	REMARKS.
Qussah قصة	15 miles north-west of Mustajiddah.	No permanent inhabitants.	Shammar Bedouins grow corn here and camp in the neighbourhood in summer. The wells are 5 to 6 fathoms deep and the water is drinkable. There are no palms here now.
Rabai 'iyah (Qasr- ar-) قصر الربيعية	2 miles north-east of Hail.	35 mud houses of Shammar.	Water is at 10 fathoms and is good; dates and corn are cultivated. This place is said to have been included in the ancient town of Hail which lay further east than the modern.
Raudbah روضه	15 miles north-east of Mustajiddah, at the southern foot of a pass over Jabal Rummān.	70 houses of mixed Arab tribes.	Water is good in wells at 10 fathoms. Cereals, melons and vegetables are grown and there are a few dates and fruit trees.
Sab' ān سبعان	35 miles south-south-east of Hail, at the foot of Jabal Salmah on the side towards Hail.	50 houses of Shammar of the Aslam division and of Bani Tamīm.	There are dates, fruit, grain and vegetables. Wells are 12 fathoms deep. Some of the land round is in the hands of cultivators who pay one-tenth of the produce to Shammar of the Mas'ūd section.
Samirah سميرة	75 or 80 miles south-south-east of Hail and slightly over 100 miles west of Buraidah.	50 mud houses of Bani Tamīm.	The village consists of two small Qasrs and one larger one with clay towers; the whole site covers less than 2 acres. There are no palms, but good crops of wheat and barley are obtained. Water is abundant at 7 feet below the surface. Harb Bedouins assemble here to be taxed by Ibn Rashīd. The place though small is said to be ancient.

Name.	Position.	Houses and inhabitants.	REMARKS.
Silaimi سليمي	Uncertain, but probably about 20 miles south of Mustajiddah.	Half-a-dozen houses of Bani Tamim in a walled enclosure.	There are a few palms and several wells, but only one is sweet. A little wheat and maize is cultivated.
Tābah طابه	12 miles east by south of Sab'an, near the foot of Jabal Salmah on its south-east side.	150 houses of Shammar of the Aslam section.	Consists of about a dozen groups of houses with palm groves. Tābah stands in a volcanic crater of which the inward sides are perpendicular and about 60 feet high except on the east, consequently it is not visible except from a short distance. The water is sweet and the level of it rose suddenly about 1875 from 25 to 15 fathoms below ground, at which it has since remained. Corn, fruit and vegetables are grown.
*Thurghud (spelling uncertain).	About 25 miles north of Hayat, on the west edge of the Harraḥ Khaibar.	2 or 3 houses of Hataim.	There are palms, wheat and barley, and wells 6 feet deep.
Waqid وقيد	4 miles north of Hail.	40 houses of Shammar.	Cereals, melons and vegetables are grown and there are a few small date groves and orchards. Wells are 8 to 9 fathoms deep.

SHAMMAR
(NORTH-
ERN)
شمر

Generally called the Northern Shammar, on account of their position, or the Shammar Jarbah حربه, from the name of their principal subdivision. They are a powerful tribe whose territory adjoins 'Irāq on the north-west, but they lie generally beyond the scope of this Gazetteer: the Shammar of Jabal Shammar are their relations and the Shammar Tōqah are reckoned one of their offshoots.† Some of their Bedouins frequent the Shāmiyah and Najaf Qadhas.

* Thurghud actually lies beyond the limits of Jabal Shammar Proper.

† For particulars regarding the Northern Shammar, see *Gazetteer of Baghdad*, 1889, pages 126 and 242-3; also Lady Anne Blunt's *Bedouins of the Euphrates*,

One of the most remarkable and important tribes of Central Arabia ; they form the main strength of the Jabal **Shammar** principality and the Amīr himself is of their number. Part of the Southern Shammar are settled and part are Bedouin.

SHAMMAR
(SOUTH-
ERN)

شمر

Distribution.—The settled portion of the Southern Shammar are almost confined to the plains between or immediately adjoining the ranges of **Aja** and **Salmah**; the more northern parts of these they monopolise, and the central and southern they share with the **Bani Tamīm**; they have moreover an important detached colony at **Taimah** and a smaller one at 'Ayūn in **Qasīm**. The ascertained settlements of the Shammar in Jabal **Shammar** are **Hāil**, **Taimah**, 'Alaq, 'Aqdah, 'Ayūn, Bida', **Faid**, **Ghazālah**, **Hafainah**, **Hafnah**, **Jadhāmiyah**, **Kahāfah**, **Laqītah**, **Mūqaq**, **Mustajiddah**, 'Odham, **Qasr-ar-Rabai'iyah**, **Sab'ān**, **Tābah** and **Waqīd**. A number of the inhabitants of permanent villages in **Qasīm** also claim Shammar descent, especially at **Butainiyāt**, **Ab-ad-Dūd**, **Hamar**, **Qasr Sa'id**, **Shaihiyah**, **Shiqqah** and **Tanūmah**. There are settled Shammar at **Qana** in the **Nafūd**, at 'Attār and **Zilfi** in **Sadair**, and even in the villages of **Wādī-al-Miyāh** in the **Hasa Sanjāq**; some Shammar also, apparently of the **Ja'afar** subdivision, reside in **Hofūf** town in the **Hasa Oasis**.

The Bedouins of the tribe have on the whole a more extensive range. On the south they enter the borders of **Qasīm**; on the west they reach to **Jabal Misma**; on the north they visit the wells of **Shaqīq** towards **Jauf-al-Āmir**, dispute **Batn** beyond the **Nafūd** with the 'Anizah and camp in **Hajarah**; on the east their boundary is a line drawn southwards through a point to the east of **Lainah**. Places near which they are known to encamp in **Qasīm** are 'Amūdiyyah, **Anbuwān**, **Ab-ad-Dūd**, **Barūd-as-Siyāh** and **Sāqīyah**, all close to its northern border; **Haiyāniyah**, **Jubbah** and **Umm-al-Qulbān** are among their camping places in the **Nafūd**; to them belongs **Wādī-ar-Rūtha**; the easternmost wells of which it is certain that they avail themselves are those of **Bida'**, some miles east of **Lainah**, where some of them pitch their tents in the hot weather, and those of the **Madhhūr** tract at the south-east end of the **Nafūd**. As has been remarked in the article on **Jabal Shammar** the distinction between nomads and non-nomads is not so sharply drawn among the Shammar as in some of the other tribes which follow both courses of life.

Mode of life.—The western territories of the Shammar tribe are full of basaltic and grey-red granite hills and contain many water-holes; and

their Bedouins live even more dispersedly than is usual among Central Arabian nomads. In the valleys of Jabal Aja and Jabal Salmah the Shammar Bedouins own a multiplicity of small date plantations, in which they camp during the summer months; but they depend chiefly on their flocks and herds, and they eke out their subsistence by carrying merchants' goods on camels and by transporting pilgrims to and from Madinah. In their tents the wife's apartment is at the left side in entering. Of the settled Shammar it is unnecessary to speak at length as they are included in the description of the fixed population of Jabal Shammar.

Character.—The Shammar are one of the most vigorous tribes of Arabia and regard themselves as the noblest of all,—a pretension which may be excessive but is not without justification. They are believed to be mainly of Yamani or Qahtanic descent but do not appear to be of unmixed race. The men are generally tall, wear brown 'Abas, and are easily distinguishable in physiognomy from their neighbours the 'Anizah. The Shammar are of a hospitable disposition.

Divisions and numbers.—The Shammar tribe consists of 5 main divisions, the 'Abdah عبده, Aslam اسلم, Dighairāt دغيرات, Sinjarah سنجاره and Tūmān نومان; these again are constituted of the following subdivisions and sections:—

<i>I.—'Abdah division.</i>			
1. Fadhl فضل	Miyakhah مياخه Shir'im شريم	5. Mufādhhal مفضل	Jibrin جبرين Manis منيس Mas'ūd مسعود
2. Hāmīl حامل	...		ابي ندا
3. Ja'far جعفر	'Abaid عبيد 'Ali علي 'Atūn عترن Haīmar حيمار Khalīl خليل Rizni رزي	6. Shimailah شميله	...
4. Jinidah جندة	'Arkāt عركات Ghazāl غزال Hamām	7. Silāt سليت	...
		8. Waibār ويبار	Fuwwāzb(فواز Matrān مطران

The ruling family of **Hāil** belong to the **Khalīl** section of the **Ja'far**. Some of the settled Shammar at **Zilfi** are 'Abdah, from which division some would even derive the 'Obaidli tribe of the **Shībkūh** District in Persia and the 'Abādilah of Trucial 'Omān.

II.—*Aslam division.*

1. Jahaish جحيش	{	Birzān برزان	4. Manāsīr مناصير	...	{	'Ahr عرار
		'Iyādah عيادة				
	{	Janfah جنفة	5. Nifqān نفقان	...	{	Firdah فردة
		Mahallaf محلف				
	{	and	6. Tuwālah طواله		{	Kāmil كامل
		Warsaik ورساك				
2. Ma'ādhid معاذ	{	...				
3. Manai' منيع	{	Fāid فايد	7. Wahab وهب		{	Badar بدر
		Līnah لينه				
	{	Madhā'ir مضايع			{	Dighaim دغيم
		Mas'ūd مسعود				
	{	Masharraf مشرف			{	Firayān فريان

The chief shaikh of the Aslam division belongs to the 'Arūr section of the Tuwālah.

The Shammar of 'Alaq, **Kahāfah**, 'Odhaim, Sab'ān and Tābah belong to the Aslam division, and those of **Kahāfah** are of the Mas'ūd section of the same.

III.—*Dighairāt division.*

1. 'Alaiyān عليان	{	5. Husain حسين	{	'Atqah عتقه	{	6. Kharisah خرصة
2. 'Amūd عمود						7. Mismār مسمار
3. Ghīthah غيثه	{		{	Masa'ad مسعد	{	8. Suwaid سويد
4. Himizah همزة						9. Taraibah تريبه
				Qilaidah قليده		

The Suwaid subdivision are still noted, as they were 60 years ago, for their excellent ghi, and are said to be purveyors of this article to Ibn Rashid. The settled Shammar of **Zilfi** are partly Dighairāt.

		and
		3. Widhāh
		وضاح

In addition to the above there is a section called Salailāt صليلات, who were originally Shammar, but are now reckoned to the 'Anizah;* and the Shammar of 'Attār in Sadair are said to belong to the Qidārah قداره, who are not shown in the table above. The numbers of the settled Shammar are included in the estimated population of Jabal Shammar Proper; and the nomad Shammar, regard being had to their political strength and to the wideness of their range, cannot be placed at less than 4,000 souls.

SHAMMAR TŌQAH

شمر طوقه

This tribe of Turkish 'Irāq is reputed a branch of the Northern Shammar or Shammar Jarbah: it was originally Sunni, but is now entirely Shi'ah.

The Shammar Tōqah domains extend upon the left bank of the Tigris from Baghdād to opposite Bghailah, and the depth of the tribal territory from the Tigris bank in the direction of the Persian hills is about 25 miles and includes part of the course of the Diyālah.

* Much information about the divisions of the Shammar will be found in Huber (*Journal de Voyage*, pages 687-8, 660-4 and 670). It does not fit in well with that given in the text.

Considerable uncertainty prevails as to the true divisions of the Shammar Tōqah, but the following may be mentioned :—

- | | |
|----------------------------------|---|
| 1. Banwah بنوه | 11. Manāhīr مناحير |
| 2. Battah بطه | 12. Manāsīr مناصير |
| 3. Da'aiyah دعيه or Da'ajah دعيه | 13. Mardān مردان |
| 4. Dalābhah دلابحه | 14. Nifāfshah نفافشه |
| 5. Dāwar دارر | 15. Qarāghöl قرغول |
| 6. Dāwud داورد | 16. Qufaiḡān قفیفان or Fūkaiḡān فوكيفان |
| 7. Hadail هديل | 17. Shwaiḡi شويقي |
| 8. Khawālid خوالد | 18. Shuwaiqi شويقي |
| 9. Majābilah مجابله | 19. Sud'ān صدعان |
| 10. Majli مجلي | 20. Zakaitat زكيطت |

Of these the Qufaiḡān and Manāsīr, who live on the Tigris a little below Khanāsah and Ctesiphon respectively, are possibly Zubaid ; and so perhaps are the Qarāghöl. Some regard the Dafāḡī'ah دفافعه as a separate tribe, others as a branch of the Shammar Tōqah. Sections known as 'Atbah عتبه and Salmāt سلمات are found in the Kūt-al-Amārah Qadha ; of these the former have their residence among the Bani Rabi'ah ; and there are 'Atbah also in the 'Azīziyah Qadha. The distribution of the sections given above will be found, in part, in the article on the 'Azīziyah Qadha.

The Shammar Tōqah are agriculturists and a large proportion of them are now employed by Kāzim Pāsha, a brother-in-law of the present Sultān of Turkey, who is kept in honourable detention at Baghdād, to cultivate his lands near Ctesiphon ; their crops are wheat, barley, maize, and sesame. They also breed cattle and camels. Like most of the other cultivating Arab tribes, they are inclined to wander in spring, and tents are their only dwellings at all seasons.

As yet the Shammar Tōqah are not well provided with modern rifles, nor are they strong in horses. The recognised Shaikh of the whole tribe is at present Saiyid Sufūkh, and the actual heads of the Khawālid and Qarāghöl section are Abtan-al-Hardi and Mutlaq-bin-Rāshid respectively.

An island in the Shatt-al-'Arab belonging to the left bank ; behind it is the mouth of the Khaiyain creek, which here forms the boundary between Persia and Turkey ; and opposite to it, on the other side of the river, is the tract known as Baljāniyah.

Shamshamīyah, itself only a mile long, is virtually a continuation of the Island of **Tawailah**; but it is divided from Umm-al-**Khasāsif**, the next island below it, by the main stream of the Shatt-al-'**Arab**, which here sets from the right to the left bank.

On Shamshamīyah is a post of Turkish Dhābitīyahs, who are responsible for patrolling the river. There are also some scattered huts, inhabited by about 80 persons of the so-styled Shaikh Hasan tribe, to whom belong about 2,000 date palms, besides other fruit trees, 10 cattle and 20 sheep and goats.

Shamshamīyah has apparently come into existence since 1836. It is a Turkish possession, and the Turks have recently proposed to locate on it the sanitary lazaret for travellers arriving in Turkish '**Irāq** from the Persian Gulf.

SHAQĪQ (KHOR)

خور شقیق

Generally pronounced Shajij or Shagig. The name of an inlet and of the village which it contains, upon the east side of the **Qatar** Promontory: the entrance of the inlet, which is shallow and runs about 4 miles inland, is situated between Rās-an-Nōf and Rās Matbakh, about 26 miles north of **Dohah**. Khor Shaqīq is frequently called "Khor-al-Mahāndah," or simply "Khor," in contradistinction to "Khuwair," that is, Khor **Hassān**, on the other side of the peninsula. The village stands on the south side of the inlet, near its foot; not far from it is a hill, surmounted by a watch tower, and under the hill is a well of good water called Halaitan حلیتان. **Dhakhirah** is only 4 miles to the northward of Khor Shaqīq and is reached by a track which turns the foot of the inlet and then crosses a level plain. Four miles south of Khor Shaqīq is Hālat Wabil حالة ربیل, an island-reef, still covered at high tide but said to be rapidly increasing in elevation. The village consists of about 400 mud and stone houses of **Mahāndah**, half of the Āl Hasan and half of the Misāndah section, to whom belong 80 pearl boats, 90 other sea-going vessels, and 30 fishing boats, besides 100 camels.

SHAQQ شقی

A long, shallow valley, forming a district in the principality of **Kuwait**, perhaps 80 miles long from north to south and on the average about 10 miles broad. On the north it ends about 20 miles north-west of **Jahrah**; on the south it is bounded by Dhula'-al-Mi'a'il; Umm Janaib

encloses it on the east and **Dibdibah** on the west; **Summān** approaches its south-western corner. **Shaqq** has no fixed inhabitants, but yields most of the grass and firewood that are sold in the town of **Kuwait**; in the north it marks the boundary between the **Hamdh** grazing on the east and the 'Arfaj on the west. Where it is crossed by the route from **Kuwait** Town to **Riqā'i**, at 40 miles west-south-west of **Kuwait**, it contains a **Khabrah** called **Farāq** فراق; and similarly on the direct route to **Hafar**, at 54 miles south-west of **Kuwait** Town, there is situated in it **Khabrat-ad-Dawish** دريش, which was disputed in 1905 between the 'Ajmān and the **Mutair** and was assigned by the Shaikh of **Kuwait** to the latter.

A large town, the capital of the **Washam** district in Southern Najd; **SHAQRAH** شقرة
it is situated towards the west side of the district about 100 miles south-east of 'Anaizah and the same distance north-west by west of **Riyādh**. **Shaqrah** stands in a plain between two hills, one to the north, the other to the south, which are two miles or more apart. The town is surrounded by a wall, both high and thick, with towers; and it has 4 gates. The date plantations belonging to **Shaqrah** are considerable, and there are many wells of excellent water about 8 fathoms deep both inside and outside the town. The population is about 3,000 souls, mostly **Bani Zaid**, but partly **Sabai'** of the **Sūdah** section; besides cultivating they engage in trade, dealing principally with **Kuwait**. The bazaar is large and contains many shops. There are about 500 camels and many horned cattle besides sheep and goats, but horses and donkeys are few. **Shaqrah** lies on the direct route between 'Anaizah and **Riyādh**. Between 1874 and 1884 the place was tributary to the Amīr of **Buraidah**. The ruling family are **Bani Zaid** of a section called **Āl Sabyān**.

The principal village in **Jabal Akhdhar**; it stands on terraces on the face of a cliff at the head of **Wādi Mi'aidin** and looks down the valley; its elevation above the sea is 6,300 feet. The houses are square, solid and built of stone; but they are small and mean in appearance and a

SHARAI-
JAH
شرايجه

few only are plastered with clay; the windows are narrow and the doors small, the better to keep out the weather. The dwellings appear to overhang one another, and the different rows are connected only by flights of irregular steps. Sharaijah consists of a main village with two annexes called, as is not uncommon in 'Omān, 'Ain عَيْن (*i.e.*, having a spring) and 'Aqar عَقَر (*i.e.*, barren). Just below the village are a copious spring of pure water and a circular reservoir. Cultivation extends for about 1,000 feet down the hillside upon ledges, only 10 or 12 feet wide, which are frequently revetted. These "pensile gardens," as they have been called, contain apricots, grapes, figs, pomegranates and grain; the grain is sometimes sown intermixed with leguminous plants and even with melons. The greatest attention is given to the cultivation of the grape, and from it the inhabitants make a wine with which they regale themselves in the long winter evenings; after the vine the pomegranate appears to be the most highly valued plant. The people are Bani Riyām (100 houses) and Bani 'Umr (100 houses). Animals are 100 donkeys, 60 cattle and 400 sheep and goats. The name "Sharaijah" means a place where water flows out of rocks into soft ground.

**SHARĀ-
RĀT**
شرارات

A considerable Bedouin tribe on the northern borders of Central Arabia between Jabal **Shammar** and Palestine; on the north-west they reach to Ma'an معان towards the Red and the Dead Seas, on the west to Tabūk تبرك, on the south to **Taimah**, and on the north-east to **Jauf-al-'Āmir**; on the last side they make excursions into the **Nafūd** as far as to the wells of Shaqīq. Some of the tribe are permanently settled in **Jauf-al-'Āmir**. Wādi **Sirhān** is the headquarters of the tribe, and one of their principal summer stations is at 'Obaid between **Taimah** and **Jauf-al-'Āmir**. The Sharārāt Dīrah, generally, is one of sandstone hills. The tribe are not considered to be Arabs; they rank below all Arab Bedouins, but above the **Hataim** and the **Sulaba**. Striking differences appear to exist among the Sharārāt. Some of those in the north are of fair complexion and blond, but dirty and almost naked; the men are strong and handsome, and the women are bold with an innocent freedom in the presence of the opposite sex. Sharārāt coming in to trade at **Taimah**, on the other hand, have been described as lean and ragged with quiet and dejected manners. The Sharārāt possibly number 3,500 souls and they are divided into a number of sections not subject to any common chief. The Sharārāt have almost no horses, but their riding camels are the

lightest and swiftest in Western Arabia and are used by Ibn Rashīd to mount his armed retainers. The dealings of the Sharārāt are chiefly with **Jauf-al-'Āmir**, which they visit in the date harvest to barter camels, cattle, wool, butter, cheese, rice imported from abroad, and even milk, for dates, mats, sacks, tent cloth, 'Abas and calico; they also resort to **Taimah**, where their camels and wool find a market. Besides these two places they have no market town. The Sharārāt render tribute and obedience to the Āmīr of **Jabal Shammar**.

An Arab tribe represented in the **Jarrāhi** District by two sections, **SHARĪFĀT** شريفات the **Rajaibāt** رجيبات and the **Bani Rashīd** بني رشيد, who inhabit the left bank of the **Jarrāhi** River near **Khalfābād**. The former section has 20 fighting men and 30 horses, the latter 30 fighting men and 35 horses, and each has about 100 camels, besides some donkeys, cattle and sheep; both inhabit tents, but both are to some extent tillers of the ground. The Sharīfāt are also found in the **Hindiyyān** District at **Hindiyyān** Village, **Shirābād** and **Qal'eh Mashraqi**, and upon the Turkish side of the **Shatt-al-'Arab** in the neighbourhood of **Abul Khasīb**. Those who visit **Qal'eh Mashraqi** are nomads and number about 100 families: the remainder of those in the **Hindiyyān** District are few but settled. The chiefs of the Sharīfāt are called **Mirs** and the tribe themselves claim descent from the **Shurafa** of **Makkah**, but they are generally believed to be of **Bani Tamīm** (I) extraction. They seem to have immigrated from **Najd** about 200 years ago.

Also written شارجة, and pronounced both **Shārjah** and **Shārgah**.

Limits and extent.—The Shaikhdom of **Shārjah**, the most important of the Arab principalities of **Trucial 'Omān**, covers a considerable portion of the **'Omān** Promontory; indeed with the exception of the small Shaikhdoms of **'Ajmān** and **Umm-al-Qaiwain** on the west coast, and of a part of the interior which is virtually independent, it may be considered to embrace everything between a line joining **Sha'am** to **Dibah** on the north and another connecting **Shārjah Town** and **Khor Kalba** on the

SHARJAH
شارجة
PRINCIPALITY*

* For authorities, maps, charts, etc., see first footnote to article **Trucial 'Omān**.

south. On the east it is bounded by the Gulf of 'Omān and on the west by the Persian Gulf.

Divisions.—The principality consists of 4 portions, namely, of the Rās-al-Khaimah District on the north ; of the Shamailiyah tract on the east ; of the village and plain of Dhaid in the interior ; and, lastly, of what we may call the district of Shārjah Proper upon the west coast towards the south. The upper part of Wādi-al-Qor belongs to Shārjah : it is uncertain whether it should be regarded as connected with Shamailiyah or with Dhaid.

The maritime possessions of Shārjah are the islands of Bū Mūsa and Sīr Bū Na'air, which are associated with the district of Shārjah Proper ; and the island of Tunb, and probably that of Nābiyu Tunb, which are attached to the Rās-al-Khaimah District. The island of Sirri was once, it cannot be doubted, in the effective occupation of the Shaikh of Shārjah ; but, though the validity of Persian claims to it is not admitted by the British Government, it cannot be regarded at the present time as forming part of the Shārjah dominions.

The district of Shārjah Proper.—The other divisions of the principality are separately described elsewhere under their own names, but the district of Shārjah Proper can be most conveniently dealt with at this point in the present article. It is situated on the sea between 'Ajmān and Dibai, its boundary with the former Shaikhdom being at a place called Dabdabah دبدبه, $2\frac{1}{2}$ miles from the north end of the date groves of Shārjah Town, and with the latter at Abu Hail : Hamriyah however, which is beyond 'Ajmān, may be considered as attached to this division. Inland the district does not, it is stated, extend beyond Wāsīt واسط, a locality 5 miles east of Shārjah Town, the tract between this and Dhaid not being under the Shaikh's control. The surface of the district is flat sandy desert.

The following are the principal places in Shārjah Proper.

Name.	Position	Nature.	REMARKS.
Fasht فشت	On the coast, 1 mile north-east of Shārjah Town.	A locality uninhabited during the last 30 years.	There was once a village here with a fort and date plantations.
Hair حيرة	On the coast between Shārjah Town and	A village of 250 houses of Na'im of the Darāwishah	The inhabitants own 25 pearl boats, 10 fishing boats, 2,500

Name.	Position.	Nature.	REMARKS.
	'Ajmān, about 2 miles from the former and 3 from the latter.	section, to which the Shaikh of the village himself belongs.	date trees, 40 camels, 60 donkeys, 40 cattle and 200 sheep and goats ; there are also 3 or 4 shops. Wells 3 to 5 fathoms deep are the source of the water-supply. The village is defended by 7 or 8 towers.
Hamriyah حمريه	On the coast, 11 miles north-east of Shārjah Town.	...	See article Hamriyah.
Khān خان	On the coast, 2 miles south-west of Shārjah Town.	...	See article Khān.
Shārjah Town شارجه	On the coast, about 5 miles south-west of 'Ajmān and 7 north-east of Dibai Town.	...	See article Shārjah Town.

The settled population of the district appears to be about 18,750 souls and is almost altogether concentrated in Shārjah Town ; its tribal composition may be ascertained from the preceding table and the articles quoted therein ; no single tribe enjoys a great numerical preponderance over the rest. Questions of resources, trade, etc., are chiefly dealt with in the article on Shārjah Town.

Population.—The facts regarding the settled population of the Shārjah principality as a whole can now be thrown into the form of a general statement. The following are the numbers by districts :—

Rās-al-Khaimah District	16,000
Shamailiyah	10,000
Dhaid	700
District of Shārjah Proper	18,750
Bā Mūsa island	100

and the total is approximately 45,500 souls. The tribes represented are numerous, and no one of them can claim a general as distinct from

a local superiority: they are detailed in the special articles upon the divisions. The subject of Bedouins is dealt with in the general article on Trucial 'Omān.

Resources, trade, and communications.—The resources and trade of the Shārijah Shaikhdom are described in the articles upon the component districts and tracts, and in those upon the towns of **Shārijah** and **Rās-al-Khaimah**. The total number of pearl boats in the principality appears to be about 360, and they are of average size.

The subject of communications is dealt with in the article on Trucial 'Omān.

Administration.—The principality forms a somewhat disjointed whole and is at present governed without efficiency or success. The headquarters district is under the personal rule of the Shaikh, Saqar-bin-Khālid, who resides at **Shārijah Town**; and the detached oasis of **Dhaid** is administered by him through the medium of a Wālī, at the present time an individual of servile origin. The district of **Rās-al-Khaimah** is under the management of the Shaikh's only surviving son Khālid, who resides at **Rās-al-Khaimah Town** as Deputy-Governor on behalf of his father: the town of **Dibah** however, in that district, is held as an appanage by Rāshid-bin-Ahmad, a first cousin of the Shaikh of **Shārijah**, who lives there and enjoys the style of Wālī. The **Shamailiyah** District is nominally made over to Sa'īd-bin-Hamad, son of a first cousin of the Shaikh, who is settled at '**Ajmān** and is in fact beyond the control of his relation and superior; but this is of the less importance that the feudatory has lately been deprived by the rebellious headman of **Fujairah** of the central part of his fief and of most of his influence in the remainder.

The **Rās-al-Khaimah** and **Shamailiyah** Districts bring nothing into the exchequer of the Shaikh of **Shārijah**, but neither are they a source of expense, for the local revenue is sufficient in each case to meet the local expenditure. There are customs houses at the towns of **Shārijah** and **Rās-al-Khaimah** only, the collections at the former amounting to about Rs. 8,000, and at the latter to about Rs. 800 a year. Piece-goods pay a duty of about $1\frac{1}{2}$ per cent. and other articles are charged 2 per cent. There is also a tax of one-twentieth produce in kind on date trees throughout the Shaikh's dominions, but its proceeds, except in the **Rās-al-Khaimah** District, are insignificant; and other taxes on sheep, miscellaneous cultivation, etc., are stated to yield only about Rs. 1,000 a year. The

annual revenue of the Shaikh—apart from taxation of the pearl industry, which is his main resource and produces about Rs. 23,400 a year,—probably does not exceed Rs. 10,000.

At **Shārjah** Town the Shaikh has only about 20 armed retainers, and these, with a larger guard of 70 men maintained by his Deputy-Governor at Rās-al-**Khaimah** Town, compose his entire army. For the defence of **Shārjah** Town, he relies chiefly upon the ordinary inhabitants, among whom are some 1,600 rifles. At **Shārjah** Town, but not at Rās-al-**Khaimah**, there are public arrangements for the watch and ward of shops at night, and a small due is recovered on this account from the occupiers.

Political position.—The ruler of **Shārjah** is one of the Trucial Shaikhs whose political position is described in the general article on Trucial 'Omān.

The name may also be written شارجة; it is pronounced both **SHĀRJĀH** ^{شارجه} **TOWN** **Shārjah** and Shārgah, but the present Shaikh appears to favour the former pronunciation. **Shārjah** is the largest and most important town on the coast of Trucial 'Omān, the capital of the principality of the same name, and the residence of its Shaikh. It is situated between the two other Arab capitals of 'Ajmān and **Dibai**, about 5 miles from the former and 7 from the latter, and it is almost equidistant from the base and the extremity of the 'Omān Promontory, being a little less than 100 miles from either.

Site, surroundings and defences.—The main town extends for more than a mile along the eastern shore of a small creek parallel to the sea, while a detached quarter called **Laiyah** لاية stands on the western shore of the same. The low sandspit which forms the bank of the creek on the seaward side is long and narrow. The entrance of the creek is on the coast about a mile north-east of the middle of **Shārjah** town and there are only 1 or 2 feet of water on the bar at low tide: the foot of it adjoins the creek on which **Khān** village stands, and boats can pass from the one to the other at very high tides. At the south end of the town is rocky rising ground 30 or 40 feet high, forming a bluff to the south. The country inland is a desert of white sand with sparse date groves which are separated from the town by a short interval.

Water is from wells and is moderately good. There is now no town wall; and the fortified residence of the Shaikh and a series of mud towers which command the plain between the town and the date plantations constitute at the present time the sole defences.

Quarters and inhabitants.—The only divisions of the town are the main town or Shārjah Proper and the quarter of Laiyah, already mentioned, which stands on the sandspit outside the creek, near its south-west end where the Shārjah and **Khān** creeks unite. There was formerly another detached quarter called Mbaraz مبرز to the north of the town, but it is now incorporated. Good masonry buildings are numerous, but the bulk of the town consists of date-branch huts: the streets are a labyrinth of narrow, crooked lanes winding between the date-mat walls of the courtyards.

The population of Shārjah is about 15,000 souls. The principal tribes are, in Shārjah Town Proper, Shwaihiyīn (400 houses); **Hūwalah** and **Sūdān** (300 houses each); **Āl 'Alī**, **Āl Bū Mahair**, **'Abādilah** and **Matārish** (200 houses each); and **Na'im** of the **Āl Bū Shāmis** division (100 houses); besides about 700 houses of mixed tribes, mostly Arab and known collectively as **Hārat-as-Sūq** حارة السوق. Laiyah consists of 200 houses of **Marar** and 100 of **Sūdān**. The ruling family alone are of the **Qawāsīm** tribe. There is also a large negro community, many of whom still speak their original Swāhili tongue. About 51 Hindus and 158 Muhammadan Indians, British subjects, are permanently settled here; the figures given for both communities include a number of women and children. The Muhammadans are **Khōjahs**.

All the Arab tribes inhabiting Shārjah belong to the Ghāfirī faction, and nearly the whole of the people are **Wahhābis** calling themselves **Hanbali Sunnis**: exceptions are the **Marar** who are **Mālikis** and some of the **Sūdān** who are **Shāfi'is**. The open sale of tobacco is still prohibited, but it is freely bought and sold in private houses. The mosques number 21, of which 2 are **Jāmi's**.

Trade, manufactures and shipping.—There are 4 or 5 shops in Laiyah, and Shārjah Proper contains a bazaar of about 200 shops, and an equal number of warehouses in which most of the merchandise of the place, such as wheat, rice and dates, is deposited. Hindu merchants number 16, but their number increases in the pearling season. There are 35 **Khōjah** traders; and about 14 **Khōjah** women, mostly widows, deal in gold lace, etc.

'Abas are manufactured of fine sheep's wool.

To Shārajah Proper belong five Baghlahs and 13 Sambūks running to **Basrah**, the **Persian Coast**, **Bombay** and occasionally **Yaman**, also 183 pearl boats and a similar number of fishing boats. Some 5 or 6 large boats are built locally every year.

Agricultural resources.—The date plantations of Shārajah include about 3,600 trees, and the livestock of the place are some 500 camels, 550 donkeys, 130 cattle and 2,200 sheep and goats. The Shaikh and his relations have 22 horses.

An important inland district of the 'Omān Sultanate, at present difficult of access to Europeans on account of the political disaffection towards the Sultān which prevails there.

SHARQI-
YAH *
شرقيه

Boundaries and divisions.—Sharqiyah is bounded on the north and east by the hills of Eastern **Hajar**; at its south-east corner it meets the district of **Ja'alān**; on the south it merges in the **Ruba'-al-Khālī** or Great Desert; on the west it is conterminous with the district of 'Omān Proper. By some authorities **Ja'alān** is regarded as a part of Sharqiyah, but it seems preferable to treat it as a separate district.

The divisions of Sharqiyah, **Ja'alān** being excluded, are, in order from south-east to north-west, **Badiyah**, **Baldān-al-Hirth** بلدان الحرت, **Baldān-al-Masākīrah** بلدان المساكير, and **Baldān-al-Habūs** بلدان الحبوس, also a small tract called **Maghsāt** مغسات, of which the position is uncertain but appears to be south-south-east of **Baldān-al-Habūs**.

Natural character.—The **Badiyah** division resembles **Ja'alān** in being an open sandy plain; the other divisions consist of a net work of small valleys adjoining the hills of **Hajar**. Nowhere is there natural wood of any size. A few miles from **Wāsil**, on the way to **Ibra**, are low limestone hills rising about 150 feet above the plain. Further to the west, between **Ibra** and **Samad**, the country is described as consisting of valleys and plains sprinkled with grassy knolls or scrub jungle, among which are interspersed small limestone hills of pyramidal form and rugged outline, devoid of vegetation. A line of drainage, called in its upper course **Wādi Ibra** and in its lower **Wādi-al-Hāimah** وادي حائم, is said to traverse Sharqiyah from **Ibra** to **Wāfi** in **Ja'alān** and thence to run to the sea.

* For authorities and maps, see footnote to article 'Omān Sultanate.

Baldān-al-Hirth.—The Baldān-al-Hirth division contains the following places :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Dariz داريز	About 9 miles north-west of Wāsil in Badi-yāh and 12 miles south-east of Ibrā.	50 houses of Hirth.	There are 4 horses, 15 donkeys, 30 cattle, 80 sheep and goats and about 2,000 date palms.
Dhalma (Bū) برضلما	7 or 8 miles from Dariz.	15 houses of do.	There are 10 donkeys, 5 cattle, 40 sheep and goats and 400 date trees.
Falaj فلج	3 or 4 miles south of the Sifalah of Ibra.	200 houses of Hirth of the Ghayūth and Mashāhibah sections and of Dawakah Bedouins. They have 200 camels, 80 donkeys, 50 cattle, 3,000 sheep and goats and 3,000 date palms.	...
Falaj Mas'ūd فلج مسعود	3 or 4 miles south of Dariz.	25 houses of Hirth.	This village has 3 horses, 10 camels, 5 cattle, 140 sheep and goats and 500 date palms.
Ibra (Sifalah of) ابرا	See article Ibra.
'Izz عز	5 or 6 miles south of Dariz.	40 houses of Hirth and a fluctuating Bedouin encampment.	The present abode of 'Isa-bin-Sālih, the Hārithi rebel against the Sultān of 'Omān. Resources are 150 camels, 30 donkeys, 20 cattle and 400 sheep and goats, also 700 date palms.
Mudhairib مضيرب	2 or 3 miles north-west of Dariz.	300 houses of Hirth and 20 shops.	There are 3,000 date trees and animals are 6 horses, 40 camels, 50 donkeys, 40 cattle and 400 sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
Qābil قابيل	3 miles south-east of Dariz.	50 houses of Hirth, of which 3 or 4 are well built.	The ordinary residence of the family to which the rebel 'Isa-bin-Sālih belongs. Animals are 7 horses, 30 camels, 20 donkeys, 15 cattle and 80 sheep and goats; date palms number 400.
Qanātir قناطر	Immediately north of the Sifalah of Ibra.	100 houses of Hirth of the Aulād Hadri section.	The people have 30 donkeys, 100 cattle, 800 sheep and goats and 3,000 date palms.
Sāh ساح	Half a mile south-east of the Sifalah of Ibra.	100 houses of Hirth of the Aulād Hadām section.	Resources are estimated at 40 donkeys, 80 cattle, 500 sheep and goats and 1,000 date trees.
Sira سرا	One mile south of the Sifalah of Ibra.	150 houses of Hirth of the Maqāḍibah section.	To this village belong 50 donkeys, 70 cattle, 700 sheep and goats, and 8,000 date palms.

The people of these villages are all Hirth, and their houses are generally of stone and gypsum stucco. It will be seen that the villages form two groups, one at the south-east end of the division adjoining Dariz, the other at the north-western end adjoining Ibra.

Baldān-al-Masākirah.—Baldān-al-Masākirah meets Baldān-al-Hirth at Ibra, that town being divided between them. The chief places in Baldān-al-Masākirah are:—

Name.	Position.	Houses and inhabitants.	REMARKS.*
Faraikh فريع	1 mile north of Yahmadi.	30 houses of Masākirah.	Resources are 7 camels, 13 donkeys, 10 cattle, 200 sheep and goats and 500 date palms.
Hazam حزن	3 or 4 miles west of the 'Alāyah of Ibra.	40 do.	Resources are estimated at 25 camels, 30 donkeys, 80 cattle, 300 sheep and goats, and 70,000 date palms.
Ibra ('Alāyah of) ابرا	See article Ibra.

* The number of date palms appears to be exaggerated in this division. In the other divisions it is probably under-estimated.

Name.	Position.	Houses and inhabitants.	REMARKS. *
Nadhārah نضارة	1 mile north of Thābiti.	40 houses of Masākīrah.	There are here 4 horses, 5 camels, 25 donkeys, 10 cattle, and 150 sheep and goats and 1,000 palms.
Nasīb نصيب	Nearly a mile north-east of the 'Alāyah of Ibra.	80 do.	There are said to be 1 horse, 9 camels, 28 donkeys, 30 cattle and 200 sheep and goats, also 50,000 date palms.
Thābiti ثابتي	2 miles east of Nasīb.	50 do.	Resources are 2 horses, 13 camels, 20 donkeys, 15 cattle and 100 sheep and goats, besides palms estimated 50,000.
Yahmadi يحمدي	2 miles north of Thābiti.	200 do.	Livestock are estimated at 25 camels, 30 donkeys, 30 cattle and 300 sheep and goats; palms are said to number 100,000.

The houses in Baldān-al-Masākīrah are mostly of mud and stone, but some are of stucco. The largest place in the division is the 'Alāyah or northern part of Ibra town, which it includes, and none of the other villages are far from it.

To complete the topography of Baldān-al-Masākīrah, we may add that there are two streams or tanks in the district known as Lammā' لَمَّاع and Siyāh سِيَّاح respectively, of which the former is nearly always dry and the latter generally contains water. A few miles to the northward of this division of Sharqīyah is a desert plain called Judha'iyah. جُدْهَائِيَّة.

Baldān-al-Habūs.—The most important places in Baldān-al-Habūs are :—

Name.	Position.	Houses and inhabitants.	REMARKS.
'Ainain عينين	Near Fath.	35 houses of Habūs of the Yāl Shabīb section.	...
Bilaidah بليدة	3 miles south of 'Alo in Wādi Samad.	30 houses of Habūs.	The people possess 400 date palms, 2 donkeys, 2 cattle and 20 sheep and goats.

* The number of date palms appears to be exaggerated in this division; in the other divisions it is probably under-estimated.

Name.	Position.	Houses and inhabitants.	REMARKS.
Fath-al-Habūs فتح الحبوس	Perhaps 2 or 3 miles eastward of Mudhaibi.	50 stone houses and huts of Habūs.	Resources are 2,000 date palms, 4 camels, 8 donkeys, 6 cattle and 60 goats and sheep.
Khashbat 'Azūr جشبة عزور	Uncertain.	40 houses of 'Azūr, said to be a section of the Bani Riyām.	Here there are 1,000 date palms, 10 donkeys, 6 cattle and 60 sheep and goats.
Lizq لرزق	Do.	30 houses of Yāl Shabīb and 50 of the Maqādamah and other sections of Habūs.	Resources are 1,000 date trees, 10 donkeys, 10 cattle and 70 sheep and goats.
Ma'aidin معيدون	Do.	15 houses of Habūs.	There are 200 date palms, 6 camels, 12 donkeys, 6 cattle and 60 sheep and goats.
Milaih مليح	7 miles south of Mudhaibi.	Now deserted.	There are 600 date trees.
Mudhaibi مضيبي	See article Mudhaibi.
Qabīl Bani Bū Sa'id قابل بني بو سعيد	A few miles eastwards of Fath-al-Habūs.	40 houses of the Bani Bū Sa'id section of the Habūs.	At present (1905) deserted on account of drought. There are 200 date palms.
Qufaifah قفيفه	A long distance south-east of Khashbat 'Azūr.	30 houses of Habūs of the Sawālim section and 60 of the Nājiyah and other sections.	Date palms number 800 and there are 30 donkeys, 20 cattle and 100 sheep and goats.
Raddah رده	2 miles south of Mudhaibi.	40 houses of Habūs, some of them of the 'Ayāl Mahrah section.	Here are 600 date palms, 6 camels, 4 donkeys, 4 cattle and 60 sheep and goats.
Sanāu سناو	See article Sanāu.

Besides the above, the places in Wādī Samad, including Samad Town, are situated in Baldān-al-Habūs; so also, probably, are most of those in Wādī 'Andām and Wādī Mahram.

The houses of Baldān-al-Habūs are some of date-branches, some of mud, and some of stucco: the largest places in this subdivision are Mudhaibi and Sanāu.

Maghsāt.—The villages of Maghsāt are :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Aflāj افلج	Seven miles south-west of Mudhaibi.	100 houses of Āl Wahibah.	The people possess 60 camels, 10 donkeys, 14 cattle, 600 sheep and goats, and 1,500 date palms.
Sadairah سديرة	Uncertain.	150 houses of Āl Wahibah of the Madhāwirah, Marāmibah and Shuwālil sections.	There are 400 camels, 20 donkeys, 12 cattle, 1,000 sheep and goats and 10,000 date trees.

Population.—Besides the fixed villages enumerated above, all of which contain some date-branch huts, Sharqiyah has many temporary settlements of the Sa'ādiyīn.

From the preceding tables it is possible to work out an estimate of the settled population of the Sharqiyah district as follows :—

Division.	Souls.
Badiyah	6,500
Baldān-al-Hirth	7,650
Baldān-al-Masākirah	3,700
Baldān-al-Habūs (excluding Wadis 'Andām Mahram and Samad	9,100
Wadi 'Andām	6,000
Wadi Mahram	4,500
Wadi Samad	5,500
Maghsāt	1,250
Total	44,200

Ibra is the largest place in Sharqiyah; the second in size is Mudhaibi. The Bedouins of Sharqiyah belong chiefly to the Āl Wahibah and Jannabah tribes, but some of them are 'Awāmīr, Habūs, Hirth and Dawakah. Their total number cannot be stated.

Agriculture.—In Sharqiyah there are few wells and nearly all irrigation is from springs. All the permanent settlements have date-groves of their own; and quinces, limes, mangoes, olives, plantains and pomegranates are generally grown. Sharqiyah is the principal camel district in 'Omān.

**SHARQI-
YĪN**
شرقيين

Singular Sharqī شرقي: an Arab tribe of the 'Omān Promontory, found chiefly in the **Shamailiyah** tract and in Wādi **Hām**, but also (in smaller numbers) in the **Jiri** plain, about Wādi-al-**Qaliddi**, and at **Dibah** and other places in the Rās-al-**Khaimah** District. In **Shamailiyah** they occur at **Bidyah** (300 houses), **Dhadnah** (50 houses), **Fujairah** (150 houses), **Ghāllah** (70 houses), **Gharāifah** (50 houses), **Gharfah** (100 houses), **Marbah** (100 houses), **Qaraiyah** (100 houses), **Qidfa'** (100 houses), the two **Rūls** (80 houses), **Saqamqam** (30 houses), **Sharam** (40 houses), and **Sufad** (15 houses)—total 1,185 houses; in Wādi **Hām** at **Bilaidah** (4 houses), **Bithnah** (50 houses), **Khalaibiyah** (15 houses), **Manāmah** (7 or 8 houses), **Masāfi** (25 houses) and **Taiyibah** (25 houses)—total about 125 houses; in **Jiri** at **Habbah** (35 houses) and **Khatt** (30 to 35 houses)—total about 70 houses; in Wādi-al-**Qaliddi** at **Muhtarqah**; and in the Rās-al-**Khaimah** District at **Shariyah** (10 houses), **Wamm** (30 houses), and **Dibah** (10 houses)—total 50 houses. The total number of the Sharqiyin thus appears to be about 7,000 souls. The most important section are the **Hafaitāt** حفيتات, to which belong the well known **Shaikh** of **Fujairah** and most of the people of that village, as well as the Sharqi inhabitants of **Manāmah** and **Masāfi** in Wādi **Hām** and of **Sufad** in **Shamailiyah**. The Sharqiyin of **Muhtarqah** and **Shariyah** belong to a section called **Yamāmahah** يماماهه (singular **Yammāhi** يماحي) and those of **Wamm** are **Hamūdiyīn** حمرديين. According to some (possibly interested) authorities, the **Jalājilah**, **Mahārizah** and **Zahūm** are also sections of the Sharqiyin; but, the evidence on this point not being conclusive, they have been treated in the present Gazetteer as independent tribes of Trucial 'Omān. The Sharqiyin reside, without exception, in the jurisdiction of the **Shaikh** of **Shārjah**; but about half of those in the **Shamailiyah** tract have succeeded, under the leadership of the **Shaikh** of **Fujairah**, in casting off—temporarily at least—the yoke of **Shārjah**. Their independence has not, however, been recognised by the British Government.

A valley in the **Dhāhirah** district of the 'Omān Sultanate, joining Wādi **Sanaisal** from the east between **Dariz** and **Bait-al-'Ainain**. It contains the villages of **Bāt** above and **Wahrah** further down. **Bāt** بات is a walled village of about 180 houses of **Maqābil** who possess 30 camels, 50 donkeys, 50 cattle and 400 sheep and goats; **Wahrah** وهره has 100 houses of the **Miyāyihah** tribe who cultivate wheat, indigo, sugarcane,

**SHARSAH
(WĀDI)**
وادي شرمه

jowari, lucerne, dates, mangoes, plantains and limes, besides owning 15 camels, 25 donkeys, 20 cattle and 300 sheep and goats. There are wells at both villages. The settled population of the valley is about 1,400 souls.

SHATAIT
RIVER
or
ĀB-I-
SHATAIT
آب شطيط

The **Kārūn** river is known by this name between **Shūshtar** Town and **Band-i-Qīr**, the stage in which it suffers temporary diminution through part of its waters taking the alternative channel of the **Gargar**.

General description.—The stream of the Shatait is much wider than that of the **Gargar**, attaining a maximum breadth of 250 yards at a point about 16 miles by land above **Band-i-Qīr**. At and for some distance below **Shūshtar** Town the bed is stony and the stream swift, but the latter is usually shallow enough to be fordable at a point $1\frac{1}{2}$ miles below the town; at its junction with the **Gargar** and **Diz** the Shatait is still 150 yards wide. Its colour when in flood is a greyish-green, and it is slower to show discoloration than either the **Gargar** or the **Diz**: it carries less silt than either the **Gargar**, the **Diz**, or the lower **Kārūn**. The lower half of the Shatait is more winding than the upper, and even when the water is high the current is less rapid below **Chahār-dingeh** than it is above. At two places in its course, 6 to 10 miles above 'Arab Hasan, the river impinges against hillocky clay ground on its right bank, but rocks are nowhere seen; the upper of the raised tracts is about $\frac{3}{4}$ of a mile, the lower about $\frac{1}{2}$ a mile long, and they are separated by an interval of about $2\frac{1}{2}$ miles. Below 'Arab Hasan there is a good deal of small scrub on the banks, especially on the right bank.

Public works and irrigation.—At **Shūshtar** Town a canal called the **Mīnau**, fed by the Shatait but described in the article on **Shūshtar**, has its head. About 500 yards below the **Qal'eh** of **Shūshtar** the Shatait is crossed by a dam, the **Band-i-Mizān** بند میرزان, supporting a bridge which is known as the **Pul-i-Dizfūl** from its carrying, when in repair, the **Dizfūl** road.* The original height of the dam above low water appears to have been 9 feet, and the rise of the river at this place seems to be from 10 to 14 feet above the lowest level. The bridge winds irregularly, and when

* The name **Pul-i-Qaisar** is no longer in use. The term **Band-i-Mirza** is occasionally perhaps applied to this dam (as also to the upper barrage on the **Gargar**) on account of its having been repaired by **Muhammad 'Alī Mirza**.

complete it had 41 arches and was 570 yards long with a cobble-paved road-way 21 feet wide. In 1905 there were still 28 arches standing on the left bank and 8 upon the right, but these were divided by a breach about 170 feet long through which the main stream of the river poured, the dam at this point having given way as well as the bridge. The materials and construction of the dam are superior to those of the bridge, and it was formerly a magnificent work, but the greater part of it has now been either broken up or removed in the course of endeavours to repair the bridge.*

The Shatait is not at present applied to irrigation.

Navigation.—When steam navigation was introduced on the **Kārūn**, the “**Shushan**,” still in use, a stern-wheeler 100 feet long with a beam of 23 and an ordinary draft of $2\frac{1}{2}$ feet, ran for more than a year upon the Shatait, instead of upon the **Gargar** as at present, it being at that time believed that in the low season the channel of the **Gargar** might become impassable. It was found that the Shatait could not be navigated with safety by a vessel of the “**Shushan**’s” dimensions above **Chahārdingeh**, a point 12 miles distant by land from **Shūshtar** Town, on account of the intricacy and number of the channels and of the shingly nature of the bed which prevented the use of anchors for getting off when aground. Below **Chahārdingeh**, which from the end of 1890 to the beginning of 1892 was the “**Shushan**’s” regular terminus, the only serious obstacle was a double reef of rocks, not far from **Band-i-Qīr**, with a narrow channel through which the water raced violently: the difficulty of the reef was at times increased by the formation of sandbanks below it. It was found that, owing to want of water, the passage of the reef was uncertain in August and September, dangerous in October, and impossible in November; but the level of the river did not vary regularly with the season. Once the “**Shushan**” crossed the reef when there was only $2\frac{3}{4}$ feet of water on it; in this case she was slacked over with lines, sheering about very much in the strong water, and took the ground twice in the operation. Native craft prefer the **Gargar** to the Shatait. The descent of the Shatait on a skin-raft from **Shūshtar** to **Band-i-Qīr** occupies nearly 17 hours even with a high river.

* The dam, in ancient times called the **Shādhurwān**, is a very old construction, and according to Persian historians it was designed by the Roman Emperor **Valerian** during his captivity with the Sassanians, which began in 260 A. D. In the 10th century A. D., however, the only bridge appears to have been a bridge of boats. *Vide* **Le Strange**. A notice of the bridge in its present condition will be found in the **Foreign Proceedings of the Government of India for June 1904**.

Villages.—The following are the villages upon the Shatait ; none of them are more than about a mile from the river :—

Name.	Distance, in miles by river, below Shushtar Town and on which bank situated.	Houses and inhabitants.	REMARKS.
Būrāki بوراکي	5 Left.	15 mud huts of Shīr 'Ali Bakhtiyāris and of Ibailāt and Taraif herdsmen of the Bakhtiyāris talking a mixture of Persian and Arabic. The people have 10 rifles.	Beans, wheat and barley are cultivated ; animals are 30 buffaloes, 60 cattle and 15 donkeys.
Yissāreh يساره	7 Left.	20 houses, of which 5 are unoccupied. The inhabitants are Shūshtaris and Shīr 'Ali Bakhtiyāris ; they have 5 rifles.	The inhabitants are gardeners and fishermen ; they own 20 donkeys, 30 buffaloes and 50 cattle. Irrigation is from the Minau canal.
Chahārdingeh چهار دنگه	18 Left.	At present deserted.	The site is the property of Khuda Karam Khān, Chahārīang Bakhtiyāri of Qal'eh Tūl. This place, which by land is 12 miles from Shūshtar Town and 8 from Shalaili on the Gargar, has been used by the upper Kārūn steamer as a landing stage to discharge cargo for Shūshtar.
'Arab Hasan عرب حسن	20 Left.	40 mud houses, chiefly of 'Anāfjeh of the Dailam section, but there are 10 households of Shūshtaris, 5 or 6 of Gūnduzlus and a few of Kathīr. There are 30 mounted men. The headman belongs to the Kathīr.	By Arabs called also 'Arab Hasan Khān or Bait Hasan-al-Hāji and by Persians Kā Hasan Khān. Wheat and barley are grown and much charcoal is manufactured and sold. Livestock are 311 mules, 10 buffaloes, 100 cattle and 1,500 sheep and goats. 'Arab Hasan is the regular half-way stage on the land route between Shūshtar Town and Band-i-Qīr : it is somewhat nearer to the latter place than to the former. Like Chahārdingeh this place is owned by Khuda Karam Khān.

Name.	Distances in miles by river, below Shushtar Town and on which bank situated.	Houses and inhabitants.	REMARKS.
Shaikh Jarrāh شیخ جراح	22 Left.	A village of mixed Arabs, chiefly 'Anāfijeh of various sections. They have 10 rifles.	There are 500 sheep. Khuda Karam Khān is the owner of this village as of the last.
Abu 'Amūd ابو عمود	24 Left.	60 mat huts and tents of 'Anāfijeh of the Dailam section. There are 30 rifles and 30 mounted men.	The crops are wheat and barley: animals are 150 cattle and 2,000 sheep and goats.
Saiyid Sālīh سید سالم	24 Right.	70 reed huts of 'Anāfijeh. They have 20 rifles.	There are 50 cattle and 1,500 sheep here.
Mizbān (Bunnat) بنة ميزبان	Left.	20 mud huts of 'Anāfijeh of various sections, with 15 rifles.	Livestock are 20 cattle and 600 sheep.
Thāmar (Bunnat). بنة ثامر	Do.	40 tents and mud huts of 'Anāfijeh of various sections. They have 20 rifles.	There are 40 cattle and 500 sheep.
'Abu Qrāniyeh ابو قرانيه	Right, opposite to Bunnat Thāmar.	15 reed huts of 'Anāfijeh. The people have 9 rifles.	There are 400 sheep.
'Abbās (Bunnat) بنة عباس	Left.	20 tents and reed huts of Bani Sa'ad of the Ka'ab-as-Sitaleh section, etc. There are 10 rifles.	Livestock are 600 sheep.
Band-i-Qīr بند قير	40 Left.	...	See article Band-i-Qīr .

With the exception of Chahārdingeh, 'Arab Hasan, Shaikh Jarrāh and **Band-i-Qīr**, all these places are the property of Saiyid 'Abdus Samad, Mujtahid, of **Shūshtar** Town and his family.

A division of the 'Amārah Sanjāq of the Basrah Wilāyat in Turkish **SHATRAT AL-'AMĀRAH**
'Irāq.

Position and boundaries.—The Qadha of Shatrat-al-'Amārah is situated on the river **Tigris**; it begins a short way below 'Amārah

شطرة العمارة

Town and ends some distance above **Qūrnah**. It is bounded on the north by the 'Amārah Qadha, on the east by the Persian frontier, on the south by the Qadha of **Qūrnah**, and on the west by that of **Shatrat-al-Muntafik**.

Topography and inhabitants.—The only place of size in the Qadha is the administrative capital, **Qal'at Sālīh**, which is described elsewhere under its own name; another place well known in spite of its small size is 'Azair or the Tomb of Ezra. The **Tigris** river and the marshes formed by the **Jahālah** canal in its lower course are the only physical features of importance. The country at large is inhabited by the **Āl Bū Muhammad** tribe.

Population.—The fixed population of the district is about 45,000 souls, of whom nearly 43,000 are Shi'ah Muhammadans. The balance consists of about 1,500 Sunni Muhammadans, some **Sabians** and about 50 Jews; almost all of these live in the town of **Qal'at Sālīh**.

Resources.—The district as a whole is wet and marshy, and rice, maize, millet and sesame are among the chief crops. Buffaloes are the most valuable kind of livestock and exist in enormous numbers, being bred by the **Āl Bū Muhammad** for exportation. Fish and feathered game abound in the marshes. There are two salt fields in this Qadha, **Abu Rūbah** ابو ربه and **Bani Mālik**, but the produce at least of the latter is inferior.

Administration.—Shatrat-al-'Amārah as a Qadha has no administrative subdivisions.

SHATRAT-
AL-
MUN-
TAFIK
شرطة المتنفك
QADHA

A division of the **Muntafik Sanjāq** of the **Basrah Wilāyat** in Turkish 'Irāq.

Position and boundaries.—This Qadha is situated on both sides of the **Shatt-al-Gharāf** in its lower middle course and appears to be enclosed between the Qadhas of **Hai** on the north, **Shatrat-al-'Amārah**—or possibly **Sūq-ash-Shuyūkh**—on the east, **Nāsiriyyah** on the south, and either **Samāwah** or **Diwāniyah** on the west.

Topography and inhabitants.—The only considerable place in the Qadha is the town of **Shatrat-al-Muntafik**, and except the **Shatt-al-Gharāf** there is no salient physical feature,

Population.—The fixed population of the district is estimated at 65,000 souls, all Shi'ah Arabs with the exception of some Sunni Muhammadans and Sabians and a few Jews, who are settled in the chief and only town.

Resources.—There is nothing remarkable about the agriculture or livestock of this Qadha.

Administration.—The Qadha is subdivided into 4 Nāhiyahs, namely, that of the Markaz or headquarters and those of Bada'ah بدعه, Dajjah دجه and Shatt-al-Kār شط الكار: the last named is at the western end of the district, while Bada'ah is apparently on the eastern branch of the Shatt-al-Gharāf, not very far from the town of Shatrat-al-Muntafik on the western branch. The Dāirat-as-Saniyah have land in the Qadha and are represented by a Mamūr in the chief town.

Frequently called "Shatrah" only, but confusion with Qal'at Sālih, of which the official name is Shatrat-al-'Amārah, should be avoided; it is a municipality and country town in Turkish 'Irāq near the right bank of the western branch of the Shatt-al-Gharāf about 20 miles above the junction of that stream with the Euphrates near Nāsiriya Town. The inhabitants of Shatrah number about 4,000 souls and are nearly all Shi'ah Arabs; but there are a small Jewish community, who maintain a primary school taught by a Rabbi, and some Sabians, the latter as usual mostly goldsmiths. The bazaar contains about 300 shops and is much resorted to by the surrounding Muntafik Arabs, but there is not much trade with distant places. In summer, when the Shatt-al-Gharāf ceases to flow, the inhabitants of Shatrah obtain water for drinking and irrigation from wells which they dig in the dry bed of the stream. Shatrat-al-Muntafik is the headquarters of a Qadha, similarly named, in the Sanjāq of Muntafik, and is the residence of the ordinary Qadha officials and of a Mamūr of the Public Debt and Civil List departments. A harbour master for the Shatt-al-Gharāf is common to this place and Hai. There are about 50 Dhābitiyahs, mostly mounted, under a Tābūr Āghāsi. The military garrison consists of 1 battalion of infantry and 2 guns. The ancient site of Tallūh lies about 8 miles to the north-east of Shatrah.

SHATRAT-
AL-MUN-
TAFIK
شرطة المنتفك
TOWN

SHATŪT

شطوط

An irrigated tract in the **Fallāhiyeh** District of Southern 'Arabistān, reaching on the east to Imāmzādeh 'Abdul Hasan, which is about 20 miles west-north-west of **Ma'shūr**, and on the south almost to **Khor Dōraq**; on the west it falls short of **Buziyeh** and on the north it does not extend to the left bank of the **Jarrāhi** River, though it approaches within about 4 miles of it at **Qarakhān**. From north to south **Shatūt** measures about 8 miles. The tract is irrigated by a number of distributaries of which it is difficult, without the aid of a survey, to establish the relative positions or direction of flow: they are, with two exceptions, fed by the canal variously known as **Shākhāt-as-Saiyid Fākhar**, **Qāhan** or **Shārūkhīyeh**, which leaves the **Jarrāhi** River a little below **Gharaibeh** and is mentioned in the table of canals in the **Fallāhiyeh** district. The following are the principal distributaries in **Shatūt**:—

Name.	Occupiers.	Number of Faddāns irrigated.	REMARKS.
Khātar خاطر	Ka'ab of the Al Bū Ghubaish subdivision, whose Shaikh is Rizaij . Sections represented are Al Bū Badar , Bait Ithāmneh , Qarāghūl , Al Quwām and Bait Rāhan .	30	The first of the distributaries crossed in going south by west from Imāmzādeh 'Abdul Hasan . It flows about south-east.
Wuli ولي	Do. Section represented is Dailam .	Do.	Crossed next after Khātar in going south by west from Imāmzādeh 'Abdul Hasan . It also appears to flow to the south-east.
Jābar جابر	Do. Sections represented are Al Bū Hamūd , Al Bū Sa'id , Al Bū Sālih , Bait Shabaiyih , Al Bū Shamāl and Bait Zūba'ad .	40	This distributary is the next beyond Wuli on the way south by west from Imāmzādeh 'Abdul Hasan and it seems to flow in the same direction as Wuli .
La-issanwi ...	Do.	5	...
Ghānim غانم	Do.	3	...
Qraian ...	Ka'ab of the ' Asākireh subdivision, whose Shaikh is Mūsa .	4	The lower end of this distributary is passed in going south by west from Imāmzādeh 'Abdul Hasan .

Name.	Occupation.	Number of Faddāns irrigated.	REMARKS.
Nahr Taryāki ...	Ka'ab of the Asākireh subdivision, whose Shaikh is Mūsa.	10	The water of this distri- butary comes from the flooded land between Buziyeh and Imām- zādeh 'Abdul Hasan, not from the Qāhan canal.
Gha d h b ā n-ibn- Rizaij غصبان ابن رزيج	Ka'ab of the Āl Bū Ghu- baish subdivision, whose Shaikh is Rizaij.	6	Do.
Nahr 'Abūd نهر عبود	Do.	4	...
Āzzāz Hadrāni عزاز حدراني	Do.	8	Probably in the northern part of the Shatūt tract.
Duwaiyir ...	Do.	4	Do.
Āzzāz Fauḡāni عزاز فوقاني	Do.	20	Do.

Canals known as Nahr-as-Saiyid ^{نهر السيد}, Bait Widai ^{بيت رداي} and Hāji 'Isa ^{حاجي عيسى}, which take out of the Jarrāhi River below Qarakhān, are the property of Shaikh Rizaij of Buziyeh and his dependents, water 40, 30 and 40 Faddāns of land respectively, and contribute to the irrigation of the Shatūt tract, but it is believed that only portions of the land which they serve fall within the Shatūt tract proper. The distributaries in Shatūt are empty in the dry season, but wells in their beds still supply drinking water. On each distributary there is a settlement of the same name, which consists of reed huts and is at least partially inhabited throughout the year. The crops grown are wheat, barley and onions.

SHATVĀR

شطار

A small and low islet, 1 mile long from east to west and $\frac{1}{2}$ a mile in breadth, off the eastern point of Shaikh Shu'aib island, from which it is separated by a strait less than a mile wide with 3 fathoms of water in the passage. Shatvār is politically a dependency of Mugām, but it is uninhabited and visited only for fishing and for pearling upon a bank which adjoins its western extremity.

SHĀŪR

شار

RIVER

This river rises from springs in the plain between the rivers Diz and Karkheh at a point opposite Aiwān-i-Karkheh: it flows to the south-south-east, and throughout its course of about 60 miles (bends being neglected) it is roughly parallel to the Karkheh and never many miles distant from it. Some 12 miles below its source the Shāūr washes the western foot of the ruins of Shūsh, and it ultimately joins the Diz by two branches which separate at Hawasiyeh and enter the larger river at 38 and 26 miles respectively by water above Band-i-Qīr;* the former of these branches is named the Sharish شرش and the latter the Khārūr خاور; both contain water at all seasons of the year, but the Khārūr is the more important. It is believed that the Shāūr originally flowed into the Kārūn, at one time near Wais and at a later period near Ahwāz, and some hold that it was originally an artificial canal from the Karkheh; it is stated in support of this view that in one place it passes through a ridge of low hills by an obviously artificial cutting.

The stream of the Shāūr is winding, deep and sluggish, with a fairly uniform width of 25 to 30 yards; there are fords at frequent intervals; the bed and banks are of soft alluvial soil. The banks are clothed in spring with luxuriant herbage; in the upper reaches they are lined with thorn trees and in the lower with tamarisk jungle. The river is largely drawn on for irrigation and at the low season its waters are practically exhausted in this manner. The lands which adjoin its course are fertile; in some places the stream forms marshes, which are tenanted by pastoral Arabs and cultivated with rice. The principal canals which leave the Shāūr on its left bank are, in descending order, the following: the Khairābād خیرآباد, the Taraifi طریفی, the Qumāt قماط, the Ishāreh (near Jājīs on the Diz) and the Hawasiyeh حوسیه; of these the Taraifi and the Hawasiyeh benefit the 'Anāfjeh tribe and the remainder water the lands of the Bait Sa'ad. The village of Khairābād,

* One report makes the mouths of the Sharish and the Khārūr much closer together, near a place called Harijeh حریجه.

described in the article on the **Karkheh**, is possibly situated on the left bank of Shāūr and so not in any sense on the **Karkheh**.

The Bait **Sa'ad** and **Kathīr** occupy both banks of the Shāūr; and until 1905, when they removed, Bani **Lām** also were to be found on its right bank below **Khairābād**.

A small coast village of the 'Adān district in the **Kuwait** Princi- **SHI'AIBAH**
pality; it is situated about 24 miles south-south-east of **Kuwait** Town. **شيبه**
It consists of 15 houses situated inside a ruinous fort; the inhabitants
are 20 families of various Arab tribes. There are 10 wells containing
good water at 16 feet, 150 date palms, a few ber trees, and a little
cultivation of barley and vegetables. The inhabitants own three or four
pearl boats. The place is to some extent a country resort for townsmen
of **Kuwait**.

A peculiar and important section of the **Persian Coast** extending **SHĪBKŪH**
from the boundary of the **Dashti** district on the north to that of **Lingeh** **شيب کوه**
on the south: its direction is approximately from west-north-west by
north to east-south-east by south. The name "Shibkūh" means "below
the hills." The Shibkūh district evidently corresponds with the Sif
Zohair زهير of the mediæval Arab and Persian geographers, so called
in the 10th century after an Arab tribe from the opposite side of the
Gulf by whom it was then occupied.*

Limits.—The north-westernmost of the Shibkūh ports is Banak,†
8 miles north-west of **Kangūn**, and the south-westernmost is **Mughu**;
the distance between is 180 miles. Along its south-western side
Shibkūh is bordered by the Persian Gulf; the inland boundary is the
crest of the main maritime range, which at **Kangūn** is about 6 miles
from the sea and at **Mughu** slightly over 20, the difference being
due not to any change in direction of the range, which is nearly straight,
but to a gradual though irregular trend of the coast-line away from
the hills.

* *Vide* Le Strange's *Lands of the Eastern Caliphate*.

† In reality Shibkūh, properly so called, does not extend so far north as Banak, and some
authorities would make it end at Shīvuh or even **Mugām**. As however the coastal
tract between Shibkūh proper and the **Dashti** district has no general name of its own
we have been obliged to include it in the present article.

The islands of Shaikh **Shu'aib**, **Shatvār**, **Hindarābi**, **Qais** and **Farūr** are attached for administrative purposes to the Shĭbkūh district.

Physical geography.—The disposition of the ranges composing this hilly littoral tract has been made clear by a survey executed in 1900-02; previously it was not well understood.

The dominant feature of the whole district is the great maritime range of Southern Persia, which, forming a tangent to the coast near **Kangūn**, runs thence south-south-eastwards without interruption and almost without change of direction until it falls into the sea between **Lingeh** Town and **Khamir** at a point immediately north of **Bāsīdu**: the distance from **Kangūn** to this place is about 210 miles. The range throughout is composed of masses of limestone which have a quaquaversal dip and rise in places to as much as 5,000 feet above sea-level; its most general name is **Jabal Sat-heh** سطحه. The principal summits are **Jabal Siri** سیري, 4 miles inland from **Miyālu**, height 4,660 feet; **Sir-i-Yalfal** سر یلفل, 6 miles inland from **Nakhl Taqi** and 4,870 feet high; and **Jabal Turanjeh** ترنجه, 20 miles inland from **Gürzeh**, elevation 5,150 feet.

We may here notice that a great trough, co-extensive with the portion of the maritime range just described, adjoins the range on its inland side and is divided into two parts by a watershed which is behind **Tāhiri** on the coast. Portions of this great valley are still unsurveyed; but the part of it to the north-west of the watershed, containing the small district of **Jam** جم about 10 miles north of **Tāhiri**, seems to drain to the upper course of the **Münd** river, while the major or south-western part runs straight in the opposite direction to **Clarence Strait**, the channel between **Qishm** Island and the main. The valley contains 3 places of some importance whose trade with the outer world is conducted through **Shĭbkūh** ports; they are **Galehdār** گلهدار, 8 miles from the sea at a point rather nearer to 'Asalu than to **Tāhiri**; **Tarākameh** تراکمه, 20 miles inland from **Shīvuh**; and **Ishkani** اشکني, 22 miles from the coast at **Mugām**.

It remains to describe the sub-features of the Shĭbkūh tract between the main range and the Persian Gulf.

From **Kangūn** as far as 'Asalu, a little over 40 miles, the main range immediately adjoins the coast and presents to it a face apparently precipitous, on which however the fires of charcoal burners are seen to twinkle at night. Immediately below 'Asalu is **Nāband** bay, and from there to another but less pronounced bay at **Mugām**,—a

distance of about 60 miles,—the coast lies parallel to the foot of the main range at about 20 miles from it, the intervening space being occupied by the **Gābandi** valley which begins immediately inland of **Shivuh** and, skirting the foot of the main range, reaches the sea at the foot of **Nāband** bay. The **Gābandi** valley is separated from the coast by a sandstone ridge, called **Shāhīn Kūh** شاهين كوه, which is nowhere more than a mile or two from the shore and in the neighbourhood of **Shivuh** attains its maximum height of 1,100 feet. This ridge continues along the coast to **Mugām**, when, the littoral making a fresh échelon seawards, it is left at some distance inland and almost immediately terminates about 16 miles due east of **Mugām**. Between **Shivuh** and **Mugām**, rather nearer to the latter, is a gap in the sandstone ridge through which a small valley, called **Darveh Āsūh**, comes down to the sea in a direction perpendicular to the coast: this valley has two branches in the interior which unite at about 10 miles from the sea, one of them coming from the west from a point near the head of the **Gābandi** valley and the other from the east, from a watershed on the other side of which a valley called **Hamīru** همير, a tributary of the **Mugām** valley, has its origin. The **Hamīru** valley from its source at first runs eastwards, then bends southwards round the end of the sandstone ridge, to the east of **Mugām**, and joins the **Mugām** valley which, with a course of 30 or 35 miles from east to west, reaches the sea at **Mugām** by an opening between two parallel ranges similar to that of the **Gābandi** valley at **Nāband**. The southern of the two parallel ranges in this case is another ridge of sandstone which extends from **Rās Nāband** for 50 miles to **Chārak**, where it ends, closely adjoining the shore throughout its length; between **Chīru** and **Chārak** it has an elevation of 2,000 to 3,000 feet. The greater part of the interval to the north of this ridge between it and the great maritime range is occupied by the **Mugām** valley and by the turn of the **Hamīru** valley already described; but the remainder consists of the basin of the **Gulshan** valley, which has its mouth on the coast less than a mile to the east of **Chārak**. Beyond **Chārak** a gap about 5 miles in width occurs in the coast ridge and a plain called **Tank Khūm** تنك خرم *ei* tends from the edge of the sea to the main range, here 15 miles inland, broken only by some dark-coloured detached hills between 1,000 and 2,000 feet high. Between this gap and **Mughu**, the last of the **Shībkūh** ports in this direction, the detached hill **Kūh Namaki** كوه نمكي (in the Admiralty Chart called **Jabal Yarid**) rises close to the sea to an elevation of 1,200 feet.

The strata of the sandstone ridges which skirt the sea below Rās Nāband dip toward the coast, and it appears not improbable that the ridges themselves have been formed by the gradual elevation of the great inner limestone range through a bed of superincumbent light-coloured sandstone.

It is worthy of remark that, while the limestone range gives birth to many fresh springs and streams and is clad, though sparsely, with almond, dwarf-oak, hawthorn, rose and terebinth, the sandstone ridges produce hardly a shrub or a grass and the streams that spring from them are generally brackish.

The actual coast of the Shībkūh district possesses no remarkable features, unless we reckon the islands of Shaikh **Shu'aib**, **Shatvār**, **Hindarābi**, **Qais**, **Farūr** and **Nābiyu Farūr**. Dangers of navigation, apart from these conspicuous islands, are few; and north of **Shīvuh** the tide-stream is either faint or imperceptible.

Population.—The number of houses in the Shībkūh district—the valleys of **Gābandi**, **Darveh Āsūh** and **Gulshan** in the interior being included—appears to be about 8,500, indicating a population of about 42,500 souls; but at the present time, in consequence of recent emigration, there is at most places a considerable proportion of unoccupied houses.

Persians of unmixed descent are few in the district, and such as are found are mostly settlers from Lār and other Persian districts; the bulk of the people are of mingled Persian and Arab blood and the tribes to which they belong are of no consequence. Local patriotism is however strong among those who are subjects of the same chief, a bond which is here regarded almost as one of clanship.

The following Arab tribes are deserving of notice :—

Name.	Estimated number of souls in the Shībkūh district.	Where found.	REMARKS.
'Alī (Āl) آل علي	3,500 (Also 300 in the Lingeh District).	At Chārak and Tāvuneh and on Qais island. (Also at Duvvān in the Lingeh District.)	Sunnis. They are a branch of the tribe of the same name in Trucial 'Omān and maintain intercourse and intermarry with those of the parent stock. Those at Tāvuneh belong to a section called Bushri بشري and are at enmity with those of Chārak.

Name.	Estimated number of souls in the Shībkūh district.	Where found.	REMARKS.
Hamad (Āl) آل حمد	About 200 only.	At Muqām, Mar- bakh, Kalāt and Gūrزه.	Other sections on the Persian side are Āl Bū Khazam, خزن, Āl Bū Muflih, مفلح, Āl Bū Yamish, یمش and Āl Bū 'Abdullah-bin-Ahmad. The Hamadis claim descent from the Qahtān of Arabia. Many persons now call themselves Hamadis merely because they are subjects of the Hamadi Shaikh.
Haram (Āl) آل حرم	2,000	At 'Asalu and Nāband.	Sunnis. They claim to be a section of a tribe called Raziya and say they immigrated from the neighbourhood of Makkah about 5 or 6 generations ago. It is probable that a number of the tribe are not Haramis by descent and are called so only because they are subjects of the Harami Shaikh.
Marāziq مرزوق	1,500 (Also 300 in the Lingeh District).	At Mughu, Hasīneh and Kun- darūn. (Also at Bustāneh in the Lingeh District.)	Wahhābis. They claim to be a branch of the 'Ajman tribe on the Arabian side. The Shaikh, at Mughu, belongs to a section called Āl Sulaimān آل سليمان. These Marāziq are supposed to be the same tribe as the Marāziq of the 'Omān Sultanate, who are Sunnis. Of the reputed Marāziq in Persia many are not really of Marzūqi descent.
Nasūr (Al) آل نصر	A few only.	Chiefly at Gābandi village in the Gābandi valley.	The Nasūris have been almost exterminated in Shībkūh by constant wars with the Āl Haram. Almost the only true Nasūris now surviving are the family of the Gābandi

Name.	Estimated number of souls in the Shĭbkŭh district.	Where found.	REMARKS.
'Obaidli عبيدلي	1,500	At Chĭru and on Hĭndarābi island.	<p>Shaikh, but a number of the inhabitants of the Nasūri group of villages in Gābandi have assumed the name of Nasūri. Those who have done so are mostly Persian-speaking Sunnis of the Shāfi'ī sect, but a few of them are Shī'ahs.</p> <p>Sunnis. They claim to be a section of a larger tribe called Ahmadah احمدة and say they are derived from the 'Abdah Shammar of Najd. It is sometimes stated that the 'Abādilah of Trucial 'Omān are connected with this tribe. The sections of the 'Obaidli of Chĭru and Hĭndarābi are: Bū 'Alī بو علي, Āl Bū 'Alī آل بو علي, Bū Hasīna بو حسينا, Maghāir مغائر, Ma-hāfir محافر, Bani Muhanna بني مهنا, Bani Muqbil بني مقبل and Bū Sulaimān بو سليمان.</p>

Some Jews are found at Khund in the Gābandi Valley.

The proportion of rifles varies from place to place: in some localities as much as $\frac{2}{3}$ of the male adult population is armed, in others not more than $\frac{1}{4}$.

Agriculture, trade, weights and measures and shipping.—Wheat, barley and dates are the staples of agriculture, and cultivation is carried on entirely without recourse to artificial irrigation.

Piece-goods are the principal import, and tobacco from the interior is the chief article of exportation: trade relations are with Lingeh Town, Trucial 'Oman, and Bahrain.

The unit of weight is a Man, equal to 9 lbs. English, and that of length a Gaz or double Zara' of 38 inches.

The shipping in the ports of the coast and islands of the Shībkūh district amounts, as will be apparent from the topographical table at the end of this article, to about 111 vessels employed in the carrying trade, 103 large sea-going pearl boats, and 643 small fishing boats which from 'Asalu to Mughu are generally used for pearling near home as well as for fishing.

Routes and transport.—A route presenting no special difficulties follows the sea-coast from Kangūn to Nāband bay, from the foot of which it runs up the Gābandi valley, traverses the upper basins of the Āsūh and Gulshan valleys and passes across the swampy plain of the Lingeḥ District to Lingeḥ Town.* There is a land route along the coast from Chārak *viā* Mughu to Lingeḥ Town; one from Chārak inland to Bastak and so to Lār; and a third, crossing the last, from Mughu to Lār.† The coast route is fit for all arms.

Transport resources can be gauged from the topographical table in this article and in the connected articles on the Gābandi valley, etc.

Administration.—The following table explains the organisation of the Shībkūh district, for administrative and revenue purposes, as it stood at the end of 1906 :—

Groups of villages.	Province to which attached.	Villages of the group.	Local authority and revenue.
1. Kangūn	Fārs.	Banak, Kangūn, Miyālu, 'Ayanāt and Akhtar on the coast.	In 1905 this group was farmed by the present Khān of Dashti for 1,800 Tūmān a year and was sublet by him to his cousin Ahmad for 1,500 Tūmāns a year. In 1906, the sea customs of this and of the Tāhiri and 'Asalu-Naband groups, which also he held, were transferred from the Khān to the Imperial Persian Customs, from whom he receives an allowance of 2,300 Tūmāns

* It was travelled by Colvill in 1865-66; *vide* his report forwarded to the Government of Bombay by the Resident in the Persian Gulf with his letter No. 46 of 4th May 1866. The description of the route is unfortunately of small value as such; all the stages even are not specified.

† See *Routes in Persia*, I. Nos. 52 A and 54.

Groups of villages.	Province to which attached.	Villages of the group.	Local authority and revenue.
2. Tahiri	Fārs.	Bagh-i-Shaikh, Tāh-iri, Barak and Rās-ush-Shajar on the coast.	<p>a year as compensation. The Khān apparently continues to collect the other revenues of the 2 first-named groups, but it does not appear that he now pays anything to the Persian Government. The total revenue formerly derived by the Khān from the 3 groups was 8,000 Tūmāns a year, of which 4,910 Tūmāns went to the Persian Government and the rest was retained by the Khān.</p> <p>In 1904 the Khān of Dashti succeeded in expelling Shaikh Sulaimān, Nasūri, nephew of the Nasūri Shaikh of Gābandi, from Tāhiri; and the group was thereafter farmed by him for 1,900 Tūmāns a year. The subsequent arrangements of 1906 are described under the Kangūn group above.</p>
3. 'Asalu-Nā-band	Gulf Ports.	Nakhl Taqi 'Asalu Baidhab Khān, Hālat Nāband, Nā-band, Barku, Rās Ghurāb, Ghāf, Khuvādān, Tibin and 'Amāriyeh on the coast.	<p>Up to 1905 the villages of the group, except Rās Ghurāb, Ghāf and Khuvādān, were subject to Shaikh Ahmad-bin-Saif, Harami, of 'Asalu, under the Khān of Dashti who held them in farm; and Rās Ghurāb, Ghāf and Khuvādān were controlled by the Nasūri Shaikh of Gābandi. In 1906, the whole group was transferred from the jurisdiction of Fārs, in which it had formerly lain, to that of the Gulf Ports; and the Tamīmi Shaikh of Gābandi was at the same time placed in charge, superseding the previous holders. The revenue of the Harami</p>

Groups of villages.	Province to which attached.	Villages of the group.	Local authority and revenue.
4. Gābandi-Shivuh	Bastak district of Fārs.	The following places upon the coast: Dastūr, Kharābeh, Bustānū, Buraghleh, Ziyārat, Kalātū, Shivuh and Saif-ash-Shaikh; also the Harami, Māliki, Nasūri and Tamimi villages of the Gābandi valley and the villages of Darveh Asūh.	<p>portion of the group before the change was 4,300 Tūmāns a year; that of the Nasūri portion was not separately assessed. It is not clear whether after 1906 the Shaikh of Dashti preserved any interest in this group. The present annual revenue of this group is indicated in the remarks upon the next.</p> <p>This entire group was, before 1906, subject to the Nasūri Shaikh of Gābandi, who paid 12,000 Tūmāns per annum as revenue for the whole; but in the year mentioned the Harami, Māliki and Tamimi villages of the Gābandi valley were transferred to the Tamimi Shaikh of Gābandi on condition of his paying 3,560 Tūmāns a year to the Imperial Persian Customs for the Harami villages of this and the preceding group, and 5,000 Tūmāns a year to the Governor of Bastak for the Māliki and Tamimi villages of the Gābandi valley. The annual revenue of the Nasūri Shaikh of Gābandi was at the same time reduced to 7,000 Tūmāns a year for the Nasūri villages of the Gābandi valley, the villages of Darveh Asūh, and the places upon the coast.</p>
5. Mugām	Do.	The following places upon the coast: Mugām, Nakhilū, Jazeh and Makāhīl; also the villages of Mugām valley.	This group is held by the Hamadi Shaikh of Mugām, who also holds the Kalāt group below. The revenue of the Mugām group separately is 800 Tūmāns a year.

Groups of villages.	Province to which attached.	Villages of the group.	Local authority and revenue.
6. Chīru	Bastak district of Fārs.	Chīru on the coast, Hindarābi island, and Gulshan in the Gulshan valley.	The holder of this group is the 'Obaidli Shaikh of Chīru, who pays 1,600 Tūmāns a year as revenue for the same.
7. Kalāt	Do.	Kalāt and Gūrزه on the coast and the islands of Shaikh Shu'aib and Shatvār.	This group is held by the Hamadi Shaikh of Mugām, who also holds the Mugām group above. The revenue of the Kalāt group separately is 1,400 Tūmāns a year, and the Hamadi Shaikh is represented on the spot by his younger brother Ibrahim-bin-'Abdullah. It should be observed that the Qawāmi family of Shirāz claim Shaikh Shu'aib island as their property, but nothing is known of their relations in this connection with the Hamadi Shaikh.
8. Chārak	Do.	Tāvuneh and Chārak on the coast; Qais island; the villages of the Gulshan valley, except Gulshan; Bavirdūn; and part of Duvvān in the Linge District.	This group is under the 'Alī Shaikh of Chārak; the annual revenue for which he is responsible being 1,600 Tūmāns. The headman, however, of the Bushri section of the 'Alī at present holds Tāvuneh on the coast and Nakhli-Mir in the Gulshan valley and defies the authority of the Shaikh of Chārak.
9. Mughu	Do.	Hasīneh and Mughu on the coast; Farūr island; Kandarūn; and part of Bustāneh in the Linge District.	This group is subject to the Marzūqi Shaikh of Mughu, the annual revenue payable by whom on that account is 1,000 Tūmāns.

From this table it will be apparent that at the end of 1906 the great bulk of the district was still subject to the Governor-General of Fārs, but that a curious exception existed in the 'Asalu-Nāband group

of villages which had recently been transferred to the Governor of the **Gulf Ports**. The prime movers in the transfer were the Customs Department, who had more influence at **Būshehr** than at **Shirāz** and were consequently desirous that the **Shĭbkūh** ports generally should be brought under the authority of the Governor.

The two groups of villages to the north of '**Asalu** were, it will be seen, managed in 1906 by the **Khān** of **Dashti**, whose hereditary dominions they adjoin; and the remainder of the coast with its islands was parcelled out among various Arab Shaikhs, namely, the **Tamīmi** Shaikh (then **Saqar-bin-Mubārak**) with headquarters at **Chāh Mubārak** in the **Gābandi** valley; the **Nasūri** Shaikh (then **Hasan-bin-Mazkūr**) residing at **Gābandi** village in the **Gābandi** valley; the **Hamadi** Shaikh (then **Ahmad-bin-'Abdullah**) with his seat at **Mugām**; the '**Obaidli** Shaikh (then '**Abdullah-bin-Muhammad 'Abdur Rasūl**) of **Chīru**; the **Āl 'Ali** Shaikh (then **Sālih-bin-Muhammad**) of **Chārak**, and his rival **Muhammad-bin-Rahmah**, **Bushri** headman, residing at **Nakhl-i-Mīr** in the **Gulshan** valley; and, finally, the **Marzūqi** Shaikh (then **Ahmah-bin-Rāshid**) of **Mūghu**.

In 1907 the situation in groups Nos. 3 and 4 above was modified by the assassination, in March 1907, of the **Tamīmi** Shaikh **Saqar** along with his son **Mubārak**, against whom the **Harami** and **Nasūri** Shaikhs, although at enmity between themselves, formed a coalition. The head of the **Harami** family at the time of this incident was in consequence of the death of Shaikh **Ahmad-bin-Saif**, who formerly held part of group No. 3, a certain **Muhammad-bin-Ahmad**, his nephew, then residing at **Sarybāsh** in the **Gābandi** valley. Shaikh **Sulaimān**, **Nasūri**, who at one time controlled group No. 2 in opposition to the **Khān** of **Dashti**, was also dead by the end of 1907. The administrative consequences of the murder of the **Tamīmi** Shaikh have not as yet fully declared themselves.

Up to the present time the local influence of the hereditary Shaikhs has been sufficient, except in the instance of the 3rd and 4th groups above, to restrain outsiders from attempting to farm the revenues of their villages, which the Persian Government would otherwise have no hesitation in handing over to the highest bidders; and the failure of the recent experiment at '**Asalu** and **Nāband** may now for some time deter the Persian Government, who had hitherto interfered but little in local affairs, from endeavours to assert their authority over these semi-independent chiefs. The jurisdiction of a revenue farmer being very similar in character to that of a hereditary Shaikh as described below, a conflict

would necessarily ensue from the introduction of the former in a place where the latter already existed. Although the conduct of the Shaikhs towards their own people is often, if not generally, characterised by violent and extortionate proceedings, they enjoy the full sympathy and support of their subjects in every effort to maintain local independence against the encroachments of the Persian Government; and for this purpose also the Shaikhs, though ordinarily at feud with one another, are able to combine among themselves for joint action, as instanced lately in the removal of the intruding Tamīmi Shaikh.

Each hereditary local Shaikh at present exercises considerable powers in his own district. He settles all civil disputes—except such as are of a religious or semi-religious character, for example matrimonial cases—according to his own idea of what is right and proper; he disposes of all criminal matters, inflicting at his discretion imprisonment and the bastinado, but not the penalty of death; and without his permission no stranger dare engage in pearl diving in his territorial waters. As a rule, he is also, as we have already seen, the exclusive revenue farmer of his own territories; and the system in this respect does not seem likely to be permanently altered at any very near date.

The revenue of the Shibkūh district after the reorganisation of 1906 appears to have stood, nominally, at 21,960 Tūmāns a year, payable as below :—

By the Khān of Dashti	Nil.	
By the Tamīmi Shaikh	8,500	Tūmāns.
By the Nasūri Shaikh	7,000	Do.
By the Hamadi Shaikh	2,200	Do.
By the 'Obaidli Shaikh	1,600	Do.
By the Āl 'Alī Shaikh	1,600	Do.
By the Marzūqi Shaikh	1,000	Do.

In some instances however, it is believed, the demand is not and cannot be recovered in full from the local authorities.

Topography.—The following is a table of the principal inhabited places on the Shibkūh coast in their order from north-west to south-east :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Banak بنك	3 miles west-north-west of Kangūn and 2 miles inland.	20 houses.	Closely connected with Kangūn and administered from that place, in which for fiscal purposes it is included. Wheat and

Name.	Position.	Houses and inhabitants.	REMARKS.
			barley are grown and there are 800 date-palms. Animals are 50 camels, 100 donkeys, 100 cattle and 3,000 sheep and goats. Water is from cisterns and from wells 12 fathoms deep.
Kangūn کنگرون	9 miles east of Daiyir and 20 miles north-west of Tahiri.	...	See article Kangūn.
Mijālu ميجالو	8 miles east-south-east of Kangūn.	50 houses. The people are Sunnis of the Shāfi'i school.	This village has a fort built on an elevation. The inhabitants are fishermen, pearl-divers, traders, date-gardeners and cultivators. They own 2 trading Sambūks and 4 fishing 'Amilahs. The farm of this place is 300 Tūmāns a year.
'Ayānāt عيانات or Tumbak تمبك	12 miles south-east of Kangūn.	225 stone houses. The people are Shāfi'i Sunnis.	The inhabitants are merchants, sailors, fishermen and pearl divers and also cultivate dates and grain. They have about a dozen trading Sambūks, plying all over the Gulf and to Basrah and 'Omān, besides 7 fishing 'Amilahs. There is a date grove at each end of the village and a reef of rocks forms a boat harbour. This place is farmed for 650 Tūmāns a year. There is a post of the Imperial Persian Customs. On the coast a little to the east of 'Ayanāt is Rās Aswad اسود where there is pearl bank.

Name.	Position.	Houses and inhabitants.	REMARKS.
Akhtar اختر	7 miles west by north of Tāhiri.	80 houses. The people are mostly Sunnis, but some are Shī'ahs.	The inhabitants are sailors, fishermen, pearl-divers, cultivators of wheat and barley and date growers. Date palms number 1,000; live-stock are 100 camels, 60 donkeys, 200 cattle and 2,000 sheep and goats. There are 5 trading Sambūks and 5 fishing 'Amilahs. The farm of this village is 400 Tūmāns a year.
Bagh-i-Shaikh باغ شیخ	2 miles west by north of Tāhiri.	40 houses. The people are Shāfi'i Sunnis.	In this vicinity is a cape called Rās-al-Bāgh, off which is a pearl bank. The inhabitants of Bagh-i-Shaikh cultivate wheat, barley and dates and own about half a dozen small fishing boats.
Tāhiri طاهري	20 miles south-east of Kangūn and 25 miles north- west of Nāband.	...	See article Tāhiri.
Barak برکي	5 miles east of Tāhiri.	100 stone houses and huts. The people are mostly Sunnis.	The people are traders, sailors, pearl-divers, cultivators and date-growers: they own 2 Ghunchahs, 2 Būms and 20 fishing 'Amilahs. The revenue of this place is farmed for 300 Tūmāns a year.
Rās-ash-Shajar راس شجر	About 6 miles south-east of Barak.	A dozen houses. The people are partly Sunnis and partly Shī'ahs.	The people have one or two fishing boats and dive for pearls on their own coast. Since 1904, when charcoal-burners from the mountains made a disturbance in the village and killed two of the inhabitants, it has been deserted. Near Rās-ash-Shajar is a pearl bank adjoining the

Name.	Position.	Houses and inhabitants.	REMARKS.
Nakhl Taqi نخل تقي	20 miles south-west of Tāhiri and 6 miles north of Nāband.	80 huts. About $\frac{1}{4}$ of the people are Shi'ahs, the rest are Sunnis.	coast and bearing the same name; and a little further to the east is an inlet called Hāvneh هافنه where there is another pearl bank.
'Asalu عسلو	4 miles north-east of Nāband, with the Nāband bay between.	...	The people own 5 Būms, which make trading voyages, and 14 fishing Baqārahs. They dive on the pearl-banks in summer, and fish, cultivate and grow dates at home.
Baidheh Khān بيضة خان	2 $\frac{1}{2}$ miles south-east of 'Asalu and one mile inland from the north side of Nāband bay.	15 huts, mostly of Shi'ah immigrants from 'Asalu.	See article 'Asalu.
Nāband (Hālat) حالة نابند	About 1 $\frac{1}{2}$ miles east of Nāband, on the south shore of Nāband bay.	50 huts. The people are mostly Shāfi' Sunnis. 10 families belong to the Al Bū Samait tribe.	On the shore of the bay opposite the village is a small anchorage, protected from the west by a sandy point and reef. The village is nearly hidden in a grove of date and other trees, and there is a little stream of good water used for irrigation and to turn mills. The people grow tobacco as well as dates and cereals and own 10 fishing Baqārahs. The people of 'Asalu have a favourite fishing ground here.
			Also called Nakhl Hāshim نخل هاشم . The people cultivate dates and grain and own 6 Sambūks on which they go to the Bahrain pearl-banks, besides 16 smaller Baqārahs and 5 Varjis from which they fish and dive for pearls along

Name.	Position.	Houses and inhabitants.	REMARKS.
Nāband نابند	On the south shore of Nāband bay, 4 miles south-west of 'Asalu and 39 miles west-north-west of Shīvuh.	...	their own coast. There are here about 100 date palms and 80 sheep and goats. See article Nāband.
Barku بركو	About 7 miles south-east of Nāband.	A few huts. The inhabitants are Shāfi'i Sunnis. 10 families belong to the Āl Bū Samait tribe.	The people have 16 Varjis from which they fish and dive for pearls on banks near the village. There is a well of good water here. Pearl banks called Nāband and Barku extend continuously between the two places.
Rās Ghurāb راس غراب	About 1 mile south-east of Barku.	Half-a-dozen houses, but not permanent.	The inhabitants, who come from places in the Gābandi valley, are Sunnis. About 20 Varjis are kept here, and there is pearl-diving on a bank near the village which is known as the Rās Ghurāb bank.
Ghāf غف	Less than a mile from Rās Ghurāb.	Half-a-dozen houses.	A dozen Varjis are owned here, and there is diving on an adjacent pearl bank which extends in the direction of Rās Ghurāb and is called the Ghāf bank.
Khuvādān خوادان	About 7 miles south-east of Ghāf.	8 huts. The inhabitants are Shāfi'i Sunnis.	The people possess 4 Baqārahs and 10 Varjis, used for fishing and pearl-diving, also two water-reservoirs. There is a pearl bank here which is known as the Khuvādān bank.

Name.	Position.	Houses and inhabitants.	REMARKS.
Tibin تبین	About 7 miles south-east of Khuvādān.	10 huts.	Tibin is a port of the Gābandi district. The inhabitants possess 3 sea-going Baqārahs, used for pearling on the Arabian side, and 9 Varjis. There are 5 water-reservoirs. The Imperial Persian Customs have a post here. A pearl bank, known as the Tibin bank, reaches from a little west of the village almost to 'Amāriyeh.
'Amāriyeh عماریه	On a hill about 7 miles south-east of Tibin.	17 houses. The people are Shāfi'ī Sunnis.	The people fish at home in winter and in summer most of them go pearl-diving in other parts; they have 3 small Baqārahs and 5 Varjis. There is a water-reservoir here. Localities connected with this place and situated between it and Tibin are Sar-i-Pusht سرپشت with two wells of fresh water; Vāpasi واپسی with two reservoirs; and Bārmu بارمو with two reservoirs. At the last mentioned there is a fort.
Dastūr دستور	About 7 miles south-east of 'Amāriyeh.	A dozen houses. The people are Sunnis.	There is a water-reservoir. The inhabitants have some 8 boats (4 small Baqārahs and 4 Varjis), which they use for fishing in winter and for pearl-diving in summer.
Kharābeh خرابه	Quite close to Dastūr.	A very small hamlet. The people are Sunnis.	The people are fishermen and have some wells of good fresh water and about 200 palm trees. There are some ruins here.
Bustānu بستانو	About 3 miles south-east of Kharābeh.	100 houses. The people are Sunnis.	This is the port of the surrounding districts and of Tarākameh; it is under the Nasuri

Name.	Position.	Houses and inhabitants.	REMARKS.
			<p>Shaikh of Gābandi. There is a considerable trade with Bahrain. Tobacco and sheep from Tarākameh are exported, and about 100 bales of piece-goods and 9,000 bags of rice, etc., are imported annually from Bahrain. The inhabitants trade and cultivate grain and dates. They own 6 large boats (Sambūks, etc.) which run to Bahrain, Qatar and Qatif and are used for pearl-diving on the Bahrain banks; also 5 smaller fishing Baqārahs.</p>
Buraghleh برغله	Some distance to the east of Bustānu.	45 houses. The people are Shāfi'i Sunnis.	There are two water reservoirs. The people own about 6 fishing Baqārahs, which in summer are used for pearl-diving in the neighbourhood.
Ziyārat زيارت	About 2 miles south-east of Buraghleh.	40 houses. The people are Shāfi'i Sunnis.	There are two water cisterns and the people own 6 fishing Baqārahs, which in summer they use for pearl-diving near the village.
Kalātu كالتو	About 4 miles west of Shīvuh.	Nil.	There is one water reservoir here, and 6 boats for fishing and local pearling are owned.
Shīvuh شيو	39 miles east-south-east of Nāband and 73 miles west-north-west of Chārak.	...	See article Shīvuh.
Saif-ash-Shaikh سيف الشيخ	Between Shīvuh and Mugām.	10 houses of Shāfi'i Sunnis.	The people are sailors, fishermen and divers. They have 4 or 5 small Baqārahs, which they use for fishing and for pearl-diving.
Mugām مكام	22 miles east-south-east of Shīvuh.	...	See article Mugām.

Name.	Position.	Houses and inhabitants.	REMARKS.
Nakhīlu نخيلو	3 miles south of Mugām.	80 houses. The people are dark complexioned Hanbali Sunni Arabs, described as Badu, and for this reason Nakhīlu, Jazeh and Makāhīl are known collectively as "the Bedouin territory."	The people fish, dive for pearls, cultivate, and grow dates: they own 2 Sambūks, which go to the Bahrain pearl-fisheries and 9 'Amīlahs, which are employed in sea-fishing in winter and in pearling on the Shaikh Shu'aib banks in summer.
Jazeh جزيرة	7 miles south-south-east of Nakhīlu, and 8 miles west of the nearer end of Shaikh Shu'aib island.	100 houses of the same.	There are date gardens and some cultivation; the people also fish, dive for pearls and navigate, and a few engage in trade. They own 2 Sambūks, which go to the Bahrain pearl-banks, besides 10 smaller Baqārahs, which are used for fishing in winter and in summer for pearling operations near home.
Makāhīl مكاحيل	1½ miles east by south of Jazeh.	50 houses of the same.	There are date gardens and cultivation and some of the people are sailors and pearl-divers. To this village belong 2 Sambūks, which are used for the carrying trade in winter and for pearl-fishing on the Bahrain side in summer, also 5 small Baqārahs used for pearling on the Shaikh Shu'aib banks. Near Makāhīl is a pearl bank upon the coast which is known as the Makāhīl or Rās Bazāli ^{بازلي} bank.
Chīru چيرو	45 miles south-east of Shīvuh and 4 or 5 miles	...	See article Chīru. About 3 miles west of Chīru is a pearl bank

Name.	Position.	Houses and inhabitants.	REMARKS.
Kalāt کلات	north-east of the nearest part of Hindārābi island. 9 miles east by north of Chīru.	200 houses. The inhabitants are Shāfi'i Sunnis.	on the coast which bears the name Rās Mansūri منصوري. The village has a large fort with a round tower which is 250 feet above the sea. The people own 14 Sambūks, 20 Baqārahs and 3 Varjis, of which 10 are trading vessels, 6 are large sea-going pearl boats, and the remainder are smaller craft used both for fishing and for pearling near home. They also possess some dates and cultivation, and a few of them are merchants. The Persian Imperial Customs have a post at Kalāt. A pearl bank known as 'Askar runs parallel to the coast from the neighbourhood of Kalāt towards Gūrzeh.
Gūrzeh گورزه	14 miles east by north of Chīru; the island of Qais is 12 miles to southward.	60 houses. The people are Sunnis.	The inhabitants have 7 Sambūks, 16 Baqārahs and 4 'Amilahs, of which 4 are trading vessels and 3 are large sea-going pearl boats, while the rest are used for fishing and pearling at home. Near the coast at Gūrzeh is a pearl bank known as Kālān; and another bank called Muveh extends from near Gūrzeh in the direction of Tāvuneh.*
Tāvuneh تاون	4 miles west-south-west of Chārak.	95 houses, chiefly of Busbris, a section of the Āl 'Alī who are	The village stands on a small point; there are a few date-trees, also a

* Being exactly opposite to the island of Qais it seems not improbable that the position of Gūrzeh may correspond with that of Huza ھوزہ, where in the 18th century A. D. a caravan road from Shīrāz reached the coast and travellers were wont to embark for the then flourishing city of Qais.

Name.	Position.	Houses and inhabitants.	REMARKS.
		at feud with the rest of the tribe; they are Sunnis.	castle on a rocky hillock at the extreme point, which is some 60 feet high. The mountains rise at less than a mile behind the village. A pearl bank known as the Tāvuneh bank begins a little to the south-west of the village and runs to meet the Muveh bank from Gūrزه. The people are mostly poor. They have some dates and cultivation, but chiefly follow sea-faring occupations. To this place belong a couple of trading Sambūks, 12 Baqārahs, 6 'Amilāhs, 4 Shū'ais and 3 Varjīs; the smaller craft are used for fishing and also for pearling on the adjacent coast and at the islands of Farūr and Shaikh Shu'aib. The Shaikh of Chāarak is responsible for the revenue of Tāvuneh to the Persian authorities, but he seldom succeeds in recovering any of it from the village. The local authority is the head of the Bushri section of the Al 'Ali.
Chāarak چاری	34 miles east of Chīru and 16 miles west-north-west of Mughu.	...	See article Chāarak.
Hasīneh حسینه	8 miles south-east of Chāarak.	200 houses of Marāzīq, mostly Wāhābis.	Kūh Namaki rises immediately inland of the village. Some of the people follow agricultural pursuits and cultivate dates, but the majority are engaged in navigation and trade. A number of them are Nā-khudas commanding

Name.	Position.	Houses and inhabitants.	REMARKS.
Mughu مغھو	17 miles south-east of Chārak and 23 miles west by north of Lingeh Town.	...	vessels belonging to Lingeh Town and the ports of Trucial 'Omān, and the rest are mostly sailors and pearl-divers. They own 10 trading vessels (Baghlabs, Ghunchahs and Sambūks), which ply in the Gulfs of Persia and 'Omān and pay occasional visits to Indian ports, and they possess also some 15 smaller craft (Baqārahs and 'Amilabs) which are used for fishing and for pearl-diving on adjacent banks. Hasineh is subject to Shaikh Ahmad-bin-Rāshid, Marzūqi, of Mughu, and the inhabitants are on good terms with their fellow tribesmen of Mughu. See article Mughu. Between Hasineh and Mughu is a cape styled Rās Yarid راس یرد off which is a pearl bank known as Bafieh.

The following villages connected with this district, which are neither upon the coast nor situated in the Āsūh, Gābandi, or Gulshan valleys, are deserving of notice:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Bavirdūn بایردون	5 miles inland and 14 miles north-west of Mughu.	80 houses of Wabhābis of mixed tribal origin.	This place is under Chārak. The people are pearl divers and agriculturists; they have 3,000 date palms, 60 camels, 15 donkeys, 80 cattle

Name.	Position.	Houses and inhabitants.	REMARKS.
Kundarūn کندرون	10 miles inland and 13 miles north-north-west of Mughu .	150 houses of Wahhābis, who are mostly Marāziq, and of Shāfi'i Sunnis of mixed origin.	and 500 sheep and goats. There are 4 water-cisterns, also 5 wells which are 4 to 5 fathoms deep. A dependency of Mughu . The people cultivate and are pearl-divers. There are 20,000 date palms, and live- stock are 60 camels, 150 donkeys, 100 cattle and 4,000 sheep and goats. The water-supply is from two reservoirs and from wells 4 fathoms deep.
Varzaug (Chāh-i-) چاه رزنگ	12 miles inland, to the north-west of Chārak .	A large and ancient well with pasturage.	Dependent on Chārak , for the inhabitants of Murāgh in the Gulshan valley have some cultivation here; but the grazing is enjoyed by subjects of Chārak and Mughu in common.

By Persians, and in Turkish official parlance, styled Shifātah شِفَاثَة, **SHIFĀTH-**
or, more pedantically, Shifatīyah شِفَاتِيَّة: a fruitful palm oasis and **AH***
thickly inhabited settlement on the border between Turkish 'Irāq and شِفَاثَة
the **Shāmiyah** Desert.

Position. - Shifāthah is situated nearly 40 miles to the west of
Karbala Town, from which it is separated by a barren and sandy desert.
The village of **Razāzah** apparently lies between, at about one-third of the
distance from **Karbala**.

* *Authorities:* Muhammad Hasan, Muhsin, Vice-Consul at **Karbala**, and the
Turkish Almanac.

Site and character.—Shifāthah is described as occupying a site which is flat, but raised somewhat above the level of the neighbouring country ; the surface of the district surrounding it is said to be broken up by hollows and stony mounds. The date plantations of Shifāthah extend over an area of many square miles ; and among these are scattered, at intervals of half a mile to a mile apart, the 17 Qasrs or walled villages of which the settlement consists. The 4 largest Qasrs, those of 'Ain عین, Darāwishah درارشه, Hasāwi حساري and Āl Bū Zain-ad-Dīn آل بوزن الدين contain about 200 houses each ; while the smallest, that of Mutlaq مطلق, has 50 and the remainder are intermediate in size. The enclosing walls of these Qasrs are 9 to 12 feet high and about 1 foot thick : the houses within are entirely of mud and very poorly constructed. The oasis is said to be 7 or 8 miles in length and the same in breadth.

Population.—The population of the entire settlement is estimated at 8,000 souls, nearly all of whom are Shī'ah Arabs not belonging to any of the well-known country tribes. Among them live a few Persians and **Balūchis**, who are Persian subjects. The nomad tribes of the vicinity are Āl Shibīl and the Khawādhir, who remain in the neighbourhood for so much of the year as they can obtain sufficient water and pasture for their animals.

Agriculture.—The chief or only wealth of Shifāthah consists in its date plantations, which are extensive and form a sort of forest. The number of the palms has been estimated at between 50,000 and 60,000, and the average annual yield of dates is said to amount to 4,000 Taghārs ; of the palms only about 35,000 now bear fruit, the rest being barren or worn out. Pomegranates are the only kind of fruit produced at Shifāthah besides dates.

In the settlement itself there is little cultivation except of dates, but lucerne for cattle fodder and small quantities of vegetables are sometimes grown in the open spaces between the groves. A little cultivation of wheat and barley is carried on at Jultah جلته, a locality 4 miles west of Shifāthah, and there is a little also at a place called Raudhah روضه.

Irrigation.—The whole of Shifāthah proper is irrigated by the water of a large and copious spring which rises inside the village of 'Ain and supplies 3 canals, each of them as large as the Hanaidiyah branch of the **Husainiyah** canal at **Karbala** Town ; and there is even a surplus

which escapes and is lost in the hollow containing salt that crosses the **Karbala** Qadha to the north-east of Shifāthah. There are many other similar springs in the neighbourhood, but their flow is feeble and scanty by comparison.

The cultivation at Jultah is dependent partly on local springs and partly on rain, that at Raudhah exclusively upon rain.

Livestock and transport.—The animals owned in the settlement are estimated at 100 horses, 1,500 donkeys, 1,500 sheep and 500 goats : there are no buffaloes or camels. The horses are said to be good, but the other stock are not of much account.

There is little communication with the outside world, and transport between Shifāthah and **Karbala** must as a rule be specially engaged. Twice or thrice a month, as a rule, a small caravan of 15 to 20 mules and donkeys makes the journey from **Karbala** to Shifāthah and back again.

Water-supply and food.—Drinking water is obtained from the spring at Qasr-al-'Ain and from the channels which it feeds. This water, where it issues from the ground, is warm and tastes and smells of bitumen and sulphur ; when it cools it becomes inodorous, but the flavour remains brackish, and it is said to cause indigestion. Rain water is procurable in hollows at Jultah until the end of July, when it dries up. Good water is also obtainable by digging to a very slight depth at Khaidhir خيضر or Akhaidhir اخيضر , a place situated in the sandy desert about 12 miles to the south-east of Shifāthah.

Food, except dates, is scarce at Shifāthah and is mostly imported : the inhabitants have little besides dates and barley bread. Vegetables can be had in small quantities only.

Occupations and industries.—Date culture is almost the only occupation at Shifāthah, but some of the inhabitants are engaged in the manufacture of palm-leaf baskets and matting.

Trade.—The only bazaar in the settlement is in Qasr-al-'Ain, where there are 60 shops : of these 10 are occupied by grocers, 3 by barbers, 2 by dyers, 14 by drapers, 4 by café keepers, 9 by grain dealers, 9 by tobacco merchants, 1 by a coppersmith, 1 by a blacksmith and 1 by a carpenter : the rest are at present empty. In each of the other Qasrs are 1 or 2 shops only, in which necessaries are sold.

Trade, apart from commodities consumed in the settlement itself, is small ; and the demand of the settlement for goods is declining in consequence of the misgovernment under which the place has laboured for some years. External commercial relations are with **Karbala** and **Baghdād** on the one hand and with the 'Anizah and Dilaim tribes on the other ; the tribesmen come periodically in bodies to make their purchases, bringing with them wool and skins, and the market thus formed is called the Musābalah مسابله . The annual imports and exports of Shifāthah are estimated at about £19,000 each. The principal imports are piece-goods (£17,500), loaf sugar (£650) and coffee (£270) ; the main exports are dates (£18,000), lambskins (£450), wool (£270) and baskets, etc. (£180).

Administration.—Shifāthah is the headquarters of a Nahiyah in the **Karbala** Qadha and as such is the seat of a Mudīr, whose authority is maintained by a force of 20 Dhābitiyahs, half mounted and half unmounted. The government of the place, especially in the matter of taxation, has been reckless and shortsighted in recent years and has been a cause of impoverishment and discontent. It is reported that a number of cultivators have emigrated, while others have cut down their date groves and sold the wood at **Karbala** to avoid payment of the tax on trees. The Government revenue of Shifāthah is said to amount to 10,500 Līrahs a year, of which 7,500 Līrahs are produced by the Silyān or tax on palms, 2,000 Līrahs by an Ihtisāb tax, and 1,000 Līrahs by cattle and other taxes ; but more than this is collected from the people.

Antiquities.—Reliable reports have been received of the existence of ancient remains, known as Qasr-al-Akhaidhir, at the watering place already mentioned 12 miles south-east of Shifāthah. They are said to be those of a vast two-storeyed building, constructed mostly of hewn stone, facing the west, and containing some very large rooms and deep, dark cellars. Local tradition connects them with the pre-Islamic Arabian dynasty of Mundhir, and the Turkish Almanac definitely ascribes them to the 8th Niman of the kingdom of Hīrah. There is now no cultivation anywhere in the neighbourhood of these ruins ; but water, as already mentioned, is obtainable by digging. To the east are other remains, and in a knoll about 4 miles distant in that direction is a cave from which a spring issues. Half way from Shifāthah to Rahāliyah, to the left of the road, is a small ruined fort known as Qasr Bardawil بردويل ; it stands on a mound about 20 feet high, from the summit of

which a winding passage leads down into the interior. At Shifāthah itself, in the Qasr-al-Hasāwi, are a small mud fort said to have belonged to Shama'un, with which various traditions are connected, and a peculiar stone-lined cistern or well reputed inexhaustible.

Singular Shihhi شححي. A peculiar tribe who inhabit the 'Omān Promontory from Bai'ah northwards on the eastern, and from Khor Khuwair northwards on the western coast. The whole of the Ruūs-al-Jibāl district of the 'Omān Sultanate is in their occupation, except a few villages which belong to the Dhahūriyīn. They also form the population of the three northernmost places in the Shārjah Principality, viz., Sha'am, Ghalilah and Khor Khuwair, and of the village of Hail in Sir; they are found, too, at Saham Town in Bātinah.

SHIHŪH *

شحر

or

SHIHHI-YĪN

شحيين

The Shihūh are divided into two main sections and various subsections, as follows :—

I. Hadiyah (Bani) بنی هديه	1. 'Abaid (Bani Muhammad) بنی محمد عبيد 2. 'Ali (Bani) بنی علي 3. Ham Mazyūd (Bani) بنی حم مزید 4. Khanāzirah خنازرة and others including a group known as Habūs.	II. Shatair (Bani) بنی شتير	1. Khanābil ah خنابله 2. Kumāzirah کمازرة 3. Mahābīb محابيب 4. Maqādhah مقادحة and others.

Among the Shihūh of the coast the main distinction between Ban Hadiyah and Bani Shatair alone is regarded, and the people ordinarily classify themselves in detail by villages and not by subsections; in the interior however the minuter classification is by subsections.

* The information for this article has been obtained chiefly from the Bani Shatair section of the tribe and due allowance must be made for the fact. -

The following table shows the distribution of the Shihūh upon the coast :—

BANI HADIYAH.		BANI SHATAIR.	
Place.	Houses.	Place.	Houses.
'Aqabah . . .	48	'Ali (Ghubb) . .	150
Bakhah . . .	200	Bai'ah . . .	450
Fadhghah . . .	40	Dorsinni . . .	1
Fanakhah . . .	5	Ghalilah . . .	50
Ghamdhah . . .	35	Gharam . . .	20
Humsi . . .	6	Haffah . . .	10
Harf . . .	12	Karshah . . .	20
Hanah . . .	15	Khuwair (Khor) .	30
Jadi . . .	150	Kumzār . . .	600
Jirri . . .	45	Limah . . .	150
Khasab . . .	300	Qabal (Dōhat) . .	5
Mukhi . . .	30	Qabbah . . .	60
Nadhifi . . .	15	Sha'am . . .	300
Qidah . . .	30	Sharīh . . .	20
Tibat . . .	15		
Total houses . . .	946		1,866

Besides the above the Bani Sa'ad of Ghūnah and Mad-hah in **Shamailiyah** are perhaps Shihūh ; but this is uncertain.

From this table it will be seen that, with the exception of 'Aqabah, all the coast villages of the Bani Hadiyah are upon the western side of the 'Omān Promontory from Khor Ghubb 'Ali to Tibāt, the latter place being included ; and that the remainder of the littoral of the Shihūh country, so far as not occupied by the **Dhahūriyin** tribe, is in the possession of the Bani Shatair. **Khasab** is the headquarters of the Bani Hadiyah and **Kumzār** of the Bani Shatair. The two sections are not found together except at **Khasab**, where there are a few Bani Shatair, and at **Bai'ah** and **Limah**, where there are a few Bani Hadiyah.

To the above settled Shihūh must be added those of Hail in **Sir** (50 houses) and those of **Saham** Town (a few only) ; the former are Bani

Hadīyah of the group called Habūs, and the latter are Bani Shatair. The **Dhahūriyīn** of **Lārak** island (40 houses) are closely connected with the Bani Shatair Shihūh of **Kumzār**.

The following is a conspectus of the nomad Shihūh of the interior:—

Bani Hadīyah.

Section.	Families.	REMARKS.
'Abaid (Bani Muhammad) بني محمد عبيد	100	Inhabit the hills above Khasab .
'Ali (Bani) بني علي	200	Live in the hills above Limah and are divided into two clans of equal strength, <i>viz.</i> , the Ahl 'Aqabah عقبه and the Bani Yidaid يديد.
Ibrāhīm (Bani) بني ابراهيم	70	Inhabit the hills near Rās-al-Khaimah Town.
Khanāzirah خانازره	100	Singular Khanzūri خنزوري Dwell at Saih سيج above Khasab .
Ham Mazyūd (Bani) بني حم مزيرد	Say 100	Occupy the hills east of Khasab .
Total families	570	

Bani Shatair.

Section.	Families.	Habitat.
Asamm (Bani-al-) بني الاصم	70	Musallih مصله near Limah. [The name of this section is due according to some accounts to a deaf ancestor, according to others to the obstinate temper of the section.]
Hail (Ahl) اهل حيل	70	Maskin-al-Hail مسكن الحيل near Bai'ah.
Hamūd (Bani) بني حمود	35	Khabbah حبه or Hair حير above Limah.

Bani Shatair—contd.

Section.	Families.	Habitat.
Kanar (Bani) بني كئر	70	Kanaif كنيف above Sharīh and Sahwah صحرة above Līmah.
Khanābilah خانبله	90	Rōdhah روضه, Salhad سلهد and Maqalaili مقليلي above Dībah. (Singular is Khanbūli خنبولي).
Mahābib محابيب	60	Various places in the hills; they visit Salhad near Dībah.
Maqādīhah مقادحه	60	Saqattah سقطه near Dībah. (Singular is Maqdahi مقده).
Muqām (Ahl) احل مقام	100	Khabbat Sōt خبة سوت near Dībah; there are some at Karshah.
Murrah (Bani) بني مره	35	Sal'alah and Ghīshah غيشه near Khasab.
Qaiyāshah قياشه	100	A place Baighūt بيغوت.
Sā'ad ساعد	100	The hills above Ghalīlah.
Salhad (Ahl) اهل سلهد	180	Salhad and Khabbat Sōt, already men- tioned.
Total houses	970	

The total number of the Shihūh tribe may be roughly estimated at 21,500 souls, of whom 14,500 belong to the coast and 7,000 to the interior.* The Shihūh are almost entirely included in the dominions of the Sultān of 'Omān; only about 2,000 of those on the coast and a few of those in the interior are resident outside the limits of the Sultanate in Trucial 'Omān.

In complexion, the majority of the Shihūh are somewhat darker than the generality of Arabs. A broad distinction may be drawn between those

* The estimate of nomad sections is of doubtful accuracy; it was mostly obtained from Bani Shatair of Kumzār.

of the coast and those of the interior, between whom there is little intercourse and who know little of each other. The Shihūh of the littoral inhabit houses built of stones and mud; their food consists of the fish they catch, of rice imported from the towns of **Shārjah**, **Qishm** and **Masqat**, and of dates grown at **Khasab** or imported from **Dibah** or **Bātinah**, supplemented in some places by shell-fish which they gather in the shallows. Their occupations are fishing, pearl diving on the pearl banks of the Persian Gulf in boats belonging to other tribes, wading for pearls on their own coasts, the culture of dates where possible, and the herding of goats; they also keep poultry. A part of the date plantations at **Khasab** and **Dibah** is owned by Shihūh of other places on the coast of **Ruūs-al-Jibāl**; and in the date season the majority of the littoral Shihūh forsake their coast villages and migrate to **Khasab**, **Dibah** and **Bātinah**, partly to escape the intolerable heat which then prevails at their homes and partly to gain a livelihood by labour in the date harvest.

The Shihūh of the interior are described as Bedouins, but some of them have houses built of loose stones. Their chief wealth appears to consist in goats, of which they own large numbers, but they are said to grow the greater quantity of the grain which they require. Water they are said to obtain from natural reservoirs in the rocks which, where necessary, they have improved; they have no regular wells. They are entirely ignorant of fishing and seafaring pursuits and many of them never come down to the coast.

In religion the Shihūh, both settled and nomad, are mostly **Shāfi'is**; but from and including **Sha'am** and **Bai'ah** southwards on either side of the 'Omān Promontory they are now **Hanbalis**. They have, since **Wahhābi** times, abandoned the practice of worshipping at certain **Mazārs** or tombs of holy men to which they were formerly wont to resort; but those in the hills have no mosques and are extremely superstitious, and the tribe as a whole are still ignorant and imperfect **Muhammadans**. In the last cholera epidemic (1904) some of the Shihūh offered sacrifices to the **Jinns** in the mountains and dug ditches round their villages to keep out the cholera spirits. Two languages are spoken among the Shihūh. The more general is the **Shihhi** dialect of Arabic; the other, which is confined to the **Kumāzirah** subdivision of the **Bani Shatair** and to their **Dhahūriyīn** relations, is heard chiefly at **Kumzār** and on **Lārak** island and is an **Iranian** dialect. From this fact it may not unreasonably be inferred that the Shihūh are a composite tribe, essentially Arab, that has absorbed some Persian elements.

The Sultān of 'Omān intervenes but little in the affairs of the tribe ; the Wālī who represents him has his seat at **Khasab**. The Shihūh belong to the Hināwi political faction and are now fairly well armed with modern rifles. The **Dhahūriyīn**, whose settlements are surrounded by Shihhi country, generally follow the lead of the Shihūh in political matters, though nominally they belong to the opposite political faction : their connection with the Shihūh appears to be chiefly through the Bani Shatair section, only those of Maqāqah, it is said, and perhaps of Qānah and Sibi being connected with the Bani Hadiyah. The Bani Shamaili tribe of Trucial 'Omān are closely related to the Shihūh, of whom they may almost be regarded as a section.

**SHINĀ-
FIYAH**
شَنَافِيَّة

A town or large village in Turkish 'Irāq, situated chiefly on the left bank of the 'Atshān continuation of the Shatt-al-**Hindīyah** immediately below its exit from the Bahr-an-Najaf. The people number about 3,500 souls and most of them inhabit huts ; among them are said to be included most of the former inhabitants of Lāmlūm village, now deserted, on the **Euphrates**. There is a bazaar of some 60 shops. Shināfiyah is the headquarters of a Nāhiyah similarly named in the **Shāmiyah** Qadha and is consequently the seat of a Mudīr. There is also a harbourmaster at this place.

SHINĀS
شَنَاص
SUB-
WILĀYAT

A subdivision of the Wilāyat of **Sohār** in the 'Omān Sultanate ; it lies to the north-west of the **Liwa** subdivision of the same Wilāyat, and, the detached **Ruūs-al-Jibāl** tract excepted, is the last possession of the Sultān of 'Omān in this direction. The following are the principal places in Shinās in their order from south to north :—

Name.	Houses and inhabitants.	REMARKS.
Shinās Town شَنَاص	...	See article Shinās Town . About here and Widaiyāj Wādī Hatta falls into the sea.
Widaiyāj وَدَيَّاج	40 houses of Bani Jābir.	The inhabitants own 80 camels, 15 donkeys, 30 cattle and 400 sheep and goats. Dates number 1,500.

Name.	Houses and inhabitants.	REMARKS.
Aqr عقر	100 houses of Mazārī'.	Tobacco is grown. There are 8 camels, 10 donkeys, 25 cattle and 80 sheep and goats, also 1,500 date palms.
Bilaidah بليده	20 houses of Bani 'Umr.	The port of Khadhrawain. There are 7 camels, 15 donkeys, 20 cattle, 70 sheep and goats and 600 date trees.
Khadrhrawain خضرين	200 houses of Biduwāt.	About a mile inland from Bilaidah. Tobacco is cultivated and there are 5,000 date palms. Animals are 20 camels, 50 donkeys, 30 cattle and 300 sheep and goats.
Bū Baqarah بر بقره	200 houses of Za'āb and Bani Jābir.	Wādī-al-Qor reaches the sea at this place. Tobacco, wheat and millet are grown, and there are 10 camels, 20 donkeys, 30 cattle and 200 sheep and goats, also 2,000 dates and 25 Shāshahs.
Murair-as-Saghīrah مرير الصغيرة	70 houses of Darāmīkah.	Murair serves as a port for Wādī-al-Qor: 15 Baqārahs and Batīls belonging to the place run to Masqat Town and the Persian Gulf. The inhabitants have 4,000 date palms, 20 camels, 20 donkeys, 35 cattle and 250 sheep and goats.
Murair-al-Kabīrah مرير الكبيرة	200 houses of Matārīsh.	There are 3,000 date palms and ordinary cultivation; tobacco also is grown. Animals are 25 camels, 25 donkeys, 40 cattle and 200 sheep and goats. 18 Baqārahs belong to this port.

The settled population of the sub-Wilāyat is thus about 6,200 souls. The houses are mere huts, except at Bū Baqarah and Murair, where a certain proportion are of stone. Wells are found throughout the tract.

A considerable town on the Bātinah coast of the 'Omān Sultanate; it is situated 30 miles north-north-west of Sohār Town and is the capital of the Shinās subdivision of the Sohār Wilāyat. It consists of about 400 houses of Riyāyisāh, Bani Ka'ab and Balūchis, and the population is thus about 2,000 souls. There is a fort occupied on behalf of the Sultān of 'Omān by a garrison of 10 men under an 'Aqīd. The bazaar contains 7 shops, of

SHINĀS
شنام
TOWN

which 4 are kept by Hindus. The people depend upon their date plantations and on fishing and other sea-faring occupations : there is no cultivation of cereals. The water-supply is from wells. Shinās is the port of Wādis **Hatta** and Faidh and possesses 4 Baqārahs which run to **Masqat Town**.

SHIQQAQ

شقق

A district in the **Kuwait** Principality, lying between the **Bātin** on the north, the **Mahzūl** hill on the west, **Dibdibah** on the south and **Umm-al-Khilān** and **Bātih** on the east. Its centre is about 50 miles north-west of **Jahrah** ; and it appears to take its name from a number of **Shiqqahs** or depressions, some of which run north-east and others south-west. **Shiqqaq** is understood to resemble the districts of **Bātin** and **Yāh** in its physical features ; it has no fixed inhabitants.

SHĪVUH

شيوه

One of the **Shibkūh** ports of the **Persian Coast** ; it is situated about 39 miles east-south-east of **Nāband** and 73 miles west-north-west of **Chārak**. Half-a-mile south-east of the village is a peaked hill about 250 feet high, and a hill about 120 feet in height behind the village carries a tower ; there is also a fort in the place itself. A large, flat, black rock, projecting into the sea in front of the village, forms a small boat-harbour and is the best landing-place. The anchorage at **Shīvuh** is said to be tolerably well sheltered, close in, from the **Shamāl** ; but there must be a considerable swell. A moderate amount of good water is contained in wells close to the beach. **Shīvuh** consists of about 150 stone houses and huts, partly of Arabs and partly of Persians from **Lār**, etc. ; the people are mostly Sunnis, and are engaged in trade, navigation and pearl-diving, but they have also some ordinary cultivation and date-gardens. Their palms are estimated at 2,000 trees and their livestock at 4 horses, 20 donkeys, 60 cattle and 200 sheep and goats. Sweet water is yielded by two wells. **Shīvuh** is the principal port of the **Gābandi** valley and carries on a considerable trade with the ports of the **Persian Gulf** generally and also with **'Omān**. There are no shops but there are several warehouses. Here are owned 15 trading **Sambūks**, 9 **Sambūks** used for pearl fishing on the west side of the Gulf, and 21 small **Baqārahs** and **Varjis** which are used for fishing and pearling upon the **Persian coast**. **Shīvuh** is subject to the **Nasūri Shaikh** of **Gābandi**, and the annual revenue of the place, which till lately was payable to the **Khāns** of **Lār**, is now payable to the Governor of **Bastak**. The place has recently received a considerable accession to its population through

immigration from **Kangūn** and **Tāhiri**; the immigrants were sympathisers with Sulaimān, the Nasūri Shaikh of **Tāhiri**, whom the Khān of **Dashti** expelled by force of arms in 1904.

To British navigators at one time known as "Busheab." An island of some importance in the Persian Gulf; it subtends the coast of the **Shībkūh** district, to which it is nearly parallel, from **Shivuh** in the west to **Nakhilu** in the east at a mean distance of about 14 miles, but at the east end a curve in the coast line brings it within 5 miles of the island. The length of the island from west to east is almost 15, and its breadth nearly 3 miles. It is of brown colour and level outline, rising to a height of 120 feet in the centre and having a low plain 1 to 2 miles in extent at either extremity; the greater part is nearly destitute of vegetation. The coast of the island all round consists chiefly of low cliff with sandy points and bights in places; the anchorages off the coast are sheltered from one direction only; pearl banks are found upon the whole circumference except at one part on the north side near the east end of the island. Water occurs in wells 2 to 3 fathoms deep and is of good quality.

There are 10 villages on the island, which are as follow :—

Name.	Position.	Houses.	REMARKS.
Dehriz دهريز	...	20 houses.	Resources are 8 fishing boats, 5 donkeys, 5 cattle and 50 sheep and goats. There are no dates.
Dehkūn دهگون	...	40 houses.	The people own 10 fishing boats (Baḡārahs), 5 cattle and 60 sheep and goats. There are no dates.
Halah حاله	Not far from Rās.	15 houses.	There are 6 fishing boats (Baḡārahs), 120 date-palms, 5 donkeys, 5 cattle and 100 sheep and goats.

* A plan of part of Shaikh Shu'aib island will be found as an inset in Admiralty Chart No. 2373—2537 A. To the mediæval Arab and Persian geographers the island appears to have been known as Lāwān, Allān, Lān and Lār : *vide* Le Strange's *Lands of the Eastern Caliphate*.

SHU'AIB *
(SHAIKH)

شيخ شعيب
or
JAZĪRAT-
ASH-
SHAIKH
جزيرة الشيخ

Name.	Position.	Houses.	REMARKS.
Kufāli كفالي	...	10 houses.	There are 4 fishing boats, Shū'ais.
Kūseh كوسه	...	10 houses.	There are 3 fishing boats (Baqārahs). No dates.
Laz لز	On the north coast, one mile from the east end of the island.	70 houses.	The principal village on the island: it stands on a small rocky point and has some cultivated land with date palms and other trees to the south of it. There are 21 fishing boats (Baqārahs and Shū'ais), 7 donkeys, 10 cattle and 100 sheep goats.
Laza لزا	On the north coast, 5 miles from the east end of the island.	80 houses.	There are 19 fishing boats (Baqārahs), 10 cattle and 150 sheep and goats.
Qurat قرط	On the south coast, 6 miles from the east end of the island.	50 houses.	Resources are 8 fishing boats, 600 date trees, 5 donkeys, 10 cattle and 120 sheep and goats.
Rās راس	On the north coast, one mile from the west end of the island.	20 houses.	The inhabitants possess 6 fishing boats, 20 date-palms, 6 donkeys, 10 cattle, and 100 sheep and goats.

In all there are thus about 300 houses on Shaikh Shu'aib and the total population may be about 1,500 souls. The people are Arabs of various tribes; in religion they are Shāfi'i Sunnis. In summer the population is augmented by immigrants from the **Persian Coast** who build themselves huts. A few of the inhabitants are 'Abādilah who immigrated about 50 years ago. Some cultivation of wheat and barley is carried on, but the principal occupations are fishing and pearl-diving. Only one pearl-boat is large enough to visit the banks on the Arabian side in summer; but there is also a Sambūk which makes trading voyages to the Shībkūh ports and Bahrain. The smaller boats, about 85 in number, are used for fishing and for pearling on the local banks only, Shaikh Shu'aib is subject to the Hamadi Shaikh of Mugām, whose

authority is represented by a resident Naib at Laz : the Shaikh, who is reputed better off than most of his compeers, is said to derive most of his substance from the possession of the island. There are about 40 modern rifles in the possession of the inhabitants.

To English navigators formerly known as "Sherarrow." A very small island, not rising more than 40 feet above the sea, situated in the bay between Abu Dhabi and Qatar about 34 miles north by west of Dalmah. Its political position appears to be indeterminate, resembling that of Hālūl island. In the neighbourhood are two pearl banks, viz., Tubābāt Shurā'awah about 5 miles to the north, and Qarn-al-'Ashairiq about 6 miles to the north-west.

SHURĀ-
'AWAH
شرعواه

The site and ruins of the ancient palace and citadel of Susa, on the left bank of the Shāūr stream, 15 miles south-west of Dizfūl Town. The city of Susa extended from the right bank of the Shāūr to the river Karkheh, 1½ miles distant, and beyond it. The remains upon the left bank of the Shāūr occupy a space over 6 miles in circumference and consist of three concentric tiers : the second of these, representing the palace and its enclosure, is still 72 feet high with a perimeter of 2½ miles ; the uppermost or citadel, still known as Qal'eh Shūsh, is 120 feet in height and measures 1,100 yards round the base and 850 yards round the summit.*

SHŪSH
شوش

Below the chief mound of Shūsh, with the Shāūr running immediately below its walls, is the reputed tomb of the prophet Daniel دانیال, the custody of which affords a livelihood to a Saiyid. The shrine is admittedly empty, and the guardians maintain that the coffin, made of glass and containing records as well as the body of the prophet, is buried beneath the waters of the river ; they trust to the uncertainty regarding the exact spot to protect the remains from the sacrilegious curiosity of the European

* A French Archæological Mission under M. De Morgan has for some years been engaged in excavations here, and the proportions of the citadel have now been reduced to less than the dimensions stated in the text. The Mission occupy a sort of castle which they have themselves constructed. A plan of the ruins, as they were and a sketch of the tomb of Daniel will be found in Loftus's *Travels and Researches*.

archæologist. The shrine is much resorted to by pilgrims from the towns of **Dizfūl** and **Shūshtar**, and it is naturally held in high veneration by the Jews, who admit its authenticity. When the country between is quiet it is occasionally visited by Jewish pilgrims from '**Amārah** on the **Tigris**.

In the 10th century A. D. **Shūsh** was a populous town, and the district in which it stood was celebrated for its raw silk and sugarcane, both of which were then important products of '**Arabistān**. To the mediæval Arab geographers the place was known as **Sūs** سوس.

SHUSHTAR
شوشتر
DISTRICT

A district of Persia, forming with the districts of **Dizfūl** and **Rāmuz** the northern division of the province of '**Arabistān**. The physical geography, climate, population and government of the **Shūshtar District** are described in the article on Northern '**Arabistān**, and its agriculture, trade and communications receive notice in the article on '**Arabistān** as a whole : only the question of limits and that of topography remain to be dealt with here.

Boundaries.—The **Shūshtar** district is completely surrounded by Persian territory. On the north it is bounded by the **Bakhtiyāri** hills, extending however for a short distance into the same to include the level tract of '**Aqīl** upon the **Kārūn** river ; on the east its limit is the **Gargar** river, except opposite **Shūshtar Town**, where it makes a loop 7 miles in length to the eastward so as to include the village of **Būlaiti** along with its lands ; its southern boundary, which is short and divides it from the **Ahwāz** district of Southern '**Arabistān**, crosses the **Miyānāb** island from side to side about 5 miles above **Band-i-Qir** and thence runs to the left bank of the **Diz**, which it strikes immediately above the locations of the '**Anāfijeh** tribe ; its western border is at the same time the eastern border of the **Dizfūl District** of Northern '**Arabistān** and is defined in the article on that district.

Topography.—The majority of inhabited places in the **Shūshtar** district are enumerated and described in the articles on '**Aqīl**, on the **Gargar** and **Shatait** rivers and on **Miyānāb** ; a few more which are situated to the west of the **Shatait** are given in the table below. Reference to the various articles quoted and to the following table will show

that the population of the district without 'Aqīli, inclusive of Shūshtar Town (20,000) and exclusive of nomads, is about 35,000 souls.

Name.	Position.	Nature.	REMARKS.
Daimcheh دایمچه	About 8 miles north-west of Shūshtar Town.	A tract of land with traces of former occupation, namely, a deep masonry well on the south side of the road and a ruined stable facing it. A flight of stone steps leads down to the well and the entrance is covered by a small building.	The stable is said to have been built by the Nizām-us-Salṭaneh during his Governorship of 'Arabistān. In the hot weather some Arabs under Shaikh Farhān Asad of the Kathīr camp and open shallow wells at a place a mile or two nearer to Shūshtar Town than these remains.
Dih Nau (Qal'eh) قلعه ده نو	About 30 miles south-south-east of Dizfūl Town, not far from the left bank of the Diz and level with the tract called Umm-al-Wāwī.	A house and stables belonging to Shaikh Farhān Asad of the Kathīr who has recently transferred his residence to this place from Lim Kathīr on the Diz: there are also some butts. The site is in an open plain, grassy and cultivated. Near the village is a large flat-topped mound, the remains apparently of an old and once strong fort: there is also an Imāmzādeh called Nabī Jarjis نبی جرجیس	Wheat and barley are cultivated without artificial irrigation; and water is from a stream, the Lūreh, which comes from a spring near Shalgahi in the Dizfūl District. Livestock are mares, mules, camels, donkeys, buffaloes, cattle and sheep. In the neighbourhood 200 households are camped in tents, who muster 400 rifles and are subject to Shaikhs 'Abdul Hasan, Shāya' and Mutṭalib, brothers of Shaikh Farhān.
Farajābad فرج آباد	17 or 18 miles south-south-east of Dizfūl Town, to the east of the 'Ajīrub.	A village of 60 houses of Shūsh-taris, Arabs, and a few Dizfūlis. They have about 50 rifles.	Wheat, barley, beans, cotton, rice, Kunjid, millet, and Māsh are grown; animals are mares, mules, donkeys, buffaloes, cattle and sheep. Water is from the stream called Lūreh, which goes also to Qal'eh Dih Nau; it is not of good quality. There are 2 mills, one out of repair and the other nearly 2 miles distant from the village. 100 yards from the village fort is a shrine called Buq'eh-i-'Alī-ibn-Mūsa Riza.

Name.	Position.	Nature.	REMARKS.
Garmak (Ab) آب گرمک	West of the Shatait and east of the Bait Sa'ad and Kathir country.	A tract of arable and pastoral land.	The place originally belonged to the Sadat-i-Mar'ashiyeh of Shüshtar Town, but $\frac{1}{3}$ of it is now owned by Shaikh Farhān Asad of the Kathir tribe, who keeps 24 riflemen in the village; the remainder is the property of Agha Nizām, son of the late Agha Riza, Mustaufi, of Shüshtar, by whom it was bought. Belongs to residents of Shüshtar Town. There are no habitations.
Gotwand گوتوند	On the right bank of the Kārūn, about 12 miles north by west of Shüshtar Town and 5 miles south-east of Ab Bid in the Dizfūl District.	A town said to contain 1,000 households of Haftlang Bakhtiyāris. The houses are of stone and mud with brick roofs, and there are 2 public baths and 12 mosques. The place is divided into two wards, Saraki سرکی and Māl Bālā مال بالا, each under a separate Raīs. About 1,500 rifles are said to be owned here.*	This place is the property of the Bakhtiyāri Khāns and the writ of the Persian Governor of Northern 'Arabistan does not run. Wheat and barley are cultivated without irrigation, and water is said to be from the river only. There are many mares and mules, also donkeys, cattle and sheep; and rafts are maintained on the Kārūn. Gotwand was plundered about 1902 by the Dirakwand Lurs.
Jallakān جلالگان	On the right bank of the Kārūn, 9 miles north of Shüshtar Town and 3 miles south-east of Gotwand.	A village of 200 houses of Haftlang Bakhtiyāris, variously constructed. There are about 100 rifles.	Owned by the Bakhtiyāri Khāns, who seized it 20 years ago from a Kalāntar of Shüshtar; there is a small mud fort and some date trees. Water is from the river and there is no irrigation. There is dry cultivation of wheat and barley, and livestock are the same as at Gotwand. The annual Persian revenue assessment of Jallakān is 280 Tūmans.
Naisiyeh نایسیه	Near the right bank of the Shatait, opposite Būrāki.	Same as Garmak above.	Same as Garmak above.

* According to another authority there are only 600 households and about 1,000 fighting men at Gotwand.

Name.	Position.	Nature.	REMARKS.
Pahwindeh پهونده	On the road from Shūshtar Town to Kāunak, 16 miles from the former and 6 from the latter.	A village of 60 mud huts of Haftlang Bakht i y ā r i s. There is a small fort, and 200 yards to the north are a few Kunār trees; while 600 yards to the south, upon the road, is a built-over well of fresh water.	This place was the property of Kāzīm Khān, a Kalāntar of Shūshtar Town, but he was done to death and his property seized by the Governor of 'Arabistān in 1905. In the hot weather Arabs under Shaikh Farhān Asad of the Kathīr come here for pasturage and sink shallow wells in a dry watercourse beside the village.
Shāhwali شاهولی	3 or 4 miles south-east of Farajābād.	200 houses of Shūshtarīs, some Arabs and a few Dizfūlīs: 15 families of Sabians are included among the population. There are about 200 rifles, 80 of the men are mounted, and the people are noted for their fighting qualities. There are 2 mills, one at 3 miles from the village; the other, at 100 yards from the village fort, pays 12 Qrāns in cash and 6 Mans of flour daily to the owner.	Mares, mules, donkeys, buffaloes, cattle, sheep and goats are owned here; the crops are wheat, barley, beans, rice, Kunjīd, cotton, millet and Māsh; water is from the Shūreh stream, apparently the tributary so named of the Diz river. Of the village $\frac{1}{3}$ is owned by Shaikh Farhān Asad of the Kathīr; the remaining $\frac{2}{3}$ belong to a certain Qaid 'Abdullah who is rich and hospitable.
Sorakān سورکان	Same as Garmak above.	Same as Garmak above.	Same as Garmak above.
Tāhīr Khān (Cham) چم طاهر خان	Said to be near the right bank of the Shatait, further up than Naisīyeh.	Do.	Do. The name is pronounced Chintār Khān.

The town of Shūshtar, the administrative capital of Northern 'Arabistān, is situated at the northern extremity of the Miyānāb in the angle formed by the division of the Kārūn into its Shatait and Gargar branches. Shūshtar, by the Arab geographers called Tustar, was a very

SHUSH-
TAR
شوشتر
TOWN

flourishing place in the 10th and 14th centuries A. D. and appears to have been at that time the capital of 'Arabistān.*

Site.—Shūshtar stands for the most part on somewhat elevated ground, consisting of the ordinary alluvial soil of the country intermingled with the ruins and rubbish of ages. Overhanging the **Shatait**, however, at the corner where its course changes from west to south, is a high isolated sandstone cliff 100 feet high, on which stands the citadel or Qal'eh; except at this point the left bank of the **Shatait** at Shūshtar is low, and exhibits, when the river is running at its normal level, a long shelving beach of shingle. On the **Gargar** an outcrop of sandstone commences a little way below the head of the stream and continues for a short way down.

Buildings and public works.—The houses of Shūshtar, though of some height and architectural pretension, are mostly old and in bad repair, and large parts of the town are ruinous and deserted. The majority of the houses are provided with subterranean chambers, lighted and ventilated by vertical shafts here called Shawwādāns شَوَادَان, and with flat parapeted roofs about 30 feet from the ground. Both these appurtenances are designed for comfort in the hot weather; the cellar then becomes by day the scene of family life, which at night is transferred to the roof.† The sanitary condition of the town, chiefly in consequence of an arrangement which makes the public street a receptacle of domestic sewage, is indescribably foul; but, as the ground in most parts has a natural fall, matters are improved by rain instead of being aggravated as at **Dizfūl**. The bazaar consists of an open space, surrounded by rows of hovels used as shops, and encumbered with fragments of ruined walls against which shelters and screens are placed in the day time to form booths. The chief architectural features of the town are a large **Jāmi'** mosque standing on an eminence near the Pul-i-Lashkar bridge to the south of the town; a lofty leaning minaret; about 20 mosques, some of which have blue-tiled domes; and some 15 **Imāmzādehs** and **Qadamgāhs**.

* A *Vide* Le Strange.

† A curious point about Shūshtar is that some of the houses in the town have nicknames by which they are universally known. Such are the **Khāneh-i-Pashkkeh** or House of Flies, the **Khāneh-i-Buz** or House of the Goat, the **Khāneh-i-Kalleh Khushk** or House of the Hot-Tempered Onē, and the **Khāneh-i-Mawās Birō** or House of "Hurry and Begone," the name in the last case referring (it is believed) to some former owner of particularly repulsive aspect.

The engineering works connected with Shūshtar upon the **Gargar** and the **Shatait** are noticed under those names; but here must be mentioned the **Minau** مینر canal, which traverses part of the town and is the only canal that waters the **Miyānāb**. This channel leaves the **Shatait** by an opening pierced in the base of the citadel rock and, running for some distance underground, emerges near the head of the **Dizfūl** bridge: thence it finds its way by a deep cutting to the south of the town where, passing under a bridge called the **Pul-i-Lashkar** پل لشکر, it gains the open country. The discharge of this canal, measured on the 25th of March 1905 when it was running 5 feet below its maximum level, was 970 cubic feet a second; its bed-width was found to be about 60 feet, the maximum depth of water was 6 feet and the surface velocity 5 feet a second.

Shūshtar could formerly be quitted by three land-routes; that to the west over the **Dizfūl** bridge has now ceased to exist in consequence of the rupture of the bridge, and its place has been taken by a ferry; the others are the **Pul-i-Lashkar*** road already mentioned, which conducts to the **Miyānāb**, and the **Pul-i-Būlaiti** dam which affords at passage to **Būlaiti** village, virtually a suburb of Shūshtar on the left bank of the **Gargar**, and to the country beyond.

Inhabitants.—The present population of Shūshtar is about 20,000 souls, but the place seems to be declining. The great bulk of the people belong to an indigenous mongrel breed, unknown by any name save that of Shūshtaris, who speak a Persian patois of their own resembling (but distinguishable from) that of the **Dizfūlis**. All of the Shūshtaris are **Shi'ah** **Muhammadans**: their most prominent sections are **Saiyids**, **Khawānīn** and **Mashāikh**, found here as at **Dizfūl**, who number about 1,000, 500 and 500 persons respectively. The town contains no **Arabs**, and a few **Bakhtiyāris** constitute the only community which is not merged in the general body of Shūshtaris: the greater homogeneity of the population may perhaps be regarded as indicative of a municipal existence longer or more continuous than that of **Dizfūl**.

Manufactures, occupations and trade.—A number of local industries are carried on at Shūshtar. Among the articles manufactured are woven carpets of wool called **Gilīms** or **Harāmis**; woollen cloth for 'Abas; coarse cotton canvas; light cotton stuffs for clothing; turbans and waist cloths; cotton shoes; coats, hats and floor cloths of felt; objects of iron, copper,

* This road no doubt led to the town of **Lashkar** or 'Askar **Mukram** while it existed, hence the name of the bridge.

brass and German silver as at **Dizfūl**; silver work; glazed earthenware; pack and riding saddles. Occupations not connected with these manufactures are the burning of bricks, the making of lime, the manufacture of opium for local use and for export, the tanning of leather, and the dyeing of cloth. Such of the inhabitants as are not engaged in these manufactures and other occupations live for the most part by wholesale or retail trade, by agriculture or by religion: the residue are builders, carpenters, muleteers and raftsmen. Shūshtar is the river port of **Dizfūl**, through which the latter receives all its imports from abroad and despatches all its foreign exports; and all **Dizfūl** merchants have agents or correspondents at Shūshtar. Messrs. Lynch Brothers have a trading agency at Shūshtar; their representative is at present an Armenian. Trade methods are much the same as at **Dizfūl**. The Shūshtar Man is equal to 15·487 lbs English.

Resources and transport.—The water-supply of Shūshtar is of course unlimited. Supplies, except fuel which comes from 'Aqīli and the jungles on the **Diz**, are drawn chiefly from **Miyānāb**: food and forage cannot be called abundant, but in good years there are considerable stocks of both in the town. About 800 mules are owned at Shūshtar, but of these a varying number are always absent either at grazing or on caravan. There are 20 flour mills in working order on the **Gargar**, but only 10 of them can be run in the hot weather.

Administration and revenue.—Shūshtar, though inferior to **Dizfūl** in size and prosperity, is the head-quarters of the Persian administration in Northern 'Arabistān and the seat of the Hākīm or Governor: * this distinction it no doubt owes to its historical pre-eminence, strategic importance with regard to both hills and plains, and convenient position upon the **Kārūn** river. The citadel or castle, formerly known as Qal'eh-i-Salāsāl قلعه سلاسل but now generally styled simply Qal'eh-i-Hukūmati قلعه حكومتي, is situated, as already mentioned, upon a rocky bluff that overlooks the headwaters of the **Shatait**: it contains the Governor's palace and is adjoined by an arsenal. The Qal'eh is constructed in several tiers, is surrounded by a lofty wall and appears to threaten rather than to protect the town. In former days it might well have withstood siege, but its defences would be valueless against modern artillery; moreover, it is partially commanded at a short range by the houses on the edge of the town, and, at longer ranges, from the further

* There was also till recently a Deputy-Governor: see the article on Northern 'Arabistān.

side of the **Shatait**. The strength of the garrison is not fixed and is usually a negligible quantity. There are at Shūshtar a Persian post office, telegraph office and customs house.

The revenue levied on the town is a part of that assessed on the district, but it is collected separately, *viz.*, it is distributed in lump sums among the different trade guilds and the amount due from each trade is collected by the head of the guild and paid by him to the Mustaufi.* The following are some of the principal items: Baqqāls or general dealers, 300 Tūmāns per annum; Bazzāzes or cloth merchants, 200; 'Attārs or grocers and druggists, 120; copper-smiths, 14; Harāmbāfs or carpet weavers, 150. The flour mills upon the **Gargar** afford an annual revenue to Government that fluctuates between 600 and 800 Tūmāns; this is collected by a curious double method. The mill-owner first takes for himself 1 Chahārak of the flour for every Man ground and the Government Farrāsh at the same time takes 2 Siyāh Pūl in cash from the owner of the flour on account of every Man; afterwards, the money received from the persons patronising a particular mill having been totalled at the end of the week, the owner of the mill is required to deliver to Government one Man of flour for every Qrān which has been collected by Government from his customers. The Governor at present holds a monopoly of the ferry upon the **Dizfūl** road, for which he pays 600 Tūmāns a year to the Persian Government.

Political matters.—Shūshtar is the seat of two powerful groups of Mujtahids who are much more influential than the Mujtahids of **Dizfūl**: the principal Mujtahid is at present Hāji Saiyid 'Abdus Samad, who with his family owns numerous villages situated on the **Gargar** and **Shatait** and in **Miyānāb** and is landlord of the **Hardān** tribe in Kharrān. The administration of public charity and the management of education are in their hands; and before the advent of the present strong Governor in 1905 the town was virtually ruled by them, some of the more important among the Khawānīn being then the only other persons who had any voice in public affairs. There is an Imām Jum'eh at Shūshtar as there is at **Dizfūl**. Shūshtar is not now a natural political centre, and if the Persian Governor and Mujtahids were to be removed it would probably fall into obscurity.

A scattered town on the **Bātinah** coast of the 'Omān Sultanate; it is 25 miles west of **Masqat** Town and is the first place of importance

SĪB
سِيب

* In 1908 the Mustaufi stated that the assessment on the town of Shūshtar, and on the villages most closely connected with it, was 3,000 Tūmāns a year in cash and 100 Kharvārs of grain.

reached in **Bātinah** from the **Masqat** side. **Sib** consists of several detached quarters; the aggregate number of dwellings may be about 1,000; nearly all of them are huts. The principal tribes are **'Awāmir** (460 houses, including 60 of the **Aulād Mahaiyi** section), **Balūchis** and **Jadgāls** (200 houses), **Siyābiyīn** of the **Mabāsili**, **Mahāmil** and other sections (30, 30, and 5 houses), **Bani Hina** of the **Aulād Yūsuf** section (60 houses), **Aulād Hadīd** (50 houses), **Bani 'Umr** (45 houses), **Āl 'Umair** (45 houses), **Bani Jābir** (30 houses), **Hirth** (30 houses) and **Persians** (15 houses). The bazaar consists of about 50 **Arab** and **Persian** shops, besides 8 which are kept by **Hindu** traders. Extensive date groves and many gardens producing lucerne, mangoes, limes and almonds, surround the town; the chief resources of the people are date and fruit-growing and fishing. **Sib** is the port for **Wādi Samāil**, so far as not served by **Matrah**, and for **Wādi Tau** the trade of which it divides with **Barkah**: 10 **Shāshahs** and 40 small boats are owned here which do not ordinarily run further than **Masqat**. **Sib** is cooler and healthier than **Masqat**, and in summer many inhabitants of **Masqat** resort here and erect temporary houses. A **Wālī**, whose residence is at the inner edge of the date groves about a mile from the coast, is posted here with a detachment of 40 men commanded by an **'Aqīd** to support his authority. The customs duty on goods imported into **Sib** is payable at **Masqat**, but **Zakāt** to the amount of \$1,000 a year is collected locally at **Sib** and remitted to **Masqat**.

SIKAN-DARIYAH

سكاندريه

In Turkish **'Irāq**, a village of some 50 mud houses with a **Khān** and several brick enclosures, forming a stage on the main route from **Baghdād** to **Karbala**. **Sikandariyah** is situated in the **Qadha** of **Karbala** on the left bank of a canal of the same name; the canal belongs to the **Dāirat-as-Saniyah** and is mentioned in the article on the **Euphrates** river. Cultivation is being rapidly developed, especially to the east of the village; there is also some grazing in the neighbourhood, and numerous flocks and herds may be seen in winter between **Sikandariyah** and **Musaiyib**. A school and a mosque here are the property of the **Dāirat-as-Saniyah**, and that department is represented by a local manager. The inhabitants of **Sikandariyah** are nearly all **Shī'ahs** and agriculturists.

A village of Turkish 'Irāq on the left bank of the Shatt-al-**Gharāf**, about 20 miles south-south-west of **Hai Town** and 30 miles north by west of **Shatrat-al-Muntafik**. It is situated in the **Qadha of Hai**. The population is about 1,000 souls, most of whom are Faily **Kurds**, and there is a small bazaar of 20 shops. Wheat and barley are cultivated in the neighbourhood; but there is no accumulation of grain and no transport. The Arabs about are **Bani Hashim**. The Turkish Government is represented only by a **Chāūsh**, or Sergeant of **Dhābitiyahs**, with a dozen men under him.

SIKAR
(**QAL'AT**)
قلعة سكر

A fertile, cultivated strip on the coast of the **Rās-al-Khaimah** District in the **Shārjah** principality in **Trucial 'Omān**: it extends from two or three miles south of **Rams** to about seven miles south of **Rās-al-Khaimah Town** and is thus about 12 miles in length. On the eastern side it is bounded by the hills of the **'Omān Promontory**, which are here five or six miles from the coast, and on the west by the sea north of **Rās-al-Khaimah Town** and by red sand hills south of that point: its extreme breadth, towards its south end, is about five miles.

SĪR
صير

The following are its villages in order from north to south:—

Name.	Reported position.	REMARKS.
Shimil شمل	5 miles inland.	200 houses of Bani Shamali . There are 50 camels, 20 cattle, 700 sheep and 4,000 date palms.
Ghubb غُبّ	1½ miles inland.	40 houses of mixed tribes. The people own some 10 cattle, 20 donkeys, 18 camels, 50 goats and sheep and about 700 date trees.
Hadaibah حديبه	Do.	30 houses of Bayādīr , owning the usual animals and about 500 date trees.
'Araibi عريبي	1 mile or less south-west of the town of Rās-al-Khaimah .	40 houses of Bayādīr , who possess the usual animals and 600 dates.
Qawais قويس	On the sea.	7 or 8 houses of Bayādīr : they have no livestock.

* Portions of **Sīr** are shown in the maps *Route of Lieutenant-Colonel Herbert Disbrowe, etc., 1865*, and *Route taken by Major P. Z. Cox, etc., 1905*.

Name.	Reported position.	REMARKS.
Qasaidāt قصيدات	1½ miles south-south-west of the town of Rās-al-Khaimah.	20 houses of Bayādīr. The animals are 10 camels, 20 donkeys, 15 cattle and 300 sheep and goats. There are 700 dates.
Falaiyah فاليه	5 miles south of Rās-al-Khaimah Town and 4 miles from the coast.	15 families of mixed tribes. The date plantations, containing about 300 trees, are irrigated from wells nearly four fathoms deep and belong to the Qawāsīm of Rās-al-Khaimah. The inhabitants have 10 camels, 25 donkeys, 10 cattle and 50 sheep and goats.
Hail حيل	1 mile south of Falaiyah.	50 houses of Shihūh; they are of the Bani Hadiyah section, from Khasab and Bakhah, and own some 20 camels, 50 donkeys, 20 cattle, 150 sheep and 1,000 date trees.
Fahlain فحلاين	1 mile south-west of Hail.	60 houses of Naqbiyīn, who possess 25 camels, 50 donkeys, 30 cattle, 200 sheep and 2,000 date palms.

The fixed population is thus about 2,500 souls. The houses in these villages are mostly of mud and stone; a few are of gypsum stucco.

The soil of Sīr is earth mixed with stones; in parts it is sandy, but at the west side it becomes muddy after rain and caravans then take the sand hills to westward. The uncultivated parts are fairly well covered with mimosa bushes and tussocks of coarse grass. Irrigation is from wells: there are no Falajis.

In old-fashioned books and records the whole of the Rās-al-Khaimah District is sometimes called "Seer" or "Julfar": the latter word appears to be a corruption of Jirfāl جرفال, which is the name of a tract in the bounds of Shimil village.

SĪRHĀN (WĀDI) وادي سرهان

A valley, or rather a long sinuous tract of depressed ground, in north-western Arabia extending from Kāf, 160 miles south-south-east of Damascus, to a point 20 miles west of Jauf-al-'Āmir; its length, from north-west to south-east, is about 140 miles. On the north-east the Wādi is bordered by the Hamād or Syrian desert, on the south-west by basaltic hills and sandhills and, towards its south-eastern end on that side, by a plain of clayey soil and pebbles called Basaitah بسيطه. The breadth

of the Wādi varies ; near its north end at Ithrah it is about 12 miles wide. The lowest part appears to be in the neighbourhood of Ithrah and Kāf, where the elevation is about 1,800 feet above sea-level. There are different routes along the valley following different series of wells, consequently the accounts of travellers are difficult to compare and their stages are rarely the same ; this much however is clear, that the northern half of the Wādi is the more sandy and level and has some vegetation, while the southern is sterile, stony and broken. Near Kāf are some saline marshes, where the ground is difficult for camels and the surface for some miles is covered with a dazzling white deposit of salt. The Basaitah plain already mentioned is said to contain ostriches, and it produces Samh seed in large quantities, which Ruwalah Bedouins bring to Jauf-al-'Āmir for sale. In midwinter there is sometimes hard frost in Wādi Sirhān.

The following are the chief points in Wādi Sirhān regarding which we possess definite information :—

Name.	Position.	Nature.	REMARKS.
'Amiri عميري	20 to 25 miles north-west of Maiqūm.	A water place and camping ground.	The wells are sunk in soft sandstone and contain sweet and abundant water at 1 fathom and less. They are used by the Sharārāt and by the Hawāzim section of the Harb or Hataim.
Ithrah اثره	8 miles east by south of Kāf, from which it is divided by hills.	A walled village of 25 mud and stone houses.	Corn is grown and there is sweet water at one fathom and less. A Turkish official is pos- ted here to collect the salt tax from persons exporting salt, of which there are de- posits in the vicinity.
Kāf كاف	About 160 miles south-south-east of Damascus, at the north end of Wādi Sirhān.	A walled village of 20 houses.	The village stands on the margin of some saline marshes in a crescent of sand- stone and basalt hills. A little to the north of the village is a hill 250 feet high composed of black volcanic blocks and surmounted by the

Name.	Position.	Nature.	REMARKS.
			<p>ruins of a fort. There is a date grove of 450 palms which, with some salt deposits 2 or 3 miles to southward, forms the chief resource of the place. The salt is purified by crystallisation and becomes very white but retains a bitter taste. It seldom rains here, and the summer is hotter than at Jauf-al-'Āmir. The people wear Bedouin costume and many of them suffer from ophthalmia. In 1877 the village acknowledged Ibn Rashīd and paid an annual tribute of £4.</p>
Maigūm مَيْقُوم	50 miles west by north of Jauf-al-'Āmir.	A watering place and camping ground.	The wells are 5 fathoms deep and the water is sweet. The place is frequented by the Sharārāt.
Nabq Abu Qasr نَبَقْ اَبُو قَصْر	12 miles north-west of 'Amiri.	Do.	This is a station of the Sharārāt and of the Hawāzim section of the Harb or Hataim. The wells are sunk in sandstone and contain sweet water at 1 fathom or less.
Waisit وَيْسِط	Rather nearer to Kāf than to Jauf-al-'Āmir.	Wells.	The spot is hidden among sand hillocks covered with brushwood and has a few stunted palms.

Wādi Sirhān belongs to the Sharārāt and is visited also by the Hawāzim section of the Harb or Hataim and by the 'Anizah, both Ruwalah and Bishr. With Jauf-al-'Āmir it formerly belonged to the Jabal Shammar principality, but Kāf and Ithrah at the north end appear now to have passed under Turkish domination.

A depressed tract in **Najd**, situated in the desert between **Shaqrah** and **'Anaizah**; it is said to be about 40 miles in length from north to south and 20 miles in breadth. **Wādi-as-Sirr** contains wells and springs, but its drainage is stated to have no outlet. It is traversed by the route between **'Anaizah** and **Shaqrah** and is separated from the latter place by a tract of red sandhills. **Wādi-as-Sirr** contains the following 3 villages:—

SIRRAH
(**WĀDI-AS**
إدي السر)

Name.	Position.	Houses and inhabitants.	REMARKS.
'Ayūn-as-Su-waina' عين الصوينع	One stage from Mudhnib on the way the Shaqrah.	120 mud houses of Hataim.	'A y ū n - a s - S u w a i n a' possesses 15 small date plantations and cereals are grown. There are one large and two small springs. The place is possibly connected with 'Uniyāt (see article Najd, Route V).
Barrūd-as-Sirr برود السر	One stage from Shaqrah on the way to Mudhnib.	100 mud and brick houses of settled Harb and other Arabs.	The village is walled. There are 5 or 6 plantations of dates, and good water in wells 8 to 9 fathoms deep. The place is possibly connected with 'Ayūn-as-Sirr (see article Najd, Route V).
Faidhah فيضة	About midway between 'Ayūn-as-Sirr and Barrūd-as-Sirr.	60 mud houses of Hataim and Bani Tamim.	Faidhah is surrounded by a wall with towers, and there are a few outlying towers to protect cultivation. There are several date groves, and the wells are 6 to 7 fathoms deep. 'Ataibah and Mutair encamp here occasionally.

A fortified desert residence of the Shaikh of **Kuwait**, 8 miles south-south-east of **Kuwait Town**: it was built about 1900. The fort is oblong and measures 150 by 120 feet: there is a tower at each corner. The walls are of mud faced with gypsum plaster, 12 feet high and 2 feet thick; they are not loopholed. The only entrance is in the north face. The fort stands at an elevation of 180 feet above the sea upon the

SIRRAH
(**QASR-AS-**
قصر السر)

highest of half a dozen low hills, and it is supplied with water from wells 60 to 70 feet deep; the water is good and abundant for this part of the country, and the Shaikh when living at **Kuwait** sometimes obtains his supply from here. About 12 miles south and slightly east of Sirrah are the wells of Thamilat-al-'Atūl تميلة العتول (so called from a section of the 'Ajman tribe) of which the water is always sweet.

SIRRI *

سري

In English maps of a former period shown as "Surdy". An island in the middle of the Persian Gulf, 40 miles south by west of Bustāneh, which is the nearest point upon the **Persian Coast**. In shape it is a truncated wedge, $3\frac{1}{2}$ miles in length from east to west, $2\frac{1}{2}$ miles broad at the eastern end, and 1 mile across at its western extremity; it is low, sandy and bare of natural vegetation, with many small detached hills of dark colour, none of which exceed 50 feet in height. On all sides the sea is deep at more than $\frac{1}{2}$ a mile off shore, and on the east and south-east sides the deep water comes close in; the anchorages are all indifferent.

There are two permanent villages on the island: Bilād Zarā'iyah بلاد زراعيه and Bilād Ghawāwis بلاد غوارويس.

Bilād Zarā'iyah is situated towards the north-eastern corner of the island and consists of a dozen mud huts tenanted by Abu Dastūr ابو دستور Arabs; the Abu Dastūr are one of the divisions of the Arabs of the **Persian Coast** who are known under the general name of Fawāris; in religion those of Sirri are Sunnis of the Hanbali school. The village possesses a date grove of about 500 trees, and the inhabitants cultivate a little wheat and barley and some melons and onions for their own consumption. Irrigation is from a group of 12 wells called I'ūi Na'amih طوي نعمه, about 6 fathoms deep, which provide a fair supply of good water; but it seems that at some previous time water was more plentiful than it is now, and the cultivation of the village more extensive. Livestock at Bilād Zarā'iyah are 20 donkeys, 12 well-bullocks, 12 milch cows and 400 sheep and goats. There are no boats.

Bilād Ghawāwis is situated on the south-eastern coast of Sirri opposite the anchorage marked in the Admiralty Chart. It is occupied by 40 families of Sūdān and 30 of Hūwalah, all originally from the coast of

* A distant view of Sirri from the sea is given in Chart No. 2373—2387A *Persian Gulf*.

Trucial 'Omān ; they are Hanbali Sunnis and, as the name of the village imports, they subsist chiefly by pearl-diving. At this village there are no animals and no cultivation, but the people own 15 Sambūks for pearling on the Arabian banks and 30 small Baqārahs which are used for pearl-diving and fishing round the island. Their drinking water is from a single well called Bū Sūr بئر سور, about 600 yards north-west of the village, which yields an abundant supply but inferior in quality to the water of Tūi Na'amih.

There has been a Persian flagstaff on Sirri since 1887, and since 1899 it has been located at Bilād Ghawāwis. In 1904 two Tufangchis of the Imperial Persian Customs were stationed at Bilād Ghawāwis, where they are now in charge of the Persian flag and collect duty on all imports reaching the island not covered by an exemption pass from Lingeh. From 1887 until recently tithes used to be collected on Sirri after each harvest by an emissary of the Deputy-Governor of Lingeh, and the island is apparently regarded by the Persian Government as belonging to their Lingeh District ; but the title of Persia to Sirri is not admitted by the British Government, and the Shaikh of Shārjah has certain hereditary claims to the island.*

An island of the Bahrain archipelago, the third of the group both in size and importance. It lies off the east coast of Bahrain island, from which it is separated by a narrow and shallow channel on its south-west side. Sitrah island measures $4\frac{1}{2}$ miles from north to south and tapers from the north, where it is $1\frac{1}{2}$ miles broad, to its southern extremity. The northern part is exceedingly fertile, watered from both springs and wells and covered with high date palms ; it contains 7 villages of Bahārinah, of which the largest is Khārijīyah. The remainder of the island is an expanse of sand, raised only a few inches above high-water level ; the only village in this part is Umm-al-Baidh, near the southern extremity, which is inhabited by Sunnis. As in Bahrain the only crops grown, besides dates and fruit, are lucerne and vegetables. Sitrah forms a valuable part of the fief held by Khālid-bin-'Alī, a brother of the Shaikh of Bahrain : his summer residence is a bastioned house at Khārijīyah.

SITRAH†
سترة

* Information about the status of Sirri is contained in the Foreign Proceedings of the Government of India for February 1905.

† The more important authorities, maps, charts, etc., are specified in a footnote to the general article Bahrain principality.

The principal places and features of interest on or connected with Sitrah island, some of which have already been mentioned above, are as follow :—

Name.	Position.	Nature.	REMARKS.
Paidh (Hālat-Umm-al- حالة أم البيض	On the east side of the island, at its southern extremity.	A village of 30 huts of pearl divers and fishermen of the 'Utūb and Murai-khāt.	The site is low and sandy, and only a few inches above high water level. There are 7 donkeys and 6 cattle here.
Dār (Dōhat Ban-dar-ad- دوحة بندر الدار	On the east coast of the island, $1\frac{1}{2}$ miles from its southern extremity.	A place of embarkation and disembarkation only. No houses.	The usual starting point of residents on the east side of Bahrain island when proceeding to Qatar. Fishermen of 'Aqur, Nuwaidrat, Tūbl and other villages on Bahrain island keep their boats here.
Hālah or Hālat حالة—حالات	On the north coast of the island.	A hamlet of 10 huts of Bahārinah.	The usual landing place for passengers arriving by boat from Manāmah or Muharraḡ Town.
Khārijīyah الخارجية	Near the west coast, 1 mile from the north end of island.	50 reed huts of Bahārinah who are pearl divers, fishermen and mat makers.	There is fort in which Shaikh Khālid, who is lord of the island, and brother of the regnant Shaikh of Bahrain, generally resides in the hot weather. There are 1,500 date palms; also 13 donkeys and 3 cattle.
Marqūbān مرقوبان	Near the centre part of the island, about a mile from its north end.	30 huts of Bahārinah, pearl divers and cultivators.	Situated on the edge of the date groves. The palms are about 5,000, donkeys number 6 and cattle 5.
Muhazzah محرزة	On the east coast, near the north end of the island.	60 reed huts. The people are the same as at Quryah.	The village is partly on the coast and partly scattered in adjacent date plantations. Close to it is a good spring of fresh water which feeds a tank 50 yards west

Name.	Position.	Nature.	REMARKS.
Qassārain قصارين	500 yards from the north side of Sitrah island.	2 rocky islets.	of the village. Vessels here are 30 Shū'ais and Sambūks and 1 Mashuwah or jolly-boat. Dates number about 4,300 trees, and there are 4 donkeys and 7 cattle. There are no houses or fresh water, but Na'im Bedouins encamp on them in the hot weather to escape the flies.
Quryah القرية	Close to the north-west corner of the island.	40 reed huts of Bahārinah who are cultivators, fishermen and pearl divers.	There are numerous gardens belonging to Shaikh Khālid, brother of the Shaikh of Bahrain. Nineteen Shū'ais and Sambūks are owned here, and there are over 7,000 date trees. Donkeys number 7 and cattle 2.
Raha ('Ain-ar-) عين الرحا	On the north side ^a of the island between Quryah and Halāt villages, in a date grove 150 yards from the beach.	A fine spring of fresh water.	Water is collected in a masonry tank of good construction, and thence distributed by plastered channels to the gardens around.
Sufalah سفالة	On the east coast, 1½ miles from the north end of the island.	50 mat huts occupied by Bahārinah who are cultivators fishermen and pearl divers.	The water-supply is from the excellent spring at Muhazzah. To the north are date groves; to the south a low-lying stretch of sand. Sailing vessels owned here are 19 Shū'ais and Sambūks. Date palms are estimated at 4,000. Donkeys number 11 and cattle 3.
Tarif (Qassār Bin-) قصار بن طريف	250 yards from the north-west corner of the island.	A rocky islet.	Na'im Bedouins encamp on it in the hot weather.

Name.	Position.	Nature.	REMARKS.
Wādīyān واديان	$\frac{1}{4}$ of a mile east-south-east of Khārījīyah.	60 reed huts of Bahārinah, who are fishermen and pearl divers.	On the southern fringe of the date groves. A fine spring of water, rising close to the village, is extensively applied to irrigation. Date trees are about 4,000.

In the table above, houses of negroes have not been distinguished from the houses of the community among whom they live.

Of the vessels owned in the island 22 are used as pearl boats.

SIYĀBIYĪN

سيابيين

Singular is Siyābi سيابي. A somewhat widely distributed but not very numerous tribe of the 'Omān Sultanate, Ghāfirī in politics and Ibādhi in religion. None of them are genuine Bedouins. They are disposed to friendship with the Bani Jābir and to enmity with the Nidābiyīn, Bani Battāsh, Bani 'Arābah and Hadādabah.

The Siyābiyīn are found chiefly in Hajar and the Masqat District, their principal settlements being in Wādī Mansah at Nafa'ah (300 houses); in Wādī Samāil at Sib-adh-Dhafar (40 houses), Ghail-ad-Dakk (20 houses), Ghubrah (25 houses), Dan (20 houses), Bidbid (20 houses), Mizra' (30 houses), Qurtā' (50 houses), Milaiyinah (20 houses) and 'Amqāt (15 houses); in Wādī Bani Kharūs at Mahālil (20 houses) and Salaiyah (10 houses) and also at 'Awābi; in Wādī Saijāni at Rissah (20 houses) and Saijāni (100 houses); in Wādī Fara' at Falaj Shirāh (50 houses) and Misfāh (50 houses); in Wādī Khabbah at Khabbah (50 houses); in Wādī Tāyīn at Ghubrat-at-Tām (60 houses); in Wādī Bōshar at Sa'al (20 houses), Ghallah (15 houses) and both Misfāhs (40 houses); in Wādī Risail at Marairāt (3 houses), Jafnain (10 houses) and Risail (10 houses). They occur also in Bātinah at Sib (65 houses) and Barkah (20 houses) and are represented at Matrah. Their total number is thus roughly about 5,500 souls. Those at Rissah in Wādī Saijāni belong to a section called Mubāsili مباسلي.

Some of the Siyābiyīn are rich, but the tribe generally are not held in much repute. Nafa'ah is the tribal capital and the residence of the chief of their Shaikhs, Saif-bin-Muhsin.

This is an important administrative division of the 'Omān Sultanate: it comprises the whole western half of the Bātinah District. Sohār is in charge of a Wālī of the Sultān of 'Omān who has his seat at Sohār Town; it is composed of 4 administrative subdivisions, which are, in order from south-east to north-west, **Saham**, Sohār Proper, **Liwa** and **Shinās**. Sohār Proper is under the direct supervision of the Wālī and details concerning it are given below; the other three subdivisions, each governed by an official subordinate to the Wālī of Sohār, form the subjects of separate articles. The valleys of Western **Hajar** from Wādī 'Āhin to Wādī-al-Qor inclusive are regarded as pertaining, along with the tribes that inhabit them, to the Sohār Wilāyat; but the degree of control, if control it can be called, exercised by the Wālī over this part of his charge is slight.

The Sohār Wilāyat resembles the rest of **Bātinah** in most of its physical features. Springs, however, occur at Falaj-al-Hijari, 'Auihi and Falaj-al-Qabāil; elsewhere, as is usual in **Bātinah**, water is from wells.

The chief places in the subdivision of Sohār Proper, in their order from south-east to north-west, are the following :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Khishdah خشد	On the coast.	100 houses of Bani Rāshid.	The people are fishermen and have 500 date trees, 30 camels, 70 donkeys, 150 cattle and 200 sheep and goats.
Majiz-al-Wahibah مجز الوهيبه	Do.	100 houses of Al Wahibah.	These villages are separated only by a short interval. There are dates and the people fish but have no seagoing boats. The Wahibah village has 500 date palms, 50 camels, 40 donkeys, 100 cattle and 250 sheep and goats; the other has 700 dates, 40 camels, 30 donkeys, 50 cattle and 150 sheep and goats.
Majiz-an-Nu-wāfil مجز النوافل	Do.	300 houses of Nuwāfil.	
'Awaināt عوينات	Do.	100 houses of Shawāfi' and of Maqābil of the Samāh section.	Wādī-al-Hilti reaches the sea between this place and Sawaiharah. Here there are 500 date

WILĀYAT
and
SUB-
WILĀYAT

Name.	Position.	Houses and inhabitants.	REMARKS.
			palms, 20 camels, 30 donkeys, 25 cattle and 100 sheep and goats. Wadi-al-Hilti reaches the sea hereabouts by various branches.
Sawaiharah صويحرة	On the coast.	100 houses of Fawāris.	Date palms number 1,000. There are 25 camels, 20 donkeys, 30 cattle and 200 sheep and goats.
Sohār Town سحار	See article Sohār Town.
Himbar همبار	About a mile inland of the Hārat-ash-Shaikh quarter of Sohār Town	90 houses of Maqābil.	Livestock are 30 camels, 20 donkeys, 40 cattle and 200 sheep and goats. There are 300 date trees.
Waqībah وقيبة	About a mile inland of the walled town of Sohār.	100 houses of Banī Ghaith.	Dates number 200; animals are 40 camels, 25 donkeys, 40 cattle and 100 sheep and goats.
Fitnah فتنة	About $\frac{1}{2}$ a mile inland of the walled town of Sohār.	20 houses of Banī Ghaith.	...
Shilūh شلوة	On the coast.	100 horses of Balūchis.	...
Sallān صلان	On the coast 2 miles north-north-west of Sohār Town.	150 houses of Fawāris, Balūchis and mixed tribes.	Wadi-al-Jizi reaches the sea here on the north-west side of the village. Resources are 30 camels, 20 donkeys, 20 cattle, 100 sheep and goats and 500 date trees. Wadi-al-Jizi reaches the sea immediately to the north of Sallān.
Taraif طريف	One mile inland of Sallān, south-west wards.	200 houses of Maqābil, some of whom are of the Samāh section.	...
'Auhi عوهي	$3\frac{1}{2}$ miles west of Sallān and $2\frac{1}{2}$ miles from the sea.	100 houses of Bidārīn بدارين said to be Dawāsir from Najd.	The residents are agents and cultivators for the owners of the land who live in Sohār Town. Dates, limes and mangoes are grown by Falaj

Name.	Position.	Houses and inhabitants.	REMARKS.
Fāsiqah فاسقه	On the coast, 4 miles north-west of Sallan.	150 houses of mixed tribes.	irrigation. The palms number 800, and there are 70 donkeys, 60 cattle and 400 sheep and goats. Some land and palms here, worth \$300 a year, are the private property of the present Sultān of 'Omān (Saliyd Faisal). There are 1,000 date-palms, 35 camels, 30 donkeys, 50 cattle and 150 sheep and goats.
Falaj-al-Qabzil فلج القبائل	4 miles inland, south-westwards, from Fāsiqah.	300 houses of Bani Jābir of the Ma'amarah section.	The dwellings are mostly temporary, the inhabitants being nomadic; resources are 4,000 date palms, 500 camels, 80 cattle and 1,000 sheep and goats.
Sanqar سنگر	On the coast.	40 to 50 houses of Na'im of the Kilabinah section.	The people fish and own a few small boats and about 400 date palms, but they have almost no livestock.
'Amq عمق	Do.	40 houses of Bani Jābir of the Ma'amarah section.	Do., but the number of palms here is about 300.
Majis مچیس	Do. 2 miles north-west of Fāsiqah.	200 houses of Balūchis and Bani Kahail.	There are no sea-going boats but about 20 used for fishing. Dates, fishing and a little trade are the resources of the place. There are 400 date palms, 20 cattle and 80 sheep and goats.
Ghadhfān غضفان	A mile or less from the sea, to the west of Majis.	250 houses of Bani 'Umr.	The dwellings are mostly temporary, the inhabitants being nomadic; date palms number 6,000 and there are 70 camels, 100 cattle and 200 sheep and goats.
Hadd حد	A mile or less from the sea to the north-west of Ghadhfan.	60 houses of Bani 'Umr.	The dwellings are mostly temporary, the inhabitants being nomadic; there are 2,000 date trees, 8 camels, 60 donkeys and 700 goats and sheep.

The total fixed population of the sub-Wilāyat is thus about 20,000 souls.

In the whole Wilāyat practically no substantial houses are found except at **Sohār Town**, Bū Baqarah and Murair ; there are one or two also at the subdivisional headquarters of **Saham**, **Liwa** and **Shinās**. Huts of date branches are the usual kind of dwelling. The subject of trade, so far as trade exists in the Wilāyat, is dealt with in the articles on the subdivisions and on **Sohār Town**.

The revenue of the whole Sohār Wilāyat, to which for fiscal purposes **Hibi** in western **Hajar** is attached, amounts to \$10,000 in customs duty proper and \$15,000 in Zakāt; the whole of this, however, is swallowed up by the expenses of the local administration, nothing remaining over to be remitted to the central treasury at **Masqat**.

SOHĀR

صحر TOWN

An important town on the **Bātinah** coast of the 'Omān Sultanate, the seat of government of the whole western half of **Bātinah** and the port of Wādis 'Āhin, **Hilti**, **Jizi**, Bani 'Umr-al-Gharbi and, to a certain extent, of the **Baraimi** Oasis. Sohār is situated on the coast about 34 miles north-west of **Khābūrah** and 30 south-east of **Shinās**: **Baraimi** lies about 65 miles from it, almost due west. A remarkable isolated hill 1,550 feet high, to Europeans known as Sohār Peak but by Arabs called **Hūrah** **Barghah** حورة برغه, rises 14 miles inland to the west-south-west of Sohār.

The town of Sohār proper contains about 800 houses, of which half belong to Persians, 100 to **Bayāsirah** and 40 or 50 to **Bahārinah**: the rest of the population belong to miscellaneous tribes among whom the **Yahāmidah** يهامدة, though now reduced¹ to a few families, appear to be universally known. The town proper is walled upon the landward sides and contains a huge, square, 4-storeyed fort of brick; parts of the works connected with it have a Portuguese appearance.

Several villages upon the coast adjoining Sohār are reckoned quarters of the town. On the north-west side there is only one such quarter, **Hadhīrah** حضيرة, a place of 250 houses inhabited by **Balūchis** and divided from the town proper by a small creek which extends about 300 yards inland; half a mile north-west of **Hadhīrah** another creek breaks the line of coast and runs southwards for 600 yards in a direction roughly

parallel to the shore. On the other side of the town the exterior quarters, proceeding south-eastwards along the coast, are :—

Name of quarter.	Houses and inhabitants.	REMARKS.
Hārat Shizāo حارة سيزار	80 houses of Persians.	The inhabitants are silk-workers, weavers and bakers.
Hārat-as-Subārah حارة الصبارة	120 houses of Arabicised Balūchis.	The people cultivate dates.
Hārat-ash-Shaikh حارة الشيخ	120 houses of Fāwāris.	Do.
Ghail-ash-Shabūl غيل الشبرل	60 houses of Shabūl.	Do.

The houses in the town proper are of mud and stone, and those in the extra-mural quarters are huts. The total population of Sohār is probably about 7,500 souls.

The **Bātinah** date belt is about 3 miles deep at Sohār, and the palms belonging to the town are estimated at 15,000 to 20,000 ; there is consequently great abundance of dates, and mangoes also are plentiful, but ordinary cultivation, which is chiefly of lucerne, wheat and sugar, is insignificant. The remains of an ancient stone aqueduct called **Falaj-al-Mu'taridh** **فلج المعترض**, which once brought water a distance of 14 or 15 miles from **Wādī-al-Jizī** near **Hūrah Barghah** to Sohār town, are still traceable for the greater part of the way.

The Sohār bazaar contains about 200 shops. The only industry at Sohār town, except tanning in which about 12 households are engaged, is the manufacture of silken turbans and lungis which find a sale at **Masqat** ; but local weaving has been nearly extinguished by the competition of cheap Indian manufactures. The principal exports of the circumjacent district which are shipped at Sohār are dates, ghi, dried limes, cow-hides and goat-skins ; these are mostly destined for **Masqat**. Three **Khōjah** and 6 Hindu traders are settled at Sohār, some on their own account and some as agents for **Masqat** merchants ; they deal in cloth, flour and rice which they obtain from **Masqat**. Here the Indians do not engage in the date trade, the whole surplus stock being cleared off by boats which come from the coast of **Trucial 'Omān**, **Masqat** and other places to purchase. About 8 sea-going **Badans** running to **Masqat** and **Makrān** are owned here besides some 30 smaller craft.

Sohār town is the seat of the Sultān of 'Omān's Wālī for all Western Bātinah; this individual resides in the fort and has at his disposal a force of about 30 men. A wet ditch, starting from the head of the creek between Hadhirah and the town proper, girdles the latter on the landward side, keeping close to the outside of the town wall, and rejoins the sea between the town proper and Hārat Shizāo.

SUBAIH
(QASRĀL)
قصر آل صبيح

A considerable village in the Sanjāq of **Hasa**; it is situated in the Biyādh tract (I), about 4 miles from the coast midway between Jubail-al-Bahri and Rās-ad-Dafi. The village consists of the Qasr proper, a fortified enclosure, and of about 350 permanent date-stick huts by which it is surrounded. The Qasr is described as about the same size as the Shaikh of Bahrain's fort at Manāmah and its armament consists of 6 muzzle-loading guns, in good order and well oiled, which have been there for many years. The fort was in a ruinous condition and the exterior village did not exist until 1905, when the fort was rebuilt and the village was founded by the Shaikhs of the Had-hūd and Dhahairāt subsections of the Āl Subaih section of the Bani Khālīd, as a base of operations against the Mutair and Āl Morrah tribes. The Shaikhs of the Had-hūd and Dhahairāt now reside permanently in the fort, and the paramount Shaikh of the Āl Subaih section camps periodically in the vicinity. The inhabitants of the place, which is also known as Qasr Mar'ūb, قصر مرعوب, regard themselves as out of reach of the Turks.

SŪDAH
سودة

An extensive plain forming the southernmost district of the Kuwait Principality. It lies on the sea; is bounded on the north by the district of Hazaim, from which the Maqta' stream divides it; reaches on the west to the eastern extremity of the Dhula'-al-Mi'ajil range and to the Na'airiyah hill at the head of Wādi-al-Miyāh: southwards it is bounded by Radāif, Sabākhāt-al-Mutāya and Zor-al-Audhān in the Hasa Sanjāq. At its north end it includes the Labībah plain. The length of Sūdah from north-north-west to south-south-east is thus about 60 miles; its surface is said to be very level, consisting of a dark firm

sand. There are no trees, but Rīmth, 'Andal, 'Arfaj and Thamām afford camel and other grazing. The following are the principal inland features of the district :—

Name.	Position.	Character.	REMARKS.
'Arafjiyah عرفجية	8 miles west of Jabal 'Amūdah.	Wells.	The water is drink- able; depth of the wells is 15 feet.
'Arq عرق	12 miles north- north-west of Takhādīd, 18 miles south-south- east of Marāghah in Hazaim, and perhaps 20 miles from the sea.	Do.	Water almost undrink- able; depth 12 feet.
Ba'al بعال	Towards the south- west corner of the Sūdah district.	Plateau or flat-topped hill.	About 6 miles in dia- meter. Bedouins often encamp here and obtain water from Naqair which is several miles to the east or north-east.
Hamudh حمض	20 to 25 miles north by west of the Na'airiyah hill.	Wells.	Water at 12 feet; slightly brackish.
Naqair نقير or Inqair انقير	12 miles south- south-east of Hamudh and several miles east or north-east of the Ba'al plateau.	Do.	...
Naqīrah نقيره or Inqairah انقيره	4 miles north of Naqair.	Do.	Water sweet; depth of wells 12 feet.
Shadhi شدي	Some miles west of 'Arafjiyah.	Do.	Depth 6 feet; some of the wells are sweet; the water of others is undrinkable.
Takhādīd تخاديد	12 miles south- south-east of 'Arq and 11 north- north-west of Hamudh.	Do.	Water sweet; depth of wells 12 feet.

The principal features of the coast of Sūdah are described in the article upon the **Kuwait** Principality: in order from north to south they are—Rās-al-Khafji, Hadd-al-Misha'ab, Jazīrat-al-Maqta', Bandar Mis-ha'ab, Jabal 'Amūdah, Bū Rāsain, Rās-as-Safāniyah, Dōhat-al-Kharais, Rās-at-Tanājib, Dōhat Balbūl and Jabal Manīfah.

SŪDĀN سودان

Singular Suwaidi سُويدي. A tribe of Trucial 'Omān, Qatar and Bahrain; they are closely connected with the **Kunūd**, and their descent from Aswad-al-Kindi—supposed to have been an immigrant from Yaman in the time of Muhammad—is generally admitted.

In Trucial 'Omān the Sūdān have 375 houses at Abu Dhabi Town and 30 at Batīn in the Abu Dhabi Principality; 250 at Dībai Town, 300 at Shārjah Town and 20 on Bū Mūsa Island in the Shaikhdōm of Shārjah; and 12 at 'Ajmān: in all nearly 1,000 houses. In Qatar they occur at Dōhah, 80 houses, and in Bahrain at Hadd, 10 houses. On Sirri Island there are about 40 families. The total number of the tribe may consequently be estimated at about 5,500 souls, of whom almost 5,000 reside in the ports of Trucial 'Omān.

There is little to differentiate the Sūdān of Trucial 'Omān from the other tribes among whom they dwell; but those of Qatar are distinguished from most of their Sunni neighbours by being Hanābilah and not Muwālik; their two principal divisions are the Āl Ramdhā and the Āl Sālmin. The northern Sūdān of Qatar were once an influential community; but after 1867 their power declined, in consequence of the attack made on Dōhah in that year by the Shaikhs of Bahrain and Abu Dhabi: they now live by pearl dealing, by pearl diving and by seafaring occupations.

SULTĀN (ĀL BŪ) آل بوسلطان

A tribe of which the population of the **Hillah** Qadha in Turkish 'Irāq is to a large extent composed: they seem to occupy the whole, or nearly the whole, of the Bārmānah and Mamdūhiyah subdivisions of the district, which follow one another on the left bank of the Euphrates below **Hillah** Town. The Āl Bū Sultān are also found in the Najaf Qadha.

The following are some of the better known sections of the Āl Bū Sultān :—

'Abdullah (Āl Bū)	عبد الله	Khalil (Āl Bū)	خليل
'Anah (Āl Bū)	عنه	Maraizah (Āl Bū)	مريرة
Daghairāt	دغيرات	Mansūr (Āl Bū)	منصور
Darwish (Āl Bū)	درويش	Masā'id (Āl Bū)	مساعد
Gharān (Āl Bū)	غران	Salih (Āl Bū)	صالح
Hamad (Āl Bū)	حمد	Samandar (Āl Bū)	سمندر
Hamdah (Āl Bū)	حمدة	Saqar (Āl Bū)	سقر
Harish (Āl Bū)	حريش	Shakair (Āl Bū)	شكير
Husain 'Ali (Āl Bū)	حصين علي	Sharifāt	شريفات
'Īsa (Āl Bū)	عيسى	Shāwi (Āl Bū)	شاوني
Janābiyīn	جنابيين	Talabah (Āl Bū)	طلبة
Jaraiyāt	حريات	Thābit (Āl Bū)	ثابت
Jarbū'	جربوع	Zahairīyah	زهيرية
Jāsim (Āl Bū)	جاسم	and	
Kasairāt	كصيرات	Zuwain	زوين

The Karākishah tribe are sometimes spoken of as a section of the Āl Bū Sultān, so also the 'Uwaisāt.

The Āl Bū Sultān are poorly armed and have few horses : there is enmity between them and the Jahaish. They are a sedentary tribe,

Singular Salaiti سليطي. A tribe found at the present day almost entirely in **Qatar** and described as a branch of the Bani Mālik. According to some authorities they arrived from an original seat in Turkish 'Irāq by way of Persia and should therefore be classed as **Hūwalah**, but statement and inference are both doubtful. They have 650 houses at **Dōhah** in **Qatar** and 10 at **Hālat-as-Sulutah** in **Bahrain** ;

SULUTAH
سلطه

they live by pearl diving, pearl dealing, navigation, and the breeding of cattle and camels. The Sulutah are Māliki Sunnis and appear to be of restless habits. A number of them immigrated into **Bahrain** with the 'Utūb in 1783; and some were settled at Dammām in the **Qatif** Oasis during the earlier part of the 19th century. The descendants of those who went to **Bahrain**, finding themselves on the losing side when Shaikh 'Īsa was established as Shaikh of **Bahrain** in 1869, fled back to **Qatar**; but a few of them returned to **Bahrain** in 1893 in consequence of trouble between the Shaikh of **Dōhah** and the Wālī of **Basrah**.

**SUMAIS-
MAH**
سمايس

A walled village on the east coast of **Qatar**, situated at the bottom of a small bay about midway between **Lūsail** and **Khor Shaqīq**. One mile east of it, at the southern point of the same bay, is the village of **Dha'āin** with which it is intimately connected. Sumaismah is inhabited by about 250 families of the Āl Bu **Kuwārah** tribe, and there are also a few **Kibīсах**. There are 50 pearl boats here, also 10 other sea-going vessels and 10 fishing boats. Livestock include 6 horses and 70 camels. Drinking water is obtained from the wells of 'Awainat Bin-Husain, 4 miles to the westward: near the village there is also a small well called **Khariqat** خريقة Sumaismah, but its water is bitter.

SUMMĀN
صمان

A huge district, the northern part of which is claimed by the present Shaikh of **Kuwait** as part of his territory; it lies between the **Dahānah** desert on the west and the districts of **Dibdibah** and **Shaqg**, the Abu Dhahair hills and the Taff hills in **Hasa** on the east. Summān extends approximately from the latitude of **Hafar** on the north to the route between **Riyādh** and **Hofūf** on the south, and possibly beyond; its length from north-west to south-east is thus at least 240 miles. It is divided, half way between the extreme points mentioned, by the **Wabrah** route from **Kuwait** to **Najd**; and its breadth, which at **Wabrah** is 90 miles, diminishes southwards to about 20 miles at the place where the road between **Riyādh** and **Hofūf** crosses it.

Entered from the **Kuwait** side, by the **Wabrah** route, the Summān is at first a confused region of earthy mounds and flat-topped sandstone

hills, through which run shallow winding valleys that in spring are brightened here and there by wild flowers, grass and shrubs. Further on the hills become more entangled, and the celebrated wells, cross-roads and camping ground of **Wabrah** are reached. Beyond **Wabrah** the country becomes again more open; the valleys, broad and flat-bottomed, run with winding courses almost north and south, while the hills, low, level and less irregularly disposed, are frequently ribanded near their bases with brick-colour or, when their form is conical, exhibit brick-red in their summits. A barren and glaring tract follows and is succeeded by a second labyrinth of valleys, but the aspect of the country is now milder. The last 20 miles, as the western border of the Summān is approached, consists of broken ground with patches of grass and brushwood; it gradually opens into undulating plains, with outcrops of sandstone, which end abruptly at the sandy barrier of the **Dahānah**.

On the **Riyādh-Hofūf** road the Summān presents towards the west scarped and embayed cliffs from 50 to 100 feet high, and on this parallel the central portion consists of bare plains, reaching to the horizon and strewn with gravel and small stones, that afford no fuel and no grazing for camels.

After good rain there is admirable pasture throughout the greater part of the Summān, better than that of the **Dahānah**. The common brushwood of the tract is a kind of wild myrtle; and sour sorrel, said to have been introduced by the Turks in **Hasa**, is abundant. In spring wild parsley and various wild flowers are seen.*

The Arabs who encamp in Summān are nearly all **Mutair**; but towards the south end there are some **'Ajmān** who occupy it in common with the **Mutair**. The tract is visited also by **Bani Khālid**, **Qahtān** and **Sabai'**.

The best known wells in the Summān are those of **Wabrah**; but it also contains those of **Sāfah**, mentioned in the articles on **Hafar** and **Dhula'-al-Mi'ajil**.

A division of the Muntafik Sanjāq of the Basrah Wilāyat in Turkish **'Irāq**.

* Fuller information about the botany and geology of Summān is contained in *Pelly's Report on a Journey to the Wahabee Capital*, especially Appendices II and III.

SŪQ-ASH-SHUYŪKH

سوق الشين
QADHA

Position and boundaries.—This Qadha lies upon both sides of the **Euphrates** river, nearly all of it below the town from which it takes its name. It is bounded by the Qadha of **Shatrat-al-'Amārah** on the north, by that of **Qūrnah** on the east, by the **Shāmiyah** desert on the south and by the **Nāsiriya** Qadha on the west.

Topography and inhabitants.—The town of Sūq-ash-Shuyūkh is the only place of importance in the Qadha, unless Garmah گرمه and Hammār حمار are to be reckoned as being the headquarters of Nāhiyāhs. Hammār is situated at the eastern end of the district, on the left bank of the **Euphrates** at the place where it is joined by the principal channel of the **Shatt-al-Gharāf**, viz., about 35 miles by water below Sūq-ash-Shuyūkh and on equal distance above **Madinah**. The **Euphrates** and the large marshes formed by the meeting of that river with the **Shatt-al-Gharāf** are the distinctive features of the district. The people of the country are **Muntafik**, **Bani Asad**, **Ahl-al-Jazāir**, **Bani Mansūr** and **Bani Sa'id**; and Hammār, from the inhabitants of the marshes surrounding it, is sometimes spoken of as “**Bani Asad**.”

Population.—The fixed population of the Qadha is placed at 85,000 souls: except some 3,000 **Sunni Muhammadans**, 700 **Sabians** and 300 **Jews**, all are **Shi'ah Arabs**. The general health is not good in consequence of the marshes.

Resources.—Large parts of the district consist merely of swamp; and the productions, vegetable and animal, are those of the wetter portions of 'Irāq. Large quantities of matting are made from reeds and some matting is exported.

Administration.—Sūq-ash-Shuyūkh contains, besides the **Markaz** or headquarters Nāhiyah, two others, viz., **Garmah** and **Hammār**. There is generally a military detachment about 100 strong at Hammār, furnished (it seems probable) from the cantonment of **Khamisiyah** nearer to Sūq-ash-Shuyūkh. Hammār is a telegraph station. The **Dāirat-as-Saniyah** department holds land in the Qadha and is represented by a **Mamūr** at Hammār.

SŪQ-ASH-
SHUYŪKH
شرق الشيوخ
TOWN

An important town and municipality in Turkish 'Iraq, situated for the most part on the right bank of the **Euphrates**: it derives its name from the fact that the desert tribes resort to it for trade.

The town has numerous fruit gardens, and its date plantations extend up the left bank of the **Euphrates** till they meet those of **Nāsiriya**h Town; the neighbourhood, unfortunately, is marshy and the climate unhealthy. The **Euphrates** is spanned at the town by a bridge of about 12 pontoons, the number of which is increased to 15 or 16 when the river rises.

The population of Sūq-ash-Shuyūkh amounts to about 12,000 souls, about three-fourths of whom are Shi'ahs, but it includes 700 **Sabians** and 280 Jews. The religious head of the **Sabians**, known as the Qāri, lives here. The **Sabian** community, who have a small primary school for their children, are mostly goldsmiths, blacksmiths, and builders of Mashhūf canoes; they inhabit a quarter on the left bank of the river which is connected with the main town by the bridge of boats. The Jews are mostly petty traders and money-lenders.

There are over 200 shops at Sūq-ash-Shuyūkh, and 'Abas are manufactured; but, except with the Arab tribes, there is no considerable trade.

Sūq-ash-Shuyūkh is the headquarters of a Qadha of the same name in the Sanjāq of Muntafik, and it is connected by a single line of telegraph with the town of **Nāsiriya**h above, and with the village of Hammār below it. A post office also exists, and the Customs department is represented by a Mamūr, while the affairs of the river are controlled by a harbour-master. There are no troops at Sūq-ash-Shuyūkh proper; but a battalion of infantry with its headquarters at Khamisiyah خميسية, a little further down the **Euphrates**, is dispersed in detachments about the adjacent country.

A town of great political and commercial importance on the coast of the Eastern **Hajar** of the 'Omān Sultanate; it is reckoned the second town of the Sultanate in size, coming next after **Matrah** of which the population is 14,000, while that of Sūr with its suburbs is about 12,000 souls. Sūr is situated 17 miles west of Rās-al-Hadd and 94 miles south-east of **Masqat**. The shore at Sūr is low and sandy, destitute both of trees and of other vegetation. The principal features of the place are a creek, with the town standing on both sides of its entrance; a stony ridge, called 'Is العيص, which rises about 50 feet high from shingly flats,

SŪR *

سور
or
سور

* A rough plan of Sūr will be found among the Government of India's Foreign Proceedings for September 1903. See also Admiralty Chart No. 236—10C and *Sketch Map of the Country round Sūr*, 1903. Foreign Proceedings for May 1905 may also be consulted.

and runs from south-east to north-west behind the town at a distance of 2 miles from the sea; and a plain, having the same direction as the ridge and lying behind it, which contains the lower course of Wādī Falaij.

The entrance of the creek runs southwards, is half a mile long, 150 yards wide and has only $\frac{3}{4}$ of a fathom in it at low water. The interior basin is about 2 miles in extent from east to west with several indentations; at low tide it is practically dry. It follows that Sūr cannot serve as a port except for vessels of the smallest size.

The town of Sūr consists of two large quarters separated by the entrance of the creek. That on the eastern side is 'Aiqa عيقا; it consists of about 300 houses of the Bani Bū 'Alī tribe. On the opposite side is Muqraimatain مقرميتين, a large quarter of 1,500 houses inhabited by Jannabah. The houses in both quarters are mostly of mud and stone with stuccoed roofs, but there is also a proportion of huts; the Muqraimatain quarter contains both the best houses and the largest number of huts. There are no date-groves in the vicinity of those two quarters, which together compose the town of Sūr Proper and have an aggregate population of about 9,000 souls; but livestock amount at 'Aiqa to 15 camels, 50 donkeys, 30 cattle and 150 sheep and goats, and at Muqraimatain to 8 horses, 40 camels, 200 donkeys, 85 cattle and 600 sheep and goats.

Adjoining the north-west end of the stony ridge already mentioned, about $1\frac{1}{2}$ miles west of Muqraimatain and $\frac{1}{2}$ a mile from the sea, is Sanaisalah سنيسله, a village of 200 houses inhabited by the Ghāfirī tribe of Bani Sinān, which, with another village Shāghi شاعبي of 100 houses of the Jannabah tribe on the coast to the north of it, may be regarded as a component part of Sūr. Animals at Sanaisalah are 60 donkeys, 30 cattle and 80 sheep and goats; at Shāghi 15 donkeys, 10 cattle and 30 sheep and goats. The people of Sanaisalah and Shāghi are sailors and fishermen, owning 8 Baghlahs, 20 Badans and 15 smaller boats. On the plain at the back of the ridge, between the ridge and the bed of Wādī Falaij, is Bilād-as-Sūr, بلاد الصور, a stone-built village with extensive date-groves and cultivation of lucerne, divided into about 7 quarters and comprising altogether some 250 houses of Masākirah, Hishm and other tribes, who supply the town proper of Sūr with vegetables and fodder: Bilād-as-Sūr is said to be a flourishing settlement and to possess 95 wells, 250 cattle and 150 donkeys. Part of Bilād-as-Sūr is called Sūq Sūr سوق صور. One mile north-west of Bilād-as-Sūr is a village called Jināh جنه of 40 houses, mostly huts, of Bani Bū Hasan of the Huwājir section; it has 10 cattle and 400 sheep and goats, and there is an old fort.

COPYRIGHT.

The port of Sur.

[MAJ. P. Z. COX.]

There are two routes from Muqraimatain to Bilād-as-Sūr; the more direct follows the shore of the creek and crosses the stony ridge at its middle; the other, more circuitous, crosses the ridge near its east end.

The inhabitants of Muqraimatain obtain their drinking water from Bilād-as-Sūr; from Jināh; from Sakaikarah سكيكره, a white-walled enclosure with date-palms at the head of the Sūr creek; and from Shāmih شاميه, a spot on the east side of the creek to the south of 'Aiqa: the inhabitants of 'Aiqa depend chiefly on Shāmih.

Sūr is the port of all Ja'alān and nearly all Sharqīyah: the celebrated dates of Badiyah are shipped at Sūr. Imports at Sūr are rice, piece-goods, wheat and other grains, coffee, kerosene and other oils from Bombay and various Indian ports; ghi from Dhufār; and tortoise-shell, shark-fins and dried fish, for re-export, from Masirah. The trade of Hadd and Masirah is entirely with Sūr, and that of Kalhāt is partly with Sūr and partly with Masqat Town; but Daghamar and Quryāt deal exclusively with Masqat. It is said that there were once 100 Hindu traders in Sūq Sūr, but after the attack on that place in 1865 by Wakhābis, Jannabah, etc., in which one Hindu was killed and another wounded, they lost confidence, and now there remain (exclusive of dependents) only 7 in Muqraimatain, one in 'Aiqa and one at Sūq Sūr. The sea-going vessels belonging to Sūr and its suburbs are at present 50 Baghlahs, 4 Sambūqs and 40 smaller craft, chiefly Badans. The slave trade still lingers here but in a much restricted condition.

Sūr is a troublesome and disturbed place in consequence partly of a perpetual feud which exists between the Bani Bū 'Ali of 'Aiqa and the Jannabah of Muqraimatain, partly of the insufficient control exercised by the Sultān of 'Omān, and partly of the way in which the inhabitants, in late years, have been encouraged by French agency to defy the Sultān's authority. The Sultān maintains a Wāli here, but has no garrison in the town of Sūr Proper. The following forts and posts in the environs are kept up by him, partially for the protection of the town and partially in order to control it by commanding its water supply:—

Name.	Position.	Strength of garrison.	REMARKS.
Sanaisalah سانيساله	At the north-western extremity of the ridge, adjoining the village of Sanaisalah.	30	To command the approach to Sūr and protect the village of Sanaisalah.

Name.	Position.	Strength of garrison.	REMARKS.
'Īs عيس	On the ridge 2 miles south-west of Sūr.	10	To command the road from Sūr to Bilād-as-Sūr and the interior which at this point runs in a gorge in the ridge.
Burj-al-Murabba' برج المربع	Between 'Īs and Burj Sulaimān.	15	Built in 1902.
Jināh جناه	At the village of Jināh.	5	To control one source of water supply to Sūr.
Hisn-as-Saiyid حصن السيد	At Bilād-as-Sūr.	40	To protect the settlement and cut off, if necessary, part of the water supply of Sūr.
Burj Sulaimān برج سليمان	Do.	15	Do.
Sakaikarah سكيكرة	At the head of the Sūr creek.	10	To control the water at this place.
Shāmih شامه	South of 'Aiqā, on the east side of the creek.	10	Do.

The total garrison of Sūr is thus about 135 men. The weakness of the Sultān's position at Sūr is illustrated by the fact that from this place and from Hadd he only succeeds in realising about \$6,000 a year as customs proper and \$2,200 as Zakāt, the whole of which is absorbed by the local expenses of maintaining his position, whereas if his power were firmly established he could collect (according to an estimate) \$50,000 per annum in customs from Sūr alone.

SUWĀDĪ (JAZĀĪR)*

Some small islands off the Bātinah coast of the 'Omān Sultanate closely adjoining Rās Suwādi on its west side, about midway between Barkah and Masna'ah. The group consists of one large islet and 6

* A large scale delineation of these islands (with view) will be found in Chart No. 2371—228.

COPYRIGHT.

Bilād-as-Sur.

(May P Z Cox)

smaller ones extending 2 miles east and west. The large islet, called Jabal 'Add ^{عَدّ}, is the easternmost; it is more than $\frac{1}{2}$ a mile long and more than $\frac{1}{4}$ of a mile broad, and it rises 280 feet above the sea; the channel dividing it from Rās Suwādi is fordable at low water. The other islets westward of Jabal 'Add are from 50 to 150 feet high, and the only one of them deserving notice is the southernmost, Maqbarah ^{مَقْبَرَة}: between it and the mainland is a partially sheltered anchorage, which is crowded in the date season and has been used as a headquarters for boats of the British naval squadron on detached duty.

SUWAIQ

سويق

A town and port on the Bātinah coast of the 'Omān Sultanate, 14 miles west-north-west of Masna'ah and 22 miles east-south-east of Khābūrah. It is a compact place of 600 dwellings, all huts: the inhabitants are Suwālih, Balūchis and Persians: they live by sea-faring occupations and the cultivation of dates. There are 6 families of Khōjahs and 7 Hindus. Suwaiq is one of the ports of Wādi Bani Ghāfir. About 10 Baqārahs and 5 Badans are owned here and run to Masqat Town and the Persian Gulf; there are also 20 fishing boats. Date trees number about 8,000; irrigation is from wells. Animals are 100 camels, 90 donkeys, 150 cattle and 400 sheep and goats. The Sultān of 'Omān has a Wāli here and a fort garrisoned by 25 men. Since 1901-02 the collection of taxes has been directly managed instead of being farmed; but as yet there is no revenue from customs proper and Zakāt brings in about \$2,000 per annum only, the whole of which is still spent locally in salaries, etc.

SUWAI-
RAHصويرة
or
سويرة

Also known as Hamidiyah ^{حميدية}, Sirah ^{سيره}, Jazīrah ^{جزيرة} and Juwaimisah ^{جويمسه}; a village in Turkish 'Irāq on the right bank of the Tigris, 85 miles by river below Baghdād City. By officials the place is generally spoken of as Jazīrah, and the name Hamidiyah is hardly ever used.

The population of Suwairah is about 750 souls, of whom a proportion are Fāili Kurds, 15 are Jews, and 15 are Oriental Christians. Of the present inhabitants 5 are British and 20 are Persian subjects.

The soil of Suwairah is productive, but the facilities for irrigation are not adequate. Wheat and barley are the usual crops; and, when the river overflows, cultivation of maize, sesame, and peas also is undertaken. Agricultural supplies not locally produced are generally brought across country from places in the **Hillah** Qadha. The liquorice plant grows in abundance in the vicinity.

The bazaar contains about 50 shops, and there are 3 merchants of substance and 1 goldsmith. An American liquorice-exporting firm has an agency here, and the Christians of the place are its employés.

Suwairah is the headquarters of the **Jazīrah** Qadha and the seat of a **Qāim-Maqām** who has under him a few civil police. In order to encourage the growth of a settlement here, the present Sultān of Turkey ordered free grants of land to be given in and around the place for a period of 10 years, which has now just expired; and to this fact the name of **Hamīdiyah** owes its origin. There is a customs house and a passport examining station, and the Turkish army is represented by a captain and lieutenant of the **Radifs**; but the place is not, apparently, a regular **Radif** centre. An elementary school is maintained by the Government, and the Turkish river steamers stop here to deliver and take up mails. Much land on the opposite bank is owned by **Muhammad Pāsha**, **Dāghistāni**, of the Turkish army, who has much influence with the local Arabs and is sometimes employed to mediate between them and the Government. The **Dāirat-as-Saniyah** has at present no land in the neighbourhood, but intends, it is said, to acquire some. There is a government reserved forest near Suwairah on the left bank of the **Tigris**.

Suwairah is completely surrounded by the country of the **Zubaid** tribe.

TAFF طاف

A tract in the **Hasa** Sanjāq; it adjoins **Jabal Taff**, towards its southern end, upon the east side. Its border on the west is **Jabal-at-Taff** from the salient known as **Naslatain-al-Farha** to the south end of the range, dividing it from **Summān**; on the south it is terminated by the **Hamrat-al-Jūdah** hill; on the east it is bounded by a line running from **Hamrat-al-Jūdah** to **Jabal Mathlūth** and separating it from **Jau-as-Sa'adān**; and on the north it meets the **Habl** tract along a line connecting **Jabal Mathlūth** and **Naslatain-al-Farha**. It should be remarked, however, that the **Bedouins** who would include the south-

western part of **Habl** in **Wādi-al-Miyāh** would deal similarly with **Taff** ; but the general opinion seems to be adverse to this view.

Taff consists of low lying, rocky ground, which forms a strip at the foot of the hills similarly named. It contains the following 5 wells :—

Name.	Vernacular equivalent.	Position.
'Arairah	عريرة	8 miles east-south-east of Injaibiyah.
Injaibiyah	النجيبية	9 miles south by east of Naslatain-al-Farha.
Judah	جوده	20 miles south of Injaibiyah between Jabal Jūdah and Jabal Hamrat-al-Judah.
Matālaiya'	مطاليع	2 miles north of 'Arairah.
Rubai'ah (Umm)	أم ربيعة	19 miles north-north-east of Jūdah and 11 miles south by west of Abwāb in Habl .

In English formerly called "Taurie". One of the **Shībkūh** ports of the **Persian Coast** ; it is situated about 20 miles south-east of **Kangūn** and 25 miles north-west of **Nāband**. **Tāhiri** lies in a small open bay, formed by low points 2 miles apart which project from the shore at either side of it and carry date-groves. The bay deepens regularly from the coast to 8 fathoms at $\frac{1}{2}$ a mile off shore. The village is built partly on the shore and partly up the side of the coast range behind it, which is here 700 feet high. A square fort stands on a hill at the west end, about 100 feet above sea level. There are about 150 stone houses inhabited by Arabs and Persians of various tribes ; the Arabs are in the majority and are **Shāfi'i** Sunnis ; the Persians supply a **Shi'ah** element. Water is from wells 3 fathoms deep, and there are about 350 date-palms besides cultivation of wheat and barley. Livestock are 10 horses, 50 donkeys, 500 cattle and 100 sheep. **Tāhiri** is the port of the **Galehdār** and **Jam** districts, immediately behind the maritime range, with which it is connected by passes practicable for camels and donkeys. The chief exports are tobacco and charcoal from **Galehdār** and salt-fish collected from the neighbouring coast villages. The people of **Tāhiri** are merchants, sailors, fishermen, pearl-divers, cultivators and date-gardeners : they own 6 trading **Šambūks**, which run to **'Omān** and **Basrah** as well as to Gulf ports, and

TĀHIRI
طاهري

4 fishing 'Āmilālis. In the neighbourhood is a small cape called Rās Majnūn, off which is a pearl bank. There is a post of the Imperial Persian Customs at Tāhiri.

The hills inland of Tāhiri, at a distance of 3 to 6 miles from the place, are said to be occupied by a **Balūchi** tribe who possess a quantity of livestock, chiefly sheep and goats, also a few date-palms, and who cultivate wheat, barley and maize.

The only claim of Tāhiri to distinction is the possession of prehistoric remains and early Muhammadan ruins. The sides of the ravines which come down from the hills on the north-west of the village are pierced with numerous chambers, most of which are inaccessible except by ladders, and in one place the hillside over a space of half a mile square has been worked into tiers of remarkable troughs. This portion is intersected by a ravine to which a flight of broad shallow steps, cut in the rough conglomerate rock, descends on either side. Here and there pillars of natural rock have been left standing, and the largest of these has been hollowed out to form a chamber. There are many wells in the hillside, one of which is 204 feet deep and contains 36 feet of good water; some of these wells are circular, some oblong, and the diameter is usually two or three feet; those furthest up the hill are the deepest. These remains are apparently pre-Islamic: the chambers appear to have been sepulchral, and some of them in 1857 still contained crumbling human bones.

On a plain near the shore immediately to the west of Tāhiri are the ruins of the old Muhammadan town, of Sīrāf سیراف, extending for a mile or more along the coast and for some distance up the slope of the foot-hills. These are now mere heaps of rough masonry; but foundations of houses, wells, and the remains of water-cisterns of the pattern still common on this coast—*viz.*, oblong excavations lined with gypsum cement and vaulted over—are still traceable. The whole extent of the ruins is strewn with broken pottery including many fragments of Chinese porcelain. The only building in a state of tolerable preservation is a mosque of well-cut stone and elegant design with pointed doors and windows. There are many ornamental monolithic tombstones bearing Kūfic inscriptions: one of these, now in the British Museum, bears a date equivalent to 991 A. D.*

* Accounts of the antiquities of Tāhiri are given by Kempthorne in the Transactions of the Bombay Geographical Society, Volume XVII (1857); by Colvill in a report forwarded to the Government of India with a letter No. 46 of 4th May 1866 by the Resident in the Persian Gulf; and by Stiffe in the Journal of the Geographical Society, Volume VI (1895): the last contains a sketch and ground-plan. Sīrāf was the principal emporium of the Persian Gulf in the 10th century of the Christian era and

TAIMAH

تيمه

An oasis and town on the western frontier of the principality of Jabal Shammar, to which politically, though not geographically, it belongs; it lies almost 200 miles west of Hāil and slightly over 200 miles north and a little west of Madinah. The altitude is some 3,120 feet above sea-level. Taimah stands in the midst of a barren, undulating desert with protruding rocks and a sprinkling of ironstone shingle; the actual site is a shallow, loamy flood-bottom; the place is healthy, and fever is unknown. The town consists of three blocks detached and separately walled; the principal is Haddāj هداج in the centre, the others are Gharb غرب on the north and Sharq شرق on the south.* The interior of each of these quarters consists of a labyrinth of shady lanes; the houses, many of which have an upper storey, do not as a rule form streets but stand apart, each surrounded by the date plantations belonging to the owner; the town consequently, in its general aspect, resembles one vast date grove. Less than a mile to the westward are the ruins of an ancient town, built of black basalt, including remains of columns.

The population, now estimated at 2,000 souls, is Shammar; a colony, it is said, of Jabal Shammar which has been 200 years in existence. Though far removed in distance from the Shammar Dirah, the speech of the people of Taimah is still that of their ancestors, and like their kinsmen of Hāil they are tall and ready of tongue. They go barefoot, but are well dressed in clothing from Turkish 'Irāq; their women do not wear the veil. In character they are said to be shallow-minded, without foresight or reflection. There are no beggars or destitute in the place. The surrounding Bedouins are 'Anizah of various sections: Sharārāt also pay annual visits to Taimah.

Taimah is in the first place a date oasis; its produce as such is excellent and includes the variety of date called Hilwah. Some of the palms are 90 feet high and are said to be 200 years old. Wheat, barley and very fine oats are grown, also millet and Duqah, a small grain resembling Dukhn, but the cultivation of cereals is not extensive; the wheat and barley harvest is in the beginning of April. Fruits are figs, grapes, peaches, and pomegranates, and there is some

was then commercially a rival of Basrah, but it suffered severely by an earthquake in 977 A. D. and thereafter was gradually supplanted by Qais; at the beginning of the 13th century A. D. Sirāf was already reduced to a heap of ruins. The imports of Sirāf in the 10th century were aloes-wood (for burning), amber, camphor, precious gems, bamboos, ivory, ebony, paper, sandal-wood, and all kinds of Indian perfumes, drugs and condiments; in the town itself excellent napkins were made, also linen veils, and it was a great market for pearls. See Le Strange's *Lands of the Eastern Caliphate*.

* See plan in Doughty (I, 287).

tobacco. Cattle are few but poultry common. Water is abundant, clear, and agreeable to drink. The main well of Haddāj, from which the most of the plantations are watered, is on an enormous scale and is the most celebrated object at Taimah. The mouth has 4 unequal sides and is about 50 feet in diameter, the depth is about 40 feet ; there are no less than 60 draw-wheel frames, and 48 camels are constantly employed in raising water. This well is in theory public property, but in practice it is controlled by several of the more influential families who mulct the others for its use. Landed property is of high value in Taimah owing to the security of the water supply, which never fails.

Local manufactures are 'Abas, sleeping carpets of black wool with coloured borders, saddle-bags, goats'-hair cloth for making tents, and household utensils. There are a few shops, but they are usually rooms in private houses opening on the street. Taimah is a date-purchasing market for the Bedouins of the surrounding desert, who dispose here of part of their sheep, goats and pastoral produce. The imports are chiefly piece-goods, metals, spices and a few articles of European manufacture ; these are received partly through Hāil and partly through Madinah. The currency consists of Riyāls and Turkish coins, supplemented by camels and dates which are used for barter.

In 1878 Taimah was governed in the name of the **Shammar** Amīr by an African freedman, and the revenue realised from the town was \$4,000 a year.

Taimah is interesting chiefly on account of its ruins, which in 1883 yielded the celebrated Taimah stone, one of the most precious of Semitic monuments.*

TAMĪM (BANI) (I) بني تميم

An important and widely distributed Arab tribe of Central Arabia ; they form one of the principal ingredients in the population, not only in Southern Najd, where perhaps the bulk of them are found, but also in Qasim and Jabal Shammar.

Distribution.—In Hautah Bani Tamim are found at Hilwah and Quwai'; in Kharj at 'Adhār, Dilam, Na'ajān and Sulaimiyah ; in 'Āridh at Dhrumah Proper and Mizāhmiyah in Dhrumah, at 'Ammāriyah, Dara'iyah, 'Arjah, Riyādh, Manfūhah and Masāni' upon Wadi Hanifah, and at Haraimlah, Hizwah, Mahrīqah, Sidūs, Sufurrah and Thādiq in the

*See Hogarth, pages 280-2.

Mahmal division of the district ; in **Sadair** at 'Ashairah, 'Audah, Dākhlah, Dhalmah, Harmah, Hasūn, Hautah, Jalājil, Janūbiyah, Khatāmāh, Khis, **Majma'**, Raudhah, Ruwaidhah, Tamair, Tuwaim, and Wushai ; in **Washam** at Fara'ah, Haraiyiq, Qussab, Tharmidah and Washaiqir ; and in Wādi-as-Sirr at Faidhah. These are their principal settlements in Southern **Najd**. In **Qasim** they are numerous in the two capitals, 'Anaizah and **Buraidah**, as well as in a number of other villages ; and in **Jabal Shammar** they occur at 'Alaq, Qasr-al-'Ashīrwāt, **Faid**, **Qafār**, Mustajiddah, Samīrah, Silaimi and Sab'an. **Qafār** is probably the northernmost place which they inhabit, unless, as is stated in one report, some are found at **Jauf-al-'Āmir** also.

Arabs who claim to be Bani Tamīm are found at places on the **Persian Coast**, e.g., in the **Rūd-hilleh** district.

Divisions and number.—The genealogical divisions of the Bani Tamīm are of little importance, inasmuch as their tribal organisation has disappeared and all of them are now attached to the soil. The following however, recognised as sections, have come to light in the course of our enquiries :—

Husain	حسين	at Hautah in Sadair.	Nawāsir	نواصر	at Dhrumh, and at Hautah and Majma' in Sadair.
Jabbār ('Abdul)	عبد الجبار	at Dhalmah in Sadair.	Thamārah	ثماره	at Majma' .
Mādhi (Al)	أل ماضي	at Harmah and Raudhah in Sadair.	Tuwaim	تويم	in Kharj .
Majid	ماجد	at Thādiq in 'Aridh.	Wahabah	وهبه	at Majma' .
Mu'ammār (Bin)	بن معمر	at Sīdūs in 'Aridh.	Wahūb	رحوب	at Riyādh .

The total number of the Bani Tamīm can be roughly ascertained from the list of villages given above. In all districts in which they are found they are included in the estimate of the fixed population.

Life and character.—At the present day the Bani 'Tamīm are entirely a settled tribe and have lost altogether those nomadic habits to which a proportion at least of nearly all other tribes cling. They are skilful and diligent agriculturists, seldom engaging in war and not often in trade. Those of **Qasim** and **Jabal Shammar** are physically more robust than the Bedouins by whom they are surrounded, and they have the spirit of industry and a good plain understanding ; but they are heavy, dull, mean and inhospitable, and sometimes they are ultra-religious, visiting Makkah as frequently as they have opportunity.

TAMĪM
(BANI) (II)
بنی تمیم

A large and powerful Arab tribe, dwellers in tents, who range the drier parts of the country between the **Kārūn**, Shatt-al-'Arab and **Tigris** Rivers; they are said to be of **Muntafik** origin. In religion they are mostly, but not all, Sunni Muhammadans; and in their mode of life also they differ considerably from the other Arab tribes of 'Arabistān. Their territory in Southern 'Arabistān includes the right bank of the **Kārūn** between Milaiḥān and Sab'eh, and they may be found anywhere to the west of that line up to the Turkish frontier. In summer the bulk of the tribe approach the **Kārūn**; in the date season they encamp on the left bank of the Shatt-al-'Arab between Nashwah and Da'aiji, where many of them own date plantations; in winter and spring they occupy the western end of their country, but a few of the 'Ayāishah section sometimes encamp and cultivate in the cold weather at Maqtū' on the **Kārūn** River and others more regularly appear at Qājariyeh. The Maqātīf مقاطيف of the **Jarrāhi** district are said to be a branch of the Bani Tamīm. There is no estimate of the number of the tribe by sections, but their strength is reckoned at 1,000 unmounted and 2,000 mounted men, part of the latter being camel-riders and their total number of souls may therefore be about 10,000. They own some 2,500 camels, 1,400 horses and large numbers of donkeys, cattle, and sheep. They also cultivate wheat and barley. When in Southern 'Arabistān they pay revenue to the Shaikh of **Muhammareh** at the rate of 10 Qrāns per cultivated Faddān as well as one-fourth of the actual gross produce. Their divisions are the Bani Mālik مالک, to whom belong the ruling family; the 'Awaināt عوينات; the 'Ayāishah عيائشه; the Barāji'ah برارجع; the Ghazaiwi غزايوي; the Ghizli غزلي; the Ghizzi غزي; the Halāf حلاف; the Hāmid حامد; the Hamūdi حمودي; the Bani Nahad بني نهدي; the Bani Sakain سكين, and the Sulaimān سليمان. The correspondence of some of these names with those of sections of the Bani Sāleh will be observed. The Bani Tamīm are now all enrolled in the Āl Bū Kāsib division of the **Muhaisin** tribe; the 'Awaināt and the 'Ayāishah divisions have been so affiliated to the **Muhaisin** for some years.

TANAIJ
طنيج

Or Tanaiq طنين : singular, Tanaiji طنيجي. An Arab tribe of Trucial 'Omān; their principal places are **Rams** (400 houses) and **Dhaid** (70 houses), and a few are found at **Hamriyah**. They have exclusive posses-

sion of **Rams**, and **Dhaid** is the chief centre of their nomad sections, whose fighting men are said to number 500. The settled portion of the tribe may perhaps be estimated at 2,500, and the nomadic at 1,500 souls. The **Tanaij** belong to the Ghāfiri faction and are Hanbali Sunnis in religion.

This district of the **Persian Coast**, which belongs to the province of **Fārs**, is somewhat irregular in shape. Its maximum length from north to south is about 40 miles and the northern half has a breadth inland of about 20 miles, but the southern half is merely a narrow strip upon the coast.

TANGIS-
TĀN
تنگستان

Limits.—The northern boundary is a line running east and west a few miles south of the important village of **Chāh Kūtāh** and dividing the district from **Dashtistān**. The western boundary is the **Mashīleh** of **Būshehr** and, further south, the coast of the Persian Gulf. The perimeter is completed by a line which, commencing at the north-east corner of the district, follows the crest of the main maritime range until it has passed several miles beyond **Ahram** and then crosses to the summit of a subsidiary maritime range, much nearer to the sea, along which it continues southwards for about 20 miles, finally running down to the coast a little south of the **Bāraki** group of villages and north of **Qalāt in Dashti**. **Khāiz*** خايز in the upper valley of the **Ahram** stream is attached to the district, but does not belong to it geographically.

Physical characteristics.—The great maritime range where it adjoins **Tangistān** is of no great elevation, the highest point being **Kūh-i-Qal'eh-i-Dukhtar** کوه قلعه دختر (better known locally as **Kūh Gūgardi** (کوه گرگردی), which is 3,938 feet high and is situated a few miles to the north-east of the **Tangistān** capital of **Ahram**. A spring of extremely hot water is said to issue from the western face of **Kūh Gūgardi** and to be adjoined by deposits of sulphur.

An important feature of the district proper is the **Ahram** or **Bāhūsh** باهرش stream, which has its exit from the hills on the south side of **Kūh Gūgardi** and, leaving the town of **Ahram** on its right bank, runs north-west and joins the **Chāh Kūtāh** stream of the **Dashtistān** district a few

* **Khāiz**, though possessing apparently the best water and orchards in the **Khān's** jurisdiction, has been omitted from the *Gazetteer* as lying beyond the maritime plain.

miles above the point where the latter empties itself into the swamps near **Būshehr** Town. A short way below **Ahram** Town this stream has a channel width of 100 yards, the right bank being 20 feet high, of a tenacious white clay, while the left bank is lower and more shelving; but the breadth of the actual stream is ordinarily about 30 feet and its depth 1 foot only: it is believed however to be liable to sudden floods after rain in the hills. Part of the district is irrigated from this stream.

The surface of the Tangistān district would be flat and open throughout, as it is in its northern part, were it not for the accident of a considerable sandstone range which, running parallel to the sea at the distance of a mile or two inland, divides the southern portion of the district into an inland valley and a littoral tract. These three physical features, the inland valley, the coastal range and the maritime strip, are all prolonged southwards into the **Dashti** district. The inland valley is cultivated, under the hills, and a chain of small villages depending on cultivation extends down each side of it. The coastal range has a length of over 50 miles and belongs as much to the **Dashti** district as it does to Tangistān: its most general name appears to be that of **Kūh-i-Münd** کوه مرند, derived probably from the **Münd** River upon which its southern extremity abuts; but it is also called **Kūh-i-Kār** کوه کار because parts of it are capable of being cultivated. The northernmost point of **Kūh-i-Münd** is only 467 feet high; but at the middle of its length, behind the coast village of **Bulkhair**, the range attains a height of 2,682 feet. It is crossed in one or two spots by passes leading from the coast to the Tangistān Valley and **Khurmūj**.

Where the district is flat the surface is generally an alluvial clay, often covered with good natural grazing and sometimes cultivated with cereals, and travelling is rendered difficult by mud in wet weather. The water of the **Ahram** stream is almost undrinkable except in rainy weather, and in the hot season the water supply everywhere depends upon wells. The climate and seasons of Tangistān resemble those of **Dashti**.

The Tangistān coast possesses no remarkable features: off it the tidal stream is so weak as often to be imperceptible.

Population.—The population of Tangistān may be roughly estimated at 10,000 souls. The people belong to various little known tribes among which are the **Darhīru** درهیر, **Darshamāl** درشمال, **Gūtu** گوتو, **Jammāli** جمالی, **Khadaru** خدر, **Pūlādi** پولادی, **Zanganeh** زنگنه and **Zandabūd** زندبرد, but they are generally spoken of in the aggregate as **Tangistānis**. The **Zandabūd** are said to have

immigrated from the neighbourhood of Shīrāz, the Zanganeh to have come from central Persia or Afghanistan, and the Pūlādis (of whom the Khān is one) to be settlers from Central Arabia, but the last are now completely Persianised. The name Gūtu means "large" in the Tangistāni dialect; the Gūtus and Jammālis are always at feud. The Khadaru tribe is also called Zāir Khizar زائر خضر. The Zanganeh are reckoned a brave tribe. In religion the Tangistānis are Shī'ahs and their language is a dialect of Persian. Notwithstanding their nearness to Būshehr Town, they still live in a rude and uncivilised state; blood-feuds flourish amongst them and their name continues to be, in Būshehr Town, a synonym for lawlessness, brutality and ignorance. The houses in the villages are mostly huts of date leaves plastered with mud, but some are built of stones. The people are poor in consequence of their perpetual wars. There are about 2 rifles to every 3 houses.

Agriculture and trade.—The district is entirely agricultural and is reckoned highly fertile. The chief crops are wheat, barley and dates, to which may be added water melons, cucumbers of two kinds (Bālang and Khiyārzeḥ) and onions. Fruits are lemons, sweet limes, pomegranates and a kind of orange (Naranji) which is grafted on the lemon. Part of the district is irrigated from the Ahram stream. There is no internal or external trade unless we reckon a small uncertain export of dates and of other fruits from the hills, such as pomegranates, grapes, lemons, oranges and citrons, and a more regular export of locally manufactured Gach or gypsum cement. A poor kind of woollen cloth for making 'Abas is the only local manufacture. The currency consists of ordinary Persian Qrāns and copper change, and the standards of weight throughout the district are a Man of 8 lbs. 4 oz. English and a Hāshim Man of 16 Mans or 132 lbs. English.

Communications and transport.—The only routes traversing the district are one from Būshehr *viā* Ahram to Jahrum and Fasa and the coast-route from Būshehr to Bandar 'Abbās; neither is of much importance, and the latter is of course unable to compete with sea-carriage. The journey from Ahram to Burāzjān presents no difficulties, but the road crosses a spur of the hills between Ābād and Samal. The transport of the Tangistān district has been calculated at 150 horses, 60 mules, 850 camels and 2,500 donkeys.

Administration.—Tangistān belongs to the province of Fārs. The total revenue is 10,300 Tūmāns a year, for the whole of which the Khān

of Tangistān, at present Haidar Khān, is responsible ; he pays 7,300 Tūmāns a year to the Governor-General of Fārs and 3,000 Tūmāns to the Nizām-as-Saltaneh, who holds **Ahram**, Khāiz and Ābād in Tiyl. The residence of the Khān, who belongs to the Pūlādi tribe, has for at least 40 years been at **Ahram** ; it is said to have been formerly at Tangistān village. In Tangistān there is no pretence of government, a deficiency which is attributed to the backward condition of the people and their intractable character ; but Saiyids and Mullas are respected and dispense a kind of rudimentary civil justice, as they do in other districts.

The Khān is badly off in consequence of the unsettled condition of the country, but by leasing the villages of the district to their headmen he manages to realise a considerable revenue. The incidence of the land tax is about 26 Qrāns per Gāu of cultivation ; date trees are subject to a tax of $\frac{1}{2}$ a Qrān each per annum ; and there is a poll tax on residents of 50 Qrāns a year and on new settlers of 25 to 30 Qrāns. At the coast there is a tax on boats. The rule of the present Khān is considered oppressive, and of late there has been much emigration from his territory to the **Būshehr** Peninsula.

Topography.—The following are the principal places in Tangistān :—

Name.	Position.	Houses and inhabitants.	REMARKS.
Ābād آباد	10 miles north by west of Ahram .	80 houses of Zang-aneh.	Wheat, barley, dates and water-melons are grown, charcoal is manufactured, and firewood is collected. Date palms number about 6,000 and animals are 10 horses, 150 donkeys, 100 cattle and 400 sheep and goats.
Ahram اھرم	27 miles east-south-east of Būshehr Town and 17 miles north-north-west of Khurmūj	See article Ahram .
'Ali Changi علي چنگي	12 miles east by south of Būshehr Town.	50 houses.	The crops are wheat, barley and dates, the palms being about 2,000 in number. Animals are 10 horses, 100 donkeys, 70 cattle and 200 sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
Ambārak امبارک	5 miles west by south of Ahram, on the western side of the Tangistān inland valley.	20 houses.	Wheat and barley are grown and there used to be 3,000 date palms, but these have been destroyed in tribal fighting. Livestock are 3 horses, 2 mules, 20 donkeys, 10 cattle and 100 sheep and goats.
'Āmiri عامري	On the coast adjoining Dilbār.	See Dilbār below.
Bāghak باغک	9 miles west by north of Ahram, at the northern end of the Kūh-i-Mūnd coast-range and upon the route from Būshehr Town to Ahram.	50 houses.	Wheat, barley, dates, water-melons and firewood are the products of this village, the palms numbering about 500; and livestock are 10 horses, 3 mules, 200 donkeys, 170 cattle and 500 sheep and goats. The place is enclosed by a mud wall 8 or 9 feet high with round towers at the corners.
Bāghcheh باغچه	6 miles south-south-west of Ahram, on the western side of the inland Tangistān Valley.	15 houses.	Wheat, barley and dates are grown.
Bāraki بارکي	On the coast, extending a few miles north and south of Khūr Shahābi.	A general name for the group composed by the villages of Gāhi, Rustami, 'Umari, Khūr Shahābi, Bulkhair, Bunju, Karri and Sālimābādeh, which (except Bulkhair and Bunju) succeed one another in order from north to south. All are separately described below.	These villages occupy a narrow plain between the hills and the sea. They supply Gach to Būshehr Town and each has about 4 fishing boats.
Bāshi باشي	On the coast, 16 miles south-east of Halileh on the Būshehr Peninsula.	100 houses.	The people are fishermen and own some Varjis and two cargo vessels, besides cultivating grain and dates and manufacturing lime.

Name.	Position.	Houses and inhabitants.	REMARKS.
Bulkhair بو الخیر	A village of the Bārakī group (see above), about 2 miles inland of Khūr Shahābi and close to Bunju.	100 houses.	The inhabitants grow dates and cereals and have several Baghlahs, Būms and Batils which run to Būshehr, Bahrain and Basrah. There are 200 date palms, 40 donkeys, 40 cattle and 200 sheep and goats.
Bunigaz بنیگز	4 miles east-south-east of 'Alī Changī, on one route from Būshehr Town to Ahram.	50 houses.	Wheat, barley and water-melons are cultivated and there are 8,000 date trees. Livestock are 8 horses, 2 mules, 100 camels, 150 donkeys, 50 cattle and 1,000 sheep and goats. The village is defended by several small towers.
Bunju بنجو	A village of the Bārakī group (see above), about 2 miles inland of Khūr Shahābi and close to Bulkhair.	A dozen houses.	The people are fishermen, owning a couple of Varjis, and cultivators.
Chaghādak چغادکی	11 miles east of Būshehr Town, near the eastern edge of the Mashīleh.	A small fort in a ruinous condition.	The land-route and telegraph line from Būshehr Town to Shirāz both run by this place, which, though geographically belonging to Tangistān, is administrative-ly under Būshehr Town. 20 horses of the Būshehr artillery are kept here for grazing.
Chah Pir چاه پیر	In open country, 9 miles north-north-west of Ahram.	40 houses.	Wheat, barley and water-melons are grown. There are 10 horses, 2 mules, 20 donkeys, 40 cattle and 800 sheep and goats.
Dilbār and 'Āmiri دلبار عامری	On the coast, 7 miles north of Bāshī.	70 houses.	The villages may be treated as one. Wheat, barley, dates

Name.	Position.	Houses and inhabitants.	REMARKS.
Gāhi گاہی	On the coast, included in the group of villages called Bāraki (see above) of which it is the northernmost. Near the coast a little to the north of Gāhi is a hill called Kamel Parwār کمه پروار.	A dozen houses.	and water-melons are grown; the date palms number 6,000. Animals are 4 horses, 4 mules, 100 camels, 150 donkeys, 60 cattle and 2,000 sheep and goats. There are 6 cargo and 10 fishing boats. There is cultivation of wheat, barley and dates, the palms numbering 200. Livestock are 5 camels, 10 donkeys and 100 sheep and goats. There are 4 fishing boats.
Gālnak گالینک	Near the coast, 8 miles north of Bashi.	40 houses	There is cultivation of wheat, barley and dates, date palms numbering about 3,000. Animals are 4 horses, 3 mules, 30 camels, 100 donkeys, 70 cattle and 1,200 sheep and goats.
Gargūr گرگور	7 miles south of 'Ali Changi.	30 houses.	There are 4,000 date palms, and animals are 4 horses, 2 mules, 50 camels, 100 donkeys, 50 cattle and 1,000 sheep and goats.
Gūrak گورک	2 miles south of 'Ali Changi on the route from Būshehr Town to Ahram.	50 houses mostly of Shī'ah Saiyids. Their pedigree is doubtful and for this reason little respect is shown them by their neighbours. Their title to wear black turbans has however recently been admitted by the Sadr-ul-Islām of Būshehr. They are renowned as cheats and swindlers.	Wheat, barley and dates are grown; the palms are about 3,000. Livestock comprises 5 horses, 4 mules, 40 camels, 110 donkeys, 35 cattle and 1,300 sheep and goats. The dwellings are partly mud and stone and partly mat huts.

Name	Position.	Houses and inhabitants.	REMARKS.
Ihshām Shaikh احشام شيخ	1 mile south of 'Ali Changi.	40 houses.	The crops are wheat and barley and there are 1,000 date trees. Animals are 2 horses, 2 mules, 30 camels, 50 donkeys, 30 cattle and 500 sheep and goats.
Ihshām Shaikhkhā احشام شيخها	3½ miles south of 'Ali Changi.	20 houses.	Wheat, barley and dates are grown.
Jawāhari (Tul) طل جواهری	1 mile north of 'Ali Changi.	20 houses.	Wheat and barley are grown and there are 1,000 date palms. The water-supply is from Tul Siyāh. Livestock are 3 horses, 4 mules, 25 cattle, 55 donkeys and 600 sheep and goats.
Karri کری	On the coast, a village of the group called Bārakī (see above).	100 houses.	Wheat, barley and dates are grown. The palms are about 1,000 and there are 4 horses, 30 camels, 50 donkeys and 500 sheep and goats. Four cargo and 6 fishing boats are owned here.
Khabidū خیدر	Near Bunju, but does not belong to the Bārakī group.	A dozen houses.	The people are fishermen and cultivate corn and dates.
Khiyārī خیاری	5 miles west of Ahram, on the west side of the Tangistān Valley.	30 houses.	The crops are wheat, barley and dates, palms numbering about 4,000. Livestock are 4 horses, 2 mules, 50 camels, 100 donkeys, 20 cattle and 1,000 sheep and goats.
Khuvair (Khor) خور خیر	3 miles from the coast, on a creek which runs inland 10 miles north of Bāshi near the commencement of the Būshehr Ma-shileh.	20 houses.	The people have date plantations comprising about 4,000 trees, own 2 cargo boats, and are traders and fishermen. Animals are 10 camels, 20 donkeys and 100 sheep and goats. The creek is dry at the entrance at low water.

Name.	Position.	Houses and inhabitants.	REMARKS.
Madūmari مدومري	On the coast, 1 mile north of Bāshi.	40 houses.	Wheat, barley and dates are grown, the palms numbering 500. Animals are 20 camels, 50 donkeys, 10 cattle and 300 sheep and goats.
Makri مکري	6 miles south-south-west of Ahram, on the west side of the Tangistān Valley.	20 houses.	There are 600 date trees, and wheat and barley are also cultivated. Livestock are 2 horses, 30 camels, 25 cattle and 800 sheep and goats.
Mankali (Qal'eh-i-) قلعه منکالي	6 miles west by north of Ahram, on the west side of the Tangistān Valley.	50 houses.	There are 400 date palms, and wheat and barley are grown. Animals are 2 horses, 20 camels, 30 donkeys and 200 sheep and goats.
Mīdar Hasani میدر حسني	2½ miles south-south-west of 'Alī Changī.	50 houses.	Wheat and barley are cultivated and 10 camels, 20 donkeys and 100 sheep and goats are owned. The people also own 10 fishing boats.
Muḥmīd Ahmadi مهديد احمدی	5 miles north of Ahram, at the western foot of the Kūh Gūgardī hill.	40 houses.	Properly Mahmūd Ahmadi محمود احمدی. Wheat and barley are grown and there are 6,000 date palms. Animals are 2 horses, 4 mules, 70 camels, 100 donkeys, 50 cattle and 1,500 sheep and goats.
Nargiszār نرگس زار	Near the coast, 3 miles north of Bāshi.	40 houses.	There is cultivation of wheat and barley and date palms number about 1,000. Livestock are 2 horses, 25 camels, 50 donkeys, 30 cattle and 500 sheep and goats.
Pākashī پاکشی	4 miles south of 'Alī Changī.	20 houses.	Wheat, barley and water-melons are grown and there are 4,000 date trees. The

Name.	Position.	Houses and inhabitants.	REMARKS.
Rustami رستمی	On the coast, included in the group of villages called Bāraki (see above).	20 houses.	people own 4 horses, 2 mules, 50 camels, 100 donkeys, 50 cattle and 1,000 sheep and goats. The inhabitants cultivate wheat, barley and dates and are fishermen, owning a few sailing boats; they also manufacture Gach.
Salimābādeh سالم آباده	On the coast. The southernmost village in the Bāraki group (see above) and in the Tangistān district.	40 houses	There are 20 donkeys, 10 cattle, 100 sheep and goats and 400 date trees, also two cargo boats.
Samīl 'Alī سمیل علی	5 miles south-west of Ahram, on the west side of the Tangistān Valley.	20 houses.	This village produces wheat, barley and dates. Animals are 4 horses, 50 donkeys, 30 cattle and 600 sheep and goats. There are 500 date-palms. Also called Samā'il 'Alī سماعیل علی.
Shahābi (Khūr) خور شهابی	On the coast, a village of the group called Bāraki (see above), in which its situation is central.	50 houses	Wheat, barley and dates are cultivated by the inhabitants who also possess 5 trading-vessels and 20 fishing-boats. The people manufacture Gach and send it by their own boats to Būshehr, Bahrain and Basrah. Animals are 50 donkeys, 30 cattle and 200 sheep and goats. There are 1,000 date palms.
Shakar (Bāgh) باغ شکر	6 miles north of Ahram, at the foot of the Kūh Gūgardi.	20 houses.	Wheat, barley and dates are grown. Livestock are 4 horses, 3 mules, 20 camels, 50 donkeys, 30 cattle and 600 sheep and goats. There are 4,000 date palms.

Name.	Position.	Houses and inhabitants.	REMARKS.
Sūraki سوركي	5 miles west-south-west of Ahram.	40 houses.	Wheat, barley and dates are grown, the palms number 4,000. Animals are 3 horses, 3 mules, 30 camels, 50 donkeys, 40 cattle and 600 sheep and goats. Also called Shūraki شوركي.
Tangistān تنگستان	About 5 miles south of 'Ali Changi.	10 houses.	This was formerly the residence of the Khāns of Tangistān, but is now practically deserted. There are some very shallow wells.
Taqi (Qal'eh-i-) قلعه تقي	6 miles south-east of 'Ali Changi, at the northern foot of Kūh-i-Mūd.	50 houses.	Wheat, barley, dates and water-melons are grown; palms number 1,000. There are 5 horses, 3 mules, 20 camels, 50 donkeys, 20 cattle and 500 sheep and goats.
Tul Siyāh طل سیاه	2 miles north of 'Ali Changi.	30 houses of a tribe said to have come from 'Irāq-i-'Ajam.	The crops are wheat and barley and there are 4,000 date-palms. Animals are 4 horses, 2 mules, 20 camels, 100 donkeys, 50 cattle and 2,000 sheep and goats. This is a well-to-do village.
Tukhm Māri تخم ماري	4 miles south-east of 'Ali Changi, on one route from Būshehr Town to Ahram.	20 houses.	Wheat, barley, dates and water-melons grow; the palms are about 2,000. Animals are 4 horses, 30 camels, 100 donkeys, 80 cattle and 600 sheep and goats.
Tunb Seh تنب سه	3 miles south-south-east of Ahram.	Half a dozen houses.	The crops are wheat and barley, and there are 2,000 date-palms. Livestock are 20 donkeys, 10 cattle and 100 sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
'Umari عمري	On the coast, a village of the group known as Bzaki (see above).	50 houses.	The people are sailors, fishermen and cultivators: they have 5 boats which run to Būshehr, Basrah and Bahrain. Their crops are wheat, barley and dates, and they also manufacture and export Gach.
Vākanku واکنکو	8 miles west-north-west of Ahram, at the north end of the Mūd hills.	40 houses.	Wheat, barley, dates and water-melons are grown. There are 20 donkeys, 10 cattle and 1,000 sheep and goats. Charcoal and firewood from the hills are exported in considerable quantities.
Zāir Khizar (Khashm) خشم زائر خضر	7 miles north of Ahram.	20 houses.	The people grow wheat, barley and water-melons and collect firewood. There are 2,000 date-palms, and livestock are 10 horses, 4 mules, 50 camels, 100 donkeys, 60 cattle and 1,700 sheep and goats.

TANŪRAH
(RĀS)
راس تنوره

A sandy promontory running north-west and south-east so as to form the north-eastern side of **Qatif** bay in the Sanjāq of **Hasa**. Its length is 8 miles or more; but it is very narrow, its breadth in places not exceeding 100 yards; and near its extremity it is exceedingly low. There is an anchorage just within the point of the cape where Turkish Government vessels visiting **Qatif** generally lie, and near which, on the shore, the Turks maintain a coal depôt. A great meeting of tides takes place off Rās Tanūrah; the courses of the currents are complicated but the general result appears to be a division of the tides, for the flood stream south of the cape sets to southwards, and north of it to north-westwards in the direction of **Kuwait**. At the extremity of Rās Tanūrah is a pearl bank, known as

Umm Rahīm, immediately north of which upon the coast are others, *viz.* (in order from south to north), Duwaiyisain, Abu 'Adhum, Abul 'Urūq and Ja'aimah.

An island in **Qatif** bay, of which the part nearest to the coast is about 2 miles east-north-east of **Qatif** Town; it forms part of the Turkish Sanjāq of **Hasa**. At low water it is connected with the mainland by a ford about $\frac{1}{2}$ a mile north of the Kūt of **Qatif**. The island measures about 4 miles each way and about $\frac{1}{3}$ of it is covered with date groves: the western side, however, has no trees. The whole island is irrigated and supplied with drinking water by two fine springs situated near the centre, in the lands of Tārūt village: the water of these is hot, but excellent. The total population of the island may be about 4,000 persons: the following table gives the villages with the tribes of the inhabitants and some other particulars.

TĀRŪT
تاروت

Name.	Position.	Houses.	Inhabitants.	REMARKS.
Dārīn or Dārāin دارين	On the south coast of the island.	100	Mostly Bani Khālīd with a few Junaidāt, 10 houses of Sādah and a sprinkling of Najdis and Bahrainis. Almost all are Sunnis.	The village is defended by a square fort. There are no dates or other kinds of cultivation, but the people have 15 pearl boats. A detached quarter on the east side, called Hālat Dārīn, forms about $\frac{1}{3}$ of the village.
Fanyah فنيه	On the north coast of the island.	40	Immigrants from Abu Dhābi of the Al Bū Falāsah section of the Bani Yās tribe, all Maliki Sunnis and mostly pearl divers.	This village is also called Zor. It is unwallled and possesses some date gardens irrigated from the Tārūt village springs, also 7 pearl boats.
Sanābis سنابس	On the eastern shore of the island.	200	Bahārinah, who are fishermen and pearl-divers; they are all Shī'ahs.	An unwallled village without any date gardens. To this place belong 68 pearl boats.

Name.	Position.	Houses.	Inhabitants.	REMARKS.
Tāiūt تَارُوت	In the centre of the island.	350	Bāharinah Shī'ahs, pearl-divers, petty pearl-merchants and cultivators.	The village is walled, but many of the houses are outside the wall. There are two fine springs, 'Ain-al-Ham- مآين الحمام mām and 'Ain Umm-al- عين ام الفرسان Fursān; the former is $\frac{1}{2}$ a mile north-west, and the latter $\frac{1}{2}$ a mile north-east, of the village: the channels of Umm-al-Fursān have fallen into disrepair. Dates, other fruit trees, lucerne and vegetables abound. There is an old fort with bastions, in bad condition but occupied by a detachment of 10 Turkish Dhābi-tiyahs.
Zor زور	See Fanyah above.

TATHLITH
OR
**TATHLI-
THAH**
(WĀDI)

وادي
تثليث - تثله

A valley or district adjoining, or possibly included in, the Wahhābi dominions at their south-western extremity; it lies apparently between Wādi Sabai' and Najrān; or possibly somewhat further to the east, south-westwards from Widyān Dawāsir. Very little is known of this remote tract except that it belongs to the **Qahtān** tribe; but it is stated to be bounded on the south-west by hills called Jabal 'Amk عمك and on the south-east by a ridge known as Jabal Jahar جهر. According to the same authority it contains a detached hill styled Jabal Kilāb and villages (or perhaps camping grounds) known as Habaiyah مريع, Murabba' مربغان, Maraighān جاش, Jāsh, حمزة Hamzah, جبیه Nahamsah نحمة and Qasr Bīn-Tōq قصر بين طرق. The **Qahtān** of Wādi Tathlith are said to profess allegiance to Ibn Sa'ūd.

A valley rising in the Western **Hajar** of the 'Omān Sultanate and reaching the **Bātinah** coast not far from Rumais ; it is to the west of Wādi **Lājāl**. Wādi Tau contains only one village of importance, that of Tau **طرو** ; it consists of 300 mud houses of the Bani **Jābir**, partly of the Anlād Rāshid section, and lies some 10 or 12 miles inland from Rumais. Dates are the principal if not the only form of cultivation and the groves contain 10,000 trees. There are 70 camels, 100 donkeys, 50 cattle and 800 sheep and goats. The trade of Wādi Tau is with **Sīb** and **Barkah**. Tau is one of the capitals of the Bani **Jābir**, and the chief Shaikh there is Saif-bin Sulaimān.

TAU
(**WĀDI**)
طرو

A long narrow island adjoining the left bank of the Shatt-al-'Arab, forming a continuation virtually of 'Ajairāwiyah, and itself prolonged downstream by **Shamshamiyah**. Tawailah begins about 10 $\frac{3}{4}$ miles by river below the British Consulate at **Basrah** and ends about 6 miles above the junction of the **Kārūn** and the Shatt-al-'Arab ; its length between these points is 5 $\frac{1}{4}$ miles, while its average breadth is $\frac{1}{4}$ of a mile or less. It fronts the village of Labāni, the creek of Abul Khasib, and the tracts of Abu Ibgai' and Abul Fulūs, and partially that of Baljāniyah, on the right bank of the Shatt-al-'Arab ; and on the other side nearly the whole stretch from Nahr Jāsim down to the Turco-Persian frontier is subtended by it. Tawailah is part of Turkish 'Irāq.

TAWAILAH
طويله

The only village on Tawailah appears to be known as Shirāji ; it stands on the north shore of the island about midway between its two extremities and consists of about 50 huts of the so-styled Mashid tribe, and its agricultural resources are estimated at 10,000 date palms besides other fruit trees, 30 cattle, and 50 sheep and goats. About 50 other families of **Mashid** are scattered over the rest of the island, most of their huts being near the southern shore : these cultivate wheat and other cereals, possess fruit gardens and about 10,000 date palms, and own 50 cattle and an equal number of sheep and goats.

It would seem that in 1836 the lower part of Tawailah island was non-existent, and that the upper part of it was then connected with the present island of 'Ajairāwiyah.

TAWAIRĪJ

طائر

Also called Hindīyah هندیّه, a town and municipality in Turkish 'Irāq, standing upon both banks of the **Hindīyah** at 13 miles below its head.

Most of Tawairij is on the right bank of the stream and, the environs being low, is protected on the three landward sides by an embankment which circles round it at a radius of a few minutes' walk. The quarter on the left bank, consisting of some mud houses, a few shops, and a good Khān owned by a Jew of **Baghdād**, is connected by a boat bridge of 21 pontoons with the main town. The latter contains numerous masonry buildings and all the public offices.

Tawairij thirty years ago was merely a small village and the centre of a rice-growing tract; it is now a considerable town. The population is about 4,000 souls, of whom nearly all are Shi'ah Arabs; there are however some 40 Persians, 60 Jews, 50 Turks, 10 Panjābi Indians and Afghāns regarded as British subjects, and half-a-dozen Oriental Christians. There are 3 mosques and 4 Khāns.

The staple business to which, in conjunction with political and administrative causes, Tawairij owes its present position has now declined; for, in consequence of the general drying up of the country round, half of the tract formerly under rice is now thrown entirely out of cultivation, while the rest only produces crops such as barley and wheat. The produce tax payable to the government has fallen to about one-third of its former amount.

Tawairij, however, shows no symptoms of commercial decay and is still to a large extent an entrepôt for rice brought from other places. Shops number about 150. Manchester piece-goods, received from **Baghdād**, are the only valuable import; some other foreign goods are received direct from **Basrah**; exports other than rice are chiefly dates, barley, wheat, and wool. The 'Anizah tribe from the **Shāmiyah** Desert visit Tawairij in large numbers to make their annual purchases of food and clothing.

Camels can be had only when the 'Anizah are in the neighbourhood, but a considerable number of horses and donkeys are procurable in the district, as also buffaloes, cattle, sheep and goats. About 20 boats of the size ordinarily in use on the **Hindīyah** are as a rule obtainable at Tawairij.

Tawairij, in addition to the ordinary appurtenances of a Qadha headquarters, has a télégraph-office connected by a single wire with the towns of **Hillah** and **Karbala**: the department of Public Debt and the Tobacco Régie are each represented by a Mamūr. There is also a harbour master. The military force at present consists only of 75 Radifs under 3 officers:

the town is the headquarters of the 2nd battalion of the 84th regiment of Radif.

One of the largest, most populous and most beautiful valleys in the 'Omān Sultanate; it forms a deep trough in the heart of Eastern Hajar. Wādī Tāyīn rises a few miles to the north-west of Najd Wāsīt, on the opposite side of that pass from Wādī Mansah, and runs at first to the south-east for 25 miles between two high ranges till it reaches Ghubrat-at-Tām; then, turning at right angles towards the north-east and assuming successively the names of Wādī Dhāiqah ضيقه and Wādī Hail حيل, it breaks out of the hills and reaches the sea at Daghmar after a further course of about 27 miles.

The following are the principal places in or directly connected with Wādī Tāyīn in order from its head downwards:—

TĀYĪN
(WĀDĪ)
وادي طايين

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Ba'ad ...	In Wādī Wāsīt, a short right bank tributary which joins Wādī Tāyīn near its head from Najd Wāsīt.	...	60 houses, Rahbiyin and Aulād Mahriz.	Resources are 30 camels, 25 donkeys, 80 cattle, 400 sheep and goats, and 3,000 date palms.
Naqsi نقسي	In the angle between Wādī Wāsīt and Wādī Tāyīn immediately above their junction.	...	30 houses of Rahbiyin.	There are 2,000 date-trees, 15 camels, 40 donkeys, 100 cattle and 700 sheep and goats.
Hindarūt هندرورت	A short distance below Naqsi.	...	30 houses of Rahbiyin.	There are 2,000 dates; animals are 10 donkeys, 7 cattle and 50 sheep and goats.
Miss مس	A short distance below the junction of Wādī Tāyīn and Wādī Wāsīt.	Right.	150 houses of Rahbiyin.	Stands amidst orchards in a little forest of date trees. There are 150 camels, 300 donkeys, 100 cattle, 4,000 sheep and goats and 5,000 date palms.
Mizbur مزر	Just below Miss.	Do.	60 houses of Hamāhimah and Rahbiyin of the Aulād Mahriz section.	Animals are 10 donkeys, 10 cattle and 50 sheep and goats and there are 5,000 palms.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Hūk حوك	Adjoins Mizbur.	Right.	15 houses of Rahbiyīn.	There are 2,000 palms; animals are 17 donkeys, 5 cattle and 30 sheep and goats.
Ghiyādhah غياطه	3 miles below Mizbur.	Both.	50 houses of Rahbiyīn.	There are 4,000 dates. Livestock are 10 donkeys, 10 cattle and 50 sheep and goats.
Madairah مديرة	Just below Ghiyādhah.	Right.	100 houses of Bani Bat-tāsh of the Bani Ghasain and Wilād Hazam sections.	Animals are 4 donkeys, 4 cattle and 30 sheep and goats; there are 2,000 dates.
Badi'ah بدية	3 miles below Madairah.	Do.	50 houses of Bani Bat-tāsh and Bani Raqād.	There are 4,000 dates, 10 donkeys, 5 cattle and 30 sheep and goats.
Shāt شات	Just below Badi'ah.	Do.	Houses of Bani 'Arābah.	5,000 date palms, 12 donkeys, 5 cattle and 60 sheep and goats.
Hammām حمام	1 mile below Shāt.	Left.	40 mud houses of the Bani 'Arābah.	The village is walled; it has a hot spring and considerable cultivation. Resources are 3,000 date palms, 8 donkeys, 7 cattle and 50 sheep and goats.
Qur'ā قرية	2 miles below Hammām.	Do.	40 mud houses of Bani 'Arābah.	There are 3,000 dates, 7 donkeys, 8 cattle and 50 sheep and goats.
Sibal سبل	Midway between Najd Wāsit and Ghubrat-at-Tām, about 13 miles from either.	Do.	50 houses of the Bani 'Arābah.	This place is 1,500 feet above sea-level: it has an abundant supply of water, extensive date plantations, considerable cultivation and many kinds of fruit trees. There are some substantial houses, 4 mosques and several Sablahs. Palms number 6,000 and

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Hida حدا	2½ miles below Sibal.	Right.	150 houses of the Bani Battāsh, Bani 'Umr section.	there are 10 donkeys, 10 cattle and 50 sheep and goats. Donkeys are bred here and a good many are available. The date plantations are extensive, containing 10,000 palms. Animals are 120 donkeys, 50 cattle and 100 sheep and goats.
'Uqdah عقدہ	1 mile below Hida.	Left.	30 houses of the Bani Battāsh, Bani 'Umr section.	Considerable cultivation. This is an unruly village where European travellers have more than once been molested. There are 10 donkeys, 20 cattle, 70 sheep and goats and 6,000 date trees.
'Ajma عجما	5 miles below 'Uqdah, at some distance from the Wādī bed.	Do.	20, houses of the Bani 'Umr section of the Bani Battāsh.	Wheat, millet and lucerne are cultivated and there are 600 date palms. Animals are 7 donkeys, 3 cattle and 20 sheep and goats.
Malahlah ملحاح	Half a mile below 'Ajma.	Right.	About 60 mud houses of the Bani 'Umr section of the Bani Battāsh.	From this place there are two routes to Sharqiyah. Animals are 5 donkeys, 10 cattle and 50 sheep and goats. There are 3,000 date trees.
Ghaiyān غيان	1 mile below 'Ajma.	Do.	30 stone houses of the Bani 'Umr section of the Bani Battāsh.	Wheat, millet and lucerne are grown and dates number 3,000. Animals are 10 donkeys, 15 camels and 70 sheep and goats.
Sīdāfi سیدفی	1½ miles below Ghaiyān.	Do.	30 houses of Bani Battāsh.	At this point Wādī Dima joins Wādī Tayin. There are 4,000 date palms, 5 donkeys, 7 cattle and 30 sheep and goats.

Name.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Rikākiyah ركاية	$\frac{1}{2}$ a mile below Sidafi.	Left.	80 houses of Bani Bat-tāsh.	Wheat, and other cereals are cultivated and there are 3,000 date trees. Livestock are 5 donkeys, 7 cattle and 30 sheep and goats.
Baiyadh بيض	$1\frac{1}{2}$ miles below Rikākiyah.	Do.	60 houses of the Suwābiq section of the Rahbiyin.	It is a quaint, picturesque village, built up the side of a knoll with a tower at the top. The date groves comprise 10,000 trees. Animals are 5 donkeys, 10 cattle and 70 sheep and goats.
Sāt صراط	1 mile below Baiyadh.	Do.	50 houses of Bani Bat-tāsh.	Date palms number 10,000 and there are 10 donkeys, 10 cattle and 70 sheep and goats.
Lashkhar لشخر	$2\frac{1}{2}$ miles below Baiyadh.	Do.	10 houses of Bani Battāsh of the Wilād Ward section.	The houses stand in an enclosure. There are 1,000 dates, 5 donkeys, 4 cattle and 20 sheep and goats.
Ghubrat-at-Tām غبرة الطام	$2\frac{1}{2}$ miles below Lashkhar.	Right.	120 houses, half Siyābiyin and half Hanādhilah.	Dates, maize, millet and lucerne are cultivated, but not wheat. Elevation above the sea is 1,000 feet. There are about 25 donkeys, 20 cattle and 100 sheep and goats. Wādī Khabbah joins Wādī Tayin on its right bank at this place. Ghubrah is protected by an oblong fort at the western extremity of a hill. A small hamlet called Tāl طرل, adjoining Ghubrah, was practically depopulated in the cholera epidemic of 1899 and has ceased to exist as a village.

As far as this place the Wādī is broad and straight, and is enclosed between two parallel ranges of hills which present a remarkable contrast to one another. The range on the north-east side is called Jabal Baidhah ضمه or Baiyādh بياض; it consists of limestone in horizontal strata and appears to have a table-top; its height has been estimated at 3,000 feet. It is arid and sterile in aspect, but is said to support a large number of shepherds with their flocks; the hollows and crevices conceal much thorny undergrowth and coarse herbage. While Jabal Baidhah is distinguished by its light colour, the range of Jabal Halwi حلي which faces it across the valley is equally remarkable for the darkness of its hue and differs no less from Jabal Baidhah in its general configuration, which is rugged and intricate. The ravines in the slopes of these mountains contain some of the villages of Wādī Tāyīn, but others extend along the fertile bed of the valley, their orchards and plantations fringing it at intervals for miles and alternating with scenes of desolation and stretches of barren rock. In the bottom of the valley there is no continuous stream; but water is perennial and abundant, now above the surface and now below. The vast assemblage of date-palms is very striking, and grapes, peaches, apricots, custard-apples, guavas, figs, pomegranates, plums, limes, sweet limes, quinces, oranges, bananas, citrons, mangoes, melons and mulberries are grown with success. Here, besides the ordinary grains and vegetables of 'Omān, are found turmeric, sugarcane, bastard saffron and henna.

At Ghubrat-at-Tām the direction of Wādī Tāyīn changes to north-east, and $\frac{1}{2}$ a mile from Ghubrah it enters an extraordinary cañon and becomes Wādī Dhaiqah. A quarter of a mile down the cañon occurs a sudden drop in the bed of the valley, where men and baggage are lowered with ropes, and camels are sent round by a circuitous track on the left bank, involving a delay of an hour. At the end nearest Ghubrah the width of the gorge is only 100 yards and further down it varies from 150 to 500, the cliffs on either side rising sheer to 1,000 and even 1,500 feet. This deep and narrow section of the valley is liable to sudden and dangerous floods, and even at ordinary times there is a considerable flow of water which increases in volume as it descends. It is this cañon which, seen from the sea, has obtained among English mariners the name of the "Devil's Gap."* The Wādī Dhaiqah section continues narrow for about 6 miles and opens out about 4 miles before Mazāra', elsewhere described under its own name, is reached.

* A distant view from the sea of Devil's Gap will be found in Chart No. 2383-38 and another in No. 2373-2337 A.

About 10 miles below **Mazāra'** is **Hail-al-Ghāf**, which also forms the subject of a separate article, and here the name of the valley is changed to Wādi Hail; indeed nowhere below Ghubrah is it called Wādi Tāyin. The coast is reached at **Daghmar** about 7 miles below **Hail-al-Ghāf**.

The entire settled population of Wādi Tāyin amounts, apparently, to about 8,600 souls.

Wādi Tāyin has only two tributaries of any importance, both on its right bank; these are Wādi **Dima**, which joins it at Sidaḡ, and Wādi **Khabbah**, which comes in at Ghubrah.

Wādi Tāyin forms a sort of vestibule to **Sharqiyah**; it is entered by routes from the **Masqat** District over the 'Amdah and Manqal passes and by a route from Wādi **Mansah** over the Wāsīt pass; on the other side routes to **Sharqiyah** leave it at Malahlah and Ghubrah. All these routes are said to be passable for camels.

The trade of Wādi Tāyin is partly with **Quryāt** and partly with **Matrah** and **Masqat Town**.

TIGRIS or DIJLAH * دجله

The eastern and now the more important, at least with reference to communications, of the two great rivers of Turkish 'Irāq; it is the nearer to the Persian frontier, it is the highway to **Baghdād** from the Persian Gulf, and it offers at the present time greater facilities for navigation than the **Euphrates**; but as a source of irrigation it is probably of less value. The general direction of its flow is from north-west to south-east, like that of the **Euphrates**, but both above and below **Baghdād** it deviates in a curve to the north-east of the direct line, and in this respect its behaviour is contrary to that of the twin river.

The Tigris is the Hiddekel of the Bible and the present name (Dijlah) represents the last two syllables of that word.

* *Authorities.*—The information contained in this article was partly supplied by Col. L. S. Newmarch and Major J. Ramsay, Political Residents at Baghdad, and partly obtained by the writer on the spot from Sir W. Willcocks and from Messrs. Braine and Cowley of the E. T. S. N. Company's service. The best existing maps of the Tigris are Chesney's of 1838; Felix Jones's of 1849-50 (in Bombay Selections XLIII), and Selby, Collingwood, and Bewsher's of 1860-65, but they are about to be superseded: the first is of the whole river, the second of the portion from Tikrit to Kūt-al-Amārah, and the third of the part from Kādhimain to Kūt-al-Amārah. The most elaborate survey yet made of the river Tigris between Baghdad and Qūrnah was carried out by Lieut. A. Hamilton, R.I.M., of the "Comet" in 1906-07 and completed by Lieut. Gardner, R.I.M., in 1907; the resulting map has not yet been published, but the principal data obtained in the survey are embodied in the last paragraph of the present article. Some information about the river is contained in the Foreign Proceedings of the Government of India for June 1899.

General course and character.—The source of the Tigris is in Armenia and after passing Mūsā مرسا, the *chef-lieu* of the Wilāyat of that name, it enters the tract with which we are concerned at Sāmarrāh. The following is a tabular account of its course in 'Irāq, the names given being those of the principal places on its banks:—

Name.	(1) On which side situated, (2) distance by stream and (3) direction from the last place.	Nature.	REMARKS.
Tikrīt تكريت	Right bank.	A town of 10,000 Arab inhabitants.	The people are poor and mostly inhabit mud and stone huts. Supplies are obtainable in moderate quantities only.
Sāmarrāh سامرة	Left bank. 30 miles. South-south-east.	A walled town of about 5,000 inhabitants, nearly all Shī'ahs; the head-quarters of a Qadha of the same name in the Sanjāq and Wilāyat of Baghdād. The town stands inland from a high bank and is invisible from the other side of the river where the land is lower; the eastern bank is 70, the western 30 feet high. The Sanitary and Public Debt Departments and the Tobacco Régie are represented at Sāmarrāh. Many of the houses are empty and the place seems to be declining. There are several fine mosques. The Persian Government is represented by a paid Nāib Karpardaz or Consular Agent. There is a carriage service between Sāmarrāh and Baghdād.	Sāmarrāh is the burial place of the 10th and 11th Imāms and consequently a place of Shī'ah pilgrimage. It was founded by the Khalifah Mo'tasim, who transferred his residence thither from Baghdād in 836 A.D., and it remained the seat of the 'Abbāsīd empire until 892 A.D., when the ruling Khalifah returned to Baghdād. The original (Aramaean) name of the place, Sāmarrā, سامرا was officially changed to "Sarrah" سر من رائي (= who behold it rejoices), but it is now written and spelt as above. The river is here 460 yards wide when full, and the current is normally 3 miles an hour. There is a bridge here varying in length from 32 to 55 boats.
Qāim قائم	Left bank. 7 miles below Sāmarrāh. South-south-east.	The ruins of a tower, probably a Sassanian structure.	The second or lower head of the ancient Nahrwān canal was at this place.

Name.	(1) On which side situated, (2) distance by stream and (3) direction from the last place.	Nature.	REMARKS.
Qadisīyah قادسيه	{ Left bank. 4 miles. East-south-east.	The site, now deserted, of a place which in the time of the Khalifate was famous for its glass works.	Not to be confounded with the battlefield of the same name near Najaf Town.
Qanātir قناطر	{ 8 miles below Qāim. East-south-east.	The site of two massive barriers, one above the other, which held up the water of the whole river; they have now disappeared leaving rapids which boats cannot without diffi- culty ascend. At this place the Dujail canal takes off from the right bank; and imme- diately below it, on the same side, an old bed of the Tigris strikes off, in a more southerly direction than the present one, towards Baghdād.	The barriers appear to have been natural, consisting of a hard conglomerate, but they may have been increased in height by artificial works. The disappearance of the conglomerate foundations appears to have resulted from the erosion by the river of a clay bed on which they rested.
'Adhaim عظيم	{ Left bank. 18 miles below Qanātir. East by south. (The position is that of the confluence with the Tigris).	A stream joining the Tigris from the north; in summer it is a petty rivulet, in winter a brawling stream and some- times an impassable torrent.	The ancient city of Opis probably stood somewhere in this neighbourhood. Cap- tain Felix Jones would identify with its site a place now called Manjūr which is 2 or 3 miles from the right bank of the Tigris at a point opposite the mouth of the 'Adhaim.
Kādhimain كاطمين Town and Mu'adhdham معظم	{ Right and left banks respectively. 65 miles below the 'Adhaim. Nearly south.	See articles Kādhi- main Town and Mu'adhdham.	The two places are con- nected by a boat bridge of 21 pontoons.
Baghdād بغداد City	{ Both banks. 4 miles below Kādhimain. South-east.	See article Baghdād City.	The Tigris is spanned here by a boat bridge of 24 pontoons, 240 yards in length. The width of the river

Name.	(1) On which side situated, (2) distance by stream, and (3) direction from the last place.	Nature.	REMARKS.
Kharr خ	Right bank. 5 miles below Baghdād. South-west. (The position is that of the mouth).	A stream or creek carrying the drain- age of the desert west of Baghdād City to the Tigris. In spring it is filled by the reflux of water from the Tigris to a maxi- mum depth of 10 feet: in summer it almost dries up.	within the city varies from about 250 to 350 yards, and the depth in floods is 30 to 36 feet. The Kharr is crossed at some distance above its mouth by an iron bridge on the road from Baghdād to Karbala. Near the mouth of the Kharr there is an island in the Tigris called Khalij خلیج.
Qarārah قرارة	Left bank. 7 miles below the Kharr. East by south.	See article Qarārah.	There is a boat bridge here varying in length from 36 to 45 pon- toons: it connects the Si'adah reach on the left bank with that of Dibaiyi on the right bank.
Diyālah دياله	Left bank. 7 miles below Qarārah. South-east. (The position is that of the confluence with the Tigris.)	See article Diyālah.	...
Qusaibah قصيه	Right bank. 9 miles below the Diyālah. South by east.	A locality on the left bank and a forest. The upper part of the forest belongs to one Ibn Jamil and the lower to Sābri Pāsha; the latter instructs the soldiers whom he employs as guards to say that it belongs to Government.	The whole reach from here down to Ctesi- phon is described as the Qusaibah reach; its navigation is diffi- cult in a low river.
Madāin مدائي	Both banks. From 2 to 4 miles below Qusaibah. South.	See article Madāin.	Madāin includes Salmān Pāk and Ctesiphon or Tāq Kisra, both of which are about half a

Name.	(1) On which side situated, (2) distance by stream, and (3) direction from the last place.	Nature.	REMARKS.
Jirf-al-Battah جرف البطّاه	{ ... Commences at the end of Madāin. South-south-west.	A reach of the river beginning just below Ctesiphon and ex- tending down-stream for $1\frac{1}{2}$ miles.	mile from the left bank of the Tigris; the latter is half a mile below the former and marks the lower end of Madāin. This is a shallow reach and difficult of naviga- tion when the water is low. It takes its name from a locality of less extent on the left bank of the river.
Hurriyah حريّه	{ Right bank. A little below Ctesi- phon, in Madāin. South-south-west.	A locality where a forest formerly exis- ted, but it has dis- appeared.	Not far below this place the course of the river changes from south- west to north-east. and further down it passes again at $1\frac{1}{2}$ miles from Ctesiphon, this time on the south- east side of the ruins.
Khannāsah خانّاسه	{ Begins a little way below Hurriyah. South-south-west.	A reach of the river continuing the last and extending for 4 miles. There was a forest here of the same name, but it has recently been cut down by a Baghdād Pāsha who has taken up the land for cultivation.	A shallow reach diffi- cult to navigate in a low river: it takes its name from a locality on the left bank. There are sometimes a few Arab tents on the bank here, and Muham- mad Pāsha, Dāghis- tāni, has a grain store and keeps some horses at this place. There is good black partridge shooting in the neigh- bourhood. A long reach of the river called Lajj لّجّ follows and is succeeded by another called Dāwar داور. The navigation of Lajj is difficult in the low season; at Dāwar, there is a Government forest.

Name.	(1) On which side situated, (2) distance by stream and (3) direction from the last place.	Nature.	REMARKS.
Suwairah صويره or صويره (also called Ja- zirah Hami- diyah, etc.)	Right bank. 73 miles below Qararah. South-east by south.	See article Suwairah.	<p>About 14 miles below Suwairah begins a reach 4 miles in length, called Qutuniyah قطنيه, where there is a reserved forest on the left bank. A few miles below the Qutuniyah reach there stood on the left bank, from the 9th to the 14th century of the Christian era at least, the Christian convent of Dai-al-'Aqul ديار العاقول, sur- rounded by a considerable town: the ruins are still visible. At this place there was a toll bar for vessels and the river was closed at night by means of cables. A little further down, but on the right bank, was Humāniyah همانيه of which the site is still traceable; here Zubaidah, the widow of Hārūn-ar-Rashīd, was kept in captivity for a time by the Khalifah Mamūn.</p>
'Aziziyyah عزيزيه	Left bank. 32½ miles below Suwairah. South-east.	See article 'Azizi- yah.	<p>A little above 'Azizi- yah is an island. called Khalij خليج. The tail of the ancient Nahrwān canal, of which the head was at Qāim above, appears to have almost reached the Tigris again in the neighbourhood of 'Aziziyyah. Not many miles below 'Aziziyyah is a place Tawīl طويل on the right bank, where about 30 families of Zubaid of the</p>

Name.	(1) On which side situated, (2) distance by stream, and (3) direction from the last place.	Nature.	REMARKS.
Bghailah بغيلة	{ Right bank. 60 miles below 'Aziziyah. ...	See article Bghailah,	<p>Dāwar section encamp in tents and cultivate wheat and barley. A long shallow reach called Shidhaif شذيف follows Tawil; and a considerable distance further on, perhaps 12 miles above the next place Bghailah, is a reach known as Sharish شرش or Sharshar شرش. The navigation of both Shidhaif and Sharish is troublesome in the low season. The left bank on the Sharish reach is called Summar سمر or Samr سمر. A short way below Shidhaif is a spot called Jarjaraiyah جرجريه on the left bank, representing the town of Jarjarāyā جرجريه, which in the 9th century of the Christian era was the residence of many Persian nobles and the capital of the lower Nahrwān tract, but by the 13th century had become a ruin.</p> <p>Immediately below Bghailah a canal called Bada'ah بدعه takes off on the right bank of the Tigris, and, running inland, forms swamps with its surplus water. Not far below Bghailah the reach of Imām Mahdi مهدي is passed, then that of Umm-al-'Aja'جاء أم at the latter there are generally Arab encampments on the right bank.</p>

Name.	(1) On which side situated, (2) distance by stream, and (3) direction from the last place.	Nature.	REMARKS.
K ū t - a l - Amārah كوت الاماره	Left bank. 50 miles below Bghailah. East by south.	See article Kūt- al-Amārah.	Opposite this place the Shatt-al-Gharāf runs off from the right bank of the Tigris to join the Euphrates after a course of 120 or more miles; it is described in a separate article. There is a boat bridge here varying from 35 to 41 pontoons: it extends between a tract called Jadriyah on the left bank and one called Muhammad Abul Hasan on the right. From this point down to 'Amārah Town the Pusht-i-Kūh hills of the Persian frontier are in full view from the river.
Shaikh Sa'ad شيخ سعد	Right bank. 42½ miles below Kūt-al-Amārah. East by north.	See article Shaikh Sa'ad.
'A l i - a l - Gharbi علي الغربي	Right bank. 30 miles below Shaikh Sa'ad. East by south.	See article 'Ali-al- Gharbi.	'Ali-ash-Sharqi on the left bank is passed more than 30 miles be- low 'Ali-al-Gharbi.
Kumait كميت	Right bank. 45 miles below 'Ali-al-Gharbi. South-south-east.	See article Ku- mait.	Several miles above the next place, 'Amārah Town, the Bitairah بتيرو canal takes off from the right bank, withdrawing a consider- able part of the water of the river. The Tib طيب, a stream from the Persian hills, probably comes in on the left bank in the same neighbourhood.
'Amārah عماره Town	Left bank. 25 miles below Kumait. South-east.	See article 'Amār- ah Town.	The large Jahālah canal leaves the Tigris on the left bank at the upper end of 'Amārah Town. The boat bridge here formerly consisted

Name.	(1) On which side situated, (2) distance by stream, and (3) direction from the last place.	Nature.	REMARKS.
M a j a r - a l - Kabir مجر الكبير	Right bank. 12 miles below 'Amārah Town. South by east.	See article Majar-al-Kabir .	of 40 pontoons, but the number of boats is said to have been recently reduced by half in consequence of the substitution of larger pontoons. About here a large canal takes off from the right bank of the river and is understood to run across Mesopotamia a long way towards Sūq-ash-Shuyūkh ; this is apparently the Majar Minshad mentioned in a paragraph below.
Qal'at Sālih قلعة صالح	Left bank. 20½ miles below Majar-al-Kabir South-east.	See article Qal'at Sālih .	A canal from the left bank goes off from the river at the middle of the town. Another called Ghumaijah غميجه, by which surplus water returns from the marshes to the river, joins the Tigris on the left bank about 22½ miles below Qal'at Sālih and a little below a sharp bend in the river, at a place called Mautaris , which is known to Europeans as the Devil's Elbow.
' Azair عزير or Ezra's Tomb	Right bank. 27½ miles below Qal'at Sālih . South-south-east.	See article ' Azair .	The reach from Qal'at Sālih above down to this place is known as the Marshes. The sea tides cease to affect the level of the river at a place Humaiyān حيمان, a few miles only below ' Azair .
Qurnah قورنه Village	Right bank. 80 miles below ' Azair . South-south-east.	See article Qūrnah Village .	This reach also is swampy. Immediately below Qūrnah Village the Tigris unites with the Euphrates to form the Shatt-al-'Arab .

The distances given in the above table are by river and are only approximate ; * the direct distances by land, especially in the part between **Baghdād** and **Kūt-al-Amārah**, are much less and on the average are hardly more than half of those by water.

The general width of the Tigris above 'Amārah Town is from 200 to 400 yards, but below 'Amārah it is greatly reduced in consequence of the absorption of water by canals ; in the Marshes, between Qal'ah Sālih and 'Azair, its average breadth is only 60 to 70 yards ; but in the reach from 'Azair to Qūrnah Village it expands again to about 100 yards in consequence of the return of some water from the adjoining swamps. The banks from **Baghdād** down to 'Ali-al-Gharbi vary in height from 5 to 20 feet, and are generally abrupt and only occasionally shelving ; near 'Ali-al-Gharbi they rise 15 to 20 feet above the lowest summer level of the river. In the Marshes the swamps which skirt the river are divided from it by a firm bank, which sometimes, however, is awash ; and for some distance both above and below this section the banks are but little above water level. Below **Baghdād** the bed of the Tigris is all of mud and sand, with a little red clay in places.

The country traversed by the Tigris below **Baghdād** is chiefly pastoral, inhabited by semi-settled Arabs whose villages of reeds and matting frequently stand upon the very bank. Except in the Marshes, buffaloes, cattle, ponies and large flocks of sheep, mostly brown, are to be seen in every direction ; and the Marshes themselves are alive with wild pig.

The water of the Tigris contains some salt, sulphur and lime in solution, and it is never clear ; but it is drinkable at all seasons of the year.

Irrigation.—The Tigris, less constant in its flow and running in a deeper bed, is probably inferior to the **Euphrates** as a source of irrigation. There is, however, a considerable similarity between the two rivers ; for the Tigris has the same average gradient as the **Euphrates**,

* The results of the latest survey (1906-07) appear to indicate that the course of the river is now longer than had been supposed even by those employed on it, from whom the distances between the main points in the above table were obtained. According to a preliminary forecast the distance from **Baghdād** to **Basrah** may now prove to be more nearly 496 than 448 miles, 2 miles of the increase being above Shaikh Sa'ad, 24 miles between that place and 'Amārah Town, and 22 miles below 'Amārah Town. This is still uncertain ; but comparison with older surveys shows that, in places at least, the course of the river has become more crooked and therefore longer.

or about 1 in 13,000, and the same average velocity; while the diagram of periodical increase and decrease given in the article on the **Euphrates** will serve approximately for the **Tigris** also. But the rise of the **Tigris** in flood is greater than that of the **Euphrates** and may amount at **Baghdād** to $6\frac{1}{2}$ metres. The minimum discharge of the **Tigris** at **Baghdād** has been calculated at 250 cubic metres per second, and the maximum at the same place at 5,000 to 6,000 metres. Floods in the **Tigris** ordinarily arrive a week in advance of the corresponding floods on the **Euphrates**, and the level of the **Tigris** has been known to rise by 12 feet in a single day. The **Tigris** carries much silt, and in winter and spring it runs a rich brown in colour.

In ancient times an extensive system of perennial irrigation was dependent on the **Tigris** and had for its two principal features the **Nahrwān** or **Nahrawān** نهرال and **Dujail** دجيل canals, to both of which reference has been made in the table in the preceding paragraph. The **Nahrwān**, which had a course of about 140 miles from **Qāim** to 'Aziziyah on the eastern side of the river, or possibly of 200 miles to the neighbourhood of **Kūt-al-Amārah**, was constructed so as to intercept the 'Adhaim and other torrents from the Persian hills; and Sir W. Willcocks, the designer of the Assouan Barrage, has pronounced it to be an engineering work as bold in its conception as the canals of the ancient Egyptians were ingenious. The **Nahrwān** was destroyed by a change in the course of the **Tigris** which closed in upon its flank from the south and swept part of it near the head entirely away: the lower part of it had ceased to be operative by the 13th century of the Christian era, probably before the failure of the uppermost section. The **Dujail** on the south side of the river, probably less ancient, had originally a bed width of 40 metres, but it is now reduced to 3: this canal has been once more brought into operation on a small scale by the **Dāirat-as-Saniyah**. The only other ancient channel supplied by the **Tigris** was the present **Shatt-al-Gharāf**, perhaps natural and not artificial in its origin. Immediately before the Muhammadan conquest of 'Irāq, probably about 600 A.D., the main stream of the **Tigris** was diverted into the **Shatt-al-Gharāf**, through which it continued to flow until about 1550 A.D.; but Newberie (in 1581 A.D.) and Tavernier (in 1652 A.D.) seem to have travelled by the present course of the river, to which it had by then returned.

There is no modern irrigation, except on a small scale from the **Tigris** above **Kumait**; and below that point, though there is much, it is wasteful and inefficient. The **Bitairah** canal on the right bank several miles

above 'Amārah Town and the Jahālah on the left bank at that place itself are said to carry off between them nearly half of the river; but most of the water which they take is wasted and merely goes to form swamps. From 'Amārah down to Qal'at Sālih there are many canals thrown off on both banks, some of which are Dāirat-as-Saniyah property: among the best known is the Majar on the right bank, which is said to reach to the Euphrates and is at present the property of Shaikh Saihūd of the Āl Bū Muhammad tribe. Then come the Marshes, and below the Marshes the flow in side-canals, such as the Ghumaijah, is generally of water returning from the swamps to the river. It has been suggested that waterlogging in this tract could probably be reduced if the heads of the canals were reconstructed facing down stream, instead of opening upwards—as at present—to receive the current; but the Turkish Government are either too apathetic, or they too greatly dread a conflict with the tribesmen, to undertake such an experiment.

Navigation.—The steam navigation of the Tigris is troublesome, though not difficult or dangerous, and it is carried on by night as well as by day. The general course of the river, which is nearly the same as at the survey of 1836, appears to be little liable to alteration, no doubt in consequence of the banks being well held together by vegetable matter; but many and considerable modifications have taken place in the smaller bends and windings during the last 70 years. The navigable channels are constantly changing and the steamers are steered by eye, men being sent off to sound only when the channel ahead is not apparent. As the river bed consists of pure and soft alluvial matter, no regard is paid to occasional contact of the steamer with banks or bottom, and she feels her way along on all but the darkest nights.

The river begins to rise with the melting of the snow in the mountains about the end of March and is at its best for navigation during April: in the middle of May it commences to decline and it is lowest in August and September. Freshets due to rain in the hills at its source may occur at any time between November and February. The current varies from half a knot with a low river to 7 or 8 knots with a full one, and it is most powerful where the channel bends. The influence of the sea tides extends, as mentioned in the table above, to a place Humaiyan which is about 30 miles by water above Qūrnah.

In the swampy tract from **Qūrnah** up to '**Azair** there is a depth of not less than 12 feet, but some of the turns are so sharp that a vessel more than 220 feet in length could not negotiate them. In the Marshes proper, from '**Azair** to **Qal'at Sālih**, the river is at its narrowest with a navigable channel of only 25 to 50 yards; in this section there is no place where a steamer of 220 feet could go about, and two steamers cannot pass one another without one tying up to the bank. The channel here is shallow in a low river. The unsatisfactory character of this reach is due to the numerous canals,—some of them 20 to 30 yards across at the head,—between **Qal'at Sālih** and '**Amārah** Town which, after the river has lost nearly half its water above '**Amārah**, absorb perhaps one-third of the remainder; conversely the improvement below the Marshes is due, as already indicated, to the return of part of the water by circuitous courses to the parent stream. The channel through the Marshes is deteriorating and has lost about one-fourth of its breadth during the last ten years. Above the Marshes the depth and width of the channel are both as a rule satisfactory, and from '**Amārah** Town to '**Ali-ash-Sharqi** there is always 8 feet of water even with a low river. There are three or four bad reaches after this before **Kūt-al-Amārah** is reached; but the worst on the upper river are above **Kūt** and are usually those known as **Sharshar** or **Sharish**, **Shidhaif**, **Lajj**, **Khannāsah**, **Jirf-al-Battah**, and **Qusaibah**; the shallowest sounding obtained at low river in this part is generally 3 feet, and the place (or places) where it occurs varies from year to year. These reaches, as will appear from the general table in the first paragraph of this article and from the special table in the paragraph below, are sometimes more extensive than the river-bank localities from which they take their names.

The banks having been denuded of wood, except where there are Government forests, fuel is not now obtainable by the way.

The Turks maintain **Nuqtahs** **نقطه** or small police posts on the banks at short intervals from 5 miles above **Qal'at Sālih** down to **Ezra's Tomb**; but the river, in spite of these, is not always entirely safe. When the local **Shaikhs** have differences with the Turkish Government, native craft, especially **Mahallahs** being towed along the bank, are liable to depredation, and at such times an official order prohibiting the carriage of valuable goods by boat is not uncommon; steamers however are never molested.

*Topography of the banks with especial reference to irrigation and navigation.**—The following table contains a more precise description of the course of the river than the general table above; it may be useful in connection with questions of irrigation and navigation.

Direction of river.	Names of localities (right bank).	Names or number of canals (right bank).	Names of localities (left bank).	Names or number of canals (left bank).

TĪWI
or
TAIWI
طيوي
VILLAGE

A large village at the mouth of Wādi Tiwi on the coast of Eastern Hajar in the 'Omān Sultanate; it is the chief port of the Bani Jābir country. Tiwi consists of 3 separate quarters, namely, Ramlah رمله, Quff قف and Jaraif جريف, all upon the sea: of these Ramlah is the nearest to Masqat and Jaraif to Sūr, while Quff is in the middle: Wādi Tiwi comes out between Quff and Jaraif. Ramlah is a walled village of about 200 mud houses and 10 shops belonging to the Bani Muqīm section of the Bani Jābir; the people are seamen and fishermen, owning 10 Badans and 15 Horis. Quff, separated by an interval of a few hundred yards from Ramlah, is also walled and consists of about 100 mud houses and 5 shops; the inhabitants are Bani Jābir of the Salūt section and are at feud with the people of Ramlah; many of them are weavers, the rest fishermen and cultivators. The remaining quarter, Jaraif, is composed of 20 houses of Salūt, who are all fishermen. Tiwi is at the mouth of a gorge in the hills and possesses a good date grove of 500 palms and many fruit trees. It has a lagoon of fresh water 400 yards from the sea. Livestock are 12 camels, 75 donkeys, 40 cattle and 400 sheep and goats.

A valley in the Eastern Hajar district of the 'Omān Sultanate, one of the three which together compose Wādi Bani Jābir (I); its mouth is 36 miles north-west of Sūr. Wādi Tiwi is inhabited exclusively by Bani Jābir, mostly Salūt and Bani Muqīm, but a few of the Aulād Rāshid section are intermingled with them. The villages of Wādi Tīwi, in ascending order, are :—

TĪWI
or
TAIWI
(WĀDI)
وادي طيري

Name.	Position.	Houses and inhabitants.	REMARKS.
Tiwi طيري	On both sides of the Wādi, at its mouth.	See article Tiwi.
Fahdah فهد	$\frac{1}{4}$ of an hour above Tiwi.	20 houses of the Salūt section.	This and all the places above it are within the hills. There are 200 date palms, 7 donkeys and 40 sheep and goats.
Hillat-al-Hisn حلة الحصن	$\frac{3}{4}$ of an hour above Fahdah.	70 to 80 houses of the Salūt section.	There is a fort here: dates are 1,000, donkeys 10, cattle 20 and sheep and goats 250.
Hārat Bidih حارة بده	$\frac{1}{2}$ of an hour above Hillat-al-Hisn.	50 houses of Salūt.	Pomegranates are grown and there are 6,000 date palms, 10 donkeys, 50 cattle and 1,000 sheep and goats.
Hārat Bani 'Isa حارة بني عيسى	$\frac{1}{4}$ of an hour above Hārat Bidih.	20 houses of Salūt.	Date palms number 2,000; animals are 4 donkeys, 12 cattle and 500 sheep and goats.
'Aqr عقر	$\frac{1}{4}$ of an hour above Hārat Bani 'Isa.	10 houses of Salūt.	There are 2,000 date palms, 10 donkeys, 10 cattle and 200 sheep and goats.
Salma سيما	1 hour above 'Aqr.	150 houses of the Bani Muqīm section.	Resources are 8,000 dates, 20 donkeys, 5 cattle and 2,000 sheep and goats.

Name.	Position.	Houses and inhabitants.	REMARKS.
Mibām میبام	1 hour above Saima.	100 houses of Bani Muqīm.	Palms number 8,000 ; there are 30 donkeys, 20 cattle and 2,000 sheep and goats.
'Amq عنق	4 hours above Mibām.	7 or 8 houses of the Bani Muqīm section.	Pomegranates are grown and there are 1,000 date palms, 100 donkeys and 1,000 sheep and goats.

The settled population of the valley is thus about 3,800 souls, inclusive of Tīwī Village.

Wādi Tīwī is a deep, narrow valley, so difficult that cattle, it is said, cannot be marched up or down it; those imported by the inhabitants are carried up when they are young. In many places the track crosses bridges of single date trunks. Dates, grown on terraces on the hills, extend the whole way from Mibām to the sea and are prolific; other crops are millet, jowari, sesame, lucerne and gourds. The valley contains a stream of flowing water.

TUNB* طنب

In English formerly "Tomb", an island in the Persian Gulf, lying 17 miles south of the south-west point of Qishm Island and 46 miles north-west of Jazīrat-al-Hamra, which is the nearest point on the coast of Trucial 'Omān.

It is roughly circular in outline, but flattened on the south side; in diameter it measures about $2\frac{1}{4}$ miles. The island is 165 feet in height at the highest point, level and of a brown colour: it is very barren and sandy, but there is some growth of coarse grass and shrubs, and a well on the south side, near which there is a large banyan tree, yields a small quantity of indifferent water. The best anchorage is off the south coast.

Tunb belongs to the Shaikh of Shārjah, and is connected with the Rās-al-Khaimah District of his principality; of the six huts which at present exist on the island one belongs to the Shaikh's representative, who is in charge of a Shārjah flag and flag-staff, two are occupied by Bani

* A distant view of this island will be found in Chart No. 2373-2387 A.

Yās families originally from **Dibai**, and one is inhabited by a family of Persians from **Lingeh** who have lived on the island for many years as employés of the **Shārjah** Shaikh. At times the population has been temporarily increased by immigration from **Bū Mūsa** and **Sirri**, due to tribal differences at those places. The permanent inhabitants live by pearl diving and fishing, by their flocks and herds, and by one small date grove; they are extremely poor. About 20 horses annually are sent from the mainland to graze here.

An island in the Persian Gulf, 8 miles west of the island of **Tunb**. It is of triangular shape, 1 mile long from north-west to south-east, and $\frac{3}{4}$ of a mile broad at the south end. A dark-coloured hill which stands on its north point is 116 feet high. The island is uninhabited and destitute of water, but there is a good deal of vegetation of a salsolaceous kind. **Nābiyu Tunb** is a favourite breeding place of sea birds. The ownership is presumably determined by that of **Tunb**.

TUNB*
(**NĀBIYU**
or
NABI)
نابي
بني طنّب

A large and powerful Arab tribe in the **Hawīzeh** District of Southern 'Arabistān, numbering some 20,000 souls and occupying the whole of the country watered by the **Karkheh** below **Kūt Nahr Hāshim**, including the marshes. The seat of the ruling family, who belong to the **Āl Bū 'Adhār**, is at **Khafājiyeh**, on the left bank of the main stream several hours to the west of **Kūt Nahr Hāshim**, where there is a bazaar of about 90 mud-built shops.

TURUF
(**BANI**)
بني طرف

A colony of **Bani Turuf** has recently been planted by the Shaikh of **Muhammareh** on the **Khaz'ali** canal in the **Fallāhiyeh** District, and by some the indigenous inhabitants of **Ma'shūr** are believed to be of **Bani Turuf** extraction.

The **Bani Turuf** are **Shi'ahs**. They live in huts made of mats, reeds and grass, and they subsist chiefly by agriculture, but are also stock-breeders; rice is their staple crop; some wheat and barley also are cultivated by them, and they are said to own 20,000 head of buffaloes and cattle, but no sheep. They export large quantities of rice and

* A distant view of this island is given in Chart No. 2373-2387A.

hides to 'Amārah *via* Hawizeh and send ghi by direct caravan to Muhammareh and Basrah. Piece-goods, sugar and coffee they obtain principally from 'Amārah; but their tobacco comes from Shūshtar.

The Bani Turuf fall into two main divisions, the Bait Sa'id بيت سعيد and the Bait Saiyāh بيت صيَّاح, of which the subdivisions are given below in tabular form. Altogether the Bani Turuf can muster about 5,600 fighting men, of whom two-thirds possess rifles; but only some 50 men belonging to the families of the Shaikhs are mounted.

Subdivisions of the Bait Sa'id.

Name.	Fighting strength.	Name.	Fighting strength.
'Adhār (Āl Bū) آل بو عذار	300	Hariz (Āl Bū) آل بو حرز	230
Fijaijāt فجيجات	250	Maiyāh ميَّاح	650
Ghawābīsh غوابش	400	Mazra'eh مزروع	400
Halāf حلاف	200	Nais نيس	100
Hamdān (Āl Bū) آل بو حمدان	150	Shākheh (Ahl-ash-) اهل الشاخه	250
Hardān (Āl Bū) آل بو حمدان	300	Sitātleh سقاطله	120

Of the above the Halāf were originally a separate tribe; they are now found among the Bani Sāleh also, and perhaps among the Bani Tamīm.

The Mazra'eh too were at one time independent and powerful and, are said to have owned $\frac{1}{3}$ of the Hawizeh District.

The Nais are of the same origin as the separate tribe so named in the Hawizeh District, and as the Nais sections of the 'Anāfijeh and Bait Sa'ad tribes.

Subdivisions of the Bait Saiyāh.

Name.	Fighting strength.	Name.	Fighting strength.
'Adhār (Āl Bū) . . . آل بو عذار	200	Hail (Āl Bū) . . . آل بو حيل	350

'Ahl (Āl Bū) . . . آل بو علي	250	Naqreh (Āhl-al-) . . . اهل النقره	300
Faraisāt . . . فريسات	250	'Ūkai . . . عوكي	300

From the names of the sections it may be conjectured that the Bani Turuf are largely composed of fragments detached from other tribes in 'Arabistān or Turkish 'Irāq; but it should be added that the information as yet obtained about this tribe is not of a very clear or satisfactory kind.

The Bani Turuf have from time to time resisted the authority of the Shaikh of **Muhammareh** in the **Hawizeh** District, but without much success. They are generally characterised as thieves and robbers.

This mountain range, of which the name is frequently pronounced Tuwaij or Itwaij, is the dominant feature of Southern Central Arabia and divides the districts of Southern **Najd** into an eastern and a western group. For convenience of description we may distinguish the northern part of the range from the southern, dividing Tuwaiq at the point where it is crossed by the route between the villages of 'Ayainah and Barrah in the 'Aridh district.

TUWAIQ
(JABAL)
جبل طويق

Northern Tuwaiq.—The northern division of Tuwaiq is perhaps a plateau rather than a chain of hills; it contains most of the villages of

the **Sadair** district besides those of the Mahmal division of 'Āridh, and in describing the physical features of those districts a good deal has been said about its configuration which need not be repeated here. In the north the range begins somewhere to the north-east of **Zilfi**, on the east side of which it passes. Near its north-western corner it has four spurs or outliers which are rounded in succession on the way from **Zilfi** to Ghāt: they are **Khashm Samnān** سمنان, **Khashm Imlaih** امليح, **Khashm Iswais** اسويس and **Khashm A'dhaidān** اعضيدان; to these may be added **Khashm 'Arnīyah** عرنيه, at the foot of which lies Ghāt. Of the better known valleys of **Sadair** only the northernmost, that of Ghāt, leaves **Jabal Tuwaiq** in a westerly direction; the other three, namely, those of **Majma'** and **Tuwaim** and the **Bātin-as Sadair** or 'Ajsh hollow, all go eastwards. From this it may perhaps be inferred that the major portion of **Tuwaiq** in the **Sadair** district drains to the east, and that the western slopes are here shorter and more abrupt. To the south-west of **Majma'** there is a group of 5 peaks called **Mishqar** مشقر which are said to command a view of the **Washam** district to the south; and about 15 or 20 miles to the south-east of **Tamair** is an unusually high portion of the range.

In the 'Āridh district it is necessary to distinguish between the main range and a subsidiary range which goes off to the south-eastwards. The main range passes southwards by **Haraimlah**, which is situated, apparently on or near its watershed; and the surface of the plateau seems, from the number of valleys and villages on both sides, to be more equally divided than it is in **Sadair** between the eastern and the western slopes. On its eastern side this main range is said to merge in the plain along a curving line marked by the villages of **Dqalah**, **Diqail**, **Mahriqah**, **Malham** and **Sidūs**. At the southern limit which we have assigned to the section now under discussion we find the **Haisiyah** hollow, which goes to form **Wādī Hanifah**, descending the eastern slope of **Tuwaiq**; while on the other side at the same point a smaller torrent bed, also called **Haisiyah**, goes down to the plains on the west. The eastern **Haisiyah** contains water only after rain; but in the other, near its origin, are shallow wells called **Hasyān** حسيان, in which water stands at two fathoms. The route from 'Ayainah to **Barrah** runs up the larger **Haisiyah** and crosses **Jabal Tuwaiq** by a pass which, as demonstrated by the Turkish expedition of 1818, presents no serious obstacle to field artillery; in descending again from this pass the smaller or western **Haisiyah** is not followed but remains to the left.

The subsidiary range of Tuwaiq in the 'Āridh district breaks off from the main one in the Sadair district, not far from Tamair, at a hill known as Umm Jazzal ^{أم جزل} and thence runs south-eastwards to a place called Hit ^{هيت} somewhere between Riyādh and the Dahānah desert. This subsidiary range encloses between itself and the main range to the west the Khafs depression which is such an important feature of the 'Āridh district, and it also separates the Khafs depression from the 'Urmah plain to the east of it. Some further particulars are given regarding it in the article on the 'Āridh district.

The northern part of Jabal Tuwaiq is described as white and calcareous, with a maximum elevation above the surrounding plains of less than 2,000 feet and an altitude generally increasing from north to south. There is good pasture which lasts throughout the year, and a few Sidr, Markh and Talh trees are seen; generally speaking, the higher the elevation in this portion of the range the less the fertility and the drier the soil.

Southern Tuwaiq.—Our knowledge of Jabal Tuwaiq south of the point where it gives birth to Wādī Hanifah is fragmentary and conjectural. Immediately south of Haisiyah, Tuwaiq seems to project very considerably to the eastwards, for the main range is said to run parallel to the right bank of Wādī Hanifah and at no very great distance from it as far as Riyādh; but at Hāir it has again begun to recede towards the west. Just below Hāir the range appears to be entirely cut across by a valley from Dhrumah,—a place regarded as being on the west side of Jabal Tuwaiq,—which enters Wādī Hanifah below Hāir. The mass of Jabal Tuwaiq between Dhrumah and Riyādh is said to contain two very high portions; they are Jabal Kharshah ^{خرشه}, which is apparently close to Haisiyah, and Abaljid ^{الجد}, which is crossed on the direct route through the hills from Dhrumah to Riyādh.

To the south of Dhrumah, according to native information, Tuwaiq changes its character and becomes of a greyish colour. It is uncertain whether Jabal 'Alaiyah, which separates 'Āridh from Harīq and Hautah and is described in the article on Harīq, is a spur of Tuwaiq or a separate range; and a similar doubt prevails in regard to Jabal Birk, which forms a barrier and a boundary between Hautah and Aflāj. Jabal Tuwaiq however is evidently prolonged to the southwards behind the districts named; for, near the south-west corner of the Aflāj district, Shutbah stands in a recess in its eastern face, and the Maqran valley, forming the southern boundary of Aflāj, leads down from its foot hills

to the **Dahānah** desert. From the neighbourhood of **Shutbah** a series of detached eminences extends southwards and connects **Jabal 'Āridh**—as **Jabal Tuwaiq** in the '**Āridh** district and also to the south of it is frequently called—with the hills of **Salaiyil**.

Of the western slopes of **Jabal Tuwaiq** in these lower latitudes nothing is known; it is possible that, as has been stated by one authority, a long limb stretches away to the south-westwards between **Wādi Dawāsir** on the south-east and the route from **Qasim** to **Makkah** on the north-west and reaches to **Wādi Sabai'**. The aggregate length of the two sections of **Jabal Tuwaiq** has been described by Bedouins as equalling "a month's journey," a statement which could hardly be considered as justified, even in a loose sense, if the range ended at '**Aflāj**.

'**UMR**
(**BANI**)
بنی عمر

Singular **Ma'amari** معمرى. A tribe of the '**Omān** Sultanate found at various places in **Bātinah** and the Western **Hajar**: they are not to be confounded with a section similarly named of the **Bani Battāsh** tribe. In politics the **Bani 'Umr** are **Ghāfiriyah**, in religion **Ibādhiyah**, except some of those in **Hajar** who are **Sunnis**; none or few of them are **Bedouins**. The **Bani 'Umr** are always at feud with the **Hāwāsinah** and **Maqābil**, their neighbours. In Western **Hajar** they occupy the whole of **Wādi Bani 'Umr**, viz., **Mijzi** (70 houses), **Jahanāt** (200 houses), **Rahbah** (150 houses), **Hail Islāt** (50 houses), **Farfār** (100 houses), **Ghaiz** (50 houses) and **Lihbān** (100 houses); also the following villages in **Wādi Bani 'Umr-al-Gharbi**:—**Hail** (15 houses), **Shuwaimarah** (15 houses), '**Aqrabiyah** (8 houses), **Rahab** (50 houses), **Dhabyān** (6 houses), and **Baidha** (4 houses); also **Hibi** (25 houses) in **Wādi Sarrāmi**. In **Bātinah** their settlements are at **Sib** (45 houses); at **Ghadhfān** (250 houses) and **Hadd** (60 houses) in the sub-Wilāyat of **Sohār**; at **Harmūl** (50 houses), **Nabar** (100 houses), **Asrār Bani 'Umr** (250 houses), **Umm-al-'Inah** (100 houses), and **Hamairah** (100 houses) in the sub-Wilāyat of **Liwa**; and at **Bilaidah** (20 houses) in the sub-Wilāyat of **Shinās**. The tribe are also found at **Ghashab** (225 houses) and **Falaj-al-'Āli** (150 houses) in **Wādi Fara'**; at **Haiyāl** in **Wādi-al-Kabīr** (50 houses); and at **Sharaijah** (100 houses) in **Jabal Akhdhar**. The **Bani 'Umr** number in all about 11,000 souls. **Ghadhfān** is their principal place in the north, while **Lihbān** is their capital in the south, but the present chief **Shaikh, Salīm-bin-Marhūn** resides at **Hibi**.

In the Western Hajar district of the 'Omān Sultanate, a left-bank tributary of Wādi-al-Hawāsinah which it joins between Ghaizain and Qasaf; it contains the following villages from its head downwards, all of which are inhabited by Bani 'Umr:—

'UMR
(WĀDI
BANI)

وادي بني
عمر

Villages.	Position.	On which bank.	Number of houses.	REMARKS.
Mijzi ميجزي	3 hours below the head of the valley.	Left.	70	Wheat, maize and lucerne are grown: there is one Falaj. Animals are 20 camels, 30 donkeys, 30 cattle and 2,000 sheep and goats. Date palms, 4,000.
Jahanāt جهانات	2 hours below Mijzi.	Right.	200	Wheat, maize and lucerne are grown: there are two Falajs. Livestock are 40 camels, 20 donkeys, 50 cattle and 3,000 sheep and goats. Date palms, 15,000.
Rabbah رجبه	1½ hours below Jahanāt.	Left.	150	Wheat only is grown: there are five Falajs. Animals are 100 camels, 400 donkeys, 20 cattle and 6,000 sheep and goats. Date palms, 6,000.
Hail Islāt حيل اسلات	3 hours below Rabbah.	Both.	50	Crops are wheat and maize: there are three Falajs. Livestock are 400 sheep and goats. Date palms, 4,000.
Farfār فرفار	2 hours below Hail Islāt.	Do.	100	Wheat, maize and lucerne are grown. There are 30 camels, 10 cattle and 1,000 sheep and goats. There are two Falajs. Date palms, 8,000.
Ghaiz غيز	½ an hour below Farfār.	Left.	50	Crops are wheat, maize, lucerne and sweet potatoes: there is one Falaj. Animals are 20 camels, 7 donkeys, 7 cattle and 1,000 sheep and goats. Date palms, 1,000.

Villages.	Position.	On which bank.	Number. of houses.	REMARKS.
Lihbān لهبان	2 hours below Ghaiz and 2 from the junction with Wādī-al-Hawā- sinah.	Right.	100	There is one Falaj. The crops are wheat and maize. Animals are 20 donkeys, 15 cattle and 800 sheep and goats. Date palms, 3,000.

The settled population of the valley seems to amount to about 3,600 souls.

In its general characteristics Wādī Bani 'Umr resembles Wādī-al-Hawāsinah. Water runs above ground throughout the valley.

'UMR-AL-
GHARBI
(WĀDI
BANĪ)

وادي بني
عمرو الغربي

A valley of the Western Hajar district of the 'Omān Sultanate; it is situated between Wādī-al-Jizi on the south and Wādī Hatta on the north and reaches the sea at Harmūl. The villages of this Wādī in order from its head downwards are:—

Villages.	Position.	On which bank.	Houses and inhabitants.	REMARKS.
Tawi طوي	At the head of the valley.	Left.	60 houses of Riyāyisab.	Grain is cultivat- ed, but there are only 1 or 2 cattle and a few sheep and goats. Palms, 4,000.
Hail حيل	$\frac{1}{2}$ of an hour below Tawi.	Do.	15 houses of Bani 'Umr.	Do. Palms, 500.
Shuwaimarah شويمرة	$\frac{1}{2}$ of an hour below Hail.	Right.	15 houses of Bani 'Umr.	Do. Palms, 800.
'Aqrabiyah عقريبه	$\frac{1}{2}$ of an hour below Shuwaimarah.	Do.	3 houses of Bani 'Umr.	Do. Palms, 100.
Rahab رحب	1 hour below 'Aqrabiyah.	Left.	50 houses of Bani 'Umr.	Do. Palms, 5,000.
Dhabyān ذبيان	1 hour below Rahab.	Right.	6 houses of Bani 'Umr.	Do. Palms, 500.
Baidha بيضا	$\frac{1}{2}$ of an hour below Dhabyān.	Do.	4 houses of Bani 'Umr.	Do. Palms, 400.

The settled inhabitants of Wādi Banī 'Umr-al-Gharbi number apparently about 800 souls.

A small stream flows through the valley. One hour below Baidha the valley emerges from the hills and enters Bātinah, and 5 hours further it reaches the sea.

Singular 'Atbi عتبي. The dominant tribe in the Bahrain Principality and also, of all the Bahrain tribes properly so called, the strongest in numbers. To the 'Utüb belong the ruling family of Bahrain. The Kuwait Shaikhdom also is in the hands of an 'Atbi family, and some of the tribe are found in Kuwait Town.

Subdivisions and number.—The following are the principal subdivisions of the 'Utüb :—

'UTÜB
عترب
or
'ITBAH
(BANI)
بنی عتبه

Section.	Subsection.	Houses.	Habitat.	REMARKS.
Fādhil (Āl) آل فاضل	...	35	Manāmāh and Muharrāq Town.	The Āl Fādhil were formerly much more numerous than they are now.
Jalāhimah جلاهيمه	There is a sub- section called Āl Zaid آل زيد.	40	These also are found at Manāmāh and Muharrāq Town, with the exception of 5 families who are at Kuwait.	Do.
Khalīfah (Āl) آل خليفة	'Abdullah (Āl) آل عبد الله.	25	Bahrain, Hasa and Qatar.	Only 5 families are on good terms with the Shaikh of Bahrain and live in his juris- diction. The remainder, con- sisting of 20 greybeards and their descend- ants, having an irreconcilable difference with the Shaikh, lead

Section.	Subsection.	Houses.	Habitat.	REMARKS.
				a nomadic existence among the Bani Hājir of Hasa and Qatar; their leader, Nāsir-bin-Mubārak, is son-in-law to Jāsīm, Shaikh of the Ma'ādhid of Qatar, and grandson to the late chief Shaikh of the Makhadhhabah (Bani Hājir). The founder of this subsection was 'Abdallah-bin-Ahmad who ruled Bahrain between 1825 and 1843.
Khalīfah' (Āl) آل خليفة	Salmān (Āl) آل سلمان	850	Muhār'raq Town, Manāmah, the 2 Rifā's, Sharaibah, Busaitin and Hālat Umm-al-Baidh.	The present Shaikh of Bahrain and his family belong to this subsection.
Subāh (Al) آل صباح	...	30	Kuwait Town.	The present Shaikh of Kuwait with his family belongs to this subsection.

On the basis supplied by the table above, the strength of the 'Utüb at the present day may be roughly stated at 5,000 souls. It should be added that at Kuwait uncertainty prevails as to who are really 'Utüb, and the number of the tribe at that place may have been underestimated in consequence, possibly to the extent of 1,000 souls or more.

Religion and occupations.—The 'Utüb are Māliki Sunnis. Those of Bahrain are engaged in date cultivation, pearl dealing and pearl diving, and in navigation both within the Persian Gulf and beyond it as far as India and Zanzibar.

Migrations and political position.—It is generally admitted that the 'Utūb are of the 'Anizah, but beyond this fact their antecedents are obscure. Their first appearance in the Persian Gulf was probably at **Kuwait**, where they seem to have settled about 1716 A.D. The Āl Subāh section have never left **Kuwait**; but about 1766 A.D. the Āl Fadhil, Jalāhimah and Āl Khalifah commenced to distribute themselves along the eastern coast of Arabia between **Kuwait** and the southern limits of **Qatar**. The headquarters of the principal Shaikh of those sections—himself a member of the Āl Khalifah section—are said to have been at **Zubārah** in **Qatar** until 1783, when the southern 'Utūb, as we may call the sections other than the Āl Subāh, crossed over from **Qatar** accompanied by most of the Arab tribes of that promontory (the Na'im, Āl Bin-'Ali, 'Amāmarah, etc.) and conquered **Bahrain** with the assistance of their kinsmen of **Kuwait**. Since then the southern 'Utūb have remained practically paramount in **Bahrain**, but in 1800 they were subjugated for a short time by the Imām of 'Omān and they have been at various times compelled to profess allegiance to that potentate, to the Wahhābi Amīr, and even to the rulers of Turkey and Persia. There are now no 'Utūb in the towns or villages of the **Hasa** Province or of **Qatar**. The northern 'Utūb have retained undisturbed possession of **Kuwait**. A certain degree of intercourse and relationship between the northern and southern 'Utūb is maintained by inter-marriage.

A well-known camping ground and watering station in **Summān**, **WABRAH** about 140 miles south by west, as the crow flies, of **Kuwait Town**; وَبْرَه it is close to the southern limit of the Shaikh of **Kuwait's** jurisdiction, either just within or just outside it. Wabrah is a main and central halting place for tribes on the move between the coast and the interior in this part of Arabia, and, as indicated in the article on **Summān**, the Wabrah route to **Najd** lies about half-way between the northern route from **Kuwait** to **Qasim** and the southern route from **Hofuf** to **Riyādh**. At Wabrah there are over 100 wells within a space of about 400 yards square, but ordinarily only a few are in good repair. They are sunk some 3 or 4 fathoms through sandstone rock and are reputed ancient; their mouths are deeply grooved by the friction of the ropes with which the water is drawn; the fluid they yield is brackish. Wabrah is a centre upon which many routes converge: one leading to **Majma'** in **Sadair** leaves Wabrah in a direction south-west by west across masses of rugged sand-

stone hills, while the direct route to **Riyādh** departs in a line about south by west: on an eminence to the west of the latter, immediately after it enters some broken ground, are the remains of a small hill fort.

WADYĀN

رديان

A large depressed area in the southern part of the **Hamād**, not far north of the **Nafūd**; it begins a little to the east of **Jauf-al-'Āmir** and runs north-eastwards towards the **Euphrates** basin, to which it is said to drain. Wadyān is composed of numerous large valleys and contains good pasturage and several large wells. Among the valleys are Suwaif , Hilālī هلالی , 'Ar'ar عرعر , Abāl ابال , Qūr قرر , Abaiyidh اببيض , Ghadaf غدف , Safāwī صفاري , Madaisīs مديسيس , Marah مرة , Hamar حمر , Tūbāl توبال , Wādī-al-Miyāh وادي المياه , Marba'ah مربعة , Mihaiwir محير , Horān حوران and Khir حر . Wadyān is in the territory of the Fida'an and Saba'ah sections of the 'Anizah and is also known under the name of Wadyān-al-Mahannah وديان المهنة .

WĀFI

وافي

Also called Balad Bani Rāsib بلد بني راسب . A large village in the **Ja'alān** district of the 'Omān Sultanate, situated about 6 miles north of Balad Bani Bū Hasan. It is inhabited exclusively by Bani Rāsib and is the only village of that tribe. Wāfi consists of about 300 houses, mostly of mud and gypsum-stucco, and is surrounded by a wall. The date groves are excellent, containing perhaps 15,000 palms, and are watered by a spring reputed the finest in **Ja'alān** or **Sharqīyah** except only that of **Mudhaibi** of the **Habūs**. Lucerne and millet are grown, and the fruits include limes, oranges, plantains, pomegranates, tamarinds, olives and grapes. Livestock are 18 horses, 200 camels, 50 cattle, 400 sheep and goats and some donkeys.

WAHAIB

(BANI)

بني رهيب

Singular Wahaibi رهيبی . A tribe found in the **Masqat** District, but not elsewhere in the 'Omān Sultanate except at **Daghmar** and **Quryāt** (60 houses). A section in Wādī Hātāt are known as the Rajaibiyin رجيبين , and those of 'Arqi belong to a section styled Jarādinah جراندنه . The Bani Wahaib are Hināwiyah and Ibādhīyah. In the **Masqat** District their settlements are: in Wādī **Mijlās** and its tributaries, at

La'bān (40 houses), Sālifah (30 houses), Būlidah (25 houses), Habūbiyah (60 houses), Mizra' Sumair (20 houses), Mizra' Balail (15 houses), Hai-thadh (30 houses), Fayādh (20 houses) and Haifal (15 houses); in Wādī **Maih** and its tributaries, at Dhahr Sidrah (30 houses), Tuyān Jahlūt (40 houses), Sa'adi (60 houses), Mahaidith (20 houses), Rakil Milh (30 houses), Mandhariyah (20 houses), Mahail (25 houses), Tawilah (30 houses) and Hājir (30 houses); on the coast at Bistān (20 houses) and Yiti (20 houses); and at Wataiyah (6 houses), **Ruwi** (25 houses) and **Masqat Town** (45 houses). Besides these settled Bani Wahaib there are two Bedouin sections, the Kawāsib (25 families) and the Shabūl شبرل (35 families); the former possess about 30 camels, 18 donkeys, 14 cattle and 1,000 sheep and goats, and the latter about 20 camels, 20 donkeys and 300 sheep and goats. The total number of the Bani Wahaib may be about 3,500 souls. Their principal chief is 'Ali-bin-Qulaim who resides at Tuyān Jahlūt.

Singular Wahaibi رهيبي . A very important tribe of the **Sharqiyah** **WAHĪBAH** (ĀL) and **Ja'alān** districts in the 'Omān Sultanate, almost entirely Bedouin, but enjoying at present a high position in the tribal system. آل رهيبي

In the **Baldān-al-Habūs** division of **Sharqiyah** settled Āl Wahibah occupy the villages of Sadairah and Aflāj and part of the town of **Mudhaibi**. On the South-Eastern Coast of 'Omān they are found as far north as Rās Shaiblah (20 houses) and as far south as Rās Sarāb. Settlements of them exist at Majiz-al-Wahibah (100 houses) and Laghshibah (20 houses) in **Bātinah**; at 'Adaibah (15 houses) and Ghubrah (30 houses) in the **Masqat** District; and at Ghallah (10 houses) in Wādī **Bōshar**.

Of the nomadic Āl Wahibah a great majority are purely pastoral, owning camels, sheep and goats; but some of those on the south-east coast are expert fishermen and venture as much as 2 miles out to sea on skin floats to catch small fish with casting nets.

The Āl Wahibah as a whole are warlike and have the usual Bedouin virtues and defects; they are always ready to fight when there is a prospect of plunder, but they are not unpleasant in their ordinary dealings. They are undoubtedly a very numerous tribe and are besides enemies of an inconvenient kind; for their camels are the swiftest in 'Omān, and they have almost no date groves or villages on which damage can be

inflicted by way of retaliation. In politics the Āl Wahībah are Hināwiyah, in religion Ibādhiyah. Their last great Tamīmab, Nāsir-bin-'Alī, died in 1866 at an advanced age; the principal Shaikh at the present time is 'Alī-bin-Sultān who lives at Aflāj. Parties of Āl Wahībah regularly visit the Shaikh of Abu Dhabi in Trucial 'Omān, the most important Hināwi chief not connected with Masqat, and receive from him presents or subsidies. The Āl Wahībah have a standing feud of great bitterness with the Jannabah, and they sometimes annoy the Hikmān of Mahōt.

The Āl Wahībah are divided into a number of sections arranged in 6 large, but apparently nameless groups, as follows :—

Section.	Fighting strength.	Habitat.	REMARKS.
<i>First group.</i>			
'Asākīrah عساكره
Barātamīn برائمين	60	Bātinah.	...
Ghafailah (Hāl Bā) حال بو غفيله	70	'Omān Proper.	...
Hidai (Āl Bū) آل بو هدي	70	'Omān Proper, especially at Dūh.	...
Jahāmāh (Wilād-al-) ولاد الجهامه	60	Do.	...
Khamīs (Hāl) حال خميس	60	'Omān Proper.	...
Likānīn لكانيين
Mabābisāh مبابسه
Madhākīr مذاكير	70	'Omān Proper.	...

Section.	Fighting strength.	Habitat.	REMARKS.
Mūnis (Hāl) حال مونس	60	'Omān Proper.	...
Muwāḥid موافد
Na'amān (Bani) بنی نعمان	60	Aḥāj.	...
Shalālībah شلالبه	50	'Omān Proper.	...
'Umr (Wilād) ولاد عمر	80	Ja'alān.	...
<i>Second group.</i>			
'Asāsīf عساسيف	100	Ja'alān.	...
Badr ('Āl) عال بدر	100	'Omān Proper.	...
Jahāḥīf جفافيف	80	Do.	Said to have been originally a Bedouin section of the Āl Bū Sa'id.
Karāḥinah كراهنه
Ma'amar (Hāl bū) حال بو معمر
Mughāirah مغائرة	200	...	This section is entirely Bedouin.
Shuwālīl شواليل	150	Sadairah in Shar- qiyah.	...
Suwaid سويد
<i>Third group.</i>			
Hatātīmah حطاطمه	60	'Omān Proper.	This is an altogether Bedouin section.

Section.	Fighting strength.	Habitat.	REMARKS.
Madhāwirah مضارره	200	Sadairah in Shar- qīyah.	This is an altogether Bedouin section.
Mufanaḡ مفنج
Muharrām (Hāl) حال محرم
Mushīn (Hāl) حال مشين

Fourth group.

Hadām (Hāl) حال حدام
Hindi (Wilād-al-) ولاد الهندي
Jidālah جداله	200	'Omān Proper.	...

Fifth group.

Badr (Hāl) حال بدر	100	Wadi 'Andām.	...
Gharīb (Yāl) يال غريب
Hindi (Hāl) حال هندي	60	In Sharqīyah.	...
Mahāsib (Hāl) حال محاسب
Sināo (Hāl) حال سنار

Sixth group.

Marāmīhah مراميه	250	Sadairah in Shar- qīyah.	...
---------------------	-----	-----------------------------	-----

This fragmentary account is all that it has been possible to procure of the constitution of the Āl Wahībah. They are believed to number in the aggregate about 13,000 souls.

A village on the left bank of the **Kārūn** river about 35 miles by water above **Ahwāz** Village and 14 miles from it in a north-easterly direction by land. **Wais** takes its name from the shrine of one **Wais-ibn-Karāni** كرائي who is said to have been a companion of Muhammad. The place consists of about 250 mud houses of which only 150 are occupied; the inhabitants are mixed Arabs and natives of the towns of **Dizfūl** or **Shūshtar**, most of whom are engaged in the cultivation of wheat and barley. There is one garden with a few **Kunār** trees. About 60 mules are owned here, which, when not in use for the plough, are employed on the caravan routes to **Ahwāz**, **Rāmuz** and **Shūshtar**. There is a ferry with 1 small boat, and the **Ahwāz**-**Isfahān** road leaves the **Kārūn** bank at this point. Some **Muhaisin** cultivate in the neighbourhood in winter.

WAIS
ريس

A town on the east coast of **Qatar**, about 10 miles south-south-east of **Dōhah**.

WAKRAH
الوكرة

Situation and surroundings.—There is no harbour or even bay at the town; but a coral reef lies in the sea about 1 mile north-east of **Wakrah**, reaching east and west, while 7 miles to the south-east another reef, known as **Fasht Shuwaimisah** شويمة or **Rās-al-'Arq** راس العرق, projects from the coast; between them these reefs enclose, as it were, a large and imperfectly sheltered basin. The town is near the beach, and at high water native boats can run close up to it, either over or through the shore reefs; but European vessels, even of small draft, cannot anchor within a less distance of the shore than 2 miles. One mile to the south of the town is a hill, **Jabal Wakrah**, 85 feet high. The country between **Wakrah** and **Dōhah** is bleak and barren.

Town.—The houses in **Wakrah** are all of mud and stone, for no date fronds are available here for use as building material. The town

originally formed a compact block, but during the last few years a detached quarter known as Rumailah رُمَيْلَة has sprung up about 800 yards further to the northward.

Inhabitants.—The population of Wakrah is two-thirds that of Dōhah or about 8,000 souls. It appears to be composed of the following elements :—

Tribe.	Souls.	Tribe.	Souls.
'Ainain (Āl Bū) . . .	2,000	Maqla (Āl Bin) . . .	50
'Amāmarah . . .	100	Negroes (free) . . .	1,000
Arabs from Najd . . .	250	Negroes (slaves, but not resident with their masters) . . .	2,000
Bahārinah . . .	200	Persians . . .	125
Hūwalah . . .	1,000	Yās (Bani) of the Qubaisāt section . . .	75
Khalaifāt . . .	850
Ma'ādhid . . .	350

The Rumailah quarter is inhabited chiefly by **Khalaifāt** and **Ma'ādhid** and their slaves. The **Bahārinah** and **Hūwalah** are tradesmen and artisans. There are no British subjects of any sort at this place.

Resources and trade.—The people of Wakrah are mostly pearl divers, sailors and fishermen ; and 150 pearl boats, 20 other sea-going vessels and 80 fishing boats belong to the port. In a grassy Raudhah about 1 mile west of the town is a walled date grove ; it contains about 80 palms besides some cultivation of lucerne and is surrounded by about 15 shallow masonry wells. From this spot, which is called 'Ain Wakrah, the drinking water of the town is fetched. Live-stock at Wakrah include about 40 horses and 150 camels. Wakrah is a market town of the Bedouins and has about 75 shops.

Government.—The governing Shaikh of Wakrah is at present 'Abdur Rahmān of the Āl Thāni family of the **Ma'ādhid** of Qatar, third son

COPYRIGHT.

The Fort of Wakrah, Qatar.

(Maj P. Z Cox.)

of Shaikh Jāsīm who is the present head of the family. 'Abdur Rahmān is the owner of the date plantation at 'Ain Wakrah and inhabits a large fort about $\frac{1}{2}$ a mile inland of the town; in the area which it covers this building is similar to the fort of the Shaikh of Bahrain at Manāmah, but the walls are not so massive and, except where they support an upper storey, probably do not exceed $2\frac{1}{2}$ feet in thickness. The Rumailah quarter has at the present time a separate headman in the person of Shaikh Thāni, another son of Shaikh Jāsīm. There are no Turkish officials or troops or other tangible evidences of Turkish influence at Wakrah.

A small tract or plateau, situated apparently between the Sūdah district and Summān on the southern confines of Kuwait territory: it extends from 6 miles north-east of Wabrah to 21 miles north-east of Wabrah. The surface of Warai'ah is irregular: the ground is broken, strewn with pebbles, and diversified with mounds of earth and sandstone. At the western end of Warai'ah is a group of 3 or 4 eminences, called Hurbāt هربات.

An island lying between the north end of Būbiyān island and the mainland of Turkish 'Irāq. It is enclosed by Khor 'Abdullah coming from the south-east and Khor-as-Sabiyah coming from the south, which, breaking into two channels each, meet around it, while from opposite its west end the inlet on which stands Umm Qasr runs off in a north-westerly direction. Warbah is about 8 miles long north-east and south-west, and is shaped like a crescent with its concavity towards the south; its greatest breadth is over 2 miles. The surface is flat and sandy with low scrubby bushes; the general level is about 10 feet above high water; at the south-west corner the ground has a steep slope and there is deep water close in shore.* The channels surrounding Warbah are described in the articles on Khor 'Abdullah, Umm Qasr and Khor-as-Sabiyah.

* See a report, dated 24th July 1905, by Captain E. W. S. Mahon, R.E., who considered the island a suitable terminus (from a purely engineering point of view) for the proposed Baghdad Railway.

WASHAM

وَشَم

Limits.—The north-westernmost of the districts of Southern Najd, bounded on the north-west by Wādi-as-Sirr, on the north by Sadair, and on the east by a valley called Jaraifah جريفة which runs north and south under the western side of Jabal Tuwaiq. The southern boundary of Washam is a locality called Hammādah حمادة which divides it from Dhrumah in 'Āridh ; to the west there is desert and no definite border.

Physical features.—Washam is described as a flat district, narrow in proportion to its length which is from north-west to south-east. Towards the west end Washam is traversed by a longitudinal ridge called Dhaharah ذهاره, which is parallel to Jabal Tuwaiq and only, it is said, 10 or 15 miles distant from it : in the middle of this ridge is a break in which stands Shaqrah, the principal town of the district. Under the face of Tuwaiq which overlooks Washam from the east is a broad belt of sandy desert containing the valley of Jaraifah already mentioned. The general slope of Washam between Dhaharah and Tuwaiq is understood to be towards the south-east corner, but it is stated that the drainage of the district finds no outlet even in this direction and is absorbed. A valley which comes down from Haraimlah by Barrah in the 'Āridh district is reported to end in a swamp, called Mufidh مفيض, near the villages of Shams and Shamaishah in Washam. None of the villages of Washam are to the west of the Dhaharah ridge, beyond which the district extends only a short distance and the country is all desert.

Inhabitants.—The settled population of Washam are chiefly Bani Zaid and Bani Tamīm, but a few Sabai', Dawāsir and even Mutair are found. Their number may be roughly estimated at 6,000 to 7,000 souls. The 'Ataibah are the principal Bedouins, but nomad Mutair and Qahtān also visit Washam.

Agriculture and trade.—The cultivable parts of Washam consist of a sandy loam in which crops can sometimes be raised by rainfall ; and there are good date plantations, especially at Shaqrah. Camels, donkeys, horned cattle, sheep and goats are fairly numerous ; but there are not many horses in the possession of the villagers. Such trade as exists is centred at Shaqrah, where the best horses for the Indian market were formerly collected from the surrounding Bedouins.

Topography.—The following are the principal inhabited places in the Washam district —

Name.	Position.	Houses and inhabitants.	REMARKS.
Fara'ah فرعة	About 3 miles north of Shaqrah.	50 houses of Bani Tamim.	The date groves are large and productive, and wheat also is grown; the irrigation here is said to be done by the women. Water is abundant in wells 6 fathoms deep.
Haraiyiq حريق	About 20 miles north-east of Shaqrah.	40 houses of Bani Tamim.	A poor village with a few dates and a little cultivation of wheat.
Jaraifah جريفه	About 15 miles from Shaqrah, north or north-east.	One large house and 2 or 3 small ones of Mutair.	There is one well only and a little cultivation of wheat and maize, also a few date trees. Camels and cattle number only 3 or 4 each. The owners of this village are influential.
Marāt مرات	A few miles east of Tharmidah.	40 houses of Dawāsir.	Dates are few, but cultivation of cereals is considerable. There are several wells of good water.
Qarāin قراين	15 miles south-east of Shaqrah.	25 houses of cultivators employed by residents of Shaqrah.	The date groves contain about 5,000 palms, and a good deal of wheat is grown. Irrigation from wells, which are numerous, is performed by camel-power.
Qussab قصب	About 15 miles east of Shaqrah.	100 houses, mostly of Bani Tamim.	There are extensive date plantations containing perhaps 10,000 trees. Water is good in wells. It is said that large salt deposits exist here, from which salt is exported to all parts of Najd and even to Makkah.
Shamaisah شميسه	Between 12 and 15 miles west of Barrah in 'Aridh and about the same south of Tharmidah.	A hamlet.	There are wells of good water, 3 to 4 fathoms deep, and cultivation of cereals. This place is a stage on the route from Riyādh to Makkah.

Name.	Position.	Houses and inhabitants.	REMARKS.
Shams شمس	Within a mile or two of Shamaishah, direction uncertain.	A hamlet.	There are wells of good water, 3 to 4 fathoms deep, and cultivation of cereals. This place is a stage on the route from Riyādh to Makkah.
Shaqrah شقرا	About 100 miles south-east of 'Anaizah and the same north-west by west of Riyādh.	...	See article Shaqrah.
Tharmidah or Tharmudah ثرمده	About 20 miles south-east or south-south-east of Shaqrah.	200 houses of Bani Tamim, Sabai' and others: the place was formerly larger.	There are date groves visible from a long way off, and considerable cultivation. Water is not good, but is drinkable; the wells are 9 fathoms deep. The town is surrounded by a wall having towers at intervals; and a large new fort was built here by Ibn Rashīd in 1905. There are 3 mosques and 12 shops. A number of the ordinary houses have upper storeys. The walls of Tharmidah were razed to the ground by the Egyptians in 1818.
Washaiqir وشيقير	About 6 miles north of Shaqrah.	100 houses of Bani Zaid and Bani Tamim.	The village is walled, boasts of 3 mosques and 15 shops, and is built of sun-dried bricks. It is surrounded by date plantations and fruit gardens, and some wheat also is grown. Water is good, in wells of 10 fathoms. The great merchant family of Bassām, which has now its headquarters at 'Anaizah and is represented at Basrah, is said to have originated here: the Bassām are Bani Tamim.
Wathaithiyah واتيثية	A few miles west of Tharmidah.	A medium sized village of Sabai'.	An ordinary village.

Singular is Ya'arabi **يعربي**. A Ghāfiri but Ibādhi tribe of the 'Omān **YA'ĀRIBAH** **يعارب** Sultanate, once important but already reduced in 1881 to very small proportions. They are now found at **Nakhl** (50 houses) in Wādi **Ma'āwal**, at Tuwaiyah in Western **Hajar**, and at Tikhah (20 houses) and **Hazam** (40 houses) in Wādi **Fara'**. Those at Tikhah belong to a section called Wilād 'Abdas Salām. The Ya'aribah probably number about 800 souls. They have no prominent chief. The tribe supplied the rulers of 'Omān between 1625 and 1744 A. D., but they have since lost all influence and credit. Their power was not finally broken until the capture of **Hazam** by Saiyid 'Azzān bin-Qais in 1870 after a 9 months' siege.

A tract in the **Kuwait** Principality between **Jahrah** and **Bātih**. It begins 15 miles north of **Jahrah** and thence extends northwards 8 miles to the beginning of **Bātih**; its eastern and western limits are not ascertained. Half-way between its northern and southern borders it is crossed from east to west by the Jāl-al-Yāh **جال اليح**, a well-marked ridge 50 feet high, half a mile broad and covered with round stones: to the south this ridge presents a rather steep face, but on the north it declines gradually to the level of the plain. Yāh is an exceedingly barren tract with very little grazing. Its average elevation above the sea is about 250 feet.

YĀH
ياح

An island in the bay between Abu **Dhabi** and **Qatar**; it lies rather over 100 miles west by south of Abu **Dhabi** Town, 18 miles east-south-east of the island of **Dalmah** and only 4 or 5 miles north of the coast of **Dhafrah** at Jabal Dhannah. The island measures $6\frac{1}{2}$ miles from north to south by 5 miles across, and its shape is roughly oval with a remarkable indentation at its south end. The shores of Yās are low, but the centre consists of volcanic hills culminating in twin peaks each 430 feet high. The indentation already mentioned forms a singular landlocked natural harbour, to British mariners known as **Meriton Bay**; the depth is from 4 to 6 fathoms and the bottom mud, but the entrance is rather narrow and inconvenient. The island is frequented in winter by Bani Yās fishermen, mostly from **Dhafrah**, and pearl boats sometimes take refuge

YĀS
ياس

there during storms. The following pearl banks exist in the neighbourhood:—Ghashshah, 3 miles north of the north-west corner of the island; Umm-al-Kurkum, 3 miles north of the north-east corner; Buwairdah, 5 miles to the south-west; and Dhahr-al-Yās, which, though 33 miles to the westward and considerably nearer to **Dalmah**, appears to take its name from Yās Island. Water is obtainable only after rain. Yās is included in the Abu Dhabi Principality of Trucial 'Omān.

YĀS
(BANI)
بنی یاس

One of the most compact and powerful tribes of Trucial 'Omān; their range is practically co-extensive with the territories of the Shaikh of Abu Dhabi, the basis of whose power they are.

The following is a tabular view of the composition of the tribe:—

Section.	Houses and distribution.	REMARKS.
Falāh (Āl) آل فلاح	35 houses at Dhawāhir, Kaiyih and Shidaq-al-Kalb in Liwah.	This section own 2,000 date palms; they have no pearl boats of their own, but some of them go to the banks from Bandar Radaim on boats belonging to other sections. One of their subdivisions is known as the Al Sa'adūn آل سعدون.
Falāh (Al Bū) آل بو فلاح	About 10 houses at Abu Dhabi Town, and 5 at Kaiyih and Shāh in Liwah.	The Āl Bū Falāh are also known as the Āl Nabyān; they are the section to which the Shaikh of Abu Dhabi personally belongs. One or two of those in Liwah go to the pearl fisheries, but they own no boats: the remainder of those in Liwah subsist by their date palms which number about 4,000. Singular is Falāhi فلاحی.
Falāsah (Āl Bū) آل بو فلاسه	440 houses in Trucial 'Omān, viz., 400 in Dibai Town and 40 in Abu Dhabi Town; 120 houses in Bahrain, viz., 100 at Hadd and the remainder at Bisaitin, Umm-as-Shajrah, Umm-ash-Shajarah, Hālat-as-Sulutah and Muharraq Town; 10 at Dōhah in Qatar; and 40 at Fanyah on Tārūt island in the Hasa Sanjāq.	The Āl Bū Falāsah who live outside of Trucial 'Omān are divided into the following sections:—Mijardah ميجرده (singular Mijarūdi ميجردی), Rawāshid راشدي (singular Rāshidi راشدي) and Yidaiwāt يديرات or Līdaiwāt ليديرات (singular Yidaiwi يدوي). These are all Māliki Sunnis, like the rest of the tribe elsewhere, and are engaged in the pearl fisheries and in navigation. Singular is Falāsi فلاسي.

Section.	Houses and distribution.	REMARKS.
Hamīr (Al Bū) آل بو حمير	60 houses in Abu Dhabi Town and 140 in the open with the Qumzān.	This appears to be the principal Bedouin section. Singular is Hamīri حميري.
Hawāmil هوامل	100 houses at Abu Dhabi Town, 50 in the neighbourhood, and 190 in Liwāh at Hadhi, Shāh, Subakhah, Tharwāniyah, Wahaidah and Wazil.	The Hawāmil of Liwāh own 20 Baqārahs in which they go pearling from Bandar Radaim. They have also 100 camels and 8,000 date palms. Singular is Hāmili هامي.
Mahāribah محاريه	60 houses in Abu Dhabi Town, 50 in the neighbourhood, and 150 in Liwāh at Dhafir, Muzaira'ah, Qarmidah, Salimi and Taraq.	The Mahāribah have 40 Baqārahs of their own in which they go pearling, those of Liwāh from Bandar Radaim and those of Abu Dhabi Town from their own port. The Mahāribah of Liwāh have 600 date trees. Singular is Mahairabi محيري.
Mazāri' مزاريح	60 houses in Abu Dhabi Town and 315 in Liwāh at 'Ayih, Haffif, Huwailah, Khannūr, Lidamah, Latir (II), Māriyah and Suhail.	The Mazāri' of Liwāh own 20 Baqārahs and go pearling from Bandar Radaim: they have also 8,000 date trees and are said to possess very large numbers of horses and camels and a few goats. The other Mazāri' of Trucial 'Omān, who may or may not be identical with this section of the Bani Yās, are dealt with in the article Mazāri'.
Qanaisāt قنيسات	15 houses in Liwāh at Latir (I).	This section have 3,000 date trees, and a few of them go pearling from Mu-ghairah. They possess 5 or 6 camels and a few goats. Singular is Qanaisi قنيسي.
Qasal القصل	8 houses in Liwāh at Shāh.	The men are all pearl fishers and own 4 boats. They have also 800 date trees.
Qubaisāt قبيسات	75 houses at Abu Dhabi Town; 185 in Liwāh at 'Attāb, Dhawāhir, Māriyah, Muzaira'ah, Qarmidah, Qutūf, Shidaq-al-Kalb, and Yaif; 15 on Dalmah island; and 15 at Wakrah in Qatar.	Those in Liwāh are credited with the possession of 10,000 date palms and 60 camels. The section generally are pearl divers and have 40 Baqārahs at Abu Dhabi Town and 16 others at Mu-ghairah, etc., upon the coast of Dhafrah. The Qubaisāt had formerly a permanent settlement at Khor-al-'Odaid, a place to which they have more than once seceded.

Section.	Houses and distribution.	REMARKS.
Qumzān قمزان	50 houses in Abu Dhabi Town and 100 in the country adjoining, especially in the neighbourhood of Raknah.	This section have 100 camels; they go pearling from Abu Dhabi Town and possess 20 taqārahs. Singular is Qamzi قمزي.
Rumaithāt رميثات	100 houses in Abu Dhabi Town and 50 in the country adjoining, particularly about Samaih.	The Rumaithāt have 100 camels and 30 Baqārahs; they go to the pearl fisheries from Abu Dhabi Town. Singular is Armaithi ارميثي.
Sabāis سبائس	40 houses at Dibai Town.	Originally Tanaij, but now regarded as a section of the Bani Yās. Singular is Sabūsi سبوسي.
Shikr (Bani) بنی شکر	80 houses in Liwah at Mūqab.	They have 4,000 date trees and 12 pearl boats; the base of their pearling operations is generally Bandar Mirfah on the Dhafrah coast. Singular is Shukri شكري.
Sultān (Āl) آل سلطان	35 houses in Liwah at Kaiyib, Qarmidah and Shidaq-al-Kalb.	The Āl Sultān are very closely connected with the Āl Falāh. They own 3,000 date palms and go to the pearl banks from Bandar Kadaim and Khor Mughairah. Singular is Sultāni سلطاني.

The Āl Bū 'Amīm of Abu Dhabi Town are now generally regarded as included in the Bani Yās; and the Halālamah, who were formerly a section of the Bani Qitab, are at the present day attached to the Bani Yās; so also the Thamairāt, who were originally Marar.

Besides the above, a few Bani Yās whose section has not been ascertained are found at Jumairah in the Dibai Principality and about 1,200 on Hanjām island.

It will be observed that the total number of the tribe in Trucial 'Omān is about 12,000 souls, of whom some 10,000 are settled and 2,000 are Bedouins. The Bedouins are all in the Abu Dhabi Principality; of the non-nomadic portion about 2,000 are in Dibai territory, but the remainder of them, about 8,000 persons, are all subjects of the Abu Dhabi Shaikh. Besides the Bani Yās of Trucial 'Omān there are, it will be seen, about 600 of the tribe settled in Bahrain, 200 on Tārūt island in the Hasa Sanjāq, and over 100 in Qatar, besides those on Hanjam. The ruins of the Muraijib fort and the incipient villages of Jahali and Mas'ūdi attest also the past and present connection of the

tribe with the **Baraimi** Oasis, which is nearer to their ancestral country than the settlements just mentioned but still outside the tribal territories proper.

It will also be noticed that the Bani Yās of the **Dibai** Principality nearly all belong to the **Āl Bū Falāsah** section and that those of **Bahrain** and **Tārūt** and part of those in **Qatar** are likewise members of this roving subdivision, which is now but slightly represented in the original home of the tribe.

The resources of the Bani Yās and their occupations are sufficiently explained in the table above and in the article on **Dhafrah**, in the **Līwah** division of which tract nearly half the tribe have their permanent abode.

The Bani Yās of the **Abu Dhabi** Principality are on the whole well affected and faithful to the Shaikh of **Abu Dhabi**, who is himself of their number. The principal exception to this rule are the **Qubaisāt** section who have at times evinced a disposition to follow the example of the **Āl Bū Falāsah** by hiving off from the main body of the tribe; but at the present time they are stationary and appear to be contented. The principal men of the tribe, under the Shaikh of **Abu Dhabi**, are **Buti-bin Khādīm** of the **Qubaisāt** section, who generally resides at **Abu Dhabi Town** but is headman of **Muzaira'ah**, **'Attāb** and **Qarmidah** in **Līwah**; **Hamad-bin-Aghtail** of the **Mahāribah** section, under whose authority are **Dhafir** and **Taraq** in **Līwah**; **Rāshid-bin-Humaid** of the **Hawāmil** section, to whom **Hādhi**, **Shāh**, **Subakhah** and **Wazil** in **Līwah** are subject; and **Faris-bin-'Alī** of the **Mazārī'** section, who is over **Khannūr Hafif** and **Māriyah** in **Līwah**, and himself lives at **Khannūr**.

The Bani Yās are of the **Hināwi** political faction and differ from most of their neighbours in being, wherever they occur, **Mālīki Sunnis** and not **Hanābilah**. They have at present no special relations of friendship or enmity with adjoining tribes.

A small tribe of **Bahrain** who claim connection with the Bani **Tamīm**, but are generally believed to be of servile descent. They have 10 houses at **Salbah** and live by pearl diving and fishing; in religion they are **Mālīki Sunnis**. They immigrated from **Qatar** with the **'Utūb**.

YATAIL
(AL BANI)
آل بني يطيّل

ZA'ĀB
زعاب

Singular Za'abi زعابي : a tribe of Trucial 'Omān, found also in the 'Omān Sultanate. They are Hināwi in politics and Hanbali Sunnis by religion. Their headquarters are at Jazīrat-al-**Hamra**, where they have 500 houses, and they are substantially represented also at Khor **Kalba** by about 150 families ; both of these places are in the **Shārjah** Principality but on opposite sides of the 'Omān Promontory. Some of the Za'ab of Jazīrat-al-**Hamra** own date plantations at the village of Khatt in the **Jiri** plain in the interior and betake themselves to that place in the hot weather. In the 'Omān Sultanate Za'ab are found at **Saham** Town and at Qasbiyat-az-Za'ab and Abu Dhurūs in the **Saham** sub-Wilāyat, also at Bū Baqarah in the sub-Wilāyat of **Shinās**. The total number of the tribe may be estimated at 3,800 in Trucial 'Omān and 1,200 in the 'Omān Sultanate, or at 4,500 souls altogether. The two territorial divisions still maintain communication with each other and intermarry.

ZAID
(**BANI**)
بنی زید

A settled Arab tribe of Southern **Najd**, whom some authorities would connect with the Bani **Tamīm** and some with the **Dawāsir**; they are found in **Washam** at **Shaqrah** and **Washaiqir**; in **Wādi Turabah** at **Khurmah** and **Rumadān**; and, in the tract between the two districts mentioned, at **Quwai'yah** and **Sha'arah**. They are said to consist of three main divisions, *viz.*, **Bawārīd** بوارید, **Ghaihab** غيهب or **Qaihab** قيهب and 'Isa عيسى .

Apart from a well known line of poetry * in which the Bani Zaid are described as resembling the **Sulaba** in one particular, there appears to be no reason at all for regarding them—as has been done—in the light of a socially inferior tribe. As a matter of fact the ruling family at **Shaqrah**, the **Āl Sabyān**, belong to the Bani Zaid.

ZAIDĀN
(**CHAM**)
چم زیدان

Often pronounced as if written Cham **Zaitūn** زيتون . A village, the administrative centre and chief place of the **Zaidān** district in the province of **Behbehān**; it is situated near the right bank of the **Zaidān** or **Hindiyyān** River about 5 miles below the junction of the **Khairābād** and

* بنی زید یا ری رفاته لولا فیهم من الصلیب طبع . "How pleasant would be the society of the Bani Zaid if there were not in them traits of the Sulaba." The accusation is understood to be one of foolhardiness merely.

Shūlistān streams. The route from **Dilam** to **Behbehān** crosses the river here by fords which are described in the article on the **Hindiyan** River. **Cham Zaidān** consists of about 120 houses of the **Āgha Jari** tribe of **Lurs** and of **Behbehānis**, who, besides other crops, cultivate rice on the river-banks, and possess about 400 cattle and 500 donkeys. The Shaikh of **Muhammareh** and the **Bakhtiyāri Khāns**, who have a joint interest in the **Zaidān** valley as lessees of the government revenue, maintain representatives at this place.

An island off the coast of **Barr-al-'Oqair** in the **Hasa Sanjāq**, about 10 miles east-south-east of **'Oqair** Port, 20 miles south-south-west of the southern tip of **Bahrain** Island and 32 miles distant north-north-westwards from the foot of **Dōhat-as-Salwa**. **Zakhnūniyah** lies parallel to the coast, from which it is separated by a shallow channel 2 miles wide: the length of the island is 4 miles and its greatest breadth about $1\frac{1}{2}$. It is barren and without good water, and there are now no permanent inhabitants. The **Dawāsir** who are now settled in **Bahrain** halted here for some years in the course of their emigration from **Najd**; they left again for **Bahrain** about 60 years ago; but their Shaikhs with some of the **'Utūb** of **Bahrain** still occasionally visit **Zakhnūniyah** for sport in the cold weather, as they also do the mainland opposite. A fort built on the island by Shaikh **'Ali-bin-Khalifah** of **Bahrain** 40 years or more ago is now in ruins.

ZAKHNŪ-
NIYAH
زخاڻيه

A small tract in **Kuwait** territory between **Jahrah** and **Qirā'-al-Marru**, extending from 5 miles north of **Jahrah** to 9 miles north of **Jahrah**; its eastern and western limits have not been fixed. **Zaqlah** is a basin, somewhat lower than **Qirā'-al-Marru**, and its drainage falls to a hollow in the centre; it is covered with **'Ausaj**, a thorny plant which affords grazing for camels, and with **colocynth**.

ZACLAH
زقلا

An Arab tribe of Southern **'Arabistān**, politically allied to the **ZARQĀN** **Bāwiyeh**; they occupy **Qrāneh** on the **Kārūn**, the country inland.

زرقان

from Qrāneh, and, it is said, a small tract on the **Jarrāhi** River. Their fighting men number about 420, of whom half are armed with rifles and about 180 are mounted: the total strength of the tribe may be about 1,500 souls. The Zarqān live principally by cultivating wheat and barley, but they also own a considerable number of sheep and goats. The divisions of the Zarqān are :—

Section.	Location.	Fighting strength.*	REMARKS.
Fādhil (Āl Bū) آل بر فاضل	Yarrāt, near Bu-wairdeh, 5 to 6 miles east of Wais.	100, of whom 50 are armed with rifles and 50 are mounted.	Their livestock are 4,000 sheep and goats.
Lahaiyeh (Āl Bū) آل بر لحيه	Thidiyain, 4 miles east of Qrāneh on the Kārūn River; also at Qrāneh on the Kārūn.	60, of whom 30 have rifles and 20 are mounted.	They possess 3,000 sheep and goats.
Munārib (Bait) بيت محارب	Yarrāt.	80, of whom 40 have rifles and 30 are mounted.	Do.
Subti (Āl Bū) آل بر سبتي	Thidiyain.	Do.	Their animals are 4,000 sheep and goats.
Sumāq ...	Qrāneh on the Kārūn.	100, of whom 50 have rifles and 50 are mounted.	The head of this section is at present chief of the whole Zarqān tribe. Their livestock are 5,000 sheep and goats.

All sections alike dwell in huts, which are sometimes of mud and sometimes of matting; but some of the tribesmen at Qrāneh inhabit mud houses. About $\frac{1}{3}$ of the tribe is settled or semi-settled at Qrāneh, while the remainder is still nomadic. The Zarqān are said to pay 500 Tūmāns a year as revenue to the Shaikh of **Muhammareh**.

ZATŪT* زطوط

Singular Zutti زطتي. A peculiar non-Arab tribe, sometimes nomadic, found in various parts of 'Omān and particularly at **Baraimi**, **Masqat** Town, **Matrah** and **Nakhl**. They are easily distinguishable from Arabs,

*A fuller account of the Zātūt with some specimens of their language is given by Col. Miles, J. A. S. B., Vol. XLVI for 1877, pages 57-59.

have apparently a language of their own, and are regarded as being a branch of the **Saluba**, who are found all over Arabia and in Mesopotamia: some authorities however connect them with the **Jāts** of India, and it is stated that according to their own traditions they came from India: others have remarked on their resemblance to Gipsies. Everywhere the **Zatūt** maintain themselves as separate communities, marrying chiefly among themselves and readily welcoming members of their own tribe from other places who come to settle amongst them. They are despised but are not molested by the Arabs, who value them for the useful services they render. They are farriers, goldsmiths, blacksmiths, armourers, carpenters and pedlars; their women are handsome and dance publicly for payment, but are not immoral. Levirate law obtains among them, and in default of a brother the nearest male relative of the deceased can take the widow to wife. Some of them are regarded as more closely connected with the Arabs, and others with the **Balūchis** of the places where they are found. In 'Omān they are generally **Ibādhis**, and their number in the Sultanate may be estimated at 1,000.

A large village or small town in **Najd**, with its dependencies; **Zilfi** is generally reckoned to the district of **Sadair** in Southern **Najd**, but some authorities would include it in **Qasim**.

ZILFI
زلفي

Site.—**Zilfi** is situated at the western foot of **Jabal Tuwaiq**, near the northern end of that range; it apparently lies about 60 miles east of **Buraidah** and a little over 40 miles north-west of **Majma'**. A desert route connects **Zilfi** with **Kuwait Town**, crossing a valley called **Artāwiyah** (ارطويه) at a point about 50 miles from **Zilfi** and running thence to the wells of **Subaihiyah** or to those of **Laqit** in the **Kuwait** district of 'Adān.

Zilfi proper.—**Zilfi proper** lies in **Batīn** (بطين), a depression consisting of arable land immediately under **Jabal Tuwaiq**; out of this depression a hollow leads westwards, which is known as 'Khall Izlaiqif and carries the route to **Qasim** (see article **Najd**, Route No. VI). The inhabitants of **Zilfi proper** number about 2,000 souls: there are approximately 150 houses of **Banī Khadhir**, 100 of **Dāwāsir**, 100 of 'Ataibah, 50 of **Shammar** and 20 of **Fadhul**. Dates, grain, musk, melons, water melons, lucerne and the usual fruits of **Sadair** are cultivated by irrigation from wells. Water is obtained at 8 to 18 fathoms. There are a few

horses among the **Fadhūl**, and flocks and herds are exceptionally numerous. Some merchants live here whose operations extend to **Kuwait** on the one side and to **Makkah** on the other; Zilfi benefits by its proximity to the route between those two places, and also by the transit of trade between Northern and Southern **Najd**.

More than 100 households from Zilfi are now settled at **Kuwait Town**.

Connected villages, etc.—The following places are situated near Zilfi proper and are directly connected with it: they are given in alphabetical order.

Name.	Position.	Nature.	REMARKS.
'Arairah عريرة	In the western slopes of Jabal 'Tuwaiq, perhaps 3 miles north-east of Zilfi proper.	Date plantations and arable lands cultivated by rainfall. The owners are Shammar and Bani Khadhīr of the Bani 'Atij and Natāqah sections.	There are no houses here.
Artāwiyah ارطاوية	About 6 miles south of Zilfi proper.	4 houses of Shammar who tend a date grove owned by Bedouin 'Anizah of the Saḡūr section.	The cultivators receive half the produce from the owners. This place is not to be confounded with the Artāwiyah valley mentioned above.
Athlah الاثله	In the sandy desert, about 9 miles west of Zilfi proper.	8 houses of Shammar of the Dighai-āt section, 5 houses of Bani Khadhīr , and 3 of Masā'irah Dawāsir .	There is a date plantation.
'Ilaqah علاقه	In the Batīn hollow, 3 miles north-west of Zilfi proper.	100 houses of 'Ataibah of the Farāhid section and 50 of Bani Khadhīr .	Dates are abundant and there is excellent cultivation of the ordinary cereals.
Ilmur المر	Among sand hills, about 8 miles south-west of Zilfi proper.	5 houses of Shammar and 5 of 'Aid or 'Aidh .	Only dates are grown here.
'Iqlah عقله	Among sand hills, about 6 miles south of Zilfi proper and 1 or 2 miles east of Artāwiyah .	3 houses of 'Ataibah , 5 of Dawāsir , 2 of Bani Khadhīr and some of slaves.	There is some cultivation of dates, but none of cereals.

Name.	Position.	Nature.	REMARKS.
Samnān سمنان	In the western slopes of Jabal Tuwaiq, perhaps 3 miles east of Zilfi proper.	A village of 50 houses, of which 10 are 'Anizah of the Hawaishān section, 20 are Bani Khālīd of the Hamrān section, 5 are Harb of the Bani Hammād section and the remainder Bani Khadhīr.	...
Umwaiḥ الأمويه	In the Khall Iz-laiqif, about 8 miles from Zilfi proper.	A date plantation.	The owners reside in Zilfi proper.
Zahlūlah زهلولة	In the sandy desert, about 3 miles west of Zilfi proper.	5 houses of Qahtān of the Mashī' section.	There are only dates at this place.

The total population of the connected villages is evidently about 1,250 souls.

Dependent villages, etc.—More distant from Zilfi proper, but regarded as dependent thereon and even as included in the name Zilfi, are the following which form a chain reaching 40 or 45 miles to the north-west or north-north-west: they are given in order from south-east to north-west.

Name.	Position.	Nature.	REMARKS.
Rahaiyah الرحية	About 12 miles north-west of Zilfi proper.	5 houses of Masā'idah 'Ataibah and 5 of Bani Khadhīr.	Cultivation is of dates only.
Shilwān شلوان	About 4 miles north-west of Rahaiyah.	5 houses of Bani Khālīd, 3 of Qahtān and 2 of Bani Khadhīr.	Cereals are grown as well as dates.
Artah (Umm) أم ارتاه	6 miles north of Shilwān.	3 houses of Farāhid 'Ataibah and 2 of Bani Khadhīr.	De.
Qasaibah القصبية	4 miles north-west of Umm Artah.	10 houses of Bani Khālīd of the Dūshān section and 5 of Bani Khadhīr.	De.

Name.	Position.	Nature.	REMARKS.
Tarafāt (Abu) أبو طرفات	8 miles north-west of Qasaibah.	5 houses of Sham- mar ('Abdah), 5 of 'Ataibah (Masā'idah), and 2 of Bani Khadhir.	Cereals are grown, but no dates.
Saja'ah (Umm) أم صجعه	2 miles north of Abu Tarafāt.	10 houses of Bani Khadhir.	Do.
Jawai الجوي	3 miles north-west of Umm Tarafāt.	4 houses of Masā'idah 'Ataibah.	Do.
Mundassah المندسه	2 miles north-east of Jawai.	2 houses of Bani Khadhir.	Do
Harār الهرار	8 miles north-west of Jawai.	4 houses of Masā'idah 'Ataibah.	Do.
Munsaf المنسف	3 or 4 miles north- west of Harār.	5 houses of Bidārīn Dawāsir, 3 of Masā'idah 'Ataibah and 2 of Bani Khadhir.	I'a'es and cereals are both grown.
Baidhah Nathīl بيضة نثيل	3 miles north-west of Munsaf.	4 houses of Masā'idah 'Ataibah.	There are cereals, but no dates.
'Ashairah عشيرة	4 or 5 miles north- west of Munsaf.	4 houses of Farāhid 'Ataibah.	Do
Thuwair الثيرير	7 or 8 miles north- west of Munsaf.	5 houses of Masā'idah 'Ataibah, 3 of Bani Khālid and 2 of Bani Khadhir.	Do.

The total population of those dependent villages is apparently about 400 souls. The villages are situated among sand hills known as Thuwairāt الثويرات, the northern extremity of which, as the village Thuwair is said to be about 20 miles (probably north-eastwards) from Raudhat-al-Mahanna in Qasīm, it seems permissible to identify with the Thuwairāt dunes mentioned in the article on Wādi-ar-Rummah.

Communications.—One of the routes between Qasīm and Riyādh passes, as already indicated above, through Zilfi. It is further reported

that a trotting camel travelling northwards from the village of Thuwair can reach some sand hills known as I'rūq اعرق in one day; and that, if the line of these sandhills be then followed to the north-west for two days more, the Darb Zubaidah will be struck. (See article **Najd**, Route No. III.)

ZĪRA

A small district of the **Persian Coast** belonging to the administrative division known as the **Gulf Ports**; it is situated between the Rūd Shīrīn and Dāliki streams immediately above their junction where the **Rūd-hilleh** River is formed, and it extends also a little to the west of the Rūd Shīrīn. Zīra is enclosed between the **Shabānkāreh** district on the west, the **Mazāra'i** district on the north, and the **Dashtistān** district (of which it is supposed at one time to have formed part) on the east and south; it lies close under the hills and the heat in summer is great. Dates and some cotton are grown, but the principal crops, as in the neighbouring districts, are wheat and barley. The inhabitants are a medley of Persian-speaking tribes, all of whom are Shī'ahs; their number is estimated at 3,000 souls. The men are well armed with rifles, and knives and revolvers are worn. Agricultural produce is the only export, and imports are the same as in the other small districts near **Būshehr**. The Hāshim Man of Zīra is equal to about 150 lbs. English. The transport available in the district amounts to about 90 horses, 30 mules and 900 donkeys. This district (like **Mazāra'i**) is held in Tiyūl by Mehdi Khān, a cousin and ward of the Sālār-i-Mu'azzam, and is farmed at present by the Khān of **Shabānkāreh**, who has a representative at **Durūgāh**. Arable land is assessed at 100 Qrāns per Gāu of cultivation, and the tax on dates is half the produce or the value of the same in cash. The cultivators in this district appear to be regarded as tenants rather than as proprietors. Administrative arrangements are the same as in **Shabānkāreh**. The annual revenue is 10,000 Tūmāns.

The following are the villages of Zīra:—

Name.	Position.	Houses and inhabitants.	REMARKS.
Durūgāh دورگاه	2 miles north-west of the confluence of the Dāliki stream and the Rūd Shīrīn.	...	See article Durūgāh .

Name.	Position.	Houses and inhabitants.	REMARKS.
Jatta جٹا	About 3 miles east of Durū-gāh.	60 houses.	There is one tower. Wheat and barley are grown and irrigation is from a branch of the Zīra canal. Animals are 7 horses, 100 donkeys, 60 cattle and 300 sheep and goats. Date-palms number about 1,000.
Kharaki (Tul-i-) طل خريكي	4 miles north-east of Durū-gāh.	30 houses.	Animals are 5 horses, 50 donkeys, 25 cattle and 150 sheep and goats. Irrigation is from the Zīra canal; wheat and barley are grown and there are 1,000 date-palms. The village is defended by a tower.
Kharpai (Tul-i-) طل خريائي	Close to Zīra, on the east of it.	60 houses.	There is a tower. Resources are 7 horses, 100 donkeys, 60 cattle, 300 sheep and goats, and 1,000 date-palms; wheat and barley are grown and irrigation is from the Zīra canal.
Qātil (Tul) طل قاتل	8 miles north-east of Durūgāh.	20 houses.	There are 1,000 date-palms. Livestock are 4 horses 5 mules, 30 donkeys, 20 cattle and 150 sheep and goats.
Sa'dābād سعدآباد	5 miles east by north of Durūgāh.	100 houses.	Here are 4 towers, 1,500 date-palms, 20 horses, 10 mules, 150 donkeys, 100 cattle and 500 sheep and goats. Irrigation from Zīra canal.
Safī (Tul Āl) طل آل صفي	On a knoll on the north side of the main canal.	60 houses.	This village is defended by a tower. Wheat and barley are grown, and there are 6 horses, 100 donkeys, 60 cattle and 300 sheep and goats.
Sarakūh (Tul) طل سرکوة	1 mile north-west of Tul Qātil	40 houses.	This place has 1 tower, 1,000 date trees, cultivation of wheat and barley, 5 horses, 6 mules, 60 donkeys, 40 cattle and 300 sheep and goats. Irrigation is from the Zīra canal.

Name.	Position.	Houses and inhabitants.	REMARKS.
Zīra زیرا	About 6 miles from Durū- gāh.	100 houses.	The defences consist of 8 small towers. Irrigation is from the Zira canal, wheat and barley are grown, and there are 5,000 date-palms. Animals are 20 horses, 40 mules, 150 donkeys, 100 cattle and 500 sheep and goats. There is said to be a remarkable cave here.

An island in the bay between Abu Dhabi and Qatar: it lies some 85 miles west-north-west of Abu Dhabi Town and 50 miles north-east by east of Dalmah. Its length from north to south is 3 miles and its breadth 2 miles; it tapers to its southern end and carries a rather remarkable peak 540 feet high. There is no water, and no vegetation except grass and stunted brushwood. An anchorage exists on the south-east side and there are several pearl banks in the neighbourhood, particularly the following:—Khor Zirko, 12 miles to the north-east; Qasmūl and Sutūh Umm-ash-Shait, at 4 and 8 miles respectively, to the south; Sutūh-al-Hūlah, a group of banks 7 or 8 miles to the south-south-west; and Ghazrat Zirko, 2 miles to the north-west. About 27 miles to the north-north-east, but apparently named from this island, is the pearl bank Umm-ash-Shaif Zirko. A great group of banks, known as Sutūh Arzanah, runs westwards from Zirko almost to Arzanah. Zirko is reckoned to the Abu Dhabi Principality.

ZIRKO *
زرکو

An island or insulated tract of land on the right bank of the Shatt-al-'Arab, cut off from the mainland by a creek of the same name which leaves the river about 1 mile below the lower end of Hāji Salbūq island and returns to it immediately opposite to the upper end of the Dawāsir islands. The tract thus enclosed extends for 5 miles along the river and

ZIYĀDĪ-
YAH
زیادیه

* For a view of this island see Chart No. 2374—2387 B.

its breadth is a mile to a mile and a half: it should be noted that the eastern side of the island—not the western shore of the creek behind it—is the true bank of the *Shatt-al-'Arab*. The inhabitants are some 2,000 persons of various tribes whose huts fringe the island on both sides; they are agriculturists and their property consists of 100,000 date trees besides orchards of other fruits, 300 cattle, 500 sheep and goats, and 5 horses. The whole island belongs to the Naqib of **Basrah**.

Closely associated with Ziyādiyah are two small islands named Bardah بردیه and Sibyah سيبه, which lie on the eastern and western sides respectively of the upstream entrance of the Ziyādiyah creek. Bardah, which very closely adjoins Ziyādiyah island, is inhabited by about 150 persons of mixed tribes owning some 2,000 date palms, other fruit trees, 30 cattle and 30 sheep and goats. Sibyah, opposite to the lower extremity of Hāji Salbūq island, is of very small size, with only 25 inhabitants and proportionate resources.

Ziyādiyah with both its satellites is in Turkish 'Irāq.

ZIYĀINAH Singular Zaiyāni زاياني: the name is said to be derived from Zaiyānah, زياننه a place near Makkah. They are also called the 'Adāwīn عداوي, on account of their supposed descent from two brothers who were perpetually fighting each other and were nicknamed for that reason 'Adwān. The Ziyāinah are believed to have come to **Bahrain** from **Qatar** with the 'Utūb. They have now 150 houses in **Muharraq Town** only. In religion they are Māliki Sunnis: their occupations are general trade, pearl dealing, pearl diving and navigation in the Persian Gulf and beyond.

ZIYĀRAT زيارت

The present administrative centre and residence of the Kalāntar of the **Persian Coast** district of **Shamīl**; it is situated near the left bank of the Jāmūsh stream, 28 miles north-east of **Bandar 'Abbās** and 19 miles west by south of **Shamīl Village**, and takes its name from a shrine dedicated to Saiyid Sulaimān, a supposed descendant of one of the twelve Imāms.

The house of the Kalāntar is a conspicuous object. There are 200 houses and the population may be 1,000 souls; the inhabitants are Shi'ahs of no particular tribe. Dates and barley are the staples of cultivation. Sweet water for drinking and for cultivation is obtained from the adjacent stream. There are 50 cattle and 500 sheep and goats, but 50 donkeys are the only transport animals. The annual revenue is 312 Tūmāns.

The name of the district in **Kuwait** territory that bounds **Kuwait** Bay on its north side from the neighbourhood of **Jahrah** to **Khor-as-Sabiyah**. It consists chiefly of a range of hills or hilly belt called **Jāl-az-Zor** جال الزور, which runs in a general north-easterly and south-westerly direction, for the most part in an almost straight line, passing about 3 miles to the north-west of **Jahrah**. At the point nearest to **Jahrah** is a gap in the ridge: the hill on the east side of the gap, 415 feet high, is called **Mutlā'** مطلاع; that on the west is **Mutaili'ah** مطيليه; and through the gap a small valley, which has its head 2 miles to the north and is called **Jauf-al-Mutlā'** جوف المطلاع, discharges its drainage into the **Jahrah** plain. A few miles to the west of the **Jauf** are some hills forming a landmark known as **Khashm-al-'Ifri** خشم العفري. Between the **Jāl-az-Zor** and **Kuwait** Bay stretches a plain from 1 to 5 miles in breadth with numerous wells, called simply **Sif** سيف or "the beach": this plain is generally barren and stony, but for 8 miles between **Mdairah** and **Mghairah** its surface is muddy, though beyond the reach of the sea. The range declines in height as it goes eastward, and at **Mdairah**, at half its length, is only about 150 feet high. Near the east end, about 2 miles north of the **Mghairah** wells, it has a conspicuous cone-shaped peak called **Mghatti** منطى. Full information about the wells in **Zor** will be found in the first route described in the article on **Kuwait** Principality.

ZOR

زور

A strip of land on the west coast of Trucial 'Omān between **Hamriyah** and 'Ajmān; at high tide it is practically an island, and this and other circumstances have combined to invest it with a certain political importance. The seaward flank of **Zora** is in line with the rest

ZORA*

زورا

* *Chief authority*.—Major Cox, from personal observation and enquiry.

of the coast, but a creek which runs inland immediately to the south of **Hamriyah** and rejoins the sea a little to the north of **'Ajmān** passes behind it and effectually detaches it from the mainland. The tract thus enclosed is about 5 miles long, the direction of its length being that of the coast, and perhaps 2 miles broad. Towards its south end Zora contains one or two wells and a few palm trees. The people of **Hamriyah** and **'Ajmān**, when there is peace between them, send their cattle to Zora to graze, but the chief value of the place is as a military stronghold surrounded by a natural ditch. The creek which protects it is not fordable at more than half tide, and then only at 2 places, one near **Hamriyah** and the other near **'Ajmān**, each of which could be easily commanded by the building of a tower. Thus secured from the landward side and already inviolable from the sea by reason of the Maritime Peace, Zora would be a secure place in which to keep flocks and herds during warfare on the mainland ; or, under different conditions, it might serve as a base of offensive action against the Bedouins of the interior. These obvious facts have not been lost on the Shaikhs of Trucial **'Omān**, and various contests relating to Zora have taken place among them during the last 60 years, of which the incidents are related elsewhere.*

ZUBAID

زبيد

A numerous and widely distributed Arab tribe in Turkish **'Irāq** : their territory covers the whole of Mesopotamia from **Baghdād** City and **Musaiyib** on the north to **Bghailah** and the **Daghārah** marshes on the south.

The principal divisions of the Zubaid are the following :—

- | | |
|-------------------|-------------------------|
| 1. 'Abdullah (Āl) | 6. Battah |
| آل عبد الله | بطه |
| 2. 'Ajīl (Bani) | 7. Dawaikāt or Dawaijāt |
| بني عجيل | دريجات دريكات |
| 3. 'Ammār | 8. Dāwar |
| عمار | دار |
| 4. 'Azzah | 9. Duwāghinah |
| عزة | دراغه |
| 5. Ba'aij | 10. 'Tkrish |
| بعيج | عكرش |
| | 11. Jabūr Āl Bū Khattāb |
| | جبرر آل بر خطاب |

* See the Historical Volume of this Gazetteer.

12. Jabūr-al-Wāwī جبور الـواري	18. Ma'āmirah معامرة
13. Jahaish جهيش	19. Na'aim (Āl Bū) آل بنوعيم
14. Kalābiyīn كلابيين	20. Sabutah مبطه
15. Khafājah خفاجه	21. Sultān (Āl Bū) آل بر سلطان
16. Khasraj خسرچ	22. Taif (Āl Bū) آل بر طيف and
17. Khidhr (Āl Bū) آل بر خضر	23. Yasār يسار

Of these sections the Ba'aij and Dāwar are sometimes regarded as independent tribes and may perhaps be so: it will be noticed that the **Shammar Tōqah** have also a Battah and a Dāwar section. The Jahaish section, now generally regarded as an independent tribe, comprises two sub-sections known as Āl Bū Dadah دده and Āl Bū Sanaid سنيد; and a number of the sub-sections of the two Jabūr sections are specified in the article on the **Hillah Qadha**, also one in that on the Qadha of **Najaf**, and two more in that on the Qadha of **Samāwah**. Some would make the two Jabūr sections a tribe by themselves (see tribal table, 'Irāq). The entries under 'Akārāt, 'Atij, Da'ūm and Jahaish in the table of tribes in the article on Turkish 'Irāq may also be consulted. The position of the Khasraj is doubtful; they are by some identified with the section so named of the Bani Lām and by others considered to be neither Bani Lām nor Zubaid. The Jabūr Āl Bū Khattāb (or part of them) live at the confluence of the Diyālah and the Tigris, the Jabūr-al-Wāwī on the Euphrates below Hillah Town, and the Jahaish in the direction of Nāsiriyyah Town. Some further facts regarding the distribution of the sections will be found in the articles on the **Hillah** and **Jazīrah Qadhas**.

With the exception of the Bani 'Ajīl and 'Azzah (or some of those sections) who are Sunnis, the whole Zubaid tribe is Shī'ah. They dwell in the usual black tents, or at best in huts: they are agriculturists, cultivating wheat, barley, rice and maize, but not sesame; and they breed horses, camels, cattle and sheep, but no buffaloes.

The Zubaid are not as yet particularly well armed with rifles. They are politically allied with the **Dilaim** and have a standing feud with the Northern **Shammar**. Their recognised chief at the present time is Rāshid Baig, who lives 10 or 12 miles west of **Suwairah**.

ZUBAIR

زُبَيْر
QADHA

A division of the 'Amārah Sanjāq of the Basrah Wilāyat in Turkish 'Irāq: it is not to be confounded with the town and Nāhiyah of the same name in the Markaz Qadha of **Basrah**.

Position and boundaries.—The Qadha of Zubair is situated on the **Jahālah** canal below, or to the south-east of, the Qadha of 'Amārah. It is bounded by the 'Amārah Qadha on the north-east, and probably by that of **Dawairij** on the north; on the east it meets Persian territory, and on the south apparently the Qadha of **Qūrnah**; on the west the Qadha of **Shatrat-al-'Amārah** seems to be interposed between it and the left bank of the **Tigris**.

Topography and inhabitants.—Nothing definite is known of the geography of the Zubair Qadha, which lies at a distance from all main lines of communication, but it appears to be watered by the **Jahālah** canal. The only fixed village is **Masa'idah** مَسْعِدَة, which is the seat of the local administration and seems to be situated on the **Jahālah** canal somewhere 20 or 25 miles to the south-east of 'Amārah Town. **Masa'idah** consists of about 100 mud houses and 30 shops: it is the residence of a manager of the **Dāirat-as-Saniyah** and is protected by a garrison of 100 regular infantry. The people of the district belong almost entirely to the **Āl Bū Muhammad** tribe.

Population.—The fixed population of the Qadha is estimated at 14,000 souls, who are all **Shī'ah** **Muhammadans** with the exception of a few **Sunni** officials and Government employes at **Masa'idah**.

Resources.—Rice and maize are cultivated by the tribes; and some date plantations laid out by the **Dāirat-as-Saniyah** in its estates promise to be highly profitable. **Buffaloes**, **cattle** and **sheep** are bred in large numbers.

Administration.—Zubair as a Qadha has no subdivisions.

ZUBAIR
 زبير
TOWN

A town of Turkish 'Irāq; it stands in the desert 9 miles to the south-west of **Basrah** Town and forms the first stage on the route from **Basrah** to **Kuwait** or **Najd**. It has no connection with the **Zubair Qadha**.

Around the town, which is walled, the country is entirely barren except to the south-east, on which side a scattered series of lucerne and melon fields, hedged with tamarisks, extends to a distance of 3 miles; this tract is called *Dirhamīyah* درهميه and the drinking water of the town is supplied by its wells. A few miles to the north-west of **Zubair** are a property and fortified dwelling-house belonging to the hereditary **Shaikh** of **Zubair**.

The principal object of interest outside the town is the tomb of **Hasan-al-Basri**, about half a mile from the western gate; and within the walls is the tomb of **Zubair**, distinguished by a blue tile-work minaret about 40 feet high, now inclining dangerously to the north. There is in the town a large covered bazaar, mostly of masonry, and the dwelling-houses are either of sun-dried or of burnt brick, the latter being excavated in great quantities on the adjoining site of ancient **Basrah**. The better houses are fitted with *Bādgīrs* or wind-catchers, and with subterranean apartments or *Sardābs* ventilated by the *Bādgīrs*.

The population is about 6,000 and virtually all are **Sunni Muhamadans**, as is natural in a place which holds the tomb of **Zubair**, arch-rebel against **Ali** and killed here in fighting against him. Many notables and land-owners of the **Basrah** neighbourhood have country houses at **Zubair**, to which they retire in the hot weather in quest of a drier atmosphere; and some important families of Central Arabian origin are located here.

Juss or gypsum mortar is exported from **Zubair**, and sandals and rude saddlery are manufactured; but the carrying trade probably supports a larger number of the population than any other industry. The melons of *Dirhamīyah* have a high reputation.

Zubair is a market town for the surrounding Bedouin tribes. As a *Nāhiyah* in the **Qadha** of **Basrah** it has a *Mudīr* and a few civil police; and there is also a small military detachment of about 20 men under an officer. The inhabitants of **Zubair** are themselves still legally exempt from military service; but some of them, caught in **Basrah** Town, are made into soldiers by the **Turks**.

The ruins of Old **Basrah** extend from the walls of **Zubair** for three miles along the road to the modern **Basrah**; they consist of mounds of earth intermingled with fragments of yellow burnt brick, and they cover an area of several square miles. Two miles from **Zubair**, on the southern

edge of the highroad, are the remains of one of the principal mosques of the ancient town ; part of its northern minaret, faced with excellent yellow brick, is still erect. About a mile to the east of this old Jāmi' is the tomb of Talhah عليه السلام who was slain along with Zubair in the Battle of the Camel, fought near this place in 656 A.D. These two monuments alone remain to testify to the greatness of the former city.

ZUBĀRAH الزبارة

A ruined and deserted town on the west side of the **Qatar** Promontory, about 5 miles south of Khor **Hassān**. It stands at the foot of a deep bay of the same name, of which the western point is Rās 'Ashairiq and which contains a small island, also called Zubārah. The town was formerly the stronghold of the Āl Khalifah ruling family of **Bahrain**: its site is still frequented by the Na'im of **Bahrain** and **Qatar**. The town was walled and some 10 or 12 forts stood within a radius of 7 miles round it, among them Faraiha, Halwān, Lisha, 'Ain Muhammad, Qal'at Murair, Rakaiyāt, Umm-ash-Shuwail and Thaghab, which are mentioned in the article on **Qatar**. All of these are now ruinous and deserted, except Thaghab, which the people of Khor **Hassān** visit to draw water. Murair is said to have been connected with the sea by a creek which enabled sailing boats to discharge their cargoes at its gate, but the inlet is now silted up with sand.
